We did not discuss Saturday anything about providing you with funds for the actual purchase. I assume this can be done through the National Bank of Commerce upon receipt of definite cable advices from you.

You wanted a list of British Timken Directors; they are: Sir Vincent Caillaird, G. Ward Grazebrook, W. Dallow, A. Jacob and M. B. U. Dewar.

I enclose copy of letter dated the 2d from Carr & Carr, just received regarding the registration of "Timken", which is self-explanatory.

I believe you made note, but I want to be sure that you remember that if a United States corporation owns 51%,

or more, of a foreign corporation it may deduct from its income tax the income taxes paid by the foreign corporation. This is naturally a matter of considerable consequence to us.

The present British income tax is 20% of the net profits, but is based on the average of the three prior years each time.

In connection with the reformation of the Contract, the three major matters to be considered are:

[fol. 5036] 1. We to have the right to fill service orders placed in this country, regardless of destination. We are willing to pay British Timken up to 10% commission on such sales of bearings for shipment into their territory.

2. In case we purchase or acquire patents in the future, British Timken are only to acquire such rights as we get; in other words, we may purchase patents which are already subject to licenses granted to foreign parties prior to the time of our purchase of them.

3. The registration of "Timken" must be definitely cleared up, and the registration in our own name, or if it is absolutely necessary that registration be made in the name of British "Timken", proper provision must be made that such registrations ultimately come to us at the expiration of the main license agreement with British Timken.

You will recall that we discussed that the price asked by Vickers is the top price, and it is inconceivable that they could find other purchasers willing to pay so high a price.

I assume that after you have had your first discussions with Dewar and understand the situation, you will cable us fully so that we can be thinking about it back home. (There is a third rate classification for cables which is even much cheaper than the delayed rate, and I find you can do a lot of cabling for five dollars.)

I enclose copies of letters being sent today to Dewar and British Timken, announcing your coming. I also enclose copy of letter written them regarding the Timken Albia Patent Universal Joint.

Yours truly, ————, Secretary & Treasurer.

Stibbard, Gibson & Co.
(Thomas Cooper & Co.)

6th April, 1927.

DEAR SIRS:

We confirm cables exchanged with you as per copies enclosed.

We have instructed Messrs. Cooper Brothers & Co. to examine the accounts of British Timken, Ltd.

We have already been considering the position with respect to the name "Timken", and if this position can be improved in connection with the new arrangements. We do not know that there is very much which can be done with respect to the name in this country, but we shall further consider the matter and we shall also take up the question with the proper people in France and Germany.

Yours faithfully, ——.

Timken Roller Bearing Company.

6th February 1928.

D. P. Hess, Esq., The Timken Roller Bearing Company, Canton, Ohio, U. S. A.

Dear Mr. Hess,

Your letter of the 25th ultimo is to hand, setting out certain returns which you would like to receive. Dealing with them in the order of your letter—

(a) The monthly particulars of Industrial and Railroad Sales, showing the number of the various types, is one which can be prepared without any trouble and I am instructing Mr. Hobley to let you have this regularly every month.

(b) Quarterly Inventories of raw material, process, and finished goods.—The stock was actually taken as at December 31st, 1927, and as soon as the figures are available I will let you have same. The corresponding figures will then be available every month as they are prepared in conjunction with the Monthly Financial Statement and I could well arrange to let you have this monthly instead of quarterly, which I will do.

(c) As from October 1st last a more detailed classification of our Sales has been prepared on the lines discussed by you with Mr. Hobley. Such details will be embodied in the Monthly Financial Report as from January 1st, 1928. I enclose a draft sheet showing the form this will take, which I think will answer your purpose. Unfortunately, it will not be possible, without a great deal of work, to give corresponding information for the previous year although it will be possible, by tying together some of the items, to make certain comparisons with the totals under the various headings of the old statement.

[fol. 5040] B. T. Ld.

Date 6/2/—.

No. 1 To: D. P. Hess, Esq.,

I am pleased to be able to inform you that we are now pretty comfortably fixed up in the new Works and everyone is happy here.

With kind regards,

Yours sincerely, Wm. C. Dallow.

Mr. W. Dallow, Director, British Timken Limited, Birmingham, England.

Dear Mr. Dallow:

According to my recollection, when our Mr. Procter left for England I gave him quite a report with reference to statistics which we needed from your plant; and due to the fact that I am unable to get in touch with him at the present time, I cannot definitely state as to whether this was actually delivered to you or what your reaction was.

However, the situation has now come again to mind, and I am constantly being asked by our executives here, and namely Mr. Timken, for the information that was heretofore requested. I am enclosing a copy of it, and I will greatly appreciate your forwarding to me as promptly as possible. If there is certain data you do not have, please give me as much of this as possible.

Yours very truly, The Timken Roller Bearing Company, —— ——, Assistant to the President.

[fol. 5044] DEFENDANT'S EXHIBIT 112

British Timken, Limited

29th March, 1928.

D. P. Hess, Esq., Messrs The Timken Roller Bearing Co., Canton, Ohio, U.S.A.

Dear Mr. Hess,

In your letter of the 25th January you ask us to furnish certain information monthly in reference to our industrial sales, etc. We regret that there has been a little delay in getting through the details for January, and even now we are not quite clear as to how you would like us to furnish such data, and perhaps you will be good enough to criticize what we are enclosing herewith if it does not conform to your wishes. We are setting this out in the following manner:

1. Industrial Sales in Detail

List No. 1 attached shows our sales for the month of January, which total 5,528 bearings, and is classified under the headings that you use yourselves.

2. Railroad Sales

During the month of January no actual sales were effected of railway bearings, although two or three enquiries were being handled. One of these is for the Wagon Lit Railway Co.—perhaps the largest French Railway Company. Another enquiry being handled is from the Buenos Aires Great Western Railway, and we are expecting very shortly an order for a trial set. Another is for the London Underground Railway, but here there are certain difficulties in connection with the size of the box, which our Engineering Department have been discussing with you.

[fol. 5045] 3. Report on Industrial Business

Some information of interest covering new applications is given on Form No. 2 attached, and will indicate what we are doing. You know yourselves that quite a long time must elapse while a new customer is experimenting and trying out the bearings, and most of these will not become

good accounts for a long time. They are all being closely followed through.

4. Report on Automotive Business

On List No. 3 you will find particulars of the bearings we sold during January to the Automobile and Commercial Vehicle sections. The sales are analyzed under the various points of application, and this we think will be of interest to you. We also include details of the customers who have purchased such bearings.

Please let us know if the report in this form is what you desire or if you require it to be amplified in any way.

Yours faithfully, For British Timken Limited, ——

——.

Lists.

———

[fol. 5046] List No. 2

10th February, 1928

Report on New Business Handled During January—Industrial Division

C. O. Liebscher, Germany.

This concern has equipped 3 Milling machines throughout with Timken Bearings, and they are to be exhibited at the forthcoming Leipzig Fair.

J. Archdale & Co. Birmingham.

This is one of the wellknown Machine Tool Manufacturers here, and they are experimenting with 2 bearings in a Drilling machine head. They are well-informed as to what is happening in America amongst machine tool builders but their conservatism has up to now been responsible for their not using Timken bearings before.

Wanderer Werke A. G., Germany.

These clients have ordered some 600 bearings or more for use in Milling machines. It has come to us privately that they secured a set of our bearings some 18 months'

ago and experimented with them on their machine tools. They were astounded with the extraordinary results enjoyed, and the whole of their machines are now so equipped. They will be exhibiting their machines at the Leipzig Fair. The results have become known amongst other German machine tool makers, and a number of enquiries are now being handled as a result from smaller concerns.

Emil Schenker, Switzerland.

This is another machine tool maker who is equipping 2 Milling machines throughout on the works spindles and in the gearbox with our bearings. No. 3 bearings are being made up specially for the works spindles.

Kamenick & Co., Czecho Slovakia.

This is a Czecho Slovakian firm of machine tool makers who have experimented with a set of our bearings on Lathe Spindles and are now negotiating with us for bearings for 200 Lathes, so successful have been their trials.

Sentinel Waggon Works, Shrewsbury.

This firm are building an experimental rail coach to be used by one of the leading railway companies—London & North Eastern. This coach is equipped with our Timken bearings on the bevel gear drive

[fol. 5047] Thames Board Mills Ltd., Purfleet.

This is the largest firm of cardboard manufacturers in England, and they have been interested in the American Berloit Co., who you have supplied with bearings for their machines. They insist on our supplying rolls complete with bearings, and having for some time been in close connection with a firm called Messrs Whittaker & Co., who specialize in this class of work, we are working with them. A preliminary enquiry has come through for 22 sets of rollers and bearings, and on the results of these they will consider changing over the whole of their machines, which will involve some thousands of bearings. The industry of paper-making presents exceptional opportunities and other firms will follow the lead of this one if it is successful.

[fol. 5048] British Timken Limited. List No. 3.

Automobile Sales—January

Touring Cars—23,901 Bearings.

Front Hubs	59.2%
Pivots	4.0%
Rear Hubs	8.6%
Differential	9.0%
Pinion	4.0%
Steering Gear	0.5%
Fans	6.9%
Universal Joints	5.8%

Our Sales included deliveries to the principal British Motor manufacturers, such as—

Standard Motor Co. Ltd.
Arrol-Johnston & Aster Eng. Co. Ltd.
Hillman Motor Car Co. Ltd.
Humber Limited.
Talbot.
Vauxhall Motors Ltd. (a subsidiary of G.M.C.)
Bentley Motors Ltd.
Sunbeam Motor Car Co. Ltd.
Crossley Motors Ltd.
Star Eng. Co. Limited.
Alvis Car & Engineering Co. Ltd.
Daimler Co. Limited.
Beardmore (Paisley) Limited.
Bean Cars Limited.
Rover Co. Limited.
Lagonda Limited.

with others of smaller importance.

An order was also executed with Austro Fiat, one of the leading Austrian Companies, Adlerwerk A.G., a German concern—bearings for pinions—and also Horchwerke on differential job.

[fol. 5049] Commercial Vehicle Sales—January

Commercial Cars—11,004 Bearings.

Front Hubs	35.7%
Pivots	2.6%
Rear Hubs	36.6%
Differential	6.4%
Pinion	2.1%
Worm	8.2%
Worm (Dual)	1.9%
Fans	2.3%
Steering Gear	3.2%
Clutch	1.0%

January shipments were to all the leading British Commercial Vehicle builders, such as—

Karrier Motors Limited.
Guy Motors Ltd.
Dennis Bros. Ltd.
Bean Cars Limited.
Associated Equipment Co. Ltd.
Albion Motor Car Co. Ltd.
Leyland Motors Limited.
Maudslay Motor Co. Ltd.
Crossley Motors Limited.
John I. Thornycroft & Co. Ltd.
Tilling-Stevens Motors Ltd.
Vulcan Motor & Eng. Co. Ltd.
Star Engineering Co. Ltd.
Scammell Lorries Limited.
Halley Motors Limited.
Commer Cars Limited.

and a few others of smaller importance.

Overseas manufacturers included—

Minerva, of Belgium.
Mannesmann Mulag, of Germany, and
Lancia of Italy.

Some months ago we started a propaganda on the dual worm mounting, similar to the T.D.A. Co. and several of the leading lorry makers have taken it up. Indications are that it is likely to become a popular form of final drive.

[fol. 5050] DEFENDANT'S EXHIBIT 113

British Timken, Limited

8th October, 1929.

DPH-HGW. WD/NB.

D. P. Hess Esq., The Timken Roller Bearing Company, Canton, Ohio, U. S. A.

DEAR MR. HESS:

I am sorry that through pressure of work I have been unable to deal earlier with your letter of September 5th (received Sept. 19th) enclosing copy of the List which was handed to me by Mr. Porter containing particulars of your requirements of British Timken Data.

This List was discussed at considerable length by Mr. Porter, Mr. Dewar and myself on the occasion of Mr. Porter's visit early in March, when we explained to him the difficulties which presented themselves in regard to some of the items. However, immediate steps were taken to prepare for you what was possible at that time, and in a letter written to you enclosing one of these Returns, dated March 14th last, I referred to the explanations which had been given to Mr. Porter.

Prior to that date we were regularly sending to you certain items which were included in your list, and since then we have added quite a number.

In an endeavour to clear up the situation at the moment, I will set out the position in the order of your list, as underlined, in regard to each item:

Monthly—Report for Each Department Showing

(1) Pcs. produced by part number. Detailed returns in hand (see my letter to Mr. Strough dated Aug. 29th).

Hours worked. For the present this is impossible (see my letter to Mr. Strough dated Aug. 29th).

Wages paid. Units produced. Cost per Unit. Efficiency of Operation. By groups of machines.)

With the exception of Assembling Section this information is being sent to you regularly every month in Returns [fol. 5051] "B", "D", "G" and "H".

(2) Total Indirect Labor expense for above production.

(3) Total supervision expense for above production.

Shown in above-mentioned monthly Returns "B", "D", "G" and "H" and also included in monthly Return "A".

(4) Number of pcs. scrapped by reason and value of same. Detailed Returns in hand (see my letter to Mr. Strough dated Aug. 29th).

(5) Expense of Dept. in detail i.e., tools, oils, belting, diamonds, bone meal, fuel, power. Given in monthly Return "A".

(6) General departmental overhead as depreciation taxes, insurance, rent. Given in monthly Return "A".

Monthly—Summary of Total Cost of Sales Showing

(1) Material Cost.
(2) Labor Cost (Direct, Indirect Supervision).
(3) Expense Cost (In detail).
(4) Total Manufacturing Cost.

This information is sent to you monthly by Mr. Squire and was specifically referred to in his letter dated Apl. 16th, 1929.

(5) Units produced. (See J.F.S. about variation in units.) Is this the aggregate Unit Value of the Sales of Bearings for the month, obtainable by extending the respective quantities of each Bearing at fixed Unit Values, such Unit Values being made up by adding together the detailed operation Units of each piece number in the Bearing (referred to in Item (1) "Monthly—Report for each Department showing")? If so, we shall be unable to give this until such time as we have fixed the Units for all operations and all pieces (including assembling) and obtained a total Units for each Bearing. In my letter of October 1st I informed you that we had only recently fixed the Units for Cone Race and Rib grinding, and we have not yet assessed the Assembling.

I do not understand "(See J.F.S. about variation in units)".

(6) Mfg. cost per unit. Is this (4) divided by (5)?
(7) General Overhead (In detail inc. depreciation, rents, taxes, ins.)
(8) Total Cost of Sales.

This information is sent to you monthly by Mr. Squire and was specifically referred to and explained in his letter dated April 16th, 1929.

[fol. 5052] Monthly.

(1) Force Report (T.R.B. Amer. forms). This is being sent to you every month—Return "E".

(2) Department payroll (T.R.B. Amer. forms). This is being sent to you every month—Return "F".

(3) Cups and Cones produced as well as shipped. Particulars of Cups and Cones "produced" are given to you in our Returns "B", "D" and "G" and also in Return "C", also a separate return of Bearings "assembled" monthly (current and corresponding period previous year). Particulars of Cups and Cones "shipped" are not given by us separately, but the Bearings Invoiced are shown in our Weekly Return of Orders Received, Invoiced and In Hand.

Monthly—Financial Status, showing cash on hand, bank or other indebtedness, advance to subsidiary companies. (Inventories in value—Raw Material, Process Finished).

The information referred to in the first part of this item has not been prepared for you in the form of any special "Return". It can be supplied. That in parenthesis is sent to you monthly by Mr. Squire and was specifically referred to in his letter dated April 16th, 1929.

Quarterly.

(1) List of new machinery put into operation and savings resulting therefrom—also cost of this machinery.

You have been consulted in regard to all new Machinery purchased; the details of such Machinery when it has been put into operation have been embodied in Returns "B", "D", "G" and "H".

In your letter of September 7th, 1929, you ask for "a new list of the Machinery you have installed at Birmingham" and in my reply of September 21st I informed you that I am having this information prepared. This is taking the form of a complete detailed copy of our Fixed Plant Register as at December 31st 1928, and will show each individual Machine and the value of each item, making up the total shown in our Balance Sheet at that date. This will be supplemented by particulars of Machines which have been installed since December 31st last, and the list can be readily brought up to date from time to time.

Generally speaking, the cost of new Plant installed will be recovered in savings effected in 2–3 years.

[fol. 5053] (2) List of machinery obsoleted. Where Machines have been obsoleted since December 31st last I will have same shown on the Inventory above referred to. None have been actually disposed of but some have been removed to an Obsolete Stores.

(3) List of new machinery on order, delivery promised and cost. If the Inventory is brought up to date from time to time as suggested in para. (1) above, you doubtless will agree this will suffice, as you are fully acquainted with our moves in this direction.

(4) Raw material prices and tonnage of material purchased for quarter. Show parts purchased from American Timken. In reply to your letter of September 7th, 1929, I sent you under cover of my letter of September 27th particulars of Tubes and Solids *issued* from our Stores to the Automatic Section for the period 8 months ended August 31st, 1929. Similar information could be supplied from time to time, or Quarterly if you so desire, much more readily than the "purchases". The American supplies you will identify. As regards "prices" we have advised you on several occasions and can do so again if you wish it.

(5) Quantity of bearings sold and part number. Our weekly Return to you of "Orders Received, Invoiced and In Hand" gives the *total* Bearings sold. To prepare a Return under part numbers in detail Quarterly will involve extra work.

(6) Part numbers made from (a) forgings (b) solids bars. In a manner this can be deduced from our monthly "D" Return. Apart from this we do not at present compile such information.

(7) Improved method of manufacture other than listed in (1). From cables and correspondence which passes between us we think you are in a position to know what we are doing in this direction.

Semi Annually

(1) List of staff and salaries, bonus, paid cash and occupation. This information was given under cover of my letter of September 21st, 1929 (in reply to yours of September 7th) and can be brought up to date periodically.

(2) Financial budget for next half year.

(3) Report on performance against budget for ½ year ended. I would suggest that you discuss these points with Mr. Dewar when you see him at the end of the month.

(4) Sales review showing new business received and value of same for ½ year ended—sales prospects by divisions (R.R. Ind. Auto. etc.) for next half year.

[fol. 5054] Mr. Hobley posts you periodically on these points.

(5) Competitors production. Rather an unknown quantity, but I believe Mr. Dewar has informed you on this point from time to time as far as possible.

(6) Value of business lost and explanation of same. Very difficult to determine.

Annually

(1) Inventory of all parts. Can of course be done but involves a lot of work.

(2) List of machinery. Covered in "Quarterly—Item (1)".

From the above you will see that I am already supplying to you regularly, or am about to supply, quite a lot of the information which you have asked for. In this respect I shall be glad to hear in detail exactly how far this information serves your purpose or how (if it can be readily altered) you would like it re-arranged.

As regards the items with which I have so far been unable to deal, will you please study very carefully what I have said and let me have your considered replies as to whether you still desire to have the information and if so the form that it should take.

Yours sincerely, for British Timken Limited, Wm. C. Dallow, Director.

[fol. 5055] DEFENDANT'S EXHIBIT 114

May 27, 1930.

British Timken Limited, Birmingham, England. Attention —Mr. Wm. Dallow

Gentlemen:

We are enclosing the comparative manufacturing costs for Canton, Columbus and Birmingham for the month of January, 1930.

In accordance with the request of your letter of the 10th ultimate, we are also enclosing a supplementary statement showing the way we have applied the expense items shown on your statements. We have not considered it necessary to place the amounts of these items on this supplementary sheet inasmuch as these amounts are already set up on the enclosed accomplishment sheet.

You will note that there has been approximately a 20% increase in the direct labor item and a corresponding decrease of approximately 20% in the indirect labor item which is mainly due to the inclusion of the viewing item under direct labor.

Very truly yours, The Timken Roller Bearing Company, —— ——, Assistant to the President.

[fol. 5059] DEFENDANT'S EXHIBIT 115

September 11, 1931.

Mr. William Dallow,
British Timken Limited,
Birmingham, England.

Dear Mr. Dallow:

We have just made a comparison of the British Timken June costs as compared with the Canton and Columbus Plants, and I am enclosing herewith the results of this comparison. You have certainly made a decided improvement in your over-all costs and this in itself is very encouraging. Both your labor and scrap seem to us to be rather high and it is the writer's thought that this high labor variation is probably due to the great many changes which you have owing to your smaller volume. However, I do think that your scrap losses could be very materially reduced and I would very much appreciate receiving your thoughts on these last items.

At any rate you have done a mighty fine job and all of us here in Canton are very proud to be able to say so. Keep up the good work and we hope very much that you can better our performance at Canton and Columbus.

Very truly yours, The Timken Roller Bearing Company, —— ——, Assistant to the President.

[fol. 5060] DEFENDANT'S EXHIBIT 116

British Timken Limited

MSUD/NB. 20th October, 1931.

D. P. Hess Esq.,
The Timken Roller Bearing Company,
Canton, Ohio, U. S. A.

My dear Don,

I am hoping to hear from you soon that you will be coming over; in case, however, you don't there are one or two things I would like to write about.

The break in the Sterling Dollar Exchange has made it inadvisable, and indeed sometimes impossible, to purchase from you more than our actual necessities, so that I fear our purchases of tubing from you will be nil for the present.

Sweden abandoned the Gold Standard within a fortnight of our doing so, consequently the London-Stockholm Exchange is much nearer parity than London-New York. In any event, I do not anticipate having to pay Sandviken more in sterling for Tubing than perhaps 5%, as we have a years contract with them still to run in sterling.

As Canada has now followed our lead and come off the Gold Standard too, we shall of course be delighted to help you in any way we can in delivering of Bearings to that Country, where now we should get not only the benefit of the exchange but also the benefit of the Preferential Tariff on British Goods.

Mr. Dallow has been giving an enormous amount of thought and attention to the question of Standard Costs and he has come to the conclusion that for June 1931, exclusive of material, our Standard Labour and Expense is almost exactly double your Standard. I can understand that our grinding cost is higher than yours, as all our bearings are ground twice being to No. 2 specification (incidentally you will never disclose what percentage of your bearing production is No. 1 and No. 4) and in spite of this it would appear that our actual floor to floor grinding times [fol. 5061] are as good as yours. Where we lose seems to be in having to change over so often from one symbol to another. Our weakest spot is without question our Automatic Section, and I am writing to ask you whether it is possible for you, say in your June Standard figures, to split up your Labour and Expense under the following Sections:

Automatics,
Grinding,
Hardening,
Press,
Assembling.

Of our total Productive Labour (for June) our Automatic Section took 36% and our Grinding Section 43%. I should be most interested to know how yours compare with this. Whilst on this subject, I wonder if you could find a

man who knows your Gridley methods (for preference an Englishman) whom we could take on here for a year or so to help us to get nearer to your times and your efficiencies, and your scrap figures.

I regard the outlook here as fairly bright, particularly in industrial work, but of course the fact will always remain that no one Country can really be prosperous for very long unless the others prosper too.

Yours very sincerely, Michael B. U. Dewar.

[fol. 5062] DEFENDANT'S EXHIBIT 117

November 6, 1931.

Mr. M. B. U. Dewar,
10, Mayfair Place,
London, W.1, England.

Dear Michael:

Your letter of the 20th arrived with its very interesting information and we will certainly do all we can to assist you and Dallow in your cost analysis problems. I note Dallow's analysis of labor and expense being double our standard. We have of course reached this same conclusion and there is no question but that you are correct in your assumption that a large part of this difference is due to your smaller quantities and various changes from one symbol to another. The writer has studied your production sheets and data at great length and frankly I am absolutely satisfied that you are going to do considerably better than double our standard cost. My conclusion is that you will reach one and one half times our standard costs even in view of the heretofore mentioned smaller quantities and changes from one symbol to another. In this connection you may possibly build up your process inventory to some extent, but I think this a very minor item in the whole problem, and I am wondering if a good deal of your trouble is not due particularly in your screw machines to the slowness in changing from one size to another. During my regime at Columbus and also by experience here at Canton dating back several years ago, I found it was quite customary for linemen and operators to take several extra hours in making changes, due to the fact that these changes were socalled

credit time. Of course, as you and Dallow can readily realize, the more time taken in changing the less production time is available and therefore your net production is bound to be lower.

As I recall your situation when I visited you—which seems to be verified by yourself and Fegan —, your problem is that satisfactory set-up men are hard to get, and I am wondering if it might not be possible, when we send over one of our Gridley linemen which I will discuss later in this letter, to start a little school for the education of set-up men. As you can realize, it is rather hard from a study of records and distance of four thousand miles away to be of very great assistance to you, but I am giving all these thoughts for what they are worth.

[fol. 5063] I would also suggest that Dallow keep track of the number of changes in the main productive department, automatic and grinding, for a month, together with the time lost in changing, as compared with productive time, and we will do the same thing here at Canton so that in this way we can analyze this problem a little more in detail. If this appeals to you, please advise me and I will have the necessary machinery set-up here for it.

With reference to your inquiry on your June figures regarding splitting up labor and expenses, our statistical department is preparing this data and it will go forward to Dallow in the very near future.

Now, with reference to your No. 1 and No. 4 specifications, as compared with No. 2 grinding, please let me set your mind at rest—which I thought I had done many summers ago. Our production runs normally 75% No. 4 product and 25% #2 product (we no longer have a No. 1 specification). Our No. 2 product is now the same as your product, i.e., two grinds on the inside of the cups and two grinds on the outside of the cone. I think you will find that Fegan is very familiar with this, as I personally spent considerable time in going over it with him and explaining the why and the wherefore of it. Incidentally, in comparing our standard with your cost sheet you can calculate on the above basis and be correct practically all the time. One thing, however, should be borne in mind and that is in the efficiency comparson that we have been sending both to British Timken and French Timken our comparisons and made only on No. 2 specifications, as we

felt this was the only accurate way to make efficiency comparisons.

We have just closed down our Columbus Plant and within the next week or ten days we will select for you one of our best Gridley linemen and arrange to send him to England. If possible we will send an Englishman, but of the two men I have in mind neither as far as I know is of English birth, but I am absolutely satisfied that either one will fit into your problem very nicely. One in particular is a very quiet but thorough type of individual and extremely well versed in Gridley accuracy of product. In fact, I personally think he is the best Gridley lineman at either of our plants and it is just a problem in my mind in getting his consent to go to England. I will cable you further on this subject very shortly.

Of course, all of us here have been very much interested in the effect of England going off the gold standard and particularly as to how it effects your operations and costs. We realize that you cannot purchase tubing from us, but we are all very anxious to have your report on the quality and general satisfaction you obtained with our tubing.

There is no question but that you will have to assist us in our problems in Canada and this is now being worked out with the Canadian Customs Authorities.

With kind personal regards, to you and your entire organization, I am,

Very truly yours, The Timken Roller Bearing Company, —— ——, Asistant to the President.

PHK:AH
File 4.1

[fol. 5064] DEFENDANT'S EXHIBIT 118

November 25, 1931.

Mr. M. B. U. Dewar, 10, Mayfair Place, London, W. 1, England.

DEAR MICHAEL:

We have finally gotten together the data you requested with reference to our standard costs based on June, 1931, and it is going forward to Mr. Dallow. I have not attempted

personally to go over all of this data, but, if it is not just what you want, do not hesitate to call upon us, as we are more than willing to give you all the help possible.

So far I am not having much luck in getting the right kind of a man to send over to you to assist in the operation of you Gridley automatics, but we will probably come to a definite conclusion on this within the next few days, and I will get in touch with you again.

With reference to the matter of tubing, we quite realize the situation you are now in due to the break in sterling, but at the same time we are very anxious to know just how our tubing performed and if it is satisfactory to both you and Ransome & Marles.

Very truly yours, The Timken Roller Bearing Company, —— ——, Assistant to the President.

DPH:PHK.
File 4.1.

Pardon my neglect—25% of our production is #2 or 3 and balance 75% is #4.

[fol. 5065] DEFENDANT'S EXHIBIT 119

27th November, 1931.

D. P. Hess, Esq., Timken Roller Bearing Co., Canton, Ohio.

MY DEAR DON:

Although I hope to have the pleasure of talking with you in the near future, I feel I must write to you regarding your letter of November 6th on the subject of actual and standard costs of Canton, Columbus and Birmingham.

So far as the Labour and Expense items go, Dallow points out that as his Standards are approximately double your Standards, he fails to see how it is going to be possible to get Actuals down to one and a half times your Standards.

I note your remarks regarding probable loss of time in changing over in the Automatic Section. As you are doubtless aware, our custom (not only in the Automatic Department but in the whole of our Departments) is to pay wages on a piece work basis for good work produced,

but as allowance is made in fixing such prices to cover changing over there is the direct incentive for the men to get through the change as quickly as possible as it is in their interests to do so. In view of this I do not think it would serve any useful purpose to record the time taken in changing over. This was done at some length when our Time Units (which similarly provide for changing over) were first fixed, and numerous checks have been made from time to time. We have a man doing nothing else but check floor to floor times in our various Departments, and it is [fol. 5066] from this information that we know that it is chiefly in our Automatic Sections that our times are not nearly as good as yours. However, now that you have agreed to send us one of your linesmen, I am hoping for big things in this respect.

Regarding our proportions of No. 4 and No. 2 specifications, which you now give as 75% and 25%, respectively, Dallow has shown me a letter signed by Riley dated August 27th 1930, in which he states that you "have only one set of standard costs and those are calculated on what we consider a number four specification. . . . This same standard has been used in determination of the standard values used in the preparation of the British Timken Manufacturing Statement for the month of January, and provided the Bearings manufactured at Birmingham are of a grade above our number four specification, then the Statement does not in that case give full credit in the standard values used"..

I suppose that you have not altered your method and that the June 1931 comparison is based on similar figures. You should, however, bear in mind that the whole of B. T.'s production is manufactured under the No. 2 conditions, and allowance surely should be made for this. The question I would like to ask you is to what extent would your findings that B. T. cost of Labour and Expense (which you show as 214.8% on Canton Standard) be modified provided this factor were taken into consideration?

I note that in the "efficiency" comparison you have provided for it.

I shall be pleased to receive your promised cable advising me of your final decision regarding a linesman coming over.

As regards a report on the quality of your tubing, we have not really had enough experience to make any remarks.

With kindest regards, Yours very sincerely, Michael B. U. Dewar.

British Timken Limited

WD/RMW. 2nd December, 1938.

Mr. W. Robert Timken, The Timken Roller Bearing Company, Canton, Ohio, U.S.A.

DEAR SIR,

We enclose our Productive Material Issues Statement for the months of August and September, 1938.

Yours faithfully, for British Timken Limited,
Wm. Dallow, Director.

Enclosures.

[fol. 5079] DEFENDANT'S EXHIBIT 123

August 6, 1930.

British Timken Limited, Birmingham, England.

Attention—Mr. Wm. Dallow.

GENTLEMEN:

We are anxious to have your revised list of the machinery you have installed at the Birmingham Plant since the issue of your inventory covering machinery in your plant mailed us last year, for as you will remember you mentioned in your letter of October 9th, 1929 that this list could be readily brought up to date from time to time.

Thanking you for your usual consideration in matters of this kind, we are

Very truly yours, The Timken Roller Bearing Company, —— ——, Assistant to the President.

CMC-REF
File 9.4

[fol. 5080] DEFENDANT'S EXHIBIT 124

British Timken Limited

15th August, 1930.

Mr. D. P. Hess, The Timken Roller Bearing Co., Canton, Ohio. U.S.A.

DEAR MR. HESS,

Your letter of the 6th inst. to hand to-day asking me to furnish you with particulars of Machinery installed since the date of the last Inventory sent to you in October last. I have given instructions for an up-to-date Inventory to be prepared and will send same on to you at an early date.

Your sincerely, Wm. Dallow, Director.

[fol. 5081] DEFENDANT'S EXHIBIT 125

British Timken Limited

October 1st, 1930.

D. P. Hess Esq., The Timken Roller Bearing Company, Canton, Ohio, U.S.A.

DEAR SIR,

With reference to your letter of the 6th August, acknowledged by Mr. Dallow on the 15th idem, regarding Fixed Plant installed at these Works, we have now compiled lists (enclosed herewith) which we trust will give you the information required.

In regard to the lists sent to you last year for the period —9 months to September 30th, 1929—these, of course, merely represented the position in our records up to that date, but before closing our books for the year, certain adjustments had to be made.

To make the position perfectly clear, therefore, we are now sending to you new lists covering the whole of 1929, which take the place of the sheets above referred to.

We are also enclosing a Summary showing exactly how the Book Value, as shown in our accounts at December 31st, 1929, namely, £107,501 0. 11. ($522,000) is arrived at.

In regard to our purchases during the present year, we are also sending you detailed lists of these, totalling £11240 11. 6d. It is, however, necessary to explain that numerous adjustments represented mainly by Sales and obsolescence will have to be made before the figures for the year are completed.

[fol. 5082] In the early part of 1931, and subsequent years, we propose to send to you complete lists up to the end of the previous December, which will put you in possession of definite figures at the earliest possible moment.

Trusting this will be of assistance to you,

We are, Yours faithfully, for British Timken Limited, R. O. Squire.

Enclosure.
AMH.

[fol. 5084] DEFENDANT'S EXHIBIT 127

August 19, 1932.

Messrs. H. H. Timken Sr., H. H. Timken Jr., Ernst, Spray, Umstattd and Brower.

Following is a brief summary of results for the first half of 1932 covering British Timken operations:

Sales for this period were $660,000.00 as compared with $1,180,000.00 for the similar period of last year. This large decline was due primarily to the loss of Russian business which for the first six months of 1931 amounted to $330,000.00 against $6,300 for this year. If we eliminate this Russian business from our sales figures for both years to date, we find that 1932 sales are 20% below last years. Another point we must remember is that Mr. Dewar advised us that his selling prices on the average had declined 14% from last year.

We are making real headway in developing Industrial Sales at British Timken. While the figures shown an 8% decline from the first half of last year, our second quarter business was 10% ahead of last year. The first rolling mill equipped with British Timken bearings recently went into operation and is meeting every guarantee of its makers. Our engineering department at British Timken is swamped with industrial layout work, and Mr. Dewar wants to keep our engineer Moreland for another year. England generally has realized they must modernize their industrial equipment, and we are going to share very largely in this development.

Another encouraging factor is the development of our railroad business. We received an order recently for 15 cars from the London Midland & Scottish Railway similar to the type which have operated so successfully on the Metropolitan Railway during the past year. The former is the largest railway in England and is considered one of the best managed and financed not only in England but on the Continent as well. Recognition of our product by this road will be of immense help to us throughout Europe. We are also equipping a trial car for the Belgian State Railways.

Profits for the first half were $36,000.00 as against $270,000.00 for the same period in 1931. This rather indicates

that with sales of $1,200,000.00 annually we will just about break even.

Progress is being made in the development of our straight roller and ball bearing business. We expect to be marketing the former type bearing by October of this year and the latter by the Spring of 1933.

D. P. Hess.

Note A:—All figures are based on the pound sterling at par.

Note B:—French Timken and German Timken figures for the first half of 1932 are not yet available.

Cheston Road, Aston,
Birmingham, England

[fol. 5087] Report on British Timken Limited

April 8, 1932.

Sales

During 1931 British Timken total sales were $1,860,000 which is a decrease of 1.3% under 1930. As has been our experience in England for the past few years, commercial vehicles and service represent the largest part of our sales or 31% and 25% respectively or a total of approximately $1,040,000. It is rather interesting to know, however, that, while these figures represent the monetary value of these sales, the total number of bearings shipped for commercial and passenger car vehicles is approximately the same,

although the latter represent only 10% of our gross sales in monetary value. This figure, of course, includes the Ford business, as we are receiving all of this business available from the British Ford plant.

During the past year approximately 68,000 commercial vehicles were produced in England and with the exception of Chevrolet, Austin, Morris, and Hillman we are represented in at least one position on every truck produced. To put it another way, Timken bearings are used on 97% of the commercial vehicles in England, excluding Chevrolet (see Exhibit "A"). Prices range from our #14 to #16, but we are now faced with severe S.K.F. competition, who are now equipped in England to make truck size bearings. During the past year this latter company has quoted several of our customers and during the writer's visit Leland Motors, one of our best accounts, called up and stated S.K.F. had just quoted them the equivalent of our #9 price, which of course is lower than our costs at British Timken. There is no question but that S.K.F. will try to get into this commercial vehicle picture in England, because:

(1) Prices are still at a level where profit can be earned which is contrary to automobile prices generally, as will be noted later, and

(2) This service business is attractive.

In the strictly passenger car field our sales in dollars were, as heretofore mentioned, comparatively small, due primarily to the fact that we do not have any bearings on the Austin and Morris cars. These two manufacturers produce practically 50% of the automobiles in England during the past year, which was 159,000 vehicles (see Exhibit "B"). Of the remaining passenger car output we are represented in at least one position in all but six of the manufacturers, which latter control a production of about 20,000 cars. One of these companies, Vauxhall, is controlled by General Motors; another, Woolesley, is controlled by Morris; and of the remaining four, two companies (Riley and Jewett) are dependent for the bulk of their production on cars in the class of the Baby and 12 H.P. Austin. Most of the small cars use ball bearings and purchase them at extremely low prices (85 and 2½% off list).

A careful study was made of the possibility of obtaining some of the Austin and Morris business, but the situation

is not at all encouraging. Morris is definitely tied up with Ransome & Marles (ball bearing manufacturers) chiefly on [fol. 5088] account of past relationships, which, I was told, originated in the early days of Morris' career when he was having difficulty to get funds to finance his activities and Ransome & Marles, either by actual cash advances or long term credits, materially assisted him. At one time Morris was on the Board of Ransome & Marles and this relationship is still very close. In the case of Austin Motors, Sir Herbert Austin very bluntly told Mr. Dewar that he could see absolutely no advantage in the use of our bearings on his small cars which represent the bulk of his output and that ball bearings had been entirely satisfactory and under no circumstances would a change be made unless he had trouble and regardless of theoretical savings due to smaller bearings and mountings. Incidentally, in order to test out this statement, about six months ago we quoted Austin prices approximately 20% under our costs and received absolutely no business. It only forced ball bearings prices down and both Morris and Austin are being quoted discounts of 85 and 5 from the British ball bearing list, which, it must be understood, is about 20% under the American list.

We are trying very hard to swing more automobile manufacturers to our bearings on pinion mountings, but invariably meet the old story of lower ball bearing prices, combined with good performance. It is to be noted that our selling price for passenger car vehicles is approximately at cost and the only opportunity we have of getting any of this business is apparently by quoting materially lower prices which is impossible under present manufacturing costs (see Manufacturing).

One of the outstanding points in our British sales is the decline in service bearing sales for American made cars. England, like practically all other Continental countries during the past few years, has materially raised the tariff on American made vehicles, which has had a decided effect on the use of American cars. The best evidence of this is in an analysis of our 1931 service sales in England which are as follows:

Commercial vehicles	80%
Ford	10%
All others	10%

Here again we are getting the usual competition from S.K.F., but, due to the use of our bearings in the original equipment, we are able to get a large part of this service business at discounts of approximately 50% from list.

We continue to do a good export service business and in 1931 this represented 9½% of our total sales or approximately $175,000. Due to Great Britain being off the gold standard, we hope to increase this business during 1932, but are beginning to feel RIV competition, especially in southern Europe.

Another interesting point in the service picture is the business coming into England from American territory, chiefly from Japan, Brazil, and the Argentine, due to the fact that British bearings (being off the gold standard) are at lower prices than American product. As a typical example, S. Kimura, of Tokio, insists on buying British made bearings and has told us that, if he cannot get British Timken bearings, he will buy S.K.F. British Timken quote him 50% off the British list which in actual American figures is equivalent to approximately 65 off our list. The same condition exists in Brazil and we have had a couple of instances of it from Buenos Aires.

[fol. 5089] Our tentative plan for handling this is as follows: British Timken will accept these orders coming into England and advise the customer that, due to their country being in American territory, they are forwarding the order to us and it will be shipped either from New York or San Francisco at 60% off the American list. If the customer objects or insists on British bearings, British Timken will of course execute the order, and the writer is inclinded to think this is going to happen in practically all cases, but it will at least give us here in America some chance of executing these orders at American prices. It might be well to mention at this time that we are going to feel the effect of this situation in all American territory, as S.K.F., with Sweden off the gold standard, can certainly under-sell us if they are inclined to do so. In Canada of course we can use British made bearings and the writer discussed the entire Canadian situation with the Canadian Government representatives in London. We recently shipped as a test case a quantity of bearings from Birmingham at the maximum British discount of 80% and which are billed to us by British Timken at #11 price. England of

course is in the favored nation position on Canadian tariffs and this will permit these bearings to be rated at Ottawa with the minimum amount of duty, as compared with the duty on American made bearings of 35%. The duty will be paid at the discount price of 80% off list.

British Timken are very aggressively going after South African and Australian markets. Up to this time they have had distributors representing them the same as we are represented in South America, but starting January 1st of this year they have an individual representative in each of these countries and have already noticed improved results. It is simply the old story of a better job being done by someone directly responsible to the home office.

Due to the fact that we now have definite American representatives in Japan and China, it was decided that Hong Kong, formerly British Timken territory, would be transferred to us, and this has been arranged.

The Ford tractor situation at Cork, Ireland, is chaotic and latest reports indicate there are less than 100 people employed there. We are still carrying approximately 3,000 sets of tractor bearings at Birmingham which were made up on orders from Ford, but on which delivery has not been specified.

Due to the general improvement in industrial conditions in England our prospects for industrial bearing business is definitely brighter. During 1931 we increase our sales 7%, reaching a total of $160,000. During the writer's visit we made a study of this industrial situation based on inquiries received at Birmingham, and we found it necessary to materially increase the engineering staff, as from the best calculations available they had approximately four months' work ahead of them. It was decided to have our Mr. Moreland, industrial engineer, remain for the balance of the year with headquarters at Birmingham. British Timken engineering practice in this division follows exactly our American practice. The prospects look particularly bright for rolling mill business. England has recently passed a 10% tariff on practically everything except foodstuffs and one of the industries which will feel the benefit of this tariff is the steel industry.

In fact, recent figures show that the British steel production has passed Germany for the first time since the war and a point that is being very seriously discussed in [fol. 5090] England is the possibility of increasing this

tariff on steel from 10% to 33⅓%. We are advised that the British Government, together with the Bank of England, thoroughly recognizes the necessity of rehabilitating and modernizing three major industries, namely, ship building, textiles, and steel, and that the program for doing so is now well under way and is being handled by a separate corporation whose identity is secret, but which is apparently dominated by the Bank of England. So far this program has functioned to the extent of shutting down in the ship building industry old and obsolete plants and concentrating activities in more modern ones located near shipping centers. I was told this move is now on in the steel industry and will reach culmination within the next two years. I discussed this British steel situation in considerable detail with Mr. H. E. Cooper in the office of the American Consul General who specializes in this particular phase of the work, and also with the directors and officials of the Wellman-Seaver Rolling Mill Company, who are one of the largest builders of rolling mills and miscellaneous steel equipment in England. The latter are busier than they have been in 15 years and are studying very carefully all recent American installations. This of course means that our bearings are receiving considerable attention and further evidence of this can be readily seen in great numbers of inquiries which we are receiving at Birmingham. So far we have only received one order for large steel mill bearings and this is for equipment for a four-high cluster type sheet mill similar to the kind built by the E. W. Bliss Company of Salem, Ohio.

Railroad bearing prospects in England are also quite encouraging. During 1931 we equipped and had in operation 35 cars on the Metropolitan railways, one of the smaller systems running a city and suburban service, both underground and surface, in London and adjacent territory. The writer spent considerable time with Mr. George Hally, traffic manager, who is very enthusiastic about our bearings. This man is a typical British engineer and made very exhaustive studies of our bearings in test car service before adopting them. His report and various calculations showed a savings of 8%, but he told me their present figures showed they were actually getting from 14% to 17%. Detailed figures covering this data are shown on Exhibit C and were the basis of an additional order for 65 cars which are now building.

This particular type of service in which these bearings are used is very interesting. The Baker Street Station out of which most of these trains run is in the heart of London and during the rush hours 45 trains per hour are operated. These trains contain seven cars and many of them are on half minute schedules. These figures sounded unbelievable to me, so I went to Baker Street to watch this service during the rush hours, and there is no question but that it is true. During my stay in England we had what is considered quite a cold spell and Mr. Hally had considerable trouble with hot boxes. Naturally running on these schedules any kind of a delay almost disrupted the service and he told me that the most gratifying thing of all was that the five Timken trains ran without a single minute's delay and were the only ones he could count on 100% of the time. He told me before several of his associates that there would never be another plain bearing car purchased by Metropolitan as long as he was traffic manager. The excellent performance of our bearings for Metropolitan is known all over England and is receiving a great deal of attention.

The London, Midland & Scottish Railroad, the largest in England, have just sent us an inquiry covering 400 bearings for 50 cars for service similar to the Metropolitan. We are working hard to obtain this order, as to have our [fol. 5091] bearings on the L. M. S. means that we are accepted in England in every sense of the word, and at my leaving everything indicated that we would obtain this order. The L. M. S. engineers spent three days riding the Metropolitan trains and analyzing all of Mr. Hally's figures. Their men told us that Mr. Hally's figures were too conservative and that their report would certainly be favorable. A detailed analysis of the British railroad situation with reference to the larger companies is shown in Exhibit "D".

Sales Engineering

There has always been a doubt in our minds as to the British Timken sales engineering policy. Mr. Wood, chief engineer, in our opinion is inclined to be too conservative and the writer discussed this matter quite at length with both Mr. Wood and Mr. Dewar. It seems there are a great many cases where Mr. Wood is handicapped by

customers demanding either metric size bearings or where our bearings must be fitted with only the minimum change in housings, closures, etc. Many times this means that we must fit larger Timken bearings than would be the normal American practice if we had a free hand in presenting a bearing of sufficient load capacity to handle a given job and where there were no limiting factors such as to make them interchangeable with ball bearings. I asked Mr. Wood point blank if he followed American engineering practice in using the smallest bearings possible wherever he was not limited by other considerations. He replied definitely "Yes" and in support of his conclusions he has presented a list of British Timken applications attached hereto and shown as Exhibit "E" which in commercial vehicles in particular show that they load their bearings even more than we do in America.

Mr. Wood, Mr. Dewar, and I went over several applications shown on these sheets and I satisfied in my own mind that the British Timken engineering policy is perfectly sound from the standpoint of British conditions. The question of the calculation of bearing loads was also discussed in detail and Mr. Wood told me that while they used a different formula than Canton, in the end they accomplished the same result. In other words, British Timken takes into consideration at all times thrust loads, whereas we in America disregard the thrust load in certain cases and calculate only the radial load. Both Mr. Wood and Mr. Dewar stated this was absolutely necessary in England and on the Continent, because S.K.F. used exactly the same formula and British engineers are very insistent in knowing exactly how we calculate loads and very often check our figures down to the minutest detail.

We must also bear in mind that in England particularly there is no standardization of engineering such as is used in this country and every British engineer takes pride in having something just a little bit different than his competitor. Naturally, while we do not like this, we have to meet the demands of our customers and it quite often forces us to use mountings that would seem rather inconsistent with American practice. Even in industrial engineering we have met some criticism of American practice, but always, as mentioned before, we have succeeded in convincing our customers that it is far better to follow Ameri-

can practice which is borne out of experience than mere theoretical load calculations, etc.

The entire British Timken sales organization and method of operation was discussed with Mr. Dewar and the plan is to make changes in the line-up in the very near future. These changes will be in the direction of conforming exactly [fol. 5092] to the American procedure and a man is to be appointed in charge of industrial sales. Mr. Hobley at present is in charge of all sales. The latter will be placed in charge of automotive and service sales. Railroad sales at present handled separately will be combined with industrial sales. British Timken are using the same procedure that we do in America, i. e., train men in the factory and put them on the sales staff as soon as possible, and there is no question but that Mr. Dewar and Mr. Pascoe are very active in the entire sales picture.

Ball Bearings

As is generally know, Mr. Dewar and the British Timken board of directors feel it vital that we undertake the manufacture of ball and straight roller bearings at the earliest possible moment. Their reasons are shown in a memorandum attached to this report as Exhibit "F", which are basically the same as were told to us when the merger with Ransome & Marles was discussed and approved by us, namely:

(1) the further expansion of British Timken business with resulting lower costs, and

(2) to block the possibility of S. K. F. having a monopoly in England the same as in Germany and France on all types of bearings.

I explained to Mr. Dewar and Mr. Pascoe our thoughts along the line that it was unwise to create additional capacity when there was admittedly already plenty of bearing capacity available and they agreed with me in principle in this matter. They have, however, studied the possibility of a merger with Ransome & Marles and Hoffman and S. K. F. The Ransome & Marles situation is understood by all of us and needs no further mention at this time, but the merger with Hoffman is impossible for the following reasons:

(1) Hoffman earnings are poor and have declined for the past several years.

(2) They are not very strong in cash and may default on the debenture notes due in 1932.

(3) Their balance sheet shows very high land and plant investments.

(4) They have several different kinds of shares, in addition to the debentures, which makes the question of control uncertain and particularly so if the debenture interest is defaulted.

(5) Brown, Bailey Company (steel interests) own a large block of stock, and they in turn are none too strong financially.

Balance sheets of Ransome & Marles and Hoffman are attached hereto as Exhibits "G" and "H".

We had an opportunity to purchase the ball bearing business of a small firm known as the Auto Machinery Company who do primarily an industrial business in ball bearings along with a nut and bolt business, but the price they asked was $150,000 with annual sales of $150,000. Their amount of profit from the ball bearing business was difficult to determine, as it was all thrown together with their nut and bolt business. Our Dr. Wrba personally visited [fol. 5093] their plant and reported their ball bearing equipment was very old and obsolete in almost all respects and in his opinion they could not get low manufacturing costs with this type of equipment. We of course felt that the price was entirely too high, but the executives of the Auto Machinery Company flatly refused to consider a lower figure and the matter was dropped.

This forces us into the position of either abandoning the thought of going into the ball or straight roller bearing business at this time or providing ourselves with whatever equipment is necessary and going forward at once. An analysis was made of what equipment we would need to manufacture approximately 500,000 bearings per year of the popular and standard sized primarily for industrial, commercial vehicles, and service uses (see Exhibit "I"). On the assumption that we could buy the balls from either Ransome & Marles or Hoffman, it was decided that the only major equipment we would need would be track grinders for grinding the ball raceways in the cups and cones. Actual quotations were received on this type of equipment and together with certain miscellaneous gauging equipment represented a total of approximately $25,000. Mr. Dewar has

already discussed the proposition of obtaining balls from Col. Higgs, of Ransome & Marles, and the latter stated they would be willing to supply us. During my last day in England, Col. Higgs called while I was in Mr. Dewar's office and enquired as to when we were going to give him some orders for balls and Dewar advised him in the near future. Of course, it may be that the price for balls will be prohibitive, in which case we will have to manufacture our own. This will mean an investment over and above the $25,000 heretofore mentioned of about $35,000.

This ball manufacturing will only be done as a "last step," because we feel that as soon as Ransome & Marles understand we are in earnest about going into the ball bearing business they will again bring up the merger question. As mentioned in my preliminary report, Ransome & Marles have had several opportunities to discuss the merger, but have avoided it and, while Hoffman is anxious for a merger, it is certainly not advantageous from our standpoint.

As was mentioned in one of my letters, S.K.F. is definitely announcing to the trade that ultimately there will be only one major anti-friction bearing manufacturer in England, similar to France and Germany, and that will be S.K.F. They state British Timken will never go into the ball bearing business, because they are dominated by American Timken and we will not permit it. I was advised by Mr. Dewar and Mr. Pascoe, and incidentally checked this up both in France and Germany, that the present S.K.F. policy in England is exactly the same as was used in Germany and later in France, namely, to force ball bearing prices down to a point where no one could make a profit, and then effect a merger on terms primarily favorable to themselves. They feel that unless we aggressively fight S.K.F. right now our prices will continue to be pushed down similar to the Leland Motors case heretofore discussed and we can, therefore, look forward to diminishing profits if this condition is allowed to continue. They further state that as soon as S.K.F. understands that we are permanently in the picture as far as making all types of bearings is concerned they will certainly change their policy, as nothing is to be gained by price cutting except to hurt themselves and ourselves.

Russian Situation

As stated in a preliminary report, we do not at the immediate moment have any Russian orders on our books. During 1931 we shipped $370,000 worth of bearings to them [fol. 5094] and practically all Russian bills have now been paid. In the meantime RIV (Italy) have made a technical agreement with the Russians and have been their main source of bearing supply at #15 price with no cash down and two year terms. The Italian Government guarantees 100% of the invoice value. With England off the gold standard our probability of getting this Russian business is much brighter, as the Italian price of #15 is equivalent to the British #23 price, and Mr. Benedetti, Managing Director of RIV, and Mr. Dewar have mutually agreed to maintain these prices to the Russians. So far this year no bearings have been purchased by the Russians, as their entire industrial program has been materially slowed down. Three members of our staff have been in Russia during the past six months, Mr. Pascoe, Dr. Wrba, and Mr. Moreland, and the consensus of opinion is that the Russians will succeed in their present so-called five-year program, but in a materially longer time, dependent, of course, on world conditions and the success they have in selling their products everywhere. Incidentally, with many countries off the gold standard, they have found it very difficult to sell their products and pay for equipment and machinery purchased in the United States and Germany, and this, of course, is having its effect on the entire Russian situation.

The German Government for 1932 has served notice on their manufacturers that they cannot guarantee to any extent any further Russian invoices. This, of course, is due to Germany's financial condition and means that a good deal of business, formerly placed in Germany, will go elsewhere. There seems to be a very definite policy all over Europe in the handling of this Russian business which is going to bother the Russians and that is as follows: Russia is being told that they can sell into England, for example, just as much as they buy from England. This same condition exists in France and is patterned after the Italian program of the past few years. Whether this will work successfully or not, nobody knows, but they are taking advantage of it in England and both Mr. Pascoe and Mr.

Dewar are working with the Government departments to see that a portion of this Russian business placed in England will be for tapered bearings. At the time of my visit Pascoe had several discussions with the Arcos (Russian) representatives and, while nothing definite was settled, we were told that we would have an opportunity to quote on any bearings placed by the U.S.S.R. It is interesting to note that the Moscow authorities told Pascoe that they would definitely place business in England, if the English purveyors were prepared to guarantee the price of this business at a certain fixed value for the pound. This is of course impossible, but is a good example of the Russian buying attitude.

Mr. Moreland and Dr. Wrba spent two weeks in Russia discussing the use of large mill bearings on Russian equipment. The Russian policy is apparently to build exactly the same kind of mills and equipment used in America and they are very favorable to Timken bearings. They complain, however, that our prices are too high and that up to the present they have left the choice of bearings up to the mill builders. We found this to be true and the mill builders in Germany have been using S.K.F. bearings (see German report). Mr. Berger, an American engineer, is designing two sheet mills for the Russians which are to be located near the Ukraine and near Petrograd. Based on American selling prices the value of the Timken bearings on these two mills would approximate $1,500,000, and we were told by Mr. Berger that there was no question but that these two mills would be built by the Russians themselves.

Mr. Moreland and Dr. Wrba report that Russian workmanship is very bad and that they recommend we do everything possible to avoid the use of our bearings particularly [fol. 5095] on pinion stands, as Russian cut gears are terrible specimens and there is little likelihood that they will work.

We have always been amazed at the great quantities of bearings purchased by the Russians and this can be largely explained by the fact that a set of spare bearings is attached to the front wheels of every tractor produced, and we are told by RIV officials that in many cases it is merely a question of hours as to how long the bearings last in a tractor. This same information has been given us by the British Timken service representative in Russia.

Various divisions in Moscow told Mr. Moreland and Dr. Wrba that they were anxious to get some agreement with Timken to assist them in the manufacture of tapered bearings for steel mills and various industrial uses. This particular phase of the question is being handled by Mr. Pascoe with the Arcos representatives and the plan is to make such an agreement with the Russians provided they will give us definite commitments on large mill bearings or guarantee us other bearing business. Both Mr. Dewar and Mr. Pascoe feel that ultimately the Russian situation with reference to the railroads will receive more attention than at present and our chance of selling them railroad bearings will be quite good. At present the Russian policy is to concentrate largely on supplying all farm and various miscellaneous industrial equipment. Railroads, ship building, and other industries will be held back and are to form the major part of the second five-year program now being discussed and partially prepared. Mr. Dewar through his Docker connections is constantly in touch with the Russian railroad situation and we feel sure this matter is being very well handled, although as yet we have no concrete evidence in the shape of orders or inquiries received.

Financial

The financial position of British Timken has already been reported by the writer in my dividend report, but briefly is as follows: cash on hand as at December 31, 1931 $38,000; as of March 1, 1932, $180,000; and as of June 1, 1932, $325,000, based on an estimate of sales and indebtedness for the next few months and before dividend payments. Throughout all our discussions of British financial conditions, the writer endeavored to impress them with the thought that the cash position should be materially strengthened before our English position would be, what is called in America, comfortable. I was greatly surprised to find that Mr. Dewar and Mr. Pascoe were very much opposed to showing too strong a cash position and, because of the fluctuation of the pound, they considered it better policy to either have this money in plant, machinery and to operate on bank loans.

They supported this statement by saying our cash position at the time England went off the gold standard was quite low and that they were indebted to the banks, and

incidentally there is no question but that this was a favorable condition at that time. I discussed this matter with Mr. Duncan, our director, in a separate interview, and he told me that it is general British practice to maintain small amounts of cash on hand and use the banks to finance business. We must bear in mind that Mr. Duncan's experience is borne out of some 50 odd years on the street and I find his opinions highly regarded in London. All the British Timken directors feel we have ample capital and particularly strong borrowing power to embark on almost any venture within reason, such as industrial bearings, Russian business, or ball bearings. The reserves, both apparent [fol. 5096] and hidden, were in their minds quite ample and Mr. Dallow, director at Birmingham, is very conservative in all financial matters. This is one of the outstanding points which impressed me and upon which I was somewhat doubtful on my visit in 1927. Dallow personally passes on every dollar of expenditure occurring at the plant and I had plenty of opportunity to observe him in action. In fact, in many cases his conservatism, as practiced in the buying of supplies for the plant, was detrimental, as I found them using tools, collets, etc., that should have been scrapped long ago (see Manufacturing).

Manufacturing

British Timken manufacturing practice has actually greatly improved over what it was three years ago and this is quite evident in comparison with costs of standard bearings existing at that time and now. Briefly they are as follows:

Part Number	BT cost 1929	BT cost 1930	BT cost 1931	BT cost 1932	Canton cost 1932
365/363	$1.10	$1.07	$ .75		$ .36
537/532A	2.07	1.97	1.63		.76
26118/26283	.83	.72	.55		.26
09074/09194	.49	.36	.33		.18
6552/6520	—	5.73	4.50		2.66
LY70/LY62A	—	2.58	2.55		1.46

Of course, not all the improvement in cost is due to better manufacturing, as a certain amount of it naturally follows with increased volume of production. The entire attitude of British Timken toward the use of American methods has completely reversed itself. They are now more than anxious to use anything we have or to follow anything we recommend, and this attitude goes right down from Mr. Dewar to every man in the shop. Mr. Teague, superintendent, is far more capable than the former one Mr. Loader, who twice visited Canton, and seems very anxious to follow American practice. One of the greatest changes was the promptness in making changes suggested by me and several recommendations made early in February were completed and in operation in a week or ten days.

The raw material situation at British Timken is somewhat involved due to the arrangement of the plant, as they are being forced to use in some cases tubing only 10′ in length. This handicap will be almost entirely overcome within the next 60 days due to the re-arrangement of the automatic machines recommended during the writer's visit and following the increased floor space to be created by moving the grinding department to a new plant addition now in process of construction. This particular addition covers approximately 28,000 sq. ft. and is largely necessitated by the expansion of large bearing industrial business. British Timken have purchased two boring mills and miscellaneous grinding equipment and it has crowded the present department beyond all possibility of even fair working conditions. This new addition will completely relieve this situation, besides being of great assistance in eliminating congestion in the grinding department as well.

Regarding the quality of the raw material, the writer found the tubing received from Sandviken is quite satisfactory and that the high carbon-tubing which we shipped [fol. 5097] them six months ago is also entirely satisfactory. Of two lot numbers out of the four chrome steel lot numbers which we sent them, one had severe ingot breaks and the other bad concentricity. The later rejection was rather extreme in the writer's mind, but nevertheless the material was not up to the standard they required. At present, with Sweden off the gold standard, the cost of tubing delivered in Birmingham is approximately $.04 per pound (Brightmanized) which is lower than we can possibly sell

it. Under the new tariff British Timken raw materials cost- are bound to go up, but Mr. Dallow anticipated this situation and we have sufficient raw material on hand for six months. It is important to remember that all tubing is purchased on a consignment basis and paid for on the basis of 30 days after consumption in the screw machine department. In view of the fact that Britain faces a still higher duty on raw material, Mr. Dallow and Mr. Dewar are experimenting with forgings produced on an upsetter. This machine has been in our plant for about six weeks and at the time of my visit they were having the usual trouble incidental with a new method of manufacture. The writer had obtained data on the New Departure practice in heating and forging and this was handed to British Timken and before I left we could see definitely improved results. It is planned to make product of 4¼" diameter and up to 6" on this machine.

A thorough study of the possibility of using our hot forming method was made and calculations show that based on 1931 production with a press of the same size as ours they would develop a savings of about $30,000 to $40,000. Incidentally they are very keen to get into this, but the writer held this temporarily in abeyance due primarily to the fact that they will have to use a slug made on an upsetter rather than from tubing such as we do. They will start at once developing this type of manufacturing practice and depending on their costs and the mechanical perfection of the slugs, we will defer the decision of our supplying them with a hot forming press.

The question of making some of their small cups from strip steel in a cold stamping method was carefully analyzed, but did not look feasible due to high costs of strip steel. All sources of supply for this type of material were to be investigated and it may be that this will eventually prove a satisfactory method at British Timken. The press equipment they have seems to be ample to handle it.

Screw machine practice at British Timken is bad and without question is the limiting factor in their improved processes of manufacture. This condition upon investigation was found to be due to three things:

(1) Miscellaneous difficulties in the mounting and use of tools, collets, bearings, cams, etc.

(2) General manufacturing conditions such as poor spindles and general machine conditions.

(3) Inefficient operators.

As is generally known, Mr. Travis, head lineman at Columbus, is now in England and is doing a great deal of improvement to their screw machine practice. At the time of my departure he had four machines running in exactly the same way as at Columbus and Canton, and Mr. Teague and Mr. Dallow were very enthusiastic about this work. In fact, they want him to stay permanently in England, but he has refused. An additional cause of trouble was the use of poor tools, collects, etc. This was largely the result of false economies on the part of Mr. Dallow who refused to replace feed shell collets, etc., until they were worn beyond any possible chance of using them. The [fol. 5098] writer noticed several conditions like this which are the outgrowth of inexperience and I believe this matter has been permanently corrected. In fact, upon examination I found a great percentage of the tool stores to be fit only for the scrap pile and they were scrapped.

British Timken uses purchased forgings on all sizes over 4¼" and these are machined on a small Herbert machine similar in construction to our Potter & Johnson, but quite a good deal faster and operated by girls. These girls turn out a very satisfactory quantity of work as well as a good quality. Chamfering and secondary operations are all performed by girls or boys with rates of 12¢ to 14¢ per hour. Due to small quantities of the part numbers going through the department, they would not be able to use the same type of chamfering equipment that we do and all of this of course is done on hand lathes.

Carburizing practice at British Timken is as good as can be expected with the box type method. It is impossible for them to use gas carburizing furnaces, as the only gas available has a BTU content of less than 500 and calculations show that the best method is the one now used. The hardening department uses practically the same type of equipment as American Timken except for electric furnaces. This latter feature was carefully investigated and may eventually be used, but at this time costs do not warrant it. The heat treating departments are in charge of Mr. Evans, metallurgist, who is a very capable young man, both from the standpoint of metallurgical skill and the handling

of this department. For example, the hardening department on my previous visit contained 30 men, but now contains only eight and is doing four times the former production. The heat treatment and general handling of high carbon steel was discussed with Mr. Evans and he has written a detailed report of their practice in this matter which the writer has handed to Mr. Hildorf.

Cup and cone internal grinding is handled on the Heald machines with practically the same floor to floor times as exist at Canton. All this work is done by girls on piece work who earn an average of 22¢ an hour which incidentally compares with our Canton average of 68¢ per hour. Girls are also used on all of the external operations with satisfactory results. The entire British Timken grinding practice is very comparable with our American practice and, while their costs are higher, the writer found it due to two things:

(1) All work is made to what we call #2 quality, and
(2) Small quantities cause numerous changes.

The writer endeavored to make a rather exhaustive study of the effect of small quantities on the cost of production and, while this was not possible in all departments, we did ascertain in the screw machine department that if the Canton plant had to make as many changes per month as British Timken our screw machine efficiencies would be 59% instead of 87% as at present. It is very difficult to put this type of calculation into dollars and figure the actual difference in costs, but there is no question in the writer's mind but that it is having a detrimental effect on British Timken costs equaling ours. Mr. Dallow is insisting from his superintendents and foremen that they will have exactly the same floor to floor times as American Timken and, as heretofore stated, this has been accomplished in the grinding department on almost all part numbers in operation, but is still to be obtained in the screw machine department.

[fol. 5099] All rolls are now made on headers and, while their efficiency does not compare with Canton, they get quite satisfactory results. Roll grinding is excellent in all respects and production times compares very favorably with ours.

Inspection and assembly operations are of course handled with female labor at rates of about 18¢ per hour and all

the bearings are put through a "run-in" operation similar to what we used and are also sound tested.

The British plant at the time of my visit was employing 430 people in the plant (of which 180 were female) and 125 on the so-called "staff". It is a rather outstanding fact that wage rates paid in the office, excluding department head and engineers, average approximately $30 a month. This figure sounded almost unbelievable, but upon a double check I found it correct. Hours of work in the shop are on the basis of a 45 hours per week on an eight hour day and in the office 40 hours per week on a 7½ hour day.

Mr. Dallow and the writer made a thorough study of British Timken costs, the outstanding feature of which was that improved screw machine practice in the use of longer tubing, better operations, and lower scrap, will save approximately $30,000 per year. This of course does not take into consideration the savings possible through the hot forming method or lower costs due to increased volume. In fact, British Timken calculations show that with each 10% reduction in volume costs go up 4% to 5% based on present standards. Another interesting point is that based on the 1931 practice labor is 16% of their total costs and material 40%—which compares with our American figures of 25% and 40% respectively.

General

The anti-friction bearing industry in England is handled by the corporations shown below and the volume for 1931 is estimated by Mr. Dewar as follows:

Hoffman	$ 4,500,000
Ransome & Marles	3,000,000
S.K.F.	2,750,000
Timken	1,800,000
Bock	350,000
Rudge	75,000
Misc.	100,000
Total	$12,575,000

There is no question but that S.K.F. is by far our most aggressive and alert competitor and is our real competition even in the face of the fact that Hoffman is the largest producer. The latter have told us that they will in all

probability go into the tapered roller bearing business. Ransome & Marles many years ago actually made tapered roller bearings with poor results and have given no indication that they will again take up this manufacture. Of course, from the attitude of British Timken, a merger with Ransome & Marles is desirable, as it would put us in a very fine position from two standpoints, namely,

(1) The largest manufacturer of anti-friction bearings in England, and

(2) A definite possibility of merger with Hoffman on very favorable terms.

[fol. 5100] Both Mr. Dewar and Mr. Pascoe feel this will eventually be culminated and as mentioned before their thought of going into the ball bearing business is to rush this particular development as quickly as possible before Hoffman joins with S.K.F. or in some way strengthens its present position.

The writer discussed with Mr. Dewar a change to be made in our agreements to the effect that royalties from subsidiary companies will not be deducted by British Timken royalties, but will be paid direct to us by the subsidiaries. I explained to Mr. Dewar that this put American Timken under a handicap due to the pound going off gold and he readily agreed to make any change that we and Mr. Higgins might suggest. This will be worked out with Mr. Brower and Mr. Higgins.

We are spending at this time approximately $16,000 per year to maintain our foreign patents. This subject was thoroughly discussed and analyzed with the British Timken staff and it was decided, subject to Canton approval, to drop a large majority of these patents.

The new Ford small car which is to be sold in competition with the Austin and Morris 7 H. P. units was on display in London and viewed by the writer. In my opinion it looks a great deal better than either of its two major competitors and I feel Ford will be successful, but I might say at this point that general British opinion is contrary to this and they feel Ford's enormous investment at Dagenham is a grievous mistake. Incidentally the writer accompanied by Mr. Dallow visited the Dagenham plant, located 26 miles from London on the Thames and occupying 140 of a total site of 640 acres. Ford's expenditure to date in

this plant is reported as $25,000,000 with an additional $15,000,000 to be spent. The capacity is given at 1000 cars per day, but at this time they are turning out only 60 trucks per day and employ 3000 people. All of the Ford operations have been transferred from Manchester to Dagenham. This plant is built on exactly the same lines as Ford's River Rouge plants with all machinery motor driven and immense one-story buildings. An interesting thing in a construction way is the major factory buildings, which are 3000' long with a span of 90' in width.

It is Ford's program to manufacture not only cars required for the British market, but units required for cars assembled in Continental countries. Of course, since Ford conceived this idea and started building Dagenham, tariffs in practically all of these Continental countries have been greatly increased, not only on complete cars, but units going into cars, to such an extent that it is seriously questioned whether the original Ford idea can possibly be carried out. When one realizes that the total automotive production in 1931, not only in England, but France and Germany as well, totaled 450,000 units, as compared with Ford's capacity of 280,000, the magnitude of Ford's undertaking can readily be seen.

The writer visited the RIV plant at Turin, the details of which are covered in his report attached hereto and marked Exhibit "J".

Business conditions in England seem to be improving and one does not encounter the depressed feeling so prevalent here in America. Not only on one occasion, but almost universally everywhere I went in England, there was definite optimism, tempered of course with the usual British conservatism. Even in France where the depression is just really taking hold, there was more optimism than one would [fol. 5101] expect, and they feel that England's improved position is going to be very beneficial to all of Europe. Of course in England particularly, there was the same old criticism of American bankers and politicians. Some of the older and more experienced men with whom I came in contract very bluntly said that in their opinion we were quite a long way from being out of the depression and, until we had a Congress with more common sense and less personal ambitions we would not get anywhere. I am simply giving these statements as pictures of the British viewpoint.

There was also considerable talk about potential weakness of the American dollar with the resulting narrowing margin between the pound and the dollar. It seems that most Englishmen view this with a great deal of alarm, as they feel that weakness in the dollar would serve to mitigate the advantage they have by being off gold and thus their ability to put British product into markets considered primarily American territory. One of the officials of the National City Bank told me that England would do all in their power to keep the pound around the $3.50 level, as they feel this would have an enormous advantage for England for the next several months. It was impossible to get any real statistics in England to support their contention of better business, but figures were just published since my return in the Wall Street Journal which show that unfavorable trade balances for the first two months of the year were approaching the lowest level in a great many years and this is considered a bullish condition in England.

The writer left Paris the day before Ivar Kreugar's suicide and was in London at the time it was announced. All the London newspapers carried various comments as to the why and wherefore of this entire situation and both Mr. Pascoe and Mr. Dewar endeavored to find out the effect of the involved condition of Kruegar & Toll on S.K.F. At the time of my leaving (March 18th) they had not obtained any positive information, except that Mr. Prytz had been appointed on the committee to investigate Kreugar & Toll's affairs, which might indicate that S.K.F. were not involved. In the meantime we are trying to obtain all possible information with reference to the situation.

In conclusion, I wish to advise that among my notes and memoranda there are a great many details which were of necessity omitted from this report, and the writer will be pleased upon request to give as much additional information as possible on the entire European situation.

D. P. Hess.

[fol. 5102] DEFENDANT'S EXHIBIT 129

Report on Visit to S. A. Francaise Timken
5 & 7 Quai Aulagnier,
Asnieres, Seine,
France.

[fol. 5103] Canton, Ohio
March 29, 1932.

Report on Visit to S. A. Francaise Timken

Sales

During the past year our sales increased from $375,000 to $500,000 or 33⅓%. This is considered quite creditable for two reasons: (1) French automobile production declined from from 180,000 vehicles in 1930 to 150,000 during the past year (see Exhibit "A") and (2) we lost the Citroen passenger car business to S K F during the last half. There is no question but that the French automotive designer and manufacturer is quite anxious to follow American practice in the mechanical part of his car and this of course has been of great help to us. Another point is our favor is the apparent French policy of S K F which will be discussed in the heading "General".

It is the writer's opinion that our future prospects in France are very good, not only for the reasons outlined heretofore, but also because just within the past three months we have aggressively gone after commercial vehicle business. France, it will be recalled, purchased all the U. S. A. military trucks at the expiration of the war, and many of these are still in service. Again bus transportation is practically negligible, but is growing and we are bound to share in this development. During 1930 51,000 commercial vehicles were built as compared with 44,000 in 1931. The decline of 7,000 units, however, was mainly in so-called "small truck" class (see Exhibit B).

An analysis of the data shown on Exhibits C and D shows we still have a wide field of application and at present we have test bearings in many jobs. Citroen continues to use our product in his commercial line and has advised us through his technical staff that they will continue to build at least 20% of the passenger cars with our bearings

mounted. It is of interest to note that the Citroen purchasing department, when placing orders, specify the bearings must be packed in unmarked containers and not shipped in the French Timken truck. We are told our product is superior to S K F and much preferred, but they are under instructions to buy from S K F. The bulk of our business during the coming year will be from Renault, whose product has apparently caught the public favor. He is supposed to have passed Citroen during the past six months. This sounded unbelievable to me, but after three checks of this statement it seems correct. The last day I was in Paris his scheduling department telephoned that we should double our output at once, and this in itself means his product is selling. Renault prices are very low (#9–10) and he is still operating his own bearing plant. Mr. Seward is now working on a proposition to sell them at cost plus 500%., which at present is our total cost including sales, and they in turn will agree to discontinue taper bearing production and buy all their requirements from us. We will doubtless work out some kind of a deal within the next 30 days and this business will serve as our "back-log" production. Another interesting thing is that while we can make no head-[fol. 5104] way selling Austin in England, his French car named Rosengart has our bearings on the differential and we are quoting on the front wheel business.

It is Mr. Seward's and Mr. Beauvivier's opinion that 1932 automotive sales will be lower than 1931 due to depression conditions, but that the commercial vehicle business will bring our volume up and also our profits, as this product will sell at about #15 price. In fact at the present moment we are behind on deliveries of truck size bearings. It was decided to send drawings of the larger truck builders to Canton Timken, so that we can lay in our bearings in typical American practice and French Timken will then check and present to the builder.

Service business in France now forms about 20% of the total volume whereas for 1930 it amounted to 13%. Our maximum discount is 61%. This part of our business will show limited growth due mostly to the decline in the use of American cars. Ford will probably do fairly well, but the tariff situation if continued as at present means that American producers will do very little business in France. This is quite evident as when the writer was in France five years ago at least half the automotive showrooms on the

Champs Elysee were showing American products. Now there are only three: Auburn, Ford and Chevrolet.

Mr. Ainsworth, managing director of Hotchkiss and also a French Timken director, pointed out to me that in the past six months the French car buyer has swung his favor back to four cylinder cars. Mr. Anylaux, managing director of Renault, told me the same thing and it is apparently due to two things (1) the lowered operating cost, both from the gasoline and tax standpoint, and (2) the resale value of a four is on the average greater than a six after two years of use. The Frenchman with typical thrift has sensed these points and when it comes to an expenditure of this type smoothness of performance, etc., means nothing to him. Citroen has apparently seen this trend, as he is reported to be concentrating his new models to fours with the flexible mounting like Plymouth.

We have decided to go slow on industrial business in France. Inquiries coming in are of course handled and we will endeavor to get the business, but neither the present staff at French Timken nor our working capital will permit of any concentrated sales and engineering policy. The writer discussed all details of this situation with Mr. Dewar, Mr. Seward, and Mr. Beauvivier, and we outlined general plans to start functioning in 1933.

It was decided, however, to press railroad sales to the greatest possible limit. S K F have their bearings on a good many of the through transcontinental trains, such as the Riviera-Naples Express, the Blue Train to Switzerland, and the Nord Express to Berlin. We were told that the Nord Railway was having considerable trouble with flange wear and had decided to discontinue use of anti-friction bearings. I tried to verify this report, but was unsuccessful. Mr. Dewar has excellent contacts in the railroad industry in France through J. E. Stone & Company and here again the French seem quite anxious to follow American practice. We are now mounting eight bearings on a passenger coach for the Chemin de Fer de l'Etat, second largest railroad in France (see Exhibit E) and we will endeavor to get test cars operating on the other two major lines, i.e., P.L.M. and the Nord Railway.

[fol. 5105] Manufacturing

The French bearing factory is small, occupying approximately 22,000 sq. ft. in about six different buildings, all attached, but very poorly arranged. How they ever produced 45,000 bearings per month is beyond the writer, and there must have been considerable high cost manufacture in so doing. For example, the screw machine department is 20′ wide from wall to wall and it is physically impossible to use a tube longer than 8′. The hardening department is divided into three different rooms, none of which is larger than 20′ x 20′. The grinding room is better, but will only hold three rows of machines and it is impossible to get between the machines without going to the end of the aisle. Apparently it was the only type of building we could get at the time and that plus the low rental ($3,000.00 yearly) accounts for its selection.

We decided to continue to use it for this year if at all possible due to uncertain business conditions, but to look around at once for a decent manufacturing space. In order to handle 3,000 truck size bearings per month, we arranged to cut down the tool room space, operating this division if necessary on three shifts, eliminate the garage and possibly move the time and cost office to some empty house near by. However, just before the writer left Paris, we were offered a building—one story type built in 1916, not far from our present plant in Asnieres. It is owned by Hotchkiss Motors and was formerly a machine gun plant and has not been used for about seven years. It is in excellent condition and covers 36,000 sq. ft. and there is ample ground around it to expand to 150,000 sq. ft. The construction is typically French, fine concrete and brick work, but light overhead steel construction and light built up steel columns. I cautioned Mr. Dewar and Mr. Seward to carefully check the stresses, as I doubt if countershafts could be hung on the steel work without additional bracing. Details as to leasing, etc., will be developed but nothing will be done without Canton approval. At present Hotchkiss have a large order for machine guns (their original activity before automobiles) for China and wish to use at least a part of the building for gun storage purposes.

French Timken manufacturing methods are good and their bearings compare favorably with ours, both for finish and limits. Female labor is used on all chucking machines,

lathe, chamfering, presses and all grinders. These girls earn from 12¢ to 16¢ per hour and their production is quite good. They need badly an electric hardening furnace, which purchase was authorized by the writer. Mr. Beauvivier presented figures where the equipment could be paid for in 18 months even on the present curtailed production and, if they get any volume of truck bearings, they cannot do without it.

Their roll grinding was excellent and they use the so-called one-size program employing Vanderbeek end grinders. The writer checked about 100 rolls of various sizes and found every one within the limits of ±.001 standard. Incidentally, both French and British Timken speak very highly of our Mr. Shuler, who spent four months at these two plants and give him the entire credit for their roll grinding performance.

[fol. 5106] It was decided to swing French Timken over to the use of upset forgings on all sizes above 4" as figures shown by Mr. Dallow check very closely with data computed at Canton. Tubing purchased in Sweden carries a duty of 2½¢ per pound plus an import tax of 15%, making a total delivered cost of .09¢ (Swedish tubing is used and being off the gold standard the kronen is down 30% from par. France, however, to partially compensate for this, adds a 15% import tax and is now threatening to increase the tariff rate of 2½¢ per pound). Prices were obtained on upset forgings which indicate a 20% saving in material costs of 4" size and a 10% saving in material cost in the 3" size. French Timken are perfectly willing to use Canton tubing in the high carbon type provided we meet the Swedish prices outlined above and the Swedish consignment terms which are: all material is shipped on a consignment basis and paid for 30 days after it is consumed.

It is the writer's opinion, after studying French costs, that with the use of forgings, longer tubes, good manufacturing screw machine conditions, better hardening equipment and a minimum increase in volume, French costs will be lowered at least 10% to 15%. At present due to small volume, it will not be feasible to use our hot forming process and due to the preference in France for high carbon steel we cannot use the cold stamped cup method. Cost reduction in France is very important and I stressed this point with Mr. Seward and Beauvivier. We are cutting

into SKF quite seriously and prices are bound to decline in line with their policy of killing off competition.

[fol. 5107] General

Business conditions in France show some decline, but the apparent stabilizing in England is having its effect in slowing down this decline. It is impossible to get any statistics, as apparently the French don't believe in them, but the writer did discuss the situation with Mr. Pierce, head of the National City Bank in Paris, Mr. Groening, assistant manager of National City, Mr. Ainsworth, managing director of Hotchkiss, Mr. Marchall, head of the largest lamp works in France (both of the latter are French Timken directors as well), Mr. Augeot, tax expert and lawyer, Mr. Nourry, director of Horstmann, Inc., Machine Tool Sales Agency. (similar to Motch & Merryweather). All of these men had varying opinions of course, but generally they agreed that conditions were not as bad as the French would have you believe and Mr. Nourry and Ainsworth were very optimistic about our particular prospects in France.

I had been advised by Mr. Seward and Beauvivier that SKF were having difficult going. They had consolidated all the former plants of SMG, CAMRBF, and SKF into two plant-, CAM and RBF. Their policy is to eliminate all French department heads, French salespeople (to a large extent) and even to the French foremen in the shops. I could hardly believe this and set out to check it up. This proved quite easy, as Mr. Nourry happens to live next door to the assistant manager of SKF, a Swede, and he not only verified the statement, but Nourry told me the Government is watching SKF very closely. There is a certain law which requires that only 10% of an organization can be other than French and that due to curtailed operations SKF is very close to this limit. They closed down the SMG works and let every man go, even after agreeing to hold certain department heads. Weinfeld, former SMG sales manager whom the writer knew, was one let out and died 30 days later. There is no question but that this policy of SKF is hurting them and we in turn are taking every advantage of it. Mr. Seward is staying well in the background of our affairs and letting Mr. Beauvivier do all contact work. We stress the fact that we are

"the only bearing plant in France employing all French people, with French salesmen, French managers, and French directors". When pressed, we admit that our staff does contain two English people but that is all. In addition we say that in time of war our plant, operated, managed, etc., by French, would be the only one the French war office could count on in its entirety. All of these things, while of no great consequence to Americans, seemingly appeals to the French.

Our directors, Messrs, Marchall, Sanz, and Ainsworth spent several hours twith the writer and they are very high types of French business men. I was told by Mr. Pierce of National City that we were very fortunate in getting men of this type to serve on our board and incidentally Mr. Sanz and Mr. Ainsworth do actually serve by getting Beauvivier in contact with anyone in the automotive industry. Sanz is financially interested in many enterprises and Mr. Dewar informed me he has been very valuable to us.

RIV (Italy) have a modern French plant at Chamberg [fol. 5108] near the Italian border and we had an arrangement worked out with them to the effect that we would supply their French needs of taper bearings at #65 price. These bearings were to be marked Timken and they agreed to maintain our selling prices both for service and otherwise. Just when all the contracts were ready, they asked for certain exclusive territories (which is quite true to form for this outfit) and we could not agree due to certain existing service contracts. At the moment the whole deal is held in abeyance.

The ball bearing situation was discussed at length and both Seward and Beauvivier feel we could do well in this line. However, Mr. Dewar feels we have enough to do for the current year and as this would involve certain financial expenditures we decided to make no plans along this line.

Our competition in France is largely SKF, but Rossi (Swiss) and RIV are also very active. A detailed estimate of bearings sold in 1931 is shown on Exhibit H.

D. P. Hess.

[fol. 5109] DEFENDANT'S EXHIBIT 130

Canton, Ohio, March 29, 1932.

Report on Visit to Deutsche Timken Gesellschaft

Sales—Automotive and Service

In accordance with the decision reached last fall upon Mr. Higgins' return from Europe, our German plant operations have been discontinued and the machinery (excluding tool room equipment) has been shipped to England and France. A small staff will be maintained (four persons) including Dr. Wrba, who after June 1st will be assigned to British Timken staff and considered as European representative. The remaining staff consists of a storekeeper, watchman, and billing clerk.

It is hoped that we can sell sufficient service bearings to break even, excluding such charges as taxes, interest, etc. In the writer's opinion this is very doubtful, as service prices are being forced downward by SKF and most important of all is the great decline in the use of American cars in Germany. In 1931 with a total registration of 62,500 passenger cars, only 6,800 were American cars, and these mostly Fords and Chevrolets (see Exhibit "A"). I was told by the National City Bank officials in Berlin that Chrysler and Hudson had completely withdrawn from the German market and had closed their sales agencies, etc. This lack of American cars is quite noticeable on the streets of Berlin now, whereas five years ago fully 25% of the cars were American types. There are very few at this time.

Another important point is the withdrawal from the use of passenger cars during the winter months. A German newspaper estimated that fully 40% of the registered cars are stored from October to March, and I was informed that this figure was probably nearer 50% due to the depression. It must be understood that the German driver can pay his taxes monthly and that when his car is not in service he pays no taxes. For example, it costs $240.00 per year just for taxes and insurance on an Essex. In addition, gasoline and oil costs roughly twice as much as in the U. S. A., so driving even a small car becomes quite a burden.

Our product is well regarded in Germany and this is quite evident when it is noted our sales were $42,500 during the past year as compared with $29,000 in 1930, or an in-

crease of 55% (see Exhibit "B"). Service sales were 38% of the total last year and 25% in 1930. The increase in sales was in passenger car equipment being up 90% in value and 300% in quantity, Industrial increased 180% in value and 80% in quantity (see Exhibit "B"). A list of the vehicles using our bearings is shown in Exhibit "C". Dr. Wrba advises that had we continued the German plant, our Sales would continue to improve and that in some cases he could obtain 5% higher prices, due to Timken name and quality. In the case of Adler, we were practically certain of the front and rear wheel business until they heard our manufacture in Germany had stopped. Wanderer also wanted to use our product in front wheels.

[fol. 5110] It is planned to supply assembled bearings to the German plant from either French Timken, British, or American Timken, wherever the lowest price, consistent with sales policy can be made. At present French Timken are supplying at #9 price which covers French manufacturing costs. To this must be added freight, tariff, and sales tax, amounting to 3 points, making the bearing ready for sale in Germany at #12 price. Our selling price in Germany for automotive purposes has been #13-14 price, although Ford is being supplied at #11-12 price by both SKF and Fischer. Some Ford business has recently been given to R. I. V.

The bearing production during the past year is estimated by Dr. Wrba as follows:

S. K. F.	$ 4,760,000
Fischer	4,760,000
Miscellaneous	2,380,000
Total	11,900,000

The German automotive manufacturer does not like the so-called Swedish combine, as is proven by the fact that Fischer's sales are the same as S. K. F. Three years ago his output was only 20% of the total industry and now has reached 40%, largely due according to Dr. Wrba to his slogan of completely made, managed, and sold by Germans.

As is generally known, S. K. F. is the result of a merger several years ago of the following firms: Fichtel & Sachs

Fried & Hoplinger, D. W. F., Rheinland, and Riebe (two separate corporations). They have met considerable difficulty in getting organized and are now operating two plants, one at Schwinefurt and one at Stuttgart. I was told that it is very likely they will discontinue Stuttgart operations and confine themselves to Schwinefurt. The last balance sheet published by S. K. F. (1930) showed the following:

Sales	$7,140,000
Inventory	8,663,000
Loans	2,118,000
Lands, bldgs., and machinery	6,640,000
Depreciation (4%)	285,000
Loss	182,000

An analysis of the balance sheet (to be forwarded by Dr. Wrba) will give additional details, but attention is called to the heavy inventory (which certainly declined in value during 1931) and the small depreciation item. Also during 1931 the capital has been decreased from $9,500,000 to $7,100,000. Even in the so-called prosperous year of 1929 only a profit of $50,000 was made on sales of $9,000,000.

The remaining $2,380,000 of sales is divided by Timken, Jaeger, D. K. F., and N. G. B. Among these Jaeger is a small ball bearing plant in South Germany, as is N. G. B., in the North German district. D. K. F. is the Hoffman (England) affiliation and make all classes of bearings except taper, but largely concentrating at present on needle bearings (see "General").

[fol. 5111] Railroad Sales

It was unfortunate that Mr. Culmeyer, of the German Railways, was away during the writer's stay in Berlin. Mr. Beilfuz, who spent two months with us in America as representative of the German Railways, is now stationed in charge of a locomotive repair shop in southeastern Germany and was therefore not available. However, certain interesting points regarding the railroad situation are as follows:

1. The last two designs presented by us and permitting of disassembly for inspection are acceptable to the German Railway officials as advised by Mr. Culmeyer.

2. Laboratory tests of our product were entirely satisfactory.

3. Contrary to all past statements the S. K. F. self-aligning bearings used so extensively in Germany are made in Sweden and not in Germany. It must be remembered that both Mr. Culmeyer and Mr. Beilfuz have stated that the German Railways could buy nothing but German made bearings, and this has been a severe handicap to us. Recently Dr. Wrba received confidential information that not a single S. K. F. self-aligning bearing had been made in Germany, but all imported from Sweden. When presented with this information, Mr. Culmeyer attempted to evade answering, but upon being pressed by Dr. Wrba finally admitted the truth of this statement, but stated that Fischer was supplying German made bearings. Upon inquiry he advised they would use American or British made bearings if our price was from $7.00 to $9.50 under the price he was paying S. K. F. of $60.00 for complete bearing and box mounted in place on the axle. He further stated that nothing further would be done with Timken bearings unless we were prepared to make such a price. This latter price of $60.00 is for a 4½" bearing and corresponds to a U. S. A. selling price for a similar equipment of $108. This problem is now being studied both at Birmingham and Canton as to the possibility of meeting such a condition.

4. During 1931 a total of 831 cars were purchased for the German Railways, but I could not ascertain whether these were equipped with anti-friction bearings or what types of cars were purchased. I was told, however, that during 1930 and 1931 approximately 1,000 new cars, anti-friction bearing equipped, were put in service on the Berlin-Metropolitan Railway which operated in, and adjacent to, Berlin both in subway and surface traffic.

Rolling Mill and Industrial Business

We are receiving a great many inquiries on rolling mill bearings, the majority of which are for ultimate Russian use, but a good portion are for use in Germany. Many German mills are considering either modernization or increasing their line of products and are turning toward Timken bearings. So far we have had four major objections to overcome:

1. Loose fitting of bearings on the necks as contrary to S. K. F. tight mounting.

2. Delay in getting replacement bearings from America, should this be necessary.

[fol. 5112] 3. Failure to give so-called "working life" figures.

4. High prices.

The first three problems have been solved by Mr. Moreland's visit and British Timken manufacturing mill type bearings, but the matter of price is a serious obstacle. We estimate we can sell these bearings for approximately $.80 to $1.00 per pound and meet S. K. F. competition. However, freight and duty amount to 11¢, taxes 4¢, royalty 4¢, which leaves a price of $.61 to $.81 per pound to cover all manufacturing and selling costs as well as profit allowance. Canton Timken manufacturing cost is about $.65 per pound. S. K. F. is getting this business on bearings imported from Sweden and the fact that this business is now available is evidenced by the fact that during October and November we lost orders amounting to $70,000 and in January we lost another order for $14,00- on account of our price of about $1.25 to $1.50 per pound being too high. Quotations were based in American made bearings. British Timken are now in a position to manufacture mill type bearings, and the writer estimates their costs will be very close to ours, as in this type of bearing we can get full advantage of the difference in labor rates. We have therefore decided to obtain an order for our bearings to be mounted on a German mill, preferably in the Dusseldorf district, regardless of what price we have to quote for it. This will then give us an opportunity to show our product on a typical German mill and not depend on drawings, pictures of American installations, etc.

The German mill builders certainly are aggressively going after Russian business, so far very successfully, and they prefer to follow American practice in using Timken bearings. Wrba and Moreland have been told many times and the writer verified this in a meeting with Mr. Eisner, director of A. H. Rohrenwalzwerk. He told me Timken bearings through their splendid performance in America were very much wanted, but German mills and builders simply could not pay any premiums for them and that our prices were in some cases 25% higher than S. K. F.

An idea of Germany's industrial output can be obtained from the following figures which cover all types of machinery, except automotive:

1928

Germany	$952,000,000	(No recent figures available but 1931 estimated about 10% under 1928).
England	737,800,000	
France	14,750,000	

Financial

It is the writer's opinion that under present conditions we will operate at a loss of $10,000 to $15,000 yearly, including all charges, etc., as compared with a loss of $26,000 in 1931.

It is quite probable no additional working capital will be required in Germany unless business conditions greatly decline. Sufficient funds will be forthcoming due to selling machinery to British and French Timken to handle current expenses. In a discussion with Mr. Dewar and Mr. Seward it was decided to consider Deutsche Timken as a purely British Timken subsidiary and any funds needed would be supplied by British Timken.

[fol. 5113] General

The entire business situation in Germany is badly depressed and this is certainly quite evident in Berlin. The famous restaurants of Horcher & Pelcher are only 20% filled, whereas during the writer's visit five years ago it was difficult to get in. Prices on the contrary are still high, even though the government is using strenuous means to decrease them, such as a flat 10% decrease in rentals, interest rates, property taxes, wages, etc. However, there seems to be a firm conviction that once the reparation problem is settled Germany will go forward quickly. I first met this attitude in England, both with members of our own organization and with members of the U. S. Department of Commerce, and may others. The same thing was told to me in Paris by Mr. Pierce of the National City Bank. The latter bluntly said Germany was ten years ahead of all other European countries, both in mechanical equipment and in realizing what difficulties lay ahead of them.

This same opinion seemed predominant in the minds of the following men whom I met and discussed conditions with

in Berlin: Mr. Messersmith, Consul General for the United States; Dr. Freundt, financier and representative of Loeb & Bendix, Wall Street, New York; Mr. Betta, manager of the National City Bank, Germany; Mr. Eisner, director for A. H. Rohrenwolzwerk Steel Company. All agreed that the current year would be a difficult one, but Messersmith in particular told me the turn was bound to come and Germany with its 60,000,000 people would go forward quickly. Mr. Seward at my request discussed the same situation with Mr. Thorald, British Consul, who has been in Berlin 20 years. It was his opinion that in the not too distant future Germany would produce more automotive vehicles than either France or England and anyone could plan right now for this eventuality. He said Ford, in particular, had this in mind in building his immense plant at Cologne. Mr. Thorald also gave me some good points on handling the German railroad situation, which will be reported verbally, along with Mr. Messersmith's statement on the political situation.

It would seem that our position in Germany at present should continue to be one of "watchful waiting", but to do all possible to maintain sales contacts in the industrial field and larger car builders. This was discussed and agreed to by Mr. Dewar, Mr. Pascoe, and Mr. Seward.

D. P. Hess.

DPH:PHK.

[fol. 5114] DEFENDANT'S EXHIBIT 131

May 31, 1935.

Mr. Timken, Mr. Umstattd cc to Messrs. Ernst, Brower, Weiss, Higgins.

(all exchange computed at £=$4.95)

Mr. Dewar telephoned yesterday stating that he was still conducting negotiations with the brokers on the basis of 32 shillings $7.90) per share, or approximately $988,000 for the entire issue, but had reached a deadlock due to the fact that the brokers are objecting to the phase of our Business Agreement, which specifies that at the end of the agreement, i. e., 16 years, the name "Timken" reverts to the American Company if the agreement is not renewed.

The broker's feeling is that this is entirely too short a period during which the British Company would conduct business under the name of British Timken, and then possibly be forced to give up the name under which it had been operating for not only this particular 16 years period, but also the period of years prior to the current time, i. e., 15 years. Mr. Dewar, therefore, recommends that our agreement should be changed from 16 years to 30 years, and feels quite positive that with this change the brokers will agree to this price of 32 shillings per share and, furthermore, that he can probably close the deal within the next few days. I explained that in this country a 30 year period was practically unheard of and that all similar types of agreement were usually made for 15 years and some extreme cases for 20 years.

Mr. Dewar advises that with this attitude of the brokers it is going to be impossible to obtain the price heretofore mentioned, and upon my inquiry as to what price he could obtain without making any changes in our present agreements, he stated that it would probably be somewhere between 30 shillings per share ($926,250) and 31 shillings per share ($957,125), but there was also the possibility that the present group of brokers who are planning to place the issue privately might even decline to handle it at all, but Mr. Dewar definitely explained that he hoped to avoid this latter alternative after all the work they had done with the present brokers even if we did not agree to change the present agreement.

Putting it another way, a difference of one shilling in the price per share amounts to approximately $31,000, of which the Timken share is approximately $16,275, so that if the price is affected to the extent of 2 shillings per share, the difference in the amount received for the total issue will be approximately $62,000, and that our approximate share would be $32,550.

The writer immediately cabled Mr. Duncan as follows:

> [fol. 5115] "Dewar telephoned stating brokers object 16 year agreement with possibility loss Timken name at expiratioin date and recommends 30 year agreement Stop We feel this is extremely long time for business agreement be in effect and not subject to modification Stop Period this length very unusual in this country Cable any suggestions and your recommendations".

I asked Mr. Dewar their attitude on the exchange situation and he stated that in England it was the opinion that France would go off gold within the next week or 10 days, and that under such circumstances he felt the dollar-pound exchange (present exchange $4.95) would be somewhere between $4.70 and $4.80.

It is the present plan that as soon as the brokers have signed the contract, Mr. Dewar will cover the entire transaction both from his point and our own with the purchase of dollars, and we have already authorized the Bankers Trust Company of London to act for us in this regard.

The writer advised Mr. Dewar we will cable him promptly on this matter.

Mr. D. P. Hess, The Timken Roller Bearing Company, Canton, Ohio.

DEAR HESS:

I enclose a statement for January 1930 showing the symbol number, gross hours required, quantity of pieces and total scrap, which you requested me to prepare when I was in America.

The time shown should not be regarded as final as we are constantly improving, especially the D.O.H. steel figures, as our experience increases and the personnel becomes more expert.

I shall be sending you a statement of the expenditure in January in due course and Trading Statement in a similar form to that rendered by British Timken.

After great difficulty I have at last succeeded in getting a satisfactory accounting and costing personnel together and as soon as they are a little more familiar with the work I shall be able to let you have the various returns more promptly.

With kindest personal regards,

Yours sincerely, W. E. L. Seward.

Data Now Received from British Timken

Monthly—Trading results showing—

(1) Total Home Sales (by division i.e. automotive, com'l. motorcycles, industrial, service, Alvis joints).
(2) Cost of Sales (by division).
(3) Gross Profit (by division).
(4) % of Profit (by division).
(5) Total sales of bearings purchased from Amer. T. by same classifications as "Home Sales".
(6) Export sales on same basis as "Home Sales" & sales of Amer. Timken prod.
(7) Total Gross Sales.
(8) ——
(9) Grand total sales.
(10) Sales cost in detail and misc. charges.
(11) Net profit (without tax deduction).

Monthly—Total payroll (for one week).
Number of employees and hours worked (for one week).
List of Industrial Sales by classification).
List of Auto and Coml. Sales by application (hubs, pinions, etc.).
Value of inventory both process and finished.
Weekly—Orders on hand—quantity and value—compared with same week of preceding year.

Orders received—quantity and value—compared with same week of preceding year.

Orders invoiced—quantity and value—compared with same week of preceding year.

(All data weekly and cumulative to date for entire year).

[fol. 5139] British Timken Data

Also for Deutsche Timken and Francaise Timken

Monthly—Report for each department showing

(1) Pcs. produced by part number, hours worked, wages paid, units produced, cost per unit, efficiency of operation (by groups of machines).

(2) Total Indirect Labor expense for above production.

(3) Total supervision expense for above production.

(4) Number of pcs. scrapped by reason and value of same.

(5) Expense of Dept. in detail i.e., tools, oils, belting, diamonds, bone meal, fuel, power.

(6) General departmental overhead as depreciation taxes, insurance, rent.

Monthly—Summary of Total Cost of Sales showing

(1) Material Cost.

(2) Labor Cost (Direct, Indirect Supervision).

(3) Expense Cost (In Detail).

(4) Total Manufacturing Cost.

(5) Units produced (See J.F.S. about variation in units).

(6) Mfg. cost per unit.

(7) General Overhead (In detail inc. depreciation, rents, taxes, ins.).

(8) Total Cost of Sales.

Monthly—

(1) Force Report (T.R.B. Amer. forms).

(2) Department payroll (T.R.B. Amer. forms).

(3) Cups and Cones produced as well as shipped.

[fol. 5140] Monthly—Financial Status, showing cash on hand, bank or other indebtedness, advance to subsidiary companies (Inventories in value—Raw Material, Process, Finished).

Quarterly.

(1) List of new machinery put into operation and savings resulting therefrom—also cost of this machinery.
(2) List of machinery obsoleted.
(3) List of new machinery on order, delivery promised and cost.
(4) Raw material prices and tonnage of material purchased for quarter. Show parts purchased from American Timken.
(5) Quantity of bearings sold and part number.
(6) Part numbers made from (a) forgings (b) solids bars. (Change to semi-annual).
(7) Improved method of manufacture other than listed in (1).

Semi-Annually.

(1) List of staff and salaries, bonus paid each and occupation.
(2) Financial Budget for next half year.
(3) Report on performance against budget for ½ year ended.
(4) Sales review showing new business received and value of same for ½ year ended—sales prospects by divisions (R.R. Ind. Auto, etc.) for next half year.
(5) Competitors production.
(6) Value of business lost and explanation of same.

Annually.

(1) Inventory of all parts.
(2) List of machinery in operation.

[fol. 5142] DEFENDANT'S EXHIBIT 143

British Timken, Limited

9th January, 1931.

D. P. Hess, Esq., The Timken Roller Bearing Company, Canton, Ohio, U. S. A.

Dear Mr. Hess:

Your letter of the 2nd December asking for arrangements to be made for Francaise Timken to furnish you with cost data similar to that which we supply, was received on December 11th. I regret the delay in acknowledging this but was under the impression that Mr. Dewar had dealt with the matter.

A few days after receiving your letter I visited Francaise Timken and took the opportunity of going thoroughly into this question with them, when Mr. Seward expressed the opinion that he would be able to get the whole of the Returns going as from January 1st, 1931. There will, however, in all probability be a little delay in sending you these Returns, on account of pressure of work arising out of their stock-taking and the year end accounts.

Yours sincerely, for British Timken Limited. Wm. Dallow, Director.

[fol. 5143] DEFENDANT'S EXHIBIT 144

June 26th, 1931.

S. A. Francaise Timken, Asnieres (Seine) France.

Attention—Mr. W. E. L. Seward.

Gentlemen:

Mr. W. Dallow in his letter of Jan. 9th 1931 stated that in a recent visit to Francaise Timken at that time that you expressed the opinion you would be able to get the whole of the Returns similar to those supplied by the British Timken going from the first of January 1931. We fully realize the delay to date in your arranging to forward those Returns to us but as the year 1931 is about half over we, of course, are anxious to know when we will be able to receive these returns. In fact we are expecting to receive them in each mail but as they have not as yet turned up we would like to have some expression from you as to the time when we may receive them.

Thanking you for your consideration, we are

Very truly yours, The Timken Roller Bearing Co.,
—— ——, Assistant to the President.

August 24, 1931.

Mr. William Dallow, % British Timken Limited.

Dear Dallow:

I am enclosing comparison of French Timken costs with our own costs. I am sending this in duplicate in view of the fact that I do not know whether Mr. Dewar wishes us to send these comparisons direct to Mr. Seward, so that I would appreciate your advising me just what action to take in the future. However, if Mr. Dewar deems it advisable, will you please send one of the copies on to Mr. Seward.

Very truly yours, The Timken Roller Bearing Company, —— ——, Assistant to the President.

Mr. W. E. L. Seward, S. A. Francaise Timken, 5 & 7 Quai Aulagnier, Asnieres (Seine) France.

Dear Mr. Seward:

This will serve to acknowledge receipt of your letter of Jan. 5th, 1931, enclosing your Production Report for the month of November, 1930. British Timken supplies us with their force report which indicates the number of employees —day work and night work and if it is at all possible to supply us with the information setup in regard to the number of your force working days and nights, we would appreciate your giving us this information in addition to the

report we are receiving just setting forth the number of people employed by the month.

Yours truly, The Timken Roller Bearing Co., ——
——, Assistant to the President.

[fol. 5157] DEFENDANT'S EXHIBIT 147

Française Timken

Société Anonyme

A1/1198 7th July, 1931.

The Timken Roller Bearing Company, Canton, Ohio, Attention of Mr. Hess

Dear Sirs,

We have your letter of the 26th June last, your file 34, regarding the rendering by Française Timken of returns similar to the whole of those supplied by British Timken. The additional returns, with the exception of Efficiency Sheets for the Hardening and Press Shops, as from January 1st to various dates in March and April, have already been dispatched to you. The returns bringing these statements up to date will be dispatched shortly.

We would point out that with the exception of the Accountant in charge, the whole of the Book-keeping and Costs staff of Française Timken are French and are not accustomed to British or American methods of cost accounting or book-keeping. Consequently, they are unable to deal with the special returns requested by you. The policy followed in France is to employ French personnel as far as possible, with a view to local opinion and also to keep the total salaries as low as possible.

From the first of the year until April, the British Accountant was extremely busy with the preparation of the Balance Sheet and the audits carried out by the two firms of Accountants, to which work preference had to be given. Subsequently, when the returns specially requested by you were compiled, our Accountant waited for the return from

America of our Mr. Seward as he wished for instructions regarding certain of these statements.

Yours faithfully, S. A. Francaise Timken, l'Administrateur Délégué, W. E. L. Seward.

WELS/RR:

[fol. 5158] DEFENDANT'S EXHIBIT 148

October 6, 1927.

British Timken, Limited, Birmingham, England, Attention Mr. M. B. U. Dewar, Managing Director

Gentlemen:

In view of the neccesity for additional machinery of a modern type at British Timken, we are fully agreed with you in the fact that the dividend payable for the current year should be passed, and a similar amount invested in machinery for your manufacturing plant. We agree that this action shall not cause any change in the voting rights as is set out in Clause 6, Section (A), of our agreement with you dated May 16, 1927.

Yours very truly, The Timken Roller Bearing Company, —— ——, Vice President.

DPH-HGW

[fol. 5166] DEFENDANT'S EXHIBIT 152

January 4, 1933.

Mr. M. B. U. Dewar, 10 Mayfair Place, London, W. 1, England

Dear Michael:

Mr. Timken and the writer recently held a meeting with Mr. Ernst in Cleveland at which our European affairs were discussed pro and con, and Mr. Ernst has asked me to write you stating that he greatly appreciates your appointing Messrs. Whinney, Smith & Whinney to be our joint auditors. As you know, he has great confidence in Mr. Meares and I have ex ained your similar feeling, so I am sure the whole affair will work out very nicely.

Very truly yours, The Timken Roller Bearing Co., —— ——, Assistant to the President.

DPH:MC

28th November, 1932.

D. P. Hess, Esq., The Timken Roller Bearing Company, Canton, Ohio, U. S. A.

MY DEAR DON:

You will remember that when Mr. Pascoe and I were in Canton last Mr. Ernst raised the question of the Auditors of British Timken Limited. I quite understand Mr. Ernst's desire for those associated with him in this country to be associated with us.

I am writing this now to tell you that if Mr. Ernst again cares to raise this question with me I should be delighted to arrange for Messrs. Whinney, Smith & Whinney to become joint Auditors to British Timken Limited for next year.

Yours very sincerely, (S.) M. B. U. Dewar.

[fol. 5168] DEFENDANT'S EXHIBIT 154

10 Mayfair Place, London, W.1.

21st March, 1933.

Personal and Confidential:

Mr. D. P. Hess, 1549, Logan Avenue, Canton Ohio.

MY DEAR DON:

I have had a long talk with Moreland and I have arranged for him to deal with all our heavy engineering work, with the exception of Railways, and I have given him the two men he asked for from our existing organisation.

I do not think he will find it necessary to stay more than four, possibly five, months, and he does not appear to consider it desirable for his wife to come over this time.

One thing I am anxious to ask you privately:

He tells me that our Drawing Office is terribly slow, and he gives as the reason that in America, when a letter

comes in asking about some application, this letter is handed straight to a draughtsman, who does the calculation, replies to the letter and does the drawings which are then checked by the Head of the Department. (Weckstein to 2 checkers then to men who prepare layout after consulting with checkers. Then to Dept. Head for approval, back to Draughtsman.)

Our method, he says, is that Wood deals with practically every letter and makes sketches, which he gives to a draughtsman, telling him to elaborate them. The draughtsman is thus really little more than a tracer and not particularly interested in the jobs.

I should be awfully glad if you could tell me what the method actually is in your Drawing Office.

Yours very sincerely, (S.) Michael.

[fol. 5169] DEFENDANT'S EXHIBIT 155

April 6, 1933.

Personal.

Mr. M. B. U. Dewar, 10, Mayfair Place, London, W. 1, England.

DEAR MICHAEL:

I have investigated the method we handle our work in our Industrial Engineering Department, and this is the line up:

When information along the line of letters or telegrams come in from the Industrial Sales Department it goes to Mr. Weckstein, head of the Industrial Engineering Department. He in turn divides the work up between two checkers, and they in turn hand the original letter, telegram, etc. to one of the men under them, or draftsmen, who does the actual work of preparing the layouts after consulting with the checkers. When this layout is finished and checked it is handed to the departmental head, Mr. Weckstein, for final approval. If he approves it, it then goes back to the draftsmen who make all the necessary office records and write the letter which goes to the respective sales divisions or customer who is interested in the layout.

We have found from five years of experience that this works out very well and it, of course, means that Weckstein

and his two checkers are very careful to guide the draftsmen and supervise their efforts very closely. However, they do not do any of the actual detail work such as I understand Mr. Wood has been doing. As you know, we take these draftsmen after they have been in our Engineering Department for two or three years and then transfer them to the Sales Department.

Very truly yours, The Timken Roller Bearing Co.,
—— ——, Asst. to the President.

Mr. D. P. Hess, The Timken Roller Bearing Company, Canton, Ohio, U. S. A.

MY DEAR DON:

Thank you very much for your letter of the 6th April giving me particulars of your method of handling work in your Industrial Engineering Department. We are following out this method and hope to be successful.

With kindest regards,

Yours very sincerely, (S.) Michael Dewar.

[fol. 5202] DEFENDANT'S EXHIBIT 167

Report on British Timken Production Efficiency

Submitted by William Sloan, June 3rd, 1929.

[fol. 5203] Automatic Department

Supervision of their Screw Machine Department is neglected by the foreman Mr. Hugh who spends most of his time working on the machines and on minor office details in place of acting in an advisory capacity towards making the men under him more efficient. There is 20% to 30% time lost every day over and above all the down time on the automatics such as repairs tool grinding and adjustments.

There is no system for setting up and timing the machines. The writer found different times on three 3¼ Gridley machines turning out #29177 cone. The relative times of the three machines were 4 min. 58 sec.; 3 min. 45 sec.; and 3½ min. A part of this variation in time is due to the worn out condition of the machines. They never overhaul a machine and do not repair them unless they break down. This condition prevents them from attaining one set time for the different machines. Mr. Dallow agreed to take one machine at a time and completely overhaul them.

The terret bushings and slides were so badly worn another tool could not be used on the reamer position without causing the terret and slide being forced to one side and machining a bad bore. The spindle bearings could not be adjusted properly on account of their being badly worn.

Green Gauges

The green gauges being used on cones consist of profile, plug, size and taper gauges. I recommend their using the American gauges of which they have the blue prints. Mr. Ellis has ordered them to be made up and put in use.

They were gauging the cups from the front face and any variation that occurred in the cup length interfered with the holding of the I.D. dimension to size which is going to be eliminated by changing the plugs so as to gauge off the backface.

The finish of their green product was poor, being torn to the extent of .015" deep. The size of the bores and the O.D.'s varied from .010 to .015".

Traveling Inspection

One inspector was checking the entire green output of the Automatic Department. The writer advised them to have one inspector assigned to each lot of 15 machines [fol. 5204] allowing for each machine to be checked every hour. Starting the week of April 22nd one inspector was employed for every 12 machines.

Automatic Stores

The set ups such as cams, borings, facing and reaming tools were scattered and the setter lost a lot of time hunting them up. The writer recommended a Store Room man to keep the setups together in a designated Store Room.

Machine Times

Gridleys

The following changes in the machine times were made in connection with their 3¼"–4¼" Gridleys.

Part #29334 cup on 4¼" Gridleys. Old time: 2 min. 45 sec. per piece; changed to: 1 min. 50 sec. per piece.

Part #313 cup on 3¼" Gridley. Old time: 4 min. —per piece; changed to: 1 min. 48 sec. per piece.

Part #29177 Cone on 3¼" Gridley. Old time: 3 min. 45 sec. per piece; changed to: 2 min. 45 sec. per piece.

The green cones were being made with the small end out which left the backface and radius to be done on the second operation. This operation not being accurate left the backface eccentric with the cone bore and O.D. and caused trouble for all the operations on the grinders. The forming tool was reversed to make the cones with the large end out as we do. They are completely sold with this method and are having the setters work on Saturday afternoon and Sunday changing all the machines to new times on methods of forming the cones.

They have 1 operator and 1 lineman to six machines and they are going to speed up all the jobs. They can get our speeds providing the machines are overhauled and the tools and tubing are O.K.

Acmes

The following changes in machine time were made in connection with their #72 and 2¼" Acmes.

Part #A4221 Cone on 2¼" Acme. Old time: 1 min. 12 sec. per piece; changed to: 1 min. 1 sec. per piece.

[fol. 5205] Part #1008 Roll on #72 Acme

Old time—26 sec. per piece
Changed to—18 sec. per piece

They were using only one forming tool on their #56 Acme making their part #09194 cup, and the writer tried to obtain a shaving form tool, rough form and form tool holder so the set up could be changed. They didn't have these tools which would help in speeding up the machines. Mr. Gray, the assistant foreman is having these tools made up to effect this change.

Cleveland Automatics

Their Cleveland Automatic machining times are on the average 13% slower than the American times because of the inferior tool steel they are using which is not only the case in connection with this automatic machine but applies to all the other automatics. Mr. Teague is getting in touch with different steel companies in an endeavor to obtain a more satisfactory grade of tool steel.

The writer found that all the tubing being used in their automatic department had more scale and slag on the surface than our tubing. Mr. Evans agreed with me that the tubing should be given a better pickling.

They payed no attention to spindle speeds and surface feet per min. The machines were running anywhere from 60-80 feet per min. which can be accounted for in the changing of jobs to different size work and not changing the spindle speeds. In each instance the tubing surface feed per minute will have to be changed to 90 feet per min. to obtain the best results.

At the time I arrived at Birmingham Mr. Dewar was breaking in as an efficiency man a Mr. Fegan. He instructed him to work with me on all the machines and operations so as to learn everything possible to enable the French and German plants to get started on the best pos-

sible operating basis, in connection with his visits to these respective plants.

Mr. Fegan and Mr. Gray, the assistant foreman, gave me their willing support in effecting the changes made and suggested and both of them had willingly changed over a machine without my assistance.

Carburizing

The cone and cup carburizing times cannot be changed on their pot carburizing operations on account of the small [fol. 5206] pots and small furnaces they are using.

They have increased the roll carburizing output on their small Gas Rotary Furnaces by tilting them at an angle which permits the loading of the furnaces with more rolls at one time, and prevents rolls from lying in the neck and not being carburized properly as was the case before the furnaces were tilted.

The quenching tank is in front of the furnace from which the rolls were scraped out by the operator. The tilting furnaces are dumped the same as we do. The carbon depth is checked by fracturing the rolls and the case depth is checked by the same method that we use.

Hardening Department

Hardening Practice on Cones & Cups

The I.D. size inspection of their cones was being carried out by taking the first two pieces of a run of one part number to the Main Inspection Department. This practice at times caused a delay of 2 to 3 hours before they could start the hardening machine. So the writer had a set of go and no go gauges made to check the pieces at the machine and save this unnecessary loss of time. The cups were being taken care of in the same way as the cones. They were advised to have the file test inspector check for size as well as hardness at the machines.

Hardening Test

The hardening test results on part #29334 cups using their French furnace is as follows,—

Pieces hardened—297.
Actual Quenching time—50 min.
Average per hour—360 pieces.

This time compares with ours but due to the many changes they have to make on account of the small lots of from 25 to 50 pieces, their production time is cut at least 20%. The cone hardening time when using the American Rotary furnace was found to be the same as on the cups.

When starting these tests the writer found the Quenching machine was working very sluggish and a check up [fol. 5207] showed they were using only 30 lbs. of air. Their plant Engineer, Mr. Tibbets was informed and he started up their large blower bringing the pressure up to 80 lbs., correcting the trouble.

The writer advised Mr. Evans, Metallurgist to age all their cups over 4" diameter in oil to prevent the heat cracking of these parts on the #3 Centerless Grinders.

Grinding Department

Automatic Blanchard Back Face Grinder

The Automatic Blanchard was being operated without a washing tank and no effort was being made to keep the work close together, the same guide ring being used for all cones and cups. The operator was required to bring his own work up to his machine most of the time, and often take the finished work to the stock room. It was necessary for the operator at his position before the machine to turn around and reach down into the box containing his work which he had brought up to his machine in wagons. Meanwhile the feed table would be empty and there would be room enough for 3 or 4 pieces in the gaps left between the work.

The work varied so much in length it would be necessary for the operator to make four passes on 50% of it. While grinding, he would pick out the pieces that did not clean up, and put them thru the grinder after the others had been finish ground. Their production was 300 to 400 pieces per hour.

They never used the automatic feed because they claimed that it took too much time to reset the feed when they were changing jobs so often. The guide rings they were using were not high enough to support the cone ribs and did not have the correct diameters to keep the work on the outer edge of the chuck. They have started to make new rings to the correct dimensions and also feed table guides to our latest prints.

They were grinding all cones on the small faces, first which made the bore and O. D. eccentric with the backface on account of their being formed with the small face out on the automatics as mentioned before.

Blanchard Grinding Test

The writer had special cups part #29334 and cones part #29177 made up in the green to the correct limits giving [fol. 5208] the following grinding times in comparison to their times,—

Parts #29334 Cups & #29177 Cones
Pieces ground on both faces—297
Total time—20 min.
Pieces per hour—890
British Timken time 300 pieces per hour ground on both faces.

So with the green work made right, the feed table guides built and set up correctly, the operator kept at his machine, and with the right method of handling work at the machine, their Blanchard Automatic will produce its full capacity with the exception of the time lost thru changing the jobs so often.

Blanchard Solutions

They were using soda ash grinding solution. The writer left instructions concerning the washing tank solution to be used when they receive the washing tank.

Cincinnati Centerless OD Cup Grinders

In checking over the #3 centerless O. D. cup grinding practice the writer found the cups had as much as .040" grinding stock, and they had only 2 diamonds for 3 machines which caused quite a loss of time by having the machine stand idle as the operators waited for each other to dress their wheels.

They used micrometers to check the cups while roughing which is very slow, and snap gauges for finish. It is impossible to check the work for out of round, taper, and chatter with snap gauges. They have prints of the Schlaupitz O. D. cup gauge and are going to make three, one for each machine. The transportation of the work is very crude, there being no benches at the machines and no pans.

The work is carried about in wagons which is very unhandy.

In setting up the machines to our time the writer found it was impossible to grind the cups due to their large variation in size which caused them to join up and make scrap. Until their green product is made to the correct sizes it will not be possible to speed up the machines. The grinding wheels being used are 60 P. Carborundum which are no good, so a 60 K universal wheel which is much better was acquired at Stafford. Mr. Teague cabled the Norton Co. for an 80 D. L. wheel.

Cincinnati Centerless Grinding Test

The writer had 500 pieces #29334 cup made in the green to our dimensions with a maximum of .024" grinding stock and set up the machine at our speed giving the following results as compared with their time,—

[fol. 5209] Pieces ground—500
Actual grinding time—60 pieces per min.
run in 4 passes

Net time—15 pcs. per min.
Total time—1 hr. and 20 min.

British Timken Time
Actual grinding time—30 pieces per min.
run in 2 or 3 passes

Net time—10 to 15 pcs. per min.

The reason for their taking so much time to grind was due to the control wheel bearing being in bad shape and not holding size very good. The writer is having #3 Timken bearings and prints of the control wheel applications sent them so as to eliminate this difficulty.

The #2 centerless cup grinder was being operated without a loading device which was the chief cause for the low production of 80 pcs. #09194 cups per hour. Mr. Teague has ordered a loading device and cup chute from the Cincinnati Grinder Co., as it is impossible to speed up this machine on account of the operator not being able to feed it any faster without the loading device.

Heald Grinders

The Heald grinders were being operated efficiently but the low production was due to the operator bringing up and taking away their own work and to the amount of grinding stock being removed which was as high as .040" on the small cones. The backfaces of the cones being eccentric with the bores and O. D.'s caused by the cones being made with the small ends out on the Automatics necessitated the cones being faced and radiused on the Capstone machines which is a larger operation than champfering. They had changed all the cone chucks by removing the spring adjustment and putting on solid rings to prevent the cones from slipping in the chucks.

Heald Grinding Tests

The writer had 500 #29177 cones made in the green with .012" stock on the I. D. and changed one chuck putting back the spring adjustment. The results of the test are as follows,—

Pcs. ground—500	British Timken Machine
Machine time—120 pcs. per hour	time is 60 pcs. per hour.
Total time—7 hours.	
Inspection—O. K.	
Hard O. D. with finish I. D. eccentricity .003"	

[fol. 5210] Mr. Dewar, Mr. Dallow, and Mr. Teague timed this machine and were very much surprised, and they intend to maintain the set time as nearly as possible.

The cup machines were being operated with the same difficulties as the cone machines consisting mainly of excess grinding stock.

300 #29334 cups were made up in the green with .015" I. D. grinding stock and #2 quality cups were ground with the following results as compared to their grinding time,—

Pcs. ground—300	British Timken Machine
Grinding time—60 per hour	time 40 pcs. per hour.
Total time—5 hours	
Inspection—O. K.	

This test was also timed by Mr. Dallow and Mr. Teague. Their present finish on #2 cups is O. K. but I left instruc-

tions regarding our 2nd operation for pinion bearings in case a better finish is required.

The one Ransome and Marles chuck which they are using is very accurate for concentricity. Mr. Dewar was very much pleased with it and arranged with Col. Higgs of the Ransome and Marles Ball Bearing Company for me to see their internal grinding department and their chucks in operation to convince me of its accuracy. I made the inspection trip on April 22nd and checked the outer and inner rings off of their different machines and found they were holding them to a maximum of .0003" for concentricity.

O. D. Cone Grinders

The Churchill grinders are worn out and very unsatisfactory, the type of arbor used taking too much time to load and unload. The only possible way to speed them up is to change the amount of grinding stock as it would not be economical to build new workheads and equip them with our type of expansion arbors.

Their cones have .030" stock on the O. D. and the undercut is not deep enough which causes them quite a lot of trouble by breaking the corners of the grinding wheels down and leaving a shoulder which causes trouble in rib grinding.

The new Herbert O. D. grinders were a complete failure. These machines were received one week after I arrived and the Herbert people were making changes and balancing up different parts, but they could not produce good cones on account of chatter.

Mr. Dewar is disgusted with them and would like to get some of our designed grinders for both the rib and O. D. [fol. 5211] operation.

All the grinding production will automatically increase when the green product is made correctly.

#2 Centerless Roll Grinders

The set up of their #2 Centerless Roll Grinders is correct with the exception of the emery wheel—80 K. C. Carborundum used for roughing and finishing. All rolls up to part #502 are ground in 2 passes at the rate of 39 pcs. per min. which compares with our production of 70 per min. in three passes.

They dress the control wheels on a lather and if the taper is not correct when the wheels are replaced on the machines

they try filing and if they are unsuccessful they resort to another recut on the lathe. Sometimes they recut and file three or four times losing a day or more.

The hoppers cannot be used on account of the rolls being mixed in carburizing which they are now trying to remedy by more careful dumping of the rolls from the carburizing so they are using one girl feeding rolls at each machine and one lineman for all the eight machines in operation. They were only using a shadow taper gauge and no size, chatter or out of round gauges.

The writer has agreed to send them one Vanderbeek roll size gauge and one gauge for out of round and chatter together with prints of the same.

The control wheel dressing attachment was put on a #2 Centerless Grinder as soon as it was received, but the motor with flexible drive had not yet arrived when the writer left.

Roll and Grinders

Their Churchill grinders cannot be speeded up as they are too clumsy for the job. They are end grinding on the average of 4000 rolls in 9 hours per machine. The actual grinding time on the Woods' grinders is 1100 rolls per hour. The American actual grinding time is 1200 rolls per hour and 10,000 rolls in ten hours. The girls operating these machines work from the backside, having the work head set at zero. The low production of 4000 rolls (end ground in 9 hours per machine is caused by the girls) taking time off and resting every once in a while. They are using 80 N. Universal grinding wheels which are correct.

[fol. 5212]

Inspection

O. D. Cup Inspection

They are using Snap Gauges on the cup O. D.'s which makes it impossible to determine the amount of chatter, out of round and taper. The inspectors take the work from the grinders which is either piled on the floor or placed in wagons and unnecessary time is lost in their carrying the work to a bench or picking the work out of the wagons. A comparison of British Timken and our gauging time is as follows,—

Canton Timken time—5000 cups O. D. Gauged in 9 hours.

Canton Timken time—5000 cups Visual inspected in 9 hours.

British Timken time—1500 cups gauged & visual inspected in 9 hrs.

I instructed them that the O. D. cup gauging should be done after I. D. grinding the cups on account of shrinkage caused by the heat generated from the I. D. grind. By having both inspections carried out together, extra handling will be eliminated. They should use Schlaupitz O. D. cup gauges which will give the true conditions of the cups. They were instructed to put the work in pans which should be taken when filled to the inspection bench by laborers. The inspection bench should be double width to accommodate gauging of the cups on one side with visual inspection on the other, and when the gauging has been accomplished the pans should be shoved on the bench to the inspection side in order to save time in handling.

Roll Inspection

They have been first inspecting the rolls on the surface, then end grinding and following this with a roll end inspection which causes a double handling and inspection. Since they do not have traveling inspection on the roll grinders, it is necessary for them to have 100% final inspection. They use daylight in all their inspection which is not as good as artificial light.

The following is a comparison of Canton Timken and British Timken roll surface and end inspection time,—

Canton Timken roll surface & end inspection time 1555 rolls per hr.

British Timken roll surface & inspection time 777 rolls per hr.

British Timken roll end inspection time 1100 rolls per hr.

Mr. Dewar is going to have roll surfaces and roll ends ground before inspection which should increase the production at least 30%.

[fol. 5213] Roll Gauging

The production of the roll size gauging machines is very low as they can only get 10 sizes on their type of ma-

chine and rolls have to be rerun 4 times owing to them not being ground to any particular size. Their size gauging machine is timed at 60 per minute but owing to their having to rerun the rolls 3 to 4 times, the net rolls size gauged per min. is about 40.

The roll taper inspection is being done on a small shadow gauge by hand, and cannot be improved upon unless they get on automatic machines.

Their method of checking the rolls for out of round consists of turning the rolls in the shadow taper gauge and if there is no light to be seen between the gauge and the roll surface, the roll is O.K. The remedy for this is our out of round and chatter gauges.

I. D. Cup Inspection

Their I. D. cup visual and gauging inspection is done in the final inspection department. The visual inspection is very slow on account of not having the work in pans and no labor to handle it. Consequently the inspectors have to pile their own work on the benches and take it off. Their cup I. D. gauging consists of using a finish plug fastened on the bench, and checking for out of round, size, and eccentricity. Taper and out of round inspection consists of trying to rock the cup on the plug. They use .001" indicators to check for eccentricity accomplished by turning the cup on the plug. Their sizing is accurate enough for the Regular limits on #2 cups.

The Schlaupitz concentricity gauging machine was received and set up while the writer was there. It was found that the arbor adaptor run out was .002" on the face. They reground it but it could not be ground any better. They have been advised to get a small portable grinder and grind it in place on the machine.

I. D. Cone Inspection

The I. D. of the cones are being gauged with a hand plug. They have one Schlaupitz I. D. cone gauge and are not using it because Mr. Ellis claims it is too sensitive and registers chatter and out of round too plainly. He also claims [fol. 5214] that the Ring masters cannot be ground close enough on their old tool grinders. They have 2 soft Ring masters, one maximum bore and one minimum bore, but they cannot use them on account of being out of round due

to being turned on a lathe which is not accurate enough for masters.

O. D. Cone Inspection

Their cones are not sized until they get to the assembly, but they give the cone O. D.'s 100% finish, taper, rib angle and concentricity inspection. All the cones are run on an arbor for concentricity which is a very slow operation. The concentricity, race and rib angle inspection could be reduced to the point where only a small percentage of the cone O. D.'s need be inspected by having traveling inspectors on the grinding machines to prevent them making bad work. All the inspectors have to convey their own work back and forth from the inspection benches which adds to the loss of time.

Assembling

Their rolls are sized gauged and sent to the Assembly Department in cans, but the cone sizes mentioned heretofore are measured in a work cup by the assembler. The cages are not spread causing a loss of time and possible damage to the cones and rolls. Their process of carrying out the assembly of the bearings is very slow and expensive.

The writer advised them of the Canton Timken method and Mr. Dewar has a new layout of all the final inspection and assembling departments to conform with our methods.

Transportation

They have no system of transporting their materials and parts either in the respective departments or from department to department. The work is carried around in unhandy wagons and shipping boxes by inspectors and machine operators. The only reason the writer could find for their not having laborers to transport the work was their method of saving expense by cutting down on labor as much as possible. The writer advised them that it is much more expensive to allow the machines to be idle while the operators are transporting their own work.

[fol. 5215] Francaise Timken

Mr. Dewar requested the writer to go to France and set up the 2 Gridleys, one 3¼" machine for #29177 cone and one 4¼" machine for #29334 cup which he had sent

to the French Timken plant. Mr. Fegan, their efficiency expert accompanied me.

The Gridleys sent over were badly worn and should have been overhauled. The writer started Mr. Fegan to set up the 3¼" machine while he was setting up the cup machine. The cup set gave a machine time of 2 min. 50 seconds as compared to the British Timken time of 4 min. 37 seconds on D.O.H. steel. The cone set up had not been completed when the forming tool broke due to a hardening crack, and as they did not have an extra tool on hand they had to make up one. They are using Direct Oil Hardening Steel for their product which made it quite difficult to approach Moly steel time. Mr. Fegan has got the production idea well in mind, and will get the machines running as fast as possible.

Mr. Seward had the French furnace man come and get the furnace adjusted properly. However, the 15 cups hardened in a test run had a thin skin which was soft to a depth of .002" whereupon Mr. Seward sent for the steel man and they blamed each other. It is the writers contention that the air and gas mixture was not quite right and a slight decarburizing action occurred as the cups were quite hard under the skin.

The #3 Centerless Cup Grinder was set the same as in England so the writer changed it but having only 15 cups to work with it was impossible to arrive at any time. The Heald time was 1 min. per cup.

I went over the entire plant with Mr. Seward and Mr. Fegan. They intend to repair the automatics and work everything to the Canton Standard.

My passage was booked for the 4th of May but owing to the poor condition which the Gridleys were in it was cancelled so as to be sure of getting everything started right.

Mr. Seward would like to have prints of the green and finish cone gauges sent direct to him as he has been having a hard time in getting them from England. He gave the writer a list of bearing part numbers on which he wants the gauge prints.

[fol. 5216] DEFENDANT'S EXHIBIT 168

Française Timken

Société Anonyme

10th April, 1930.

Mr. D. P. Hess, The Timken Roller Bearing Company, Canton, Ohio.

Dear Sir,

Report on Francaise Timken

No. 22 Waterbury Farrel Upsetters: Started the machine on March 18th making part No. 2008 rolls at 75 per minute, but had some trouble filing out the roll heads due to grease which had been worked all through the dies caused by running the Machine idle before I arrived and after taking all the dies and tools out and cleaning them thoroughly we made 32,800 No. 2008 rolls in 22½ hours with 10 hour delay caused by the wire being greased and dirty, but we eliminated this trouble by washing the wire in carbon oil.

On March 21st I changed to No. 1003 rolls, making 180,000 rolls up to April 6th.

Most of the delays since changing to No. 1003 rolls were caused by breaking in an operator who never had any experience on upsetters, but is doing very good now.

No. 2 Centerless Roll Grinder: They were having a lot of trouble on these machines and in checking over the setup I found Soft Control Plates.

Regulating wheel head set at 2½° angle instead of Zero. The regulating wheel had leads on both front and rear about 2° taper for 1½ inches.

Both regulating and grinding wheel spindles were bad.

The lubricating oil was entirely too heavy to flow properly.

[fol. 5217] They were using the same rail for dressing the regulating wheel on both machines, shifting it from one machine to the other and never getting it lined up properly.

The grinding solution was soft soap and soda which did not lubricate the control plate and caused slippage on the regulating wheel.

The control plates were made of an ordinary Carbon steel and when they were hardened hard enough they would crack, so instead of using the instructions I left with Mr. Fegan last year they used them half hard which caused a lot of trouble.

The 3 No. 76 Acmes, Automatic Blanchard and two Vanderbeeks grinders are being belted wired up and I expect to have them running in another week.

I am having no trouble at all in getting anything changed or getting different materials to improve production as Mr. de Beauvivier, Mr. Cognard, the Factory Manager, and Mr. Fegan are very anxious to improve the plant efficiency.

Yours truly, Wm. Sloan.

[fol. 5218] British Timken Limited

Cheston Road, Aston, Birmingham

15th May, 1930.

D. P. Hess Esq., The Timken Roller Bearing Company, Canton, Ohio, U. S. A.

Report on Francaise Timken

No. 22 Upsetter

This machine was down from April 9th to 15th to change the Electric Power Line from temporary to a permanent line. On April 8th we changed the job back to No. 2008 Rolls.

The Operator is doing very good and is now able to handle the Machine himself.

Rolls made to date:

415,000—1003 Rolls
90,000—2008 Rolls

No. 2 Cent. Roll Grinders

Both the Regulating Wheel dressing attachment Rails are fixed permanent and now have the Regulating Wheels made with the drop off on the rear end in place of the taper.

We had some trouble with Sandvik Charcoal Steel roll rest blades cracking in the hardening, but have overcome this trouble.

On one machine both spindles were repaired and the taper on the end of the Regulating Wheel spindles on the other Machine ground as they were not alike which made the Regulating Wheels unchangeable from one machine to the other. We are now using a light lubricating oil and have no trouble with the spindles sticking.

These machines were down about 30% of the time due to the method of feeding in the rolls, and are now changing to our method.

I have finished 7000–2008 Rolls to .0005 limits for the Vanderbeek End Grinders which have not been run on account of the large variation in the roll size off the Centerless Grinders.

[fol. 5219] Vanderbeek End Grinders

Started one Grinder on May 8th on No. 2008 Rolls, and have had some trouble at first holding size on account of the suction fan not being large enough and sawdust all through the hopper and machine. They have these Machines set in between two wet hand end roll grinders with no water guards on and the water runs all over the floor and there they soak it up with sawdust. After thoroughly cleaning the machine I have no trouble holding the rolls to .0001 for size on the dia.

Mr. Seward, M. de Beauvivier and M. Cognard are very much pleased with these Machines.

Blanchard Back Face Grinder

Received the Machine April 5th and put on all the extra parts during the week of April 7th to the 12th. The Machine was idle until April 22nd waiting on the Electricians. Started April 23rd grinding No. 29177 Cones and have had no trouble at all.

In the past the old type Blanchard was holding up production, but with the new machine we have no more than 2½ to 3 days work per week at the present.

This machine is running 100% American times when we have the work.

Heald I.D. Cup Grinders

Both Pinion and Wheel Bearing Cups are given two passes, and the second Pass takes as long as the first, for they have the machines set to go through all the motions,

dressing the wheel on every cup, while we dress every six or ten cups which is much faster.

I have arranged with M. Pierre Barzy of the Norton Wheel Company to get some 100 A.S.4. Wheels as the 60 grit Rubber Bond Wheels they are using are too corrse to get a good finish, and when these Wheels are received I will start them on our method, of grinding pinion Cups.

Mr. Fegan of the French Timken has a copy of the instructions I left last Year but had it filed away and forgotten.

Automatic Dept.

Of the three Acmes received, two are belted up and one running on part No. 14132 Cone but is running slow as they changed the lineshaft pulley to get 75 surface feet per min. which is their standard on D.O.H. Steel. The Machine time is 1 min. 42 sec. but expect to reduce this time as soon as the Roll Grinders are running O.K.

The Chamfering operation is being done on Capstan Machines, which is very slow, and Mr. Congard and myself have been looking all over Paris for a four spindle drill press suitable for this job and have finally located one, which I expect to see after the No. 33 Heading Machine is running O.K. at British Timken, as Mr. Dallow telegraphed me on May 9th that the Machine was in and he was way behind in 502 Rolls and needed some immediately.

[fol. 5220] Mr. Dewar was at the French Plant on April 30th and said he had made all arrangements for S.K.F. in Sweden, and he also wants me to experiment with D.O.H. Steel on the Heading Machine. He claims that S.K.F. are making rolls out of D.O.H. Steel and I am very anxious to find out all the details, such as die steel used, die life and production; but at the present it is more important to get the French Plant going properly.

All information concerning steel limits and Calow Heading Machine at British Timken Plant will follow this Report a few days later.

Yours truly, —— ——.

[fol. 5221] Date: 6-16-30.

Mr. D. P. Hess, The Timken Roller Bearing Company, Canton, Ohio

Dear Sir,

Report on French Timken.
No. 2 roll Centerless Grinders.

The 2 new Centerless Roll-Grinders are operating on No. 2008 and No. 1003 Rolls at .0005 limits for size and .0001 for out of round and chatter in 3 Passes, 1st and 2nd Passes at 70 pieces per minute and the 3rd at 52 pieces per minute.

Both machines are operated by one girl and one lineman on all the 4 machines at 60 to 70% efficiency at present due to the French carburized and hardened rolls having a soft skin about .003 thick on the outer surface, but O.K. for hardness underneath. There is quite a number of these Rolls spin with the emery wheel about halfways across the wheel until the soft surface is removed on the 1st Pass only, which causes excessive wear on both the emery and regulating wheels.

The remaining 2 machines are operating at 52 pieces per minute and also in 3 passes, but will change as soon as we get the Hoppers on which was received last week. These machines are also running between 60 and 70% efficiency due to the soft surface on the rolls.

Vanderbeek end Grinders. Both machines had been operating well until they accidentally mixed some rolls that were to be reground to size on the centerless with the rolls ready for end grinding.

These machines are timed at 19 pieces per minute and we are having no trouble holding the rolls at .0008 for stand which is 2/100 millimètres on the gauges, but we have the last 100 J. Norton wheels on now and cannot get any for 6 or 8 weeks, so will try to keep going on 120 J wheels which are available and may be just as good.

At present it is impossible to get the efficiency on these machines as they are taking the rolls away as soon as they get 100 or 200 done and no count is being taken.

I have been trying to get them to use a daily work card [fol. 5222] similar to ours so it will be possible to check the efficiency of the machines daily and have had about 5000

printed, but Mr. Cognard says that a large percentage of employees cannot write their names so I suggested they use their block numbers and expect to have them in operation before I am done here. As it is at present all orders are issued for 500 bearings at one time and no cards are turned in until they are done which may be in a day or a week and nobody knows whether the operators are doing a full days work or not. This method is general throughout the Plant.

Heald J.D. Cup Grinders

We have received the 100 A.S.H. Norton wheels for second Pass and also the 10" pulley for the countershaft to speed up the work head to 1000 R.P.M.

When trying the above items out we had trouble getting a decrease in the time due to the cups being .006 off taper after hardening, which left .020 grinding stock to be removed, and was due to the green cups being off taper. We are having some cups made correct in the green and will check after hardening to find out just how much they change and then make the green cups accordingly. This should decrease the grinding stock to .014 and enable us to get a better finish when roughing.

The present time is 90 pieces per hour roughing and finishing 100 pieces per hour.

Rib Grinders

Of the 3 machines received 2 had the forks that operates the work head broken, the emery wheels broken too and the collets damaged, the 3rd machine was O. K.

We started operating 2 of these machines on May 26th and run out of emery wheels as we can only get 1" wear on the Dia. due to the diamond running into the wheel spindle housing, and there is no way to get more wheel wear unless we cut a slot in the spindle housing, which is 1" thick, and it would not effect it to put a slot in ½ deep and ¾ wide, which would give another 1" wheel wear.

I have checked this up thoroughly and find that Cone No. 366 is the largest they make and that eliminates any possibility of wearing the wheels down to less than 5" in Dia. unless the spindle housing is slot-ed.

We have ordered 80 M. Norton wheels, but cannot get delivery in less the 2 months and are now using 60 P. Nor-

ton wheels which are very hard and do not finish very well.

Vanderbeke O. D. Cone Grinders

We have received 1 machine in good condition, but is not set up yet. The other 2 grinders are operating O.K. for finish, but very slow at an average of 60 pieces net per hour, in 2 operations and will work on them as soon as the Cage Department is O. K.

[fol. 5223] Cage Department

We have received all the American Presses and the one from British Timken for making thrust bearings. These machines are being set up for No. 14001 Cage while the Millwrights and Electricians are getting the lineshafting and power ready. We expect to have them running June 9th.

Carburising

At present we have 1 Gregson Furnace and the capacity is 8000 No. 2008 rolls per 6½ hours.

This furnace should be dumped every 5 hours according to information received from British Timken, but the air pressure is low and they have ordered a larger fan.

They also had bad meal which was 50% bone and 50% charcoal and very coarse. The low air pressure and carburising meal as far as we know is the cause of the soft skin on the Rolls and if there is any information such as the analysis of meal, air pressure and temperatures you can send over, they would appreciate it very much as they have quite a lot of trouble getting the desired information from British Timken.

I am going to British Timken on Wednesday 4th to meet Mr. Lothrop.

Yours truly, Wm. Sloan.

[fol. 5224] June 27th, 1930.

The Timken Roller Bearing Company, Canton, Ohio. *For the attention of Mr. Hess.*

DEAR SIR,

Report on French Timken

Cage Department

Arrived in France June 10th and started blanking No. 14001 cages on June 13th, after blanking 21,000 pieces, changed to No. 29008 cages on June 17th and made 15,000 cages and broke both dies, caused by operator letting one blanked cage lie on the dies and tripping the press to form another.

We then changed to No. 1711 cage on June 26th.

Machine Times

1st operation blanking	450 per hour	on No. 1711
2nd operation sizing	800 per hour	
3rd operation perf.	1100 per hour cage	
3rd operation perf.	300 per hour cage	on No. 14001
3rd operation perf.	300 per hour cage	on No. 29008
4th operation winging	300 per hour	on No. 1711
4th operation winging	225 per hour	on No. 14001
4th operation winging	225 per hour	on No. 29008
5th operation spreading	1100 per hour	

The machine times for blanking and spreading are the same for all cages.

During the week of June 17th we finished 10,000 cages complete and also finished the cages from America, but the perforating production was low due to the dies being soft, the max. life of which was 2,000 cages, so we continually changed from one job to another until we used all the American dies to keep going until we could make some.

We are operating very satisfactory now with the excep-
[fol. 5225] tion of the cage steel which is brittle and makes it necessary to anneal the No. 29008 cage after blanking to prevent cracking at the top of the pockets.

On the first lot of No. 29008 cages we had 15% scrap due to cracks, but the No. 1711 and No. 14001 steel is much better and we have had very few cracked.

The sand blast is doing a fairly good job, but expect to do better when we receive some harder sand, the sand being used now is very soft and pulverizes in a very short time.

Roll Carburizing and Hardening

When I first discovered the rolls had a soft skin on the surface, I suggested to have to have Mr. Evans over from the British Plant but they wanted to experiment with different carburizing compounds, and after a month the rolls being no better, they then sent for Mr. Evans. He arrived June 25th and found the heat was wrong due to the gauge not being right and the compound was also wrong, and there is not enough air to heat the furnace properly unless the hardening furnace is shut off, so they immediately got in touch with the people off whom they ordered a fan about a month ago, and it was delivered the same day, so we expect some good rolls to-day.

No. 2 Centreless Roll Grinders.

These machines have been operating between 30 and 40% due to the lineman and soft rolls, but on June 22nd they fired both linemen and since then the percentage has increased from 30 to 60.8% and when the rolls are properly carburized and hardened we expect 90% efficiency.

Yours truly, —— ——.

[fol. 5226] 30th July, 1930.

Mr. D. P. Hess, The Timken Roller Bearing Company, Canton, Ohio.

Dear Mr. Hess:

Report on French Timken

Cage Dept.: New Times

Blanking	No. 1711	Cage	1005	per hour
Blanking	No. 14001	Cage	1002	per hour
Blanking	No. 29008	Cage	990	per hour
Sizing	No. 29008	Cage	1585	per hour
Sizing	No. 1711	Cage		
Sizing	No. 14001	Cage		
Perforating	No. 1711	Cage	423	pcs. per hour
Perforating	No. 14001	Cage	389	pcs. per hour
Perforating	No. 29008	Cage	358	pcs. per hour
Winging	No. 1711	Cage	278	pcs. per hour
Winging	No. 14001	Cage	253	pcs. per hour
Winging	No. 29008	Cage	240	pcs. per hour
Spreading	No. 1711	Cage	1500	per hour
Spreading	No. 14001	Cage		
Spreading	No. 29008	Cage		

This department is operating at 85% efficiency on the above times and I expect them to do better when they get on less brittle material.

We have had trouble with the No. 29008 Cages on the perforating operation which had been annealed after blanking, due to the extreme softness, which left a bur on the inside and prevented them from turning on the die. We scrapped about 8% due to the pockets not being rightly spaced.

The press received from British Timken for making T.75 thrust bearings was in a very bad condition and had to be overhauled. It is a toggle joint machine and had ¼" p-ay up and down on the ram. We have received the discs from British Timken and also the roll grinding and assembling equipment from Canton and unless we have trouble with the material we expect to make some races and retainers by the beginning of the week commencing July 28th.

[fol. 5227] Roll Heading Machine

This machine has been operating fairly well at 70% to 75% efficiency until we ran out of American dies for No. .2008 Rolls and started to use the French dies made at some outside place. They were very accurate but too soft and after making about 300 rolls they would open out .008 which is our size limit.

I gave them the analysis, names of steel and heat treatment for all the various tools when I first arrived and also prints of the Canton die quenching machine. Although they have done their best to duplicate our steel they have only just started to make the quenching machine and when it is complete I expect to get some good dies. I do not think there is much wrong with the steel, it is just a matter of correct heat treatment.

They have just started to work on the dies for the T75 Roll and expect to have them by the end of the week commencing July 28th.

2228 "	1 " 00 "	4 Spindle Gridley
1755 "	1 " 30 "	No. 56 Acme

The Acme Automatic on No. .1729 cups has not been operating due to the French tubing being 1/32 larger in diameter than the Canton tubing and they had to make new chuck pads and feed shells.

Production and scrap for the 1st two weeks of June

Part No.	Total hrs required	Quantity made	Pieces scrapped	Average pieces per hr
365	47.75	947	6	19.81
367	76.00	1280	7	16.85
A1201	47.75	937	3	19.6
07098	88.	2570	5	29.8
19138	88	1887	6	21.45

28156	36	450	0	12.5
1755	83	3060	10	36.9
[fol. 5228]				
1755	81.25	2485	5	30.6
17132	51.25	1395	0	27.25
362X	87	1276	4	14.67
1729	84	2479	2	29.4
07204	88	2484	8	28.25
14274	176	4292	11	24.4
29334	147	3353	4	22.8

The above figures will give you an idea how this department is operating.

Production of undercutting and champher on hand machine for the 1st two weeks of June

Part No.	Total hours required	Pieces made	Average per hr
337W Cone	6	552	92.1
344 "	5	353	70.7
1755 "	56	6150	110.5
07098 "	17.25	2294	133
19138 "	10.5	1100	104.5
14132 "	3.75	485	129
333 Cup	1.75	456	275
362X "	4.0	1020	255.
1729 "	9.0	1682	298
362 "	2.0	550	275
07204 "	15.0	2902	193.7
14274 "	15.5	4361	281
20334 "	13.75	3537	257

These are the latest production figures I have received up to the present for the automatic department.

After advertising in all the Paris papers for a second hand 4 spindle drill press, for champhering cups and cones, without success we finally located a 3 spindle 20" Rockford drill press which is in fairly good condition and I am now starting to revamp to the American prints.

It will be some time before they start using solid bar stock as they have just bought 200 tons of tubing from the Citroen ball bearing plant.

Grinding Department Rolls Centerless Grinders

This Department is slowly increasing in efficiency due to the soft rolls being picked out in the hardening department and a new foreman, and is now running between 65% to 75% efficiency.

Before sorting out the soft rolls we had to change blades on an average of 3 times per day on each machine and were contin-ally dressing both wheels.

Vanderbeek End Grinders

We have had a lot of trouble breaking castings on these machines which was due to not being adjusted right, the [fol. 5229] first one broken was the cam arm which operated the loading device and the hopper and then the loading device casting and also the idler pulley arm.

Mr. Fegan and I have been in almost every day and checked the rolls and the machine adjustments until we finally taught the setters to adjust them right and they are operating at 75% efficiency now and are very accurate for size;

Roll Carburising and Hardening Department

The carburising furnace is now operating at 5½ hours per heat carburising 8,000 No. .2008 and 12,000 No. .1003 rolls each per heat and as there is only one furnace for this operation the hradening furnace only runs about 50% of the time.

We are still getting about 5% soft rolls which we are now able to sort out since we lined the round tumbling barrel with sheet iron and put in 6 angle irons to tumble the rolls more and this is cleaning them very well.

We received a sack of carburising compound from British Timken which is now being tried out.

Mr. Lothrop advised me not to go to Sweden or Germany saying that he had all that was necessary, so I *I* have booked passages on the "George Washington" for August 7th.

Yours truly, Wm. Sloan.

I am leaving for Brit. Timken on Aug. 3rd. Check up before sailing home.

[fol. 5230] DEFENDANT'S EXHIBIT No. 169

Excerpts from W. B. Sloan's Report on Gauges Used at British Timken Ltd., Dated March, 1930

Roll Grinding Department Gauges

American shadow taper gauge
British Timken size gauge—see print #7
British Timken size gauge—see print #8
American Chatter and Out-of-Round gauge

The size limits on roll grinding are plus and minus .0024 and I have advised them to work to .0005 limit as they now have 3 hoppers working, and the operator has plenty of time to keep the machine adjusted and check the rolls.

Shortly after my arrival at the British Plant I looked up the Vanderbeck hand roll drop gauge for size and found it on Mr. Ellis' desk. It had never been tried out since they had received it, but it is being used now.

Roll End Grinding

The only gauge used in this department is a straight edge to test the end for angles. They never use the blueing check for end flatness.

Roll Grading Department

British Timken is still using the Churchill grading machine with a few alterations Mr. Ellis has made but they are not accurate.

The writer has checked the rolls after grading and found 3 sizes or .00075 variation in one can.

[fol. 5231] Excerpt from W. B. Sloan's Report on Francaise Timken

Under date of April 10, 1930.

On March 21st I changed to No. .1003 rolls, making 180,000 rolls up to April 6th.

Most of the delays since changing to No. .1003 rolls were caused by breaking in an operator who never had any experience on upsetters, but is doing very good now.

No. 2 Centerless Roll Grinder: They were having a lot

of trouble on these machines and in checking over the setup I found—

Soft Control Plates.

Regulating wheel head set at 2½° angle instead of Zero. The regulating wheel had leads on both front and rear about 2° taper for 1½ inches.

Both regulating and grinding wheel spindles were bad.

The lubricating oil was entirely too heavy to flow properly.

They were using the same rail for dressing the regulating wheel on both machines, shifting it from one machine to the other and never getting it lined up properly.

The grinding solution was soft soap and soda which did not lubricate the control plate and caused slippage on the regulating wheel.

The control plates were made of an ordinary Carbon steel and when they were hardened hard enough they would crack, so instead of using the instructions I left with Mr. Fegan last year they used them half hard which caused a lot of trouble.

[fol. 5232] The Timken Roller Bearing Company

Canton, Ohio

8-12-'30.

1st Pass Rolls

Taper—¼ to ⅓ the length of the roll touching the taper gauge.

Size—Normal 18. Minimum 17. Maximum 19.

Chatter—on all 3 pass rolls under size 502 allow .0003 and not more than 2 out of a trial lot of 10 or 12 over this. On 502 and larger rolls allow .0004 instead of .0003.

Watch for nicks, especially on the small end of roll.

2nd. Pass Rolls

Taper—½ length of roll touching the taper gauge. Better a trifle over ½ the length off if taper shallow than a trifle under with a deep taper.

Size—Normal 10. Minimum 9½. Maximum 10½. This size will change when special size finish rolls are required.

Chatter—On all 3 pass rolls under size 502 allow .0002 and not more than 2 out of a trial lot of 10 or 12 over this. On 502 rolls allow .0003 instead of .0002.

Watch for flat spots and nicks.

3rd. Pass Rolls

Taper—No allowance.

Size—Not over ¼ size above or below size of finished roll required.

Chatter—On all 3 pass rolls under size 502 allow .0001 and not more than two roll out of a trial lot of 10 or 12 to run more than this. Also if one-half the rolls tried show .0001, machine must be stopped. This applies to either or both ends of the rolls.

Watch for wheel marks, roughness, shadow chatter, nicks, etc. Use stone on at least one roll each time they are tried.

4th. Pass Rolls

Taper—No allowance.

Size—Not over ¼ size above or below size of finished roll required.

Chatter—Limit .00005 and not over 3 or 4 out of a trial lot of 10 or 12 allowed to run to this limit.

Watch for wheel marks, roughness, shadow chatter, nicks, etc. Use stone on at least one roll each time they are tried. Sound test 4-pass rolls frequently.

NOTE: These limits apply to two point checking.

O. J. Grubb, Head Checker.

[fol. 5233] The following gauging equipment is needed in the Roll Grinding Department to operate it efficiently and on the Canton plan:

20—large Ames (2¾" face) .0001 indicators—without revolution counting hand—model number will be furnished later. For chatter checking.

10—Small Ames 2 1/16" face) .001 indicators—but having .0005" graduations also, no revolution counting hand. Style dial 0-20-0 Model 55.

24—Stands for sizing or chatter checking.

1—Diamond point—center contact block for each kind of roll. For chatter checking.

1—Solid block for each kind of roll for size checking.

Two—.0001 indicators are needed for each kind of roll being ground. One set up for 2 point checking and one set up for 3 point checking.

There should be 1 size gauge for each machine also.

This may seem like quite an expense but the salary of

at least two people can be saved which will more than pay for the gauges in a short time.

NOTE: This applies to British plant.

Shuler.

[fol. 5234] Information on hardened steel feed wheels.

The following method is used in getting the old 9⅞" feed wheel ready for the steel shell. It is placed on a boring mill—trued up to the inside hole—roughed to taper on outside (See print) leaving about ⅛" stock for finish cut. If possible leave casting set a few days before finishing.

The inside of the steel shell is bored to size and taper allowing from .040 to .060 for grinding (See print). The steel shell is then pressed on to a special casting (just a regular feed wheel cut undersize on account of the grinding stock in the shell), and turned up on the outside in the regular way to the regular print. Be sure to keep the drop off at least ⅛" deep as the shell can never be recut except for small wells (?). After this it is removed from the special casting, carborized, hardened, ground internally then pressed on the casting prepared for it. It is then put back in the lathe and by means of a special grinding attachment clamped on the tool rest, it is ground true both the bottom of the groove and the side of the Bead. It is then ready to be used on the roll grinders.

The special grinding attachment was made from a spindle taken from a Woods hand angle grinder and driven from the end with a motor and flexible shaft. (Your present motor and flexible shaft used for dressing control wheels can be used).

The cost of the steel feed wheel is very little more than the nickel cast iron that is being tried out here at present. I would not recommend the nickel cast iron as it is very little harder than the regular cast iron.

The steel being used in Canton is known as "Evansteel" No. 2 Grade, made by the Chicago steel Foundry Co., Kedzie Ave., and 37th Street, Chicago, Ill., U. S. A. The rough shell weighs 140 lbs. Cost $.10 per pound, or $14.00 for the material for one wheel. Your Mr. Evans tells me the same steel can be purchased in England. I have given him the analysis of the steel and all the particulars as to carborizing, hardening and heat treatment.

Shuler.

[fol. 5235] Mr. Shuler Mr. Teague.

15.9.30

S/RW

The following is taken from a note by Mr. Bear to Mr. Buker at the Canton Plant dated May 6th, 1930:

502—4 pass.
702—4 pass.
802—4 pass.
902—4 pass.

Above rolls are held to .0001 for chatter and high spots.

Regular production rolls—3rd pass are held to .0001 for chatter up to 3008 rolls—above this size .0002 for chatter.

NOTE: Rolls are checked for chatter on a two point set up and for high spots on a three point set up.

Shuler.

[fol. 5236] FEED WHEELS—ROLL GRINDERS

Evansteel

Chemical Analysis

Carbon—.30-.40

[fol. 5237] Mr. Shuler to Mr. E. Teague.

9.9.30

S/W

The following are the sizes that have been standarized in America on all three pass rolls up to and including the 602, 4003, 5003 and 7003 rolls also 702 and 6003 when ground on the No. 2 Grinders.

Pass	Canton Size	British Size
First	17 to 19	40 to 48 grades or .010" to .012 over correct.
Second	9½ to 10½	10 to 14 grades or .0025 to .0035 over correct.
Third or Finish	7¼ to 7½	1 to 2 grades or .00025" to .0005" over correct.

Canton standard is 7—British standard is called "correct". The ¼ to ½ over 7 is the allowance for drop after angle or flash grinding.

If other than standard size is wanted the 2nd pass size should be lowered or raised to allow from .0025" to .0035" stock for the finish pass.

If rolls are to be fourth passed the third pass size should be raised from .00125" to .0015" over the size fourth pass rolls desired. This amount to be removed on 4th pass. The above chart is followed closely in Canton and proves very good. I think it would increase efficiency and improve the quality of rolls if followed more closely in this plant.

Shuler.

[fol. 5238] British Timken Limited

Cheston Road, Aston, Birmingham

LME/NC

9th October, 1930.

Mr. M. Schuler, Ste Ame Francaise Timken 5 & 7, Quai Aulagnier, Asnieres, Seine

Dear Mr. Schuler,

I am in receipt of your letter of the 8th instant and thank you for the information given which will be of con-

siderable assistance to us in dealing efficiently with the rolls you mention.

I am enclosing a copy of the data contained in your letter for your own records and I am circulating other copies in our Works here.

Trusting that you are keeping well and enjoying your stay in Paris,

I am, Yours sincerely, /s/ L. M. Ellis

[fol. 5239] 9th October, 1930.

Information Regarding Feed Wheels for Small Rolls Supplied by Mr. Schuler on the 8th Oct., 1930.

T.75 and T.87 Rolls. The grooves should be 1/8" deep and .010 wider than the maximum length roll.

Drop off should only be 1/32" deep at back end of feed wheel. Undercut front lead in a scant 1/16" deep overall diameter, a trifle less than the drop off on a side.

11-A-103 & MS.22000 Rolls. The same drop off and lead in as above should be used. Width of groove can be made regular.

T.75 and A Rolls. 5/64" blade and top guide must be used.

T.75 and T.87 Rolls. The top guide should have a 15° angle (Canton method of measuring angle).

[fol. 5240] Mr. Shuler to Mr. E. Teague, S/W, 9.9.30.

I am giving you a written summary of some things that if taken care of will help the roll grinding department quite a bit.

Control wheel dressers—there are six for twelve machines, five are being numbered for individual machine use and the sixth one is to be used on the other seven. An hour or two sometimes more, is lost changing this dresser. It is very impractical and does not fit correctly. In Canton these dressers are never moved from one machine to another. Anyone with any experience on these grinders knows that the feed wheel dresser should never be tampered with.

The feed wheel heads are still being tilted, all rolls will grind on any machine without this; this destroys your standard set up and will cause the rolls to pull away from

the feed wheel head or draw tighter against it according to which way the head is tilted. No operator or job setter should be allowed to tilt the head under any circumstance when grinding the straight thru method on tapered rolls. I think Mr. Sloan mentioned this also.

Have all feed wheel spindles set uniform so new style feed wheels will come the same on all machines. Two have been set.

See that all old style loaders have a plate screwed to the bottom so as to be five inches from the bottom to the blade rest, before changing them to new style loaders.

In Canton all rolls up to 502 are ground on a 37° blade, as compared to 45° here. A 37° blade gives a more substantial rest. 45° is only used on rolls that might spin, due to a soft skin or on rolls such as T75—T87 or A roll when ground on a hardened steel feed wheel when spinning is likely. 502 - 602 - 4003 - 5003 - 6003 - 7003 - such rolls should be ground on a 30° or 32° blade. Less angle allows the roll to turn more free thereby cutting down high spots and chatter. Too little angle will allow the rolls to slip.

All rolls up to a 502 should be ground on a blade set 3½ inches in front and from 1/32" to 1/16" higher in the back or where the roll passes off the blade, 502 - 602 - 5003 etc. should be 1/8 lower on each end. Larger rolls ground at this height will be better for high spots and chatter but they cannot always be ground this high as this will bring the center of the roll quite a bit more than 1/8 above the grinding center and they may spin or jump.

[fol. 5241] Mr. Shuler, Mr. E. Teague, 9.9.30. Continued 1.

Angle checking for out of square, at the angle or flash grinding machines is important. All rolls should be checked on center contact blocks in the roll grinding department. Angle contact can be used in inspection or after flash is ground. This applies to either two point or three point checking. If rolls are found bad on a flash contact block a few should be tried on a center contact to determine if the surface or flash is bad.

Size gauges are not in very good shape. They should be looked after by the head checker.

Bins for parts and tools for Lineman are needed. Much time is lost between tool room and roll grinding depart-

ment. A small bench grinder of some sort would also save much time.

Better wheels should be had for control wheel dressers. A good wheel made by the Norton Co. can be had in most all widths, 3" diameter and 5/16" hole—1960K.

When checking rolls with a 3 point set up, a 2 point should also be used, as the chatter that makes a noisy vibrating bearing does not usually show up on a 3 point check.

Quite a few rolls are made on the automatics. I believe they could be made smaller and surfaces ground in two passes. Header roll size should be checked into also—some come small.

Shuler.

[fol. 5242] Hr. Shuler, Mr. E. Teague, 18.9.30.

PDS/W

It will list here a few things that may help you in the line of 4 passing and sound testing.

In the first place the roll must have a very even grind over the whole six inches of wheel surface. It may be made to die out a trifle at the back; too much will make the roll too smooth and cause shadow chatter or light and dark streaks which can be seen under a light but does not show up under an indicator. Shadow chatter will make a bearing whistle when run in a sound testing machine. If you find it impossible to get a straight even grind, it may be due to one of the following causes:

Feed wheel may be dressed low in center due to worn feed wheel dresser rail.

Blade not dressed perfectly straight in the tool room.

Grinding wheel dresser worn badly—not dressing grinding wheel straight.

The feed wheels must be dressed chatter free and perfectly round; the least bit out may make rolls that cause a noisy bearing. The Bead that the large end of the roll comes in contact with must not be chattered.

The grinding wheel spindle or feed wheel spindle may be badly worn—so that they are not parallel. This will cause trouble on any machine any pass. The third pass rolls must be uniform in size and within the chatter limits. They should not have more than .0015 or less than .001 to be removed on 4th pass. This is extremely important.

Only 25200 BS6 or 7 should be used. This is a bakelite bonded wheel.

The rolls should always be flash ground before 4th passing.

A machine sometimes must be run two or three hours before it will come up to sound test, that is when the job is first set up.

[fol. 5243] Mr. Shuler, Mr. E. Teague, 18.9.30. Continued.

Be sure you have a good free cutting diamond; sometimes changing a diamond will work wonders. Above all be sure the sound testing machine is working correctly.

Grinding solution must be up to standard 25% oil in America.

Care must be exercised in setting size as only .001 is being removed. Fourth passing is a very delicate operation. You may try one machine and get it first time. You may have to try two or three different machines, or you may have to repair both spindles and re-line everything before it can be done. Sometimes a new machine must be run in a few days before the rolls are good enough for 4th pass.

All care that is taken to grind good third pass rolls, chatter free etc., and the same methods used to make good third pass rolls can be used to make good 4th pass rolls such as balancing wheel, keeping wheel dressed, keeping blade dressed smooth and set correct height. Always keep the blade about 1/16 inch higher at the back end and keep the feed wheel head set on zero.

The best combination to have between the feed wheel and grinding wheel is dressing the grinding wheel the whole way across and still have the rolls coming out on taper with an even grind the whole way.

Shuler.

[fol. 5244] Mr. Shuler, Mr. E. Teague, 16.9.30.

PDS/W

Method of setting lathe for cutting control wheels at Canton Plant.

An arbor about 14 inches long, 2 inches in diameter with a taper 3 inches long cut on one end, the included angle of which is made to suit a certain roll. All rolls

having the same included angle use the same arbor. The arbor is put in the lathe centers with the tapered end to the right. An indicator is clamped in the tool holder and the top slide is swung around until the indicator registers no movement, when the tool holder is drawn back and forth across the 3 inches of taper, by means of the top slide. In some cases when the taper is not perfect on the arbor, that is if the rolls do not come on taper or nearly so from a new feed wheel, the lathe can be set so the indicator will show as many thousandths more or less as desired in order to bring the rolls nearer to taper. A feed wheel from the lathe should be near enough to taper and round enough that it does not need dressing by the control wheel dresser, if used on 1st or 2nd pass.

The following is a table showing the roll angles, arbor angles and variations made for different rolls.

Roll	Included angle of roll	Included angle of arbor	How Cut
A	5°	9°51′	Same as arbor
T75 & T87	3°	5°24′30″	.010 more taper than arbor.
Saginau No. 1	5°1′	Use A arbor	.006 do.–?.0006
" No. 2	5°2′	do.	.017 do.
" No. 3	5°12	do.	.011 do.
202	3°4′	Use 2003 arbor.	Same as arbor.
205	"	do.	do.
302	3°8′	6°11′	do.
305	3°4′	Use 2003 arbor.	do.
402	3°10′	6°9′20″	do.
405	3°4′	Use 2003 arbor.	do.
502	3°10′	" 402 "	do.
505	3°4′	" 2003 "	do.
602	3°30′	" 1003 "	4° less
702–802–902	3°10′	" 402 "	Same as arbor.
1003	3°34′	6°55′	.0015 more taper than arbor.
[fol. 5245]			
1008	4°	7°45′40″	.002 less taper than arbor.
2003	3°4′	5°58′	.001 do.
2008	4°	Use 1008 arbor	.002 do.
2009	8°	16°	.010 do.
3003	3°8′	Use 302 arbor	Same as arbor.
3008	4°	" 1008 "	" " "
4003	3°10′	" 402 "	" " "
4004	8°	" 2009 "	.010 less taper than arbor.
5003	3°14′	6°30′	.0035 do.
5004	—	—	.010 do.
6003	3°35′	6°56′	Same as arbor.
6006	—	Use 6003 arbor.	.0085 less taper than arbor.
7003	8°18′40″	16°39′20″	.005 do.

The figures given in the last column may have to be changed somewhat to meet your own conditions.

When cutting feed wheels for T75 or T87 rolls be sure to keep them 1/8" deep and not more than .010 wider than the roll. T75 and T87 must be watched close for length and diameter on the upsetters or they can not be ground without sorting.

When cutting T75, T87 or A feed wheels the standard drop off is not used. These rolls should just be brought to the edge of the grinding wheel not 1/16" past. The rolls being so short will be hollow ground if allowed to pass the edge of the wheel.

Shuler.

[fol. 5246] Grinding Wheels

All 3 and 4 pass rolls should be 1st and 2nd passed on an 80N or 80M carborundum wheel. 80L can be used providing it does not cause high spots (found by three point checking) or chatter (found by two point checking). The 80L being the harder wheel of the three.

Other wheels that will grind more rolls per wheel and can be used on first or second pass are 80DM, 80DN, 70DL, 70DM, 70DN—Norton. As these wheels are much harder than the Carborundum 80M or 80N, the rolls must be watched extremely close for high spots and chatter on the roughing passes.

For trouble free grinding, 80M or 80N Carborundum top all others. These wheels are also best for 1st passing 2 pass rolls.

To save time when only 25,000 or 50,000 rolls are wanted, all three passes can be ground on the finish or 80 K. C. wheel. This only applies to small rolls, from 2008 on down. Rolls such as 103 or 1008 can be roughed and finished on an 80 K. C. wheel. In Canton all rolls below 502 size are 3rd passed on 80 K. C. wheels, 502—4003—5003 are third passed on a 150 DM Norton wheel. 4003 and 5003 can be finished with an 80N, but more care must be used to get a smooth finish.

The 150 D. M. is a vitrified wheel and will not give the high polish of an 80 K. C., but the quality of the roll will be better, less chatter. An 80 K. C. wheel does not cut fast or free enough for large rolls, although it can be used but not as efficiently. As long as you demand the high polished roll no wheel can be used for finish except 80 K. C. Carborundum. Large rolls such as 702-802-902 are finished on an 80M or 80N—in Canton but without the high polish.

The Norton Company build a rubber wheel—90 AR5, but it is a poor substitute for Carborundum 80 K. C. Too soft.

For 4th passing, removing only from .001 to .0015 stock and grinding to sound test the Norton 25200 BS6 or 25200 BS7 is the only wheel to use. It cannot be used for removing more stock than this as it is a soft wheel. A high polish can be obtained with this wheel with the proper grinding combination but it is not desired as when this combination is used the rolls will not come up to sound test. They must have a smooth, chatter free finish, but not necessar-ly a polish. The polish is obtained by having the grinding wheel dresser dropped to low in the back, allowing the rolls to pass through the machine taking practically no stock from the roll on the last few inches of wheel surface, merely polishing it. In Canton all railroad and mill bearing rolls are roughed and finished with an 80N wheel. The larger rolls over 902 on an in and out grinder not the straight through method.

Shuler.

[fol. 5247] Yesterday Mr. Dallow mentioned having a closer gauge for sizing. The .001 indicators I have asked you to order must be had for roughing and they will be closer gauges than you are using for finish at present. You have a Vanderbeek drop gauge which is not being used that only needs one collet made for each type roll and you will have a size gauge that will gauge closer than you can grind. This type gauge is used extensively in America and has proved to be very good. If you care to make up collets for all rolls, use the 302 collet that you have as a standard, by that I mean the gauge should be set so that when the collet with a "correct" size or No. 7 roll in it is placed under the gauge, and the handles pulled down to the stop the hand on the indicator should make exactly three round and stop on zero. The dial should be set with zero at the top and *never moved.* If the hand does not come to zero the gauge should be raised or lowered as necessary by means of the clamps on the two upright rods that support it. After the gauge is once set for one roll all other collets should be made in accordance, that is, so a "correct" roll or No. 7 will show exactly three round and stop at zero. The collets are made adjustable for wear and if after a time the "correct" roll shows .001 low a paper shim can

be inserted at the bottom of the collet. The steel washer can be ground off if a new collet shows a "correct" roll too high.

Rolls having the same taper will have the same drop or stand. Rolls of different taper and the same grade or size will not have the same reading on the gauge. Your Mr. Ellis can have a chart made showing the drop for each grade for each roll. For example a 2008 roll drops approximately 14 to 1—A 202—18 to 1.

A	202—1 grade over	correct should show	.0045	high.
A	202—1 grade under	correct should show	.0045	low.
A	2008—1 grade over	correct should show	.0035	high.
A	2008—1 grade under	correct should show	.0035	low.
A	202—2 grades over	correct should show	.009	high.
A	202—2 grades under	correct should show	.009	low.
A	202—4 grades over	correct should show	.018	high.
A	202—4 grades under	correct should show	.018	low.

[fol. 5248] On 2008 rolls in America an operator is given a limit of .002 on drop to work. A few may be over or under these limits as it is impossible to hold them all this close.

Shuler.

[fol. 5249] 9th October 1930.

Mr. Fegan:

Following is a list of rolls and methods used in grinding them, most of which are not run in the regular manner.

Saginaw. No-. 1. 2. and 3.

Steering gear rolls—Finished in *one* pass, grind from size 8.¼ to 8.½—all under 7.½ are scrapped. All over 9.¼ are reground. All 8.¼ or 8.½ *ground end* rejected rolls can be reground on surface. All rejected rolls *not ground end* can also be reground, all under 7.½ are scrap. 70 per minute Rubber wheel.

A. roll. Ground three methods.

1st. For steering gear job. Finish to 7.¼ in one pass.

2nd. For regular bearings. Finish in two passes. 1st pass to 10-finish to 7.¼".

3rd. For quiet sound tested bearings. Regular two passes, then lapped.

All methods run 70 per minute. Rubber wheel.

Delco (straight roll, no taper).

2 passes—80 N. Carborundum wheel.

First pass. .303 to .304.

Finish pass—Maximum .302 minimum .3005.

Replace cast iron control wheel with a 12" x 6" x 5" 80 K. C. wheel. A standard Cincinnati control wheel dresser must be used, set at an agle of 2°30′ (front left). The feed wheel head should be tipped down 2°30′ in the back. The diamond should be set 2°30′ off center in the holder, right. Use a cam with three points on to work the hopper, run the feed wheel spindle 52. R. P. M. The rolls will draw themselves through the machine 150 per minute on roughing and 175 per minute on finish (may run some over) if all angles are correct. No taper allowance on the rolls. Use a long spring tube direct from the hopper tube to the loading tube, old style tube not new style block. Rolls are fed in a steady stream direct from loader tube to blade, no finger or push rod used.

103—3 methods.

1st. One pass to 7.¼ steering gear.

2nd. Two passes—1st pass 10—Finish pass 7.¼.

3rd. Two regular pass to 8.½ instead of 7.¼. Another pass to 7.¼ on 4th pass wheel and sound tested. All 70 per minute.

T.75 and T.87.

One pass on 80N wheel 70 per minute.

Minimum 5.½ maximum 6.½ all over or under are scrap.

A small percentage of nearly all type of three pass rolls are given a fourth pass and sound tested where quiet bearings are needed.

[fol. 5250] 9th October 1930.

Mr. Fegan

The following is a list of gauges which should be had in order to properly check your rolls: Canton is standardising on Ames.

4—Large Ames (2.¾" face) graduated in .0001. Mr. Teague will send you the model number. One of these gauges to be set up for each roll being ground to check for chatter.

4—Small Ames (2/16" face) graduated in .001 and .0005 —Model 55—Style face 0-20-0. One for each machine for size gauging. Small .0001 indicators on hand could be used for size gauging on finish, but I would recommend using

the Vanderbeek drop gauge which you have. If rolls are to be sized on .0001 indicators a few more *angle* contact blocks are needed as you do not have blocks for all rolls. When using the .001 indicators for rough sizing solid blocks can be used. A few more of these are also needed.

One diamond point block-*center* contact for each roll should be had for chatter checking. At least six more stands for indicators are needed.

Setting Diamond Blocks

Set the diamonds as near the center of the roll as possible by the eye. The block should *be* then be put in the stand, a roll on the block and if the indicator registers more than .002 when the block is moved sidewise the length of the roll the two bottom diamonds should be adjusted. The indicator needle should be set straight with the back face of the block, not on an angle, but from .0009 to .0012 off center, toward the operator. If both ends of the rolls are not off center within the limits the back diamonds need adjusting. This set up should always be used for chatter checking and can be used for size gauging, but with an angle contact block instead of center contact.

If a block is to be used for size gauging only, it need not be set up as accurate from .0002 to .0004 off center is plenty, but the indicator needle should be straight with the back face of the block.

Setting feed wheel spindles

On standard American feed wheels, which have the drop off 11/16" from the end of the roll to the end of the wheel, the *maximum* distance that the backface of the wheel should extend past the backface of the grinding wheel is 13/16"—in this position the roll is being carried past the edge of the grinding wheel 1/8". If a ring appears on the small end of the roll (dark colour ring), it is probably caused by the roll passing over the wheel edge too far—the feed wheel spindle should be moved out so the roll only passes over the wheel edge 1/16" or a trifle less, the machine can then be run till the spindle wears back to 1/16" more. The *minimum* distance that the feed wheel should extend past the grinding wheel is 3/4" or a trifle less. On Timken bearing machines it is necessary to put a washer, the thickness of

which is equal to the distance the spindle is to be moved, behind the cone of the front bearing, generally about 1/16".

Bushing agitator

To be used on the following rolls.
[fol. 5251] 502. 602. 702. 802. 902. 4003. 5003. 6003. any large roll of this type. 7003 cannot be run this way—length and diameter being too near alike.

Grinding solution

Considered to be and proven *extremely* important in holding chatter, finish and sound test within limits, also in keeping the efficiency of the grinders up. A good soluble oil should be used, one which will stay in solution and not separate. In Canton "Phoenix" oil is used. "Shell" soluble oil was recommended by the Canton chemist and can be purchased here. In Canton a 3 to 1 solution is used. 25% oil. The water is kept in a central sump and piped to the machine, returning to the sump in covered gutters in the floor. This guarantees uniform solution on all machines. A small arrangement on this order could very easily be made here, it serves also as a filter.

Grinding wheels

Wheels can be run till they are worn down to 15/6" from the adaptor flange many can be run till only ¾" from the flange. It may be necessary to mill the loaders out in the back and cut about ⅛" off the end of the six screws that hold the flanges. The new style loaders should be spotted to allow the grinding wheel and flanges the same clearance on both sides.

A checking devise for testing end of roll for out of square with body should be arranged as I explained.

[fol. 5256] I will make this report out covering several subjects, first the checking system that is being used in Canton.

On first and second pass machines the operators are permitted to dump their rolls from the tray to a basket but on third or finish pass and fourth pass they are not permitted to. This is done by the checker, who makes a check over them first for taper, size, chatter, surface defects and on fourth pass sound test before he lumps them. Both the operator and the checker are held responsible for the quality of the work. If the checker finds any rolls beyond the limits in the tray he immediately takes them away and holds them for regrinding, the operator not being paid for the rolls. If the rolls at either end of the tray are good and the checker thinks he can pass part of them without getting many rolls in that are beyond the limits he passes those that he thinks are good. If he finds nicks, cracks, wheel marks or any other defects on quite a few and size, taper and chatter are O.K. he marks the basket "Inspect 100%" and allows the rolls to pass. No rolls are taken from the operator for being a trifle over or undersize and otherwise O.K. unless he is grinding rolls to be 4th passed as the size must then be within the limits.

On first pass the checker must see that the operator has his rolls within the size limits and if he grinds them oversize he is made to re-first pass them.

On second pass the size is also important; if the rolls are too large they may chatter when passing thru the finisher, if too small they will not clean up. If small the checker takes them away for regrinds, if large the operator must re-second pass them. Taper and chatter must also be checked and if beyond the limits the rolls are taken away. All rolls taken away are taken care of by the head checker. Bins with pans are provided and when a pan has been filled with one size and type of roll it is taken to the machine and reground. While the machine is grinding this pan it is given extra close checking to see if all the defects are being removed. If a checker finds an operator making defective rolls quite often the head checker reports it to the foreman who handles the situation in his own way.

A practice I notice quite frequent here, that is absolutely [fol. 5257] forbidden in Canton is giving the pilot wheel a quick turn back then up again while rolls are passing thru

the grinder. This is done when rolls are undersize and the operator wishes to set the head back, but it should never be done without first stopping the rolls from feeding and allowing the last one to pass from the feed wheel. Every time it is done a few rolls pass thru without grinding or are oversize, causing trouble on the next pass or in case of a finisher not cleaned up.

All No. 2 machines in Canton are equipped with a plate over the rolls where they swing on the hopper blades and a small bracket underneath. (As applied on the 2008 machine with the new style loader). This prevents rolls from going in backwards and makes feeding more uniform. The hoppers should also be adjusted to stop the roll from swinging as on the machine referred to above. Owing to the extremely bad upset rolls they should be sorted which could be done quickly by means of a hopper as I suggested to you.

When grinding 7003 rolls to the limits you require I would give them 2 pass on an 80N wheel—holding the 2nd pass on taper or not more than ¼ of the roll showing light, then flash grind and give the third pass on an 80 K. C. wheel. If they can be ground not chatter free enough this way, you might try 3 passes with an 80N wheel, allowing about .0015 stock to be removed on 4th pass. You could use either an 80 K. C. or 25200 wheel for 4th pass, rolls from the 25200 probably would sound better if you are sound testing. We always found that when grinding large rolls with an 80 K. C. they were more subject to chatter although you seem to be able to get good rolls with the 80 K. C.

I should hold the first pass to about .0003 on a 3 point check. A few at .0004 will grind out on 2nd pass. Hold the 2 pass from .0002 to .00025. Third pass should not be over .0002 and not many that much.

[fol. 5258] The two point checking should be to the regular limits I have given you previously.

When setting the job up be sure the feed wheel is round, spindles drawn up tight and get an even grind. Use the whole wheel, don't have the rolls grinding on only about 3 inches of wheel surfaces.

If the rolls from any machine can not be made to show O.K. on a 3 point check, it is often due to a poor bearing in the feed wheel spindle. The long tapered bearing wears most at the front and when the spindle is pulled back to

tighten it, the spindle tightens up at the back end of the front bearing; this allows the feed wheel to spring. The spindles should be taken out and the bearing relieved at the back. Chatter can be caused by either spindle being bad.

All extension feed wheels should be turned up with the new drop off and when a machine is equipped with the new loaders the feed wheel spindle should be set accordingly.

When the new diamond blocks arrive have them set as I showed you, using a two point set up to check them. They can be used then on 3 point also as they need not be set so exact for 3 point checking.

I think it should be arranged so Mr. Beech has access to a copy of these reports.

Shuler.

[fol. 5265] The Timken Roller Bearing Company

Canton, Ohio

Oct. 11, 1929.

Mr. Reifsnyder:

Subject: Special 702 rolls ground for Kesel held for eccentricity to .0002 limit. angle.

Rough end ground	3000 pieces
4 hours average	750 per hour
Finish end ground	3000 pieces
40 hours average	75 per hour

The cause of slow production on finish end grinding was due to the following causes—

Each roll had to be wiped clean before end grinding. Chuck had to be cleaned every 10 or 15 rolls. Rolls were sparked down to minimum to allow for even grind.

We tried washing rolls in hot soda water but soda when dried was to- hard to have wiped off of rolls. We tried grinding rolls with soda spots on after wiping and the run out on these rolls were from .0001 to .0005 eccentricity on end.

To eliminate this rolls were taken from Centerless grinder and wiped dry, which proved O. K. for grinding ends. They could be held to .00025 limit for eccentricity.

Special 902 rolls ground for Kesel, held for eccentricity to .0003 limit angle.

Rough end ground	2500 pieces
5 hours average	500 per hour
Finish end ground	2500 pieces
29 hours average	86 per hour

The cause of slow production on finish end grinding was due to the following cause—

Operator had to wipe all rolls clean before grinding.

These rolls were wiped clean after surface grinding.

Special 802 rolls ground for Kesel held for eccentricity to .0003 limit angle.

Rolls were delivered to Mr. Yohe after surface grinding to be wiped clean by one of his girls.

We did not rough grind angle on these rolls, ground angle in one grind.

Finish end ground	1255 pieces
5½ hours average	230 per hour

I suggest that Mr. Yohe furnish a girl to clean all rolls that have to be ground for Mr. Kesel for #3 rolls.

This will increase production on end grinding No. 3 rolls.

G. Baer.

Antifriction Bearings

Tariff Act of 1930—Paragraph 321

Summary of Tariff Information

Prepared in Response to Senate Resolution 334

72d Congress, 2d Session

October 1934

[fol. 5281] Antifriction Bearings

Tariff Act of 1930—Paragraph 321

Antifriction balls and rollers, metal balls and rollers commonly used in ball or roller bearings, metal ball or roller bearings, and parts thereof, whether finished or unfinished, for whatever use intended, 10 cents per pound and 45 per centum ad valorem.

Comparison of Tariff Rates

1930, par. 321—10 cents per pound and 45 percent
1922, par. 321—10 cents per pound and 45 percent
1913, par. 106—35 percent

Description and Uses

Antifriction balls, rollers, and bearings are used to reduce friction to a minimum between a revolving part and a fixed part in many mechanical devices. Complete bearings consist of metal balls or rollers which are fitted between two metal cases or race rings so that a shaft may be inserted into the inner ring, and the outer ring may be fitted into the machine frame. In some instances, the outer case for the balls or rollers is an inherent part of the machine or device, while the shaft forms the inner race, in which case only the balls or rollers are supplied by the bearing manufacturer.

Antifriction bearings are used in many types of machines, in airplanes, in railway cars, machine tools, electric motors, hardware articles, etc. The automobile industry is the greatest consumer in the United States and Europe of both ball and roller bearings, but the proportion used for this purpose is considerably larger in the domestic industry than in Europe.

[fol. 5282] One of the leading domestic automobile producers owns two large bearing plants, one manufacturing ball bearings and the other roller bearings. The bearings from these plants are sold also to the general trade.

Two of the principal domestic ball bearing companies are principally foreign owned—one Swedish and the other English, while one domestic manufacturer has affiliates in several European producing countries.

Foreign Production

The principal foreign producing countries are Sweden, Germany, Italy, the United Kingdom, France, and Switzerland, probably ranking in the order named. Roller bearings are a rather recent development of the industry and are of less importance in relation to total production than in the United States.

The principal foreign company is Swedish controlled, and is known in the trade as S.K.F. It has 3 plants in Sweden, 2 in Germany, 2 in France, 1 in England, 1 in Czechoslovakia, and 3 in the United States, and has nearly 200 agencies and offices throughout the world. This company owns rich iron ore mines in Europe and is equipped to produce bearings from raw material to finished product. In its Swedish plant over 1,000 standard types of bearings are manufactured, while its foreign factories concentrate on the production of types most in demand in their respective areas. Its normal capacity for ball bearings is 190,000 daily and it supplies approximately one-third of the world markets. S.K.F. bearings produced in Sweden represent about 95 percent of the total production of bearings in Sweden. Production in Sweden amounted to $9,370,000 in 1930, and to $6,410,000 in 1931. Approximately 99 percent of the total bearings exported from Sweden are S.K.F. bearings. Total Swedish exports amount to about 90 percent of production.

[fol. 5283] It is reported that approximately four-fifths

of the German consumption, placed at $20,000,000 annually, is supplied by S.K.F. subsidiaries in Germany.

There is one large producer in Italy specializing in the production of automobile ball bearings. This company is a subsidiary of an Italian automobile company which also has a bearing plant in France.

There are about six producers in France, four of which are affiliated with companies in other countries, including a subsidiary of an American roller bearing company.

Production in the United Kingdom amounts to about $10,000,000 annually.

Production methods in Europe are similar to those in the United States, and in many instances the machines used are of the same type and are largely American made. Foreign producers are as favorably situated in relation to high grade iron ore as are the domestic manufacturers.

Ball bearings were first produced in Europe where the metric system is in general use. The metric system is also used in the United States in the manufacture of ball bearings, both European and American producers using standard S.A.E. metric specifications. Roller bearings were first made in the United States where inch-measurements were established, but in Europe they are made both to inch and to metric measurements. Ball bearings, and roller bearings made to inch-measurements are generally interchangeable.

[fol. 5284] No statistics are available on the number of bearings exported as parts of automobiles, machine tools, and industrial machines, but they far exceed those of separate bearings shown in table 12.

Factors affecting exports

Domestic and foreign bearings are generally of high quality. Foreign producers have plants in the principal consuming European countries and can produce bearings at a lower cost than can domestic producers. This gives the foreign producers an advantage in price not only in their home markets but in all sections of the world.

There is a market for domestic bearings in Canada due to the establishment of branch factories of American automobile companies which is not so largely affected by prices.

Domestic exports to principal markets

Domestic bearings are exported principally to Canada with lesser amounts going to European countries, Latin American countries, Japan, Australia, and the Philippine Islands with occasional large shipments to Soviet Russia. Export statistics, by principal markets, are given in the following table:

• • • • • • •

[fol. 5285] Character of exports as to types and grades

Exports from the United States are principally bearings used in the manufacture of automobiles in Canada in plants affiliated with American automobile producers. The balance of the exports are largely repair and replacement parts for American-made machines and devices, and types of bearings not produced in Europe.

Competitive Conditions

The United States is the largest world market for bearings, due principally to the extensive use of automobiles, electrical devices, and other machinery.

Domestic production is far in excess of any other country, amounting to $120,000,000 in 1929 and to $41,000,000 in 1933. Imports amount to less than one percent of production. The domestic producers have established a high reputation through high quality products and service. Mass production methods are generally used in the American plants, and two of the largest bearing factories are owned by one of the principal domestic automobile producers.

Production in Europe is principally in Sweden, Italy, Germany, the United Kingdom, and France. The principal foreign company is Swedish controlled (S.K.F.) and has plants in each of the above countries, except Italy, and in the United States and Czechoslovakia and has agencies and offices throughout the world. This company is as favorably situated as the domestic producers in relation to raw material, equipment, and skilled workmen, and produces high quality bearings. Imports into the United States are principally from the S.K.F. plants and from [fol. 5286] Hoffman of England. These imports go largely to their American affiliates and are largely sizes and types

which they do not advantageously produce here. In earlier years large quantities of bearings came from Italy. There is no foreign competition in domestic markets in cheap bearings which represent a very small part of the total domestic consumption.

Production costs in Europe are lower than in the United States, but under the present rate of duty, the price advantage is not sufficient to overcome the prestige of the domestic bearings. Neither would imported bearings replace the bearings used by the domestic automobile company which has two large bearing factories.

[fol. 5287] Lines of expansion of exports

As production costs are higher in the United States than in Europe, and as foreign bearings are generally of the same high quality as domestic, there is little likelihood of any material expansion in exports. Encouragement in the exportation of antifriction bearings can probably be best accomplished by attempting to increase exports of the articles of which they are integral parts.

(Here follows 1 Paster, folio 5288)

[fol. 5288]

REGULATION OF IMPORTS BY EXECUTIVE ACTION IN COUNTRIES WITH INDEPENDENT TARIFF JURISDICTION

With particular reference to developments between the two World Wars

Under the Provisions of Section 338
Title III, Part II, Tariff Act of 1930

Miscellaneous Series

[fol. 5295]

COUNTRIES WITH FOREIGN-EXCHANGE CONTROL

European countries	Latin-American countries	Other countries
Portugal,[1] September 1924 to October 1937.	Uruguay, May 1931.	Turkey, March 1930.
Spain, July 1930.	Chile, July 1931.	Iran, March 1936.
Germany, July 1931.	Brazil, September 1931.[3]	Japan,[2] July 1932.
Hungary, July 1931.	Colombia, September 1931.	China, March 1938.
Greece, September 1931.	Argentina, October 1931.	Afghanistan,[3] April 1938.
Austria, October 1931.	Nicaragua, December 1931.	Egypt, September 1939.
Bulgaria, October 1931.	Costa Rica, January 1932.	
Czechoslovakia,[3] October 1931.	Bolivia, May 1932.	
Estonia, October 1931.	Ecuador,[4] May 1932.	
Latvia, October 1931.	Paraguay, June 1932.	
Yugoslavia, October 1931.	Honduras, June 1934.	
Denmark, November 1931.	Venezuela,[4] December 1936.	
Iceland, February 1932.	Cuba,[3] June 1939.	
Rumania, May 1932.		
Italy,[2] September 1931.	British countries	
Lithuania, October 1935.		
Poland, April 1936.	New Zealand, December 1938.	
Albania, April 1939.	Australia, September 1939.	
France, September 1939.	Canada, September 1939.	
Finland,[3] October 1939.	Newfoundland, September 1939.	
Sweden, February 1940.	Union of South Africa, September 1939.	
Belgium,[3] May 10, 1940.	United Kingdom, September 1939.	
	Eire (Ireland), September 1939.	
	India, September 1939.	
	Burma, September 1939.	

[1] Not restrictive on imports from 1929.
[2] Not restrictive on imports until 1937.
[3] Applies only to receipts from exports.
[4] Not continuously in effect.
[5] Not restrictive on imports from February 1937.
[6] Not restrictive on imports until October 1940.
[7] Not restrictive on imports from free-exchange countries until early 1935.
[8] Exchange limitations introduced in 1931 were allowed to expire in the same year. This was the time when Finland went off the gold standard.
[9] Exchange control introduced on Mar. 18, 1935, was revoked on Apr. 28, following. Belgium devalued its currency during this period.

United Kingdom Census of Production, 1930

Ball Bearings and Roller Bearings, Including Steel Balls and Steel Rollers for Bearings

Total 1924: £2,268,000
Total 1930: £2,464,000

Source: Industrial Machinery in Principal Foreign Countries, Bureau of Foreign and Domestic Commerce, Trade Information Bulletin No. 825, Washington, 1935 p. 7.

[fol. 5314] Ball and Roller Bearings

As indicated in the table, Sweden's exports of ball and roller bearings in 1933 were valued at 19,485,000 crowns. No distribution by countries is shown in the 1933 export statistics. One manufacturer of these products in Sweden makes practically the entire production, and it is believed that a request was made that the "distribution" be deleted from the official statistics. According to the 1932 statistics,

out of a total of 16,677,471 crowns of ball-bearing exports, 6,316,079 crowns' worth went to Soviet Russia, 1,649,651 crowns to Japan, and the remainder was distributed in large part and fairly evenly to European countries, although exports were made to practically every country in the world.

Roller-bearing shipments in 1932 totaled 8,233,357 crowns; again Soviet Russia took the largest part, 5,164,095 crowns; Germany, 825,861 crowns; France, 827,482 crowns; Japan 303,662 crowns; and the remainder was as widely distributed as in the case of ball bearings.

Information on ball and roller bearings is significant because these form such an important group in the Swedish manufacturing community and because they enter largely, now, into industrial-machinery construction. (p. 57.)

Swedish production	1930 Crowns	1931 Crowns	1932 Crowns
Ball bearings	24,368,300	15,534,051	17,715,000
Roller bearings	10,513,157	9,751,308	10,316,242
Other bearings and transmission parts	5,461,760	3,887,118	3,415,663

(p. 55) Taken from "Industri," Kommerskollegium (Swedish official statistics).

The trade in industrial machinery for 1933, segregated according to principal groups, as in Swedish official statistics, is shown below:

Ball and roller bearings:

Imports: 910,000 crowns
Exports: 19,485,000 crowns

(p. 56) Taken from "Handel". Kommerskollogium (Swedish official statistics).

Date: March 12, 1948

Statement of rates of import duty on Ball and Roller Bearings
(Rates effective October, 1947)

TARIFF NO.	AUSTRALIA	British Preferential	General Tariff
	(Figures in parentheses represent additional ad valorem primage duties)		
176(A)	Roller bearings and ball bearings, not being roller bearing or ball bearing plummer or hanger blocks ad valorem	Free (5%)	15% (10%)
176(J)(1)	Machines and machinery not elsewhere included (covers plummer or hanger for machinery shafting) ad valorem	15% (5%)(E.A.)	55% (10%)
	Not liable to sales tax (E.A.) Subject to Exchange Adjustment under British Preferential. (See paragraph 7 of attached tariff application sheet.)		
	Import Restrictions Import licenses were required for all importations from the nonsterling area which included United States, Canada, Newfoundland, Hong Kong and all non-Empire countries. The licenses were obtained by importers in advance of shipment. According to their existing licensing regulations, goods classified under the above tariff items are permitted entry under "Administrative Control". Quota restrictions do not apply and applications for licenses are dealt with individually on their merits by the Department of Trade and Customs at Canberra, Australia. U. S. Imports are dutiable under the General Tariff. Similar Canadian goods take British Preferential rates.		

Form IT-580

DEPARTMENT OF COMMERCE
OFFICE OF INTERNATIONAL TRADE
WASHINGTON 25, D. C.

Date: March 12, 1948

Statement of rates of import duty on Ball and Roller Bearings
(Prevailing rates effective November 15, 1947)

TARIFF NO.	AUSTRALIA	British Preferential	Intermediate Tariff	General Tariff
	(Figures in parentheses represent additional ad valorem primage duties)			
176(A)	Roller bearings and ball bearings not being roller bearing or ball bearing plummer or hanging blocks - ad valorem	Free (5%)	—	12½% (10%)
176(F)(1)	Machines and machinery not elsewhere included (covers plummer or hanger for machinery shafting) - ad valorem	27½% (Exempt)	55% (5%)	57½% (10%)

Not liable to sales tax.
U.S. imports are dutiable under the Intermediate Tariff when specified. Otherwise the General Tariff applies. Similar Canadian goods take the British preferential rates.

Import Restrictions: Licenses are now granted only for those nonsterling goods (see paragraph 9 of attached tariff application sheet) listed by the Australian Government as essential. Ball bearings and roller bearings are included in this list and import licenses will probably be granted for such U. S. products. Goods classified under 176(F)(1) are not specifically mentioned on the essentials list and therefore import licenses for such dollar goods may not be issued.

Reprint from FOREIGN COMMERCE WEEKLY

SUMMARY OF IMPORT LICENSE AND EXCHANGE CONTROL REGULATIONS IN PRINCIPAL FOREIGN COUNTRIES

Prepared in the Areas Division, Office of International Trade, Department of Commerce

In many countries foreign goods may not be imported unless covered by an import permit which must be obtained by the importer and in certain cases must have been granted before the order for the goods has been placed. Also in many countries, owing to the extreme scarcity of foreign exchange, particularly dollar exchange, the authorities require that an exchange permit be obtained before the goods may be paid for. Before shipping his goods, the exporter should make certain that the importer has obtained these permits, if required. He should insist upon being advised as to the number of the documents.

The following tabulation of the import and exchange permits required in foreign countries has been prepared as a guide to exporters regarding these regulations. More detailed information may be obtained by writing the Areas Division, Office of International Trade of the Department of Commerce.

Country	Is import permit necessary?	Is exchange permit required?
Argentina	No, except for a selected list of commodities.[1] Certain products are subject to import quota.	Yes; *for all* imports; granted only for "listed" products. Application should be filed prior to confirmation of purchase order.
Australia	Yes	Yes.
Austria	Yes	Yes; import permit does not automatically carry the right to foreign exchange.
Belgium-Luxembourg	Yes; for about 30 percent of the items of the customs tariff. Licenses are granted to importers who are entitled to "certificates of priority."	Yes.
Belgian Congo	Yes	Yes.
Bolivia	Yes; for all imports reported not being granted for luxury goods until exchange situation improves.	No; the import permit authorizes purchase of exchange, but is not a guarantee that exchange will be granted.
Brazil	Yes; for rubber goods, used machinery, and certain other items including jewelry, toilet preparations, cosmetics, plastic articles, manufactures of hides and skins, tin and tin plate, and chemical fertilizer.	Yes.[2]
Bermuda British East Africa British Malaya British West Africa British West Indies British Guiana British Honduras	Yes	Yes; import permit generally assures release of foreign exchange.
Bulgaria	Yes	Yes.
Burma	Yes	Yes.
Canada	Yes, for many products.[3]	Yes.
Ceylon	Yes	Yes.
Chile	Yes; must be obtained prior to shipment of goods.	Yes; in the form of a notation on the import permit.
China	Yes; certain goods are also subject to quota allocation.[4]	Yes; exchange is made available through approved banks for licensed imports.[5]
Colombia	Yes, with certain exceptions, must be obtained prior to purchase of goods.[6]	No, but import permit necessary to obtain foreign exchange.
Costa Rica	No	Yes; foreign exchange is rationed.
Cuba	No	No.
Czechoslovakia	Yes	Yes; import permit carries the right to foreign exchange.
Denmark	Yes, on almost all commodities.	Do.
Dominican Republic	No	No.
Ecuador	Yes; must be presented in order to obtain the consular invoice.	Yes; import permit carries the right to foreign exchange "Central Bank of Ecuador."
Egypt	Yes, unlicensed imports are subject to confiscation.	Yes.
Eire	For a few products only	Yes.
El Salvador	No	No.
Finland	Yes	Yes; import permit carries the right to foreign exchange.
France	Yes; obtainable for "essentials" only.	Yes; issued simultaneously with the import permit.
French Colonies	Yes	Yes; import permit carries the right to foreign exchange.
French Indo China	Yes	Yes.
Germany	Imports controlled by the occupation authorities.	Payment is made by occupation authorities.
Greece	Yes; permits granted only for limited number of essential products.	Yes; import permit carries the right to open a letter of credit.
Guatemala	Understood to have become effective for certain articles Jan. 29, 1948.	No.
Haiti	No	No.
Honduras	No	Yes.
Hong Kong	Yes	Yes; a permit to purchase foreign exchange must be obtained from the Finance Department prior to the granting of an import permit by the Hong Kong Customs authorities.
Hungary	Yes	Yes.
Iceland	Yes	Yes; unless otherwise stated on the permit, the import permit carries the right to foreign exchange.
India	Yes	Yes; import permit ordinarily carries the right to foreign exchange.
Iran	No	Yes.
Iraq	Yes; goods exported before a license is obtained are confiscated.	Yes; permits are obtained through licensed dealers.
Italy	Yes	Yes; through the Bank of Italy or its agents.[7]
Japan	Yes	No; trade with the United States is in United States dollars.
Korea	Yes	No.
Liberia	For arms and ammunitions only.	No.
Luxembourg	(See Belgium-Luxembourg.)	
Mexico	There is a long list of products which are prohibited from importation, and another list of commodities requiring an import permit.	No.
Morocco (French)	Yes	Yes.
Netherlands East Indies	No	Yes.
Netherlands West Indies	Yes; quota system	Yes.
Netherlands	Yes	Yes ("payment attest").
Newfoundland	No; except for food products.	Yes.
New Zealand	Yes	Yes; import permit carries the right to foreign exchange.
Nicaragua	Yes; none are being issued except for certain goods in short supply.	No.
Northern Rhodesia	Yes	Yes.
Norway	Yes	Yes; import permit carries the right to foreign exchange.
Pakistan	Yes	Yes; import permit ordinarily carries the right to foreign exchange.
Palestine	Yes; goods exported before the importer obtains the import permit will be confiscated.	Yes; import permit carries the right to foreign exchange.
Panama	No.	No.
Paraguay	No	Yes.[8]
Peru	Yes	Yes.
Philippine Republic	No; some system of import controls may be adopted by the Philippine Congress which convened Jan. 16, 1948.	No.[9]
Poland	Yes	Yes.
Portugal	Yes, for a considerable list of nonessential products.	No; no restrictions on dollar transactions.
Portuguese Colonies	Yes; for a (relatively) few products.	No; no restrictions on dollar transactions.
Rumania	Yes	Yes
Saudi Arabia	No	No.
Siam	No; import licenses have been discontinued.	Yes; the government controls on the major part of foreign exchange are still in effect.
Spain	Yes; largely limited to essential raw materials.	Yes; the import permit carries an allotment of foreign exchange.
Southern Rhodesia	Yes	Yes.
Spanish Colonies	Yes	Yes; the import permit carries an allotment of foreign exchange.
Spanish Zone of Morocco	Yes	Do.
Sweden	Yes; rigid controls. Special "free list" exempt from import license.	Yes; rigid exchange control in operation.
Switzerland	Yes, for a few commodities, chiefly those under international allocation.	No difficulty in regard to exchange.
Syria and Lebanon	Yes	Yes.
Tangier	No	No.
Turkey	Yes	Yes; special exchange license from the Control Office.
Union of South Africa (including South West Africa, Basutoland, Bechuanaland and Swaziland)	No, except for a few products, usually those under international allocation.	Yes; exchange permits are easily obtained.
United Kingdom	Yes except for a few products.	Yes.
Uruguay	Yes; must be obtained.	No; import permit carries the right to foreign exchange.
U. S. S. R.	Yes; importing government agencies responsible for securing own permit.	Yes; all exchange allocated by U. S. S. R. State Bank upon receipt of import permit.
Venezuela	No; except for 24 tariff items.	Import permit when required authorizes foreign exchange.
Yugoslavia	Yes	Yes.

[1] American exporters may obtain information regarding the import controls on their products by writing the Areas division or one of the field offices of the Department of Commerce.

[2] All exchange transactions amounting to more than $5,000 in currencies require an exchange permit from the Banco do Brazil.

[3] Details of China's import and exchange controls may be obtained from the Far East Branch of the Office of International Trade.

[4] The importer buys his dollar exchange on the basis of the daily free market rate.

[5] Importers must conclude a contract for purchase of exchange with the Bank of Paraguay before purchasing abroad.

[6] A Foreign Funds Control Office is established in Manila, but blanket licenses are issued to banks for exchange transactions by bona fide firms.

Reprint from

POST-WAR IMPORTS AND DOMESTIC PRODUCTION OF MAJOR COMMODITIES

A report made to the United States Senate
in response to Senate Resolution 341
(78th Cong., 2d sess.)

United States
Government Printing Office
Washington : 1945

Duty increased by 50 percent.—The total value of imports might be 20 to 30 percent below that with 1939 duty rates prevailing. Imports then might be about 3 percent of consumption and might have a foreign value of about $800,000 (1.4 million dollars landed value). Production for the domestic market then would be around 48¾ million dollars.

Exports

Before the war, United States exports of these wire products consisted very largely of screening. The Philippines, Mexico, Venezuela, Cuba, and Canada took about half of the total value. It seems reasonable to expect somewhat greater demands abroad for the higher quality screening and woven wire during the long-term post-war period. With per capita income at the 1939 level, exports may be 40 to 60 percent greater than in 1939, or 1.2 million dollars. With per capita income at the higher level and a larger use of nonferrous and alloy steel wires, exports may be 20 to 30 percent greater, or about 1.5 million dollars.

Employment

According to commercial directories, 100 to 125 concerns produce these commodities. No separate data are available regarding employment, as most of these wire-drawing mills make other classes of wire products in the same plants. Employment may not increase under greater production in the same proportion, owing to improvement in mechanization.

ANTIFRICTION BEARINGS

Tariff paragraph	*Commodity*	*Rate of duty*	*Equivalent ad valorem (1939)*
321	Antifriction bearings:		
	Balls and rollers	8¢ per lb. +25% ad val.	46%
	Ball bearings and parts (except balls).	8¢ per lb. +35% ad val.	49%
	Roller bearings and parts (except rollers).	8¢ per lb. +35%	54%

NOTE.—The rate fixed in the Tariff Act of 1930 was 10 cents per pound plus 45 percent ad valorem. This was reduced to 8 cents plus 35 percent, effective August 5, 1935, pursuant to the trade agreement with Sweden, and on January 1, 1939, the rate on balls and rollers was further reduced to 8 cents plus 25 percent, pursuant to the United Kingdom trade agreement.

GENERAL

Data on United States production, imports, and consumption for 1939 are given below:

Item	Production			Imports	Apparent consumption	Ratio of imports to consumption
	Total	For export	For domestic market			
Value ($1,000)	101,874	3,062	101,812	[1] 493	102,305	*Percent* 0.48
Persons employed (number)	Less than 20,000					

[1] Foreign value.

NOTE.—Because of many types and sizes, quantities are not informative and are not used herein.

While domestic production, exports, and consumption were not unusual in 1939, the usual correlation between imports of bearings and automobile production was reversed. From 1938 to 1939 motor vehicle production rose while imports of bearings fell. Because of this departure from the normal, this discussion is based on the average consumption for the years 1935–39 ($105,000,000) and the average imports for the same period ($800,000 foreign value). The average ratio of imports to consumption was three-fourths of 1 percent.

Ball and roller bearings (antifriction bearings) are widely used in machinery and vehicles. They are practically essential in many articles of both consumers' and producers' equipment; for many other articles they are superior. The largest pre-war user was the automobile industry, which took from 50 to 60 percent of the output. Other large uses are in machine tools, agricultural implements, and airplanes. In armaments they are of the greatest importance.

In the United States there are 20 to 30 manufacturers, the largest of which is a subsidiary of an automobile manufacturer. Two large firms are affiliated, respectively, with a Swedish and a British bearing maker.

The Swedish company (commonly called S. K. F.) has a large plant in Sweden and subsidiaries which are the largest producers in Germany and France. The pre-war output of this company is estimated at about one-third of the world supply. The Soviet Union, Great Britain, Italy, and Japan are large producers.

The principal exporting countries before the war were the United States, Great Britain, Sweden, Germany, and Italy. Imports into the United States have consisted mainly of two classes: (a) Shipments from the Swedish and British firms to their affiliates in the United States (these shipments were of certain types of bearings which were not in great demand here and which these companies could supply to better advantage from the home plants); and (b) shipments of competitive products, principally from Germany. If any bearing in the first class should come to be in substantial demand, its production would probably be undertaken in domestic plants. Imports into the United States during recent pre-war years were very small (less than 1 percent) in relation to domestic production. The many types required for stock to meet the users' needs, and the exactitude specified by consumers in the United States are obstacles to a general import trade on a large scale.

It is probable that the cost of producing those types of bearings which are made on a small scale is lower in Sweden than in Great Britain, and possibly lower in both than in the United States.

Inasmuch as the largest users of antifriction bearings are the motor-vehicle producers, production of antifriction bearings will tend to follow the same trend as the production of automobiles; the latter is especially sensitive to changes in national income. Price may in a few cases influence the choice between antifriction and plain bearings, and to that extent affect consumption of the former.

POST-WAR SHORT TERM

After manufacturing plants have been reconverted to regular production, the production of motor vehicles will probably reach an annual output of about 6 million units. At the same time the output

of other machinery requiring ball and roller bearings is likely to be at a high level. In the first few years following the war it may be expected that annual domestic production of bearings will be substantially above the 1939 level. Imports of bearings may not be above the 1939 level, as Germany was then an important source and probably will not be able to produce on a large scale for some time after the war. Moreover, the demand for bearings in foreign producing countries themselves is likely to restrict the quantity exported to the United States.

POST-WAR LONG TERM

Consumption, Production, and Imports

Per capita income at 1939 level.

The production of automobiles was abnormally low in 1939 in relation to national income, so it seems probable that even with the same income production might be about 30 percent greater, or 15–20 percent above the average for 1935–39. Allowing for a parallel increase in consumption of other kinds of machinery, consumption of bearings might increase to a value of 120–140 million dollars annually. What effect changes in the duty may have on import trade is highly uncertain. At lower rates of duty the market for bearings of special types and sizes might be more largely supplied by imports, whereas at higher rates of duty there would be a tendency for more such bearings to be produced in the United States.

Duty as in 1939.—It seems probable that imports would remain at about the same ratio to consumption, approximating a foreign value of 0.9–1.0 million dollars annually. This range is also consistent with the past correlation between automotive production and imports of bearings.

Duty reduced by 50 percent.—A decrease in duty might possibly tend to expand imports by as much as 5 or 6 times, compared with what they would be under the 1939 rate of duty. But there could be no assurance that the imports would expand appreciably, say, by more than 50 percent. Consequently the imports might amount to 1.5–5 million dollars (foreign value).

Duty increased by 50 percent.—As the duty under these conditions would approximate 75 percent, a sharp reduction in imports might occur. American subsidiaries might tend toward domestic production, and imports might fall to $250,000 or $500,000, foreign value.

Per capita income 75 percent higher than in 1939.

Automotive production of 6–7 million vehicles might be reached and the consumption of other machinery might be doubled. This would indicate a consumption of bearings about 75–100 percent above the average of 1935–39, amounting to 200–225 million dollars.

Duty as in 1939.—With no change in duty there seems no reason to expect a change in the relation of imports to domestic consumption. Imports might then range from 1½–2 million dollars, foreign value.

Duty reduced by 50 percent.—The considerations discussed under the assumption of the lower income might lead to imports with a range as wide as 2–10 million dollars, foreign value.

Duty increased by 50 percent.—This might result in a proportionate decrease of imports similar to that under the lower income, of $500,000 to $750,000, foreign value.

Exports

In 1939 direct exports were about 3 percent of production. Canada was the principal market. Canadian branches of American automobile companies use a large part of these bearings. Canadian production of motor vehicles is about 4 percent of the American output. Other pre-war markets for United States bearings were Japan, the Soviet Union, France, and Great Britain. In addition to direct exports, automobiles and machinery exported in very large volume contain many antifriction bearings.

Employment

Employment in this industry is reported together with that in the production of gears, chains, and other power transmission apparatus. The value of bearings produced is more than half the total value of output of the group. Total wage earners in the group in 1939 amounted to 30,000, and would probably increase or decrease about in ratio with the value of United States output.

TIMKEN

TRADE-MARK REG. U. S. PAT. OFF.

When buying tapered roller bearings, fine alloy steel, seamless steel tubes and rock drilling bits. Then you'll be sure of getting *genuine* Timken products.

PERHAPS you never thought of a Timken Bearing and how it affects your daily work. It probably never occurred to you how much of your life, your daily routine, depended on Timken products.

When you sat down this morning to your breakfast of dry or cooked cereal, bacon or ham and eggs, milk, fruit, buttered toast and coffee, you really started a Timken day. The fruit was cultivated, sprayed and hauled to market by implements and vehicles equipped with Timken Bearings. The hogs were fattened on grain and other products cultivated by tractors and equipment which rolled on Timken Bearings. The same thing was true of the milk, cream, toast and butter on your table. Even the coal or gas used to cook your food and heat your home was available because the cars in the mines and the drilling and pumping equipment in the oil or gas field were mounted on Timken Bearings.

Your day's work may have been back of a desk, in a factory, on the highway or in the field. No matter where it is, you are surrounded by Timken Bearings. They are virtually everywhere, in automobiles, trucks and busses, in the elevators of tall buildings, in tractors and farm machinery, in machine tools of all sorts, deep in the earth in mines and quarries, on sea and in the air. Wherever your work may be you are among friends . . . Timken Bearings.

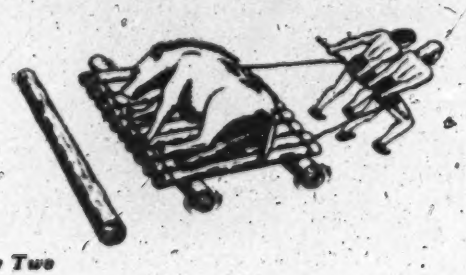
Just What is a Timken Bearing

WHEREVER there is movement there is friction. If you wave your hand in the air, there is friction between your hand and the air. When a wheel turns on a shaft or axle, there is friction. In ordinary work the problem is to reduce friction, because friction causes wear and generates heat.

Our forebears found out somehow that if they applied animal fat to the rubbing surfaces of the wheels and axles of their crude vehicles they moved easier and would wear longer. How to keep the fat in place was another problem and for countless centuries no satisfactory solution was found.

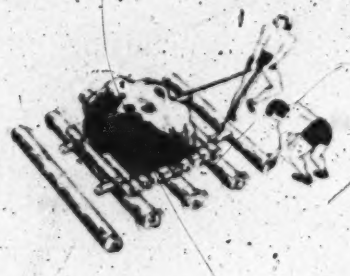
Someone, however, did find a way to introduce balls or rollers between the rubbing surfaces of wheels and axles, and at that moment was born one of the great improvements of industry . . . the anti-friction bearing. For years on end, however, before this took place, primitive man carried his burdens on his back or dragged them along the ground. The first vehicle no doubt employed rollers, made from the trunks of trees, placed under heavy loads. It may have moved a huge animal too heavy to carry, too cumbersome to drag.



Our hairy forebear, having slain the beast, worked out in his sluggish mind a way to transport it to his cave. Having observed how a round stick turned under his foot he applied the same principle to the problem at hand.

First, he lashed together a number of poles to make a crude platform. Underneath he placed other poles after which he put the carcass of the beast on the platform. He found that the entire load moved quite easily. The first rolling conveyance was built!

Step by painful step improvements were made. Someone found a way to introduce small rollers or balls between a shaft and the box. We then had roller or ball bearings. These were tremendous steps forward. In time the limitations of these became apparent. They could not carry a thrust load. The washers put at each end of the box wore thin and had to be replaced. The rollers and balls too would wear and in time break. The crying need was for an anti-friction bearing which would carry all kinds of loads . . . loads from any and all directions and at the same time.



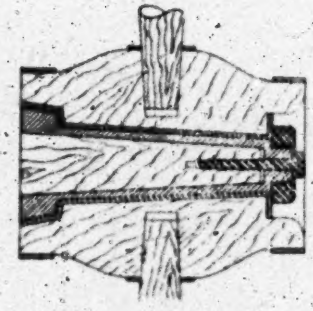


Fig. 1

LIKE many another great invention the solution was extremely simple. In fact it was so close at hand that it was surprising that it had not been discovered sooner.

In the manufacture of heavy duty wagons it was found desirable to make the axle tapered, Fig. 1, to obtain maximum strength. Obviously the skein in the hub likewise was tapered.

Although the primary purpose of the tapered construction was to obtain maximum strength, it was discovered that the tapered surfaces absorbed an appreciable amount of the thrust loads. The remaining thrust was taken on the inner end of the skein and a section of the axle.

In order not to introduce unnecessary friction in the axle box assembly the taper of the axle and the skein were made in such a way that lines produced along the surfaces met at a common point on the centerline of the axle.

Although this type of construction was used by practically all wagon manufacturers it remained for the inventors of the Timken Bearing to see the possibility of improvment. It occurred to these pioneers that by introducing tapered rollers between the axle and skein that the resulting anti-friction bearing would carry both radial and thrust loads.

The first Timken Bearing, (which was the original tapered roller bearing) did not follow the simple profile of the skein and wagon axle. The inventor thought that it was necessary to provide a means of keeping the rollers aligned about the cone. The original Timken Bearing therefore looked like the one shown in Fig. 2.

The first Timken Bearing which contained a full compliment of rollers was found to have certain limitations. While it did reduce friction, carried radial and thrust loads or both in any combination, it lacked stamina.

The rollers, rubbing against each other, generated heat, wore rapidly and soon fell apart. It became evident, even at this early date that some means was needed to separate the rollers and at the same time keep them spaced properly around the cone. The development or rather the addition of the cage, or roller retainer, was given immediate attention and the second major improvement in tapered roller bearing construction was developed.

Fig. 10

PROGRESS

A FEW of the steps in the gradual development of the Timken Bearing through the years may be visualized by referring to Figs. 3 to 10. Each of these represented a forward step, each accomplished something which its predecessor lacked. Each bearing served the purpose for which it was intended. In time each one was supplanted by a superior product, until we have the Timken Bearing of today, Fig. 11, the finest ever produced. In it are embodied features of design and advanced manufacturing practices in keeping with the most exacting requirements of industry.

Fig. 11

Thrust Loads and Radial Loads

THE earliest Timken Bearing as well as each and every Timken Bearing since then is a *tapered roller bearing*. It will carry thrust loads *and* radial loads.

Briefly, *radial loads* are loads imposed at right angles to the axis of the bearing, such as the dead weight of a car or truck, in the case of an automobile wheel bearing. And *thrust loads* are loads parallel to the axis of the bearing, the sideways force you feel when going around a curve in an automobile. Thrust loads are the forces which tend to push bevel gears out of mesh, or any other forces which tend to slide a shaft through a bearing.

As a matter of fact, in actual everyday work the loads or forces exerted on a bear- are rarely, if ever, wholly radial (up and down) or wholly thrust (from the side) but an ever varying combination of both acting simultaneously. The anti-friction bearing, therefore, to be the most nearly ideal must possess versatility and function unhampered when loads are momentarily changing from one direction to the other.

In the development of bearing design, several different methods have been used to take care of these different types of loads. The first method, that of using a separate bearing for each load, although satisfactory in operation, is naturally more expensive. In addition to the cost of the extra bearing, it involves a more complicated and expensive design for the bearing housings and mountings.

The second method, that of using straight roller bearings to carry the radial load, and equipping them with thrust washers to carry the thrust load, is not entirely satisfactory.

In reality it is merely an attempt to lessen the cost of the first method. The force comes at a slanting angle and is not evenly distributed on the washer faces or on the surfaces of the straight rollers. The result is that wear is excessive on the ends of the straight rollers; the washers themselves soon wear thin; and this uneven wear all too soon necessitates replacements.

The advantage, therefore, of a bearing which simultaneously does carry all types of loads is apparent.

The Timken tapered roller bearing was developed for that purpose and, fundamentally, one of the most important reasons for its unprecedented success is its ability to meet imposed loads regardless of the direction from which they come. From its initial application to wagon axles, its use has extended to practically every industrial, railroad and automotive field.

2302 F

How the TIMKEN BEARING Carries All Loads

The Timken Tapered Roller Bearing consists essentially of four elements, as shown in the accompanying illustrations:

The inner race, which, because of its mechanical construction, is designated as the cone;

The outer race which fits around the cone and roller assembly and is called the cup;

The tapered rollers which roll between the cup and cone;

The cage which serves as a retainer and maintains proper spacing between the rollers.

The component parts of the bearing are shown in Fig. 12, the appearance of an assembled bearing is illustrated in Fig. 11, and the principle of construction is explained in Fig. 13.

A careful examination of Fig. 13 will show clearly how true rolling motion is obtained, since lines produced coincident with the faces of the rollers, cone and cup meet at a common point on the axis of the bearing.

Fig. 12

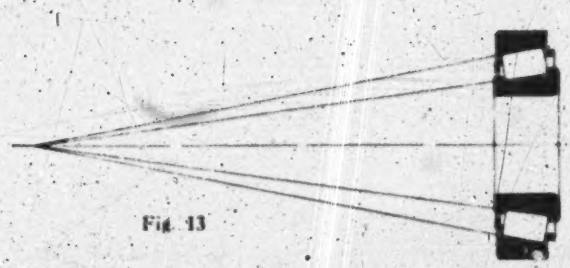

Fig. 13

Figs. 14 and 15 illustrate diagrammatically the way in which both radial and thrust loads are safely carried by the tapered construction of Timken Bearings; whereas this is possible only to a minimum degree in many other types of bearings.

This "dual service ability" of Timken Tapered Roller Bearings . . . their ability to carry radial loads and thrust loads and resultant combination loads . . . result in the following important advantages:

Friction resulting from all types of loads is reduced to a minimum, thus conserving power whether in automotive vehicles or in industrial machinery. Shafts, gears, and wheels are kept in perfect alignment constantly, thus cutting down wear on all parts. The complicated, expensive construction is eliminated which is necessary when separate bearings are installed to carry each load.

The inherent ability of Timken Tapered Roller Bearings to carry all types of loads simultaneously is one of the chief reasons behind their dominance in automotive vehicles and industrial machinery, and their rapidly increasing use in railroad cars and locomotives.

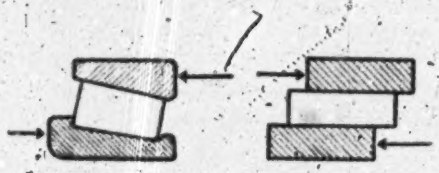

Fig. 14

Fig. 15

Positive Roll Alignment

Fig. 16

Not only does the Timken Bearing present marked advantages by reason of its tapered construction, but also the rolls are positively aligned without guidance by the cage. This refinement in bearing design permits greater load and speed possibilities which are essential to many operations. It assures quieter and cooler bearing operation and is responsible for eliminating much of the initial wear and attendant re-adjustment experienced in early bearing design.

To accomplish the positive alignment of rolls certain improvements were perfected in the rollers as well as in the cone, or inner race, of the bearing. Fig. 16 shows cross section of the cone with a roll in place against the cone rib. A natural and true geometric contact between these two rotating elements is obtained by grinding the roll ends and rib and later by generating the common contact areas by running the assembled bearing at a moderate load and speed while immersed in a lapping agent. This process results in a "Generated Unit Assembly".

As the roll revolves about the cone, there is contact between the end of the roller and the rib or shoulder of the cone in a wide area, Fig. 17. Since this contact is in a wide area, the rollers are compelled to align themselves perfectly at all times. At the same time a full line contact is maintained between the roller and the cone, on the one hand, and the roller and the cup on the other. Thus, with the rollers positively aligned, the cage does nothing more than space the rolls properly about the cone.

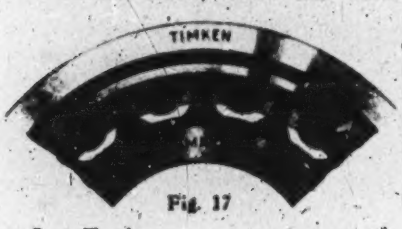

Fig. 17

Greater Load Area

It is easily understandable that any anti-friction bearing to be successful in a variety of applications must combine maximum load area with minimum friction, and at the same time possess stamina. To possess stamina, a bearing needs not only to be built precisely, and of the finest material, but likewise to incorporate features of design which will distribute the unit pressures over as great an area as possible without sacrificing friction reducing qualities.

In the Timken Bearing full advantage is taken of the principle of reducing friction. Without surrounding the discussion with a maze of theoretical technicalities, it may be emphasized that the design of the Timken Bearing permits the distribution of unit pressures over the full length of the roller. Naturally, with an initial distribution of unit pressures over a line of contact there is minimum distortion under load. Translated into terms of bearing life and service, the less distortion, the greater the precision, the greater the rigidity, the less wear and consequently the longer the life of the bearing and the machine parts which it supports. Complementary to the above benefits, manufacturers have found that the rigid mountings made possible by Timken Bearings permit machining practices impossible with any other type of mounting.

Wear Proof

Although some statements have been published to the effect that certain types of bearings do not wear, we believe that it is idle to claim this for any bearing, regardless of type. Wherever there is motion, there must be wear. True, there are times when this wear is so microscopic that the efficiency of the machine is not impaired even after long periods of service. This condition obtains however only in those applications where loads are lightest.

The problem of the bearing designer and builder thus focuses itself on the production of bearings of such quality as to withstand the ravages of wear for the longest possible period. This problem has been given thought and study by Timken engineers and exhaustive tests and experiments have determined the material best suited to the service required. For longest life and freedom from both wear and metal fatigue, it has been found that the cup, cone, and roll having a hardened outer surface with a tough resilient inner core is best suited to service conditions. Consequently, Timken Bearings are case hardened to obtain just that result.

The analysis of the metal and the correct metallurgical structure are equally important. To insure a product of predetermined analysis consistently, complete steel mills were built. These mills are famous the world over as a source of high quality alloy steel.

The Timken Bearing thus combines not only the finest talent from the standpoint of bearing engineering but the equally essential qualities of wear-proof metals, determined by chemical and metallurgical specialists in steel making. Timken steel, Timken tapered construction, and Timken positively aligned rolls give Timken Bearings unequaled resistance to wear.

A PRECISION PRODUCT

The field of usefulness of any manufactured product invariably broadens as the accuracy of manufacture develops. The fact that Timken Bearings are so universally used on the spindles of leading makes of machine tools testifies to their unequaled precision. In order to secure this accuracy of manufacture it was necessary to develop machines which would produce Timken parts consistently within the most narrow limits. Gauges and gauging machines of almost unbelievable accuracy were built to serve as a constant check on parts manufactured. So close are some of the resulting limits maintained on Timken Bearings that angles of cup, cone, and rollers are held to a single second of arc . . . one millionth part of the circumference of a complete circle. Translated into every day language this means an angle made by two lines two miles long and less than an inch apart at the outer end. The angles of the cup, cone and roller are held within these limits.

The capacity and life of a bearing depend in a large measure on the uniform distribution of stresses over the complete set of rollers. It is thus essential that the size of the rollers in any one bearing be absolutely uniform. To maintain this uniformity, machines have been developed which with superhuman accuracy separate the rollers into microscopically identical sizes and deposit them in containers where they are retained until assembled into complete bearings.

To set up a standard is one thing. To maintain it is quite different. It is therefore a matter of pride that more than one-third of the factory personnel in the Timken plant devote their full time to inspection. Thus, the precision of manufacture attained through the development of the finest measuring devices is assured day by day by the most rigid inspection methods.

FRICTIONLESS

Attempts to set up standards of friction in the form of coefficients are apt to be misleading. The results obtained depend quite often on what the experimenter wishes to prove. It would serve no useful purpose to claim that plain bearings, for instance, are in every case grossly inefficient, when even the casual investigator can find numerous cases where this type of bearing has operated for years in a most satisfactory manner.

A plain bearing operating under light or medium load, without end thrust and well lubricated, is remarkably free from friction. It is idle to claim otherwise. But the difficulty of maintaining an oil film in the plain bearing and likewise the complete elimination of thrust loads limit the completely successful use of this type of bearing to a few applications.

Theoretically, it may appear that ball and roller bearings should, under ideal conditions be frictionless. However in actual service such is not exactly the case. This is particularly true as the loads on the bearings are increased. Metal under load deforms ever so slightly—and rolling in a slightly deformed condition produces friction. The Timken Bearing with the full line contact between all rolling elements distorts less than other types of anti-friction bearings and thus retains its full friction reducing qualities under heavier loads. In the last analysis, however, the final test of a bearing is not the amount of friction present under staged, laboratory conditions, but the performance in actual service. Here in most cases we find conditions far from ideal and as a matter of fact often distinctly adverse to what may be found or set up in the laboratory. The behavior of the bearing under these tests is what interests the practical operator of machinery. In the Timken Bearing, with manufacturing limits held to microscopic dimensions and the rolls positively aligned at all times, bearing efficiency approaches most nearly 100 percent. The Timken Bearing therefore with true rolling motion of the rolling elements and possessing the known advantages of tapered construction has been found superior in the great proving ground of bearings . . . everyday service.

Take-Up in Assembly

Quite apart from the advantage of tapered construction in carrying loads from all directions, there is the additional and equally important element of take-up in assembly. Manufacturers find that this feature permits wider machining limits of both shaft and housing, which is an important element in the reduction of costs as well as speeding up assembly.

This feature makes possible the closer adjustment of dependent parts such as spiral bevel gears and pinions. Chatter of machine tool spindles is eliminated and noise of running bearings may be measurably reduced by the close and accurate bearing adjustment which is possible with Timken Bearing construction.

Furthermore it is a recognized engineering fundamental that wherever there is motion wear must follow. In the Timken Bearing the amount of wear is so slight that even after long periods of service it is scarcely measurable even with the most delicate instruments. Should it develop, however, the cup may be advanced on the cone by the tightening of a nut or the removal of a shim. The bearing will then function as satisfactorily as when new.

Types of
TIMKEN BEARINGS

TYPE S
The Standard Single-Row Timken Bearing

In the consideration of the various types of Timken Bearings, obviously the standard bearing, Fig. 18, is the first to discuss. It is this bearing which is so widely used throughout all industry. The principle of the bearing is understood since the design and construction have been described. It will be recognized, however, that almost endless modifications are possible by merely changing the dimensions or angles of the rolling elements. In actual practice, however, it is essential to make certain basic classification or "series". These are established by maintaining a fundamental relation between the various components of the bearing. We thus obtain standard or conventional Timken Bearings with wide races and long rollers; others with narrow races and short rollers; and a third group representing an approximate mean between the other two. This permits the designer to select the bearing best suited to his needs.

Fig. 18

Fig. 19

TYPE SS
The Steep Angle, Single-Row Timken Bearing

In numerous applications, such as power take-offs, worm, gears and bevel gear shafts, the thrust load predominates although there is an appreciable radial load. For these positions the high thrust capacity or steep angle bearing has been developed. It differs from the conventional Timken Bearing in that the angles of the raceways, as well as the rollers, are quite steep. The fundamental principle of the tapered roller bearing is retained in that lines drawn coincident with the surfaces of the cone, cup and rollers meet at a common point on the axis of the bearing, thus assuring true rolling motion. The designer therefore obtains all of the outstanding advantages of the standard Timken Bearing and in addition a product particularly adapted to heavy thrust loads. These bearings have been developed over a period of years, so that today they are available in a wide range of sizes for practically all applications.

TYPE SF
Flanged Cup Bearing

In certain applications, particularly in precision machine tool spindles, it was found difficult to machine conventional cup seats to a shoulder and maintain the desired accuracy. This was brought about by the necessity of removing the tool from the machine after one seat was machined and to set it up in a reverse position to bore the other. Even with the most careful workmanship a variation often occurred so that the cup seats were not in absolute alignment. The required accuracy can now be obtained, however, by boring straight through the housing and facing an outside seat at right angles to the bore. The face thus obtained provides the backing for the flange of the cup.

This bearing is also favored in other machine tool applications such as gear boxes where there is not sufficient space to use conventional mounting methods. In this case the flange on the cup is set against a face machined on the inside of the gear box.

In other industrial applications such as sheaves and car wheels which are frequently cast of manganese steel it is also used extensively. This material is exceptionally difficult to machine, in fact it is necessary to resort to grinding to obtain a finished surface. It would be impractical to attempt to obtain the usual shoulder for cup backing, but here again no difficulty is experienced in grinding a seat on the face of the sheave or wheel hub to locate the flange and thus obtain the required bearing mounting.

The popularity of this bearing has brought about its rapid development so that it is now available in a wide range of sizes.

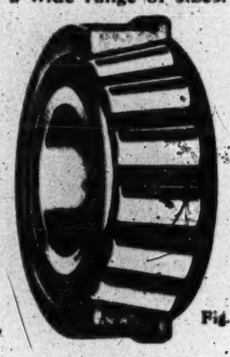

Fig. 20

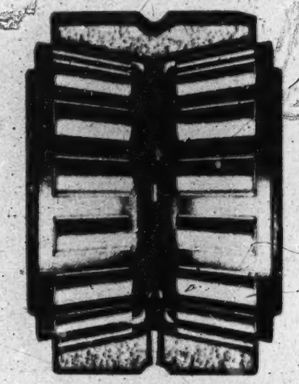

Fig. 21

TYPE DO
Two-Row, Double Cup, Single Cone

This unit employs a double cup with two conventional cones, Fig. 21. Two assemblies are possible, both are identical excepting that in one case a spacer is introduced between the cones so that the set-up or running clearance is established at the time the bearing is assembled. The other, having no cone spacer, requires that the proper set-up be obtained by some form of adjusting device. Either form will give satisfactory service, the one having the spacer is usually preferred in those applications where provision must be made for quick removal and replacement of the bearings or where the operating conditions are such that it is unnecessary to provide for take-up after a long period of service. Numerous applications require that some provision be made to allow for shaft expansion. With this type of bearing it is readily accomplished by securely locking the cones in position and permitting the cup to "float" in the housing. The opposite end of the shaft is usually fixed in position so that the movement is confined to one end. Lubrication may be introduced through the groove and holes in the outside periphery of the cup.

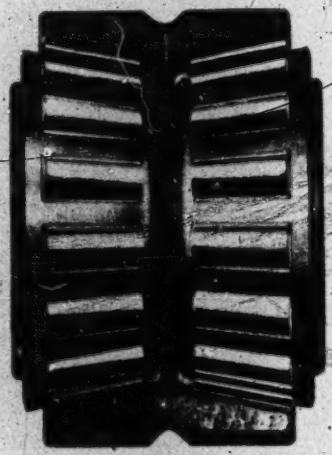

Fig. 22

TYPE NA

Two-Row, Double Cup, Single Cone

Another construction is shown in Fig. 22. Here again we have a double cup and two single cones. In this assembly, however, the cones are butted together so that when the unit is fixed in place the proper running clearance is provided. This class is designated as the "N.A." series and is divided into the conventional and steep angle groups. These bearings like those discussed in the preceding page are suited particularly well to those assemblies where it is not desirable to provide means for take-up in service or where operating conditions require a fixed mounting at one of an assembly and a certain amount of "float" at the other.

This bearing is exceedingly popular and sizes are now available over a wide range of cone bores. The cup is identical with the DO type, having a groove and oil holes.

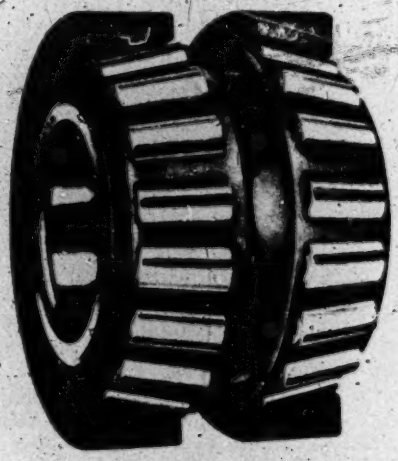

Fig. 23

TYPE DI

Two-Row, Double Cone, Single Cup

The DI, or double inner race bearing is shown in Fig. 23. The cone, as the name indicates, is in a single piece; the cups, however, are the conventional design, and identically the same as those used with a single cone.

There is no need to provide special means for lubrication since it may be readily introduced between the cups. The bearing set-up must be made, of course through the cups.

This unit is frequently selected for positions where it is necessary to secure the capacity of a two-row bearing, yet to obtain a simpler mounting than two standard, single-row bearings. It is often used on the fixed end of a shaft when an allowance must be made for shaft expansion. In this case the bearing used on the opposite end is usually one of the double cup units so set up as to float.

TYPE DIK

Two-Row Bearing, Slotted Double Cone

A bearing, developed for use in light duty pillow blocks, is shown in Fig. 24. It will be noted that slots are provided in the cone to engage in mating projections on a collar, which in turn is secured to the shaft by means of set-screws. This unit is, of course, not limited to pillow blocks, but finds a wide field of usefulness in those applications where cold finished shafting is used. Since cold finished shafting may be held to comparatvely close limits, it is possible to obtain relatively tight fits on the shaft. This type of bearing, however, is not recommended for heavy duty service. It should be kept in mind that the bore of these standard bearings is held to the nominal outside diameter of cold finished shafting, however the Timken Company's manufacturing practice always provides a plus tolerance, while the standard manufacturing tolerance for cold rolled shafting provides for the undersize variation only.

Fig. 24

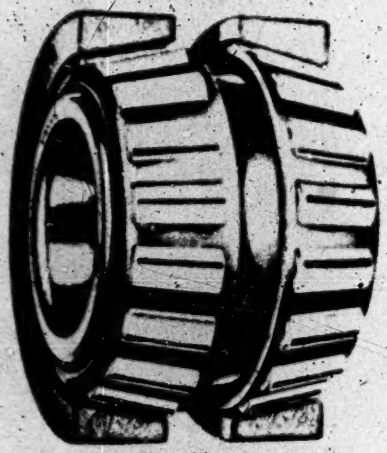

Fig. 25

TYPE DIT

Two-Row Bearing, Tapered Bore, Double Cone, Single Cups

This unit was developed for use on line shafting and in pillow blocks. Like the slotted cone bearing, however, it is by no means limited to such service, but is used extensively in those applications where ease and speed of assembly and disassembly are primary requirements. The usual method of mounting is, to use a sleeve tapered to conform to the taper of the bearing. This sleeve should have a saw-cut lengthwise to permit it to compress as it advances into the bearing bore, which also provides a rigid seat on the shaft.

On line shafting and other positions where it is necessary to be able to slide the complete assembly into position and then fasten it securely this unit is ideally suited. The field of application is unusually extensive since the tapered sleeve permits a rigid seat on the shaft.

This bearing may however be mounted directly on a tapered shaft.

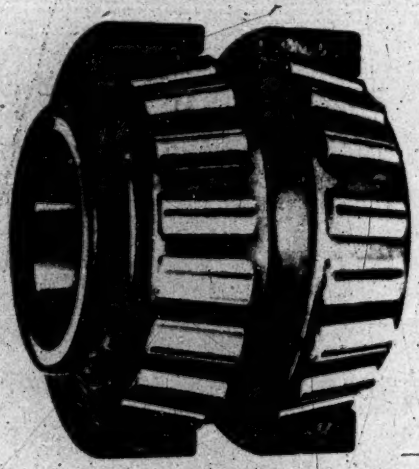

Fig. 26

TYPE DITP

Two-Row Bearing, Tapered Bore, Double Cone with Puller

This bearing is shown in Fig. 26. It differs from the one just described in that a flange is provided on the cone to facilitate removal. The mounting is usually made directly on the shaft. The general field of application covers positions in machines where it is necessary to remove component parts frequently, such as in certain railroad applications, and paper mill machines.

TYPE QO

Four-Row — Heavy Duty

This bearing was developed for those applications where maximum capacity is required in a limited space. As will be seen from Fig. 27 it consists of four sets of rollers. The arrangement is similar to 2 two-row, double cone bearings set side by side, with a double cup carrying the load from the two inner sets of rollers and single cups carrying the load imposed on the outer sets of rollers. In some installations where the speed is slow the bearings are mounted without cup and cone spacer rings. It is recommended however, that spacer rings be included in all applications, as this permits a completely factory adjusted unit with the proper running clearance established at the time of manufacture. The cone spacer also permits clamping the cones securely in position on the shaft or roll neck, thus positively locating the shaft with respect to the bearing and without interfering with the bearing adjustment. Lubrication is introduced through leads in the housing and holes in the spacer rings.

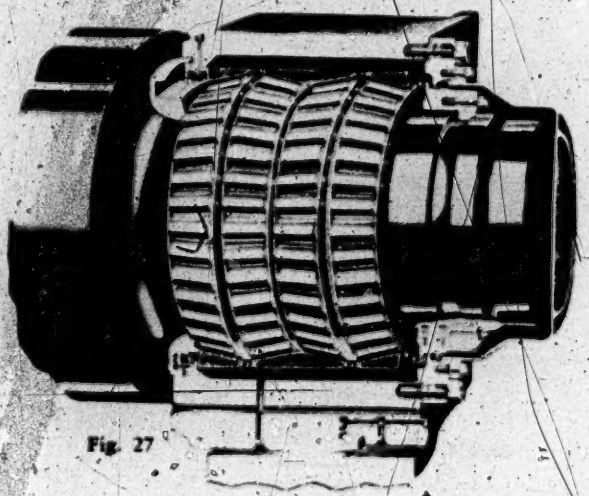

Fig. 27

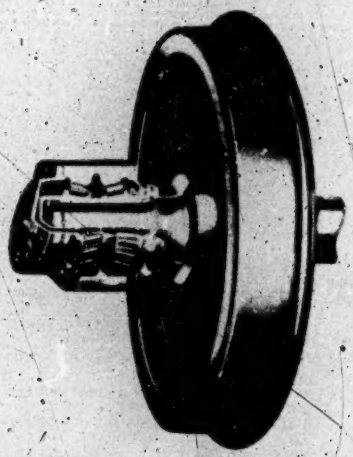

Fig. 28

RAILROAD BEARINGS

Through the application of Timken Bearings to railway rolling stock starting resistance of trains has been reduced 88 percent. Train delays caused by "hot boxes" are a thing of the past. Smooth, easy starting and stopping increase the riding qualities of all kinds of passenger trains. Speeds of seventy, eighty and in some cases over one hundred miles per hour are becoming commonplace. This advancement in rail travel is brought about not only by the use of Timken Bearings but also by the adoption of light weight reciprocating parts made from Timken High Dynamic steel. A new era of high speed freight service will follow the adoption of Timken Bearings on freight cars. The experience gained through the use of Timken Bearings on locomotives, tenders and passenger cars is of inestimable value in solving freight car problems.

Another outstanding advantage is the ease of starting and running in cold weather. There is no need of reducing the length of trains since Timken Bearing Equipped trains are not effected by adverse weather conditions.

TYPE T

Thrust Bearings

Although a combination of radial and thrust loads exists much more frequently than either a purely radial or purely thrust, yet there are numerous occasions where it is necessary to install a bearing to withstand thrust loads only. To meet this condition a series of bearings known as the T-type are available. The bearings are in regular production in bores ranging from five-eighths of an inch, and a capacity of about one thousand pounds, to massive units having a bore of eleven inches and capable of withstanding over two hundred thousand pounds load.

These bearings are manufactured in two distinct types. The one shown in Fig. 29 is designed to meet the demand for a very inexpensive bearing for oscillating or very slowly rotating applications, such as steering knuckles or pivots. The bearing shown in Fig. 30 is suitable for heavy duty rotating applications, such as oil well swivels, extruders and similar applications. Whenever the design includes these bearings it is recommended that the Timken Engineering Department be consulted before final bearing selections are made.

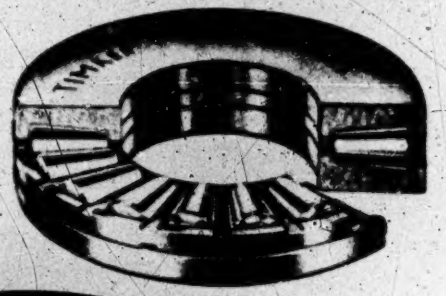

Fig. 30

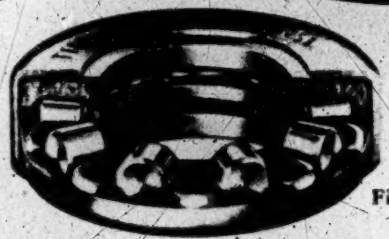

Fig. 29

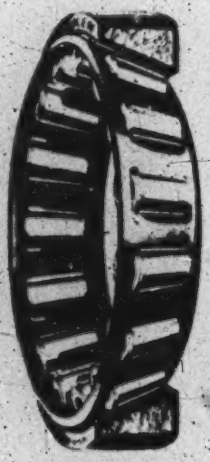

Fig. 31

STEERING GEAR BEARINGS

With the advent of the low pressure tire as standard equipment, automotive engineers were confronted with the problems of providing easier steering. At least a part of the answer was obtained through the development of this series of bearings. They differ somewhat from the conventional Timken Bearing in that the cone is usually formed on the worm at the end of the steering column so that only a cup and roller assembly is needed. The cage differs from that used in the standard Timken Bearing in that it is so constructed that the rolls are retained within the cage itself. This, of course, is a distinct advantage in assembly and disassembly as well as in all service operations. It does, however, offer the same general advantages as the regular Timken Bearing as it carries both radial and thrust loads. This bearing is illustrated in Fig. 31.

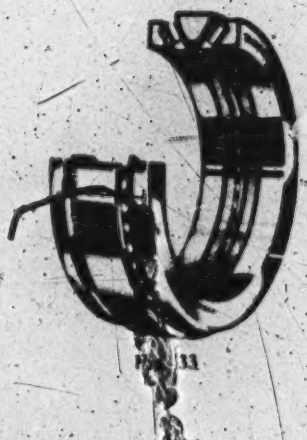

Fig. 33

PROPELLER THRUST BEARING

Adjustable pitch propellers are in almost universal use today. This bearing was designed to take the thrust load and permit easy feathering of the blades.

Other applications of Timken Bearings to aircraft include, landing and tail wheels, rocker arms, engine mounts, carburetor valves and any application where thrust and radial loads are encountered.

Landing and tail wheels are almost universally mounted on Timken Bearings. This is true since they carry both radial and thrust loads. Likewise they permit a close adjustment which eliminates loose wheels and consequent ground looping.

The advantages of Timken Bearings in other aircraft applications include the possibility of wider machining tolerances which may be compensated by the adjustment feature of Timken Bearings. Then, too, the mountings may be made more rigid. All these advantages are important in private, commercial, and military flying.

2302 Q

Special Bearings

Although standard Timken Bearings will be found suitable for nearly all applications, yet at times problems arise requiring special units. The rocker arm of aircraft engines is such an example. The bearing developed for this position is of the two-row double cup type. In addition to the bearing assembly, that is, the cone, cup and rollers, closures are provided so that the unit becomes a complete self-contained assembly.

The standard Timken Bearing as produced in regular production is held to exceptionally close limits of accuracy, yet in some positions, especially in machine tools, this bearing is not sufficiently precise. For these or similar positions Timken Bearings may be obtained which are held to exceedingly close limits. Engineers requiring bearings of unusual accuracy are requested to consult with the Timken Company's Engineering Department.

Miscellaneous Parts

Numerous equipment manufacturers have expressed a preference for obtaining from us certain parts essential to the proper installation of Timken Bearings. To meet this demand we are in a position to supply certain sizes of tubes, nuts, dust collars, washers, cotter pins and shims. These parts are held to certain standards of precision and when used with Timken Bearings will give satisfactory service.

Timken Steel and Tube Division

THE Timken Roller Bearing Company began the manufacture of steel in 1915. Furnaces were built when it was found difficult to secure a steady supply of high grade steel. The quality standards established by the Timken Steel mill in behalf of The Timken Roller Bearing Company were such that many manufacturers of steel products early seized the opportunity to buy Timken Alloy Steel and Timken Seamless Tubes. As a result the Timken Steel Mill has enjoyed a steady growth.

Today the facilities for producing steel in the Timken Plant include: three 100-ton, open hearth furnaces; one 20-ton, two 35-ton, one 60-ton, one 70-ton and one 100-ton, Heroult, arc-type electric furnaces. The melting capacity is approximately 30,000 ingot tons of electric furnace and 20,000 ingot tons of open hearth steel per month. All furnaces are mechanically charged and the molten steel is all poured into special corrugated ingot molds, using either a refractory or metal hot tops. The Timken Roller Bearing Company, one of the largest producers of electric steel, has made an enviable reputation not only as a manufacturer of bearing steel, but also as a producer of some 200 grades of alloy and stainless steels for applications where quality is the paramount consideration. Timken has pioneered in the development of steels for oil refinery service where resistance to high temperature, oxidation, corrosion and creep are essential requirements.

Timken electric and open hearth carburizing and oil hardening steels for manufacture of transmission and differential gears are well known in the automotive industry.

Timken is a leading producer of magnaflux quality forging steels for aircraft parts.

Timken Graphitic Steels (steels in which part of the contained carbon is present in the form of free graphite), a group of five tool steels, combine the most desirable features of cast iron with the high strength and response to heat treatment of steel. The performance of these steels in cold working dies has been outstanding.

"GRAPH-AL"—Water hardening steel, for tube drawing mandrels, cold heading dies, and impact applications. Good resistant to abrasion. Excellent machining and impact properties.

"GRAPH-M.N.S."—Air hardening steel, for intricate dies, light section parts for cold metal forming, hot working dies and tools. Non-deforming and good resistance to abrasion.

"GRAPH-MO"—Non-deforming oil hardening steel, for tools, dies, oil seals, wear plates, spindles, gages, etc. Good resistance to abrasion and excellent machining properties.

"GRAPH-SIL"—Water hardening steel, for tools, dies, brake drums, cylinder liners, pump tubing, bushings, etc. Good response to heat treatment and high fatigue resistance.

"GRAPH-TUNG"—Water hardening steel, for bar and tube cold drawing dies, deep drawing dies, bushings, general purpose dies and tools, air hammer pistons. Excellent resistance to abrasion and good impact properties.

The billet and bar rolling equipment of the Timken steel plant includes the 35 inch blooming mill, the 28 inch mill, the 22 inch mill and the 10 inch mill. Tube billets for subsequent piercing are produced on the 22 inch mill. In addition to the rolling equipment, adequate facilities are pr ded for reheating, thermal conditioning, pickling, grinding, and chipping.

Billets are available in sizes 1¼ to 9¼ inches square for forging or re-rolling purposes. Bars can be had in 5/16 to 9½ inches diameters for forging or machining. Machining bars are available in hot rolled,

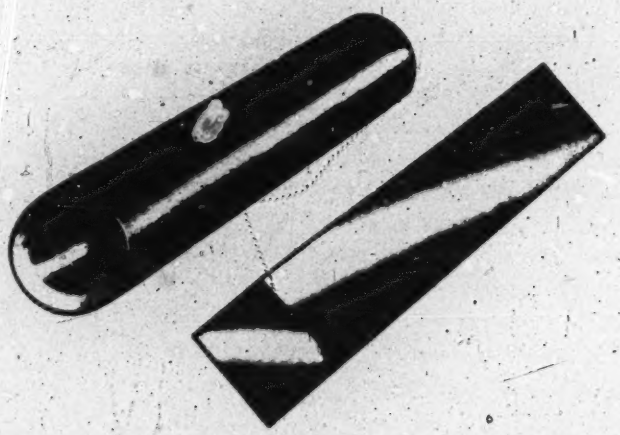
rough turned, cold drawn or centerless ground finishes. A battery of 30 annealing furnaces provide adequate facilities for supplying the customer with whatever steel structure he may require.

Timken operates two Mannesmann type piercing mills for the production of seamless tubing. Timken Seamless Tubes are available in both electric furnace and open hearth grades in a variety of analyses. These are produced for mechanical and pressure applications.

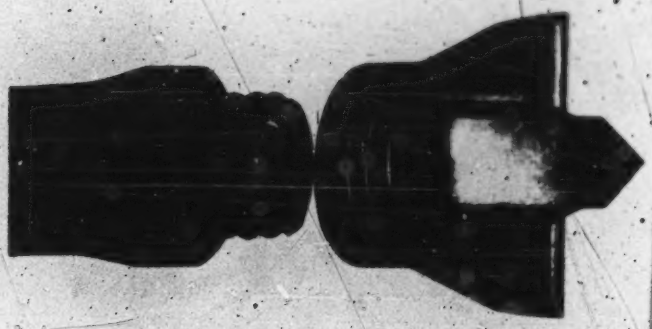
Timken Seamless Tubes for pressure applications are used in the oil refinery, paper pulp, chemical and heat and power industries. The following classifications are available . . . cracking still tubes, condenser, heat exchanger and evaporator tubes, superheater tubes and mechanical tubing, including special grades for roller bearing and ball bearing races.

The use of Timken mechanical tubing to replace bar stock has radically reduced production costs in the manufacture of many products. Timken tubes are available hot rolled in outside diameter 1⅛ inches to 10½ inches with walls in proportion.

Cold drawn tubing is available in outside diameter 3/4 inches to 10 inches. Turned and ground finishes are also produced. Annealing and heat treating facilities are available to guarantee the proper structure and hardness.



TIMKEN ROCK BITS



THE Timken Rock Bit is backed by years of experience in every type of mining, quarrying and contracting operation. It has revolutionized rock drilling costs through

(1) the reduction of forging expense;

(2) faster drilling;

(3) longer life (more footage per bit);

(4) reduced investment in steels;

(5) saving of drillers' time on the job;

(6) reduction of hoisting and tramming time.

Timken Bits are manufactured under the same policy as Timken Bearings — to produce the best product that can be made at the lowest possible price consistent with superior quality. As a result of this policy Timken Bits occupy the same position in their field as do Timken Bearings in the anti-friction bearing field.

Like Timken Bearings, Timken Bits are made from Timken Electric Furnace Alloy Steel produced in the Timken Steel Plant under the direct supervision of Timken metallurgists. The use of Timken Steel combined with Timken experience in heat treatment gives to Timken Bits a superior, uniform deep hardening that assures high drilling speed and long life. Design is a highly important factor in Timken Bit performance. The bit shoulder takes the shock of the hammer blow which is transmitted to the outside of the wings of the bit where most needed. The same feature protects the threads against injury. In the Timken Bit the only function of the threads is to hold the bit on the steel. Between the bottom of the steel and the bit is a definite clearance which prevents the steel upsetting or "bottoming" in the bit. The union of the bit and steel is almost invisible. This, plus the streamlined contour of the bit and steel allows the cuttings to pass unobstructed. Since there is no overhang of any kind for cuttings to lodge behind and wedge the steel, the steel can be easily pulled from the hole.

Authorized Distributors carry full stocks of Timken Bits in all gauges and sizes for immediate delivery. Authorized Conversion Shops will economically convert any size or section of hollow drill steel for use with Timken Bits. They will also furnish new steel in any section or size.

For complete information, write for the Timken Rock Bit Booklet.

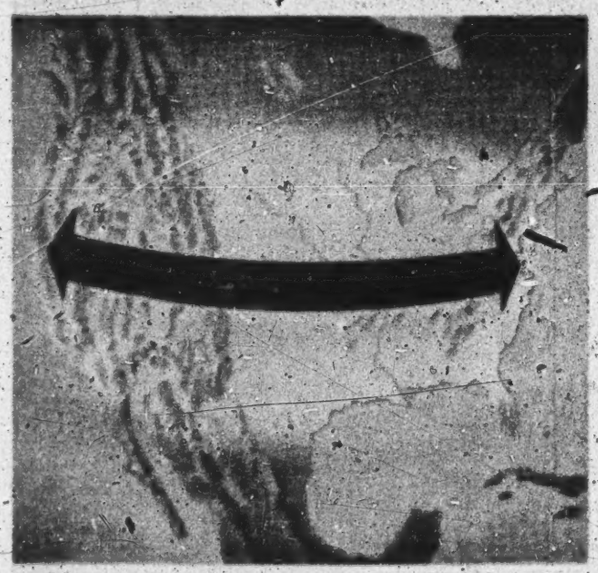
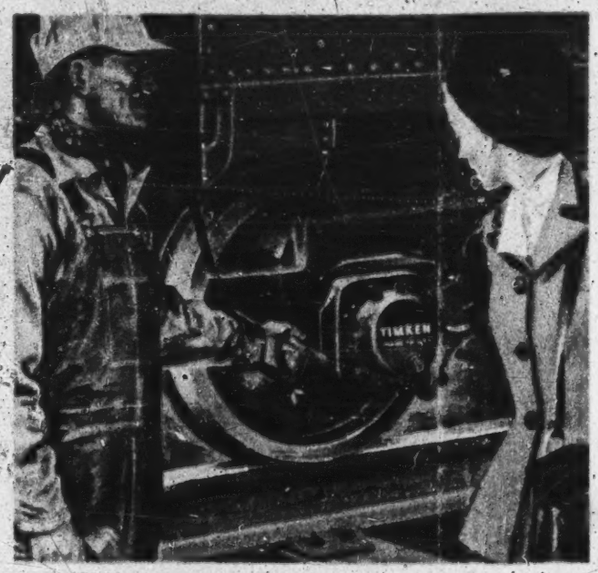
THE NEXT GREAT STEP IN RAILROADING !

1. IT'S FUN TO RELAX in deep-cushioned comfort and watch the world go by. Big, wide windows in the new observation cars offer an unobstructed view of the finest scenery in the world—America's! Modern roller bearings under the cars insure velvet-smooth starts and a gliding ride.

2. YOUR ROOM IS YOUR CASTLE in the newest all-room passenger cars. Here's all the comfort of home—and the privacy, as well. And you arrive fresh and sparkling, thanks to roller bearings which speed you along smoothly and effortlessly.



3. THROUGH SERVICE COAST-TO-COAST without changing cars is one of the latest improvements on the railroads. And it's *fast* service, too! All speed restrictions due to bearings are eliminated when cars are equipped with modern roller bearings.

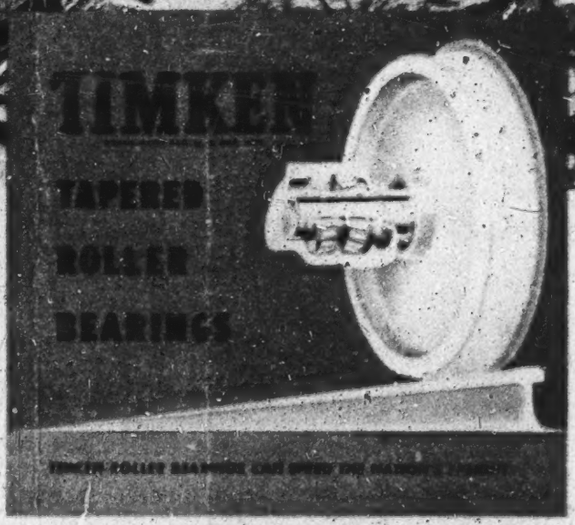


4. THE TIMKEN NAME ON THE JOURNAL BOX is the sign of a modern train. Timken tapered roller bearings reduce starting resistance 88%. They pave the way for sustained high speeds of 100 m.p.h. and more! Delays due to hot "boxes" eliminated!

5. IT'S COMING—the next great step in railroading is "Roller Freight"! When freights replace their friction bearings with Timken tapered roller bearings, freights will roll as fast and smooth as passenger trains.

The things you eat and wear and use will reach you faster—and in better condition. There will no longer be any need for drastic winter cuts in freight tonnage, due to 88% less starting resistance. Maintenance costs on rolling stock will be reduced, equipment life lengthened, and the days of the "hot box" will be over.

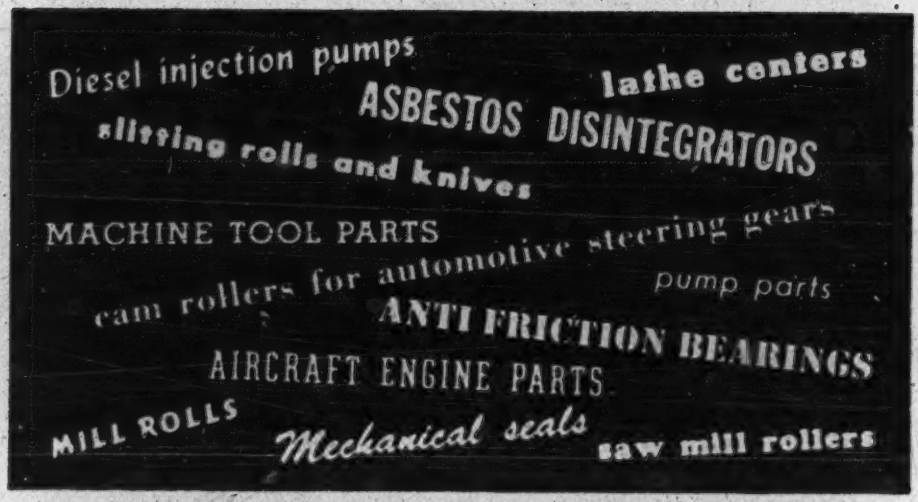
On the railroads and throughout industry, the Timken tapered roller bearing is preferred because it takes any combination of radial and thrust loads. Make sure the trade-mark Timken is on every tapered roller bearing you use. The Timken Roller Bearing Company, Canton 6, Ohio. Tapered Roller Bearings, Alloy Steels and Tubing, Removable Rock Bits.



TIMKEN ROLLER BEARINGS CARRY MORE LOAD AT HIGHER SPEEDS

Design No. [illegible]—B. B. D. & O. Claim 20—The Saturday Evening Post, March 7—Received February 17, 1941—Serial, February 26, 1941

5358



If they've got to be hard to be good . . . use Timken 52100 steel

DEVELOPED primarily for the anti-friction bearing industry, Timken 52100 steel has outstanding advantages for any machined part (such as those listed above) where great strength and exceptional wear resistance are essential.

52100 has extreme hardenability throughout its cross-section, high tensile strength, high fatigue strength and excellent machinability (because of fully spheroidized structure). It can be oil quenched to a maximum hardness of 65/66-Rockwell C. And it withstands working pressure of 200,000 p.s.i.

Uniform quality in every lot of Timken 52100 steel is assured by The Timken Roller Bearing Company's close quality control from melting through final inspection. The Timken Company is one of the world's largest producers and the *only* source of 52100 steel in three finished forms—bars, tubes and wire. A wide range of sizes in each form is made to meet your needs.

Don't overlook the advantages of Timken 52100 steel. For further information write The Timken Roller Bearing Company, Steel and Tube Division, Canton 6, Ohio. Cable address: "TIMROSCO".

[fol. 5360] DEFENDANT'S EXHIBIT 189

Agreement

An Agreement made between The Timken Roller Bearing Company. a Corporation organized under the laws of the State of Ohio and having its Office and principal place of doing business in the City of Canton Ohio in the United States of America (hereinafter called "the Licensor") of the one part and The Electric & Ordnance Accessories Company Limited a Company organized under the laws of Great Britain and having its office in the Borough of Aston England (hereinafter called "the Licensee") of the other part.

Whereas the Licensor has been granted or holds the following Letters Patents for the United Kingdom and the Isle of Man viz: No. 14656 of 1898, No. 19634 of 1907 and No. 7925 of 1908 for inventions relating to Roller Bearings and improvements therein.

And Whereas said parties mutually desire to enter into an arrangement whereby the Licensor will grant to the Licensee the right to make use exercise and vend Roller Bearings under said Patents within the United Kingdom and the Isle of Man upon the terms and conditions hereinafter set forth.

Now therefore in consideration of the premises and for the mutual stipulations hereinafter contained and for the further consideration of the sum of One Dollar paid by the Licensee to the Licensor the receipt of which is hereby acknowledged it is mutually agreed between the parties as follows:

[fol. 5361] Article 1

Grant of License Territory

(1) The Licensor hereby grants to the Licensee as from the First day of July 1909 the full and exclusive right license and authority to make use exercise and vend in the United Kingdom and the Isle of Man Roller Bearings of all kinds made under or in accordance with the specifications of the Letters Patent above referred to or made under or in accordance with any Letters Patents which may hereafter be taken out or acquired by the Licensor in the United Kingdom and the Isle of Man during the terms of the three

several Patents above referred to and during the terms of the several Patents which may hereafter be taken out or acquired by the Licensor in the United Kingdom and the Isle of Man and relating to Roller Bearings and improvements therein or in any parts thereof or in the methods of manufacture thereof and during any prolongation or extended term of any of the present or future Patents before referred to.

(2) Hereinafter in this Agreement the United Kingdom and the Isle of Man will be designated as "the said Limits."

Article 2

Restrictions as to Licensor

(1) So long as this Agreement is in force the Licensor will not directly or indirectly make or sell Roller Bearings to others in the said limits nor license others to make or sell Roller Bearings therein under the said Patents nor sell Roller Bearings outside the said limits knowing them to be for shipment into the said limits or into the limits defined in any other Agreement for the time being sub- [fol. 5362] sisting between the parties hereto. But this shall not at any time restrict the Licensor from making selling or licensing others to make or sell Bearings for Automobiles or other vehicles manufactured outside the said limits and outside the limits defined in any other Agreement which may for the time being be subsisting between the parties hereto and which may go into the limits affected by this Agreement or any other Agreement between the parties as aforesaid as parts of and assembled in complete Automobiles or other vehicles.

Article 3

Tools etc. to be Furnished—Cages Furnished

(1) The Licensor will immediately upon being required so to do by the Licensee furnish the Licensee at cost free on board the Cars at Canton Ohio initial sample sets of gauges tools and jigs for the various sizes of Bearings which the Licensee will manufacture hereunder. It will also furnish to the Licensee at the cost charged to the Licensor free on board the Cars at Canton Ohio or at the factory where made the steel stamped cages needed by the

Licensee until such time as the Licensee will need the same in quantity but not in any case longer than twelve months from the date of this Agreement. And after the expiration of such twelve months the Licensee will be expected to purchase cages direct from the Company manufacturing the same for the Licensor or have them manufactured by or for itself. In the event of the Vendor of the said Cages to the Licensor putting up the price for supplying the same to the Licensee beyond the most favourable price at which he shall be at the same time supplying them to the Licensor then until the Licensee shall be able to make other arrangements for obtaining the Cages elsewhere the [fol. 5363] Licensor shall supply the same to the Licensee at the most favourable price charged to the Licensor by the Vendor.

Article 4

Furnish information as to manufacturing

Steel Analyses

(1) The Licensor will furnish the Licensee until such time as the Licensee has its manufacturing business well established complete information as to the factory cost of Bearings including labour material and overhead charges also informing the Licensee as to the prices at which the Licensor sells its various sizes of Bearings to the trade in the United States in general. The Licensor will give the Licensee at all times whilst this Agreement shall be in force full opportunity at the factories of the former to study the business of manufacturing Roller Bearings. The Licensor will also furnish to the Licensee during the same time chemical analyses of the steels from time to time used by it in making Bearings and will furnish the Licensee at all reasonable times with all necessary data relative to the proper manufacture of Timken Roller Bearings.

Article 5

Bearings to be furnished for a time

(1) Subject to the limitations hereinafter provided the Licensor will furnish the Licensee (free on board Cars at Canton Ohio) Bearings for re-sale in the said Limits (not exceeding 10,000 Bearings in all) at prices equal to the

cost of producing the Bearings as shewn by Licensor's Books including therein a proper proportion for overhead charges (not exceeding 150% on production wages) and in addition thereto Fifty per cent (50%) of the total cost.
[fol. 5364] (2) This obligation of the Licensor however will only extend to enabling the Licensee to satisfy the reasonable requirements of the public in the said limits until such time (not later than two years from the date of this Contract) as the Licensee shall be able to manufacture Bearings in sufficient quantities to meet the reasonable requirements of the public as herein provided. The Licensor will not however charge the Licensee with the royalty hereinafter provided for on Bearings furnished by it to the Licensee hereunder.

Article 6

Patent dues

(1) The Licensor will pay all renewal fees and do all such acts and things as may be required by law to maintain and keep on foot the said Letters Patents.

Licensor not to amend specifications

(2) The Licensor shall not amend the specifications of the said Letters Patents or any of them without the consent in writing of the Licensee but such consent shall not be unreasonably withheld.

Revocation

(3) The Licensor shall defend at its own cost every action or proceeding instituted for the purpose of revoking any of the Letters Patents referred to herein whether now in existence or hereafter taken out.

Revocation by Licensees default

(4) If the Licensor shall defend any action or proceeding instituted for the purpose of revoking any of the Letters Patents as last before mentioned and any such Patent shall be revoked solely on some ground which would not have been available if the Licensee had duly performed its obligations under this Agreement then and in any such case the Licensor shall in addition to any other rights which it may have against the Licensee be entitled to recover from the Licensee

[fol. 5365] all costs charges and expenses which it may have reasonably incurred in such defence.

Licensee to manufacture

(5) The Licensee will subject to the provisions of Article 5 hereof so long as this Agreement shall remain in force manufacture Roller Bearings under the said Patents in quantities sufficient to satisfy the reasonable requirements of the public in the said limits as defined by Section 24 of The Patents & Designs Act 1907.

Notice of infringement

(6) The Licensee shall give notice promptly to the Licensor of any infringement or threatened infringement of the said Patents or any of them within the said limits which shall at any time and from time to time come to its knowledge.

Infringement

(7) The Licensor shall protect the said Letters Patents herein referred to whether now in existence or hereafter taken out against infringement if notified by the Licensee that they are being infringed upon so far only as it deems fit same being left entirely to the Licensor's discretion. Provided nevertheless that in the case of any infringement by reason whereof the Licensee shall suffer damage (not being merely nominal damage) and of which the Licensee has given the Licensor written notice with a request that the latter prosecute such infringer then if the Licensor shall not take any legal proceedings in regard to such infringement or shall unreasonably delay taking such proceedings or if the Licensor having taken shall unreasonably delay in prosecuting such proceedings to a conclusion then and in any such case all royalties which would otherwise have been payable hereunder during such period as the Licensor shall take no proceedings or shall unreasonably delay taking or prosecuting proceedings as aforesaid shall cease to be payable either during such period or at any time thereafter. [fol. 5366] In case legal proceedings are brought by the Licensor upon request of the Licensee to prevent infringement of the Patents above mentioned or referred to and any damages are recovered therein such damages shall be applied on the costs and expenses of such proceedings and the

remainder of said expenses shall be borne two-thirds by the Licensor and One-third by the Licensee.

(8) If the damages recovered in any such proceeding exceed the expenses of prosecuting said proceeding the surplus damages recovered shall be payable Two-thirds to the Licensor and One-third to the Licensee.

Article 7

Indemnity of Licensee against infringement. (Signed) A. V., V. G., J. D. M., W. R. T., A. L., R. J. B., Jr

(1) Subject to the provisions contained in Paragraph (3) of this Article the Licensor shall keep indemnified the Licensee and its sub-licensees against all actions proceedings claims and demands or prosecutions whatsoever which may be brought commenced or prosecuted against the Licensee or its sub-licensees and against all the reasonable costs charges and expenses incurred or payable by the Licensee or its sub-licensees in respect of all such actions proceedings claims and demands or prosecutions or any such of them as may be threatened and against all loss or damage whatsoever which the Licensee or its sub-licensees may sustain in consequence of anything made used exercise or vended by the Licensee or its sub-licensees under any Patent of the Licensor and under the terms of this Agreement or any sub-license granted thereunder being alleged or held to infringe the Patent rights of any other person or persons and in the event of any action being brought or threatened against the Licensee or any of its sub-licensees [fol. 5367] in respect of any such matter as aforesaid the Licensee or its sub-licensees will immediately give notice thereof to the Licensor and failing so to do the Licensor shall not be liable to the Licensee or its sub-licensee for any such loss or damages above referred to.

(Signed) A. V., V. G., J. D. M., W. R. T., A. L., R. J. B., Jr

(2) The Licensor shall be permitted to come in and join the Licensee or sub-licensees in conducting the defence against any infringement proceeding brought by others against the Licensee (or its Sub-licensees)

(3) Provided always that if and whenever the sum or sums of money which have been paid or which shall be payable by the Licensor to the Licensee or its sub-licensees un-

der the last two foregoing paragraphs of this Article and under the corresponding provisions in the Agreement between the same parties relating to Foreign Patents in Roller Bearings shall aggregate to the total amount of royalties then already paid or payable by the Licensee to the Licensor whether under this Agreement or under the said Foreign Agreement the Licensor shall only thereafter be liable to pay to the Licensee or its sub-licensees one half of all further sums of money which but for this paragraph and the corresponding paragraph in the said Foreign Agreement would have been wholly payable by the Licensor to the Licensee or its sub-licensees under the said last two foregoing paragraphs of this Article and under the corresponding provisions in the said Foreign Agreement.

Royalties

(4) So long as any of the Patents before referred to whether now in existence or hereafter taken out by the Licensor shall remain in full force the Licensee shall subject to the provisions of Article (6) hereof pay to the Licensor a royalty equal to 15% of the net invoice prices (after deduction of all discounts) of all goods manufactured [fol. 5368] and sold by the Licensee under this Agreement. If all of the said Patents shall cease to remain in full force by reason of some court or other competent authority revoking or declaring the same invalid and if the decision of the Court or other authority making such revocation or declaration shall be reversed on appeal the said royalties shall forthwith again become payable together with all royalties which would have been payable but for the adverse decision.

Payment of Royalties

(5) The said royalties shall be paid on the first days (or within thirty days thereafter) of January, April, July and October of each year for the Bearings made and sold during the quarter year prior to the first day of each said four months respectively the first of such payments to be made on the First day of October 1909.

Statements to be furnished

(6) The remittances of royalty shall be accompanied by statements from the Licensee showing in detail (a) The

number of finished Bearings made during the preceding quarter year (b) The number of Bearings sold during the preceding quarter year and (c) At what prices to whom and when such Bearings were sold after deducting all discounts allowed. The statement to be furnished in July of each year shall also be accompanied by a certified statement prepared by the Auditors of the Licensee's Company for the time being based upon an actual examination of the books and records of the Licensee giving the same data as above required in respect to sales made during the year prior to said month of July. The said statement shall if required by the Licensor be further verified by Statutory Declaration of the Secretary of the Licensees Company for the time being.

(7) If the Licensor so desires it may once each year at its own expense employ a chartered accountant who shall have the privilege of examining the books records and plant [fol. 5369] of the Licensee with a view to determine how many Bearings the Licensee shall have made and sold under this Agreement up to the time of such examination and to whom and when and for what prices.

Article 8

Minimum Royalty. (Signed) A. V., V. G., J. D. M., W. R. T., A. L., R. J. B. Jr. (Signed) A. V., V. G., J. D. M., W. R. T., A. L., R. J. B. Jr.

(1) During each of the 2nd and 3rd years whilst this Agreement shall be in force the Licensee will pay to the Licensor a minimum royalty at the rate of £1000. per annum Provided Always that so soon as the licensee shall prove to the Licensor by a Certificate of its Auditors for the time being that the total expenditure of itself and of its sub-licensees (whether under this Agreement or under the Agreement between the same parties relating to the Foreign Patents on Roller Bearings) in the manufacture exploitation and sale of Roller Bearings under either or both of the said Agreements (less the amount of sales not including the profit on such Sales) aggregates £25,000. then after such proof the Licensee shall be under no further liability whatever to pay to the Licensor a minimum royalty either in respect of the year in which such proof shall be made or any subsequent year.

Payment of Minimum

(2) Any sum due hereunder in excess of the royalty on Bearings actually sold as provided in this clause to make up the minimum annual royalty shall be payable on July first of each year or within Thirty days thereafter for the year to said July first.

Expenditure of Licensee

(3) Without limiting the same to such items the expenditure of the Licensee before referred to shall in any case include the following items, viz:—Expenditure upon material raw wrought or in process, wages, overhead charges, advertising, commercial expenses and every other head of expenditure in connection with making and selling the said Bearings, manufacturing plant, (not including land and [fol. 5370] buildings) patterns, tools, jigs, gauges, fixings and fittings.

How determined in case of dispute

(4) If any difference of opinion shall arise between the parties hereto as to what ought or ought not to be included in the "Expenditure" above referred to in this Article then such difference shall forthwith be referred to and shall be finally and without appeal determined by the President for the time being of the Institute of Chartered Accountants in England or by some independent Chartered Accountant to be nominated by him as an expert and not as an Arbitrator. Within one calendar month after any such difference shall have arisen each party shall deliver to the expert a Statement in writing of its case and the Expert shall forthwith proceed to determine the matter on the footing of such Statements or where one only shall have been put in on the footing of that one which shall have been put in without obtaining from either party without the consent of the other in writing any further explanations or information whether by interviews written communications or otherwise.

(Signed) A. V., V. G., J. D. M., W. R. T., A. L., R. J. B. Jr.

[fol. 5371] Termination of Agreement

(5) Notwithstanding anything to the contrary herein contained the Licensee shall be at liberty to terminate this Agreement at or at any time after the completion of the first year by giving to the Licensor 6 calendar months previous notice in writing. The Licensee shall also be at liberty to terminate this Agreement forthwith without any notice whatever if either of the three Patents specified in the first recital hereof shall at any time hereafter be revoked on any ground whatsoever except the ground that the Licensee has failed to satisfy the reasonable requirements of the public as provided by Section 24 of The Patents & Designs Acts 1907 or the ground that the Licensee has failed to manufacture the said Roller Bearings within the United Kingdom to an adequate extent as provided by Section 27 of the said Act. Provided always that neither of the two last mentioned exceptions shall come into operation until such time as the Licensee shall or ought under the provisions of this Agreement to be in a position to manufacture in the said limits.

(6) If the Licensee shall at any time prior to the completion of the third year prove in the manner provided by Sub-Clause (1) of Article (8) hereof that the total expenditure as defined in Article (8) hereof aggregates £25,000. then the Licensor shall not at any time thereafter whilst the Licensee shall manufacture Roller Bearings under any Patent belonging to the Licensor under the provisions of this Agreement have the right to terminate this Agreement but if such expenditure shall not be so proved prior to the completion of the third year the Licensor shall have the right to call upon the Licensee so to prove it up to and as at the completion of such third year. And if the Licensee [fol. 5372] on being called upon shall fail to prove its total expenditure as aforesaid then the Licensor shall be at liberty to terminate this Agreement at any time during but not later than the end of the fourth year by giving to the Licensee six calendar months previous notice in writing to expire not later than the end of the fourth year. But save as provided in this Article the Licensor shall have no right to terminate this Agreement.

(7) The exercise of this right by the Licensor shall not

deprive it of the right to enforce payment of all royalties due and payable under the terms of this Agreement up to the date of termination.

Article 9

Requirements as to manufacturing

(1) The Licensee agrees to begin the manufacture within the said limits of Timken Roller Bearings under said Patents as soon as the necessary machines, tools, jigs and gauges can be obtained and to furnish and employ all the capital necessary to meet the reasonable requirements of the public for Timken Roller Bearings and will subject to the provisions of Articles 3, 4, and 5 hereof manufacture as quickly as possible such of the different sizes of Bearings shewn by dimension sheet Number A. 790 of Licensor's List a copy of which is set out in the Schedule hereto as will meet the reasonable requirements of the public within the said limits. Subject to the provisions of Article 3 hereof the Licensee agrees to procure or otherwise to furnish itself with the machines, tools, jigs, and gauges, necessary for carrying out their obligations under this Article with all reasonable promptitude.

Salesmen

(2) The Licensee shall employ one or more high class [fol. 5373] traveling salesmen whose duty it will be to solicit the trade generally throughout said limits on behalf of the Licensee for Timken Roller Bearings. Such salesmen shall devote their entire time and energy in placing the Timken Roller Bearings on the market and they shall not be permitted to represent any other line of goods except the Warner Auto Meter.

Advertising

(3) The Licensee will also regularly and adequately advertise the Timken Roller Bearings in two or more standard Automobile Trade Journals. For this purpose the Licensor will furnish to the Licensee such cuts or half-tones of Timken Roller Bearings as are now used by the Licensor

in its own advertisement until such time as the Licensee is able to prepare cuts and half-tones of its own.

Catalogues

(4) The Licensee will also print annually or oftener a Catalogue descriptive of the Timken Roller Bearings and mail same freely to the trade generally in said limits. It is the intent of this Agreement that the Licensee shall aggressively push the business of making and selling said Timken Roller Bearings.

Article 10

Instructions of Licensor to be followed

(1) The Licensee will carefully and faithfully follow all instructions given to it by the Licensor for the manufacture of Timken Roller Bearings particularly those pertaining to the quality of steel used and its analysis the method of case hardening the system of grinding gauging etc. and will not depart from the methods employed by the Licensor and disclosed to the Licensee whilst this Agreement remains in force except under the provisions of Article 13 hereof.

[fol. 5374] Article 11

Licensee sell no other Roller Bearings. (Signed) A. V., V. G., J. D. M., W. R. T., A. L., R. J. B. Jr.

(1) Subject to the provisions of Article 13 hereof the Licensee shall not be permitted to manufacture or sell any anti-friction Bearings except those made under the Patents of the Licensor during the existence of this Contract and except those assembled in other articles manufactured or sold by the Licensee not being the wheels or the hubs of the wheels of vehicles of any kind or in any part of automobiles except accessories for same. And it shall use the word "Timken" exclusively in connection with the Roller Bearings made or sold by it under this Agreement and in connection with the sale of such Bearings. Always provided however that the Licensee shall be entitled to describe itself as sole Licensee within the said limits.

Article 12

May sell remaining stock

(1) If this Agreement shall be terminated under any of the provisions hereof or otherwise howsoever the Licensee and its sub-licensees shall have the privilege of thereafter completing and selling their stocks of Bearings on hand at the termination of the Contract at the prices and upon the terms which would have ruled if the Agreement had not been terminated and subject to the payment of the royalties herein provided for. Such stock of Bearings as the Licensee or its sub-licensees shall not be able to sell within the period of six months after the termination of the Contract the Licensor will take over paying the Licensee or sub-licensee as the case may be therefor the cost of producing the Bearings at the works of the Licensee (overhead charges being taken at 150% on production wages) provided the Licensor finds it feasible to use said stock of [fol. 5375] Bearings in its own business. In case however the Licensor shall not find it feasible to use said stock of Bearings in its own business the Licensor shall not until the Licensee and its sub-licensees shall have disposed of such stock sell Roller Bearings within the said limits at prices lower than those ruling for the disposal of the Licensee's stock.

Article 13

Licensee may change methods when

(1) The Licensee shall have the privilege of submitting to the Licensor any improvements the former may desire to make in the methods of manufacture and in the construction and design of Timken Roller Bearings and upon approval by the Licensor which approval shall not be unreasonably withheld such improvements may be adopted in the manufacture and in the construction and design of Timken Roller Bearings by the License and whatever improvements the Licensee adopts the Licensor shall have the privilege of using the same improvements by paying a reasonable consideration therefor. In the event of the parties failing to agree on such "reasonable consideration" as last mentioned or as to whether such improvements

ought to be approved by the Licensor then the question involved in the disagreement shall be determined under the provisions of the Arbitration Clause herein contained.

Investigation methods

(2) The Licensee shall have the privilege at any time or times during the existence of this Agreement of sending a representative at its own expense to investigate the methods of manufacture of the said Bearings followed by the Licensor at its various factories.

ditto

(3) And the Licensor shall have the privilege at any time or times during the existence of this Agreement of sending [fol. 5376] a representative at its own expense to investigate the methods of manufacture of the said Bearings followed by the Licensee at its various factories.

Article 14

Restrictions as to selling price

(1) The Licensee shall have the privilege of selling Timken Roller Bearings in said limits at any price it may deem advisable. But the deficiency between the lowest price charged for the time being by the Licensor to the trade within the United States and the lowest price charged at the same time by the Licensee to the trade within the said limits shall not exceed the U. S. A. Tariff chargeable on such Bearings from time to time from said limits.

The term "Trade within the United States" shall not include the business between the Licensor and The Timken Detroit Axle Company located at Detroit, Michigan, the same being a subsidiary company of the Licensor.

(2) THE Licensor shall advise the Licensee at the beginning of each yearly season its general trade prices for the United States for the coming season so far as possible.

Article 15

Restrictions as to Licensee

(1) So long as this Agreement is in force then unless authorized so to do by any other Agreement for the time being subsisting between the parties hereto the Licensee will not sell any Roller Bearings outside the said limits or sell them inside the said limits knowing them to be for shipment outside the said limits. But this shall not restrict the Licensee from selling Bearings in said limits for automobiles or other vehicles manufactured within the said [fol. 5377] limits and which may go to countries outside of said limits as parts of and assembled in complete automobiles or other vehicles.

Article 16

Assignable

(1) THE full benefit and advantage of and all obligations of the Licensee under this Agreement may at any time hereafter be assigned by the Licensee with the consent in writing of the Licensor such consent not to be unreasonably withheld.

Article 17

Sub-licenses.

(1) THE Licensee shall be at liberty to grant sub-licenses to vend the said Roller Bearings within the said limits and any Bearings so vended by any such sub-licensees shall for all the purposes of this Agreement be deemed to have been vended by the Licensees.

Article 18

Arbitration Clause

(1) ALL differences and disputes which shall arise between the parties hereto touching this Agreement or anything herein contained or as to the rights duties and liabilities of the parties hereunder or in relation to anything herein contained or as to the meaning or construction of

this Agreement shall be referred to a single Arbitrator under the provisions of the Arbitration Act 1889 or any statutory modification or re-enactment thereof.

[fol. 5378]

Article 19

Marginal Notes

(1) The marginal notes to these presents are for convenience of reference only and shall in no way whatever be construed together with or regarded as forming part of or as in any way affecting the meaning of the text of these presents.

Article 20

Estoppel

(1) Nothing in this Agreement contained shall preclude or estop the Licensee from disputing the validity of any of the Patents within referred to after the determination of this Agreement by notice or otherwise.

Article 21

English Law

(1) In the construction interpretation and performance and observance of these presents the principles of English Law shall prevail and in so far as it may be necessary at any time to obtain a ruling decision verdict or judgment or otherwise of any Court of Law or Equity the proceedings relative thereto shall be conducted in England before an English Tribunal and in accordance with English Law and the Licensor accordingly agrees and declares that it will if and when called upon furnish an address for service of process in England and that in default of its so doing the Licensee shall be at liberty to apply to any Tribunal of competent Authority to fix an address for such purpose.

In witness whereof The Timken Roller Bearing Company [fol. 5379] by the authority of its Board of Directors has caused these presents to be executed in duplicate by its Secretary and its corporate Seal to be hereto affixed on this 16th day of June, A. D. 1909. And the Electric & Ordnance Accessories Company Limited the other party hereto under the authority of its Board of Directors has

also caused its Common Seal to be affixed hereto in duplicate on this 16th day of July, A. D. 1909.

The Schedule before referred to.

[fol. 5380] The Timken Roller Bearing Co., (signed) By W. R. Timken, Secretary.

Executed by The Timken Roller Bearing Company in the presence of (signed) Austin Lynch, Raymond J. Bour, Jr.

The Common Seal of the Electric & Ordnance Accessories Company Limited was affixed hereto in the presence of (signed) —— ——, —— ——, Directors; (signed) J. D. Morrison, Secretary.

It is hereby recited that after the execution of the foregoing Agreement by The Timken Roller Bearing Company, and before it was sealed by The Electric & Ordnance Accessories Company, Limited, certain material changes and alterations therein were made as appear on pages 7, 8, 10,

11, 12 and 15 thereof, each and all of which changes and alterations were then identified by the initial of two of the Directors and of the Secretary of the party of the second part. Thereafter said instrument was duly sealed by the party of the second part.

[fol. 5381] The party of the first part by authority of its Board of Directors has caused the above recited changes and alterations to be initialed by the initials of its Secretary and of the two witnesses to its signature and has caused the foregoing Agreement, so altered as aforesaid, to be executed in duplicate by its Secretary and its corporate seal to be hereto affixed on this 4th day of August A. D. 1909. And The Electric & Ordnance Accessories Company, Limited, the other party to the foregoing instrument, under the authority of its Board of Directors, for the purpose of executing the foregoing Agreement, so altered as aforesaid, has also caused its common seal to be affixed hereto in duplicate on this — day of August A. D. 1909.

(Signed) The Timken Roller Bearing Co.; By W. R. Timken, Secy.

Executed by The Timken Roller Bearing Company in the presence of (signed) Austin Lynch, Raymond J. Bour, Jr.

The Common Seal of The Electric & Ordnance Accessories Company Limited was affixed hereto in the presence of (signed) —— ——, —— ——, Directors; (signed) J. D. Morrison, Secretary.

[fol. 5382] Agreement

Between The Timken Roller Bearing Company and The Electric & Ordnance Accessories Company Limited

Lynch & Day, Attorneys at Law, Canton, Ohio

[fol. 5383] Defendant's Exhibit 190

Parties—Recitals

An Agreement made the sixteenth day of June One thousand nine hundred and nine Between The Timken Roller Bearing Company a Corporation organized under the Laws

of the State of Ohio and having its offices and principal place of doing business in the City of Canton Ohio in the United States of America (hereinafter called "the Licensor") of the one part and The Electric & Ordnance Accessories Company Limited a Company organized under the Laws of Great Britain and having its offices in the Borough of Aston England (hereinafter called "the Licensee") of the other part Whereas by an Agreement (hereinafter called "the Principal Agreement") already prepared intended to bear even date herewith and made between the Licensor of the one part and the Licensee of the other part the Licensor (amongst other things) grants to the Licensee as from the 1st day of July One thousand nine hundred and nine the full and exclusive right license and authority to make use exercise and vend in the United Kingdom and the Isle of Man Roller Bearings of all kinds made under and in accordance with the specifications of the British Letters Patents therein more particularly referred to And Whereas it has been arranged between the parties that simultaneously with the completion of the said recited Agreement this Agreement also shall be completed Now Therefore it is Agreed as follows:

German Patent

1. This Agreement shall come into force on the 1st day of July 1909.

2. The Licensor will at its own expense forthwith take all such steps and do all such acts deeds and things as may be necessary to obtain the grant to the Licensor of Letters Patent or of rights equivalent thereto in Germany in pursuance of Application No. A 15,482 being an Application for a Patent in relation to Roller Bearings or improvements therein including the whole of the subject matter of the [fol. 5384] English Letters Patents No. 14656 of 1898, No. 19634 of 1907 and No. 7925 of 1908. And so far as may be necessary in that behalf the Licensor will at its own expense procure the assistance and concurrence of all such other parties including in any case the original Inventors as may be necessary to complete the grant of the said Letters Patent or other grant equivalent thereto as aforesaid.

French, Russian and German Patents

3. The Licensor shall as to the French Patents No. 279,-295, 383,963 and 388,242 and also as to the Russian Patent No. 6224 forthwith and as to the said German Patent so soon as the Letters Patent or other grant equivalent thereto shall have been obtained as mentioned in Clause 1. hereof grant to the Licensee (a) the full and exclusive right license and authority to make use exercise and vend in the territories covered by the said Patents respectively by Roller Bearings of all kinds made under or in accordance with the specifications of the said Letters Patents during the full terms of the said Letters Patents and any prolonged or extended terms thereof and (b) so long as this Agreement shall remain in force the full and exclusive right license and authority until all the said Patents shall have been granted or after all or any of the said Patents shall have ceased to exist (but only so far as the Licensor can then lawfully do so) to make use exercise and vend articles embodying the subject matter of such Patents or Patent and Roller Bearings of every kind whatsoever in that part of the said territory where the Patents or Patent shall not have been granted or shall have ceased to exist.

All necessary fomalities to be observed by Licensor to complete Licenses

4. The Licensor shall at its own expense do or concur in doing all such acts deeds and things and procure all other necessary parties to do or concur in doing all such acts deeds and things as may be necessary according to the Laws of France Russia and Germany for fully and effectually granting such full and exclusive License or Licenses as mentioned in the last clause hereof and the [fol. 5385] Licensee will concur therein so far as may be necessary. And pending the completion of any License or Licenses in this Agreement provided for the Licensor doth hereby declare that it will hold the Letters Patents under which the same are respectively to be granted including the German Patent (as and when the same shall be granted) as Trustee for the Licensee according to the true intent and meaning of this Agreement.

Licenses Under Further Patents Obtained Where No Patents

5. If and whenever the Licensor or any person on behalf of the Licensor shall obtain Letters Patent or grants equivalent thereto in any of the European Countries (other than France Russia and Germany) or in any of the British Colonies Protectorates or Dependencies except Canada for Roller Bearings or any improvements therein then the Licensor will at its own expense grant and procure the concurrence of all necessary parties in granting to the Licensee the full and exclusive right license and authority to make use exercise and vend in the country covered by each such Patent the subject matter thereof for the term or terms and in like manner as is mentioned in Clause 3 hereof and otherwise subject to and upon the terms of this Agreement. So far as applicable Clauses 3 and 4 hereof shall apply to the Patents or other grants referred to in this Clause and until any such Letters Patents or grants as aforesaid shall be made then so far as the Licensor lawfully can do so in the absence of such Patents or grants the Licensor doth hereby grant unto the Licensee the full and exclusive right license and authority to make use exercise and vend articles embodying the subject matter of the three British Patents before referred to and Roller Bearings of every kind whatsoever (whether covered by Patents or not) throughout Europe (except the United Kingdom France and Russia and Except Germany after the Patent or Grant shall be issued or made there) and throughout the whole of the British Colonies Protectorates and Dependencies except Canada.

Restrictions on Licensor

6. So long as this Agreement is in force the Licensor [fol. 5386] will not directly or indirectly make use or sell Roller Bearings of any kind to others in any of the territory covered by the provisions of this Agreement (hereinafter called "the said territory") nor license others to make use or sell Roller Bearings in such territory whether under any of the Patents already belonging to the Licensor or any which may hereafter belong to them or otherwise nor will the Licensor directly or indirectly sell Roller Bearings outside the said territory knowing them to be for

shipment into the said territory. But this shall not at any time restrict the Licensor from making selling or licensing others to make or sell Roller Bearings for automobiles or other vehicles manufactured outside the said territory and which may go into the said territory as parts of and assembled in complete automobiles or other vehicles.

Steel Cages

7. The Licensor will furnish to the Licensee at the cost charged to the Licensor free on board the Cars at Canton Ohio or at the Factory where made the steel stamped cages needed by the Licensee being part of the Roller Bearings as now manufactured by the Licensor until such time as the Licensee will need the same in quantity for sale in the said territory but not in any case longer than twelve months from the date of this Agreement. And after the expiration of such twelve months the Licensee will be expected to purchase cages direct from the Vendor manufacturing the same for the Licensor or have them manufactured by or for itself. In the event of the Vendor of the said cages to the Licensor putting up the price for supplying the same to the Licensee beyond the most favourable price at which he shall at the same time be supplying them to the Licensor then until the Licensee shall be able to make other arrangements for obtaining the cages elsewhere the Licensor shall supply the same to the Licensee at the most favourable prices charged to the Licensor by the Vendor.

Finished Bearings to be Supplied by Licensor for a Time

8. Subject to the limitations hereinafter provided the [fol. 5387] Licensor will furnish the Licensee free on board the Cars at Canton Ohio Roller Bearings for resale in the said territory (not exceeding 5,000 Bearings in all) at prices equal to the cost of producing the Bearings as shown by the Licensor's books including therein a proper proportion for overhead charges not exceeding One Hundred and fifty per cent (150%) on production wages and in addition thereto fifty percent (50%) of the total cost. This obligation of the Licensor however will only extend to enabling the Licensee to satisfy the reasonable requirements of the public in the said territory until such time not later than two years from the date of this Contract as the Licensee

or any sub-licenses of the Licensee shall be able to manufacture Bearings in sufficient quantities to meet the reasonable requirements of the public as herein provided. The Licensor will not however charge the Licensee with the royalty hereinafter provided for on Bearings furnished by it to the Licensee hereunder.

Renewal Fees

9. The Licensor will pay all renewal fees and do all such acts and things as may be required by law to maintain and keep on foot all Letters Patents belonging to the Licensor and in any way relating to Roller Bearings which may at any time whilst this Agreement shall remain in force be subsisting in any country comprised within the before mentioned territory.

Amendment of Specification

10. The Licensor shall not amend the specification or other document equivalent thereto of any of the Letters Patents referred to in the last preceding clause hereof or do any other act or thing equivalent thereto without the consent in writing of the Licensee but such consent shall not be unreasonably withheld.

Proceedings for Revocation

11. The Licensor shall defend at its own cost every action or proceeding instituted for the purpose of revoking any of the Letters Patents last above referred to or other equivalent grants which may be subsisting at any time in the said territory whilst this Agreement shall remain in [fol. 5388] force whether the same are now in existence or are hereafter taken out.

Licensee's Obligation on Revocation in Certain Cases

12. If the Licensor shall defend any action or proceeding instituted for the purpose of revoking any of the Letters Patents or other grants as last before mentioned and any such Patent or grant shall be revoked solely on some ground which would not have been available if the Licensee had duly performed its obligations under this Agreement then and in any such case the Licensor shall in addition to any other rights which it may have against the Licensee be entitled to recover from the Licensee all costs charges and

expenses which it may have reasonably incurred in such defence.

Manufacturing

13. Within twelve months from the date hereof and so long thereafter as this Agreement shall remain in force the Licensee by itself or its sub-licensees will manufacture Roller Bearings in each Country in the said territory in which there shall exist Patents belonging to the Licensor covering Roller Bearings or improvements therein to such extent only as may be necessary according to law to keep the said Patents in existence. But except to that extent the Licensee shall not be bound to manufacture at all outside the United Kingdom Provided Always that it shall be competent for the Licensee at any time within the said period of twelve months to mail or cable to the Licensor a notice of its intention not to manufacture or to discontinue manufacturing in any particular country and after such notion shall have been mailed or cabled as the case may be the Licensee shall be under no further obligation to manufacture in that country. But nevertheless all the other provisions of this Agreement shall continue to apply to that country until such time as the Licensor or any of its other Licensees or their sub-licensees shall manufacture in such country and thereafter the terms of this Agreement shall cease in all respects to apply to that country and the licensee [fol. 5389] shall cease to be entitled to make use exercise or vend Roller Bearings in that country under the Patents of the Licensor subsisting in that country. Reasonable notice in writing of intention to manufacture shall in any such case be given by the Licensor to the Licensee and the Licensee shall be in any case entitled to use and sell in the country in question such amount of stock as the Licensee shall have got ready for sale in that country.

Notice of Infringement

14. The Licensee shall give notice promptly to the Licensor of any infringement or threatened infringement of the said Patents of grants or any of them within the said territory which shall at any time and from time to time come to its knowledge.

Infringement—Licensor's Liability

15. The Licensor shall protect the said Letters Patents or grants herein referred to whether now in existence or hereafter taken out against infringement if notified by the Licensee that they are being infringed upon so far only as it deems fit the same being left entirely to the Licensor's discretion Provided nevertheless that in case of any infringement by reason whereof the Licensee or any sub-licensee of the Licensee shall suffer damage (not being merely nominal damage) and of which the Licensee has given the Licensor written notice with a request that the latter prosecute such infringer then if the Licensor shall not take any legal proceedings in regard to such infringement or shall unreasonably delay taking such proceedings or if the Licensor having taken shall unreasonably delay in prosecuting such proceedings to a conclusion then and in any such case all royalties which would have otherwise been payable hereunder during such period as the Licensor shall take no proceedings or shall unreasonably delay taking or prosecuting proceedings as aforesaid shall cease to be payable either during such period or at any time thereafter. In case legal proceedings are brought by the Licensor upon request of the Licensee to prevent infringement of the [fol. 5390] Patents above mentioned or referred to and any damages are recovered therein such damages shall be applied on the costs and expenses of such proceedings and the remainder of said expenses shall be borne two thirds by the Licensor and one third by the Licensee.

16. If the damages recovered in any such proceedings exceed the expenses of prosecuting said proceedings the surplus damages recovered shall be payable two thirds to the Licensor and one third to the Licensee.

Indemnity of Licensee

17. Subject to the provisions contained in Clause 19 hereof the Licensor shall keep indemnified the Licensee and its sub-licensees against all actions proceedings claims and demands or prosecutions whatsoever which may be brought commenced or prosecuted against the Licensee or its sub-licensees and against all the reasonable costs charges and expenses payable by the Licensee or its sub-licensees in respect of all such notions proceedings claims and de-

mands or prosecutions or any such as may be threatened within the said territory and against all loss or damage whatsoever which the Licensee or its sub-licensees may sustain by reason of anything made used exercised or vended by the Licensee or its sub-licensees under any Patent of the Licensor or under the terms of this Agreement or any sub-license granted thereunder being alleged or held to infringe the Patent rights within the said territory of any other person or persons. And in the event of any action being brought or threatened against the Licensee or any of its sub-licensees in respect of any such matter as aforesaid the Licensee will immediately give notice thereof to the Licensor and failing so to do the Licensor shall not be liable to the Licensee or its sub-licensees for any such loss or damages above referred to.

18. The Licensor shall be permitted to come in and join the Licensee or sub-licensees in conducting the defence against any infringement proceeding brought by others against the Licensee or its sub-licensees.

[fol. 5391] 19. Provided Always that if and whenever the sum or sums of money which have been paid or which shall be payable by the Licensor to the Licensee under Clause 17 hereof or under the corresponding provisions of the Principal Agreement shall aggregate to the total amount of royalties then already paid or payable by the Licensee to the Licensor under this Agreement and the Principal Agreement the Licensor shall only thereafter be liable to pay to the Licensee one half of all further sums of money which but for this Clause and for the corresponding provision in the Principal Agreement would have been wholly payable by the Licensor to the Licensee under Clause 17 hereof and the corresponding provision of the Principal Agreement.

Royalties

20. So long as any of the Patents under which for the time being the Licensee shall sell Roller Bearings upon the terms of this Agreement shall remain in full force the Licensee shall subject to the provisions of Clause 15 hereof pay to the Licensor a royalty equal to Fifteen per cent of the net invoice prices after deduction of all discounts and Tariffs (where paid by the Licensee) of all goods manufactured and sold by the Licensee under this Agreement.

21. If all the said Patents shall cease to remain in full force by reason of some Court or other competent authority revoking or declaring the same to be invalid and if the decision of the Court or other competent authority making such revocation or declaration shall be reversed on appeal then the royalties which would have been payable but for the adverse decision shall forthwith again become payable.

Payment of Royalties

22. The said royalties shall be paid on the first days or within thirty days thereof of January, April, July and October of each year for the Bearings made and sold during the quarter or prior to the first day of each said four months respectively the first of such payments to be made on the 1st day of October 1909.

[fol. 5392] Remittances and Statements

23. The remittances of royalty shall be accompanied by statements from the Licensee shewing in detail:

(a) The number of finished Bearings made during the preceding quarter year (b) The number of Bearings sold during the preceding quarter year and (c) At what prices to whom and when such Bearings were sold after deducting all discounts allowed.

24. The statement to be furnished in July of each year shall also be accompanied by a certified Statement prepared by the Auditor of the Licensee's Company for the time being based upon an actual examination of the Books and records of the Licensee giving the same data as above required in respect of sales made during the year prior to the said month of July. The said Statement shall if required by the Licensor be further verified by Statutory Declaration of the Secretary of the Licensee's Company for the time being.

25. If the Licensee so desires it may once a year at its own expense employ a Chartered Accountant who shall have the privilege of examining the books, records and plant of the Licensee with a view to determine how many bearings the Licensee shall have made and sold under this Agreement up to the time of such examination and to whom and when and for what prices.

No Minimum Royalties

26. No minimum Royalties shall be payable in respect of the Bearings sold under this Agreement but all Royalties paid on Bearings sold under this Agreement shall go to make up the minimum royalties provided for in the Principal Agreement.

Licensee to Put Goods on Market

27. The Licensee shall employ all such means as shall be reasonably necessary for putting the said Roller Bearings upon the market within the said territory.

Termination

28. Notwithstanding anything to the contrary herein contained the Licensee shall be at liberty to terminate this Agreement at or at any time after the completion of the first year by giving to the Licensor six calendar months previous notice in writing. The Licensee shall also be at [fol. 5393] liberty to terminate this Agreement forthwith if any Patent covering any part of the said territory shall at any time hereafter be revoked on any ground whatsoever other than the ground of non-manufacture within the country covered by the Patent whilst the Licensee shall be bound to manufacture in order to keep the same Patent in existence as herein provided.

Ditto

29. If the Licensee shall at any time prior to the completion of the third year prove in the manner provided by the Principal Agreement that the total expenditure as defined in the Principal Agreement aggregates £25,000. then the Licensor shall not at any time thereafter whilst the Licensee shall make use exercise or vend Roller Bearings in the said territory under the provisions of this Agreement have the right to terminate this Agreement. But if such expenditure shall not be so proved prior to the completion of the third year the Licensor shall have the right to call upon the Licensee so to prove it up to and as at the completion of such third year. And if the Licensee on being called upon shall fail to prove the total expenditure calculated as aforesaid then the Licensor shall be at liberty to terminate this Agreement at any time during but not later than the end of

the fourth year by giving to the Licensee six calender months previous notice in writing to expire not later than the end of the fourth year. But save as provided in this Clause the Licensor shall have no right to terminate this Agreement.

30. The exercise of this right by the Licensor shall not deprive it of the right to enforce payment of all royalties due and payable under the terms of this Agreement up to the date of termination.

Licensee to Follow Instructions

31. The Licensee will carefully and faithfully follow all instructions given to it by the Licensor for the manufacture of Timken Roller Bearings particularly those pertaining to the quality of steel used and its analysis the method of case hardening the system of grinding gauging, etc. and [fol. 5394] will not depart from the methods employed by the Licensor and disclosed to the Licensee while this Agreement remains in force except under the provisions of Clause 34 hereof.

Restrictions on Licensee. (Signed) A. V., V. G., J. D. M., W. R. T., A. L., R. J. B. Jr.

32. The Licensee shall not be permitted to manufacture or sell any anti-friction Bearings except those made under the Patents of the Licensor or where no such Patents exist except under the provisions of this Agreement and except those assembled in other articles manufactured or sold by the Licensee not being wheels or hubs of wheels of vehicles of any kind or in any part of automobiles except accessories for same during the existence of this Agreement. And it shall use the word "Timken" exclusively in connection with the Roller Bearings made or sold by it under this Agreement and in connection with the sale of such Bearings. Always provided however that the Licensee shall be entitled to describe itself as sole licensee within the said territory.

Sale of Stock on Termination

33. If this Agreement shall be terminated under any of the provisions hereof or otherwise howsoever the Licensee and any sub-licensee of the Licensee shall have the privilege of thereafter completing and selling the stock of bearings

on hand at the termination of the Agreement at the prices and upon the terms which would have ruled if the Agreement had not been terminated and subject to the payment of the royalties herein provided for. Such stock of Bearings as the Licensee or any of its sub-licensees shall not be able to sell within the period of six months after the termination of the Contract the Licensor will take over paying the Licensee or sub-licensee as the case may be therefor the cost of producing the Bearings at the works of the Licensee (overhead charges being taken at 150% on production wages) provided the Licensor finds it feasible to use said stock of Bearings in its own business. In case however the Licensor shall not find it feasible to use said stock of Bearings in its own business the Licensor shall not until [fol. 5395] the Licensee and all of its sub-licensees shall have disposed of such stock sell Roller Bearings within the said territory at prices lower than those ruling for the disposal of the Licensee's stock.

Licensee's improvements

34. The Licensee shall have the privilege of submitting to the Licensor any improvements the former may desire to make in the methods of manufacture and in the construction and design of Timken Roller Bearings and upon Approval by the Licensor which approval shall not be unreasonably withheld such improvements may be adopted in the methods of manufacture and in the construction and design of Timken Roller Bearings by the Licensee and whatever improvements the Licensee adopts the Licensor shall have the privilege of using the same improvements by paying a reasonable consideration therefor. In the event of the parties failing to agree on such "reasonable consideration" as last mentioned or as to whether such improvements ought to be approved by the Licensor then the question involved in the disagreement shall be determined under the provisions of the Arbitration Clause herein contained.

Investigation of Licensor's methods

35. The Licensee shall have the privilege at any time or times during the existence of this Agreement of sending a representative at its own expense to investigate the methods of manufacture of the said Bearings followed by the Licensor at its various factories.

Investigation of Licensee's methods

36. And the Licensor shall have the privilege at any time or times during the existence of this Agreement of sending a representative at its own expense to investigate the methods of manufacture of the said Bearings followed by the Licensee at its various factories.

Prices on sales

37. The Licensee shall have the privilege of selling Timken Roller Bearings in all parts of the said territory at any price it may deem advisable But the deficiency between the lowest price charged for the time being by the Licensor to the trade within the United States and the lowest price [fol. 5396] charged at the same time by the Licensee in any part of the said territory shall not be greater than the U. S. A. tariff on Bearings from that part plus in cases where Bearings are sent from the United Kingdom to any part of said territory and the customer therein pays the duty the duty so paid. The term "trade within the United States" shall not include the business between the Licensor and The Timken-Detroit Axle Company located at Detroit Michigan the same being a subsidiary of the Licensor.

Licensor to advise prices

38. The Licensor shall advise the Licensee at the beginning of each yearly season its trade prices for the United States for the coming season so far as possible.

Restrictions on Licensee

39. So long as this Agreement is in force then unless authorised so to do by any other Agreement for the time being subsisting between the parties hereto the Licensee will not sell any Roller Bearings outside the said territory or sell them inside the said territory knowing them to be for shipment outside the said territory. But this shall not restrict the Licensee from selling Bearings in said territory for automobiles or other vehicles manufactured within the said territory and which may go to countries outside of said territory as parts of and assembled in complete automobiles or other vehicles.

Agreement assignable

40. The full benefit and advantage of and all obligations of the Licensee under this Agreement may at any time hereafter be assigned by the Licensee with the consent in writing of the Licensor such consent not to be unreasonably withheld.

Sub-licenses

41. The Licensee shall be at liberty to grant sub-licenses to make use exercise and vend the said Roller Bearings within the said territory or any part of parts thereof and any Bearings so made used exercised or vended by any sub-licensee shall for all the purposes of this Agreement be deemed to have been vended by the Licensee.

[fol. 5397] Arbitration

42. All differences questions and disputes which shall arise between the parties hereto touching these presents or anything herein contained or any matter in any way connected with these presents or as to the rights duties and liabilities of the parties hereunder or as to the meaning or construction of these presents or any Clause thereof shall be referred to a single arbitrator under the provisions of the Arbitration Act 1889 or any Statutory modification or re-enactment thereof.

Marginal notes

43. The marginal notes to these presents are for convenience of reference only and shall in no way whatever be construed together with or regarded as forming part of or as in any way affecting the meaning of the text of these presents.

Estoppel

44. Nothing in this Agreement contained shall preclude or estop the Licensee from disputing the validity of any of the Patents herein referred to after the determination of this Agreement by notice or otherwise.

English Law & Jurisdiction

45. In the construction interpretation and performance and observance of these presents the principles of English Law shall prevail and in so far as it may be necessary at any time to obtain a ruling decision verdict of judgment or

otherwise of any Court of Law or Equity the proceedings relative thereto shall be conducted in England before an English Tribunal and in accordance with English Law and the Licensor accordingly agrees and declares that it will if and when called upon furnish an address for service of process in England and that in default of its so doing the Licensee shall be at liberty to apply to any Tribunal of competent authority to fix an address for such purpose.

In Witness whereof The Timken Roller Bearing Company by the authority of its Board of Directors has caused these presents to be executed in duplicate by its Secretary and its Corporate Seal to be hereto affixed on the 16th day of June A. D. One thousand nine hundred and nine and The Electric & Ordnance Accessories Company Limited the other party hereto under the authority of its Board of Directors has also caused its Common Seal to be affixed in duplicate on this 16th day of July A. D. One thousand nine hundred and nine.

Executed by The Timken Roller Bearing Company in the Presence of (signed) Austin Lynch, Raymond J. Bour, Jr.

The Common Seal of The Electric & Ordnance Accessories Company Limited was affixed hereto in the presence of (signed) ——— ———, ——— ———, Directors; (signed) J. D. Morrison, Secretary.

It is hereby recited that after the execution of the foregoing Agreement by The Timken Roller Bearing Company, and before it was sealed by The Electric & Ordnance Accessories Company, Limited, certain material changes and alterations therein were made as appear on page 12 thereof, each and all of which changes and alterations were then identified by the initials of two of the Directors and of the Secretary of the party of the second part. Thereafter said instrument was duly sealed by the party of the second part.

The party of the first part by authority of its Board of Directors has caused the above recited changes and alterations to be initialed by the initials of its Secretary and of

the two witnesses to its signature and has caused the foregoing Agreement, so altered as aforesaid, to be executed in duplicate by its Secretary and its corporate seal to be hereto affixed on this 4th day of August A. D. 1909.

And The Electric & Ordnance Accessories Company, Limited, the other party to the foregoing instrument, under the authority of its Board of Directors, for the purpose of executing the foregoing Agreement, so altered as aforesaid, has also caused its common seal to be affixed hereto in duplicate on this — day of August A. D. 1909.

[fol. 5399] Agreement

Relating to Foreign Patents

The Timken Roller Bearing Company and The Electric & Ordnance Accessories Company, Limited

Lynch & Day, Attorneys at Law, Canton, Ohio

[fol. 5400] Defendant's Exhibit 191

Dated 6th April, 1920.

The Timken Roller Bearing Company and Wolseley Motors Limited

Agreement

Supplemental to Agreement, Dated 16th June 1909 with regard to Patent Rights for Great Britain.

[fol. 5401] An Agreement made this 6th day of April One thousand nine hundred and twenty Between The Timken Roller Bearing Company a Corporation organized under

the laws of the State of Ohio in the United States of America and having its office and principal place of business in the City of Canton in the State of Ohio aforesaid (hereinafter called "the Licensor Company") of the one part and Wolseley Motors Limited a Joint Stock Company incorporated under the laws of the United Kingdom of Great Britain and Ireland and having its registered office at Adderley Park Birmingham in the Kingdom of England (hereinafter called "the Licensee Company") of the other part Supplemental to an Agreement (hereinafter referred to as "the Principal Agreement") dated the Sixteenth day of June and the Sixteenth day of July One thousand nine hundred and nine between the Licensor Company of the one part and the Electric and Ordnance Accessories Company Limited of the other part being a license for the manufacture and sale of Timken Roller Bearings in the United Kingdom of Great Britain and Ireland and the Isle of Man Whereas the benefit of the Electric and Ordnance Accessories Company Limited under the Principal Agreement is now vested in the Licensee Company And Whereas the parties hereto are desirous of modifying the terms of the Principal Agreement as more particularly hereinafter appears Now it is Hereby Agreed as follows:

1. The Principal Agreement shall be modified so far as necessary in order to give effect to the following provisions of this Agreement.

2. For purposes of this Agreement "the Licensees' area" means and includes the United Kingdom of Great Britain and Ireland and the Isle of Man and "the Licensor's area" means and includes the whole of the world outside the Licensee's area and "Timken Roller Bearings" means and includes Roller Bearings of the kind from time to time manufactured by the Licensor Company and commonly known as Timken Bearings.

3. The Licensor Company shall be entitled to make and to license others to make Timken Roller Bearings in the Licensor's area and to sell and to License others to sell Timken Roller Bearings made in the Licensors' area to [fol. 5402] manufacturers in the Licensor's area for use in their respective products notwithstanding that such Roller Bearings may be intended for shipment into the Licensee's area and the manufacturers hereinbefore mentioned other than the Licensor Company shall be entitled to import any

such Roller Bearings into the Licensees' territory for use in their respective products.

4. The Licensee Company shall be entitled to make and to license others to make Timken Roller Bearings in the Licensee's area and to sell and to license others to sell Timken Roller Bearings made in the Licensees' area to manufacturers in the Licensees' area for use in their respective products notwithstanding that such Roller Bearings may be intended for shipment into the Licensor's area and the manufacturers hereinbefore mentioned other than the Licensee Company shall be entitled to import any such Roller Bearings into the Licensor's territory for use in the respective products.

5. The Licensor Company shall supply to the Licensee Company Timken Roller Bearings made by the Licensor Company in the Licensor's area and delivered f. o. b. Canton or Columbus Ohio of such kinds and sizes for the time being manufactured by the Licensor Company and in such quantities as the licensee Company shall order within a period of four months after receiving each order at prices which shall not exceed by more than ten per centum the respective lowest prices (after allowing for all rebates allowances and discounts except any discount for cast not exceeding five per centum) at which the Licensor Company is for the time being supplying Roller Bearings of the same kind and size to any of its customers in the Licensors' area except in the case of front wheel bearing sets supplied to the Ford Motor Car Company of Detroit The Licensor Company shall supply to the Licensee Company Ford front wheel bearing sets made by the Licensor Company and consisting of four bearings with two dust washers and felts at the price of three dollars and seventy-five cents delivered f. o. b. Canton or Columbus Ohio within a period of four months after receiving each order. And the Licensee Company shall not sell or authorize others to sell in the Licensees' area Ford Replacements Sets for use in Ford Cars at a less price than [fol. 5403] the equivalent of four dollars and eighty-six cents plus freight insurance and charges to the Licensees' area per set of four bearings with two dust washers and felts. The Licensor Company is at liberty to increase or reduce the said price of three dollars and seventy-five cents in accordance with a rise or fall in its manufacturing costs including labour material and overhead charges.

6. The Licensee Company shall in the year ending on the Thirty first day of December One thousand nine hundred and twenty-one manufacture and put on the market a minimum quantity of Four hundred thousand Timken Roller Bearings and in each subsequent year during the continuance of the Principal Agreement a minimum quantity of Five hundred thousand Timken Roller Bearings.

7. Neither of the parties hereto shall be liable for any failure to perform any of the obligations contained in this Agreement if such failure shall be directly or indirectly attributable to fire strikes lock-outs labour difficulties or other cause beyond the control of the party under such obligation interfering with or delaying the performance of such obligation and in particular the Licensee Company shall not be bound to manufacture and put on the market the minimum quantities hereinbefore mentioned in the event of a change not now within the contemplation of the parties which shall radically restrict the use of Roller Bearings in motor cars provided that the Licensee Company manufactures and puts on the market Timken Roller Bearings in quantities sufficient to satisfy the reasonable requirements of the public in the Licensees' area as defined by Section 24 of the Patents and Designs Act 1907.

8. The Licensee Company shall from time to time report in writing to the Licensor Company as to the production and sale of Timken Roller Bearings in the Licensees' area and shall from time to time furnish to the Licensor Company all such further information as the Licensor Company shall require so far as it lies within the power of the Licensee Company.

9. The parties hereto place on record their desire and intention without accepting any legal obligation in that behalf to develope the sale of Timken Roller Bearings in all territories to the advantage of both parties and to procure that all Timken Roller Bearings made in the territory of one of the parties hereto and sold in the territory of the [fol. 5404] other party hereto shall not be sold at prices which shall be unreasonable and unfair to the party in whose territory the Roller Bearings are sold.

10. If the Licensee Company shall go into liquidation either voluntary or compulsory except for the purpose of reconstruction or shall fail to put on the market Timken Roller Bearings in compliance with the provisions of

Clauses 5 and 6 of this Agreement or shall after the expiration of two years from this date fail to put on the market Timken Roller Bearings in quantities sufficient to satisfy the reasonable requirements of the Public in the Licensees' area as defined by Section 24 of the Patents and Designs Act 1907 then and in such case the Licensor Company may by notice in writing to the Licensee Company rescind the Principal Agreement and this agreement and if the Principal Agreement shall be rescinded the Licensee Company shall abandon the use of the name "Timken" as part of its name (if so used) and in all oth r ways and shall execute and do all such acts and deeds as may be necessary in order to secure to the Licensor Company the exclusive use of such name.

11. The provisions of the Principal Agreement shall remain in full force except so far as the same are modified by this Agreement.

12. Each of the parties hereto hereby releases the other of them from all claims in respect of anything done or omitted to be done previous to the date hereof contrary to the provisions of the Principal Agreement.

In Witness whereof the Licensor Company have signed this Agreement by (signed) Heman Ely as Agent for them and on their behalf and Wolseley Motors Limited have hereto caused their Common Seal to be affixed the day and year first above written.

(Signed) Heman Ely.

Signed by the said (signed) Heman Ely, in the presence of (signed) R. Plumridge, 21 Leadenhall Street, EC. Clerk.

[fol. 5406] DEFENDANT'S EXHIBIT 192

Dated: 6th April, 1920

The Timken Roller Bearing Company and Wolseley Motors Limited

Agreement with regard to foreign patents

[fol. 5407] An agreement made this 6th day of April One thousand nine hundred and twenty between The Timken Roller Bearing Company a Corporation organized under the laws of the State of Ohio in the United States of America and having its office and principal place of business in the City of Canton in the State of Ohio aforesaid (hereinafter called "the Licensor Company") of the one part and Wolseley Motors Limited a Joint Stock Company incorporated under the laws of the United Kingdom of Great Britain and Ireland and having its registered office at Adderley Park Birmingham in the Kingdom of England (hereinafter called "the Licensee Company") of the other part Supplemental to an Agreement (hereinafter referred to as "the Principal Agreement") made the Sixteenth day of June One thousand nine hundred and nine between the Licensor Company of the one part and the Electric & Ordnance Accessories Company Limited of the other part being a license for the manufacture and sale of Timken Roller Bearings in the Continent of Europe and the British Colonies except as therein more particularly described Whereas the benefit of the Electric & Ordnance Accessories Company Limited under the Principal Agreement is now vested in the Licensee Company And Whereas the parties hereto are desirous of modifying the terms of the Principal Agreement as more particularly hereinafter appears Now It Is Hereby Agreed as follows:

1. The Principal Agreement shall be modified so far as necessary in order to give effect to the following provisions of this Agreement.

2. For the purposes of this Agreement "the Licensees' areas" means and includes the territory as defined by the Principal Agreement and "the Licensors' area" means and includes the whole of the world outside the Licensees' area except the United Kingdom of Great Britain and Ireland and the Isle of Man and "Timken Roller Bearings" means and includes Roller Bearings of the kind from time to time

manufactured by the Licensor Company and commonly known as Timken Bearings.

3. The Licensor Company shall be entitled to make and to license others to make Timken Roller Bearings in the [fol. 5408] Licensors' area and to sell and to license others to sell Timken Roller Bearings made in the Licensors' area to manufacturers in the Licensor's area for use in their respective products notwithstanding that such Roller Bearings may be intended for shipment into the Licensees' area and the manufacturers hereinbefore mentioned other than the Licensor Company shall be entitled to import any such Roller Bearings into the Licensees' territory for use in their respective products.

4. The Licensee Company shall be entitled to make and to license others to make Timken Roller Bearings in the Licensees' area and to sell and to license others to sell Timken Roller Bearings made in the Licensees' area to manufacturers in the Licensees' area for use in their respective products notwithstanding that such Roller Bearings may be intended for shipment into the Licensors' area and the manufacturers hereinbefore mentioned other than the Licensee Company shall be entitled to import any such Roller Bearings into the Licensors' territory for use in the respective products.

5. The Licensor Company shall supply to the Licensee Company Timken Roller Bearings made by the Licensor Company in the Licensors' area and delivered f.o.b. Canton or Columbus Ohio of such kinds and sizes for the time being manufactured by the Licensor Company and in such quantities as the Licensee Company shall order within a period of four months after receiving each order at prices which shall not exceed by more than Ten per centum the respective lowest prices (after allowing for all rebates allowances and discounts except any discount for cash not exceeding Five per centum) at which the Licensor Company is for the time being supplying Roller Bearings of the same kind and size to any of its customers in the Licensors' area except in the case of front wheel bearing sets supplied to the Ford Motor Car Company of Detroit The Licensor Company shall supply to the Licensee Company Ford front wheel bearing sets made by the Licensor Company and consisting of four bearings with two dust washers and felts at the price of Three Dollars and Seventy-five Cents delivered f.o.b. Canton or Columbus Ohio within a period of

four months after receiving each order And the Licensee Company shall not sell or authorize others to sell in the Licensees' area Ford Replacement Sets for use in Ford Cars at a less price than the equivalent of Four Dollars [fol. 5409] and eighty-six Cents plus freight insurance and charges to the Licensees' area per set of four bearings with two dust washers and felts The Licensor Company is at liberty to increase or reduce the said price of Three Dollars and Seventy-five Cents in accordance with a rise or fall in its manufacturing costs including labour material and overhead charges.

6. The Licensee Company shall in the year ending on the Thirty-first day of December One thousand nine hundred and twenty-one manufacture and put on the market a minimum quantity of Four hundred thousand Timken Roller Bearings and in each subsequent year during the continuance of the Principal Agreement a minimum quantity of Five hundred thousand Timken Roller Bearings.

7. Neither of the parties hereto shall be liable for any failure to perform any of the obligations contained in this Agreement if such failure shall be directly or indirectly attributable to fire strikes lock-outs labour difficulties or other cause beyond the control of the party under such obligation interfering with or delaying the performance of such obligation and in particular the Licensee Company shall not be bound to manufacture and put on the market the minimum quantities hereinbefore mentioned in the event of a change not now within the contemplation of the parties which shall radically restrict the use of Roller Bearings in motor cars provided that the Licensee Company manufactures and puts on the market Timken Roller Bearings in quantities sufficient to satisfy the reasonable requirements of the public in the Licensees' area as defined by Section 24 of the Patents and Designs Act 1907.

8. The Licensee Company shall from time to time report in writing to the Licensor Company as to the production and sale of Timken Roller Bearings in the Licensees' area and shall from time to time furnish to the Licensor Company all such further information as the Licensor Company shall require so far as it lies within the power of the Licensee Company.

9. The parties hereto place on record their desire and intention without accepting any legal obligation in that behalf to develop the sale of Timken Roller Bearings in

all territories to the advantage of both parties and to procure that all Timken Roller Bearings made in the territory of one of the parties hereto and sold in the territory of [fol. 5410] the other party hereto shall not be sold at prices which shall be unreasonable and unfair to the party in whose territory the Roller Bearings are sold.

10. If the Licensee Company shall go into liquidation either voluntary or compulsory except for the purpose of reconstruction or shall fail to put on the market Timken Roller Bearings in compliance with the provisions of Clauses 5 and 6 of this Agreement or shall after the expiration of two years from this date fail to put on the market Timken Roller Bearings in quantities sufficient to satisfy the reasonable requirements of the public in the Licensees' area as defined by Section 24 of the Patents and Designs Act of 1907 then and in such case the Licensor Company may by notice in writing to the Licensee Company rescind the Principal Agreement and this Agreement and if the Principal Agreement shall be rescinded the Licensee Company shall abandon the use of the name "Timken" as part of its name (if so used) and in all other ways and shall execute and do all such acts and deeds as may be necessary in order to secure to the Licensor Company the exclusive use of such name.

11. The provisions of the Principal Agreement shall remain in full force except so far as the same are modified by this Agreement.

12. Each of the parties hereto hereby releases the other of them from all claims in respect of anything done or omitted to be done previous to the date hereof contrary to the provisions of the Principal Agreement.

In Witness whereof the Licensor Company have signed this Agreement by Heman Ely as Agent for them and on their behalf and Wolseley Motors Limited have hereto caused their Common Seal to be affixed the day and year first above written.

(Signed) Heman Ely.

Signed by the said Heman Ely in the presence of ——.

[fols. 5411-5416] The Common Seal of Wolseley Motors Limited was hereto affixed by order of the Board in the presence of ——.

—— ——, Directors; —— ——, Secretary.

[fol. 5417] DEFENDANT'S EXHIBIT 194

An Agreement made the Thirty-first day of December, One thousand nine hundred and twenty-four between The Timken Roller Bearing Company, a corporation organized under the Laws of the State of Ohio in the United States of America and having its office and principal place of business in the City of Canton in the State of Ohio aforesaid (hereinafter called "the Licensor Company") of the one part and British Timken Limited a Joint Stock Company incorporated under the Laws of Great Britain and having its registered office at Adderley Park Birmingham in the Kingdom of England (hereinafter called "the Licensee Company") of the other part

Supplemental to:

(1) An Agreement hereinafter referred to as "the First Principal Agreement") dated the Fourth day of August One thousand nine hundred and nine and made between the Licensor Company of the one part and The Electric and Ordnance Accessories Company Limited of the other part being an Agreement to grant Licenses for the manufacture and sale of Timken Roller Bearings in Europe outside the United Kingdom of Great Britain and Ireland and in the British Colonies Protectorates and Dependencies except the Dominion of Canada.

(2) An Agreement (hereinafter referred to as "the Second Principal Agreement") dated the Sixth day of April One thousand nine hundred and twenty and made between the Licensor Company of the one part and Wolseley Motors Limited of the other part whereby the terms and conditions of the First Principal Agreement were modified.

[fol. 5418] (3) An Agreement (hereinafter referred to as "the First French Agreement") dated the Twelfth day of July One thousand nine hundred and twenty-two and made between the Licensee Company of the one part and La Societe de Mecanique de Gennevilliers (hereinafter called "the French Company") of the other part being an agreement or Licence for the manufacture and sale of Timken Roller Bearings in France and its Colonies and

(4) An Agreement (hereinafter referred to as "the Second French Agreement") dated the twenty-ninth day of August One thousand nine hundred and twenty-four and made between the Licensee Company of the first part and

the Licensor Company of the second part and the French Company of the third part being an agreement which provides for the payment by the French Company direct to the Licensor Company of certain sums by way of royalty in substitution for like amounts which but for the Second French Agreement would have been payable by the French Company to the Licensee Company under the First French Agreement and like amounts which but for the Second French Agreement would have been payable by the Licensee Company to the Licensor Company under the First Principal Agreement.

Whereas the benefits and obligations of the Electric and Ordnance Accessories Company Limited under the First Principal Agreement with the consent of the Licensor Company were assigned by the Electric and Ordnance Accessories Company Limited to Wolseley Motors Limited previous to the date of the Second Principal Agreement and [fol. 5419] were assigned by Wolseley Motors Limited to the Licensee Company after the date of the Second Principal Agreement and previous to the date of the First French Agreement.

And whereas the parties hereto are desirous of further modifying the terms of the First Principal Agreement and of modifying the terms of the Second French Agreement as more particularly hereinafter appears.

Now these presents witness and it is hereby declared and agreed by and between the parties hereto as follows (namely):

1. The First Principal Agreement as modified by the Second Principal Agreement shall be further modified so far as necessary in order to give effect to the following provisions of this Agreement.

2. The royalty payable under Clause 20 of the First Principal Agreement shall be equal to Five per cent of the net invoice prices therein mentioned instead of Fifteen per cent.

3. The royalty payable by the French Company to the Licensor Company under the First French Agreement and under the Second French Agreement shall be reduced from Seven and a half per cent to Five per cent of the net invoice prices therein mentioned and the Licensor Company and the Licensee Company shall take such steps as may be

necessary to communicate and confirm such reduction to the French Company.

4. This Agreement shall take effect as from the First day of January One thousand nine hundred and twenty-four and the First Principal Agreement as modified by the Second Principal Agreement and this Agreement shall con-
[fol. 5420] tinue for a term of five years from the First day of January One thousand nine hundred and twenty-four and thereafter unless and until one party shall determine the same at the end of the said term of five years or at any time afterwards by at least six months previous notice in writing to the other party.

5. In the territories covered by the First Principal Agreement the name "Timken" shall belong exclusively to the Licensor Company and during the continuance of the First Principal Agreement as modified from time to time the Licensee Company and its sub-licensees shall be deemed to be using the said name as part of the subject matter of the Licence contained in the First Principal Agreement and shall have the right to use the said name accordingly and upon the expiration or other determination of the First Principal Agreement as modified from time to time the Licensee Company and its sub-licensees will cease to have any right in the said name or to make use of the same in any way and during the continuance and after the expiration or sooner determination of the First Principal Agreement as modified from time to time the Licensee Company will execute and do at the expense of the Licensor Company such acts and things as may be reasonably necessary to secure for the Licensor Company so far as practicable an exclusive right to use the said name in the said territories in connection with bearings and other products dealt in by the Licensor Company and to secure and protect so far as practicable the property and rights of the Licensor Company in the said territories in respect of the said name and
[fol. 5421] enable the Licensor Company to obtain or preserve in the said territories the exclusive right, aforesaid.

In witness whereof these presents have been signed by or on behalf of The Timken Roller Bearing Company and British Timken Limited have caused their common seal to be hereunto affixed the day and year first above written.

(Signed) Heman Ely, Vice President and Treasurer.

Witness to the signature of Heman Ely, Vice President and Treasurer for and on behalf of The Timken Roller Bearing Company

The Common Seal of British Timken Limited was affixed hereto by order of the Board in the presence of

—— ——, Directors. —— ——, Secretary.

[fol. 5422] Dated: 31st December, 1924.

The Timken Roller Bearing Company and British Timken Limited

Agreement with respect to the Continent of Europe and British Colonies

---

[fol. 5423] DEFENDANT'S EXHIBIT 195

Memorandum

In consideration of an Agreement executed as of the First day of January One thousand nine hundred and twenty eight between The Timken Roller Bearing Company (hereinafter called "the American Company") and British Timken Limited (hereinafter called "the British Company")

It is hereby acknowledged by the above named companies that the Agreements specified in the Schedule hereunder written are all terminated and cancelled as from the First day of January One thousand nine hundred and twenty eight except as follows:

(a) All royalties and other monies which may be due and payable under these Agreements to the British Company or the American Company in respect of the period down to the First day of January One thousand nine hundred and twenty eight shall be paid and retained in accordance with such Agreements unaffected by the said Agreement dated the First day of January One thousand nine hundred and twenty eight

(b) The Agreements specified in Part II of the Schedule hereto shall continue in force so far as regards the French Company named in the said Schedule from the First day of

January One thousand nine hundred and twenty eight until the Agreement between the British Company and the French Company dated the Twelfth day of July One thousand nine hundred and twenty two is terminated on the Thirtieth day of June One thousand nine hundred and twenty eight except that the French Company has been relieved from the payment of all royalties which may be due and payable by the French Company to the British Company or the American Company under any Agreements in respect of the period after the First day of January One thousand nine hundred and twenty eight and down to such termination.

Dated this First day of January One thousand nine hundred and twenty eight.

The Schedule above referred to

Part I

(a) 1909, June 16, July 16—The Timken Roller Bearing Company (1) and The Electric and Ordnance Accessories Co. Ltd. (2) Agreement applying to the United Kingdom.

(b) 1920, April 6—The Timken Roller Bearing Com- [fol. 5424] pany (1) and Wolseley Motors Ltd. (2) Agreement modifying Agreement (a)

(c) 1925, Jan. 1—The Timken Roller Bearing Company (1) and British Timken Ltd. (2) Agreement modifying Agreements (a) and (b).

Part II

(d) 1909, June 16, July 16, Aug. 4—The Timken Roller Bearing Company (1) and The Electric and Ordnance Accessories Co. Ltd. (2) Agreement applying to countries on the Continent of Europe.

(e) 1920, April 6—The Timken Roller Bearing Company (1) and Wolseley Motors Ltd. (2) Agreement modifying Agreement (d)

(f) 1924, Aug. 29—British Timken Ltd. (1) The Timken Roller Bearing Company (2) La Societe Mecanique de Gennevilliers (3) Agreement with respect to royalties payable by the said Societie under an Agreement dated the 12th day of July 1922 between the said British Company (1) and the said French Company (2)

(g) 1924, Dec. 31—The Timken Roller Bearing Company (1) and British Timken Ltd. (2) Agreements modifying Agreements (d) and (e)

For The Timken Roller Bearing Company:
John Frederic Strough, Secretary and Treasurer.

For British Timken Limited:
M. B. U. Dewar, Managing Director.

[fol. 5425] Dated: 1st January 1928

The Timken Roller Bearing Company and British Timken Limited

Acknowledgement with respect to termination of existing Agreements

[fol. 5426] DEFENDANT'S EXHIBIT 196

This Agreement executed as of the First day of January One thousand nine hundred and twenty eight by and between The Timken Roller Bearing Company a Corporation having its principal office in the City of Canton, Ohio in the United States of America (hereinafter for convenience called "the American Company") and British Timken Limited having its registered office at Birmingham in the Kingdom of England (hereinafter for convenience called "the British Company").

Supplemental to another Agreement (hereinafter called "the Principal Agreement") already executed as of the same date by and between the same parties and providing inter alia for reciprocity in the matter of patent rights between the said parties in their respective territories in the Principal Agreement referred to as the territory of the American Company and the territory of the British Company respectively.

Now the parties hereto Agree as follows:

The Principal Agreement shall be read and take effect as if the following Section 2 and been included therein in the place of Section 2 of the Principal Agreement:

"2. (a) Each of the parties hereto will as fully and freely as its patent and contractual rights and obligations permit and free of expense to the other party except as to out-

of-pocket expenses inform the other party as to all inventions discoveries improvements and practices useful in connection with the manufacture of bearings whether patented or not.

(b) The American Company will so far as its patent and contractual rights and obligations permit and free of expense to the British Company except as to out-of-pocket expenses license the British Company to operate manufacture and sell bearings in the territory of the British Company during the life of this Agreement under any Letters Patent or other patent rights now or hereafter from time to time owned by the American Company and pertaining to the manufacture of sale of bearings in the territory of the British Company.

(c) The British Company will so far as its patent and contractual rights and obligations permit and free of expense to the American Company except as to out-of-pocket expenses assign absolutely and for all time to the Ameri- [fol. 5427] can Company or its nominees all Letters Patent or other patent rights now or hereafter from time to time owned by the British Company and pertaining to the manufacture or sale of bearings in the territory of the American Company.

(d) The British Company if and when requested by and at the expense of the American Company will execute and do or cause to be executed and done all deeds acts and things which the American Company may consider necessary or desirable in order that any inventions discoveries improvements or practices useful in connection with the manufacture of bearings which may come to the knowledge of the British Company and which the British Company shall be entitled to communicate to the American Company for this purpose may be protected by Letters Patent or other patent rights in such parts of the territory of the American Company and in such names as the American Company shall specify with a view to such patent rights being assigned to or otherwise vested in the American Company or its nominees in accordance with the provisions hereinbefore contained.

(e) The British Company hereby irrevocably appoints the American Company with power of substitution to be its Attorney for it and in its name and on its behalf but at the expense of the American Company to execute and do

all deeds acts and things which the American Company or its substitutes from time to time may consider necessary or desirable for the purpose of giving effect to the agreements on the part of the British Company contained in this Section.

(f) Provided however that nothing in this Agreement contained shall obligate either party to acquire or enlarge its interest in any Letters Patent or other patent rights."

In Witness whereof the Timken Roller Bearing Company by the authority of its Board of Directors has caused these presents to be executed in duplicate by its Secretary and its corporate Seal to be hereto affixed and British Timken Limited under the authority of its Board of Directors has caused its Common Seal to be affixed hereto in duplicate [fol. 5428] as of the day and year first above written.

The Common Seal of British Timken Limited was hereunto affixed in the presence of:

M. B. U. Dewar, Wm. Dallow, Directors; R. O. Squire, Secretary. (Seal.)

The Timken Roller Bearing Company by John Frederic Strough, Secretary & Treasurer. (Seal.)

[fol. 5432] DEFENDANT'S EXHIBIT 198

British Timken Limited

At an Extraordinary General Meeting of the above-named Company duly convened and held at 4, Central Buildings, Westminster, S. W., on Friday the 20th day of April, 1928, the following Resolutions were duly passed as Ordinary Resolutions, namely:

Ordinary Resolution No. 1

That pursuant to Article No. 64 of the Articles of Association of the Company and with the consent in writing under hand of the holders of a majority of the "A" shares at present issued and of the holders of a majority of the "B" shares at present issued (which consents have been read to this meeting) the following by-laws as to voting be and the same are hereby adopted.

By-laws as to Voting

1. For the purposes of these by-laws the expression "the first control period" shall mean the period from the date of the adoption of these by-laws until the date in or after the year 1929 of the holding of an ordinary meeting of the Company at which, for the first time either (i) accounts of the Company are submitted which show that during the financial year or period covered by such accounts the net profits earned by the Company for such year or period (before charging income tax or any other tax on profits) have been at a rate which is less than £15,000 per annum plus £15 per annum in respect of every sum of £100 paid up (whether by way of capital or premium) on any shares issued after the date of the adoption of these by-laws otherwise than by way of capitalisation of profits (hereinafter referred to as "the minimum rate of profits"); or (ii) no [fol. 5433] dividend is declared on any shares of the Company, or the dividend or dividends declared (including as dividends declared or part thereof any interim dividends already paid in respect of that year or period) are at a rate which does not require for the payment thereof (in the gross and subject to deduction of tax) a sum equal to five-sixths of the minimum rate of profits for such year or period.

2. No member other than a member holding "A" shares

or "B" shares shall be entitled to attend or vote at any meeting of the Company.

3. On a show of hands every member present in person and entitled to vote shall have one vote. For the purposes of this by-law a corporation represented at the meeting by a proxy or other duly authorised representative not being himself a member entiled to vote shall be deemed to be present thereat in person.

4. On a poll taken on an ordinary resolution

(i) During the first control period each "A" share shall carry four votes and each "B" share one vote only.

(ii) After the termination of the first control period, each "B" share shall carry four votes and each "A" share one vote only.

5. On a poll taken on an extraordinary or special resolution each "A" share and each "B" share shall carry one vote.

Ordinary Resolution No. 2

That pursuant to Article No. 74 of the Articles of Association of the Company and with the sanction in writing under hand of the holders of a majority of the "A" shares at present issued and of the holders of a majority of the "B" shares at present issued (which sanctions have been read to this meeting) the following by-laws as to Directors be and the same are hereby adopted.

[fol. 5434] By-laws as to Directors

1. For the purposes of these by-laws the expression "the first control period" shall have the same meaning as in the by-laws as to Voting adopted by the Company pursuant to Article 64.

2. The Directors shall not be less than three nor more than five in number.

3. The Directors shall be appointed either by the holders of the "A" shares or by the holders of the "B" shares and each of such classes of shareholders shall be entitled to appoint and be represented by two Directors and during the first control period the holders of the "A" shares and after the termination of such period the holders of the "B" shares shall be entitled to appoint and be represented by a third Director. The Company in general meeting shall have no power to appoint or remove Directors.

4. For the purpose of giving effect to the foregoing by-laws and subject to the foregoing limitations upon the number of Directors to be appointed by each class of shareholders the "A" shareholders or the "B" shareholders may at any time and from time to time appoint any person to be an "A" shareholders' Director or a "B" shareholders' Director (as the case may be) and (subject to the following by-law No. 6) remove from office any "A" shareholders' Director or any "B" shareholders' Director (as the case may be) and if thought fit appoint another Director in his place.

5. Of the present Directors Michael Bruce Urquhart Dewar and William Dallow shall be deemed to be "A" shareholders' Directors and Andrew Jameson Matthews Duncan shall be deemed to be a "B" shareholders' Director for all the purposes of these by-laws.

6. The said Michael Bruce Urquhart Dewar shall not be liable to removal from office as an "A" Shareholders' Director so long as he continues to hold not less than 20 per cent. of the share capital of the Company for the time being issued.

[fols. 5435-5436] 7. All appointments and removals of Directors by the holders of a class of shares under these by-laws shall be effected by writing under the hands of the holders of a majority of the issued shares of that class left at or sent to the Registered Office of the Company and shall take effect as and when such writing is received at such office.

8. Every Director appointed under these by-laws shall hold office until he is removed under the foregoing by-laws by the class of shareholders whom he represents or dies or vacates office under Article 76 of the Articles of Association. Provided that if at the termination of the first control period the "A" shareholders have their full representation upon the Board, they shall forthwith remove one of the "A" shareholders' Directors from office or procure one of them to resign office and in default of their so doing within seven days after the termination of the first control period the "B" shareholders may at any time thereafter by writing under the hands of the holders of a majority of the "B" shares for the time being issued remove from office one of the "A" shareholders' Directors to be selected by them and if so thought fit appoint another person to be a "B" shareholders' Director in his place.

9. The remuneration of the Directors shall be at such rate or of such amount as the Company in general meeting may from time to time by ordinary resolution with the sanction in writing under hand of the holders of a majority of the issued "A" shares and a majority of the issued "B" shares determine. Such remuneration shall in default of any direction to the contrary given by the resolution voting the same or of any agreement to the contrary between the Directors be divided between the Directors equally. A Director holding office for part only of a year shall be entitled to a proportionate part of a full year's remuneration. The Directors shall also be entitled to be repaid by the Company all such reasonable travelling (including hotel and incidental) expenses as they may incur in attending meetings of the Board, or of Committee of the Board, or general meetings, or which they may otherwise incur in or about the business of the Company.

10. Any Director who by request performs special services, or goes or resides abroad for any purposes of the Company, may be paid such extra remuneration by way of salary, percentage of profits or otherwise as the Board may determine.

Company Limited by Shares

Memorandum of Association of British Timken Limited

1. The name of the Company is "BRITISH TIMKEN LIMITED."

2. The registered office of the Company will be situated in England.

3. The objects for which the Company is established are:

(a) To enter into and carry into effect, with or without modification, an agreement, a draft whereof has already been prepared and signed for identification by Mr. Gerald Lacy Addison, Solicitor, and which is expressed to be made between Wolseley Motors Limited of the one part and the Company of the other part, providing for the acquisition by the Company of the assets and rights therein more particularly defined.

(b) To manufacture, build, repair and deal in all parts of and accessories to motor cars and vehicles of every description, cycles, engines, chassis and bodies, and aircraft, including electric motors and other electric appliances, and all kinds of machinery, tools, appliances and materials for use in relation to the manufacture, running, storage and repair of motor cars, vehicles, cycles, engines, chassis, bodies and aircraft [fol. 5440] respectively, or the parts or accessories thereof respectively, and to apply for and take out letters patent in connection therewith.

(c) To supply and deal in petrol and other volatile oils and spirits, and all kinds of lubricating oils and other lubricants and all kinds of fuel for developing locomotive power.

(d) To manufacture, supply and deal in all kinds of personal and other equipment for the use of drivers, tourists and the public generally, for use in connection with motor cars, aircraft, including (without prejudice to the generality of this clause) wearing apparel and maps and guide books.

(e) To carry on business as mechanical and electrical engineers, and to buy, sell, manufacture, repair and deal in machinery, metals, implements and hardware of all kinds.

(f) To acquire by grant, purchase, licence, or exchange, and to use, work and sell or otherwise turn to account any patent or patent rights, *brevets d'invention*, or other rights which may be deemed to be in the interests of the Company.

(g) To purchase, take on lease, or otherwise acquire and undertake, all or any part of the business, property and liabilities of any person or company carrying on any business which the Company is authorised to carry on, or possessed of property suitable for the purposes of the Company, and to acquire, hold and deal in the shares or securities of any such company or of any other company whatsoever.

(h) To remunerate any person or company for services rendered or to be rendered, in placing, or assisting to place, or guaranteeing the placing of any of the shares of the Company's capital, or any debentures or other securities of the Company, or in or about the formation or promotion of the Company, or the conduct of its business, or of any other company promoted or financed by this Company.

[fol. 5441] (i) To purchase, take on lease, or in exchange, hire or otherwise acquire, any real or personal property and any rights or privileges which the Company may think necessary or convenient for the purposes of its business, and to construct, maintain and alter any buildings or works necessary or convenient for the purposes of the Company.

(j) To borrow or raise money on mortgage, debentures or debenture stock, or in such other manner as the Company shall think fit, and to charge all or any of the Company's property or assets, present or future, including its uncalled capital, and to lend money on such terms as to repayment or otherwise as may be

necessary or convenient for the purposes of the Company.

(k) To subscribe for, take, purchase, or otherwise acquire and hold, shares or other interests in, or securities of, any other company having objects altogether or in part similar to those of this Company, or carrying on any business capable of being conducted so as directly or indirectly to benefit this Company, or to promote such company.

(l) To pay all expenses of and in connection with the incorporation or promotion of this or any other company which this Company is hereinbefore authorised to promote, and the obtaining the subscription of any shares or securities thereof, and procuring or obtaining settlements and quotations upon the London or Foreign, Colonial or Provincial Stock Exchanges of any such shares or securities.

(m) To draw, make, accept, indorse, discount, execute, and issue promissory notes, bills of exchange, bills of lading, warrants, debentures or other securities of the Company.

(n) To sell or dispose of the undertaking of the Company or any part thereof in such manner and for such consideration as the Company may think fit, and in particular for shares (either fully or partly paid [fol. 5442] up), debentures or securities of any other company, and to improve, manage, develop, exchange, lease, dispose of, turn to account or otherwise deal with all or any part of the property and rights of the Company.

(o) To distribute among the Members of the Company in kind any property of the Company, and in particular any shares, debentures, or securities of other companies belonging to this Company, or of which this Company may have the power of disposing.

(p) To do all such other things as are incidental or the Company may think conducive to the attainment of the above objects or any of them.

4. The liability of the Members is limited.

5. The capital of the Company is £50,000, divided into 50,000 shares of £1 each.

Any of the said shares for the time being unissued, and any new shares from time to time to be created, may from

time to time be issued with such preferred, deferred or other special rights, or such restrictions, whether in respect of dividend, voting return of capital or otherwise, as the Company may from time to time by Special Resolution determine, but so that the special rights or privileges belonging to the holders of any shares issued with preferred or other special rights shall not be affected, modified, abrogated or dealt with, except with such sanction as is provided by the Articles of Association of the Company for the time being.

[fol. 5443] We, the several persons whose names, addresses, and descriptions are subscribed are desirous of being formed into a Company in pursuance of this Memorandum of Association, and we respectively agree to take the number of shares in the capital of the Company set opposite to our respective names.

Names, Addresses and Descriptions of Subscribers.	Number of Shares taken by each Subscriber.
ARTHUR JOHN McCORMACK, Middle Park, Paignton. Director of Public Company.	One
GEORGE WARE GRAZEBROOK, Greys Mallory, Warwick. Director of Public Company.	One

Dated the 1st day of June, 1920.

Witness to the above Signatures—

J. F. English, 581, Bordesley Green, Birmingham.
Commercial Clerk.

[fol. 5444] British Timken Limited

At an Extraordinary General Meeting of the above-named Company duly convened and held at 4, Central Buildings, Westminster, on Thursday the 5th day of April, 1928, the subjoined resolutions were duly passed, and at a subsequent Extraordinary General Meeting duly convened and held at the same place on Friday the 20th day of April, 1928, the Resolutions were duly confirmed as Special Resolutions, viz:—

Resolutions

1. That the 100,000 shares of £1 each in the present capital of the Company be divided into 50,000 "A" shares and 50,000 "B" shares, the "A" shares to consist of the 25,000 issued shares at present Numbered 1 to 13,502 inclu-

sive and 23,753 to 35,250 inclusive (to be re-numbered A1 to A25,000 inclusive) and 25,000 of the unissued shares, and the "B" shares to consist of the 25,000 issued shares at present numbered 13,503 to 23,752 inclusive and 35,251 to 50,000 inclusive (to be re-numbered B1 to B25,000 inclusive) and the remaining 25,000 unissued shares.

2. That the "A" shares and the "B" shares in the capital of the Company do confer upon the holders thereof respectively the special rights and privileges expressed to be annexed to the same by the new Articles of Association adopted by resolution passed and confirmed at the meetings at which this resolution is passed and confirmed respectively or by any by-laws made pursuant thereto and for the time being in force.

3. That the Articles of Association contained in the printed document which has been laid before this meeting and subscribed for identification by the Chairman be and the same are hereby adopted as the Articles of Association of the Company in substitution for and to the exclusion of all existing Articles of Association and regulations thereof.

M. B. U. Dewar, Chairman.

[fol. 5445] The Companies Acts, 1908 to 1917

Company Limited by Shares

Articles of Association of British Timken Limited
Adopted by Special Resolution passed and confirmed the 5th day of April and the 20th day of April, 1928

Preliminary

1. The regulations in Table "A" in the first schedule to the Companies (Consolidation) Act, 1908, shall not apply to the Company.

2. In these presents, if not inconsistent with the subject or context, the words standing in the first column of the table next hereinafter contained shall bear the meanings set opposite to them respectively in the second column thereof.

Words.	Meanings.
The Statutes.	The Companies Acts, 1908 to 1917, and every other Act for the time being in force concerning joint stock companies and affecting the Company.
The Act.	The Companies (Consolidation) Act, 1908.
These presents.	These Articles of Association, as originally framed, or as from time to time altered by special resolution.

[fol. 5446]

The Office.	The Registered Office of the Company.
The Seal.	The Common Seal of the Company.
The United Kingdom.	Great Britain and Northern and Southern Ireland.
Year.	Year from the 1st January to the 31st December inclusive.
In writing.	Written, or expressed by any substitute for writing, or partly one and partly the other.
Writing under hand.	In the case of a corporation a writing signed on behalf of the Corporation by its secretary or some other person duly authorised to sign on behalf of the Corporation.

And the expressions "Debenture" and "Debenture Holder" shall include "Debenture Stock" and "Debenture Stockholder," and the expression "Secretary" shall include a temporary or assistant Secretary and any person appointed by the Directors to perform any of the duties of the Secretary.

Save as aforesaid any words or expressions defined in the Statutes shall, if not inconsistent with the subject or context, bear the same meaning in these presents.

Private Company

3. The Company is a Private Company and accordingly:—

(a) The right to transfer shares in the Company shall be restricted in manner hereinafter appearing.

(b) The number of members of the Company (exclusive of persons who are in the employment of the Com-
[fol. 5447] pany, and of persons who, having been formerly in the employment of the Company, were, whilst in such employment, and have continued after the determination of such employment to be, members of the Company) shall be limited to fifty; provided that where two or more persons hold one or more shares in the Company jointly they shall for the purposes of this paragraph be treated as a single member.

(c) No invitation shall be given to the public to subscribe for any shares or debentures of the Company.

Business

4. Any branch or kind of business, which the Company is either expressly or by implication authorised to undertake, may be undertaken by the Directors at such time or times

as they may think fit, and further may be suffered by them to be in abeyance, whether such branch or kind of business may have been actually commenced or not, so long as the Directors may deem it expedient not to commence or proceed with the same.

5. No part of the funds of the Company shall be employed in the purchase of or in loans upon the security of the Company's shares.

Capital

6. The share capital of the Company at the date of the adoption of these Articles is £100,000 divided into 50,000 "A" shares and 50,000 "B" shares of £1 each of which 25,000 "A" shares and 25,000 "B" shares have been issued. The "A" and the "B" shares shall confer upon the holders thereof respectively the special rights or privileges as regards voting, appointing directors and otherwise conferred by or pursuant to these presents, but except as otherwise provided by or pursuant to these presents the "A" and the "B" shares shall rank *pari passu* as a single class of Ordinary Shares and the expression "Ordinary Shares" as hereinafter used means and includes both the "A" shares and the "B" shares.

[fol. 5448] Modification of Rights

7. The special rights attached to the "A" shares and the "B" shares respectively may, with the consent in writing under hand of the holders of a majority of the said shares of each class for the time being issued (but not otherwise), be modified or abrogated, and may be so modified or abrogated either whilst the Company is a going concern or during or in contemplation of a winding up. The special rights attached to any other class of shares in the Company's capital at any time issued with special rights may be modified or abrogated either with the consent in writing under hand of the holders of three-fourths of the shares of the class for the time being issued or with the sanction of an extraordinary resolution passed at a separate general meeting of such holders, but not otherwise. To every separate general meeting of any class of shareholders (whether held pursuant to this article or to any other provision of these presents) all the provisions of these presents relating to general meetings or to the proceedings thereat shall, *mutatis mutandis*, apply, except that the necessary quorum shall

be two persons at least holding or representing by proxy one-tenth of nominal amount of the shares of the class for the time being issued (but so that if at any adjourned meeting of such holders a quorum as above defined is not present, those members who are present shall be a quorum), and that the holders of shares of the class shall, on a poll, have one vote in respect of every share of the class held by them respectively.

Shares

8. Except as otherwise authorized by writing under the hands of the holders of a majority of the "A" shares for the time being issued and of the holders of a majority of the "B" shares for the time being issued, no further shares shall be issued unless the further shares so issued shall consist of equal numbers of "A" shares and "B" shares and unless the further "A" shares so issued are issued to the holders of the "A" shares for the time being issued in proportion to the numbers of the "A" shares for the time being held by them respectively and unless the further "B" shares so issued are issued to the holders of the "B" shares for the time being issued in proportion to the numbers of the "B" shares for the time being held by them respectively.

[fol. 5449] 9. Subject to the provisions of the last preceding Article and to any other express provision of these presents the shares shall be at the disposal of the Directors, and they may allot, grant options over, or otherwise dispose of them to such persons, at such times, and on such terms as they think proper. The Directors shall, as regards any allotment of shares, comply with the provisions of section 88 of the Act, if and so far as such provisions may be applicable thereto.

10. The Company (or the Directors or behalf of the Company) may exercise the powers of paying commissions conferred by section 89 of the Act. Provided that the rate per-cent. or the amount of the commission paid or agreed to be paid shall be disclosed in the manner required by the said section, and shall not exceed the rate of 20 per cent. of the nominal amount of the shares in respect whereof the same is paid, or an amount equal to 20 per cent. of the nominal amount of such shares (as the case may be). The Company (or the Directors on behalf of the Company) may

also on any issue of shares pay such brokerage as may be lawful.

11. If any shares of the Company are issued for the purpose of raising money to defray the expenses of the construction of any works or buildings, or the provision of any plant which cannot be made profitable for a lengthened period, the Company (or the Directors on behalf of the Company) may, subject to the conditions and restrictions mentioned in section 91 of the Act, pay interest on so much of such share capital as is for the time being paid up, and may charge the same to capital as part of the cost of construction of the works, buildings or plant.

12. No person shall be recognised by the Company as holding any share upon any trust, and the Company shall not be bound by or recognise any equitable, contingent, future or partial interest in any share, or any interest in any fractional part of a share, or (except only as by these presents otherwise provided) any other right in respect of any share, except an absolute right to the entirety thereof in the registered holder.

13. Every person whose name is entered as a member in the register of members shall be entitled without payment to one certificate for all his shares, or upon payment of [fol. 5450] such sum, not exceeding 1s., for every certificate after the first as the Directors shall from time to time determine, to several certificates, each for one or more of his shares. Every certificate shall be issued under the seal, and shall bear the signatures of one or more Directors and the Secretary, and shall specify the shares to which it relates, and the amount paid up thereon. Provided that in the case of a share held jointly by several persons, the Company shall not be bound to issue more than one certificate therefor, and delivery of a certificate for a share to one of several joint holders shall be sufficient delivery to all.

14. If a share certificate be defaced, lost or destroyed, it may be renewed on payment of such fee (if any), not exceeding 1s., and on such terms (if any) as to evidence and indemnity as the Directors think fit.

Lien

15. The Company shall have a lien on every share (not being a fully paid share) for all moneys, whether presently payable or not, called or payable at a fixed time in re-

spect of such share; and the Company shall also have a first and paramount lien and charge on all shares standing registered in the name of a single member for all the debts and liabilities of such member or his estate to the Company, and that whether the same shall have been incurred before or after notice to the Company of any equitable or other interest in any person other than such member and whether the period for the payment or discharge of the same shall have actually arrived or not, and notwithstanding that the same are joint debts or liabilities of such member or his estate and any other person, whether a member of the Company or not. The Company's lien (if any) on a share shall extend to all dividends payable thereon.

16. The Company may sell, in such manner as the Directors think fit, any shares on which the Company has a lien, but no sale shall be made unless some sum in respect of which the lien exists is presently payable, nor until the expiration of fourteen days after a notice in writing, stating and demanding payment of the sum presently payable, and giving notice of intention to sell in default, shall have been given to the holder for the time being of the share or the person entitled by reason of his death or bankruptcy to the share.

[fol. 5451] 17. The proceeds of sale shall be applied in or towards payment or satisfaction of the debt or liability in respect whereof the lien exists, so far as the same is presently payable, and any residue shall (subject to a like lien for debts or liabilities not presently payable as existed upon the shares prior to the sale) be paid to the person entitled to the shares at the time of the sale. The purchaser shall be registered as the holder of the shares and he shall not be bound to see to the application of the purchase money, nor shall his title to the shares be affected by any irregularity or invalidity in the proceedings in reference to the sale.

Calls on Shares

18. The Directors may from time to time make calls upon the members in respect of any moneys unpaid on their shares, and each member shall (subject to receiving at least one month's notice specifying the time or times and place of payment) pay to the Company at the time or times and place so specified the amount called on his shares.

19. A call shall be deemed to have been made at the time when the resolution of the Directors authorising the call was passed.

20. The joint holders of a share shall be jointly and severally liable to pay all calls in respect thereof.

21. If a sum called in respect of a share is not paid before or on the day appointed for payment thereof, the person from whom the sum is due shall pay interest on the sum from the day appointed for payment thereof to the time of actual payment at such rate, not exceeding 10 per cent. per annum, as the Directors determine, but the Directors shall be at liberty to waive payment of such interest wholly or in part.

22. Any sum which by the terms of issue of a share becomes payable upon allotment or at any fixed date, whether on account of the amount of the share or by way of premium, shall for all the purposes of these presents be deemed to be a call duly made and payable on the date on which, by the terms of issue, the same becomes payable, and in case of non-payment all the relevant provisions of these presents [fol. 5452] as to payment of interest and expenses, forfeiture or otherwise, shall apply as if such sum had become payable by virtue of a call duly made and notified.

23. The Directors may make arrangements on the issue of shares for a difference between the holders in the amount of calls to be paid, and in the times of payment.

24. The Directors may, if they think fit, receive from any shareholder willing to advance the same, all or any part of the moneys uncalled and unpaid upon any shares held by him, and upon all or any of the moneys so advanced, may (until the same would but for such advance become presently payable), pay interest at such rate, not exceeding (unless the Company in general meeting shall otherwise direct) 10 per cent. per annum, as may be agreed upon between the Directors and the shareholder paying such sum in advance.

Transfer of Shares

25. Any share may at any time be transferred to a person who is already a member or (with the consent in writing of the holders of a majority of the shares for the time being issued other than those held by the transferor) to a person who is not already a member.

26. Except in the case of a transfer of shares expressly authorized by the last preceding article, the right to transfer shares in the Company shall be subject to the following restrictions, namely:—

(a) Before transferring or requiring the Company to register a transfer of any shares the person, whether a member of the Company or not, proposing to transfer the same (hereinafter called "a retiring member") shall give a notice in writing (hereinafter called "a transfer notice") to the Company, that he desires to transfer the same. The transfer notice shall state the price per share which the retiring member is willing to accept for the shares comprised therein and shall constitute the Company his agent for the sale of the [fol. 5453] shares therein mentioned or any of such shares at that price (hereinafter called "the prescribed price") to any member of the Company. A transfer notice once given shall not be revocable except with the consent of the Company during the next 90 days following the day on which the notice is given. Shares of different classes shall not be included in the same transfer notice, and a transfer notice which includes shares of different classes may be treated as invalid.

(b) If the Company, within a period of 90 days after receiving a transfer notice shall find members (hereinafter called "purchasers") willing to purchase the shares therein mentioned, or any of such shares, and shall give notice in writing thereof to the retiring member, he shall be bound, upon payment of the prescribed price, to transfer the shares mentioned in the transfer notice, or those for which the Company has found purchasers, to the respective purchasers thereof.

(c) Every notice given by the Company under paragraph (b) stating that it has found a purchaser for any shares shall state the name and address of the purchaser and the number of shares agreed to be purchased by him, and the purchase shall be completed at a place and time to be appointed by the Company, not being more than 28 days after the date on which the notice is given.

(d) If in any case a retiring member, after having become bound to transfer any shares to a purchaser, shall make default in transferring the shares, the Com-

pany may receive the purchase money, and shall thereupon cause the name of the purchaser to be entered in the register as the holder of the shares, and shall hold the purchase money in trust for the retiring member. The receipt of the Company for the purchase money shall be a good discharge to the purchaser, and he shall not be bound to see to the application thereof, and after the name of the purchaser has been entered in the register in purported exercise of the aforesaid [fol.5454] powers, the validity of the proceedings shall not be questioned by any person.

(e) If the Company shall not within a period of 90 days after receiving a transfer notice find members willing to purchase all the shares mentioned in the transfer notice, and give notice in writing thereof to the retiring member, or if the Company shall within the period aforesaid give to the retiring member notice in writing that the Company has no prospect of finding purchasers for such shares, or any of them, the retiring member shall at any time within one month after receiving such notice or the expiration of the said period of 90 days (as the case may be) be at liberty (subject only to the restrictions contained in article 32) to transfer the shares, or those for which the Company has not found purchasers, to any person on a *bona fide* sale of such shares at any price not being less than the prescribed price, but so that before passing any such transfer the Directors may require to be satisfied in such manner as they may reasonably require that the shares included in the transfer notice are being transferred in pursuance of a *bona fide* sale for the consideration stated in the transfer without any deduction, rebate allowance or benefit whatsoever to the purchaser.

(f) All shares included in a transfer notice shall be offered by the Company in the first instance for sale at the prescribed price to all members holding Ordinary Shares (other than the member giving the transfer notice) on the terms and so that in case of competition the shares so offered shall be sold to the members accepting the offer in proportion (as nearly as may be and without increasing the number sold to any member beyond the number applied for by him) to their existing holdings of Ordinary Shares. All offers of shares under this paragraph shall be made by

writing sent through the post in prepaid registered letters addressed to the members at their respective registered addresses as appearing in the register and every such offer shall limit a period of 60 days from the posting of the letters containing the same within [fol. 5455] which the offer must be accepted or in default will be treated as declined.

27. The legal personal representatives of any member dying shall be bound at any time after the expiration of six months from the date of his death, if and when called upon in writing by the Directors so to do, either to apply to be themselves registered as holders of or to give a transfer notice in respect of all the shares registered in the name of the deceased member at the date of his death, or such of the same as still remain so registered, and should such legal personal representatives fail either to apply to be so registered or to give such transfer notice within a period of 14 days after being so called upon, they shall be deemed to have given such transfer notice at the expiration of the said period of 14 days and the provisions of these presents shall have effect accordingly.

28. If any member shall be adjudged bankrupt, his trustee in bankruptcy shall be bound forthwith to give to the Company a transfer notice in respect of all the shares registered in the name of the bankrupt member, and in default of such transfer notice being given within one month of the bankruptcy, the trustee in bankruptcy shall be deemed to have given such notice at the expiration of the said period of one month and the provisions of these presents shall have effect accordingly.

29. The "prescribed price" for any shares of any class included in a transfer notice deemed to be given under either of the two last preceeding articles shall be such sum as the auditors of the Company shall by certificate made at the request of the Directors certify to be, in their opinion, the fair value of a share of that class in the Company.

30. All transfers of shares shall be effected by transfer in writing in the usual common form.

31. The instrument of transfer of a share shall be executed both by the transferor and transferee, and the transferor shall be deemed to remain the holder of the share until the name of the transferee is entered in the register of members in respect thereof.

[fol. 5456] 32. The Directors may, in their discretion, and without assigning any reason therefor, decline to register any transfer of shares not being a transfer expressly authorised by Article 25.

33. The Directors may also decline to recognise any instrument of transfer, unless

(a) Such fee, not exceeding 2s. 6d., as the Directors may from time to time require is paid to the Company in respect thereof; and

(b) The instrument of transfer is accompanied by the certificate of the shares to which it relates, and such other evidence as the Directors may reasonably require to show the right of the transferor to make the transfer.

34. The register of transfers may be closed at such times and for such period as the Directors may from time to time determine, provided always that it shall not be closed for more than thirty days in any year.

35. There shall be paid to the Company in respect of the registration of any probate, letters of administration, certificate of marriage or death, power of attorney or other document relating to or affecting the title to any shares such fee, not exceeding 2s. 6d., as the Directors may from time to time require or prescribe.

Transmission of Shares

36. In case of the death of a shareholder the survivors or survivor where the deceased was a joint holder, and the executors or administrators of the deceased where he was a sole holder, shall be the only persons recognised by the Company as having any title to his shares, but nothing herein contained shall release the estate of a deceased joint holder from any liability in respect of any share jointly held by him.

37. The executors or administrators of a deceased sole holder of shares shall be entitled upon such evidence as to their title being produced as may from time to time be [fol. 5457] required by the Directors and upon their claiming such registration by notice in writing to the Company, to be registered themselves as holders of the shares of the deceased member. They shall also be entitled, unless and until they shall have been so registered themselves and sub-

ject to the restrictions on transfer of shares hereinbefore contained, to sell and transfer the shares of the deceased member.

38. The Trustee in bankruptcy of a member becoming bankrupt shall not be entitled to be registered himself as holder of the shares of the bankrupt member but shall be entitled, subject to the restrictions on transfers of shares hereinbefore contained, to sell and transfer the same.

39. A person becoming entitled to a share in consequence of the death or bankruptcy of a member shall be entitled to receive and may give a discharge for all dividends and other moneys payable in respect of the share, but he shall not be entitled to receive notices of or to attend or vote at meetings of the Company or save as aforesaid to any of the rights or privileges of a member unless and until he shall have become a member in respect of the share.

Forfeiture of Shares

40. If a member fails to pay any call or instalment of a call on the day appointed for payment thereof, the Directors may at any time thereafter, during such time as any part of such call or instalment remains unpaid, serve a notice on him requiring payment of so much of the call or instalment as is unpaid, together with any interest and expenses which may have accrued.

41. The notice shall name a further day on or before which and the place where the payment required by the notice is to be made, and shall state that in the event of non-payment at or before the time and at the place appointed the shares on which the call was made will be liable to be forfeited.

42. If the requirements of any such notice as aforesaid are not complied with any share in respect of which such notice has been given may at any time thereafter before payment of all calls and interest and expenses due in re-
[fol. 5458] spect thereof has been made be forfeited by a resolution of the Directors to that effect.

43. A forfeited share may be sold, re-allotted or otherwise disposed of, either to the person who was before forfeiture the holder thereof or entitled thereto, or to any other person, upon such terms and in such manner as the Directors shall think fit, and at any time before a sale or

disposition the forfeiture may be cancelled on such terms as the Directors think fit.

44. A shareholder whose shares have been forfeited shall cease to be a member in respect of the forfeited shares, but shall notwithstanding the forfeiture remain liable to pay to the Company all moneys which at the date of forfeiture were presently payable by him to the Company in respect of the shares, with interest thereon at seven per cent. per annum from the date of forfeiture until payment.

45. A statutory declaration in writing that the declarant is a Director of the Company and that a share has been duly forfeited on a date stated in the declaration shall be conclusive evidence of the facts therein stated as against all persons claiming to be entitled to the share, and such declaration and the receipt of the Company for the consideration (if any) given for the share on the sale or disposal thereof shall constitute a good title to the share, and the person to whom the share is sold or disposed of shall be registered as the holder of the share and shall not be bound to see to the application of the purchase money (if any), nor shall his title to the share be affected by any irregularity or invalidity in the proceedings in reference to the forfeiture, sale, or disposal of the share.

Increase of Capital

46. The Company in general meeting from time to time with the sanction in writing under hand of the holders of a majority of the "A" shares for the time being issued, and the holders of a majority of the "B" shares for the time being issued (but not otherwise), may increase its capital by such sum to be divided into shares of such classes and amounts as the resolution of the General Meeting shall prescribe.

[fol. 5459] 47. The new shares shall be subject to the same provisions with reference to payment of calls, lien, transfer, transmission, forfeiture and otherwise, as the shares in the present capital.

Alterations of Capital

48. The Company in general meeting with the sanction in writing under hand of the holders of a majority of the "A" shares for the time being issued and of the holders

of a majority of the "B" shares for the time being issued (but not otherwise) may by ordinary resolution—

(a) Consolidate and divide all or any of its share capital into shares of larger amount than its existing shares.

(b) Cancel any shares which, at the date of the passing of the resolution, have not been taken, or agreed to be taken, by any person, and diminish the amount of its capital by the amount of the shares so cancelled.

And may by special resolution—

(c) Sub-divide its shares, or any of them, into shares of smaller amount than is fixed by the Memorandum of Association (subject, nevertheless, to the provisions of section 41 (1) (d) of the Act), and so that the special resolution whereby any share is sub-divided may with the sanction aforesaid determine that, as between the holders of the shares resulting from such sub-division, one or more of the shares shall have any such preferred or other special rights, or shall have such deferred rights, or shall be subject to such restrictions as compared with the others as the Company has power to attach to unissued or new shares.

(d) Reduce its capital in any manner authorised by law.

General Meetings

49. A General Meeting shall be held in every year, at such time (within a period of not more than fifteen months after the holding of the last preceding general meeting) and [fol. 5460] place as may be determined by the Directors. The general meetings referred to in this article shall be called ordinary meetings. All other general meetings shall be called extraordinary meetings.

50. The Directors may call an extraordinary meeting whenever they think fit, and shall, on the requisition, in accordance with section 66 of the Act, of the holders of not less than one-tenth of the issued capital of the Company upon which all calls or other sums then due have been paid, forthwith proceed to convene an extraordinary meeting.

Notice of General Meetings

51. Seven days' notice at the least (inclusive of the day on which the notice is served or deemed to be served and

of the day for which the notice is given) specifying the place, the day, and the hour of meeting, and in case of special business, the general nature of such business, shall be given in manner hereinafter mentioned to such members as are, under the provisions herein contained, entitled to receive notices from the Company. With the consent in writing under hand of all the members entitled to receive notices from the Company, a meeting may be convened by a shorter notice and in such manner as such members may think fit.

52. The accidental omission to give notice to, or the non-receipt of notice by, any member, shall not invalidate the proceedings at any general meeting.

53. Whenever it is intended to pass a special resolution the two meetings may be convened by one and the same notice, and it shall be no objection that the notice only convenes the second meeting contingently on the resolution being passed by the requisite majority at the first meeting.

Proceedings at General Meetings

54. All business shall be deemed special that is transacted at an extraordinary meeting, and also all business that is transacted at an ordinary meeting, with the exception of sanctioning dividends, the consideration of the accounts and balance sheet and the ordinary reports of the [fol. 5461] Directors and Auditors, the election of Auditors and other officers in the place of those retiring, and the fixing of the remuneration of the Auditors.

55. No business shall be transacted at any general meeting unless a quorum is present when the meeting proceeds to business. Two members present in person shall be a quorum for all purposes.

56. If within half an hour from the time appointed for the meeting a quorum is not present, the meeting, if convened on the requisition of members, shall be dissolved. In any other case it shall stand adjourned to the same day in the next week, at the same time and place, and if at such adjourned meeting a quorum is not present within fifteen minutes from the time appointed for holding the meeting, the meeting shall be dissolved.

57. The chairman (if any) of the Board of Directors shall preside as chairman at every general meeting of the Company. If there be no such chairman, or if at any meeting

he be not present within fifteen minutes after the time appointed for holding the meeting, or be unwilling to act as chairman, the members present shall choose some Director, or if no Director be present, or if all the Directors present decline to take the chair, they shall choose some member present to be chairman.

58. The chairman may, with the consent of any meeting at which a quorum is present (and shall if so directed by the meeting) adjourn the meeting from time to time and from place to place, but no business shall be transacted at any adjourned meeting except business which might lawfully have been transacted at the meeting from which the adjournment took place. When a meeting is adjourned for ten days or more, notice of the adjourned meeting shall be given as in the case of an original meeting. Save as aforesaid, it shall not be necessary to give any notice of an adjournment or of the business to be transacted at an adjourned meeting.

59. At any general meeting a resolution put to the vote of the meeting shall be decided on a show of hands unless a poll is (before or on the declaration of the result of the show of hands) demanded by some member present in person or by proxy and entitled to vote. Unless a poll is [fol. 5462] so demanded, a declaration by the chairman that a resolution has been carried, or carried unanimously, or by a particular majority, or lost, and an entry to that effect in the minute book shall be conclusive evidence of the fact without proof of the number of proportion of the votes recorded in favour of or against such resolution.

60. If a poll is duly demanded, it shall be taken in such manner as the chairman may direct, and the result of a poll shall be deemed to be the resolution of the meeting at which the poll was demanded.

61. In the case of an equality of votes, whether on a show of hands or on a poll, the chairman of the meeting at which the show of hands takes place or at which the poll is demanded shall not be entitled to a second or casting vote.

62. A poll demanded on the election of a chairman or on a question of adjournment shall be taken forthwith. A poll demanded on any other question shall be taken at such time and place as the chairman directs.

63. The demand for a poll shall not prevent the continu-

ance of a meeting for the transaction of any business other than the question on which the poll has been demanded.

Votes of Members

64. The Company in General Meeting with the consent in writing under hand of the holders of a majority of the "A" shares for the time being issued, and the holders of a majority of the "B" shares for the time being issued, may by ordinary resolution adopt, and from time to time rescind or vary by-laws prescribing the rights of attending and voting at General Meetings of the Company to be conferred by or attached to the different classes of shares in the Company's capital. Any by-laws so adopted and for the time being in force shall be as effective and binding upon the Company and all its members as though the provisions thereof were incorporated in these presents. Subject to the provisions of any by-laws of the Company [fol. 5463] adopted pursuant to this article and for the time being in force, on a show of hands every member who (being an individual) is present in person or (being a corporation) is present by a proxy not being himself a member, shall have one vote, and on a poll every member who is present in person or by proxy shall have one vote for every share of which he is the holder.

65. In the case of joint holders of a share the vote of the senior who tenders a vote, whether in person or by proxy, shall be accepted to the exclusion of the votes of the other joint holders, and for this purpose seniority shall be determined by the order in which the names stand in the register of members.

66. A member of unsound mind, or in respect of whom an order has been made by any Court having jurisdiction in lunacy, may vote, whether on a show of hands or on a poll, by his committee, *curator bonis*, or other person in the nature of a committee or *curator bonis* appointed by such Court, and such committee, *curator bonis*, or other person may on a poll vote by proxy.

67. No member shall be entitled to vote at any general meeting unless all calls or other sums presently payable by him in respect of shares in the Company have been paid.

68. On a poll votes may be given either personally or by proxy.

69. The instrument appointing a proxy shall be in writing under the hand of the appointor or of his attorney

duly authorised in writing, or if the appointor is a corporation either under the common seal or under the hand of an officer or attorney so authorised.

70. No person shall act as a proxy unless either he is entitled on his own behalf to be present and vote at the meeting at which he acts as proxy or he is appointed to act at that meeting as proxy for a corporation.

[fol. 5464] 71. The instrument appointing a proxy and the power of attorney or other authority (if any) under which it is signed, or a notarially certified copy of such power or authority, shall be deposited at the office not less than 48 hours before the time appointed for holding the meeting or adjourned meeting at which the person named in the instrument proposes to vote, and in default the instrument of proxy shall not be treated as valid. No instrument appointing a proxy shall be valid after the expiration of 12 months from the date named in it as the date of its execution.

72. An instrument of proxy may be in the following form, or in any other form which the Directors shall approve.

British Timken Limited

I —— of —— being a member of the above named Company hereby appoint —— of —— or failing him ——of —— as my proxy to vote for me, and on my behalf, at the ordinary [*or* extraordinary *as the case may be*] general meeting of the Company to be held on the —— day of ——, 19—, and at any adjournment thereof.

As Witness my hand this —— day of —— 19 —.

73. A vote given in accordance with the terms of an instrument of proxy shall be valid, notwithstanding the previous death or insanity of the principal or revocation of the proxy, or of the authority under which the proxy was executed, or the transfer of the share in respect of which the proxy is given, provided that no intimation in writing of such death, insanity, revocation or transfer shall have been received by the Company at the office before the commencement of the meeting or adjourned meeting at which the proxy is used.

Directors

74. The Company in General Meeting with the sanction in writing under hand of the holders of a majority of the

[fol. 5465] "A" shares for the time being issued and of the holders of a majority of the "B" shares for the time being issued, may by ordinary resolution adopt and from time to time rescind or vary by-laws prescribing the maximum and minimum number of directors, and prescribing and regulating the appointment, removal and remuneration of the directors, and if thought fit their retirement by rotation or otherwise. Any by-laws so adopted and for the time being in force shall be as effective and binding upon the Company and all its members as though the provisions thereof were incorporated in these presents, and so long as any such by-laws are in force directors shall only be appointed and removed from office and be subject (if at all) to retirement by rotation or otherwise as thereby provided.

75. If and whenever there are no by-laws in force adopted pursuant to the last preceding article, the number of the directors shall not be less than three and the Company in General Meeting may by ordinary resolution appoint directors and fix their remuneration and by extraordinary resolution remove any director from office.

76. The office of a Director shall be vacated in any of the following events, namely:—

(A) If (subject as regards a Managing Director to the provisions of any contract between him and the Company) he resign his office by writing under his hand left at the office.

(B) If he become bankrupt or compound with his creditors.

(C) If he be found lunatic or become of unsound mind.

(D) If he be incapacitated by ill-health from performing his duties for a continuous period of six months, and the Directors resolve that his office be vacated.

(E) If he be convicted of an indictable offence.

77. A Director may hold any other office or place of profit under the Company (other than the office of Auditor) in conjunction with his office of Director, and no Direc-
[fol. 5466] tor or intending Director shall be disqualified by his office from contracting with the Company, either with regard to his tenure of any such other office or place of profit, or as vendor, purchaser or otherwise, nor shall any

such contract, or any contract or arrangement entered into by or on behalf of the Company in which any Director is in any way interested, be liable to be avoided, nor shall any Director so contracting or being so interested be liable to account to the Company for any profit realized by any such contract or arrangement by reason of such Director holding that office, or of the fiduciary relation thereby established, but the nature of his interest shall be disclosed by him at the meeting of the Directors at which the contract or arrangement is determined on, if his interest then exists, or in any other case at the first meeting of the Directors after the acquisition of his interest. Provided, nevertheless, that a Director shall not vote in respect of any contract or arrangement in which he is so interested, and if he shall do so his vote shall not be counted, but this prohibition shall not apply to any arrangement for giving any Director any security or indemnity in respect of money lent by him to or obligations undertaken by him for the benefit of the Company, nor to any contract by a Director to subscribe for or underwrite shares or debentures of the Company, and it may at any time be suspended or relaxed to any extent, and either generally or in respect of any particular contract, arrangement or transaction, by extraordinary resolution of the Company in general meeting.

Powers of Directors

78. The business of the Company shall be managed by the Directors, who may exercise all such powers of the Company as are not by the statutes or by these presents required to be exercised by the Company in general meeting, subject nevertheless to any regulations of these presents, to the provisions of the statutes, and to such regulations, being not inconsistent with the aforesaid regulations or provisions, as may be prescribed by extraordinary resolution of the Company in general meeting, but no regulation made by the Company in general meeting shall invalidate any prior act of the Directors which would have been valid if such regulation had not been made. The general powers given by this article shall not be limited or restricted by any special authority or power given to the Directors by any other article.

[fol. 5467] 79. The Directors may establish any local boards or agencies for managing any of the affairs of the

Company, either in the United Kingdom or elsewhere, and may appoint any persons to be members of such local boards, or any managers or agents, and may fix their remuneration, and may delegate to any local board, manager or agent any of the powers, authorities and discretions vested in the Directors, with power to sub-delegate, and may authorise the members of any local board, or any of them, to fill any vacancies therein, and to act notwithstanding vacancies, and any such appointment or delegation may be made upon such terms and subject to such conditions as the Directors may think fit, and the Directors may remove any person so appointed, and may annul or vary any such delegation, but no person dealing in good faith and without notice of any such annulment or variation shall be affected thereby.

80. The Directors may from time to time and at any time by power of attorney under the seal appoint any company, firm or person or any fluctuating body of persons, whether nominated directly or indirectly by the Directors, to be the attorney or attornies of the Company for such purposes and with such powers, authorities and discretions (not exceeding those vested in or exercisable by the Directors under these presents) and for such period and subject to such conditions as they may think fit, and any such power of attorney may contain such provisions for the protection and convenience of persons dealing with any such attorney as the Directors may think fit and may also authorise any such attorney to sub-delegate all or any of the powers, authorities and discretions vested in him.

81. The Company may exercise the powers conferred by section 79 of the Act with regard to having an official seal for use abroad, and such powers shall be vested in the Directors.

82. The Directors may exercise all the powers of the Company to borrow money, and to mortgage or charge its undertaking, property and uncalled capital, and to issue bonds, debentures, debenture stock, and other securities. Provided that no bonds, debentures, debenture stock or other securities in the nature of loan capital shall be issued without the sanction in writing under hand of the holders of a majority of the "A" shares for the time being issued and of the holders of a majority of the "B" shares for the [fol. 5468] time being issued, but so that nothing herein contained shall be held to restrict the power of the Direc-

tors to obtain (without such sanction) temporary loans from the Company's bankers and others in the ordinary course of business or to create mortgages or charges upon the Company's undertaking or property and to issue debentures or other securities for securing the same.

83. All cheques, promissory notes, drafts, bills of exchange, and other negotiable or transferable instruments, and all receipts for moneys paid to the Company, shall be signed, drawn, accepted, endorsed, or otherwise executed, as the case may be, in such manner as the Directors shall from time to time by resolution determine.

Managing Director

84. The Directors may from time to time appoint one or more of their body to the office of Managing Director for such period and on such terms as they think fit. Provided that a Managing Director shall *ipso facto* vacate office as such if he cease from any cause to be a Director, or (subject to the terms of any contract between him and the Company) if the Directors resolve that his term of office as Managing Director be determined.

85. A Managing Director shall receive such remuneration (whether by way of salary, commission, or participation in profits, or partly in one way and partly in another) as the Directors may determine, but so that such remuneration shall not exceed such rate or amount as from time to time shall be sanctioned by writing under hand of the holders of a majority of the "A" shares for the time being issued and of the holders of a majority of the "B" shares for the time being issued.

86. The Directors may entrust to and confer upon a Managing Director any of the powers exercisable by them as Directors upon such terms and conditions and with such restrictions as they think fit, and either collaterally with or to the exclusion of their own powers, and may from time to time revoke, withdraw, alter or vary all or any of such powers.

[fol. 5469] Proceedings of Directors

87. The Directors may meet together for the dispatch of business, adjourn and otherwise regulate their meetings as they think fit. A Director may, and the Secretary on the

requisition of a Director shall, at any time summon a meeting of the Directors. It shall not be necessary to give notice of a meeting of Directors to any Director for the time being absent from the United Kingdom.

88. Questions arising at any meeting shall be determined by a majority of votes and in case of an equality of votes the Chairman shall have a casting vote.

89. The quorum necessary for the transaction of the business of the Directors may be fixed by the Directors, and unless so fixed at any other number shall be two.

90. The continuing Directors or a sole continuing Director may act notwithstanding any vacancies in the Board.

91. The Directors may elect a chairman of their meetings and determine the period for which he is to hold office, but if no such chairman be elected, or if at any meeting the chairman be not present within five minutes after the time appointed for holding the same, the Directors present may choose one of their number to be chairman of the meeting.

92. A resolution in writing, signed by all the Directors for the time being in the United Kingdom, shall be as effective as a resolution passed at a meeting of the Directors duly convened and held.

93. A meeting of the Directors for the time being, at which a quorum is present, shall be competent to exercise all powers and discretions for the time being exercisable by the Directors.

94. The Directors may delegate any of their powers to committees consisting of such member or members of their body as they think fit. Any committee so formed shall in [fol. 5470] the exercise of the powers so delegated conform to any regulations that may be imposed on them by the Directors.

95. The meetings and proceedings of any such committee consisting of two or more members shall be governed by the provisions of these presents regulating the meetings and proceedings of the Directors, so far as the same are applicable and are not superseded by any regulations made by the Directors under the last preceding article.

96. All acts done by any meeting of Directors, or of a committee of Directors, or by any person acting as a Director, shall, notwithstanding it be afterwards discovered that there was some defect in the appointment of any such Director, or person acting as aforesaid, or that they or

any of them were disqualified, or had vacated office, be as valid as if every such person had been duly appointed, and was qualified and had continued to be a Director.

Minutes

97. The Directors shall cause minutes to be made in books provided for the purpose—

(A) Of all appointments of officers made by the Directors.

(B) Of the names of the Directors present at each meeting of Directors and of any committee of Directors.

(C) Of all resolutions and proceedings at all meetings of the Company and of the Directors and of committees of Directors.

The Seal

98. The seal of the Company shall not be affixed to any instrument except by the authority of a resolution of the Board and shall be so affixed in the presence of at least one Director and the Secretary, both of whom shall sign every instrument to which the seal is so affixed in their presence.

[fol. 5471] Alternate Directors

99. Any Director may at any time appoint any person approved by the Board (such approval not to be unreasonably withheld) to be an alternate Director of the Company, and may at any time remove any alternate Director so appointed by him from office. An alternate Director so appointed shall not be entitled to receive any remuneration from the Company.

100. An alternate Director shall (subject to his giving to the Company an address within the United Kingdom at which notices may be served upon him) be entitled to receive notices of all meetings of the Board, and to attend and vote as a Director at any such meeting at which the Director appointing him is not personally present, and generally to perform all the functions of his appointor as a Director in the absence of such appointor.

101. An alternate Director shall *ipso facto* cease to be an alternate Director if his appointor ceases for any reason to be a Director.

102. All appointments and removals of alternate Directors shall be effected by writing under the hand of the Director making or revoking such appointment left at the office.

Dividends and Reserves

103. The profits of the Company available for dividend and resolved to be distributed shall be applied in the payment of dividends to the holders of the "A" and "B" shares *pari passu* as a single class of shares. The Company in general meting may declare dividends accordingly.

104. No dividend shall be payable except out of the profits of the Company, or in excess of the amount recommended by the Directors.

105. All dividends shall be declared and paid according to the amounts paid on the shares in respect whereof the divi- [fol. 5472] dend is paid, but no amount paid on a share in advance of calls shall, while carrying interest, be treated for the purposes of this article as paid on the share. All dividends shall be apportioned and paid *pro rata* according to the amounts paid on the shares during any portion or portions of the period in respect of which the dividend is paid, but if any share is issued on terms providing that it shall rank for dividend as from a particular date, such share shall rank for dividend accordingly.

106. The Directors may from time to time pay to the members such interim dividends as appear to the Directors to be justified by the profits of the Company.

107. The Directors may from time to time set aside out of the profits of the Company (including therein premiums obtained on the issue of shares) and carry to reserve or reserves such sums as they think proper, which shall, at the discretion of the Directors, be applicable for meeting contingencies, or for the gradual liquidation of any debt or liability of the Company, or for repairing or maintaining the works, plant and machinery of the Company, or for equalizing dividends, or for any other purpose to which the profits of the Company may properly be applied, and pending such application may, at the like discretion, either be employed in the business of the Company, or be invested in such investments (other than shares of the Company) as the Directors may from time to time think fit.

108. The Directors may deduct from any dividend payable to any member all sums of money (if any) presently

payable by him to the Company on account of calls or otherwise.

109. No dividend shall bear interest as against the Company.

110. Any dividend may be paid by cheque sent through the post to the registered address of the member or person entitled thereto, and in case of joint holders to any one of such joint holders. Every such cheque shall be made payable to the order of the person to whom it is sent.

111. If several persons are registered as joint holders of any share, any one of them may give effectual receipts for any dividend or other moneys payable on or in respect of the share.

[fol. 5473]

Capitalisation of Profits

112. The Company in general meeting may, upon the recommendation of the Directors, and with the consent in writing under hand of the holders of a majority of the "A" shares for the time being issued and of the holders of a majority of the "B" shares for the time being issued, resolve that it is desirable to capitalise any undivided profits of the Company (including profits carried and standing to any reserve or reserves or other special account), and accordingly that the Directors be authorised and directed to appropriate the profits resolved to be capitalised to the members in proportion to the amounts paid up on the issued Ordinary shares held by them respectively, and to apply such profits on their behalf, either in or towards paying up the amounts, if any, for the time being unpaid on the shares held by such members respectively, or in paying up in full unissued shares or debentures of the Company of a nominal amount equal to such profits, such shares or debentures to be allotted and distributed, credited as fully paid up, to and amongst such members in the proportion aforesaid, or partly in one way and partly in the other.

113. Whenever such a resolution as aforesaid shall have been passed, the Directors shall make all appropriations and applications of the undivided profits resolved to be capitalised thereby, and all allotments and issues of fully paid shares or debentures, if any, and generally shall do all acts and things required to give effect thereto, with full power to the Directors to make such provision by the issue of fractional certificates or by payment in cash or otherwise

as they think fit for the case of shares or debentures becoming distributable in fractions, and also to authorise any person to enter on behalf of all the members holding Ordinary Shares into an agreement with the Company providing for the allotment to them respectively, credited as fully paid up, of any further shares or debentures to which they may be entitled upon such capitalisation, or (as the case may require) for the payment up by the Company on their behalf, by the application thereto of their respective proportions of the profits resolved to be capitalised, of the amounts or any part of the amounts remaining unpaid on their existing shares, and any agreement made under such authority shall be effective and binding on all such members.

[fol. 5474] Accounts

114. The Directors shall cause true accounts to be kept:—

(a) Of the sums of money received and expended by the Company and the matters in respect of which such receipt and expenditure takes place; and

(b) Of the assets and liabilities of the Company.

115. The books of account shall be kept at the office, or at such other place as the Directors think fit, and shall always be open to the inspection of the Directors. No member (other than a Director) shall have any right of inspecting any account or book or document of the Company except as conferred by statute or authorised by the Directors or by the Company in general meeting.

116. Once at least in every year the Directors shall lay before the Company a proper profit and loss account and a balance-sheet containing a general summary of the capital, the assets, and the liabilities of the Company arranged under suitable heads, both made up to a date not more than six months before the meeting.

117. Every such balance-sheet as aforesaid shall be signed on behalf of the Board by two of the Directors, and shall be accompanied by a report of the Directors as to the state of the Company's affairs and the amount which they recommend to be paid by way of dividend to the members, and the amount (if any) which they have carried or propose to carry to reserve. It shall also have attached

to it, or there shall be inserted at the foot thereof a reference to, the Auditors' report.

118. A copy of the profit and loss account, balance-sheet, and Directors' report shall, seven days previously to the meeting, be delivered or sent by post to the registered address of every member.

Audit

119. The Company shall at every ordinary meeting appoint an Auditor or Auditors to hold office until the next ensuing ordinary meeting.

[fol. 5475] 120. A Director or officer of the Company shall not be capable of being appointed Auditor of the Company.

121. The Directors may fill any casual vacancy in the office of Auditor, but while any such vacancy continues the surviving or continuing Auditor or Auditors (if any) may act.

122. The remuneration of the Auditors shall be fixed by the Company in general meeting, except that the remuneration of any Auditors appointed to fill any casual vacancy may be fixed by the Directors.

123. A person other than a retiring Auditor shall not be capable of being appointed an Auditor at an ordinary meeting unless notice of an intention to nominate that person to the office of Auditor has been given by a member to the Company not less than 14 days before the meeting, and the Company shall send a copy of any such notice to the retiring Auditor and shall give notice thereof to the members not less than 7 days before the meeting, provided that if after a notice of the intention to nominate an Auditor has been so given an ordinary meeting is called for a date 14 days or less after that notice has been given, the notice, though not given within the time required by this provision, shall be deemed to have been properly given for the purposes thereof and the notice to be given by the Company may, instead of being given within the time required by this provision, be given at the same time as the notice of the meeting.

124. The Auditors' report to the shareholders made pursuant to the statutory provisions as to audit for the time being in force shall be read before the Company in general meeting and shall be open to inspection by any shareholder, who shall be entitled to be furnished with a copy of the balance sheet and Auditors' report at such charge not ex-

ceeding sixpence for every hundred words as the Directors determine.

Notices

125. Any notice or document may be served by the Company on any member either personally or by sending it through the post in a prepaid letter addressed to such mem- [fol. 5476] ber at his registered address as appearing in the register of members. In the case of joint holders of a share all notices shall be given to that one of the joint holders whose name stands first in the register of members, and notice so given shall be sufficient notice to all the joint holders.

126. Any member described in the register of members by an address not within the United Kingdom who shall from time to time give to the Company an address within the United Kingdom at which notices may be served upon him shall be entitled to have notices served upon him at such address.

127. Any notice or other document, if served by post, shall be deemed to have been served at the time when the letter containing the same is posted, and in proving such service it shall be sufficient to prove that the letter containing the notice or document was properly addressed, stamped and posted.

128. Any notice or document delivered or sent by post to or left at the registered address of any member in pursuance of these presents shall, notwithstanding that such member be then dead or bankrupt, and whether or not the Company have notice of his death or bankruptcy, be deemed to have been duly served in respect of any share registered in the name of such member as sole or joint holder, unless his name shall at the time of the service of the notice or document have been removed from the register as the holder of the share, and such service shall for all purposes be deemed a sufficient service of such notice or document on all persons interested (whether jointly with or as claiming through or under him) in the share.

Winding Up

129. If the Company shall be wound up the Liquidator may with the sanction of an extraordinary resolution of the contributories divide amongst the contributories in specie the whole or any part of the assets of the Company, and

may with the like sanction vest the whole or any part of such assets in trustees upon such trusts for the benefit of the contributories as the Liquidator with the like sanction shall think fit.

[fol. 5477] Indemnity.

130. The Directors, Managing Directors, Auditors, Secretary and other officers for the time being of the Company and the Trustees (if any) for the time being acting in relation to any of the affairs of the Company, and their respective executors or administrators, shall be indemnified and secured harmless out of the assets of the Company, from and against all actions, costs, charges, losses, damages and expenses which they or any of them, their or any of their executors or administrators, shall or may incur or sustain by reason of any act done, concurred in, or omitted in or about the execution of their duty or supposed duty in their respective offices or trusts, except such (if any) as, they shall incur or sustain through their own wilful neglect or default respectively, and none of them shall be answerable for the acts, receipts, neglects or defaults of any other of them, or for joining in any receipt for the sake of conformity, or for any bankers or other persons with whom any moneys or effects of the Company shall be lodged or deposited for safe custody, or for the insufficiency or deficiency of any security upon which any moneys of the Company shall be placed out or invested, or for any other loss, misfortune or damage which may happen in the execution of their respective offices or trusts, or in relation thereto, except the same shall happen by or through their own wilful neglect or default respectively.

[fol. 5478] Names, Addresses and Descriptions of Subscribers.

Arthur John McCormack, Middle Park, Paignton.
Director of Public Company.
George Ware Grazebrook, Greys Mallory, Warwick.
Director of Public Company.

[fol. 5479] The Companies Acts, 1908 to 1917

Company Limited by Shares

Memorandum and Articles of Association of British Timken Limited

Incorporated the 4th Day of June, 1920

Linklaters & Paines, 2, Bond Court, Walbrook, E. C. 4

[fol. 5480] DEFENDANT'S EXHIBIT 200

An Agreement made the 20th day of April 1928 between The Timken Roller Bearing Company of Canton, Ohio, U. S. A. (hereinafter called "the American Company") of the one part and Michael Bruce Urquhart Dewar of 4 Central Buildings, Westminster (hereinafter called "Mr. Dewar") of the other part.

Supplemental to certain Heads of Agreement between the same parties (hereinafter called "the Heads of Agreement") dated the 16th May 1927 and relating to the purchase by the parties hereto of the whole of the issued share capital (50,000 shares of £1 each fully paid) of British Timken Limited (hereinafter called "the British Company").

Whereas the purchase of the said shares contemplated at the date of the Heads of Agreement has since been effected and the said shares have been transferred to the parties hereto or their nominees as provided by Clause 1 of the Heads of Agreement.

And Whereas the Heads of Agreement have in part been carried into effect by means of Special and Ordinary Resolutions of the Company and certain agreements entered into between the American Company and the British Company and between the British Company and Mr. Dewar.

And Whereas the parties hereto are desirous of entering into this present agreement with a view to further carrying the Heads of Agreement into effect.

Now it is Hereby Agreed as follows:—

1. Each of them the American Company and Mr. Dewar hereby declares by way of honourable understanding and not as a legally binding agreement that if the other of them [fol. 5481] or any of his nominees shall give a transfer notice under Article No. 26 of the British Company's new

Articles of Association adopted by one of the said Special Resolutions in respect of all or any of the shares in the British Company owned by the other party and the shares comprised in such transfer notice or any of them are not purchased by the other members of the British Company to whom the same are offered pursuant to the said Article then.

(a) The declaring party will not unreasonably stand in the way of the other party selling such unpurchased shares or any of them to any person (not being a person to whom the declaring party shall object on reasonable grounds) at any price not being less than that at which such shares shall have been offered to the members pursuant to the said transfer notice and

(b) In the event of the other party effecting a sale the declaring party will do all acts and things in his power in order to procure the registration of the transfer of the said shares to the purchaser thereof and in particular will exercise the voting rights conferred by any shares in the British Company held or controlled by the declaring party in such manner and give all such consents and sanctions as may be reasonably required and procure any Directors of the British Company controlled by the declaring party to pass all resolutions necessary for procuring the registration of such transfers.

2. Upon the death of Mr. Dewar or in the event of his being incapacited by ill-health or otherwise for a consecutive period of six months from discharging his duties as a Director of the British Company the American Company shall have an option (exerciseable within three months after the death of Mr. Dewar or after the expiration of the said period of six months as the case may be) of purchasing all the shares in the British Company together with all the shares in any subsidiary Companies belonging to Mr. Dewar at the date of his death or the expiration of the [fol. 5482] said period of six months (as the case may be) at their fair value to be determined failing agreement by an award of two London Chartered Accountants as arbitrators one to be appointed by each party or an umpire to be appointed by the said arbitrators (such reference to arbitration to be deemed for all purposes a reference to arbitration under the English Arbitration Act 1889 or any statu-

tory modification or re-enactment thereof for the time being in force). The said option shall be exerciseable by notice in writing served upon Mr. Dewar or in the case of his death his legal personal representatives within the said period of three months and if it is exercised the sale of the shares shall be completed by delivery of duly executed transfers of and the certificates for the shares against payment of the purchase price within seven days after the price has been agreed or determined by arbitration as aforesaid.

3. If either of the parties hereto shall give a transfer notice under the British Company's new Articles of Association in respect of all or any of the shares in the British Company held by such party and the other party hereto shall purchase such shares the purchasing party shall have an option of also purchasing and if called upon by the selling party so to do shall be bound also to purchase all or a like proportion of the selling party's total shareholding in every subsidiary Company as at the date of the transfer notice. Such option of purchasing or right of putting the said shares in subsdiary Companies shall be exercised if at all by notice in writing served on the other party within 21 days after completion of the purchase of the shares of the British Company included in the transfer notice and the price payable for the shares in subsidiary Companies which the purchasing party elects or becomes bound to purchase shall be determined failing agreement by arbitration and the purchase of such shares shall be completed as provided by Clause 2 hereof.

4. For the purposes hereof the expression "subsidiary Company" means any Company controlled by the British Company so far as regards ordinary business whether by reason of its holding a clear majority of all the issued shares of such Company or shares carrying a voting control or otherwise.

[fols. 5483-5484] 5. The Heads of Agreement shall be completely superseded upon the execution of this Agreement and shall cease to be operative as from the date hereof.

6. This Agreement shall be construed and have effect as an agreement made in England and in accordance with the Laws of England.

In Witness whereof the American Company has caused its Common Seal to be hereunto affixed and Mr. Dewar

has hereunto set his hand and Seal the day and year first above written.

The Timken Roller Bearing Company, by John Frederic Strough, Secretary-Treasurer.

M. B. U. Dewar. Signed, Sealed and Delivered by the above named Michael Bruce Urquhart Dewar in the presence of R. O. Squire, 37 Golden Hillvick Road, Small Heath, Birmingham. (Seal.)

[fol. 5485] DEFENDANT'S EXHIBIT 201

This Agreement dated the Twentieth day of April One thousand nine hundred and twenty eight between The Timken Roller Bearing Company of the City of Canton Ohio United States of America (hereinafter for convenience called "the American Company") British Timken Limited of the City of Birmingham England (hereinafter for convenience called "the British Company") and Michael Bruce Urquhart Dewar of Number 4 Central Buildings Westminster England (hereinafter for convenience called "Mr. Dewar") is Supplemental to two Agreements already executed and made as of the First day of January One thousand nine hundred and twenty eight by and between the American Company and the British Company (hereinafter for convenience collectively referred to as "the Companies Agreement") and another Agreement already executed and made the Twentieth day of April One thousand nine hundred and twenty eight by and between the American Company and Mr. Dewar (hereinafter for convenience referred to as "the Timken Dewar Agreement")

Whereas the parties hereto contemplate that there will hereafter be Companies or Associations engaged in the manufacture or sale of bearings in the British Company's territory as defined in the Companies Agreement which Companies shall be sub-licensees of the British Company and the American Company under the Companies Agreement either immediately or at one or more removes and/or subsidiary Companies as defined in the Timken Dewar Agreement

And whereas the parties hereto desire to make special provision with respect to such Companies which are here-

inafter for convenience referred to as "subsidiary Companies"

Now it is hereby agreed between the parties hereto as follows (namely):

1. Each of the parties hereto shall have the right to have at least one representative on the Board having the chief authority over a subsidiary Company whatever may be the functions or description of such Board whether Directorial Administrative Supervisory or otherwise so long as such party shall hold any stocks shares securities or other proprietary interest in such Company

2. If any of the parties hereto shall at any time hold any stocks shares securities or other proprietary interest [fol. 5486] in a subsidiary Company either in his own name or in the name of a nominee (i.e. a bare trustee for such party) such party shall be entitled at his own will and pleasure to transfer or cause to be transferred the said stocks shares securities or other proprietary interest or any part thereof from himself to a nominee or from a nominee to himself or another nominee as such party may direct.

3. None of the parties hereto shall sell or transfer any stocks shares securities or other proprietary interest in a subsidiary Company belonging to him (except as aforesaid) without first offering the same to the other parties hereto. Every such offer shall be made by notice in writing specifying the interest to which it relates and shall remain open for acceptance by either of the other parties hereto for Thirty days after it is received by such party and any acceptance of an offer shall be signified by notice in writing to the party making the offer. If any such offer is duly accepted the price payable for the interest specified in the offer and if two of the parties hereto accept an offer the allocation of all or part of such interest to one or other of the accepting parties as purchaser shall be determined and the sale and transfer of the interest specified in the offer shall be completed in the manner and at the time which shall be fixed under the provisions hereinafter contained.

4. The parties hereto shall give any consents and exercise any voting powers and execute and do any other deeds acts or things which may be necessary for the purpose of giving effect to this Agreement or any Award made in an Arbitration under this Agreement.

5. If any question shall arise between the parties hereto or any of them with respect to the price or allocation afore-

said or the completion of any such sale or transfer or any matter or thing to be done under this Agreement in connection with such sale or transfer every such question shall in default of agreement be settled by arbitration under the English Arbitration Act 1889 or any statutory modification or re-enactment thereof for the time being in force.

In witness whereof the Timken Roller Bearing Company by the authority of its Board of Directors has caused these [fols. 5487-5488] presents to be executed in triplicate by its secretary and its Corporate Seal to be hereto affixed and British Timken Limited under the authority of its Board of Directors has caused its Common Seal to be affixed hereto in triplicate and the said Michael Bruce Urquhart Dewar has executed this Agreement in triplicate the day and year first above written.

The Timken Roller Bearing Company, By John Frederic Strough, Secretary & Treasurer.

The Common Seal of British Timken Limited was hereunto affixed by order of the Board in the presence of:

M. B. U. Dewar, Wm. Dallow, Directors; R. O. Squire, Secretary.

Signed Sealed and Delivered by the above named Michael Bruce Urquhart Dewar in the presence of:

A. A. Hill, 42 Auderlon Road, Sparkbrook, Birmingham.

British Timken Limited

May 1st. 1928.

J. F. Strough Esq, Messers. The Timken Roller Bearing Company, Canton, Ohio, U.S.A.

Dear Mr. STROUGH:

You will recollect that when you were in London I mentioned the importance of inducing two or three Frenchmen possessing considerable influence of the right kind to become members of the Board of the proposed French Timken Company.

After considerable trouble, I have succeeded in finding two Frenchmen, and one Englishman residing in Paris, who, I think, would prove most suitable and be of great assistance.

The more important of these is Mons. Pierre Marchal, who is the leading manufacturer of electrical equipment for Automobiles in France, and who has great influence in the French automobile industry.

I went to Paris in order to meet Mons. Marchal, who impressed me as a most suitable person to be President of our French Company.

I discussed the proposed Company with him, and he expressed his willingness to act as President of the Board, and to use his influence to further the interests of the company.

[fol. 5490] Another Frenchman who should prove a desirable and useful member of the Board is Mons. A. Senz, who is the President and principal proprietor of Million-Guiet, one of the leading makers of automobile bodies in France. He also possesses considerable influence in the French motor car industry.

The Managing Director of Hotchkiss Motors, Mr. H. M. Ainsworth, should also prove a valuable member of the sireable and useful member of the Board is Mons. A. Sanz, Board, and has already been of assistance to us. I believe I spoke to you about him when you were in London. Both he and Mons. Sanz would be willing to become members of the Board.

I think it most desirable that we should secure the services of these three gentlemen, as they would help us to get into touch rapidly with all the principal manufacturers in the French automobile industry, and their inclusion on the Board would create a very good impression in France.

As Mons. Marchal enjoys a position of considerable importance, and possesses ample financial resources, he would not give his assistance to the Company without adequate inducement. He intimated that he would not be interested in a fixed fee for acting as President, and that he would want some interest in the Capital, in addition to some sort of commission for his services. However, as he thinks very highly of the prospects of the French Company, if it is properly introduced to the French automobile industry, he would be willing to take his remuneration in accordance with the

success of the Company. The least that he would be prepared to accept would be an option on some of the shares, and a small commission on the turnover during the early years of the Company, and would only consider an arrangement that would continue for several years, as he naturally wishes to enjoy the fruits of his work on behalf of the Company.

I sent Mr. Seward over to Paris to negotiate terms in detail with Mons. Marchal, and a provisional agreement has been arrived at, subject to your approval.

[fol. 5491] Briefly, the outline of this proposed agreement is as follows:

A Committee of Management shall be formed consisting of Mons. Marchal, Mons. Sanz, and Mr. Ainsworth. The functions of the Committee shall be principally of an advisory nature, and their powers and duties shall be fixed by the Board.

The members of the Committee shall become members of the Board as and when required by the shareholders.

The Committee shall receive its remuneration as a whole, and the members shall decide themselves in what proportions it is distributed amongst them.

The Committee shall have an option on 16% of the first and subsequent issues of shares for a period of five years. The price of the first issue to be at par, and that of subsequent issues to be fixed by arbitration.

If any member of the Committee ceases to be a member of the Comittee, his shares shall be offered to the other of the Committee, his shares shall be offered to the other arbitration.

The Committee shall receive a commission of 2½% on the turnover, as defined below, until two years after the termination of the year in respect of which a dividend at the rate of 20% per annum on the first issue of shares has been paid and the option on the shares has been exercised.

The turnover shall be the nett sales encashed of the French Company, excluding all sales to British Timken Ltd. or its subsidiary Companies, but excluding all sales to Railway Companies, or similar concerns.

The agreement shall continue for a period of five years, and shall be extended for a second period of five years, if [fol. 5492] the turnover, as defined above, in the fifth year amounts to at least the equivalent of £100,000.

A contract is being drafted by our Lawyer in Paris which will be submitted to Mr. Duncan, and then to you.

The reason for forming a Committee of Management is that the remuneration of its members would not be liable to the French tax of 18% on Directors fees in respect of their remuneration as members of the Committee.

Further, the obligation of the members of the Board to retire annually is not affected, so that if at any time it is considered desirable, the above gentlemen could retire from the Board, but remain as members of the Committee of Management.

When you were in London, it was provisionally agreed that the shares should be held as follows:

Mr. Timken	59%
Mr. Dewar	39%
British Timken	2%

I think that the most equitable arrangement to meet this option of 16% of the share capital would be that in the event of the option being exercised, your holding should come to 52%, mine to 30%, the French Directors 16%, and British Timken 2%.

I would again emphasize that after considerable enquiry and consideration, I am of the opinion that it is most desirable to have these gentlemen as members of the Board, and I think that the terms provisionally agreed are satisfactory considering the importance of the individuals concerned and their probable utility to the Company.

[fol. 5493] Mons. Marchal is in Algiers until about the end of May, so I shall be glad to have your comments or agreement before then.

With kindest regards,
Yours sincerely, M. B. U. Dewar

Mr. M. B. U. Dewar, 4 Central Buildings, Westminster SW 1, London, England.

DEAR MR. DEWAR:

This will confirm my cablegram of today, as follows:

We approve French proposals your letter May First

With kindest regards, —— ——, Secretary and Treasurer.

JFS-HG

[fol. 5495] DEFENDANT'S EXHIBIT 204

Stibbard, Gibson & Co.

4th June, 1928.

DEAR SIRS,

French Company

We have settled with Mr. Seward the terms of the Statutes of Incorporation of the French Company, and have also to-day settled with him the terms of a letter to be written by Mr. Dewar to Messrs. Marchal, Sanz, and Ainsworth, outlining the conditions upon which they are to accept office as members of the Technical Committee of the French Company; these conditions have been agreed in principle by Mr. Seward on behalf of Mr. Dewar and Messrs M. S. & A.

Mr. Seward informs us that he expects the incorporation of the French Company to be completed in the course of the present week and that Mr. Dewar purposes visiting Paris next week in order to attend the first meeting of the French Company and comply with the formalities of French Law; he will at the same time complete the arrangements with the three members of the Technical Committee.

The shares in the French Company have to be taken up and paid for at the start of the Company and Mr. Dewar has asked us to advise you that the amount to be paid for [fol. 5496] the shares should be in Paris by the 15th instant; the money should therefore be in this country by the 14th

inst. We have to-day sent you a cable with regard to the money as per copy enclosed.

Yours faithfully, Stibbard Gibson & Co.

The Timken Roller Bearing Company.

P. S. We have received your cable advising that the fund for the French Company will be with the British Company on the 8th instant.

[fol. 5497] DEFENDANT'S EXHIBIT 205

June, 1928.

Mons. P. Marchal, Mons. A. Sanz, Mons. H. M. Ainsworth.

SIRS,

As promoter of the "Societe Anonyme Francaise Timken" (the French Company) which will be incorporated at an early date in Paris and of which I have communicated to you draft Articles of Association, I beg to confirm the following:

(1) I will cause to be moved at the First General Meeting of the Shareholders of the French Company that will be held for Incorporation Purposes, the appointment of yourselves as Directors thereof.

At the same meeting, there shall also be moved that a nominal fee of 2,000 francs per annum be voted for each Director, said attendance fee being doubled for the Chairman of the Board of Directors.

I undertake to move these appointments and fees and to get them passed both as being myself one of the principal shareholders and as answering for the other subscribers of the First Capital Stock of the French Company.

(2) On the other hand, and in virtue of the above quali-
[fol. 5498] fications I also pledge myself:

1. To cause Mons. Marchal to be elected Chairman of the Board of the New Company, at the first Meeting of said Board.

2. To cause you to be elected a Technical Committee.

Those appointments being subject to the following conditions:

(a) The Three Members of the Technical Committee shall reside in France

(b) The Committee shall have no particular powers nor any right of supervision over the Company's operations, the Members of the said Committee being only invited to advise the Board of Directors, when there is occasion, respecting matters of commercial or of a technical character concerning the manufacturing and the sale of the Company's products.

(c) The appointment of the Three Members of the Technical Committee shall be considered as running from the day on which the Company is finally incorporated and the tenure of office of said Members shall come to an end five years, at the latest, after the said date, unless the five years extension foreseen in the following paragraph should become effective. Their duties shall be entirely independent from those which may have been vested in them as Directors by the General Meeting of shareholders. No member on the Technical Committee, shall have the right to resign as a Director so long as he serves as a Member of the Technical Committee.

Should any Member eventually be dismissed from the Board of Directors, this shall not involve dismissal as a Member of the Technical Committee. If any Member of the Technical Committee shall become incapable of performing his functions for a period of six months his office shall be vacated.

[fol. 5499] The above five years' tenure may, however, be extended at your request, for another full period of five consecutive years if, in the course of the fifth and last year of the first term, the net amount of business (turnover) as defined in the next paragraph, reaches or exceed a total amount equivalent to the counter-value in French francs of 100,000 at the exchange rate of Frs. 125.—to say a minimum of Fcs. 12,500,000.

The amount of business (or turnover) just above mentioned shall include the amount of all the sales actually effected by the Company and invoiced after delivery in the course of the year subject to deduction, if there is occasion, of, to wit:

1. Sales effected through the French Company on account of British Timken Ltd. (the British Company) The Timken Roller Bearing Company of Can-

ton, Ohio, U. S. A. (The American Company) or their subsidiaries other than the French Company and concerning goods put by the British Company the American Company or their subsidiaires, at the French Company's disposal with a view to export out of the terri-
[fol. 5500] tories ascribed to the latter's activities under the license or trading agreements between the British Company and the French Company (the French Company's territory).

2. Business treated or exchanges of goods made as between the French Company and the British Company, the American Company or their subsidiaries for reasons of convenience, commercial customary or otherwise.

3. Business treated directly or through the French Company with French or foreign Concerns working or operating normal gauge railroads either in France or in French Colonies, Protectorates or Mandatory territories or even in any other countries of the European Continent and their Colonies.

On the other hand, so long as the French Company will not be manufacturing at their own works the various models of bearings used by the said railroads Concerns, the British Co. the American Co. and their subsidiaries shall be at liberty to, as they may think fit, sell or concede working or selling licenses to either French or Foreign normal gauge Railway Companies or to any other Companies the main and essential object of which is the construction or operation of cars serving for transportation by normal gauge Railways and this all over the French Company's territory.
[fol. 5501] The proceeds from business thus made with such Railway Companies or Companies for the construction or operation of cars serving for transportation by normal gauge railways shall not be taken into account in valuing the French Company's turnover, neither shall be taken into account for this purpose whatever profits may accrue therefrom to foreign Companies outside the Group.

On the other hand the supply of goods destined for the construction of vehicles to be hauled along narrow-gauge railway lines (as for instance to firms engaged in the construction or exploitation of light railways or of tramways) may if necessary be included in the

calculation of the minimum turnover fixed as above (Fcs. 12,500,000)

In the event of it being later decided to have the bearings for rolling stock used by the firms engaged in the construction or operation of normal guage railways manufactured in France, by the French Company, a new arrangement would have to be made between the French Company and the Technical Committee in order mutually to decide under what conditions the assistance of the Members of the Committee should be rewarded concerning those new manufacturings.

[fol. 5502] (3) During the period of five years to run from the final incorporation of the Company, the Members of the Technical Committee shall receive from the French Company an allowance amounting to 2½% of the whole total of the (net) sales actually effected by the French Company and invoiced after delivery during the period in question.

Said allowance of 2½% shall accrue after payment is received for the goods delivered and shall be payable within the fortnight next following the end of every term (three months) and shall be apportioned to the Three Members of the Technical Committee as they may think fit.

4. In virtue of the same qualifications as aforestated I undertake to give the first Members of the Technical Committee up to the end of the five year period to run from the day on which the French Company is finally incorporated, an option to acquire, but only on behalf of each of the three first Members and according to the proportion that may indicate for each one of them, a number of shares in the French Company representing a maximum of sixteen per cent (16%) of the original subscribed capital, i.e. 1,600 shares of Fcs. 100 each in all. These shares will, in principle, be furnished as to 7% by the group of shareholders of American origin, and as to the remaining 9% by my [fol. 5503] own group. In any case I reserve the right to meet the option by transferring class "A" shares registered either in my own name or in that of other shareholders.

If any of the first Members take up this option within the above defined time, the shares shall be sold

to him at the par value of 100 francs per share, and he shall be entitled to one Founder's share per 10 shares taken up on such terms as said Founder's shares are allotted under the Company's Articles of Association.

In the event of the Capital of the Company being increased through an issue of new shares the above option will extend to sixteen per cent of such issue but in this case the sale price shall be determined by mutual agreement or, failing this, by arbitration irrespective of the terms upon which the new shares are issued. If any of the first Members has taken up part of the first mentioned option, his share of the second mentioned option shall be correspondingly reduced.

The first Members of the Technical Committee shall be entitled ~~to~~ the benefit of those various options even in part, but only during the first five years to run from the French Company's incorporation, and it shall be their concern to agree beforehand as to the apportionment of the shares amongst the three as they may think [fol. 5504] fit. Within one month from taking up an option the option holder shall be bound to get registered to his name the registered shares of which he will become the owner.

5. In the event where, having taken full or part avail of any of the purchase option provided for by this Agreement, Mons. P. Marchal should happen personally to vacate office as a Member of the Committee from any cause or for any reason whatsoever, during the above stated period, the shares whether ordinary or Founder's acquired by him under the options shall be re-purchased by me or my nominees at such a price as may be determined by mutual agreement, or, failing this, by arbitration taking into account the situation of the Company's affairs at the moment his functions cease. He and his assigns shall remain bound to regularize the necessary transfers and to do this within the time provided for by the Company's Articles of Association.

6. If Mons. Sanz or Mons. Ainsworth has taken up one or other of the options granted in his favour in whole or in part and ceases to be on the Committee from any cause or for any reason whatsoever, while Mons. P. Marchal remains a Member of the Committee, the

shares which the outgoing Member of the Committee [fol. 5505] is the owner at the time shall be open to purchase by the newly elected Member of the Committee, of French nationality or residing in France, and selected jointly by Mons. Marchal and by the Board of Directors, and for the nomination of such new Member or Members no account shall be taken of any vote cast by Mons. Sanz or Mons. Ainsworth if he is at the time a Director of the Company.

Should the newly elected Members of the Committee not acquire the whole of these shares or should Mons. Sanz or Mons. Ainsworth vacate office as Member of the Committee when Mons. Marchal has already ceased to be a Member thereof, the shares not acquired in the former case and all the shares belonging to the vacating member in the latter case shall be re-purchased by me or my nominees upon the same terms and conditions as above provided with respect to Mons. Marchal's shares.

7. The respective portions of the option rights above mentioned as apportioned to the three first Members of the Technical Committee will continue to be available by the respective Members to whom the same are apportioned notwithstanding the death, retirement, or incapacity of one or both of the other Members.

8. Moreover it is expressly stipulated as an essential [fol. 5506] condition of the present agreement, that if, for each of three consecutive years during the first five years to run from its definitive incorporations the French Company has distributed to its Shareholders an annual dividend equal to or over 20% of the face value of each share having been part of the first capital Stock of the Company and if, the above purchase options respecting shares in the French Company have been taken up in full or in part according to the above conditions, then the allowance of 2½% on the turnover, as herein before provided, shall cease to be paid as from the end of the third of the said three consecutive years.

9. The advantages and renumerations that will thus be ascribed to the three first members of the Technical Committee shall be considered as personal to them and shall in no case be assignable to any, third party or belong to future Members of the Committee unless

the Board of Directors of the French Company do previously, expressly and in writing, assent thereto.

10. Since by reason of the appointments which will be made and of the advantages which will be granted to the Members of the Technical Committee, they will be bound to foster to the best of their power the interests of the French Company, they will undertake [fol. 5507] not to hold nor to accept in the French Company's territory office as Directors, Managers or Managing Directors of any Company or concern whose objects are the manufacturing of bearings that might directly compete with the French Company or have as an important department of their trade dealings in such bearings.

Said undertaking or inhibition shall hold good as regards any Member of the Technical Committee or Director of the Company so long as he receives the benefit of any of the various advantages provided for by this letter.

11. In the event of any dispute arising anont any of the clauses in this letter contained, we agree to submit the matters at stake to the two arbitrators hereinafter nominated. Said arbitrator's award shall be final, each party expressly declaring to waive appeal.

As to their award the arbitrators shall not be bound to abide by Rules of Law, all powers being expressly given to them to decide as compounders (that is to say, to judge according to equity).

By mutual agreement I nominate even now any partner in the firm of Deloitte, Plender, Griffths & Co. Chartered Accountants, of 18, Rue Chauveau-Lagarde, Paris, for myself and you for yourselves and each of you nominate any partner in the firm of M. M. Durand-[fol. 5508] Villette & Pioche, Barristers at law, of 16, Rue d'Aumale, Paris, to act as arbitrators under the above mentioned conditions in the event of any dispute arising.

In the case of disagreement the arbitrators shall have authority to appoint a third arbitrator who shall also be vested with compounding powers. The third arbitrator will consider the case jointly with the two first ones and an award will be made by a majority of votes. Failing the two first arbitrators to agree as to the person to be appointed as third arbitrators to agree

as to the person to be appointed as third Arbitrator, the latter shall be appointed by the President of the Seine Civil Court and, preferably, from amongst the Members of the Private Institute of Conciliation and Arbitration, 163, Faubourg Saint Honore, Paris.

In the event of one of the two first arbitrators departing this life, leaving this country, or declining to act or being prevented from doing duty, he shall be replaced by one appointed by the one of us who was his appointer.

12. It is quite understood that the carrying out of this letter is subject to the precedent condition of the French Company being incorporated in the course of the year 1928, and that, on the said Company being so [fol. 5509] incorporated, the agreements to be entered into shall be executed, according to the provisions hereof and within a fortnight from the Incorporation of the Company.

13. Failing the Company's incorporation on or before the 31st day of December 1928, the foregoing covenants shall be considered as of no avail without any of us being entitled to claim any indemnity nor damages for non-performance.

The above set forth arrangements having already been verbally agreed upon between us, kindly confirm to me your acceptance thereof.

Believe me, sirs, yours faithfully, —— ——.

Limited Liability Company, Nominal Capital Fcs. 1,000,0

Registered Office: 5, Quai Aulagnier, Asnieres (Seine)

I.

Following on the terms of an Agreement drawn up wit out the intervention of a notary and executed at Paris o the sixteenth June nineteen hundred and twenty eight, which one of the originals remains attached to the origin schedule of shares subscribed and payments made, r ferred to hereafter, Mr. William Eric Louis Seward, manu facturer, residing at 128 Piccadilly, London W., has estab lished the Statutes of a Limited Liability Company whic he proposed to constitute, from which statutes the follow ing is given as an exact copy:

Statutes

First Section

Formation—Object—Title—Registered Office—Duration

Article No. 1

There is formed according to the terms of the presen Statutes a Limited Company which shall exist between th holders of the shares created hereafter and between th holders of any shares which may be credited later. Thi Company will be subject to the Commercial Code, the cur rent legislation regarding Limited Companies and the pres ent Statutes.

Article No. 2

Object

The main object of the Company is as follows:

The manufacture, purchase, sale, import and export of all types of bearings, roller, ball, annular and otherwise, and of all machines and parts relating to the metal industry and anti-friction processes.

The subsidiary objects of the Company are as follows:

The purchase, construction, installation, development, sale, renting or leasing of all premises, land or buildings, and of all chattels necessary for the object of the Company.

The purchase or acquisition by other means, sale and working of all Trade Marks, Trade Processes, Patents or Licenses referring directly or indirectly to the object of the Company.

The purchase, subscription, or acquisition by other means, sale, transfer or exchange of all Shares, Debentures, Bonds and other scrip of all enterprises or Companies, French or Foreign, at present in existence or to be created, having an object referring directly to that of the present Company.

[fol. 5512] The participation of the Company in all transactions or Companies which may refer directly or indirectly to its own object, either by way of transfer of assets in kind or in cash, creation of new Companies (French or Foreign), subscription or purchase of shares and other scrip or of rights or in any other manner.

Generally, all operations whether commercial, industrial, personal estate, real estate, financial or otherwise, which may refer directly or indirectly to the objects set forth above.

The whole of these powers may be exercised in France and or in any other countries, without any limitation.

Article No. 3

Title

The Company takes the title of:

Societe Anonyme Francaise Timken

Article No. 4

Registered Office

The Registered Office of the Company is established at 5, Quai Aulagnier, Asnieres (Seine).

It may be transferred to any other place in the Departments of the Seine or the Seine-et-Oise by decision of the Board of Directors and elsewhere by virtue of a resolution of an Extraordinary General Meeting of Shareholders, taken in accordance with the terms of Article No. 41 of these Statutes.

Article No. 5

Duration

The duration of the Company is fixed at 99 years, as from the date of its definite constitution, subject, however, to the dissolution at an earlier date or extension of the duration of the Company, as provided for in the present Statutes.

Second Section

Capital—Shares

Article No. 6

Form and Division of Shares

The Nominal Capital is fixed at one million francs. It is divided into 10,000 shares of one hundred francs each, to be subscribed in cash and to be paid up in full at the date of the subscription.

These shares are divided into two categories:

The First category consists of 9,800 shares of one hundred francs each, numbered from 201 to 10,000, and referred to in the present Statutes by the term "A Shares".

The second category consists of 200 shares of one hundred francs each, numbered from 1 to 200, and referred to in the present Statutes by the term "B Shares".

The form and the respective rights appertaining to the shares of each of these two categories are determined by the present Statutes.

[fol. 5513] In addition, one thousand bearer deferred Shares (of no par value and having no voting rights) are created, each having the right to a thousandth part of the portion of the Profits falling to these deferred Shares, as

specified in Article 44, i.e., 47½% of the balance remaining of the Net Profits of the Company up to the date of its expiry and liquidation (even should its duration be extended), after deduction of the allocation to the Statutory Reserve and of a first dividend of 10% per annum, cumulative or non cumulative, payable to the shareholders.

The certificates in respect of the Deferred Shares shall be issued from a counterfoil book, and shall be numbered from 1 to 1,000 and bear the signature of two Directors or of one Director and a person nominated by the Board. One of these signatures may be applied by means of a stamp.

The provisions of Articles 12 and 14 are applicable to the Deferred Shares.

The whole of the Deferred Shares shall be allocated to the subscribers of the shares constituting the Nominal Capital, without distinction of category and in the proportion of one Deferred Share for every ten shares.

The Deferred Shares have no rights as regards the assets of the Company but only to a participation in the Profits.

The holders of the Deferred Shares as such have no right to interfere in the affairs of the Company or to question any Reserves or Depreciation Reserves. They are not entitled to take part in the General Meetings of the Shareholders and are bound for the exercise of their rights (and more particularly the determination of any dividend falling to them) by the Annual Accounts and by the decisions of the General Meeting of Shareholders.

They may not oppose any alterations effected in the Statutes by the General Meeting if the alterations in question do not affect their right to that part of Profits which is attributed to them.

It is also provided that they may not oppose the dissolution of the Company at an earlier date than that laid down in the Statutes, or its amalgamation, or transformation or the disposal either in total or in part, of the assets of the Company.

In the event of the increase or reduction of the Nominal Capital, the rights of the holders of the Deferred Shares to their part of the Profits are not modified; these rights are maintained irrespective of the amount of the Nominal Capital and any reduction in these rights can only be effected with the consent of a General Meeting of the Association of the Holders of Deferred Shares, which will be created as mentioned later.

It is however, expressly stipulated that the consent of the General Meeting of the Association of the Holders of Deferred Shares is not necessary in regard to the following matters:

(a) In the event of an increase in the Nominal Capital, the Holders of Deferred Shares must acquiesce in the deduction of a first dividend of 10% per annum—non cumulative or cumulative, on the additional Capital and must acquiesce in the other rights and privileges of whatever description which may be attributed to any Preference Shares which may be created.

[fol. 5514] (b) In the event of a reduction in the Nominal Capital by reason of trading losses or depreciation in the value of the assets of the Company, the General Meeting of Shareholders may decide that, notwithstanding this reduction, the first dividend of 10% per annum, cumulative or non cumulative, payable to the Shareholders shall be calculated on the original capital prior to the reduction.

An association of the Holders of Deferred Shares shall be created.

Article No. 7

Increase and Reduction of the Capital

The Nominal Capital may be increased from time to time by the creation of new shares, as against the transfer of assets in kind or against subscription in cash, or by the employment of available Reserves or Reserve Funds or by any other means by virtue of a decision of an Extraordinary General Meeting of Shareholders taken in conformity with the provisions of Article 41 hereafter.

Every increase of Capital must be carried out by the creation simultaneously of shares of Categories "A" and "B' in proportion to the Capital subscribed on the formation of the Company, i.e., for every share issued of Category "B", 49 shares of Category "A" must be issued and vice versa. Subject to this provision the General Meeting will determine the conditions of issue of the new shares or will delegate its powers for this purpose to the Board of Directors.

Subject to the observance of the above provisions the Board of Directors is, from now on, authorized to increase the capital of the Society to three millions of francs by the

issue, in one or several instalments, of new shares of one hundred (100) francs each, to be subscribed and liberated in cash, without having recourse to any decision of the General Meeting, which will only be called for the purpose of verifying the subscriptions and payments. The conditions of these issues, including the premium if any payable on the shares, will be fixed without appeal by the Board of Directors.

In the case of an increase in Capital effected by the issue of shares to be subscribed in cash, and unless the General Meeting decides otherwise, the holders of shares previously created, on which all calls have been paid, have (personally or through their assignees) a priority for the subscription of the new shares of each category in proportion to the number of shares in the same category which each shareholder already holds. The exercise of this right shall be subject to such forms, delays and conditions as may be determined by the Board of Directors. Those shareholders who do not possess a sufficient number of shares to allow of their subscribing for a share may combine to exercise their rights, but no subscription for a part of a share can result therefrom.

Subject to the same conditions, the General Meeting may also, by virtue of a resolution passed as stated above, decide to reduce the Capital for any reason and in any manner, more particularly by means of a repayment to the shareholders, redemption of the Company's shares or exchange of old scrip against new for an equivalent or lesser number, with or without the same nominal value, and, if necessary, accompanied by transfer or purchase of old shares so as to allow the exchange to be made, with or without a balance to be paid or received in cash. However, any reduction of capital thus operated must maintain the proportions, as originally determined, of the two categories of shares "A" and "B", i.e., one B share for 49 "A" shares and vice versa.

[fol. 5515]

Article No. 8

Method of Liberating the Shares

The 10,000 shares forming the original capital shall be subscribed and paid up entirely in cash at the time of subscription.

The above provisions (unless modified expressly by a resolution of the General Meeting), and those of Article 9 shall apply to any increase of capital by the issue of shares in cash.

The holders, intermediary assignees and subscribers are jointly and severally liable for the amount of the shares.

All subscribers and shareholders who have transferred their shares, cease to be responsible, two years after the transfer, for any sums not called up on the shares.

Article No. 9

Interest and Proceedings in case of delay

In the case of an increase of the Capital by means of shares not fully paid up at the time of subscription and in default of payment on the shares at the dates determined by the Board of Directors, interest shall automatically accrue due for each day's delay at the rate of six per cent per annum.

The Company may sell shares on which payments are in arrears.

For this purpose the numbers of the shares are published in one of the papers containing legal notices in the town where the Registered Office is situated.

Sixty days after this publication, without any other notification or other formality, the Company is entitled to proceed with the sale of the shares on which all calls due have not been paid up, either as a whole or separately and even consecutively, for the account of and at the risks and peril of the persons in arrears, on the Bourse, through the agency of a Stock-broker if the shares are quoted, or, if this is not the case, by public auction through a notary at a starting price which may be reduced without any limit. The Shares shall be sold as free in respect of calls already made and paid up.

The certificates in respect of the shares thus sold will be automatically cancelled, and new scrip, bearing the same share numbers will be delivered to the purchasers.

Any share which does not carry the proper inscription to the effect that all calls have been met ceases to be negotiable. No dividend shall be paid thereon.

The net product from the sale of the said shares shall be deducted in accordance with the Law, from the amount due

to the Company by the former owner, who continues to be responsible to the Company for any deficit, but must be credited with any surplus.

The Company is also empowered to institute an action against the shareholder and any guarantors either before or after the sale of the shares or at the same time as the sale.

[fol. 5516]

Article No. 10

Forms of Shares—Certificates

The share certificates in respect of any category of shares are, and shall continue to be issued in registered form.

This also applies to any increase in the capital effected under the conditions provided by Article 7 of the present statutes.

Should any shares created by means of an increase of capital not be fully paid at the time of subscription, a receipt in registered form shall be given for the first payment. This receipt shall be exchanged for a provisional share certificate, also in registered form, within three months of the realization of the increase of capital; all subsequent payments shall be inscribed on this provisional certificate with the exception of the final payment, which will be made against the issue of the certificates for the fully paid shares.

Provisional share certificates or certificates for fully paid shares shall be issued from a counterfoil book and shall bear a number in numerical order, the company's stamp and the signature of two directors, or of one director and a delegate of the board; one of these signatures may be applied by means of a stamp.

Article No. 11

Assignments—Transfers by reason of decease, etc.—Transfers—Rights of Pre-emption

In conformity with article 36 of the Commercial Code, the transfer of registered shares is carried out by means of a declaration of transfer signed by the tranferor and the transferee, or by their proxies, and inscribed in a special register kept by the company.

The company may require that the signature of the parties concerned be certified by a public official.

Only those shares on which all payments due have been made are allowed to be transferred.

All transfers, either gratuitous or for valuable consideration, in whatsoever manner they may be effected, as also all transfers arising by the decease of a shareholder or by reason of settlements between living persons, even between shareholders, are invalid and not binding with regard to the company unless previously agreed to by the Board of Directors, which in no case is bound to make known the motives for its acceptance or refusal.

For this purpose, notice of the proposed transfer or assignment shall, in all cases, be given to the company by registered letter, indicating the names, Christian names, profession, and residence of the proposed future shareholder. To this letter shall be attached the share certificate referring to the shares to be transferred, and, if necessary, the documents justifying the transfer or assignment.

In the ninety days following on the receipt of the said letter, the Board of Directors shall decide, by a majority, [fol. 5517] and without need of further intervention on the part of the shareholders of the class of shares concerned, as to the acceptance or refusal of the person presented as the proposed future holder of the shares. Notice of this decision shall be given by registered letter before the expiration of the above mentioned delay to the transferor or donator or, in the case of a decease, to the beneficiary.

When it is desired to obtain the previous consent of the Board to a transfer of shares between shareholders already on the register of the company, the transferor, before agreeing to the transfer to the proposed transferee, must declare to the Board the price at which he proposes to transfer the shares inscribed in his name. The Board may require this declaration to be made by registered letter. The Board must advise this price to shareholders holding shares of the same category. The latter shall have priority, at the price indicated over the proposed transferee, if the latter is not a holder of shares of the same category as these which it is proposed to transfer. Should several of the shareholders of the same category desire to exercise their right of preemption simultaneously to acquire the shares thus offered, then the shares will be allocated to such shareholders in proportion to the number of such shares of the same category owned by them on the day the Board was advised of the transferor's offer.

If the number of shares to be transferred cannot be divided exactly in this proportion, priority will be given for any fractions of shares to that shareholder who first made known his intention of accepting the transfer of the shares offered. If this shareholder does not utilize this right of priority immediately, the Board will dispose of the fractions of shares at its own discretion.

In the case of all transfers or assignments (by reason of decease or otherwise) of shares to persons or companies not yet inscribed on the company's registers at the date when the company is notified in proper form of the proposed offer of cession or of the demand for transfer, the Board has the right, for a period of one month following on the notification given by them of their refusal to register the said transfer or assignment, to have the shares purchased by one or several persons or companies designated or accepted by the Board. Such assignment or transfer shall be effected at a price determinated under the following conditions:

If, on the receipt of the Board of the registered letter conveying the notification, as provided in the 5th para. of this Art., the company has not distributed every year during the three consecutive years immediately preceding the notification a dividend on the category of shares to which the shares transferred or assigned belong, the price of the transfer or assignment shall be equal to the nominal value of the shares transferred or assigned, plus the proportion appertaining to such shares in any free reserves disclosed by the last balance sheet approved by the shareholders at that period, or less a proportion appertaining to the shares of any losses shown by this balance sheet, as the case may be.

In the contrary case the price of the transfer or assignment shall be equal to the capitalised amount, at the rate of 10%, of the average obtained in taking into account the net annual dividends distributed for the three years immediately preceding the above mentioned notification, on the shares of the same category, without ever being less than the nominal value of the shares increased, should the case arise, by the proportion appertaining to these shares in the reserves shown by the last balance sheet approved at that date by the shareholders or, if necessary, less a proportion appertaining to these shares of any losses shown by this balance sheet.

[fol. 5518] Notwithstanding any contrary provisions contained in this article, the Board shall not have the right to oppose the assignment or transfer of the company's shares of whatsoever category, if it is ascertained on the sole responsibility of the Board that the holders of a potential majority of votes at an extraordinary general meeting formally approve the assignment or transfer in favour of the proposed transferee.

The transfer to the name of the purchaser or purchasers designated by the Board will be regularized automatically by the signature of the President or of a delegate of the Board of Directors and by that of the assignee. The signature of the holder of the shares or of his representatives is not required but they will be advised of the transaction by registered letter within fifteen days of the purchase, with notice to present themselves at the registered office to receive the consideration which will not bear interest.

If, the Board of Directors has not designated or accepted a purchaser by virtue of the present dispositions within the period of ninety days mentioned above, the transferee given in the transfer or assignment shall become the definite owner of the shares transferred or assigned and the transfer of the said shares shall be executed in his favour.

Article No. 12

Indivisibility

So far as the company is concerned, fractions of shares are not recognized.

Joint owners of shares must be represented by one of their number with regard to the company.

Article No. 13

Rights Attached to the Shares—Responsibility of the Shareholders

Each share, irrespective of the category to which it may belong, is entitled, so far as concerns the assets of the company, to a part corresponding to the number of shares issued.

The same rule applies to the allocation and distribution of the company's profits, whether distributed annually or on the winding up of the company, either at the expiration of its duration or on dissolution at an earlier date.

On the other hand, at the annual and ordinary general meetings held under the conditions provided for by Articles 35 to 38 of the present statutes, the holders of shares belonging to the first category, called "A" shares, are entitled to one vote only for each share, whilst holders of shares belonging to the second category, called "B" shares, are entitled to fifty votes for each share.

At the general meetings held under the provisions of Articles 39, 40 and 41 of the statutes, and in connection with the modifications provided for by this last article, the "A" and "B" shares will be entitled, without distinction, to one vote only for each share.

[fol. 5519] Shareholders are only liable to the extent of the nominal value of the shares which they possess; no call may be made in excess of this limit.

Article No. 14

The rights and obligations appertaining to the share are not affected by any change of owner. The possession of a share automatically implies admission of the statutes and of the decisions taken by the general meeting.

The heirs or creditors of shareholders cannot, under any pretext whatsoever, claim that seals be fixed on the possessions and papers of the company, nor participate in any manner in its management. They are bound, for the exercise of their rights, by the annual accounts and resolutions of the general meeting.

Section 111

Administration of the Company

Article No. 15

Board of Directors

The company is administered by a Board formed of at least three members and at most seven, chosen among the holders of shares and nominated by the general meeting of shareholders.

Article No. 16

Guarantee Shares of the Directors

Each director shall be the holder of ten shares during the entire duration of his functions.

These shares are entirely affected as guarantee for the acts of the Board, even in respect of the acts of a single Director; they are not transferable, bear a stamp to this effect, and are deposited in the custody of the company.

Article No. 17

Duration of the Functions of the Directors

The Directors are appointed for a period of one year, each Board remaining in office until the holding of the ordinary general meeting called for the purpose of approving the accounts of the company's year.

Article No. 18

Power of Adding to the Board

If the Board consists of less than seven members, it may, if deemed advisable in the interests of the company, appoint additional directors up to the total of seven.

In this event the appointments made by the Board must be submitted for ratification to the next general meeting of shareholders.

[fol. 5520] Similarly, if a vacancy arises on the Board in the interval between two general meetings, the Board may appoint a Director temporarily to fill the vacancy; should the number of directors fall to less than three, the Board is obliged to fill the vacancy within one month after same has occurred. The next general meeting ratifies these nominations.

If these temporary nominations are not ratified by the general meeting, the resolutions passed and the acts accomplished by the Board are not invalidated as regards third parties.

Article No. 19

Chairman, etc. of the Board

Every year, at the Board Meeting following the general meeting, the Board nominates a Chairman among its members, and, if it deems advisable, a Vice-Chairman, the Chairman and Vice-Chairman may always be re-elected.

Should the Chairman and Vice-Chairman be absent, the Board will, for each meeting, select one of the members present to fill the functions of Chairman.

The Board also appoints the person who is to fill the

functions of Secretary, who may be selected outside the shareholders.

Article No. 20

Board Meetings

The Board of Directors shall meet on the convocation of its Chairman or Vice-Chairman, or of the Managing Director, or of one-half of its members, as often as the interests of the company require, and at least twice yearly, either at the registered office, or at any other place mentioned in the letter of convocation.

The Directors may be represented at any meeting by one of their co-directors designated by letter or telegram, but a director cannot act as proxy at any meeting for more than one of his co-directors.

The actual presence of two members, and the representation, either in person or by proxy, of at least one-half of the members of the Board are necessary for the validity of the proceedings.

Resolutions are adopted on a majority of the votes of the members present. A Director who represents one of his co-directors has two votes. In case of division, the Chairman of the Meeting has the casting vote.

It is provided, however, that if the Board of Directors only consists of three members, the actual presence of at least two members is necessary for the validity of resolution.

So far as concerns third parties, proof of the number of Directors present and of their power to act as such results from the inscription in the minutes of each meeting of the resolutions passed and from the mention in any extracts from these minutes of the names of the Directors present and of those absent.

[fol. 5521] Article No. 21

Minutes of the Board

The Resolutions adopted by the Board are recorded by minutes written in a special Minute Book and signed by the Chairman of the Meeting and by another Director, or by the Majority of the Members present.

Copies or extracts of these Minutes, required for production before the Courts or elsewhere, are signed by the Chairman of the Board or in default thereof by another Director.

Article No. 22

Powers of the Board

The board of Directors is invested with the fullest possible powers to act in the name of the Company and to carry out or authorise all acts and operations relative to its objects.

In particular, the Board has the following powers, which are set forth, however, as instances of its powers and not as limiting the same:—

It represents the Company as against third parties and all Public Authorities.

It draws up rules for the management of the Company.

It establishes branches, agencies, depots and offices wheresoever it may deem advisable, in France and in all other countries.

It appoints and dismisses all agents, employees and workpeople of the Company, determines their wages, salaries, fees and gratuities, whether on a fixed or on a percentage basis, together with all other conditions of their employment and retirement, or of their dismissal; if deemed advisable, it may organise any description of sickness and pension funds for the staff.

It carries out all formalities necessary so that the company may conform to the laws of the countries in which it may operate and appoints all responsible agents.

It settles the General Expenses of Management and regulates supplies of all kinds.

It receives all amounts due to the company and pays sums owing.

It determines the investment of funds available and regulates the employment of any Reserve Fund.

It contracts all insurances.

It subscribes, accepts, endorses, negotiates and discharges all commercial bills, bills of exchange and warrants.

It decides on all agreements, contracts and enterprises, whether for fixed sums or otherwise, entering into the objects of the company.

It requests and accepts all concessions, makes all tenders, takes part in all adjudications and furnishes all guarantees.

It authorises all purchases, redemptions, transfers, disposal of Government Stock, Stock Exchange securities, book-debts, patents or licenses of patents of invention, com-

mercial and industrial establishments and all descriptions of rights concerning personal estate.

[fol. 5522] It consents or accepts, grants or cancels, all leases and rentals, with or without promise of sale.

It authorizes and realises all purchases, all exchange of lands and rights to real estate, also the sale of those it may deem useless.

It decides all work, construction, installations, and in particular creates and instals all factories and industrial and commercial establishments.

In all banks, particularly the Bank of France, it opens current accounts and accounts guaranteed by stocks and shares, and issues all cheques and bills for working these accounts. It operates the deposit and withdrawal of all funds and bills.

It contracts all loans by means of open credits or otherwise. However, loans in the form of debenture bonds must be authorized by the General Meeting of Shareholders.

It grants all mortgages, pledges, delegations, surety-bonds, guarantees, endorsements, and other personal and real estate guarantees on the property of the Company.

It establishes all Companies, French or Foreign, or co-operates in their foundation; it grants to companies constituted or to be constituted all transfers of assets under such conditions as it deems advisable; it subscribes, buys and sells all shares, debenture bonds, founders' shares, interest shares and all rights whatsoever; it interests the company in all participations and syndicates.

It exercises all legal actions, whether as plaintiff or defendant.

It authorizes all agreements, transactions, compromises, all acceptances and non-units, as well as all substitutions and priorities, and all withdrawals, and cancellations of charges, distraints, oppositions, and other rights, all either before or after payment.

It draws up reports on the situation, inventories and accounts which should be submitted to the General Meeting of shareholders; it decides on all proposals to be put forward to the General Meeting and settles the Agenda.

Article No. 23

Délegation of Powers

The Board may delegate such powers as it deems advisable to one or more of its members for the purpose of the execution of its decisions and for the current management of the Company.

It may also confer on one or several Managers, members of the Board of Directors or non-members, such powers as it deems advisable for the technical and commercial management of the Company, and may enter into agreements with this or those Managers, defining the duration of their functions, the extent of their powers, and the conditions of their retirement and of their dismissal.

The Board may create all Management Committees and all consultative or technical committees, permanent or otherwise, and the members of those Committees are selected from amongst the Directors or outside of them; it settles the working and the powers of these committees.

[fol. 5523] It settles the amount of the fixed or proportional remuneration of the Managing Directors, of the Managers and of the Management Committee, and these emoluments are debited to the Company's general expense account.

Finally, the Board can confer powers on such persons as it deems advisable, for one or several objects resolved on.

Article No. 24

Authorised Signatures

All documents referring to the Company which are decided upon by the Board, as well as the withdrawal of funds and bills, drafts on bankers, debtors or depositors, and subscriptions, endorsements, acceptances, guarantee signatures or receipts for commercial bills shall be signed by two directors, unless the Board especially delegates its powers to one Director or to a Manager or to any other proxy.

Article No. 25

Responsibility of the Board

No personal or joint obligation with regard to the Company's liabilities is contracted by the Directors as a result of their management of the Company's affairs. The Direc-

tors are only personally responsible should they commit a grave error in the execution of the mandate confided to them, or, again, should they have acted beyond the powers entrusted to them by the Company.

This responsibility shall be incurred collectively if the act giving rise to the claim results from an action of the Board as a whole, and it will only be incurred individually if it can be proved that the act in question results from the personal action of a single director.

In all cases, the responsibility of the Directors is confined strictly to the exact limit of the loss suffered, the burden of proof of the direct relation of cause and effect between the loss suffered and the personal fault of the Directors falling on the shareholder or third party making the complaint.

Article No. 26

Limitation of Interest of Directors in other Companies, etc.

The Directors are forbidden to take or to retain any interest direct or indirect in any enterprise or any contract entered into by mutual agreement with the Company or for its account, unless they have been duly authorised to do so either by the Board of Directors or by the Ordinary or Extraordinary General Meeting of Shareholders, as the case may be. Every year communication is given to the Ordinary General Meeting of the execution of contracts or enterprises thus sanctioned or authorized.

Article No. 27

Allowances, Attendance Fees, Percentage Remunerations

In addition to the special allowances provided for in Article No. 23 above, the Directors shall receive Attendance Fees, of which the amount, fixed by the General Meeting, remains unaltered until such time as modified by any subsequent General Meeting. In addition, they are entitled to a share in the profits of the Company as attributed to them by Article No. 44 hereafter.

[fol. 5524] The Attendance Fees and the proportion of profits are divided by the Board among its members in such proportion as it may decide.

Section IV

Auditors

Article No. 28

Nomination, Powers, Remuneration

Each year the General Meeting nominates one or more Auditors, who may or may not be shareholders, and who are charged with the drawing up of a report to the next General Meeting on the position of the Company, on the Balance Sheet and on the Accounts presented by the Board of Directors.

They may be reelected.

During the quarter preceding the date fixed for the holding of the General Meeting, the Auditors have the right, whenever they may so deem advisable in the general interest, to acquaint themselves with the books and to examine the operations of the Company.

In urgent cases they may convoke a General Meeting.

If the General Meeting nominates several Auditors, one of them may act alone in the case of death, resignation, refusal or impossibility to act of the other.

The Auditors are entitled to remuneration which, fixed by the General Meeting, remains unaltered until such time as modified by any subsequent General Meeting.

Section V

General Meetings

I. Dispositions applicable to both Ordinary and Extraordinary Meetings

Article No. 29

Notices

An annual General Meeting of the shareholders is called by the Board each year, for the first Friday after the third Monday in the month of March, due notice being given of the hour and place in the letter of convocation.

General Meetings may be convoked specially, either by the Board of Directors or, in urgent cases, by the Auditors. With the exception of the instances provided for in Article No. 41 hereafter, the Board must convoke a General Meet-

ing at the request of shareholders representing at least one quarter of the capital of the Company.

Notice as to General Meetings must be given thirty days at least in advance, by registered letter and by telegram addressed to the shareholders duly registered on the books of the Company at the date the Meeting is called. The notice necessary for Meetings may be reduced to six days for Ordinary meetings convoked exceptionally or for a second convocation, subject to the requirements of the law and of the provisions of Article No. 41 hereafter, referring [fol. 5525] to Extraordinary Meetings held after a second or third convocation.

The notices given in respect of Meetings shall indicate briefly the object of the Meeting.

Article No. 30

Composition

All persons who have held shares for at least five days before the meetings may assist at this Meeting without any previous formality. They may be represented by a proxy at the General Meeting.

No one may represent a shareholder at the Meeting unless he is personally a member of this Meeting or the legal representative of a member of the Meeting.

Nevertheless the following are legally represented: minors, prohibited persons and other persons legally incapable, by their guardians or other legal representative; married women by their husbands, limited partnerships with shares of private limited companies, partnerships or Limited Partnerships by their managers or one of their managers, having the power to act alone or furnished with a power by his co-managers, or by a person holding a permanent power of attorney and specially delegated for this purpose; lastly Limited Companies by a delegate of their Board of Directors. In these instances, the guardian, legal representative, husband, manager, holder of a permanent power of attorney, delegate of Board of Directors, need not necessarily be shareholders personally.

The form of the proxies is settled by the Board of Directors.

Article No. 31

Procedure at General Meetings

The Chairman or Vice-Chairman of the Board of Directors presides over the General Meeting or, in their absence, a Director delegated by the Board.

The functions of scrutineers of the votes cast shall be filled by the two shareholders present who represent the largest number of shares and who accept the position. The Meeting appoints a secretary who need not necessarily be a shareholder.

A list of the shareholders attending is drawn up, containing the names and residences of the shareholders present and represented, and the number of shares owned by each of them. This list, which is certified by the person presiding the Meeting, the scrutineers and the Secretary, is deposited at the Registered Office and shall be communicated to any applicant.

Article No. 32

Agenda

The Agenda is drawn up by the Board of Directors if it convoked the Meeting, or by the Auditors if they do so.

The matters contained in the Agenda are limited to proposals eman-ting from the Board or from the Auditors and to proposals, falling within the scope of an ordinary General meeting, which have been communicated to the Board at least one month before the meeting, with the signature of members of the meeting representing at least one quarter [fol. 5526] of the Capital.

Should a communication of this nature be made, its substance should be communicated by the person empowered to convoke the Meeting to each Shareholder by registered letter sent to the last address known to the Company and entered in the Company's Register of shareholders.

No matters other than those mentioned on the Agenda can be discussed by the General Meeting.

Article No. 33

Proceedings

Records of the proceedings of the General Meeting are kept in a special register and signed by the Chairman Scrutineers and Secretary.

Copies or extracts of these proceedings, required for production before the Courts or elsewhere, are signed by the Chairman of the Board or by another Director.

After the Company is dissolved and during its liquidation these copies or extracts are signed by two liquidators or, if there be occasion by the sole liquidator.

Article No. 34

General Powers of the Meeting

The General Meeting regularly constituted represents all the shareholders. It may be ordinary and extraordinary if it combines the necessary conditions.

The resolutions of the Meeting, taken in conformity with the Law and the Statutes are binding on all shareholders, even if absent, incapable or not assenting.

II. Ordinary General Meetings

Article No. 35

Composition

The ordinary General Meeting (annual or convoked specially) consists of shareholders owners of one share at least on which all calls due have been paid.

Article No. 36

Quorum

In order to deliberate validly, the Ordinary General Meeting shall be formed of a number of shareholders representing at least one quarter of the Capital.

If this condition be not fulfilled, the General Meeting shall be convoked again in the manner prescribed by Article No. 29.

The resolutions taken by this second Meeting are valid no matter what number of shares be represented, but they

[fol. 5527] can only refer to the objects mentioned on the Agenda of the first Meeting.

Article No. 37

Voting Rights

Decisions of the ordinary General Meeting are taken by a majority of the votes of members present; should there be an equal division of votes, the President has a casting vote.

As stipulated in Article No. 13 preceding, the members of the Meeting who hold "A" share, or their proxies, are entitled to as many votes as the shares they hold without any limit, and members of the meeting who hold "B" shares, or their proxies, are entitled to as many times fifty votes as they hold shares of this category also without limit.

Article No. 38

Powers

The general Meeting (Whether convoked specially or annually) shall hear the board of Directors' Report on the affairs of the Company, it shall also hear the Auditors' Report on the position of the Company, on the Balance Sheet and on the Accounts presented by the Board.

It shall discuss, approve or rectify the Accounts, it shall fix the dividends to be distributed.

It shall nominate and dismiss Directors and Auditors.

It shall determine the amo-nt to be paid to the Board of Directors in respect of attendance fees, and the remuneration of the Auditors.

It shall authorise all loans effected by the issue of debenture bonds, whether secured by mortgage or otherwise.

It shall deliberate on all other proposals mentioned on the Agenda, if the same do not require to be dealt with by an Extraordinary General Meeting.

Finally, it confers on the Board of Directors the necessary authority in respect of all instances where the powers attributed to the Board are inadequate.

The resolution containing the approval of the Balance Sheet and of the Accounts shall be invalid unless preceded by the Auditor's Report.

III. Extraordinary General Meetings

Article No. 39

Composition

The extraordinary General Meeting consists of all shareholders whatever may be the number of their shares, provided that all calls due thereon have been paid.

[fol. 5528]

Article No. 40

Quorum and Voting Rights

The resolutions shall be taken by a majority of two thirds of the votes of the members present.

As stipulated in Article No. 13, each member of the Meeting disposes without exception of one vote for each share, irrespective of category, without limit.

Article No. 41

Powers

The extraordinary General Meeting has power, but only on the initiative of the Board of Directors to modify the Statutes in any way thought fit, subject, however, to the Laws governing Companies and subject to the restrictions concerning the object of the Company referred to hereunder:

In particular, it may decide on the following matters:

1. The change of the Company's name and the transfer of the registered office to any place outside the Departments of the Seine or the Seine-&-Oise, and more particularly to any place in the French colonies, countries under a protectorate or under a mandate, and even abroad.

2. The methods and conditions relating to the transfer of shares. The increase or reduction of the Capital; its division into shares of another type than that of one hundred Francs. It is provided, however, that any increase or reduction of the capital shall not affect the registered form of the shares, or the conditions laid down regarding their division only into the two categories "A" and "B" the proportion existing between the same at the date of constitution of the Company, and the respective rights and privileges attached to the same as stipulated in Articles Nos. 6 and 7 of the Statutes, unless previously specifically

authorized as regards any of these matters by a resolution of a Special Meeting of the category of shareholders in question, this Meeting having been called prior to the holding of the Extraordinary General Meeting and held in accordance with the last paragraph of the present Article.

3. The extension or reduction of the duration of the Company or its dissolution at an earlier date.

4. The amalgamation or alliance of the Company with other companies, constituted or to be constituted.

5. The transformation to that of a Company of any other form, and more particularly into a Private Limited Company (Societe a Responsabilite Limitee).

6. The transfer or sale to any third parties or transfer in kind to any Company of the whole of the Assets, rights and obligations of the present Company.

7. All alterations in the object of the Company (without, however, changing the object completely or altering it in its essence), as also the division of profits and of assets.

[fol. 5529] In all the instances provided for above, the proper constitution of the Meeting and the validity of its decisions is subject to the attendance, personally, or by proxy, of shareholders representing at least three fourths of the Capital.

So far as regards alterations in the Statutes other than those referring to the object or form of the Company, if at the first Meeting three fourths of the shareholders are not present or represented, a further Meeting may be called which will be properly constituted if attended personally or by proxy by shareholders representing at least one half of the Capital of the Company. And if this second Meeting is not attended by shareholders representing one half of the Capital of the Company, a third Meeting may be called at which the presence, personally or by proxy of shareholders representing one third of the Capital will be sufficient. These second and third meetings are to be called by means of the two advertisements prescribed by law, made at thirty days interval, published both in the bulletin of compulsory legal notices in a newspaper giving legal notices in the place where the registered office is situated and also by registered letter and telegram dispatched at least 30 days before the Meeting.

In any instance where a decision of the General Meeting affects the rights of one category of shares or shareholders,

this decision shall not be final until such time as it has been ratified by a special meeting of the shareholders whose rights are to be modified. This special meeting shall be composed and will deliberate under the conditions determined by the present article and by articles Nos. 39 and 40 above.

Section VI

Six Monthly Statement—Annual Balance Sheet—Reserve Funds—Division of Profits

Article No. 42

Business Year

The Company's year commences January 1st and finishes December 31st, except that the first accounting period of the Company shall extend from the date of the definite constitution of the Company until December 31st, 1929.

Article No. 43

Approximate Statements and Balance Sheet—Right of Communication

Every six months, an approximate statement showing the Assets and Liabilities is drawn up. This Statement is placed at the disposal of the Auditors.

In addition, in conformity with Article No. 9 of the Commercial Code, a detailed Balance Sheet is prepared every year, containing particulars as to the Company's Assets and Liabilities. In this Balance Sheet the various items of the Assets are written down in accordance with the decisions of the Board of Directors.

The detailed Balance Sheet and Profit and Loss Account are placed at the disposal of the Auditors not less than forty days prior to the General Meeting. They are presented to this Meeting.

During the period of fifteen days preceding the General Meeting, any shareholder may acquaint himself at the Reg-[fol. 5530] istered Office with the detailed Balance Sheet and with the list of shareholders and may also obtain at his own expense a copy of the Balance Sheet summarizing the Assets and Liabilities and a copy of the Report of the Auditor or Auditors.

Article No. 44

Basis of estimation of the Annual Profits and Division thereof

The receipts of the Company, as shown by the detailed annual Balance Sheet, after deduction of the general expenses, of expenses of the Company, of all depreciation written off the assets of the Company and of all reserves for commercial or industrial risks, constitute the Net Profits of the financial period.

From these profits are deducted, every year:

1. Five percent to constitute the Reserve Fund prescribed by Law. This allocation ceases to be compulsory when the Reserve Fund reaches a sum equal to one tenth of the Capital of the Company. It is resumed when, for any cause whatsoever, the Reserve has fallen below this proportion of one tenth.

2. Subject to the provisions mentioned later, the sum necessary to pay the shareholders, as a first dividend, ten per cent per annum of the sums paid up and unredeemed on their shares without, however, giving the shareholders any right to claim this payment from the profits of subsequent years, if the profits of any one year did not permit of the payment of the ten per cent, except in so far as it stipulated later.

The balance is divided as follows:

5% at the disposal of the Board of Directors.

47½% to the shareholders without any distinction between the holders of "A" shares and "B" shares.

47½% to the Deferred Shares.

However, the Ordinary General Meeting may, on the proposal of the Board of Directors, decide to set aside out of that part of the Profits falling to the shareholders and to the Deferred shares, such sums as it may deem advisable either to be carried forward to the following year or to be applied as additional depreciation of the assets of the Company or to be carried to an extraordinary reserve fund.

In particular, this Fund may be applied, on the decision of the Extraordinary General Meeting, following on the proposal of the Board of Directors, either to make up the payment to the shareholders of a first dividend of ten per

cent should the profits of one or more years be insufficient, or to purchase and cancel shares or deferred Shares of the Company, or for the total or partial redemption of the shares by the drawing of lots or otherwise. Shares entirely repaid shall be replaced by other shares, ("Jouissance" shares) having the same rights and prerogatives as the ordinary shares, except so far as concerns the first dividend of ten per cent and the repayment of capital.

Article No. 45

Payment of Dividends

[fol. 5531] Dividends are paid annually at the periods and places fixed by the Board of Directors.

The payment of dividends on all shares is valid if effected to the bearer of the scrip.

Dividend not claimed within a period of five years following on the date when payment became due are prescribed according to law.

Section VII

Dissolution—Liquidation

Article No. 46

Loss of three fourths of the Capital of the Company

Should three fourths of the Capital of the Company be lost, the Board of Directors must call a General Meeting of all shareholders, which shall decide whether the Company shall be continued or dissolved. The validity of this General Meeting as regards the quorum and the majority is governed by Articles Nos. 40 and 41 above.

Article No. 47

Expiration—Dissolution—Conditions of Liquidation

On the expiration of the duration of the Company, or in the event of its being dissolved at an earlier date, the General Meeting shall, on the proposal of the Board of Directors, settle the method of liquidation and nominate one or several liquidators whose powers it shall determine.

The nomination of the liquidators will put an end to the powers of the Directors and Auditors.

By virtue of a resolution passed by the Extraordinary General Meeting, the liquidators may transfer to another Company against shares in the latter all or part of the assets rights and obligations of the dissolved company or may transfer the said assets rights and obligations to a Company or any other person.

During the liquidation the General Meeting regularly constituted shall retain the same powers as when the Company was in being; in particular, it retains the power of approving the Accounts of the liquidation and giving a discharge to the liquidators.

After the settlement of the liabilities and charges of the Company, the net product of the liquidation shall be first employed in the redemption of the amounts paid up on the shares, if this redemption has not already been effected, and the surplus is divided 50% to the shareholders without distinction as to the category of the shares and 50% to the holders of deferred shares.

Section VIII

Disputes

Article No. 48

Disputes between Shareholders

[fol. 5532] All disputes which may arise during the existence of the Company or during its liquidation, either between the Company and its shareholders, or between the shareholders themselves, or between the holders of Deferred Shares themselves, or between the Company and the Holders of Deferred Shares, on the subject of matters concerning the Company shall be decided in conformity with the Law of 31st December 1925 and submitted to the Court of Arbitration to be constituted in accordance with the terms of Article No. 49 of these Statutes.

For this purpose, in the event of a dispute, all shareholders must elect domicile at the registered office of the Company and all notices or summons may be properly effected at this domicile.

Should domicile not be elected, notices or summons may be properly effected at the office of the Procurer of the Republic attached to the Civil Court of the Place where the Registered Office is situated.

Any holder of shares who wishes to place before the Court of Arbitration any litigious matter must communicate the same to the Board of Directors, with particulars as to the exact object, motives and conclusion of the matter and must require the Board to communicate the matter to the Court of Arbitration which must meet with the shortest possible delay.

The Board must, within the period of a fortnight, inform the Applicant of the transmission of his demand to each of the members of the Court of Arbitration; these members, after being informed, will settle the procedure to be followed.

In the event of default or negligence on the part of the Board in regard to this matter, the applicant shall be entitled, after the expiration of the delay of a fortnight, to communicate direct with the members of the Court of Arbitration, and in this case the applicant shall be required to pay to the members of the Court such sums as they may consider necessary in respect of deposits for costs.

Should the matter be urgent, the applicant may communicate direct with the member of the Court of Arbitration first named on the list of members, and this member is authorized by the present Article to decide, alone and without the assistance of his colleagues, on any matter submitted for arbitration.

Article No. 49

Stipulations as to the right to bring matters before the Courts

By express agreement and by reason of the mutual abandonment of individual rights, effected in the common interest, all shareholders renounce their separate rights in regard to the bringing of matters before the Courts, authorized by Article No. 17 of the Law of 24th July 1867.

Consequently all shareholders, holders of shares or holders of Deferred Shares, undertake not to place directly before the Courts any litigious matter resulting from a question concerning the Company in connection with which any shareholder could bring any form of action, either for annulment or as regards responsibility, whatever Courts could be involved and whether the action could be brought against the Company or against another shareholder or against a Director or Founder or any other person interested in the Company & this provision applies to any litigious matter

arising out of a question concerning the Company which might be invoked by any shareholder, whether on behalf of all shareholders or personally.

[fol. 5533] By reason of the approbation of the present Statutes in itself all shareholders are bound, both personally and for all other interested parties, to agree to accept as nul- and void any action of this nature, whether appertaining to the Company or individual, which may be brought directly before the Courts, together with any proceedings whatsoever which may result therefrom and are bound, by virtue of the dispositions of the Law of 31st December, 1925, to submit the matter in dispute to a Court of Arbitration, of which the members will be appointed by the General Meeting constituting the Company.

The award of the arbitrators must be given within a delay of three months, as from the day when they received full particulars of the matter from the applicant or applicants, with the exact indications as to the questions submitted for settlement. Nevertheless the Arbitrators shall have power in exceptional cases to extend the period of three months for a further reasonable period without, however, it being possible to postpone their final decision for more than a year from the date they were officially notified of the dispute.

The Arbitrators shall not be obliged to comply with any legal formalities. They shall endeavor to arrive at a solution acceptable to all parties and their decision shall be given only in the last resort and by a majority. The Arbitrators shall decide as to the parties who shall support the fees and expenses of the arbitration and shall fix the amount thereof. The powers to act of the Arbitrators are limited to the year for which they are appointed. The General Meeting may, whenever held, modify the composition of the Court of Arbitration. If no decision is taken on this subject, the powers of the Arbitrators are automatically continued for the following year.

In the event of death, resignation or any other cause by reason of which an Arbitrator would not be able to fulfil his duties, the Board of Directors must provide on the Agenda of the next General Meeting for the nomination of new Arbitrators; should any conflict arise, the Board must also call a General Meeting to proceed with the nomination of Arbitrators.

Section IX

Association of the Holders of Deferred Shares

Article No. 50

1. An Association is formed which shall exist between all the owners, present or future, of the thousand Deferred Shares created above.

II. The object of this Association is to place in common, reunite and centralise all rights and powers which may appertain to the Preferred Shares, so that the Association alone, and not the holders of the Deferred Shares individually, may exercise all the rights and powers attached to the said Shares, and in particular, may conclude with the Company any contract or arrangement in all instances where the same may be necessary and more particularly in case:

Of the increase or reduction of the Capital of the Company if this increase or reduction necessitates any modification in the proportion of the Profits attributed to the Deferred Shares.

Of the creation of an increased number of Deferred Shares.

Of the repurchase of all or part of the Deferred Shares.

[fol. 5534] Of the dissolution or amalgamation of the Company and of the transformation of the Deferred Shares.

The Association shall exercise, without any restriction whatsoever, the rights of the holders of the Deferred Shares for the determination and settlement of all questions affecting the said holders in any way whatsoever, provided, however, that the present Article shall not give the Association of the Holders of Deferred Shares any right of interference in the Affairs of the Company nor any right of attendance at the General Meetings of the shareholders of the Company.

III. This Association takes the title of "Société Civile des Portseurs de parts de fondateur de la Société Anonyme Francaise Timken".

IV. The Registered Office of the Association is at 5 Quai Aulagnier, Asnieres.

The Registered Office may be transferred to any other place by a decision of the Directors of the Association.

V. The Association shall be automatically brought into existence, without any formalities, as from the date when by reason of transfer or assignment the thousand Deferred shares created above shall be owned by several persons.

The Association shall continue to exist until such time as the rights attached to the Deferred Shares are extinguished.

The death, banishment, bankruptcy or insolvency of one or more members does not involve the dissolution of the Association before the expiration of its normal life.

VI. No special share certificates shall be issued by the Association; the Certificates in respect of the Deferred Shares shall be inscribed with reference to the existence of the said association.

The ownership of a Deferred Share implies adhesion to the terms of the present Statutes and to the decisions of the General Meeting of the Holders of Deferred Shares. The rights and powers attached to a Deferred Share appertain to the person holding the Share Certificate in question, no matter in what hands it may pass.

It is provided that, notwithstanding the fact that the rights and powers attaching to the Deferred Shares are placed in common, each of the holders of Deferred Shares retains the personal and exclusive ownership of his Shares and may dispose of them and come to an arrangement by mutual consent with the S. A. Francaise Timken for their repurchase, but may not oppose the compulsory repurchase of all or part of the Deferred Shares decided, as a general measure, by the General Meeting of the Holders of Deferred Shares.

VII. The Association is administered by one or more Directors appointed by the General Meeting of the members of the Association which may revoke these appointments. These Directors need not necessarily be members of the Association.

These Directors may act jointly or separately. The length of their appointment is without limit.

Exceptionally, Mr. Seward is appointed as the first Director.

[fol. 5535] VIII. In the event of death, resignation or dismissal of a sole Director or of one of the Directors, the

vacancy shall be filled up by the General Meeting of the Holders of Deferred Shares & within three months of the event which has given rise to the vacancy.

The resolutions containing the appointment or dismissal of Directors shall be deposited for record with the present Statutes.

IX. The Director or Directors holding office shall have the fullest possible powers to represent the Association of the Holders of Deferred Shares either as against the Company or against third parties. They are authorized more particularly to receive all communications and propositions from the Company and from its Board; convoke General Meetings of the Holders of Deferred Shares; transmit the decisions of these Meetings to the Company and see to their execution; draw up with the Company all agreements which they may consider necessary in the interests of the Association of the Holders of Deferred Shares subject however, to the approbation of the General Meeting of the Holders of these Shares; carry out any agreements agreed to by this General Meeting.

The Director or Directors shall have power to delegate and to transmit all or part of their powers and to create special powers of attorney.

X. Whenever necessary, the Holders of Deferred Shares shall be convoked in General Meeting by the Director or Directors of the Association or by one of them, or by the Board of Directors of the Company or by persons holding at least one fourth of the Deferred Shares.

The Notice convening the Meeting shall be effected by means of an advertisement inserted at least 30 days prior in a newspaper publishing legal announcements, published in the place where the Registered Office is situated and by registered letter and telegram addressed to those holders of Deferred Shares who have communicated their names and addresses to the Registered Office of the Association at the time the notice convening the Meeting is published.

The delays concerning the deposit of certificates, and the formalities relating thereto, necessary in order to assist at the General Meeting, shall be specified in the notice convening the meeting provided, however, that the delay may not exceed 5 days before the Meeting; no matter what d. te the convocation bears.

XI. The General Meeting is composed of all the Holders of Deferred Shares. It is presided by the Director or one of the Directors of the Association, or, in their absence, by the largest holder of Deferred Shares, present and accepting. The two largest holders of shares present and accepting are nominated as scrutineers of votes. The President and Scrutineers nominate the Secretary.

The resolutions of the General Meeting are only valid if the shareholders present represent, either personally or by proxy, two thirds of the number of shares existing.

If, on the first convocation, the Meeting does not represent two thirds of the shares existing, a second Meeting shall be called and the resolutions adopted by this second Meeting shall be valid if it comprises one half of the said shares but only in regard to the matters specified in the Agenda of the first Meeting.

[fol. 5536] Finally if One half of the said shares are not comprised in the second Meeting, a third Meeting shall be convened, and the resolutions of this Meeting shall be valid no matter what number of shares are represented.

These second and third Meetings shall be convened either by the Director of the Directors of the Association, or by one of them, or by the Board of Directors of the Company, or by persons holding at least a quarter of the Deferred Shares, by registered letter and by telegram sent at least thirty days before the Meeting to all such holders of Deferred Shares who have notified the Director or one of the Directors of the Association, their name, Christian name, profession and address at the moment of convocation. Notice convening these second and third Meetings must in any case be published also at lease thirty days in advance in one of the newspapers publishing legal notices of the place in which the Registered Office of the Association is established.

In any case resolutions to be valid must be approved by two thirds of the votes of the shareholders present or represented at the Meeting.

Every member of the Meeting shall have right to as many votes as the shares which he owns or represents without limitation.

No person may represent a holder of Deferred Shares if he himself is not a member of the Meeting.

The proceedings are recorded by Minutes written in a special Minute Book and signed by the President, Scruti-

neers and Secretary. Copies or extracts of these Minutes are certified as correct and signed by the Director or one of the Directors.

XII. The General Meeting considers and decides without appeal on all questions of any nature whatsoever which may interest the Association, provided that particulars of these matters have been indicated in the notice convening the Meeting.

The General Meeting appoints or dismisses the Director or Directors, hears their Reports and gives them "quitus".

It examines, rejects or authorizes all contracts, arrangements compromises and all modifications of the rights of the holders of Deferred Shares, more particularly as to all propositions for the repurchase of shares, and it decides without appeal on all questions affecting the Deferred Shares in any way whatsoever.

It confers on the Directors any additional powers.

Finally, it may modify the present Statutes without any restriction or reserve.

XIII. The General Meeting, regularly constituted, represents the whole of the holders of Deferred Shares; its decisions are binding on the whole of the shareholders even if absent, dissenting or incapable.

XIV. The expenses in connection with the working of the Assoication shall be advanced by the "Société Anonyme Francaise Timken", this Company reimbursing itself out of the proportion of Profits falling to the Deferred Shares. [fol. 5537] Any disputes concerning the carrying out or interpretation of the above provisions shall — decided in accordance with the Law of 31st December, 1925, and referred for settlement to the Court of Arbitration of which the constitution is provided for in the terms of the following Article of the present Statutes.

Section X

Constitution of the Society

Article No. 51

The present Company shall only be considered as definitely constituted after:

1. All the shares shall have been subscribed and fully paid up in cash. Proof of this will be given by a notarial declaration made by the founder of the Company, to which

will be annexed a list of the subscriptions and payments containing the necessary legal declarations.

2. A first General Meeting shall have recognized the veracity of the declaration of subscription and payment, nominated the first Directors and the Auditor or Auditors and ascertained their acceptance of these functions.

This Assembly shall be composed and its resolutions shall be taken according to the Law.

It is specially provided, however, that contrary to the provisions of the present Statutes, each person attending the constitutive Meeting shall have at least one vote and as many votes as shares represented by him either in his personal name or as proxy.

It is also provided that, as a special measure, this Meeting may be called, by a notice of not less than two days by an advertisement inserted in a newspaper of legal notices published in the place where the Registered Office is situated, or by registered letters addressed to the shareholders; it may even be called by notices given verbally and without any delay if all shareholders are present or represented.

Article No. 52

For the purposes of publication of the present Statutes and of all documents and extracts from proceedings relating to the constitution of the Company, full powers are given to the bearer of a copy or an extract from these documents.

[fol. 5538] II

As stated by a *co*dument received by Me Constantin, Notary at Paris, the sixteenth June nineteen hundred and twenty eight, Mr. Seward has declared: that the ten thousand shares of one hundred francs each of the said "Société Anonyme Française Timken", which were to be subscribed in cash, have been subscribed by eight persons, in different proportions and that there has been paid in cash by each subscriber a sum equal to the amount of the shares which he has subscribed, i.e., one million francs in all, which was deposited with Lloyds and National Provincial Foreign Bank Ltd.

And he has produced, in support of the said declaration, a schedule giving the names, Christian names, occupations

and addresses of the subscribers, the number and amount of the shares which they have subscribed, with the schedule of payments which they have each effected, which schedule has been annexed to the said declaration of subscription and payments.

III

From the Minutes (of which a copy has been deposited for record with Me Constantin, Notary at Paris, following a document received by him sixteenth June 1928) of the resolutions passed by the Constitutive General Meeting of the shareholders of the "Société Anonyme Francaise Timken", held sixteenth June 1928, it appears:

Firstly. That the General Meeting, after verification, has recognized the exactitude of the declaration of subscription and payments, made by the founder of the said Company, in the terms of the document received by Me Constantin, Notary at Paris, 16th June 1928.

Secondly. That the General Meeting has appointed as the first Directors, in accordance with the terms of Article 13 of the Statutes:

1. M. Pierre-Louis-Donat Marchal, manufacturer, residing at 38 Boulevard d'Argencon, Neuilly a/Seine.
2. M. Adolphe Sanz, manufacturer, residng at 16 rue Ampere, Paris.
3. M. Harry-Mann Ainsworth, manufacturer, residing at Hotel Majestic, Avenue Kléber, Paris.
4. M. Michael-Bruce-Urquhart Dewar, engineer, residing at 4 Central Buildings, Westminster, London, S.W.
5. M. Andrew-Jameson-Mathews Duncan, solicitor, residing at 21 Leadenhall Street, London E.C.
6. M. William-Eric-Louis Seward, manufacturer, residing at 128 Piccadilly, London W1.

These appointments have been accepted by the Directors or by their proxies.

Thirdly. That the General Meeting has appointed as Auditors:

M. Edmund Heisch, Chartered Accountant, residing at 18 rue Chauveau Lagarde, Paris.
[fol. 5539] and M. George Stevens Murray, Chartered Accountant, residing at the same address.

With power to act jointly or individually and for one to act alone in default of the other.

With the mission of making a report to the General Meeting on the Accounts of the Company for its first financial period and on the position of the Company, in accordance with the Law.

These appointments have been accepted by the proxy of the said Auditors.

Fourthly and Finally. That the General Meeting has approved the Statutes and has declared the Company definitely constituted.

Copies:

Of the document containing the declaration of subscription and payments, dated 16th June 1928, of the Schedule and of the Statutes annexed thereto.

Of the document deposited 16th June 1928 and of the Minutes of the General Meeting annexed thereto.

Have been lodged with the Registrar of the Commercial Tribunal of the Seine and with the Justice of the Peace at Asnieres, 9th July 1928.

Extracted and noted

After thorough consideration feel salary question can and should wait until Dewar can come over which we hope can be shortly after your return when all problems can be discussed and better understanding which seems necessary and desirable and feeling arrived at. New salary dating back to January 1st and suggest you investigate comparable salaries in England using National City if desirable. Hope Dewar will approve British Timken guarantee on this basis.

Lothrop.

The National City Bank, New York, N. Y.

GENTLEMEN:

The loan which you proposed making to Societe Anonyme Francaise Timken of Paris, France, of 6,000,000 francs for two years at six percent, has our approval, the said loan to be guaranteed by British Timken Limited, Birmingham, England.

We owe 52½% of the capital stock of British Timken and 59% of the capital stock of the Societe Anonyme Francaise Timken at Paris. However, your Mr. Wilson has been informed by us of the special arrangement between ourselves and Mr. Dewar regarding the management control of these two companies. We agree that during the period the above described loan is in effect we will not dispose of our stock ownership in these two companies.

Yours truly, The Timken Roller Bearing Company,
—— ——, President.

On basis your cable 24th financing plans discussed with Porter now obviously inadequate. You are closer to this problem what do you propose as proper way to finance French plant under plan fair to both you and us. Keep in mind we can furnish hardened cups and cones which will reduce equipment required for example can furnish 356 cup and cone hardened both for about 23¢ Canton other sizes in proportion. Most of labor will still be French labor if that is important and your raw material is now imported we understand. What commitments do you plan to have Citroen make for your protection. Can suitable rearrangements be made with French directors.

Strough.

B157 re French finance assuming total capital required six hundred thousand dollars suggest one hundred thousand dollars ordinary shares and two separate loans of two hundred and fifty thousand dollars each one loan to be definite mortgage debenture on all machinery and the other a loan guaranteed by British Timken on floating assets stop I suggest that these two loans should be called up as required in equal amounts stop in view of Sloans visit which we have much appreciated we feel that capital expenditure on British Timken is practically finished stop our financial position including providing finance for Germany will be all square by end of year when present loans from British

Timken to French Timken are repaid stop we see no reason to expect any reduction in British Timken profits for next year or following years consequently are prepared to undertake to devote one-third British Timken profits after this year to repaying both above loans but feel you should be prepared to extend our 10 years agreement to 15 years stop suggest that as loans are repaid some form of common stock should be issued in their places stop your suggestion regarding import of hardened parts is impracticable as duty per lb on semifinished parts is same as on finished bearings namely 30 cents per lb whereas duty on raw material is only 3 cents per lb stop propose insist on three years contract from Citroen stop consider can modify agreement with French directors.

28th May, 1929.

DEAR SIRS:

Societe Francaise Timken

The working Agreement between the British Company and the French Company has now been signed, and I enclose two completed copies.

The working Agreement between the British Company and the German Company will very soon be signed, and I shall then send you copies of that document as well.

With respect to the loan to be made by the National City Bank of New York, this has now been arranged as a fixed loan until the 30th November next, the interest at present being 6%. In connection with it, the British Company has given to the National City Bank a guarantee for the amount to be advanced. The amount guaranteed by the British Company is limited to 6,000,000 Francs, French Currency; the interest on the loan is at present 6% and the National City Bank has undertaken not to call upon the guarantors until after the 30th November.

It is no part of the arrangements with the National City Bank that the French Company is to give them any security, [fol. 5555] but it has been arranged between the British Company and the French Company that they are to give the British Company such security as they can, so as to protect them against loss under the Guarantee.

British Company

We had a Board Meeting of the British Company on Monday. The business of the British Company is proceeding satisfactorily, but the profits are affected by the large output which has been appropriated to the service of the French Company at a price which does not show a profit. This seriously affects the net results of the British Company and will continue to do so for some months yet. In this way, the British Company are submitting to some sacrifice for the French Company to which they could hardly be asked to submit if the British Company and the French Company were independent concerns. It is possible, however, that the present sacrifice may eventually prove to be justified by future benefits to be enjoyed by the British Company in the way of a share of the royalty which will be payable by the French Company to you, the supply of service material to French cars in this country, enlarged prestige for the Timken Name and in other ways. The French Company would, moreover, be quite willing to concede something to the British Company on account of these [fol. 5556] sacrifices. The persons principally concerned are, of course, the independent shareholders of the British Company.

Mr. Dewar also mentioned to me the main object of his visit to New York, and if there are any special interests of yours to be cared for, I daresay that you will be sending me instructions after Mr. Strough's meeting with Mr. Dewar and Mr. Seward.

Yours faithfully, A. J. M. Duncan.

The Timken Roller Bearing Company.

[fol. 5557] DEFENDANT'S EXHIBIT No. 222

New York, N. Y., June 7, 1929.

Mr. M. B. U. Dewar,
New York, N. Y.

DEAR SIR:

Referring to the proposed readjustment of holdings of Deutsche Timken G. m. b. H. (hereinafter referred to as the "German Company"), we propose to you the following outline of procedure:

1. A Swiss corporation will be organized to acquire all of the outstanding shares of the German Company, issuing shares of the Swiss Company in exchange therefor.

2. Two classes of shares similar to the existing classes of shares of British Timken Ltd. will be provided for and will be so issued by the Swiss Company that a system of voting control of the Swiss Company will be established and maintained similar to the system of voting control now in effect in respect to British Timken Ltd. Your retention of control of the Swiss Company will be dependent upon annual net earnings after corporate taxes for the calendar year 1932 and thereafter by the German Company in an amount not less than 15% of the capital investment of the German Company including proceeds of the sale of its outstanding shares, debentures and other similar securities. In the determination of such annual net earnings adjustment shall be made crediting earnings with all interest paid on such debentures and other similar securities.

[fol. 5558] 3. Appropriate provision shall be made in respect to the shares of the Swiss Company whereby such shares shall be subject to the same transfer limitations and

purchase option rights as are now in effect with respect to the shares of British Timken Ltd.

4. British Timken Ltd. will distribute ratably among its shareholders the shares of the Swiss Company which it receives in exchange for its shares of the German Company.

5. Beginning January 1, 1930 you shall receive £500 per annum as compensation for your supervision of the activities of the Swiss Company and the German Company.

It is the purpose of this letter to serve as a memorandum of the outline of procedure agreed upon and your approval hereof by notation hereon will constitute an agreement between us for that purpose subject to modification as to procedure and form in accordance with the mutual recommendations of our respective counsel.

Very truly yours, Timken Roller Bearing Company,
by (S.) M. T. Lothrop, Pres.

Approved: June 7, 1929. (S.) M. B. U. Dewar.

[fol. 5559] DEFENDANT'S EXHIBIT 223

New York, N. Y., June 7, 1929.

Mr. M. B. U. Dewar,
New York, N. Y.

DEAR SIR:

Referring to the proposed financing of S. A. Francaise Timken, (hereinafter referred to as the "French Company"), and contingent upon your securing for that Company a contract with Citroen necessitating additional facilities and working capital, we propose to you the following outline of procedure:

1. The French Company will increase its authorized shares and its existing shareholders will ratably subscribe at par for additional shares of the same respective class in the aggregate par amount of 1,000,000 French francs.

2. A Swiss corporation will be organized to acquire all of the outstanding shares of the French Company issuing shares of the Swiss company in exchange therefor.

3. Two classes of shares similar to the existing classes of shares of British Timken Ltd. will be provided for and will be so issued by the Swiss Company that a system of

voting control of the Swiss Company will be established and maintained similar to the system of voting control now in effect in respect to British Timken Ltd. Your retention of control of the Swiss Company will be dependent upon annual net earnings after corporate taxes for the calendar year 1932 and thereafter by the French Company in an [fol. 5560] amount not less than 15% of the capital investment of the French Company including proceeds of the sale of its outstanding shares, debentures and other similar securities. In the determination of such annual net earnings adjustment shall be made crediting earnings with all interest paid on such debentures and other similar securities.

4. Appropriate provision shall be made in respect to the shares of the Swiss Company whereby such shares shall be subject to the same transfer limitations and purchase option rights as are now in effect with respect to the shares of British Timken Ltd.

5. British Timken Ltd. will distribute ratably among its shareholders the shares of the Swiss Company which it receives in exchange for its shares of the French Company.

6. To the extent that the French Company shall require additional facilities and working capital, we will loan to the Swiss Company an amount up to $500,000 which funds shall be used by the Swiss Company in purchasing additional shares and/or debentures or similar securities of the French Company. Such loan shall be repayable in United States funds and shall bear interest at the rate of 6% per annum payable semi annually also in United States funds, and without deduction or withholding for any tax or taxes.

7. Until such loan shall be paid in full, the British Timken Ltd. to the extent of one-third of its annual net profits beginning with profits for the year 1930, will annually [fol. 5561] subscribe at par for additional shares of the Swiss Company. The proceeds of such subscriptions shall be used in repayment of such loan and interest. The shares of the Swiss Company so acquired by British Timken Ltd. shall be distributed ratably among its shareholders.

8. Beginning January 1, 1930 you shall receive £500 per annum as compensation for your supervision of the activities of the Swiss Company and the French Company.

It is the purpose of this letter to serve as a memorandum of the outline of procedure agreed upon and your approval

hereof by notation hereon will constitute an agreement between us for that purpose subject to modification as to procedure and form in accordance with the mutual recommendations of our respective counsel.

Very truly yours, Timken Roller Bearing Company,
by M. T. Lothrop, Pres.

Approved: June 7, 1929. M. B. U. Dewar.

[fol. 5562] DEFENDANT'S EXHIBIT No. 224

Agreement

Agreement made this 8th day of November, 1929, by and beween Michael Bruce Urquhart Dewar, (hereinafter called "Dewar"), of Number 10, Mayfair Place, London, England, party of the first part, and The Timken Roller Bearing Company, (hereinafter called "Timken Company"), a corporation organized under the laws of the State of Ohio, United States of America, party of the second part;

Witnesseth:

Whereas, Timken Company proposes to enter into a contract with Dewar, copy of which is hereto annexed as Exhibit "A"; and

Whereas, Dewar proposes to control a corporation to be organized under the laws of the Duchy of Luxembourg (hereinafter called "Dewar Corporation", which term for the purposes of this agreement shall include any corporation acquiring all or substantially all of the assets of Dewar Corporation), for the purpose of acquiring and possessing certain of the rights and obligations of Dewar provided for in the provisions of said contract Exhibit "A"; and [fol. 5563] Whereas, Timken Company, as a condition of its entering into the said contract with Dewar, requires that Dewar enter into this agreement with it and undertake and promise to perform the obligations hereinafter set forth;

Now therefore, in consideration of the execution by Timken Company of said contract Exhibit "A", and the undertaking by it of the covenants and obligations therein set forth to be undertaken and performed by it, and in consideration of the mutual covenants herein contained, it is

mutually agreed by and between the parties hereto as follows:

1. Dewar, without the written consent of Timken Company, will not sell, assign, transfer or create any lien or pledge upon any of the shares of Dewar Corporation at any time owned or acquired by him except to members of his immediate family, and he will at all times keep and maintain effective control of said corporation.

2. During such time as 2060 shares of common stock of the Delaware Corporation described in said contract Exhibit "A" hereto are registered in the name of Dewar as provided in Section 2 thereof, (a) Dewar will vote all such shares and will cause Dewar Corporation (or its sub-
[fol. 5564] sidiary corporation as described in said Exhibit "A"), to vote all shares of the common stock of the Delaware Corporation owned by it at all elections of directors of the Delaware Corporation in favor of nominees of Timken Company to the extent of one less than a majority of such Board of Directors.

(b) Dewar will not cause or permit the Delaware Corporation to sell or otherwise dispose of any of the shares of the French Company described in said contract Exhibit "A" or to vote them to effect with respect to said French Company any of the purposes set-forth with respect to the Delaware Corporation in subdivision (g) of Section 5 of its Certificate of Incorporation unless Timken Company shall consent thereto in writing.

3. Dewar agrees at all times to cause the Dewar Corporation (or its said subsidiary corporation), to keep and perform all of the covenants, agreements and obligations set forth in said contract Exhibit "A" hereto to be kept and performed by it, and himself to keep and perform all of the covenants, agreements and obligations therein set forth to be kep. and performed by him.

[fol. 5565] 4. Contingent upon Dewar's causing the shares of the Delaware Corporation owned by him to be transferred to and owned by the Dewar Corporation for the purpose of avoiding any succession of ownership of said shares of the Delaware Corporation arising out of the death of Dewar, Timken Company agrees that in the event that, by reason of any amendments or changes in the laws of the United States of America or the State of Delaware, Dewar Corporation or Dewar or his estate shall become

subject to any taxes of the United States of America or of the State of Delaware, by reason of the organization and existence of the Delaware Corporation under the laws of the State of Delaware which would be avoided if it were organized and existing under the laws of Luxembourg, then and in such event Timken Company will, at its option, either

(a) Indemnify and save harmless Dewar Corporation and/or Dewar and/or his estate from such taxes, or

(b) Cause to be organized a corporation under the laws of Switzerland or Luxembourg or such other jurisdiction as Timken Company may determine with [fol. 5566] the approval of Dewar, which will acquire all the assets and assume all the liabilities of the Delaware Corporation, will issue its stock to Timken Company and Dewar Corporation in the same proportions as the stock of the Delaware Corporation is then held, and will be substituted in the place and stead of the Delaware Corporation for all purposes of this agreement and of said contract Exhibit "A".

In event that Timken Company elects to proceed under the above clause (b), it will pay all costs and expenses in connection therewith, and Dewar will do all acts and things and cause Dewar Corporation to do all acts and things requisite and desirable to carry out said transaction.

5. Until such time as Dewar and/or Dewar Corporation shall cease to own twenty per cent (20%) of the shares of the common stock of the Delaware Corporation, he shall continue to have a right to be a director of such corporation.

6. Insofar as any provision of this agreement or of said contract attached hereto and marked Exhibit "A", conflicts with any provision in any prior agreement heretofore entered into between the Timken Company and Dewar and/or British Timken Limited (a joint stock company incorporated under the laws of the United Kingdom of [fol. 5567] Great Britain and Ireland and having its registered office at Birmingham in the Kingdom of England), said conflicting provision of any said prior agreements shall, for the purpose of this agreement and for the purpose of said contract attached hereto and marked Exhibit "A", be deemed to have been waived and made of no effect.

In witness whereof, the parties hereto have executed this agreement as of the day and year first above written, and for the purpose of evidencing its consent to and acceptance of the provisions of Section 6 above, British Timken Limited, under the authority of its Board of Directors, has caused its Common Seal to be affixed hereto as of the day and year first above written.

Michael Bruce Urquhart Dewar, L. S., Timken Roller Bearing Company, By J. F. Strough, Secretary & Treasurer.

The Common Seal of British Timken Limited was hereunto affixed in the presence of: —— ——, —— ——, Directors.

[fol. 5568] DEFENDANT'S EXHIBIT No. 225

EXHIBIT A

Agreement made this 8th day of November, 1929, between Timken Roller Bearing Company, a corporation organized and existing under the laws of the State of Ohio, (hereinafter called "Timken Company"), party of the first part; and Michael Bruce Urquhart Dewar, of Number 10 Mayfair Place, London, England, (hereinafter called "Dewar"), party of the second part; Witnesseth:

Whereas Industrial & Commercial Investments, Inc. (hereinafter called "Delaware Corporation"), is a corporation organized and existing under the laws of the State of Delaware, having a total authorized capital stock consisting of 5,000 shares of six percent cumulative preferred stock of the par value of One Hundred Dollars ($100) each, and 58,000 shares of common stock with a par value of Ten Dollars ($10) each, of which 3,400 shares of preferred stock and 8,000 shares of common stock are or are presently to be issued and outstanding, Timken Company to be the owner of said 3,400 shares of preferred stock of the Delaware Corporation, and of 4,804 shares of said common stock, and Dewar to be the owner of 3,196 shares of said common stock.

Whereas, S. A. Francaise Timken, (hereinafter called "French Company"), is a corporation organized and existing under the laws of France having a total authorized

and outstanding capitalization consisting of 30,000 shares of common stock, with a par value of 100 francs each, and 1,000 Founders shares all of which are or are to be owned by the Delaware Corporation;

Whereas, Dewar proposes to cause a corporation to be organized under the laws of the Duchy of Luxembourg (hereinafter called "Dewar Corporation"), for the purpose [fol. 5569] of acquiring and holding the shares of the Delaware corporation presently to be owned or hereafter acquired by Dewar, (which shall become a party hereto upon its organzation) at least a majority of the voting shares of which said Dewar Corporation shall be owned by Dewar and all other shares whereof shall be owned by the members of Dewar's immediate family;

Whereas, it is the intention and desire of Timken Company and Dewar that Dewar should have the right to elect a majority of the Board of Directors of the Delaware Corporation and to exercise management thereof upon the conditions hereinafter set forth;

Whereas, Timken Company and Dewar (or Dewar Corporation) respectively desire each to give to the other an option and right to purchase the shares of the common stock of the Delaware Corporation presently to be owned and hereafter acquired by it during the continuance of this Agreement upon the conditions hereinafter set forth;

Whereas, in consideration of the mutual agreements herein set forth and in order to protect and secure the rights and obligations of Timken Company and Dewar (and Dewar Corporation) hereunder, and to facilitate the enforcement and performance of the same, said Timken Company and Dewar (and Dewar Corporation) have agreed to deposit the shares of the common stock of the Delaware Corporation presently to be owned and hereafter acquired by them respectively during the continuance of this Agreement with Bankers Trust Company, a New York corporation, as Depositary, as hereinafter provided, to be held and disposed of on the terms and conditions hereinafter set forth;

Now therefore, it is mutually agreed by and between the parties hereto as follows:

[fol. 5570] 1. For the purpose of this agreement, wherever the context so admits, the phrase "Timken Company" shall be deemed to include Timken Company or any sub-

sidiary corporation all of the outstanding shares whereof shall be beneficially owned by the Timken Company; and the phrase "Dewar Corporation" shall be deemed to include said Dewar Corporation or any subsidiary corporation all of the outstanding shares whereof shall be beneficially owned by the Dewar Corporation.

2. For the purposes of this Agreement, Timken Company will cause 2,060 shares of the said common stock of the Delaware Corporation presently to be owned by it to be registered in the name of Dewar, and Dewar will forthwith assign in blank the certificate for said shares, complete for transfer, and will execute and file with the Delaware Corporation an irrevocable dividend order and assignment directing Delaware Corporation to pay to or upon order of Timken Company all dividends in cash, stock or otherwise, including upon liquidation, which may be declared and paid upon said 2,060 shares of common stock of Delaware Corporation, owned by Timken Company and so registered in the name of Dewar.

3. Timken Company and Dewar will sign and deliver to Bankers Trust Company, (herein called the "Depositary"), a letter in the form of Exhibit A hereto attached, constituting it Depositary or Escrow Agent for the purposes of this Agreement and will deposit forthwith with the Depositary certificates representing all common stock of the Delaware Corporation presently to be issued and outstanding duly assigned in blank, complete for transfer, executed by the registered holders thereof, and Timken and Dewar (and Dewar Corporation) will likewise deposit all additional shares of common stock of Delaware Corporation at any time acquired by them during the con- [fol. 5571] tinuance of this Agreement, to be held by the Depositary subject to the terms and conditions of said letter.

4. Upon the organization of Dewar Corporation, the parties hereto agree that it may and Dewar agrees to cause it to become a party to this agreement with all the rights and the obligations herein provided, such adhesion to this agreement being evidenced by the delivery to Timken Company of a copy of this agreement duly executed by said Dewar Corporation.

Upon Dewar Corporation becoming a party to this agreement as above provided, the Depositary shall, upon the request of Dewar, cause the Certificates owned by Dewar

and theretofore deposited by him with it to be transferred unto the name of Dewar Corporation, provided that at the time of making such request Dewar Corporation shall deliver to the Depositary (1) a copy of the escrow letter herein referred to duly signed by it, and (2) an irrevocable stock power endorsed in blank, duly executed by the Dewar Corporation, covering the shares so to be transferred into its name and further provided that the transfer tax stamps in connection with such transfer shall be furnished the Depositary by Dewar. The new Certificate shall be issued in the name of Dewar Corporation and shall thereupon be substituted for the corresponding certificate originally deposited in the name of Dewar, and shall be held by the Depositary upon the same terms and conditions.

5. If, at any time after January 1, 1933, the French Company shall fail to earn, during any calendar year, at least fifteen per cent (15%) upon its invested capital, as such invested capital is computed as hereinafter provided, evidenced by the written certificate of Messrs. Deloitte, Plender, Griffiths & Co., a copy of which shall be delivered [fol. 5572] to each of the parties hereto (and to the Depositary), then in such event:

(a) Dewar will, upon written, telegraphed or cabled request of Timken Company, execute and deliver proxies to Timken Company or its nominees to vote upon and act with respect to the said 2,060 shares of common stock of Delaware Corporation owned by Timken Company and registered in the name of Dewar as aforesaid.

(b) The Depositary, upon receipt of:

1) The written, telegraphed or cabled request from Timken Company;

2) The above mentioned certificate of Messrs. Deloitte, Plender, Griffiths & Co.;

3) An assignment, in blank, duly executed by Timken Company (or its nominees in case the stock is to be transferred into the names of its nominees) for said 2,060 shares; and

4) An amount sufficient to pay any transfer stamp taxes in connection therewith;

will forthwith cause the certificates for said 2,060 shares to be transferred on the books of the Delaware Corporation

from the name of Dewar into the name of Timken Company, or into the name of its nominees (which shall have filed with the Depositary a copy of the escrow letter herein referred to duly signed by them), and will thereafter hold the certificate or certificates for said 2,060 shares registered in the name of Timken Company, or its nominees, with the instrument of assignment and transfer thereof in blank attached thereto, for the purposes and the purposes only of the options hereinafter set forth.

[fol. 5573] 6. For the purposes of this Agreement the invested capital of the French Company shall be taken to be the sum of its paid in capital stock and the net proceeds of any bonds or other obligations issued by it to the Delaware Corporation and any loans by it from or through the instrumentality of the Delaware Corporation; net earnings shall be credited with the interest paid on any such bonds, obligations or loans, and shall be computed after deduction for depreciation, reserves and all taxes imposed upon the properties, business and income of the French Company, but without deduction for any taxes imposed upon interest and dividends paid by it whether or not such taxes are required to be withheld and paid at the source.

7. Timken Company agrees not to sell, assign or transfor, and Dewar (and Dewar Corporation) agree not to sell, assign or transfer, all or any part of the shares of the common stock of the Delaware Corporation now owned or hereafter acquired by them respectively during the continuance of this Agreement without first offering such shares to the other of them at the price at which it (the offering party) is willing to dispose of the same.

To this end if either Timken Company or Dewar (or Dewar Corporation) shall wish to sell, assign or transfer all or any part of such shares, it shall serve written notice upon the other party and upon the Depositary, stating the price at which it proposes to so dispose of the same, and the other party shall have a period of 90 days from the date on which such notice shall have been received by the Depositary in which to purchase said shares at such price. Such purchase will be made by written notice to the Depositary and payment of the purchase price to the De-[fol. 5574] positary for account of the offering party, and thereupon the Depositary shall deliver to the purchaser certificates for the shares so purchased and make payment thereof to the seller. If such purchase shall not be effected

within the said period of 90 days, then and thereafter the offering party shall be free to dispose of such shares to any other party at the price so specified within a period of one year after the expiration of said ninety day period and the Depositary shall, upon written notice from the offering party and payment to it for account of the offering party of the specified purchase price, deliver the certificates for said shares as the offering party may direct.

The provisions of this section shall not apply:

(a) To the sale and transfer of shares of the common stock of the Delaware Corporation by either Timken Company or Dewar (or Dewar Corporation) to another corporation all of the shares of which are beneficially owned and except for necessary directors qualifying shares are held by the Timken Company or Dewar (and/or members of his immediate family or Dewar Corporation), as the case may be; or (b) To the sale and transfer of shares of the common stock of the Delaware Corporation held by either Timken Company or Dewar Corporation to another corporation, together with all or substantially all of the assets of said selling corporation pursuant to a reorganization, merger, consolidation or the like,

and any such sale or transfer may be made pursuant to the above clause (a) and/or clause (b) without offering such shares to the other; provided, however, that in case of any [fol. 5575] such sale or transfer the corporation acquiring such shares shall, by instrument in writing, delivered to the other parties hereto, assume and agree to perform this agreement and shall thereupon be substituted for all purposes of this agreement, in the place and stead of Timken Company or Dewar (or Dewar Corporation) as the case may be, without, however, relieving the original contracting parties from their obligations hereunder, and such corporation shall likewise sign and deliver to the Depositary a copy of the Escrow Letter hereto attached as Exhibit A; and provided further that in the case of any such sale or transfer by Dewar (or Dewar Corporation) at least a majority of the voting shares of said purchasing corporation (or of its parent corporation owning all of its shares) shall be owned and held by Dewar free and clear in his own right and all other shares of said purchasing corporation

(or of its said parent corporation) shall be owned free and clear by members of Dewar's immediate family and all shares of any said purchasing corporation (or of its said parent corporation) except necessary directors qualifying shares shall be held by Dewar or by members of Dewar's immediate family.

8. Timken Company and Dewar (and the Dewar Corporation) hereby each grant to the other an irrevocable option and right to purchase all of the shares of the common stock of the Delaware Corporation now owned or hereafter acquired by them respectively, at their then value determined as hereinafter provided on the happening of any one of the following events:

(a) Timken Company may exercise said option upon:

1) The death of Dewar; or upon

2) Dewar's ceasing to be an officer and director of the French Company, or being incapacitated by ill- [fol. 5576] health or otherwise from performing his duties as such for a period of six (6) consecutive months; or upon

3) The cessation of the ownership of at least a majority of the voting shares of the Dewar Corporation by Dewar free and clear in his own right, or the ownership of all other shares of the Dewar Corporation by members of Dewar's immediate family;

4) Bankruptcy of the Dewar Corporation;

5) The liquidation of the Dewar Corporation except pursuant to a reorganization, merger, consolidation or the like, as hereinbefore in clause (b) of Section (7) provided.

(b) Dewar (or Dewar Corporation) may exercise such option upon:

1) The bankruptcy of Timken Company;

2) The liquidation of Timken Company except pursuant to a reorganization, merger, consolidation or the like as hereinbefore in clause (b) of Section (7) provided.

Such option shall be exercised by written notice served upon the seller and the Depositary within six (6) months after the happening of any one of the above named contin-

gencies shall have become known to the party entitling to exercise such option.

In the event that the parties or their legal representatives shall fail to agree as to the then value of the respective shares within sixty (60) days after the serving of said notice, then and in that event the then value of said shares shall be determined by an award of two firms of chartered or certified public accountants as arbitrators, one to be appointed by each party and by an umpire to be appointed by the said arbitrators. Such award shall be conclusive upon the parties and the parties will take all appropriate action for the consummation of such purchase and sale as the purchasing party may reasonably request.

[fol. 5577] 9. Timken Company agrees, upon demand by Delaware Corporation, to subscribe at par for authorized and unissued shares of its preferred stock up to an aggregate of 1,600 shares of said stock now authorized and unissued. The proceeds of such additional subscription shall forthwith be applied by the Delaware Corporation:

(a) To the subscription for additional shares of capital stock of the French Company, or

(b) To the subscription for bonds of the French Company, or

(c) To loans to the French Company on open account, or

(d) To all or any of said purposes.

10. So long as any preferred stock of the Delaware Corporation shall be outstanding and owned by Timken Company, Timken Company and Dewar (and Dewar Corporation) agree to use their best efforts to cause British Timken, Ltd., a corporation organized under the laws of England, to declare and pay as dividends an amount equal to at least one-third of its net earnings for each year commencing with the calendar year 1930, such dividends to be declared and paid as promptly as such net earnings may be reasonably determined and as may be consistent with the best interests of British Timken, Ltd., Timken Company and Dewar (and Dewar Corporation) further agree, as and when such dividends are paid, to apply an amount equal thereto to the subscription to common stock of the Delaware Corporation at par up to an aggregate of one-third of the net earnings of British Timken, Ltd., since January 1, 1930, as the

same may be determinable on the date of each such subscription, such obligation to continue until all of the preferred stock of the Delaware Corporation therefore out- [fol. 5578] standing shall have been redeemed or funds provided for the redemption thereof as hereinafter set forth. Such subscriptions shall be made by the parties hereto in the ratio of one hundred five shares subscribed by Timken Company for each ninety-five shares subscribed by Dewar (and Dewar Corporation) and the parties hereto waive their preemptive rights to subscribe to such stock to the extent necessary for the foregoing subscriptions. The proceeds of the issue of such common stock of the Delaware Corporation, together with any amounts received by the Delaware Corporation from the French Company on account of principal of any bonds, obligations or loans (other than by way of amortization of discount), shall be applied by Delaware Corporation forthwith to the redemption of its preferred stock and upon such redemption the preferred capital stock of the Delaware Corporation shall be reduced accordingly. Certificates for all such additional shares of common stock of Delaware Corporation shall be forthwith assigned in blank, complete for transfer, by Timken Company and Dewar (and Dewar Corporation) and deposited with the Depositary.

11. None of the authorized and unissued stock of the Delaware Corporation shall be issued except as herein provided.

12. By mutual agreement of Timken Company and Dewar (and Dewar Corporation), evidenced in writing and filed with the Depositary, any other firm of certified public accountants may be substituted by reason of the liquidation, death or otherwise, in the place and stead of Messrs. Deloitte, Plender, Griffiths & Company for all purposes of audits, determination of invested capital and earnings under this agreement. Messrs. Deloitte, Plender, Griffiths [fol. 5579] & Company or such other firm as may be substituted for them, shall at all times have full and free access to the books and accounts of the Delaware Corporation and of the French Company, and the parties hereto agree to do all things in their power to facilitate such examination at any time; it being understood that the provisions of this agreement relating to the named certified public accountants or any successor to them from time to time, are not

limited, confined or special to them respectively or to their especial judgment.

13. The fees and expenses of the Depositary shall be borne by the parties hereto in accordance with their respective beneficial interest in the stock deposited. Each shall be liable, however, to the Depositary jointly and severally for the full amount of such fees and expenses with right of contribution.

14. This Agreement shall terminate upon the termination or consummation of the option rights arising on the death of Dewar, provided, however, that it may be sooner terminated with the unanimous consent of the beneficial owners of all of the stock deposited with the Depositary as herein provided.

15. All notices hereunder shall be given by letter or cable or radio photostat or by cable or radio confirmed by letter and if to Timken Company shall be sufficient in all respects if sent to The Timken Roller Bearing Company, Canton, Ohio, U. S. A. and if to Dewar or Dewar Corporation if sent to Michael B. U. Dewar, 10 Mayfair Place, London, England.

In Witness Whereof, the parties hereto have executed this Agreement on the day and year first above written.

The Timken Roller Bearing Company, by (S.) J. F. Strough, Secretary and Treasurer. (S.) Michael Bruce Urquhart Dewar.

[fol. 5580] DEFENDANT'S EXHIBIT 226

New York, N. Y.,
November 9, 1929.

Industrial & Commercial Investments, Inc., (a Delaware Corporation).

GENTLEMEN:

S. A. Francaise Timken (a French Corporation) has an authorized capital stock consisting of 30,000 ordinary shares and 1,000 Founders shares. Of said shares 20,000 ordinary and 1,000 Founders shares are full-paid and are owned or controlled by the undersigned the Timken Roller Bearing Company and M. B. U. Dewar. In addition the undersigned Timken Roller Bearing Company has caused

a nominee of the National City Company, Geneva, to subscribe and pay for the remaining 10,000 additional ordinary shares, using for that purpose funds advanced by the Timken Roller Bearing Company.

We make the following proposal to you:

1. We will deliver or cause to be delivered to you in negotiable form certificates for said 30,000 ordinary shares of said French corporation and transfer to you our rights to receive the 1,000 Founders shares above referred to.

2. The Timken Roller Bearing Company will subscribe for 3,400 shares of your preferred stock at par payable from time to time on your demand against issuance of certificates representing the number of shares payment whereof shall have been made.

[fol. 5581] 3. You will cause to be issued 8,000 shares of your full-paid and non-assessable common stock as follows:

Names	Certificate No.	No. of Shares
Timken Roller Bearing Company, Canton, Ohio	1	2,744
Michael Bruce Urquhart Dewar, 10 Mayfair Place, London	2	2,060
Michael Bruce Urquhart Dewar, 10 Mayfair Place, London	3	3,196
		8,000

You will credit to the preferred stock subscription of the Timken Roller Bearing Company above referred to an amount equal to 1,000,000 francs, representing the amount advanced by the Timken Roller Bearing Company to the National City Company, Geneva, above referred to.

In the event of your acceptance of these proposals the certificates (or temporary receipts therefor) representing the above mentioned ordinary shares of S. A. Francaise Timken will be delivered to National City Bank, Paris, for your account and upon confirmation thereof to you you will issue certificates representing the shares of your common stock as above provided.

Your acceptance hereof by notation hereon will constitute an agreement between us.

Very truly yours, Timken Roller Bearing Company, by J. F. Strough, Secretary-Treasurer, Michael Bruce Urquhart Dewar.

Accepted: Nov. 9, 1929.

Industrial & Commercial Investments, Inc., by Grover Higgins, President.

[fol. 5582] DEFENDANT'S EXHIBIT 227

Exhibit A

November 11, 1929.

Bankers Trust Company, 16 Wall Street, New York, N. Y.

DEAR SIRS:

The undersigned, The Timken Roller Bearing Company, an Ohio corporation, of Canton, Ohio (hereinafter called "Timken") and the undersigned, Michael Bruce Urquhart Dewar of No. 10 Mayfair Place, London, England (hereinafter called "Dewar") herewith deliver to you as Depositary certificates for an aggregate of 8,000 shares of the common stock of Industrial & Commercial Investments, Inc., a Delaware corporation (hereinafter called "Delaware corporation") of which certificates for 2744 shares stand in the name of and are owned by Timken, for 2060 shares stand in the name of Dewar but are beneficially owned by Timken, and for 3196 shares stand in the name of and are owned by Dewar. All of said certificates are duly endorsed in blank for transfer or are accompanied by irrevocable stock powers duly endorsed in blank for transfer.

The undersigned and such others as may become parties to this agreement as hereinafter provided, hereby request you to hold such certificates, together with any which may be hereafter deposited with you in substitution therefor or in addition thereto, subject to the following terms and conditions:

1. Any of the parties hereto may from time to time [fol. 5583] deposit certificates for additional shares of common stock of the Delaware corporation hereunder and such certificates shall be accepted and held hereunder provided that they are either duly endorsed in blank for transfer or are accompanied by irrevocable stock powers duly endorsed in blank for transfer. At the time of any such deposit of additional certificates the depositing party shall in writing, filed with the Depositary, declare the beneficial ownership thereof.

2. If at any time after January 1, 1933 S. A. Francaise Timken, a French corporation (hereinafter called "French company") shall fail to earn, during any calendar year, at least 15% upon its invested capital, as such invested

capital is computed as hereinafter provided, evidenced by the written certificate of Messrs. Deloitte, Plender, Griffith & Co., (certified public accountants) a copy of which shall have been delivered to you, then in such event, upon receipt of

(1) the written, telegraphed or cabled request from Timken;

(2) the above mentioned certificate of Messrs. Deloitte, Plender, Griffith & Co.;

(3) an assignment, in blank, duly executed by Timken, (or its nominees in case the stock is to be transferred into the names of its nominees) for 2060 shares; and

(4) an amount sufficient to pay any transfer tax stamps in connection therewith,

you will cause the certificates for 2060 shares standing in the name of Dewar but which are owned by Timken, to be [fol. 5584] presented to the Delaware corporation for transfer into the name of Timken or into the name of its nominees (which shall have filed with you a copy of this letter duly signed by them) and you will thereafter hold the certificate or certificates for said 2060 shares registered in the name of Timken or its nominees, with the instrument of assignment and transfer thereof in blank attached thereto, for the purposes and the purposes only of the options hereinafter set forth.

3. For the purposes hereof the invested capital of the French company shall be taken to be the sum of its paid-in capital stock and the net proceeds of any and all other obligations issued by it to the Delaware corporation and any loans by it from or through the instrumentality of the Delaware corporation; net earnings shall be credited with the interest paid on any such bonds, obligations or loans and shall be computed after deduction for depreciation, reserves and all taxes imposed upon the properties, business and income of the French company, but without deduction for any taxes imposed upon interest and dividends paid by it, whether or not such taxes are required to be withheld and paid at the source.

4. By mutual agreement of the undersigned and of any person or corporation who may become a party hereto as herein provided, evidenced in writing filed with you, any

other firm of certified public accountants may be substituted by reason of the liquidation, death or otherwise in the place and stead of Messrs. Deloitte, Plender, Griffiths & Co. for [fol. 5585] all purposes of audits, determination of invested capital and earnings as herein provided. The Depositary is hereby authorized and directed to rely upon any certificate of Messrs. Deloitte, Plender, Griffiths & Co. or of any such other firm as may be substituted for them, as hereinabove provided, and shall be under no liability whatsoever to investigate the correctness of any such certificate.

5. Timken and Dewar have agreed not to sell, assign or transfer, all or any part of the shares of the common stock of the Delaware corporation now owned or hereafter acquired by them respectively during the continuance of this agreement, without first offering said shares to the other of them at the price at which it (the offering party) is willing to dispose of the same.

To this end if either Timken or Dewar wish to sell, assign or transfer all or any part of such shares, it shall serve written notice upon the other party and upon the Depositary (which notice to the Depositary shall state that such notice has been served upon the other party), stating the price at which it proposes so to dispose of the same, and the other party shall have a period of 90 days from the date at which such notice shall have been received by the Depositary in which to purchase said shares at such price. Such purchase will be made by written notice to the Depositary and payment of the purchase price to the Depositary for account of the offering party, and thereupon the Depositary shall deliver to the purchaser certificates for the [fol. 5586] shares so purchased and make payment thereof to the seller. If such purchase shall not be effected within the said period of 90 days, then and thereafter the offering party shall be free to dispose of such shares to any other party at the price so specified within a period of one year after the expiration of said ninety day period and the Depositary shall, upon written notice from the offering party and payment to it for account of the offering party of the specified purchase price, deliver the certificates for said shares as the offering party may direct.

The provisions of this section shall not apply: (a) To the sale and transfer of shares of the common stock of the Delaware Corporation by either Timken or

Dewar (or Dewar Corporation hereinafter mentioned) to another corporation all of the shares of which are beneficially owned and except for necessary directors qualifying shares are held by Timken or Dewar (and/or members of his family or Dewar Corporation) as the case may be; or (b) To the sale and transfer of shares of the common stock of the Delaware Corporation held by either Timken or any corporation to which Dewar pursuant to clause (a) hereof may have transferred his shares of the common stock of the Delaware Corporation (hereinafter called the "Dewar Corporation") to another corporation, together with all or substantially all of the assets of said selling corporation pursuant to a reorganization, merger, consolidation or the like,

and any such sale or transfer may be made pursuant to the [fol. 5587] above clause (a) and/or clause (b) without offering such shares to the other; provided, however, that in case of any such sale or transfer, the corporation acquiring such shares shall sign and deliver to the Depositary a copy of this letter; and provided further that in the case of any such sale or transfer by Dewar (or Dewar Corporation), at least a majority of the voting shares of said purchasing corporation (or of its parent corporation owning all of its shares) shall be owned and held by Dewar free and clear in his own right and all other shares of said purchasing corporation (or of its said parent corporation) shall be owned free and clear by members of Dewar's immediately family and all shares of any said purchasing corporation (or of its said parent corporation) except necessary directors qualifying shares shall be held by Dewar or by members of Dewar's immediate family.

6. Timken and Dewar hereby each grant to the other an irrevocable option and right to purchase all of the shares of the common stock of the Delaware corporation now owned or hereafter acquired by them respectively, at their then value determined as hereinafter provided on the happening of any one of the following events:

(a) Timken may exercise said option upon:

(1) The death of Dewar; or upon

(2) Dewar's ceasing to be an officer and director of the French Company, or being incapacitated by ill

health or otherwise from performing his duties as such for a period of six consecutive months; or upon

[fol. 5588] (3) The cessation of the ownership of at least a majority of the voting shares of any said Dewar corporation by Dewar free and clear in his own right, or the ownership of all other shares of any said Dewar corporation by members of Dewar's immediate family; or

(4) Bankruptcy of any said Dewar corporation; or

(5) The liquidation of any said Dewar corporation except pursuant to a reorganization, merger, consolidation or the like, as hereinbefore in clause (b) of paragraph 5 provided.

(b) Dewar (or Dewar corporation) may exercise such option upon:

(1) The bankruptcy of Timken;

(2) The liquidation of Timken except pursuant to a reorganization, merger, consolidation or the like as hereinbefore in clause (b) of paragraph 5 provided.

Such option shall be exercised by written notice served upon the seller and upon the Depositary within six (6) months after the happening of any one of the above named contingencies shall have become known to the party entitled to exercise such option.

In the event that the parties or their legal representatives shall fail to agree as to the then value of the respective shares within sixty (60) days after the serving of said notice upon the Depositary then and in that event the then value of said shares shall be determined by an award of two firms of chartered accountants or certified public accountants as arbitrators, one to be appointed by each party and by an umpire to be appointed by the said arbitrators. Such award of said arbitrators shall be conclusive upon the parties.

[fol. 5589] 7. The Depositary shall be under no obligation to make any transfer or delivery of any of the stock deposited hereunder or to take notice of or any other action, pursuant to the exercise or alleged exercise of the option referred to in paragraph 6 hereof unless and until either (a) it shall have been furnished with a written request signed by all of the parties hereto to make any such transfer, delivery or to take any other action in connection therewith or (b)

proof shall have been furnished to it to its satisfaction and to the satisfaction of its counsel that one or more of the contingencies mentioned in paragraph 6 hereof shall have happened, and the option therein referred to shall have been properly exercised and the purchase price of the shares so purchasd shall have been deposited with it to be held by it to or upon the order of the selling party.

8. In the event any parties hereto desire pursuant to clause (a) and/or clause (b) of paragraph 5 hereof to cause any of the certificates deposited hereunder standing in their name or the name of their nominee and owned by them to be transferred to a subsidiary corporation or to a corporation resulting from a reorganization, merger or consolidation or the like of any of the parties hereto which shall acquire all or substantially all of the assets of the selling corporation, they shall in writing notify the Depositary of their desire so to do. The Depositary shall upon receipt of any such notice cause any such certificates on deposit with it hereunder to be presented to the Delaware corporation for transfer [fol. 5590] into the name of such corporation upon receipt of

(1) a copy of this letter duly executed by the transferee corporation;

(2) a certificate signed by the selling party to the effect that the shares of the purchasing corporation are owned by it (or by Dewar and/or his immediate family) in the manner provided in paragraph 5 hereof;

(3) an irrevocable stock power endorsed in blank for transfer duly executed by such transferee corporation covering the number of shares so to be transferred; and

(4) an amount sufficient to pay stock transfer tax stamps due upon such transfer.

The Depositary will hold the new certificates issued in the name of such corporation, together with such assignment and transfer in blank in lieu of the certificates so transferred.

9. The Depositary shall be under no responsibility for the validity of any certificate deposited with it, the value thereof, nor for the sufficiency of any assignment thereof. The Depositary shall be under no liability to any of the parties hereto for any act taken by it in good faith in reliance upon any certificate, writing, advice, notice, instru-

ment, request or instructions purporting to be duly given or executed which it believes in good faith to be genuine and authorized or otherwise in connection herewith except for wilful default or gross negligence. The Depositary may [fol. 5591] act in any matter in connection herewith by agents and it shall not be liable for any default of any such agents selected by it with reasonable care. The Depositary at any time may act in reliance upon advice of counsel and for any action taken or not taken pursuant to such advice, it shall not be liable.

10. The undersigned and all who may become parties hereto by depositing with the Depositary a signed copy of this letter as hereinabove provided shall be jointly and severally liable to the Depositary for its reasonable fees and expenses including counsel's fees and expenses, in connection herewith and shall indemnify and hold it harmless from any and all liability which it may incur by reason hereof, and the Depositary shall have a lien upon any of the deposited stock therefor.

11. This agreement shall terminate upon the termination or consummation of the option rights arising on the death of Dewar, provided, however, that it may be sooner terminated upon the written request of the owners of all of the stock deposited hereunder. Upon any such termination the Depositary shall deliver to the persons entitled thereto the deposited stock according to their respective interests.

12. Any corporation with or into which you may consolidate or merge or which may acquire all or substantially all of your assets shall be substituted as Depositary of the deposited certificates without execution of any further instrument. You may at any time resign as Depositary hereunder upon 60 days prior written notice given to such party hereto. You may be removed as Depositary at any time [fol. 5592] upon 60 days prior notice delivered to you by all of the parties hereto.

13. The word "Timken" and the words "Dewar Corporation" as used herein, shall extend to and include any subsidiary corporation or any successor corporation which shall acquire all or substantially all of their assets respectively.

14. Notices hereunder may be by letter or cable or radio photostat or cable or radio confirmed by letter, addressed

and sent to the parties at their addresses as given in this letter.

Very truly yours,
The Timken Roller Bearing Company, by J. F. Strough

August 15, 1934.

The Timken Roller Bearing Company, Canton, Ohio. Attention—H. H. Timken, President

Gentlemen:

The undersigned, M. B. U. Dewar (hereinafter called Dewar), desires to submit heads of agreement as heretofore negotiated between Dewar and The Timken Roller Bearing Company (hereinafter called the Timken Company).

British Timken, Limited, has authorized, issued and outstanding 50,000 Class A shares and 50,000 Class B shares,

of which Dewar owns or controls 27,000 Class A shares and 20,500 Class B shares, and the Timken Company owns or controls 23,000 Class A shares and 29,500 Class B shares. It is contemplated that such capitalization will, by appropriate action, be increased to 125,000 Class A shares and 125,000 Class B shares, and such increased capitalization be charged to surplus.

In connection with and subject to the consummation of the sale, on or before August 31, 1935, of a fifty per cent stock interest in British Timken, Limited, as described in section 1 below, it is proposed as follows:

1. Dewar and the Timken Company will attempt to negotiate a cash sale of a fifty per cent stock interest in British Timken, Limited, at an aggregate sale price of not less than 150,000 pounds. The fifty per cent stock interest in [fol. 5595] British Timken, Limited, so proposed to be sold will be made available by Dewar and the Timken Company each supplying, for that purpose, one-half of the holdings in British Timken, Limited, owned or controlled by them.

2. In connection with such proposed sale of a fifty per cent stock interest in British Timken, Limited, the share capital of British Timken, Limited, will, by appropriate action, be changed so that all of the shares will be of one class, and all appropriate changes and amendments will be made in the Articles of Incorporation looking to the changing of British Timken, Limited, from a Private Company to a Public Company.

3. Also in connection with such proposed sale of a fifty per cent stock interest in British Timken, Limited, Dewar and the Timken Company will cause the contract between the Timken Company and British Timken, Limited, dated first January, 1928, to be amended, to the end that the amount provided to be paid by the American Company (The Timken Company) to the British Company (British Timken, Limited) in accordance with the provisions of sub-section (b) of Section 7 and the amount provided to be paid by the British Company (British Timken, Limited) to the American Company (the Timken Company) in accordance with the provisions of sub-section (b) of Section 8 shall in each instance be an amount equal to five per centum (5%) of the described net sale prices. Dewar and the Timken Company will also cause said contract to be amended to the end that the amount provided to be paid by the British Company

(British Timken, Limited) to the American Company (the Timken Company) pursuant to the provisions of Section 10 shall be an amount equal to one-half of one per centum [fol. 5596] of the net invoice prices as therein described, instead of an amount equal to four per centum of such net invoice prices, and an adjustment in respect of such reduction shall be made from and after January 1, 1934. The provisions of Section 16 of said contract shall also be amended to the end that the provisions of such contract shall remain in effect for a period of fifteen years from and after the date of the consummation of the proposed sale of a fifty per cent stock interest in British Timken, Limited.

4. Also in connection with such proposed sale of a fifty per cent stock interest in British Timken, Limited, Dewar and the Timken Company will cause appropriate provision to be made, either in the aforesaid agreement between the Timken Company and British Timken, Limited, or otherwise, to the end that Societe Anonyme Francaise Timken, a French corporation (hereinafter called French Timken), or its successor operating in France, shall be under no obligation to pay any license, royalty or service fees either to British Timken, Limited, or to the Timken Company.

5. Also in connection with such proposed sale of a fifty per cent stock interest in British Timken, Limited, Dewar and the Timken Company will cause the aforesaid contract between British Timken, Limited, and the Timken Company to be modified to the end that either the Timken Company or British Timken, Limited, may sell bearings in or to Russia free and clear of the provisions of such contract and on a basis whereby the Timken Company and British Timken, Limited, will share equally the expense of negotiating such [fol. 5597] sales by either company, and whereby the company securing such sales shall pay to the other company an amount equal to two per cent (2%) of the net sales so secured.

6. In the event of the confirmation of the proposed sale of the fifty per cent stock interest in British Timken, Limited, the remaining fifty per cent of the total outstanding shares of British Timken, Limited, owned or controlled by Dewar and the Timken Company, shall be transferred to and held by a Holding Company to be organized for that purpose. The Holding Company will issue to the respective assignors of such shares of British Timken, Limited,

an equal number of shares of the Holding Company. The shares so to be issued by the Holding Company shall be Class A and Class B shares, having such rights and privileges in respect of voting and election of directors, and otherwise, as are provided in the present Articles of Association and the present Ordinary Resolutions Nos. 1 and 2 of British Timken, Limited, together with the accompanying by-laws. The earning and dividend record applicable to the rights and privileges attaching to the Class A and Class B shares will be the earning and dividend record of British Timken, Limited. The shares of the Holding Company issued in respect of the shares of British Timken, Limited, so transferred by Dewar, shall be Class A shares, and the shares of the Holding Company issued in respect of the shares of British Timken, Limited, so transferred by the Timken Company, shall be Class B shares.

In the event of the withdrawal from the Holding Company in the manner hereinafter provided of more than five per cent of the shares of British Timken, Limited, thereto- [fol. 5598] fore assigned to the Holding Company by either the Timken Company or by Dewar, all of the special rights and privileges attaching to such Class A and Class B shares, respectively, shall cease and determine, and all of the shares of the Holding Company shall be deemed to be of one class.

The shares of the Holding Company shall be redeemable by the Holding Company, at the option of the owners thereof, upon not less than sixty days' notice to the Holding Company and surrender to the Holding Company of the respective certificate or certificates representing the shares so to be redeemed. The redemption price of each share of the Holding Company shall be one share of British Timken, Limited, plus an amount equal to a pro rata share of the Holding Company's assets other than the shares of British Timken, Limited. In each instance the shareholder in the Holding Company causing his shares to be redeemed shall assume and pay any tax involved in the transaction.

Appropriate provision shall be made whereby both Dewar and the Timken Company, respectively, shall cause shares owned or controlled by them respectively to be first offered to the Timken Company and Dewar, respectively, on appropriate terms, prior to being sold to outside interests or presented to the Holding Company for redemption as hereinbefore in this section provided.

7. Upon the consummation of the sale of the fifty per cent stock interest in British Timken, Limited, as hereinbefore described, Dewar and the Timken Company will adjust their respective interests and investments in Societe Anonyme Francaise Timken (hereinafter called French Timken), [fol. 5599] Deutsche Timken Gesellschaft m.b.h. (hereinafter called German Timken), Industrial and Commercial Investments, Incorporated (hereinafter called I.C.I.), and International Bearings Investments, Incorporated (hereinafter calling I.B.I.), in such manner as to produce the following ultimate results:

(a) Dewar and the Timken Company will each own or control a one-half interest in French Timken, German Timken, I.C.I., and I.B.I., subject, however, to the obligation of re-payment of advances since December 31, 1933, made by Dewar or the Timken Company.

(b) Dewar will pay in cash to the nominee of the Timken Company, the sum of $250,000, and will cause to be issued to the nominee of the Timken Company a note, bearing no interest, in the amount of $150,000, executed either by Dewar personally or by a Holding Company owned or controlled by Dewar and organized for the purpose of holding a one-half interest in French Timken, German Timken, I.C.I., and I.B.I., as now constituted or as hereafter reorganized, all of which said corporations, French Timken, German Timken, I.C.I., and I.B.I., as now constituted or as hereafter reorganized, are hereinafter called Continental Timken. Payment of such note shall be secured by the pledge of such one-half interest in Continental Timken. The amount of such note shall be due and payable from and only from the proceeds of sale of all or any part of such one-half interest in Continental Timken, or from the proceeds of liquidation of Continental Timken applicable to such one-half interest, or from dividends or other distribution de- [fol. 5600] clared and paid by Continental Timken in respect of such one-half interest in excess of an amount equal to $7500 per year.

8. From and after the consummation of the sale of the fifty per cent stock interest in British Timken, Limited, as hereinbefore described, Dewar, during his lifetime and his active management of the business of French Timken, shall be entitled to nominate and elect a majority of the Board of Directors of French Timken until such time as French Tim-

ken shall fail to pay annually to its shareholders an amount, less French taxes on dividends, equal to $24,000 per year, as dividends or other distribution from accumulated earnings; provided, however, that for the purpose of the provisions of this section, no default in the payment of such distribution shall be effective prior to the year commencing six months after the consummation of the sale of the fifty per cent stock interest in British Timken, Limited, as hereinbefore described. In the event of Dewar's death or retirement from the active management of the business of French Timken, or in the event of the failure of French Timken to make the payments hereinbefore in this section provided, Dewar will, at the election of the Timken Company, cause shares of French Timken equal to one voting unit to be sold to the Timken Company, or its nominee, at the book or par value of such shares.

Your approval hereon in writing will evidence our mutual understanding of the foregoing heads of agreement.

Very truly yours, M. B. U. Dewar.

Approved: September 24, 1934.

The Timken Roller Bearing Company, By W. J. Timken, President

[fol. 5601] Agreement

Dated: December twenty-ninth, One thousand nine hundred and thirty four.

Parties

(1) The Timken Roller Bearing Company Canton Ohio United States of America (the American Company)

(2) British Timken Limited Cheston Road Aston Birmingham England (the British Company)

(3) Michael Bruce Urquhart Dewar Number 10 Mayfair Place London W. England (Mr. Dewar)

Recitals

(A) The British Company is a private company with a share capital of Two hundred and fifty thousand pounds divided into One hundred and twenty five thousand "A" Shares and One hundred and twenty five thousand "B" Shares all of One pound each of which One hundred thou-

sand shares have been issued One hundred and fifty thousand shares have been allotted but are not yet issued and all are fully paid

(B) The British Company is organized and carries on business under inter alia the following deeds agreements instruments etcetera:

(1) Articles of Association adopted by Special Resolution passed and confirmed on the Fifth and Twentieth days of April One thousand nine hundred and twenty eight respectively

(2) By-laws as to voting and By-laws as to Directors adopted by Ordinary Resolutions passed on the Twentieth day of April One thousand nine hundred and twenty eight as altered by an Ordinary Resolution passed on the Eighteenth day of March One thousand nine hundred and twenty nine

(3) Resolutions of the Directors passed on the First day of July One thousand Nine hundred and twenty seven the Twenty fifth day of January One thousand nine hundred and twenty nine and the Nineteenth day of April One thousand [fol. 5602] nine hundred and thirty four with respect to the remuneration of William Dallow as Manager of the British Company and Resolutions of the British Company in General Meeting passed on the Twenty fourth day of April One thousand nine hundred and thirty one and the Twenty eighth day of April One thousand nine hundred and thirty three and of the Directors passed on the Twentieth day of March One thousand nine hundred and thirty three and the Nineteenth day of April One thousand nine hundred and thirty four with respect to the remuneration of Frederick John Pascoe as Financial Adviser of the British Company

(4) Agreement between the American Company and the British Company executed as of the First day of January One thousand nine hundred and twenty eight being an Agreement establishing business relations between the American Company and the British Company (hereinafter called "The Business Agreement")

(5) Agreement between the British Company and Mr. Dewar made the Twentieth day of April One thousand nine hundred and twenty eight being an Agreement with respect to Mr. Dewar's appointment as Managing Director (hereinafter called "Mr. Dewar's Service Agreement")

(6) Agreement between the American Company and Mr. Dewar made the Twentieth day of April One thousand nine hundred and twenty eight being an Agreement with respect (inter alia) to transfers of shares (hereinafter called "the Transfers Agreement")

(7) Agreement between the American Company the British Company and Mr. Dewar made the Twentieth day of April One thousand nine hundred and twenty eight with respect to Directorships of and shares etcetera in Subsidiary Companies (hereinafter called "the Subsidiary Companies Agreement")

(8) Agreement between the British Company and Societe Francaise Timken a Societe Anonyme Incorporated in France (hereinafter called "the French Company") made as at the Sixteenth day of June One thousand nine hundred [fol. 5603] and twenty eight being an agreement establishing business relations between the American Company and the British Company and the French Company (hereinafter called "the French Company Agreeement")

(C) By special Resolutions passed on the Thirtieth day of November One thousand nine hundred and thirty four with the sanction required by clause 46 of its Articles of Association the British Company increased its share capital to Two hundred and fifty thousand pounds by the creation of One hundred and fifty thousand new shares of one pound each divided into Seventy five thousand "A" Shares and Seventy five thousand "B" Shares all of One pound each which shares when issued are to rank pari passu with the Fifty thousand "A" Shares and Fifty thousand "B" Shares already issued and by an Ordinary Resolution passed on the Thirtieth day of November One thousand nine hundred and thirty four the British Company resolved (with the necessary consents) that it was desirable to capitalise a sum of One hundred and fifty thousand pounds standing to the credit of General Reserve Account and authorised and directed the Directors at any time before the Thirty first day of August One thousand nine hundred and thirty five to appropriate and distribute such sum as capital amongst the members in proportion to the amounts paid up on the issued ordinary Shares held by them respectively and to apply such sum in paying for the said Seventy five thousand new "A" Shares and Seventy five thousand new "B" Shares such shares credited as fully paid to be

allotted and distributed to and amongst the members in such proportions that the number of "A" Shares and/or "B" Shares held by each member should be increased by the addition thereto of three new A shares for every two A shares held and three new B shares for every two B shares held

(D) Pursuant to and in accordance with the said resolutions the Directors of the British Company have capitalised and distributed the said sum of One hundred and [fol. 5604] fifty thousand pounds and allotted the said One hundred and fifty thousand new shares credited as fully paid

(E) The shareholders in the British Company are proposing to offer for sale to the public One hundred and twenty five thousand of the said One hundred and fifty thousand new Shares of One pound each and with a view thereto it will be necessary and it is proposed to convert the British Company (which is a private Company) into a Public Company and to adopt new Articles of Association and make other alterations in the organisation of the British Company

(F) In connection with the said proposed offer it has been agreed between the American Company and the British Company to make alterations in the terms of business now subsisting between them with respect to royalties and other matters which are contained in the Business Agreement and it has also been agreed between the parties hereto that other alterations shall be made in the arrangements according to which the British Company is at present organised and carried on but such alterations are to become finally effective only if the said One hundred and twenty five thousand new shares are sold and issued to purchasers in accordance with arrangements to be made between the American Company and the other shareholders in the British Company and Mr. Dewar as the person through whom the said offer of sale is to be made

(G) As a matter of convenience with a view to such offer it is proposed to embody the new arrangements in an Agreement at once and to provide that these new arrangements will take effect in part as from a past date so that the accounts of the British Company for the year One thousand nine hundred and thirty four and the Balance Sheet at the end of that year will show the working results and position of the British Company in accordance with

the new arrangements so far as the same take effect previous to the end of that year but inasmuch as the new arrangements are intended to become finally effective only if the said shares are sold and issued to purchasers as hereinbefore mentioned it is necessary to make provision so that the position may be restored in the event of the said shares not being sold and purchased

[fol. 5605] Agreement

1. (a) The British Company is at liberty at any time before the Thirty first day of August One thousand nine hundred and thirty five when requested by Mr. Dewar to cancel its existing Articles of Association and all by-laws adopted pursuant to such Articles of Association and to adopt new Articles of Association by which amongst other things the British Company will become a public Company and all the shares in the British Company will cease to be divided into A shares and B shares and will become shares of one class

(b) A draft of the new Articles of Association has been submitted to the American Company and to Mr. Dewar and the new Articles of Association shall be in the form of the said draft with such alterations if any therein as may be approved by Messrs. Stibbard Gibson and Company of Number 21 Leadenhall Street London E.C. England (hereinafter called Messrs. Stibbard) on behalf of the American Company and by Mr. Dewar

(c) Messrs. Stibbard are hereby authorised by the American Company to sign consents in the name and on behalf of the American Company to the passing of resolutions by the British Company by which the said existing Articles of Association and by-laws will be cancelled and the said new Articles of Association will be adopted in the place of the said existing Articles of Association and to the passing of resolutions by the holders of any class of shares in the British Company for the purpose of modifying or abrogating the rights attached to the particular class of shares in order to give effect to any of the said resolutions passed by the Britisn Company

2. (a) The American Company and the British Company will forthwith enter into a new Business Agreement in the terms of a draft agreement which has already been prepared but (subject as hereinafter mentioned) the Busi-

ness Agreement shall be cancelled and the said new Business Agreement shall come into operation and effect only [fol. 5606] if and when the said One hundred and twenty five thousand new shares in the British Company have been sold and issued to purchasers as hereinbefore mentioned

(b) The royalty of four per centum payable under clause 10 (a) of the Business Agreement shall be paid in accordance with the Business Agreement in respect of the period ending on the Thirty first day of December One thousand nine hundred and thirty three but provisionally in respect of the period after that date that royalty shall be payable at the reduced rate of one half of one per centum provided for in clause 12 (a) of the said new Business Agreement Provided nevertheless that such reduced royalty is provisional only and will not become absolute unless and until the said One hundred and twenty five thousand new shares in the British Company shall have been sold and issued to purchasers as hereinbefore mentioned

(c) All payments and Book entries which have been made in respect of the said royalty of four per centum for the period after the Thirty first day of December One thousand nine hundred and thirty three in accordance with the Business Agreement shall be reversed and credited or debited to the American Company or to the British Company as the case may require.

(d) No claim shall be made upon the French Company by the British Company or the American Company before the Thirty first day of August One thousand nine hundred and thirty five in respect of any royalty or other charge payable under the French Company agreement previously to that date and if the said One hundred and twenty five thousand new shares in the British Company are sold and issued to purchasers as hereinbefore mentioned all claims upon the French Company for royalty or other charges payable under the French Company agreement shall be cancelled by the British Company and the American Company

3. (a) The British Company shall forthwith enter into a new service agreement with Mr. Dewar in the terms of a draft agreement which has already been prepared and [fol. 5607] which provides for the cancellation of Mr. Dewar's service agreement on the date therein mentioned

(b) All monies payable under Mr. Dewar's Service Agree-

ment shall be made in accordance with Mr. Dewar's Service Agreement in respect of the period down to the date of the new service agreement coming into force

(c) All monies payable under the said new Service Agreement shall be made in accordance with that agreement as from the date of its coming into force.

4. The British Company shall forthwith enter into Service Agreements with Mr. Dallow and Mr. Pascoe in the terms of draft agreements which have already been prepared

5. If and when the said One hundred and twenty five thousand new shares in the British Company have been sold and issued to purchasers as hereinbefore mentioned the Transfers agreement shall be cancelled and at an end

6. The Subsidiary Companies Agreement shall remain unaffected by this Agreement except that if and when the said One hundred and twenty five thousand new Shares in the British Company have been sold and issued to purchasers as hereinbefore mentioned the Subsidiary Companies Agreement shall become an agreement between the American Company and the British Company and Mr. Dewar shall be excluded therefrom and a new agreement shall be entered into between the two Companies alone on that footing

7. If and when the said One hundred and twenty five thousand new shares in the British Company have been sold and issued to purchasers as hereinbefore mentioned the British Company will enter into a new Business Agreement with the French Company in the form of the draft agreement which has already been prepared and the American Company and Mr. Dewar will cause the French Company to enter into such Agreement and thereupon the French Company Agreement shall be cancelled

[fol. 5608] 8. (a) If the said One hundred and twenty five thousand new shares in the British Company shall not have been sold and issued to purchasers as hereinbefore mentioned before the Thirty first day of August One thousand nine hundred and thirty five then and in such case all the deeds agreements instruments etcetera hereinbefore mentioned shall be fully restored so that the British Company shall become a private Company as at present and the contractual and other relations between the parties hereto and also between any of them and the French Company shall be reinstated so as to be the same as before this Agreement

was entered into and all payments and book entries in respect of the said royalty of one half of one per centum made in accordance with the new arrangements as hereinbefore provided for shall be reversed and credited or debited to the American Company or the British Company as the case may require and in lieu thereof payments will be made in respect of the said royalty of four per centum in accordance with the Business Agreement.

(b) The American Company so far as regards the shares in the British Company now registered in its name and Mr. Dewar so far as regards the shares in the British Company now registered in his name and also the shares now registered in the name of Societe Americano Europeenne de Participations and the American Company so far as regards any Director of the British Company nominated by it and Mr. Dewar so far as regards himself and any other person nominated by him as Director of the British Company will cause the voting rights exercisable in respect of such shares or by such Directors to be exercised so far as necessary in order to give effect to the provisions of paragraph (a) of this clause.

In witness whereof this Agreement has been executed by or on behalf of the parties hereto.

Signed and Sealed by or on behalf of the American Company in the presence of Wm. E. Umstattd, President, R. C. Brower, Secretary.

[fol. 5609] Sealed by or on behalf of the British Company in the presence of M. B. U. Dewar, Director, E. N. Arvir, Director, R. O. Squire, Secretary.

Signed sealed and delivered by Mr. Dewar in the presence of A. A. Hill, 65 Cheston Rd. Aston, Birmingham.

[fol. 5610] Dated December twenty-ninth 1934

The Timken Roller Bearing Company (1); British Timken Limited (2); and M. B. U. Dewar Esq. (3).

Agreement with a view to Sale of Shares

[fol. 5611] Agreement

Date

Twenty-ninth day of December One Thousand nine hundred and thirty four

Parties

(1) Industrial and Commercial Investments Incorporated of No. 7, West Tenth Street, Wilmington, Delaware, United States of America, (hereinafter referred to as "the I.C.I. Company")

(2) International Bearings Investments of No. 100, West Tenth Street, Wilmington, Delaware, United States of America (hereinafter referred to as "the I.B.I. Company").

(3) The Timken Roller Bearing Company of Canton, Ohio, United States of America (hereinafter referred to as "the Timken Company").

(4) Michael Bruce Urquhart Dewar of No. 10, Mayfair Place, London W. England (hereinafter referred to as "Mr. Dewar").

(5) Societe Americano Europeene de Participations of Luxembourg (hereinafter referred to as "the Luxembourg Company No. 1").

Recitals

(a) Societe Anonyme Francaise Timken (hereinafter called "the French Company") is a Company incorporated in France and having a Share Capital of Francs Ten million divided into Seventy thousand Ordinary Shares of Francs One hundred each all issued and fully paid and Thirty thousand Six per cent Cumulative Preference Shares of Francs One hundred each all issued and fully paid and One thousand "Parts Beneficiaires" without nominal value and in addition the French Company has taken up Loan Capital to the amount of Francs Eleven million seven hundred and fourteen thousand

(b) Deutsche Timken Gesellschaft mit beschrankter Haftung (hereinafter called "the German Company") is a company incorporated in Germany and having a Share Capital of Reichmarks Four hundred thousand all of which has been issued and is fully paid and in addition the German Company has taken up Loan Capital to the amount [fol. 5612] of Reichmarks 613,930.30

(c) The Luxembourg Company No. 1 is a Company incorporated in Luxembourg and Mr. Dewar is proposing to form another Company in Luxembourg (hereinafter referred to as "the Luxembourg Company No. 2") and Mr. Dewar is the owner of all the issued shares in the Luxembourg Company No. 1 and will become the owner of all the issued shares in the Luxembourg Company No. 2.

(d) The parties hereto are the owners directly or indirectly of Share Capital, Loan Capital and Parts Beneficiaires in the Companies named in the First Column of the First Schedule hereto as shown by the tabulated particulars specified in such Schedule and such Companies are hereinafter referred to as "the owned Companies".

(e) The parties hereto have agreed that the Share Capital, Loan Capital and Parts Beneficiaires in the owned Companies specified in the First Schedule hereto shall be redistributed so that the Share Capital, Loan Capital and Parts Beneficiaires aforesaid shall be owned as shown by the tabulated particulars specified in the Second Schedule hereto and the Share Capital, Loan Capital and Parts Beneficiaires so owned as aforesaid are hereinafter referred to as "the owned interests".

(f) The parties hereto in connection with the said redistribution have further agreed to the effect hereinafter appearing

Agreement

1. Each of the parties hereto will execute and do such deeds acts and things as may be necessary in order that the owned interests except Reichmarks Five thousand eight hundred in the Share Capital of the German Company which are owned by British Timken Limited may be redistributed to the end that the same except as aforesaid may be owned as shown by the tabulated particulars specified in the Second Schedule hereto and accordingly upon such re-distribution being effected each of them the Timken Company and Mr. Dewar directly or indirectly will own or control one [fol. 5613] half of the Share Capital, Loan Capital and Parts Beneficiairies in the French Company and the German Company included in the owned interests except as aforesaid as shown by the said particulars.

2. (a) As consideration for the foregoing re-distribution and coincident therewith Mr. Dewar will pay to the Timken Company or its nominee a sum of Two hundred and fifty thousand dollars cash and also will deliver to the Timken Company or its nominee a promissory note for One hundred and fifty thousand dollars which will be payable and secured in accordance with and subject to the conditions hereinafter contained.

(b) The I.C.I. Company the I.B.I. Company and the Timken Company will arrange between themselves as to the division between them of the consideration to be received by the Timken Company as hereinbefore mentioned and Mr. Dewar and the Luxembourg Company No. 1 and the Luxembourg Company No. 2 will arrange between themselves as to the contribution to be made by each of them in respect of the said sum of cash and the said promissory note.

3. The promissory note to be delivered by Mr. Dewar to the Timken Company as hereinbefore mentioned shall be a promissory note of the Luxembourg Company No. 2 which Company at the time when such promissory note is delivered will own the owned interests which are to be transferred to its ownership according to the particulars contained in the Second Schedule hereto (hereinafter referred to as "Mr. Dewar's Assets") and shall be free from debts liabilities and engagements other than in respect of the said promissory note and the security hereinafter mentioned.

4. The said promissory note shall not carry interest and shall be limited so that it shall be payable only from the sources and in accordance with the conditions to be specified therein (that is to say)

(a) The Luxembourg Company No. 2 will undertake that all monies and other values which from time to time shall be paid or transferred by the French Company or the [fol. 5614] German Company in respect of Mr. Dewar's assets before or after the commencement of a winding up either by way of interest or divided out of profits or by way of payment or distribution out of capital or otherwise in excess of a cumulative sum of Seven thousand five hundred dollars per annum commencing from the First day of January One thousand nine hundred and thirty five down to the date of any such payment by the French Company or the German Company shall be paid to the holder for the time being of the said promissory note in or towards satisfaction of the amount of the said promissory note remaining unpaid until the whole amount of the said promissory note shall be paid and satisfied.

(b) The whole of Mr. Dewar's Assets shall be constituted an absolute security for the payments to be made under the foregoing paragraph of this clause.

5. Each of the parties hereto will execute and do or cause to be executed and done such deeds acts and things as may be necessary to give effect to the following purposes:

(a) Mr. Dewar shall be Managing Director of the French Company and the yearly allowance of Francs Eighty five thousand net free of all taxes which has been assigned to him by the French Company shall be continued and he shall actively engage in the management of the French Company to such an extent as he shall consider neeessary

(b) Mr. Dewar shall have the control of the business of the French Company and shall be entitled to nominate and elect a majority of the Board of Directors of the French Company and the remaining Directors of the French Company shall be nominated by the Timken Company and the remuneration of the Directors Managing Directors and any management or technical committee of the French Company shall be at such rate and of such amount as shall be agreed from time to time in writing between Timken Company and Mr. Dewar.

[fol. 5615] (c) The French Company shall make payments pari passu on account of its Loan Capital and shall declare and pay dividends in respect of its Share Capital as directed by Mr. Dewar.

(d) No part of the Share Capital of the French Company which is owned or controlled by any of the parties hereto shall be sold transferred or otherwise disposed of by such party except upon such terms and conditions as will effectively reserve to such party the control of all voting rights in respect of the part of the Share Capital of the French Company which is in the ownership or control of such party.

(e) The Luxembourg Company No. 2 shall not carry on any business or enter into any engagements except such as are necessary in connection with the holding of the owned interests coming to it under this Agreement without the consent in writing of the Timken Company

(f) The foregoing provisions of this clause shall continue in force until the occurrence of any of the following events—

(i) Mr. Dewar dies

(ii) Mr. Dewar retires from the active control of the business of the French Company

(iii) The undistributed profits as hereinafter defined of the French Company at the end of the year One thousand nine hundred and thirty six or any subsequent year amount to less than Twenty four thousand dollars

(iv) The amount actually paid by the French Company in the year ending on the Thirtieth day of April, One thousand nine hundred and thirty seven or in any subsequent year ending on the Thirtieth day of April by way of dividend or interest or repayment of Capital in respect of the Share Capital or loan capital forming part of the owned interests amounts to less than Twenty four thousand dollars

(g) For the purposes of the previous paragraph of this clause the following shall apply—

[fol. 5616] (i) The undistributed profits at the end of any year means the surplus of the profits over and above losses earned after the Thirty first day of December One thousand nine hundred and thirty three down to the end of such year after making the deductions hereinafter mentioned.

(ii) In ascertaining the profits aforesaid all French Taxes shall be deducted and in addition at the end of the year One thousand nine hundred and thirty seven and any subsequent year there shall be deducted in respect of the year ending on the Thirtieth day of April, On thousand nine hundred and thirty seven and each subsequent year ending on the same day a sum of Twenty four thousand dollars or the amount actually paid in any such last mentioned year by way of dividend or interest in respect of the share capital and loan capital aforesaid whichever is the greater.

(iii) Profits earned means profits earned after such provision has been made for depreciation and bad and doubtful debts as the Auditors of the French Company consider to be reasonable but without any deduction in respect of the debit balance on the Profit and Loss Account of the French Company at the Thirty first day of December, One thousand nine hundred and thirty three or in respect of any transfer made for the purpose of writing down or amortizing the amounts which were shown in the Balance Sheet at

that date under headings Development Account Expenses of increase of Capital or Formation expenses or in respect of any Capitalization of Profits.

(iv) The Sum of Twenty four thousand dollars means either that sum or its equivalent in French Francs at the rate of exchange current at the time of payment.

(h) If and when the foregoing provisions of this clause come to an end then and in such case Mr. Dewar if so requested by the Timken Company will cause one share or other holding of shares in the French Company carrying [fol. 5617] one vote to be transferred to the Timken Company or its nominees at the par value of such share or holding

6. (a) Each of them the Timken Company and Mr. Dewar hereby covenants with the other of them that the covenanting party will not sell transfer or otherwise dispose of or permit to be sold transferred or otherwise disposed of any owned interest owned or controlled by the covenanting party unless the covenanting party has first offered the same to the other party.

(b) Every such offer shall be made by notice in writing specifying the interest to which it relates and shall remain open for acceptance by the party to whom it is made for Ninety days after it is received by such party and any acceptance of an offer shall be signified by notice in writing to the party making the offer.

(c) If any such offer is duly accepted the price payable for the interest specified in the offer shall be the fair value thereof and such value shall be determined and the sale and transfer of the interest specified in the offer shall be completed in the manner and at the time which shall be agreed or in default of agreement shall be settled by arbitration under the provisions hereinafter contained.

(d) The parties hereto shall give any consents and exercise any voting rights and execute and do any other deeds acts or things which may be necessary for the purpose of giving effect to this Agreement or any Award made in an Arbitration under this agreement.

7. If any question shall arise between the parties hereto or any of them with respect to the fair value aforesaid or the completion of any such sale or transfer or any other

matter of thing arising out of this Agreement every such question shall in default of Agreement be settled by arbitration in London under the English Arbitration Act 1889 or any statutory modification or re-enactment thereof for the time being in force.

[fol. 5618] 8. (a) This agreement shall not come into force unless and until the sale of shares to the public under an Agreement made the twenty ninth day of December One thousand nine hundred and thirty four between the Timken Company (1) British Timken Limited (2) and Mr. Dewar (3) has been completed and the said shares have been sold transferred and paid for.

(b) Upon this Agreement coming into effect this following Agreement shall be at an end namely: (a) An Agreement made the Eighth day of November One thousand nine hundred and twenty nine between Mr. Dewar (1) and the Timken Company (2) and (b) An Agreement made the Eighth day of November One thousand nine hundred and twenty nine between the Timken Company (1) and Mr. Dewar (2).

In Witness whereof this Agreement has been executed by or on behalf of the parties hereto the day and year first above written.

TIMKEN ROLLER BEARING COMPANY

M. B. U. DEWAR Esq. and others

A G R E E M E N T

re-distributing various interests

in Companies.

[fol. 5625] An Agreement made the 29th day of March 1935 between British Timken Limited (hereinafter called "the Company") of the one part and Michael Bruce Urquhart Dewar (hereinafter called "Mr. Dewar") of the other part.

Whereas Mr. Dewar is the present Managing Director of the Company and it is desired to define the terms upon which he is to continue to hold that office.

Now

It is hereby agreed as follows:

1. Mr. Dewar shall be the Managing Director of the Company and so long as he holds office as such no other Managing Director shall be appointed without his previous consent in writing.

2. There shall be entrusted to Mr. Dewar as Managing Director the general supervision and management of the Company's business and affairs which Mr. Dewar shall regard as his principal occupation and to which he shall devote so much of his time and attention as shall be necessary for the proper and efficient conduct thereof.

3. In the performance of his duties and exercise of his powers as Managing Director Mr. Dewar will have regard and conform to any reasonable instructions or regulations given or made by the Board of Directors of the Company and subject to any such instructions or regulations Mr. Dewar will manage and conduct the Company's business and affairs in such manner as he may consider most beneficial to the Company and shall have and be entitled to exercise for this purpose all powers conferred upon the Directors generally by the Company's Articles of Association.

4. Subject as hereinafter provided Mr. Dewar shall hold office as Managing Director from the date when this agreement comes into force until the expiration of a period of five years from the 31st day of December 1934 and thereafter until his appointment as Managing Director shall be determined by either party by at least six months previous notice in writing given to the other party.

[fol. 5626] 5. Should Mr. Dewar at any time be incapacitated by ill-health or otherwise from performing his duties as Managing Director for a continuous period of six months

the Company may at any time whilst such incapacity continues by notice in writing to Mr. Dewar determine his appointment as Managing Director.

6. Mr. Dewar's appointment as Managing Director shall ipso facto cease and determine

(a) If Mr. Dewar vacates office as a Director of the Company.

(b) If the Company in General Meeting by Ordinary resolution decides that Mr. Dewar's appointment as Managing Director shall cease and determine.

7. Mr. Dewar shall be paid by the Company remuneration for his services as Managing Director at the rate of £5,000 per annum or at such higher rate if any as shall from time to time be fixed by the Directors and such remuneration shall be payable by equal monthly installments on the last day of each month.

8. Mr. Dewar shall also be entitled to be recouped by the Company all travelling and other expenses incurred by him in or about the performance of his duties as Managing Director.

9. This Agreement shall come into force only if and when the business agreement dated the 29th day of December 1934 and made between the Timken Roller Bearing Company (1) and the Company (2) comes into operation and effect and thereupon the Agreement dated the 20th day of April 1928 under which Mr. Dewar is acting as Managing Director of the Company shall be cancelled.

In witness whereof the Company has caused its Common Seal to be hereunto affixed and Mr. Dewar has hereunto set his hand and seal the day and year first above written.

The Common Seal of British Timken Limited was hereunto affixed by Order of the Board in the presence of Wm. Dallow, F. J. Pascoe, Directors; R. O. Squire, Secretary. (Seal.)

Signed sealed and delivered by the above named Michael Bruce Urquhart Dewar in the presence of D. Curwen, (Spinster) 10, Mayfair Place, W. 1., Private Secretary. M. B. U. Dewar (L. S.)

Agreement as to Managing Directorship

Stibbard Gibson & Co., 21, Leadenhall Street E.C.3.

TO MICHAEL BRUCE URQUHART DEWAR

Re BRITISH TIMKEN LIMITED

(hereinafter called "the Company")

PRELIMINARY

(a) The share capital of the Company is Two hundred and fifty thousand pounds divided into One hundred and twenty five thousand "A" shares and One hundred and twenty five thousand "B" shares all of One pound each of which Fifty thousand "A" Shares and Fifty thousand "B" shares have been issued and are fully paid and Seventy five thousand "A" shares and Seventy five thousand "B" shares are at present unissued

(b) The Company on the Thirtieth day of November One thousand nine hundred and thirty four passed a resolution under which the Directors of the Company were authorised to capitalise a sum of One hundred and fifty thousand pounds being part of the undivided profits of the Company standing to the credit of General Reserve Account by appropriating and distributing such sum as capital amongst the members of the Company and applying such sum in payment in full for the One hundred and fifty thousand unissued shares in the Company consisting of Seventy five thousand "A" shares and Seventy five thousand "B" shares all of One pound each to be allotted to and distributed amongst the members of the Company in such proportions that the number of "A" shares and/or "B" shares held by each of the members should be increased by the addition thereto of three new A shares for every two A shares held and 3 new B shares for every two B shares held

(c) Pursuant to and in accordance with the said resolution the Directors of the Company have capitalized and distributed the said sum of One hundred and fifty thousand pounds and allotted the said One hundred and fifty thousand unissued shares credited as fully paid but the said One hundred and fifty thousand shares have not yet been issued or entered in the Share Register of the Company

(d) The Company is proposing to adopt new Articles of Association and to pass resolutions in accordance with which the Company which is now a private

Company will become a public company and the share capital of the Company will be Two hundred and fifty thousand pounds divided into Two hundred and fifty thousand shares of One pound each all of one class so that the shares to be issued in pursuance of the resolution for capitalisation above mentioned will be One hundred and fifty thousand shares of One pound each all of one class uniform with the issued shares of the Company

(e) You are proposing at our request and with our consent to make an offer for sale to the public of One hundred and twenty five thousand of the said One hundred and fifty thousand shares in the Company at present unissued direct or through Brokers or Agents who may purchase firm as a preliminary

(f) You are also proposing to form a new Company (hereinafter called "the New Company") to be called "Tinsun Holdings Limited" and to be constituted with Articles of Association and By-laws substantially the same mutatis mutandis as the Articles of Association and By-laws under which the Company was constituted before the adoption of the New Articles of Association above mentioned but subject as hereinafter mentioned and the share capital of the new Company is to be One hundred and twenty five pounds divided into Two thousand five hundred shares of One shilling each of which One thousand two hundred and fifty shares shall be "A" shares and One thousand two hundred and fifty shares shall be "B" shares and it is intended that the New Company shall create Two thousand five hundred registered obligations or participating rights (hereinafter called "Participating Rights") in accordance with provisions relating thereto to be contained in the Articles of Association of the New Company and in accordance with the particulars contained in the schedule hereto

(g) We have delivered to you the following documents:

(1) A signed letter or signed letters addressed to the Company authorising and requesting the Company to issue the fully paid shares to which we are respectively entitled pursuant to the above allotment to you or your nominees

(2) A signed transfer or signed transfers of the shares in the Company

now issu and held by us in favour of th new Company at the price of One shilling (to be satisfied by the allotment of one fully paid share of One shilling) and one participating right for each Fifty shares transferred

(3) The certificates for the shares in the Company now issued and held by us

N O W

1. With respect to the One hundred and fifty thousand fully paid shares in the Company at present allotted but unissued to which we are entitled pursuant to the above allotment we hereby give you authority to sell One hundred and twenty five thousand of such shares subject to the following conditions:

(a) All of the said One hundred and twenty five thousand fully paid shares are to be offered for sale and if sold are to be sold at one and the same time at the same price and upon and subject to the same terms and conditions either to the Public direct or through Brokers or Agents who may purchase firm as a preliminary

(b) You will receive the proceeds of sale and be entitled to pay out of such proceeds all legal charges brokers charges underwriting commission advertising expenses and other costs charges and expenses in connection with the offer and sale

(c) The whole amount received by you upon the sale of the said One hundred and twenty five thousand fully paid shares less the costs charges and expenses aforesaid shall belong to and be divided between us as the persons entitled to the said One hundred and twenty five thousand shares pro rata according to the number of shares to which we are entitled respectively

(d) The net amount to be received by each of us after deduction of all expenses shall not be less than One pound four shillings in respect of each of the said One hundred and twenty five thousand fully paid shares to which we are respectively entitled

2. YOU are authorised to complete such sale so far as regards the said One

hundred and twenty five thousand fully paid shares to which we are respectively entitled by delivering the letter of authority mentioned above to the Company and instructing the Company to issue such One hundred and twenty five thousand fully paid shares to the purchasers as your nominees

3. SO soon as the said sale has been completed we hereby authorise you to form the New Company and (a) to deliver the signed transfers of the One hundred thousand shares now issued and held by us as above mentioned together with the certificates for such shares to the New Company and (b) to instruct the Company to issue the Twenty five thousand fully paid shares constituting the remainder of the said One hundred and fifty thousand fully paid shares to the New Company subject to the following conditions

(a) The whole of the shares in the Company other than the One hundred and twenty five thousand fully paid shares to be offered for sale as above mentioned shall be transferred to the New Company at the same time and at the same price videlicet One shilling and one participating right of the New Company for each Fifty shares transferred and on the same terms and conditions

(b) The sum of One shilling per Fifty shares part of the purchase price in every case shall be satisfied in fully paid shares of the New Company at par and the shares in the New Company to be received shall be "A" shares or "B" shares in the case of the One hundred thousand shares to be transferred by transfer as above mentioned according as such shares were "A" shares or "B" shares before the consolidation into one class of all the shares in the company and in the case of the Twenty five thousand fully paid shares to be issued as above mentioned according as such shares were allotted in respect of shares which were A shares or B shares before the said Consolidation

(c) Every shareholder in the Company who transfers shares in the Company to the New Company will receive certificates under the Seal of the New Company for the shares and participating rights in the New Company to which he is entitled as the purchase price for the shares transferred

and in accordance therewith you will in due course deliver to us Certificates for shares and participating rights of the New Company according to the number of shares and participating rights set opposite our respective signatures at the foot hereof

(d) The New Company at the start is to have a share capital of One hundred and twenty five pounds in Two thousand five hundred shares of One shilling each all issued and fully paid and is to become the owner of One hundred and twenty five thousand shares of One pound each fully paid in the Company all paid for by means of the issue of the share capital of the New Company credited as fully paid and the issue of the said Two thousand five hundred participating rights and is to be free from all other debts liabilities or engagements

(e) The costs charges and expenses to be incurred by you in forming the New Company and carrying out and completing the transfer to it of the said One hundred and Twenty five thousand shares shall be paid out of the proceeds of sale of the One hundred and twenty five thousand fully paid shares in the Company to be sold as hereinbefore mentioned but the net amount to be received by us shall still not be less than One pound four shillings per share as above mentioned

4. THIS Authority shall continue in force until the Thirty first day of August One thousand nine hundred and thirty five.

5. THIS Authority may be signed in several parts and shall not be operative until it has been signed by the holders of all the shares in the Company and if and when it has been thus signed in several parts it shall then be operative as one single Authority

D A T E D this [illegible] day of March

One thousand nine hundred and thirty [illegible]

THE SCHEDULE ABOVE REFERRED TO

PARTICULARS in regard to the Participating Rights of the New Company

(a) Under the Agreement mentioned in Clause 3 (a) of The Company's Memorandum of Association the Company will agree to purchase 125,000 Shares of £1 each fully paid in a Company incorporated in England and named British Timken Limited and the business of the Company shall include

the holding of the Shares so purchased the management and control of such Shares the exercise of all voting and other rights in respect of such Shares and the receipt and disposal of all monies and other benefits receivable in respect of such Shares

(b) The Company will carry on no business other than the business hereinbefore mentioned without the sanction of a Special Resolution of the Company in General Meeting

(c) The Company will create 2,500 registered Participating Rights which shall be numbered consecutively and every person becoming a shareholder in the Company shall receive one Participating Right in respect of each Share in the Company allotted to him and a Certificate as to the Participating Rights to which he is entitled

(d) The Participating Right granted in respect of each Share in the Company will bear the same distinctive serial number as the Share in the Company in respect of which it is granted and every share in the Company and the Participating Right bearing the same distinctive serial number shall be held together in the same ownership and shall not be transferred or otherwise be allowed to fall into separate ownerships.

(e) If and when a holder of Participating Rights has become entitled under the Articles in the Section of the Company's Articles of Association headed "Transfer of Shares" to transfer any shares with the connected Participating Rights to any person on a bonafide sale then at any time during the period of one month during which he is so entitled such holder shall be entitled to give notice to the Company requiring the Company to redeem all or any of such Participating Rights and thereupon the Company shall redeem the Participating Rights referred to in the notice by transferring to the holder at the expense of the holder (and as nearly as possible in kind) a share of the surplus of the assets of the Company over and above the amount of assets required to make provision for the paid up Share Capital of the Company and the debts and liabilities of the Company if any in the proportion which such Participating Rights bear to the whole of the Participating Rights for the time being outstanding and except as hereinbefore provided the Participating Rights shall be irredeemable PROVIDED ALWAYS that the right to give notice to the company requiring the Company to redeem Participating Rights shall not come into operation unless

the prescribed price for the Shares with the connected Participating Rights which the holder has become entitled to transfer shall be such sum as the Auditors of the Company shall by certificate made at the request of the Directors certify to be in their opinion the fair value of the Shares with the connected Participating Rights

(f) If and when 5% of the Participating Rights which have been granted in respect of the A Shares in the Company or 5% of the Participating Rights which have been granted in respect of the B Shares in the Company have been redeemed all the Shares in the Capital of the Company shall cease to be A Shares or B Shares and shall become Ordinary Shares of one class and all special rights or privileges for the time being attached to either class of Shares shall be abrogated

(g) If and when a Participating Right is redeemed all right to any share or interest in the profits of the Company and all right to any share or interest in the surplus of the assets of the Company over and above the amount required to make provision for the paid up Share Capital of the Company and all voting and other rights conferred by the Share bearing the same distinctive number as the participating Right shall be abrogated and at an end

(h) The holder or holders for the time being of at least 600 participating Rights shall be entitled (i) at any time or times to nominate one person to act as a Director of British Timken Limited and to cancel such nomination and (ii) once in each year at their own expense to employ a Chartered Accountant who shall have the privilege of examining the books of account and records of British Timken Limited and taking notes and extracts therefrom and the Company shall exercise or cause to be exercised any Shareholder's or Director's voting rights vested in it or under its control and execute and do such other acts and things within its power as may be necessary in order to procure the appointment of such nominee as a Director of British Timken Limited and maintain him in that office and procure for the said Chartered Accountant the privilege aforesaid so long in the case of a nominee Director as his nomination has not been cancelled and so long in the case of either (i) or (ii) as the holder or holders aforesaid or some of them continue to hold at least 600 participating rights but so long as a Director of British Timken Limited holds office pursuant to a nomination by a holder of Participating Rights under this provision no

further nomination can be made under this provision by that holder or in respect of the Participating Rights in respect of which such Director was nominated and any person nominated to act as a Director of British Timken Limited shall himself acquire the shares necessary to qualify him as such Director.

[fol.5639] Stibbard, Gibson & Co. (Thomas Cooper & Co.)
21 Leadenhall Street, London, E. C. 3

ENC.

10th April, 1935.

Dear Mr. Hess,

Matters have progressed so far, that I can now send you various of the documents which have been completed and exchanged, and I accordingly enclose the following, except where stated:

1. Agreement No. 1 with a view to sale of shares dated 29th December 1934. This has been sealed by the British Company and signed by Mr. Dewar.

2. New Business Agreement No. 2, dated 29th December 1934. This has been sealed by the British Company.

2A. Collateral Undertaking No. 2A. binding the British Company to pass on the benefit of any unpaid royalty to the French and German Companies dated 29th December 1934. This has been sealed by the British Company.

3. Service Agreement No. 3 between the British Company and Mr. Dewar dated 29th March 1935. This has been sealed by the British Company and signed by Mr. Dewar, and a copy is enclosed.

4A. Mr. Dallow's Service Agreement. The document was prepared on the understanding that Mr. Dallow would sign the Agreement; however, Mr. Dewar now informs me that Mr. Dallow has finally told him that he has never had [fol. 5640] an Agreement and does not wish to have one now, and for that reason he does not propose to sign a Service Agreement. Mr. Dewar informs me that he has already advised this to you, and I fancy that you will be willing to dispense with an Agreement between the British Company and Mr. Dallow.

4B. Service Agreement No. 4B. between the British Company and Mr. Pascoe dated 29th March 1935. This Agreement has been sealed by the British Company and signed by Mr. Pascoe and a copy is enclosed.

5. Authority dated 29th December 1934 addressed to the British Company and authorizing the Company to cancel the existing Articles and substitute new Articles. This authority has been acted on and I shall be sending you

some prints of the new Articles of Association in the course of a few days. In the meantime, I enclose a copy of this authority; the original has been lodged with the British Company.

6. Nomination in favour of Mr. Dewar No. 6 in three parts, one dated 29th December 1934 and the other two dated 29th March 1935. I enclose a copy of the document completed with signatures, etc.

7. Authority for the sale of shares No. 7 dated 29th [fol. 5641] March 1935. This document has been completely signed and I enclose a complete copy. The original will be lodged with the British Company when the time comes.

8. Agreement between the Canton Company and Mr. Dewar No. 8 as to shares and interests in the Holdings Company. This document is standing over for completion when the time comes.

9. Re-Distribution Agreement dated 29th December 1934 No. 9. This has been signed by all necessary parties, but you will notice that although it has been signed by Mr. Pascoe and Mr. Ernst on behalf of the I.C.I. Company, it has not been sealed by that Company. I enclose two signed copies of this Agreement and you might have them sealed by the I.C.I. Company and return one of them. I shall then send you another copy, which you can have sealed in its turn, and you will then have two copies, one for the Canton Company and the other for the I.C.I. and I.B.I. Companies.

10. New French Business Agreement between the British Company and the French Company. This is standing over for completion when the time comes.

The British Company had its Annual General Meeting last week, and will be sending to you the Directors' Report and abridged Balance Sheet and Profit and Loss Account as approved at the meeting so soon as the document [fol. 5642] has been printed.

Mr. Dewar and Mr. Pascoe are in close touch with the Brokers in regard to the sale of shares, and I understand that there is likely to be a meeting shortly to settle various details.

I enclose a stamped transfer to the Holdings Company of shares in the British Company, and I shall be obliged if you will make use of this when the time comes. So soon

as the shares to be marketed have been sold, I shall advise you by cable, and you can then seal and send off this transfer, together with the certificates of all the shares in the British Company in the possession of the Canton Company, including those in the names of Duncan and Bulloch.

Yours faithfully, A. J. M. Duncan.

Mr. M. B. U. Dewar, 10 Mayfair Place, London, W.1., England.

DEAR MICHAEL:

In accordance with your recent cable request, we would appreciate your having the new stock certificate covering the purchase of ten thousand shares issued in the name of Continental Bearings Incorporated.

Very truly yours, The Timken Roller Bearing Co.
—— —— Assistant to the President.

DPH:MC

[fol. 5648] This Agreement made the Fifteenth day of July One thousand nine hundred and thirty five between The Timken Roller Bearing Company of the City of Canton Ohio United States of America (hereinafter for convenience called "the American Company") of the one part and British Timken Limited of the City of Birmingham England (hereinafter for convenience called "the British Company") of the other part is

Supplemental to

An Agreement with a collateral Memorandum both dated the Twenty ninth day of December One thousand nine hundred and thirty four and two further Agreements dated the Twenty eighth day of May One thousand nine hundred and thirty five and the Sixth day of June One thousand nine hundred and thirty five and all made between the American Company and the British Company which Agreements and Memorandum are hereinafter for convenience collectively referred to as "the Business Agreement"

Whereas:

(A) The parties hereto contemplate that there will hereafter be Companies or Associations engaged in the manufacture or sale of bearings in the British Company's territory as defined in the Business Agreement which Companies shall be sub-licensees of the British Company and

the American Company under the Business Agreement either immediately or at one or more removes.

(B) The parties hereto desire to make special provision with respect to such Companies which are hereinafter for convenience referred to as "subsidiary Companies."

Now

It is hereby agreed between the parties hereto as follows (namely):

1. Each of the parties hereto shall have the right to have [fol. 5649] at least one representative on the Board having the chief authority over a subsidiary Company whatever may be the functions or description of such Board whether Directorial Administrative Supervisory or otherwise so long as such party shall hold any stocks shares securities or other proprietary interest in such Company.

2. If either of the parties hereto shall at any time hold any stocks shares securities or other proprietary interest in a subsidiary Company either in his own name or in the name of a nominee (i.e. a bare Trustee for such party) such party shall be entitled at his own will and pleasure to transfer or cause to be transferred the said stocks shares securities or other proprietary interest or any part thereof from himself to a nominee or from a nominee to himself or another nominee as such party may direct.

3. (a) Neither of the parties hereto shall sell or transfer any stocks shares securities or other proprietary interest in a subsidiary Company belonging to him (except as aforesaid) without first offering the same to the other party.

(b) Every such offer shall be made by notice in writing specifying the interest to which it relates and shall remain open for acceptance by the other party for Thirty days after it is received by such party and any acceptance of an offer shall be signified by notice in writing to the party making the offer.

(c) If any such offer is duly accepted the price payable for the interest specified in the offer shall be determined and the sale and transfer of the interest specified in the offer shall be completed in the manner and at the time which shall be fixed under the provisions hereinafter contained.

4. The parties hereto shall give any consents and exercise any voting powers and execute and do any other deeds

acts or things which may be necessary for the purpose of [fol. 5650] giving effect to this Agreement or any Award made in an Arbitration under this Agreement.

5. If any question shall arise between the parties hereto with respect to the price aforesaid or the completion of any such sale or transfer or any matter or thing to be done under this Agreement in connection with such sale or transfer every such question in default of agreement shall be settled by arbitration under the English Arbitration Act 1889 or any statutory modification or re-enactment thereof for the time being in force.

In witness whereof The Timken Roller Bearing Company by the authority of its Board of Directors has caused these presents to be executed in duplicate by its Secretary and its Corporate Seal to be hereto affixed and British Timken Limited under the authority of its Board of Directors has caused its Common Seal to be affixed hereto in duplicate the day and year first above written.

Signed and Sealed on behalf of The Timken Roller Bearing Company in the presence of

The Timken Roller Bearing Company, Canton, Ohio, U.S.A., By W. J. Timken, President. Attest: R. C. Brown, Secretary

The Common Seal of British Timken Limited has been hereunto affixed in the presence of

Wm. Dallow, A. J. M. Duncan, Directors. R. O. Squire, Secretary. (Seal.)

[fol. 5651] Dated: 15th July 1935

The Timken Roller Bearing Company and British Timken Limited

Agreement with respect to Subsidiary Companies

A G R E E M E N T made the seventh day of September One thousand nine hundred and thirty five B E T W E E N THE TIMKEN ROLLER BEARING COMPANY of Canton Ohio United States of America (hereinafter called "the American Company") of the one part and MICHAEL BRUCE URQUHART DEWAR of Number 10, Mayfair Place London, W. (hereinafter called "Mr. Dewar") of the other part with respect to a Company incorporated in England on the Thirty first day of August One thousand nine hundred and thirty five and named Timken Holdings Limited hereinafter called "the Holdings Company".

N O W

IT IS HEREBY AGREED as follows :-

1. EACH of them the American Company and Mr. Dewar hereby declares by way of honourable understanding and not as a legally binding agreement that if the other of them or any of his nominees or any Company controlled by him shall give a transfer notice under Article Number 28 of the Articles of Association of the Holdings Company in respect of all or any of the shares in the Holdings Company owned by the other party or his nominees or any Company controlled by him with or without participating rights connected therewith and the shares comprised in such transfer notice or any of them with the connected rights (if any) are not purchased by the other members of the Holdings Company to whom the same are offered pursuant to the said Article then

(a) The declining party will not unreasonably stand in the way of the other party or his nominees or the

controlled Company aforesaid selling such un-purchased shares or any of them with the connected rights (if any) to any person (not being a person to whom the declaring party shall object on reasonable grounds) at any price not being less than that at which such shares and rights (if any) shall have been offered to the Members pursuant to the said transfer notice and

(b) In the event of the other party or his nominees or the controlled Company aforesaid effecting a sale the declaring party will do all acts and things in his power in order to procure the registration of the transfer of the said shares and rights (if any) to the purchaser thereof and in particular will exercise the voting rights conferred by any shares in the Holdings Company held or controlled by the declaring party in such manner and give all such consents and sanctions as may be reasonably required and procure any Directors of the Holdings Company controlled by the declaring party to pass all resolutions necessary for procuring the registration of such transfers.

2. (a) UPON the death of Mr. Dewar or in the event of his being incapacitated by ill-health or otherwise for a consecutive period of six months from discharging his duties as a Director of a Company incorporated in England and named British [illegible] American Company shall have an option (exerciseable within six months after the death of Mr. Dewar or after the expiration of the said period of six months as the case may be) of

purchasing all the shares in the Holdings Company together with the connected participating rights (if any) belonging to Mr. Dewar or his nominees or any Company controlled by him at the date of his death or the expiration of the said period of six months (as the case may be) at their fair value to be determined failing agreement by an award of two London Chartered Accountants as Arbitrators one to be appointed by each party or an Umpire to be appointed by the said Arbitrators such reference to arbitration to be deemed for all purposes a reference to arbitration under the English Arbitration Act 1889 or any statutory modification or re-enactment thereof for the time being in force.

(b) THE said option shall be exerciseable by notice in writing served upon Mr. Dewar or in the case of his death his legal personal representatives within the said period of six months and if it is exercised the sale of the shares and rights if any shall be completed by delivery of duly executed transfers of and the certificates for the shares and rights if any against payment of the purchase price within seven days after the price has been agreed or determined by arbitration as aforesaid.

(a) THE provisions of Clause 2 of this Agreement shall apply also to Forty seven thousand five hundred shares in British Timken Limited at present registered in the name of the Holdings Company and held by that Company as to Forty one thousand shares as nominee (that is, bare Trustee) for Societe Americano Europeenne de Participations and as to Six thousand five hundred shares as nominee for Mr.Dewar.

(b) THE Provisions of Clause 2 of this Agreement (with the substitution of three months for six months) shall apply also to the said Forty seven thousand five hundred shares

in the event of the said Societe or Mr. Dewar desiring to sell or transfer all or any of the said Forty seven thousand five hundred shares and in such event the said Societe or Mr. Dewar as the case may be will give notice in writing of such desire to the American Company and will not sell or transfer such shares or any of them until three months from the date of such notice has expired but will be at liberty to sell or transfer such shares or any of them not purchased by the American Company under the option contained in the said Clause 2 at any time during a period of six months after the expiration of the said period of three months.

4. FOR the purposes of this Agreement all shares in the Holdings Company registered in the name of Societe Americano Europeenne de Participations and the connected participating rights shall be deemed to be shares and rights belonging to Mr. Dewar and under his control.

5. THIS Agreement shall be construed and have effect as an agreement made in England and in accordance with the Laws of England.

I N ITNESS whereof this Agreement has been executed by or on behalf of the parties hereto the day and year first above written.

Loan Capital Reichsmarks	613930.30	306965.15	306965.15
	1,008130.30	504065.15	504065.15

(c) The certificates for the shares and parts beneficiaires in the French Company (except the 60 Directors qualifying shares) and the Promissory Notes of that Company have been deposited with Westminster Bank Ltd. of 41 Lothbury London hereinafter called "the Bank" in the joint names of the Timken Company the Lux Company and the third party who are hereinafter collectively referred to as "the Trustees".

N O W

IT IS HEREBY DECLARED and AGREED as follows :

1. If at any time the third party desires to retire from his position as a party to this agreement or dies or becomes incapacitated the Timken Company and the Lux Company shall appoint a substitute or if they cannot agree a substitute shall be appointed upon the application of either of them by the President for the time being of The Law Society London and the expression "the third party" when used in this agreement means and includes the third party from time to time original or substituted.

2. (a) All monies and other values which from time to time shall be paid or transferred by the French Company or the German Company in respect of the shares Parts beneficiaires

or Promissory Notes of the French Company or the shares or Loan Capital of the German Company which are the property of the Timken Company shall be paid or transferred to the Timken Company unaffected by this agreement.

(b) All monies and other values which from time to time shall be paid or transferred by the French Company or the Germany Company in respect of the shares parts beneficiaires or Promissory Notes of the French Company or the shares or Loan Capital of the German Company which are the property of the Lux Company including the Lux Company's 30 Directors qualifying shares shall be paid transferred or otherwise disposed of in accordance with the provisions hereinafter contained.

(c) All monies and other values which from time to time shall be paid or transferred by the French Company or the German Company in respect of the shares parts beneficiaires promissory notes or Loan Capital aforesaid shall be paid or transferred in equal shares as between the Timken Company and the Lux Company respectively and upon any such payment or transfer made by the French Company in respect of the Promissory Notes of the French Company held by the Trustees the Trustees shall release to the French Company Promissory Notes of that Company in equal portions from the Promissory Notes of the French Company held by the Trustees on account of the Timken Company and the Lux Company respectively.

(d) If and so far as necessary the parties hereto will execute and do such deeds acts and things as may be required in order to give effect to the provisions herein contained with respect to the payment and transfer of the monies or other values hereinbefore mentioned.

3. (a) All monies and other values which from time to time shall be paid or transferred by the French Company

or the German Company in respect of the shares parts beneficiaires Promissory Notes or Loan Capital of the French Company or the German Company which are the property of the Lux Company including the Lux Company's 30 Directors qualifying shares before or after the commencement of a winding up of the French Company or the German Company either by way of interest or dividend out of profits or by way of payment or distribution out of capital or otherwise in excess of a cumulative sum of £7,500 per annum commencing from the 1st day of January 1935 down to the date of such payment or transfer by the French Company or the German Company shall be paid to the Timken Company until the Timken Company shall have received from this source a sum of £150,000. without interest and thereafter shall be paid and transferred to the Lux Company unaffected by this agreement.

(b) The intention is that the property of the Lux Company hereinbefore mentioned shall be an absolute security for the payment of the said sum of £150,000. but such sum shall not be payable except from that source.

(a) The Trustees from time to time at the request in writing of the Timken Company or the Lux Company will deliver to some company or person nominated by the Trustees any or all of the certificates for shares in the French Company held by the Trustees on account of the Company making such request in order that such shares may be made available temporarily for qualifying or voting purposes at Annual Extraordinary or other General Meetings of the French Company to the intent that the voting rights in respect of such shares shall be exercised in accordance with the instructions of the Company making such request, and the said certificates may also be similarly delivered at the like request in order that they may be stamped or exchanged or otherwise dealt with in connection with any conversion of

shares reorganisation or like occasion.

(b) If at any time the Timken Company or if at any time after the Timken Company has received the said sum of £150,000 the Lux Company shall give notice to the Trustees of its desire that the certificates for shares or parts beneficiaires or promissory notes held by the Trustees on account of the Company giving such notice or any part or parts thereof shall be released to it then and in any such case the Trustees will deliver the certificates and/or promissory notes referred to in such notice to the Company giving such notice or as it may direct Provided Always that none of the promissory notes held by the Trustees shall be released or delivered unless and until effective steps have been taken by the substitution of altered notes agreement or otherwise so as to ensure that the amount payable under the whole of the said notes shall be payable pari passu as between all the holders of the said notes and no holder shall be able to obtain any preference or priority in payment or otherwise over any other holder. Provided also that none of the certificates for shares or Parts Beneficiaires or Promissory Notes held by the Trustees shall be released or delivered unless or until effective steps have been taken by agreement or otherwise so as to ensure that the provisions of this agreement with respect thereto will be duly complied with into whomever hands or ownership the said certificates or notes may come

except with the consent of The Timken Company and The Lux Company

INDUSTRIELLE LUXEMBOURG

5. Each of the parties hereto will execute and do or cause to be executed and done such deeds acts and things as may be necessary to give effect to the following purposes:

(a) Mr. Dewar shall be Managing Director of the French Company and the yearly allowance of Francs Eighty Five thousand net free of all taxes which has been assigned to him by the French Company shall be continued and he shall

5661

actively engage in the management of the Fr n Com any to such extent as he shall consider necessary.

(b) Mr. Dewar shall have the control of the business of the French Company and shall be entitled to nominate and elect a majority of the Board of Directors of the French Company and the remaining Directors of the French Company shall be nominated by the Timken Company and the remuneration of the Directors Managing Directors and any management or technical committee of the French Company shall be at the present rate or amount or at such other rate or amount as shall be agreed from time to time in writing between the Timken Company and Mr. Dewar.

(c) The French Company shall make payments pari passu on account of its Loan Capital and shall declare and pay dividends in respect of its share Capital as directed by Mr. Dewar.

(d) No part of the Share Capital of the French Company which is owned or controlled by any of the parties hereto shall be sold transferred or otherwise disposed of by such party except upon such terms and conditions as will effectively reserve to such party the control of all voting rights in respect of the part of the Share Capital of the French Company which is now in the ownership or control of such party.

(e) The Lux Company shall not carry on any business or enter into any engagements except such as are necessary in connection with the holding of the shares parts beneficiaires Promissory Notes and loan Capital which are the property of the Lux Company without the consent in writing of the Timken Company.

(f) The foregoing provisions of this clause shall continue in force until the occurrence of any of the following events :-

(i) Mr. Dewar dies

(ii) Mr. Dewar retires from the active control of the business of the French Company

(iii) The undistributed profits as hereinafter defined of the French Company at the end of the year 1936 or any subsequent year amount to less than £24,000

(iv) The amount actually paid by the French Company in the year ending on the 30th day of April 1937 or in any subsequent year ending on the 30th day of April by way of dividend or interest or repayment of Capital in respect of the Share Capital parts beneficiaires or Promissory Notes of the French Company hereinbefore mentioned amounts to less than £24,000

(g) For the purposes of the previous paragraph of this clause the following shall apply :-

(i) The undistributed profits at the end of any year ending on the 31st day of December means the surplus of the profits over and above losses earned after the 31st day of December 1933 down to the end of such year after making the deductions hereinafter mentioned

(ii) In ascertaining the profits aforesaid all French taxes shall bededucted and in addition at the end of the year 1937 and any subsequent year there shall be deducted in respect of the year ending on the 30th day of April 1937 and each subsequent year ending on the same day a sum of £24,000 or the amount actually paid in any such last mentioned year by way of dividend or interest in respect of the share capital parts beneficiaires and Promissory Notes aforesaid whichever is the greater.

(iii) Profits earned means profits earned after such provision has been made for depreciation and bad and doubtful debts as the Auditors of the French Company

consider to be reasonable but without any deduction in respect of the debit balance on the Profit and Loss Account of the French Company at the 31st day of December 1933 or in respect of any transfer made for the purpose of writing down or amortizing the amounts which were shewn in the Balance sheet at that date under the headings Development Account Expenses of increase of Capital or Formation expenses or in respect of any Capitalisation of Profits.

(iv) The sum of $24,000 means either that sum or its equivalent in French Francs at the rate of exchange current at the time of payment.

(h) If and when the foregoing provisions of this clause come to an end then and in such case the Lux Company if so requested by the Timken Company will cause one share or other holding of shares in the French Company carrying one vote to be transferred to the Timken Company or its nominees at the par value of such share or holding.

6. (a) Each of them the Timken Company and the Lux Company hereby covenants with the other of them that no share part beneficiaire Promissory Note or Loan Capital of the French Company or the German Company now owned or controlled by the covenanting party will be sold transferred or otherwise disposed of unless the same has been first offered for sale to the other party.

(b) Every such offer shall be made by notice in writing specifying the interest to which it relates and shall remain open for acceptance by the party to whom it is made for 90 days after it is received by such party and any acceptance of any offer shall be signified by notice in writing to the party making the offer.

(c) If any such offer is duly accepted the price payable for the interest specified in the offer shall be the

fair value thereof and such value shall be determined and the sale and transfer of the interest specified in the offer shall be completedin the manner and at the time which shall be agreed or in default of agreement shall be settled by arbitration under the provisions hereinafter contained.

(d) The parties hereto shall give any consents and exercise any voting rights and execute and do any other deeds acts or things which may be necessary for the purpose of giving effect to this Agreement or any Award in an Arbitration under this Agreement.

7. If any question shall arise between the parties hereto or any of them with respect to the fair value aforesaid or the completion of any such sale or transfer or any other matter or thing arising out of this Agreement every such question shall in default of Agreement be settled by arbitration in London under the English Arbitration Act 188[illegible] or any statutory modification or re-enactment thereof for the time being in force.

8. Mr. Dewar hereby guarantees that the Lux Company will duly perform and observe the agreements and conditions hereinbefore contained and on the part of the Lux Company to be performed and observed.

9. The parties hereto declare that for the purposes of this agreement they have or have adopted an English Domicile at the office of the Bank and that the English Courts shall have jurisdiction in any legal proceedings with respect to the interpretation or execution of this agreement.

L220 Situation in France and probability of enforced declaration of foreign assets of French companies and nationals and compulsory repatriation of these assets at existing exchange rates subject to heavy fines if not done makes it essential for SAFT to part immediately with its gold and dollar assets in return for notes held by CBI and Luxemburg Company Stop We propose following Luxemburg Company and CBI authorize Westminster Bank surrender part of notes in exchange for gold and dollar assets Stop SAFT will then have repaid about 3.5 million francs of notes while exchange is favourable Stop Westminster Bank will hold gold and dollars as trustees for CBI and Luxemburg Company Stop Agreement can then be worked out providing for again lending money to SAFT in future as required Stop As the first step is very urgent we ask your agreement immediately Stop Have asked Whinney Murray cable you confirming their agreement to proposed step Stop Please send authority Duncan act for CBI—

Dewar.

[fol. 5670] DEFENDANT'S EXHIBIT 232

June 29, 1936.

Mr. M. B. U. Dewar, 10 Mayfair Place, London, W. 1., England.

DEAR MICHAEL:

We wish to confirm our cable of June 27th reading as follows:

"L220 We agree your thoughts and have cabled Duncan and Westminster Bank proceed conversion of notes STOP Please write giving full details present situation STOP Hold funds for our account in present form."

We attaching hereto copies of our cables to Stibbard, Gibson & Co. and also to the Westminster Bank, giving

them authority in behalf of Continental Bearings to proceed with the conversion of the French Timken notes.

We would appreciate your writing us, giving us the present status of the French Timken affairs. In your cable L220 you state that French Timken will then have repaid about 3½ million francs of notes, and we would like to know whether this figure of 3½ million francs includes discount due them for anticipating their notes and just how many years they are paid in advance. It is our understanding that French Timken had on deposit in England both gold and American dollars, and we are interested in knowing the amount of each on deposit and how much was transferred to the joint account of Luxemburg Company No. 2 and Continental Bearings, Inc. Also, did you use all the funds they had on deposit in England or did you leave them some balance?

After we have heard from you giving us further details, we shall again write you regarding this matter.

Very truly yours, H. H. Timken, Jr.

ref/rw
Encl.

[fol. 5671] DEFENDANT'S EXHIBIT 233

10, Mayfair Place,
London, W. 1.

30th June, 1936.

Mr. Henry Timken Jnr., Timken Roller Bearing Company, Canton, Ohio.

MY DEAR HENRY:

I was so very glad to receive your cable agreeing to the action which we propose to take regarding the finances of the French Timken Company.

It has been obvious for some time that the French financial situation was becoming very bad and there is no doubt that it is now getting worse.

The present Government, unfortunately, in their election speeches, promised not to de-value the franc, so that presumably they will have to fight to maintain the franc to

the bitter end. The alternative result will probably be worse from a de-valuation point of view than if they were to de-value it in the way that Belgium has already done.

At the present time, France cannot be forced off the gold standard as her gold reserve is more than ample. Nevertheless, owing to the fear of the future actions of a Socialist-Communist Government, enormous sums of money have left and are leaving France. This naturally reduces the gold reserve and brings the time of forced de-valuation nearer.

In order to try to bring back some of this money or in any event to prevent further export of French capital, the Government are almost certain to insist on a declaration of financial resources held abroad by French Nationals and French firms, thus following the example already set them by Germany and Italy.

[fol. 5672] S.A.F.T. has, as you know, considerable assets in gold and dollars. We did not want to pay these sums away from the control of the Company except in so far as provided in the agreements between yourselves and me. Unfortunately, we are afraid that if we delay any longer we may be forced to return these sums to France under very severe penalties, such as confiscation of property that we cannot export from France.

Fortunately, we have a perfect reason for paying money out and that is to repay the Notes owing by the Company.

We cabled you that we proposed to do this, and we have just received your concurrence.

As far as the French Company is concerned, the repayment of the Notes owing by it is equivalent to paying the money away from the control of the Company, but as far as our partnership is concerned, I am anxious to keep these funds available for Francaise Timken except for the payments that are provided for under our agreements.

As you know, we have been terribly cramped for room for the last two years and we have been considering the question of moving to a larger works. Fortunately, this has now become unnecessary as we have been able to obtain a lease of the property next door to us on reasonable terms. The two leases of our existing property and our next door property will run together, and will be for a period of twelve years.

In order to make the new property suitable for use would

probably mean an expenditure in total of approximately one million francs.

I shall write you more fully about this in the course of a week or so.

The repayment of the Notes will deal with a matter of some 3½ million francs.

In addition to this sum there is about ½ million francs which is surplus to our immediate requirements, but which [fol. 5673] we shall probably need within the next seven or eight months for normal business purposes.

After consulting our accountants, we came to the conclusion that we could not draw this and convert it into gold as the French authorities would perfectly legitimately say that we were denuding the company of its necessary assets and obviously in order to make a profit on the possible de-valuation of the franc.

I have therefore borrowed the money for six months personally on a 4% basis from French Timken. If the franc is de-valued there will be a profit on this sum which I propose to use for the benefit of those members of the company who have been extremely loyal during a very difficult period and who are bound to suffer from the de-valuation of the franc and whose recompense in any other way would be difficult. If there is a loss on this transaction through the franc not being de-valued, I propose to stand this loss myself.

I trust you will agree to this.

With kind regards,

Yours very sincerely, M. B. U. Dewar.

[fol. 5674] DEFENDANT'S EXHIBIT 234

10, Mayfair Place, London, W. 1

15th July, 1936.

Mr. Henry Timken Jnr., Timken Roller Bearing Company, Canton, Ohio.

MY DEAR HENRY:

Thank you for your letter of June 29th.
S.A.F.T. had the following gold and dollars:

10 bars Gold costing ..... Frcs. 2,122,153.31
and U.S. $100,000

Under the present scheme the French Company is repaying Notes to the total value of Frcs. 4,000,000 under discount as shown below:

Amount	Due date		Discount	
Frcs. 500.000	15.4.37	2½%	9 months	9,375
500.000	15.4.38	"	1 yr. 9 mths.	21.875
500.000	15.4.39	"	2 years "	34.375
500.000	15.4.40	"	" "	46.875
500.000	15.4.41	"	" "	59.375
500.000	15.4.42	"	" "	71.875
500.000	15.4.43	"	" "	84.375
500.000	15.4.44	"	" "	96.875
Frs. 4,000.000				Frs. 425.000

The repayment of these Frcs. 4,000,000 Notes after deduction of discount will absorb the sum of Frcs. 3,575,000.

The French Company will pay this by handing over 10 bars of Gold at cost ..... Frcs. 2,122,153.31
and U.S. $96,856.45 which at the fixed rate of 15 francs to the dollar (applicable to the notes) is equivalent to ..... " 1,452,846.69

" 3,575,000.00

[fol. 5675] The discount on the repayment of these Notes amounts to Frcs. 425,000.

We have decided that this amount should not be credited immediately to the Profit and Loss Account of the French

Company, but should be split up over the period involved as follows:

1936	45.834
1937	91.146
1938	78.646
1939	66.145
1940	53.646
1941	41.146
1942	28.646
1943	16.146
1944	3.645
	Frs.
	425.000

As I have previously explained to you, the above steps have been necessitated by the present position in France with its grave danger of the French having to abandon the Gold standard. Decrees have already been issued in France asking individuals to state the amount of their holdings in foreign currency and gold before the 15th July. Whether or not these decrees will be applied to S.A.F.T., there is little doubt that, unless we had taken action, we should be unable to gain any benefit from our precautions in placing the liquid resources of the French Company in gold and foreign currency should the franc be devalued.

It is our idea that we should modify the agreement of the 10th December 1935 between Timken Roller Bearing Company, La Reunion Industrielle, F. J. Pascoe and M. B. U. Dewar so that the Bank may continue to hold the gold and the dollars in the name of the Trustees, the reason being that a very considerable proportion of these liquid resources will be needed by the French Company during the next twelve months; in particular we have in mind the fact that as soon as the political conditions become more stable in France, we shall expend approximately 1 million francs reconditioning the new premises at Asnieres which we have [fol. 5676] just rented. When we need the resources, we shall make some arrangements whereby Notes are again issued by the French Company.

Yours sincerely,

M. B. U. Dewar

[fol. 5677] DEFENDANT'S EXHIBIT 235

July 31st, 1936.

Mr. M. B. U. Dewar, 10 Mayfair Place, London, W.1, England.

DEAR MICHAEL:

I received your letters of June 30th and July 15th containing some of the details on our recent transfer of S.A.F.T.'s, cash and gold, which were held in England. To some of us here in America the situation is not yet clear. In your letter of June 30th you mentioned having borrowed some money from French-Timken on a 4% basis. However, your letter does not mention the exact amount. This is the only word we have about such a loan.

We are also not clear about how extensive the improvements are which you plan to make at French-Timken and in fact this is the only intimation you have given us of any definite plans either for the rental of new space or the purchase of additional equipment.

With regard to the personal loan from French-Timken we would like to have you arrange so that half of this will be carried by C.B.I. so that we may share any possible losses which result from this transaction. We do not want to place ourselves under the obligation of having you bear their loss as we shall benefit equally with yourself through the proposed bonus to the members of the French-Timken Company. I am sorry to change this arrangement and hope you will notify us in advance if anything similar should come up in the future.

Referring to your suggested modification of the agreement of December 10, 1935 we are agreeable to such a change on the condition that if it becomes necessary to again loan the 3,575,000 francs to French-Timken that the status of the French-Timken notes and also the note secured by the Luxembourg Company will be the same as before this transaction.

Yours truly, H. H. Timken, Jr.

H.H.T/Jr/IL

[fol. 5679]. Copy for Mr. Ely

February 3rd, 1920.
Washington Hotel, Canton, Ohio.

A. McCormack, Esq., c/o Wolseley Motors, Adderley Park, Birmingham, England.

DEAR SIR:

RE—Visit to the Timken Company

We arrived at Canton on Friday morning, and visited the Timken Company in the afternoon, seeing Mr. Ely.

Mr. Ely stated that it was unfortunate that we had arrived at this time, as the relations between the Wolseley Motors and themselves were not clear. The reasons given were—

1. The Timken Company did not view with favor Timken Bearings being made by a motor car manufacturer. It was pointed out to Mr. Ely that our directors

had already decided that Timken Bearings should be made under an entirely separate organization, with separate offices, plants, officials and their staff, and the organization to trade under an entirely different name, that the staff was already appointed and new offices were already being planned. Also that the E. & O. A. Company had made cars since 1913, which circumstances ought not effect the volume of Timken business.

2. They did not recognize that their plans should necessarily be effected by agreements with E. & O. A. Company as they had not acquiesced in any transfers.

3. They were of opinion that as there was considerable business to be done in Europe, it might be better for themselves to plan new arrangements—ie—by developing other arrangements greafer benefit might ultimately accrue to themselves.

4. That because of past experience with the E. & O. A. Company, they were not sure that the Timken business would be prosecuted by the new organization any better than under the E. & O. A. Company. Mr. Ely was informed that their experience with the E. & O. A. Company must not be taken as an indication of the way the Timken business would be prosecuted in [fol. 5680] the future, as the directors controlling the new organization had very much greater facilities than they had over the activities of the E. & O. A. Company; that the Wolseley Cars had standardized Timken Bearings and would be requiring 150,000 to 300,000 bearings per annum at a very early date.

Because of the position indicated above, we were told that while certain information might be given us, Mr. Ely could not at that moment decide to let us have such confidential information which might be included in or covered by blue prints, etc., relating to processes, tools and jigs, or times and costs. After discussion, Mr. Ely agreed that full facilities should be given us in the collection of data relating to—

A—Application Engineering.
B—Bearing capacities and formule.
C—Investigation of fittings at customer's works.
D—With regard to the inspection of plant—this for the time being would be limited.

The Timken Company express themselves unable to co-operate heartily with us until the matters referred to in the first portion of this letter are made clear to them, but in the meantime, we are making full use of facilities offered, and no doubt much more useful information will be gathered than is indicated in A, B, C, and D, by the exchange of views with the Timken Company officials.

Mr. Ely states that he is sailing for England on February 14th, and that he may not be able to make any statement as to how far the Timken Company will co-operate with us until the matter has been investigated in England.

We expect this week to cover the Engineering side of the Timken business, and are making use of the facilities granted that we inspect processes in the steel producing plant. Next week, it is proposed that we visit Detroit and several of the Timken Company's customers in that area, calling on Colonel Alden, who will give us letters of introduction to the suitable motor car plants.

Yours truly, (Signed) G. H. Rodway.

December 15, 1922.

DEAR MR. ELY:

Don't feel that I can let the season go by without sending over the season's greetings and best wishes for a prosperous New Year.

Also to give you a line which may be considered overdue. It has been difficult to send you usefull news owing to very

indifferent health of Mr. Sharpe. As probably you understand my *position* as determined by Mr. McCormack is engineering, but as determined by personal interest in Timken has been "prodder" or *chora* in the sides of all depts where initiative, advice or help is required.

With Sharpe away, while not given his authority, one is expected to keep the wheels going round and it has thrown considerable extra work on my shoulders during the last 9 months or so.

Now, I believe it is time we got together again quite apart from agreement position.

If you should be coming over let me tell you that our weakest or most *vulnerable* spot is the lack of a real live outside sales organization.

These things are constantly being brought to Mr. Sharpe's notice but I am afraid he hadn't the power to alter things.

Our sales organization should include some young men with pep *and initiative and who have to make their career and operated from the Works* whereas we are in the hands of one old man whose activities are not controlled and are in consequence also at a very great disadvantage for trade expansion.

[fol. 5683] I could be impounded for libel if I was to write here all the things I know.

Am sending herewith report on a *roller* which may be of interest and also photostat showing our connection with the motor trade in 1923 passenger cars. Am having similar information prepared for tractors and trucks and will send you when completed. Will also send you these in blueprint form officially so that you can comment upon them as necessary, and a few pertinent questions are necessary.

Considerable obstacle to furtherance of business, outside lack of sales aggressiveness which would account for a good deal, is question of cost. This is principally due to our overhead or direct labor. With an output of approximately 6,000 bearings per wk our overhead on direct labor including sales charges and Royalty amount to approximately 370% today and even if we operated our plant at its fullest estimated capacity of 10,000 per week our charges would not it is estimated come much below 260% due to certain high fixed expenses. We are producing today approximately 6,000 bearings and believe there are possibilities for *something* like 10,000 or more per week with real live sales policy.

Our associations with our clients on technical grounds are best ever in the history of the company. Our engineers are well received and liked and we are able to do much in keeping dissatisfied clients in our fold.

You have written Mr. Sharpe regarding ball bearing prices in Continent and this country. I made several attempts to obtain periodical reports but could not get the cooperation and am afraid Mr. Sharpe will not bet any more, perhaps less. Quite a number of our agents are Vickers' representatives and battleships are more in their [fol. 5684] line. Furthermore nobody ever checks these people up visiting them and analyzing their sales against possibles. I did something of this nature several months ago against Belgium and France when visiting them but afterwards the thing fell through.

However, perhaps I strove to get too near to perfection but *feel* you will *confirm my news* if you visit us. We don't know how you are doing from the American plants at the moment and some news in this regard might be useful to our sales dept.

With very kind regards,

I remain, G. H. Rodway.

[fol. 5685] February 21, 1923.

DEAR MR. RODWAY:

Referring further to yours of last December, this certainly should have had earlier and more detailed reply. The information you give of your operation leaves much to be desired, and I am wondering what can cure the present situation, particularly to your advantage and also to ours.

In the first place, just what is the cause of British Timken excessively high costs? Would you care to give me your material and labor costs on some commonly used size, without overhead? Of course with your limited volume you have to absorb a terrific lot of overhead, and it does seem with energetic and intelligent direction, your volume could be very materially increased, and thereby cut down the overhead. I am curious to know how much profit or loss the past year's operation by the British Timken Company shows.

I would be interested in knowing what the price comparison is with ball bearings and Timken, at our price to

you without any profit added, but carrying import duties, freight and insurance.

There is an opportunity for the British Timken Company to have a profitable business, I am sure, and it will be a shame if they don't take advantage of the opportunity, to some degree at least. Of course for European consumption the matter of exchange is very much against you, but with your European connections, it does seem as if you could work an exchange of credits in some way so that this would not be so great a handicap as would appear on the surface.

You might be interested in knowing that our production here in 1922, in numbers of bearings, was almost 50% in excess of 1920. This of course is not true in dollar sales value, because our prices have been very materially reduced since 1920; but at that, our total sales were slightly in excess of those of 1920, and the demands upon us at present are just as heavy and we have the same difficulty in keeping our hungry customers satisfied.

Our labor situation is difficult, and it is very difficult to get suitable labor and keep them at all satisfied. Material prices are advancing all along the line. This, however, does not affect us as much as others, because we are so self-contained.

[fol. 5686] We now have operating satisfactorily a briquetting machine which handles our turnings so that we can use 100% of these. We are adding equipment both to our Plant here and at our Columbus Plant, to help carry the peak load this spring, and are putting up another building here at Canton, 60 x 200.

With this activity which we have, and the additional customers we have added, it makes it difficult to understand your situation at the British Timken Company, as it doesn't in any way parallel ours. I am writing Mr. McCormack just a few lines—a pertinent inquiry as to their operations and his views as to the future.

I am always glad to hear from you, and wish to extend to you the good wishes of your many friends here in our organization. We speak of your frequently.

With kind regards, believe me,

Very truly yours, —— ——, Vice Pres. & Treas.

HE.BES

[fol. 5687] February 21, 1923.

Arthur McCormack, Esq., c/o Wolseley Motors, Birmingham, England.

My dear Mr. McCormack,

I dislike thinking of how long it is since we have had any word from you. We don't seem to have kept in touch as we planned and I think we have both suffered from the lack of contact.

In looking at your operations from this side, it would seem as if there must be some very pertinent reasons for the small volume of business the British Timken Company is doing, under present conditions, and I would like an analysis from you as to the reasons for this, and also a statement as to what your operations will be for the balance of this year, and general prospects for the future.

We of course are not at all in close touch with your organization, or your activities, but it would seem you also should show some material increase, that is, in the additional customers secured and further application of Timken Bearings with old customers.

In this connection I would appreciate your writing fully as to the make-up of your Sales Department—just how many men have you, what is their experience, age, and how actively do they solicit the trade? How frequently are the different motor car manufacturers seen?

You will be interested in our operations here. In the year 1922 we produced about 50% more bearings than in our best previous year. This of course was not reflected in the same ratio in sales value, on account of reduction in prices.

We are now running on heavier schedules than any time in our previous history, and find it difficult to keep our hungry customers satisfied. As you have seen by the papers, practically all motor car companies in this country are breaking all previous production records. I fear, however, that they can't maintain the present high speed, and that shortly they will be out of breath.

[fol. 5688] I would very much appreciate an early reply to the above letter, and your opinion of general conditions, and about car conditions in particular from your point of view, as existing now in England and the Continent, and your views of the future.

With kind regards from the writer, we are,
Very truly yours, The Timken Roller Bearing Co.,
—— ——, Vice Pres. & Treas.

HE.BES

[fol. 5689] Wolseley Motors, Limited
London, S.W.1.

6th June 1923.

Heman Ely, Esq., Messrs. The Timken Roller Bearing Co.,
Canton, Ohio.

Dear Mr. Ely,

In the first place I must apologise most sincerely for not replying earlier to your letters re progress of the Timken Department.

I was anxious that Mr. Sharpe, the General Manager of the business, should assist in drawing up the report, and as Mr. Sharpe was expected back from South Africa, where he has been partly for reasons of health and partly for the purpose of assisting in the development of Timken business, I deferred replying until his return.

I gather from our officials that they are at a loss to understand the suggestion that Canton is not sufficiently in touch with our organization and activities, as communications have been regularly sent recording all new applications.

However, I quite understand your point of view. What you want is something of an insight into the possibilities of the future, which cannot be gathered from the ordinary communications.

I am afraid that when you look at the comparatively small amount of business we are able to do in England, it must seem ridiculously small as compared with the enormous business you do in America, and I can quite see the possibility of your Company taking the view that if we pressed harder we could do more business here.

You doubtless have by you some kind of a record of the activities of British Motor Manufacturers, from which it must be clear to you that from a manufacturing point of view we are producing in this country on an extremely small scale.

Shortly after the war there was quite a boom in trade in this country, but this boom was accompanied by labour

difficulties which, while being very helpful to importers of our particular class of commodity, as well as others, at the same time prevented British Manufacturers taking advantage of the opportunity which presented itself.

[fol. 5690] Briefly, our production was paralysed. Unfortunately this was repeated for three successive seasons. In 1920 we had a moulders' strike right in the heart of the season, which killed the season entirely; in 1921 we had a great strike in the transport and coal mines, which affected every industry in the country; last year we had severe disputes with the Amalgamated Unions of Engineers, resulting in a lock-out, which again paralysed our business.

It is not wonderful, therefore, that from a production point of view British Motor Manufacturers, with two or three exceptions, have been working at very much less than half their normal capacity, as far as passenger cars are concerned.

In regard to the Commercial Vehicle industry, this has been practically killed by the extraordinary action of the British Government in dumping thousands of used war vehicles on the British market. The nett result of this is that British commercial vehicle factories are working at less than 10% of their normal capacity. Several of the important ones have been wound up or are working under receivers in bankruptcy, and only two or three out of the whole number are keeping their heads above water.

Fortunately for us the Wolseley Company is one of the few in the Passenger Car section that has been able to keep going at anything like a fair pace, but even we have been operating at very little more than half our full capacity, so that altogether the British Motor industry since the war has had a most unhappy time.

Since we entered into the new agreement in 1920, and organised the Timken Department under the title of British Timken Limited, the business has run and is now running quite satisfactorily.

Mr. Sharpe, the General Manager we appointed, has adapted himself to the business in a most excellent way, and enjoys the confidence of the officials under his control as well as that of the Directors.

Our Engineering Department, still controlled by Mr. Rodway, has dealt very promptly and efficiently with all new applications, and has, I understand, been in constant

communication as necessary with the Technical Department at Canton, and the relations and understandings, so far as this department is concerned, were never on a better footing.

Mr. Hall still controls the outside operations. Our country is a very small one after all, and there are very few manufacturers to call upon. Mr. Hall keeps in touch with the chiefs of design, and in many cases with the Directors, of all British concerns, and has proved most diligent in the execution of his duties. He is ably supported by Mr. Hill, who deals specially with the Service Engineering Department, Mr. Hall confining himself more particularly to the securing of new business from manufacturers.

[fol. 5691] The Sales Department is well handled by Mr. Hobley, who is well known to the officials of your company.

You will see from the above that the organization remains much the same as it was when we established the British Timken Company in 1920.

As regards the development of the business since the original license was granted in 1911, the following table indicates what has happened—

1911	27,125
1912	56,988
1913	57,471
1914	73,028
1915	64,027
1916	50,276
1917	58,437
1918	66,240
1919	127,362
1920	255,848
1921	169,769
1922	177,431

You will remember that up till 1912/13 nearly all the Timken Bearings made in this country were used by the Wolseley Company.

The years 1914/15/16/17/18 were the war years, during which there was practically no production of passenger cars in this country. The bearings made in that period were, therefore, chiefly replacements for war vehicles, British and American, but of course there was a certain amount

of new business in the heavy vehicle trade, and latterly for tanks.

In 1919 there was a distinct advance, and in 1920 we reached the peak of production, when we produced 255,848 bearings.

In 1921 there was a reduced production, owing to the fact that we had accumulated a certain amount of stock in 1920, while at the same time our slump period commenced.

In 1922 things were a little better, and the prospect for the present year is that, at the present rate of turnover, we ought to get back to the 250,000, although, of course, the value will be reduced owing to the drop in material and labour and in selling prices generally.

With regard to the possibilities of further expansion, we have done and are doing everything that is possible to increase the popularity of the Timken Bearing among the manufacturers of this country. We find, however, that it is extremely difficult to get old established Companies to alter the applications in which ball bearings are employed unless they are in trouble.

[fol. 5692] Our officials have had many interviews with the Directors of the Rolls-Royce Company. It has been pointed out that they could get greater efficiency by using Timken Bearings, and save a certain number of shillings per car, but their answer to this has always been to the effect that the saving of a pound was nothing to them and that as the ball bearings they have used have never given them any trouble, they prefer to let well alone.

Similar remarks would apply to our interviews with all old firms, who established their models before the Timken Bearing was strongly introduced in this country.

Our opportunities of success are therefore restricted to:

1. New designs, and

2. The introduction of Timken Bearings in applications where ball bearings have failed.

So much for new business.

As regards the replacement or Service Department, the arrangements we outlined when the British Timken Company was established have been carried into effect. We have established small service agents in various parts of the country, and I am glad to say that the replacement business, particularly for American Cars, is on the increase.

A very great number of American Cars are being brought

into this country at the present time, and we are closely watching developments with a view to strengthening up the Service Stations as necessary to look after the maintenance of these cars.

Regarding our Colonial and Overseas trade, the development of this appears to present somewhat greater difficulties.

It appears that most exporters of American Cars to British Colonies make arrangements for delivery of spares to support their cars, and there is of course nothing to prevent their sending out supplies of Timken Bearings with their cars.

We have done a certain amount of business in Australia, but very little in other Colonies. We are, however, hopeful that the arrangements made by Mr. Sharpe during his recent visit to South Africa will result in increase of business for us in that Colony.

As regards France, the Societe Gennevilliers appear to be faced with even keener competition than we ourselves. Continental ball bearings are extremely cheap, and as the S.M.G. are not laid out to make the 400 or more different [fol. 5693] sizes of Timken Bearings, they must necessarily purchase from ourselves. Their depreciated exchange places them at a very great disadvantage.

To encourage them and help them in every possible way, we have sold to them at a loss to ourselves for the past two years, and today are selling to them at practically cost.

As for Belgium, Motor Car Manufacturers in that country are able to import German ball races at ridiculously low prices, and there is nothing to be done.

Italy—here again we are at a disadvantage, owing to the adverse exchange, but our Agent there has just reported that two of the leading Motor Car Manufacturers in Italy have agreed to give our bearings a trial.

At the present time business in Germany, Russia and Eastern Europe is impossible.

It should be pointed out that for the development of overseas business we have appointed no less than forty Agents, a list of which I understand was sent to Canton some few weeks ago.

I feel that it is very hard for you enormous producers in America to realise the difficulties we have to contend with, and if this brief resume of the position does not entirely satisfy you, and you would like fuller particulars,

we shall be pleased to reply instanter to any points you may raise.

It appears to us that the development of the British Timken business in this country is dependent on the state of the automobile industry in general.

The dumping of American surplus productions in our Home market, as well as in what before the war we used to look upon as our Overseas markets, must obviously have the effect of reducing the production of cars at home. The more open we are to attack, for fiscal or other reasons, the less becomes our production, the higher do our costs become and the smaller our sales.

Our people may wake up some day, and see that the open market, or what in the present conditions amounts to an open market, is a fatal policy. British industry, in many lines of business, was stifled during the war, and has never had a chance of reinstating itself.

I am glad to say that, in spite of all this, a much healthier feeling is beginning to assert itself.

It has always been said of British armies and the British nation in times of distress that we manage to "muddle through," and I hope that this will be the case in the present instance, and that with the return of prosperity and something approaching a settlement of European affairs, our business in Motor Car production and in Timken Bearing production will steadily increase.

[fol. 5694] I am glad to be able to tell you that so far as the Wolseley Company is concerned, we appear to have turned the corner. We have made and sold this year more than twice as many cars as we ever sold in the history of the Company, and we are preparing for bigger production for 1924.

We have not yet reached an average of 200 cars per week, but we are approaching this figure very closely, and we are hopeful that we shall be able to produce and sell an average of more than 200 cars per week in our next financial year.

We have reached this position by cutting our costs down to the water's edge, so that by comparison with our immediate competitors we are offering extremely good value.

Price appears to be a very big factor in these days and it appears to us that it would be a great assistance to the British Timken Company if your Company could see their way to a further reduction of the royalty.

In some directions we are now beginning to feel the effect of the competition from certain firms who have started making taper roller bearings in this country, and who, by reason of the fact that they have no royalty to pay, are able to sell (at a profit) at a price equivalent to our cost price, including royalty.

I do not think that in some cases these people are making the bearings as well as we do; they have no reputation to uphold, and they are building up a good business in the cheap bearings, especially in Ford replacements.

On this particular class of business it will be seen that anything that your Company could do which would help us to compete with such people would beneficially affect your Company, and we suggest that it may be in the interest of your Company to accept a very small royalty, say not more than 2½%, on competitive business such as that to which I have referred.

We have previously suggested a reduction of royalty on this competitive business, but up to the present your Company has not seen their way to help us in this matter, and as a result the business goes to other people.

We are naturally very much interested and pleased to learn that business is so prosperous in Canton, and express the hope that this may long continue. You must indeed be prosperous in America when you cannot get enough people to fill your factories. This is in strong contrast with our conditions in England, where in Birmingham alone there are 45,000 people drawing the unemployment dole from the Government at the present time. An eloquent testimony to the advantages of our Free Trade system!

[fol. 5695] With very kind regards, I remain, Yours faithfully, A. McCormack, Managing Director.

[fol. 5696]. August 27, 1923.

Arthur McCormack, Esq., Managing Director, British Timken Limited, Ward End, Birmingham, England.

Dear Mr. McCormack,

I have read with much interest your letter of June 6th, as this has really been the first advice we have had from you for some time, covering the general situation in England and the Continent, insofar as it affects the motor car industry. You certainly have had your share of problems

to meet, and it is very evident that our problems are of an entirely different nature, and in the main, much more simple, for the time being at least.

We note your suggestion of a decreased royalty on competitive business. If we felt assured that a decreased royalty would sufficiently increase the volume of this business, we would be glad to give it consideration; therefore, suggest that you write us as to the amount the business could be increased with a reduction to 5%, and a reduction to 2½%.

You will of course realize that unless we can get a very material increase in business, any royalty reduction would not be worth while. We would be glad to hear from you on this matter further, and in detail, when we would be glad to give the matter careful consideration.

The writer had the pleasure of meeting Sir William Letts in Mr. Willys' office, of The Willys-Overland Company, last week. Sir William did not seem particularly enthusiastic over your situation in England, but it is my impression he is perhaps profiting to a rather generous extent from his importations of cars, rather than making or losing money on the manufacture of cars.

We would appreciate it if you could see fit to give us a letter similar to yours of the 6th, about every six months, and if there are any phases of the business on which we could be of assistance or help to you, we hope you will point them out to us.

With very kind regards from the writer, we are,

Faithfully yours, The Timken Roller Bearing Co.,
—— ——, Vice Pres. & Treas.

HE.BES

[fol. 5697] Copy

Robinhood. Penns Lane, Erdington, Birmingham,
September 2, 1923.

Dear Mr. Ely,

Was very pleased to have your letter of July 20th which I will reply to in order of importance.

First I ought to tell you that events have been moving during the last few days very rapidly. During last week

we had the news that Mr. McCormack had resigned. I don't know the real cause but can indicate probable ones.

As you would know, Wolseley Company again made a loss on last year's trading, some £70,000. The British Timken Ltd. has for the same year been of some financial assistance to them; our profit has amounted, according to Mr. McCormack, to approximately £25,000.

Whether McCormack resigned because of the adverse balance, or because he couldn't agree with economy measures dictated by Vickers, I don't know.

As an official of the Wolseley Motors he does not therefore now exist, and it is also very probable that he is not retained on any board in London.

Naturally, as a consequence, quite a number of old officials of Wolseley Motors have been dismissed, and same is managed at the moment by a committee of three; i.e., Jacobs, past Secretary; B. Caillard, son of Sir Vincent C.; W. Dallon, associated with E. & O. A. Co., and very strong with Vickers as statistician in connection with their allied concerns. O. Boden, associated with E. & O. A. Co. and Timken in the past, is brought back and made Wolseley Production Manager.

Receivers' erstwhile Superintendent is now styled Technical Manager, whatever that may be!

Mr. McCormack's system of management was undoubtedly wrong, which I believe I took the liberty of mentioning in letters, and it remains to be seen whether the new management will do any better. They certainly should have little difficulty in doing better.

I don't know yet how these changes will effect British Timken. It will be a great pity if they do interfere. We have perhaps been some time in working out our destiny (the delay has been due to Wolseley influence and control in the past) but the results of the last two or three years have been the reward for our spade work and promise of better things to come. British Timken Limited at this stage MUST NOT be interfered with, and if you believe this view at this time you would do us all (i.e., officials of the British [fol. 5698] Timken Limited, including Sharpe) and the future of B. T. Company a very good turn by writing to our London Directors supporting this view.

If there is no serious obstacle in the way, B. T., if it cannot become entirely separated from Vickers organiza-

tion, could at least be a subsidiary company of Vickers and not Wolseley Motors.

Hardly necessary to point out the commercial advantage of this disassociation.

Approximately 33⅓% of our business is with Wolseley Motors, but of course as a subsidiary of Vickers we should hope to retain their business.

We have already passed our record of sales in bearings, which was in 1920 for 256,000. We are expecting to reach the 280,000 mark for 1923.

With regard to Mr. McCormack's views of the motor trade situation, it is certainly depressing, at the moment, but the B. T. have in spite of this done well this year, and hope to do better next. We are not discouraged, we feel the call for our bearings is going to be greater every year. True, it will be small compared with U. S. A. standards, but I feel we are meeting the situation over here in the only way it could be met at the moment.

For several reasons we must manufacture over here, one of which is that your present general standard is not good enough for constructors over here. I can fully appreciate the circumstances which dictate your present manufacturing policy. They perhaps mean sacrificing of ideals, but we would be glad to see something like it over here, for a short time anyway.

With regard to Bock, I am trying to get some facts together, but this is not so easy, I should imagine, as on your side. We have not so far had any serious competition for this concern and of late have heard less than formerly.

Our keenest competitor is found in Skefko who are making taper roller bearings, samples of which we sent you.

We feel that this concern are supplying bearings at below cost in order to create a market or opening. Perhaps I ought to say that it is felt that they are supplying below cost. Personally I have a suspicion that our price is high because of overheads imposed but am not in a position to scrutinize the charges they carry.

Quite agree that it is time for us to make another call at Canton. The question which will naturally be asked is how can we expect to benefit by new methods at Canton which may involve expensive plant and methods which are only justified by cheaper production costs when the quantities are very large and such as we cannot at the moment hope to attain?

[fol. 5699] That is the question which will be asked, and if you are writing suggesting the visit, might be useful to have this point of view in mind—your view is, it ought and must be done. The benefit to be gained cannot be obtained through existing channels.

Whether the powers appreciate it or not (I think they do, i.e., Mr. Sharpe and London Directors), British Timken's success would have been almost impossible without our 1920 call on you.

With best regards,

Yours truly, (Signed) G. H. Rodway.

[fol. 5700] Wolseley Motors Limited

September 10th, 1923.

Heman Ely Esq., Messrs. The Timken Roller Bearing Company, Canton, Ohio.

Dear Sir:

We wish to refer you to our letter of the 6th June last, written to you by Mr. McCormack. As that gentleman has now resigned his position as Managing Director of this Company, and the business at the present time is under the control of our Director, Mr. B. Caillard, and the undersigned, and as we are anxious to fix up new Contracts as soon as possible, we shall be obliged if you will be good enough to let us have a definite reply to our commur cation in regard to the amount of Royalty to be paid to you in respect of Timken Bearings.

We are afraid that it will be quite impossible for us to pay you 10% Royalty in view of the present very severe competition which we have to contend with, combined with the fact that all the Patents have now expired.

Awaiting your early reply on this subject,

We remain,

Yours faithfully, Wolseley Motors Limited. A. Jacob, Secretary.

[fol. 5701] September 20, 1923.

Mr. G. H. Rodway, Robin Hood, Penn's Lane, Erdington, Birmingham, England.

My Dear Rodway:

I was very interested in reading yours of the 2d, and of course surprised to learn that Mr. McCormack has resigned from British Timken and Wolseley Motors, and am just now in receipt of letter, dated September 10th, from A. Jacob, formally advising us of this fact.

In reply to Mr. McCormack's letter of June 6th asking for a reduction in royalty, I stated that if we felt assured that a decreased royalty would sufficiently increase the volume of this business, we would be glad to give it consideration, and suggested that Mr. McCormack advise us as to the amount he expected the business could be increased by a reduction in royalty.

Mr. Jacob in his letter asks for a reply to Mr. McCormack's letter, which of course is now in their hands. I am enclosing carbon copy of my letter to Mr. Jacob.

Yesterday I had quite a little visit with Sir William Letts of the Crossley Company, in the office of Mr. John Willys of The Willys-Overland Company. Sir William seemed rather surprised to learn of Mr. McCormack's resignation, but intimated as a matter of fact it was not to his mind entirely unexpected. Sir William spoke well of the British Timken Company but I couldn't judge whether this was inspired by simply a desire to be courteous or not.

Sir William Letts evidently feels that all British manufacturers can make no headway except by mighty hard work, and this is a time when they must all get busy and dig as hard as possible.

I hope that the British Timken Company will have appointed a Managing Director who can sense the importance of the business, and with whom we can have contact. It is always more satisfactory to deal with one man than with a committee. I would of course appreciate any private suggestions you may have to make on these matters from time to time.

With kind regards,

ry truly yours, ——, Vice Pres. & Treas.

HE.BES

[fol. 5702] September 20, 1923.

Mr. A. Jacob, Secretary, c/o Wolseley Motors Limited, Adderley Park, Birmingham, England.

DEAR SIR:

Referring to yours of September 10th, just received, we replied to Mr. McCormack's last letter on August 27th, and you of course now are in receipt of that letter.

We are surprised to learn that Mr. McCormack has resigned, and will be glad to be promptly advised as to who will succeed him. We don't know from your Mr. Jacob's letter whether your Mr. Jacob and Mr. Caillard are permanently managing the British Timken business, or only until Mr. McCormack's successor will be appointed.

In connection with the operation of the British Timken Company, we would like to ask as to whether these operations have been profitable or not, and how the operations compare with profit or loss of other similar companies. We learn that many of your prominent manufacturers are still operating at a loss.

It has been something over three years since we have had a visit from anyone from the staff of the British Timken Company, and we think that it would be profitable to you to have one or more of your men call upon us, that they might be in personal touch with progress we have made in manufacturing processes.

Awaiting your further reply with interest, we are,

Very truly yours, The Timken Roller Bearing Co.,
————, Vice Pres. & Treas.

HE.BES

[fol. 5703] COPY

Robin Hood, Penns Lane,
Erdington, Birmingham,

November 13, 1923.

DEAR MR. ELY,

Have refrained from replying immediately to your letter of September 20th, in order to collect information arising out of recent changes and particularly in regard to suggested visit to Canton.

Although it is nearly 6 weeks since receipt of your letter of September 20th, the subject has not been broached with either myself or Loader; i.e., visit to Canton.

I met Player of Bethel Player at Passenger Car Show; perhaps copy of report will interest you.

Am disappointed in the way this matter has been received by Sharpe, which appears to be for the following reasons: Sharpe tells me he has been just informed by Jacobs that directors have decided to *buy back the plant from British Timken* and make the bearings under the Wolseley auspices, selling them at a nominal figure to British Timken, who I suppose will become simply a selling organization.

I cannot, however, always depend on Sharpe's views, as having a somewhat superficial knowledge of the business, is likely to be lead astray. He has however appeared during the last few days very depressed. At the same time that he gave me the above news he tells me that the arrangement will not make any difference to British Timken officials and their duties. What exactly is the drift of the new arrangement will only become apparent in the course of time. It may be one of economy (!) for the *Wolseley Motors* or of accountancy. As matters develop I will notify you.

Personally I am sick of the Wolseley. One feels that the British Timken has been all along nothing more or less than a very great convenience to Wolseley Motors. Profits that British Timken have actually made and that would have appeared as substantial had we been an entirely separate concern, have been, one feels, appropriated to cover Wolseley's blunders and lack of proper business acumen and consequent lack of proper expansion of the British Timken.

By constant endeavor, in spite of dragging effect of Wolseley yoke, this year has been a record one—very small as compared with your own work, but indicative of the correctness of our view that, given a freedom of expression, there is a great future for taper roller bearings over here. But we *must hurry*. Competitiors are entering the field untrammeled by our restrictions.

[fol: 5704] Business done, i.e., orders invoiced for year, is:

Bearings 296,329—Value £212,727
Increase 148,320—Value £53,586 of last year.

I cannot get our people to advertise more to the general public, who are of course either actual or potential motor owners. We seem blind to a very powerful weapon which may be used greatly in our favor, and some day we shall regret the delay. I believe that such an advertising policy would operate more favorably for our benefit than same methods in U. S. A. to Canton. This is assumption of course.

I perhaps ought to mention that Wolseley's business with British Timken amounted to approximately 20% of our turnover. While this is a big item, would be a very much less serious account with freedom for proper expansion. As a matter of fact, with our slowly growing overseas business under present conditions it will become a small percentage each year.

November 15, 1923.

Since writing the above, have heard that directors are very sore about having to pay large sums in income tax for British Timken profits; hence the new arrangement referred to in the beginning of this letter. It is assumed that in future British Timken will show better profit.

Had intended to write more but shall have to close to catch next post, but will write again shortly.

Yours sincerely, (Signed) G. H. Rodway.

Attached reports will contain matter of interest and save me referring to them in letter, etc.

[fol. 5705] December 31, 1923.

Mr. A. Jacob, Director, British Timken Limited, Ward End, Birmingham, England.

DEAR SIR:

We are just in receipt of yours of the 14th, and have decided to have our Mr. M. T. Lothrop call upon you at an early date. Mr. Lothrop is our Works Manager and is in the closest touch with all of our manufacturing processes, and particularly with our new developments.

We have suggested to you that you send someone from your Works to see us, but you have not apparently seen fit to consider this, and we want Mr. Lothrop to call upon you that he may take up in detail your more fully taking

advantage of our experience, as we feel that you can very much reduce your costs.

Mr. Lothrop's work with us here is very important and we can ill afford to spare him. We trust therefore that you will arrange to see that his time with you is not wasted, and that he has access to your Shop executives, and also with yourself and Mr. Bernard Caillard, Mr. Sharpe, and any other executives who are interested in the British Timken Company.

We presume Mr. Lothrop will be sailing on the 12th of January, but we are not positive of this and will cable you as soon as we know definitely when he will arrive so that you can set up proper appointments for him. On Mr. Lothrop's arrival he will get in touch with you, and we are sure that you will appreciate that Mr. Lothrop's time is very valuable to us and we want him to be able to make as efficient use of the little time he has in England, as possible.

Mr. Lothrop may advise you in regard to some points brought up in yours of the 14th, or we may await his report before covering this matter in detail.

We assume that Mr. Jacob and Mr. Caillard, as well as Mr. Sharpe, will be at Birmingham, and Mr. Lothrop will get in touch with you there. Should any of you be located in London, please advise us by cable, so that Mr. Lothrop can meet you there, as Mr. Lothrop immediately on his arrival will go to London.

[fol. 5706] We know that you will extend Mr. Lothrop every possible courtesy and see that he has proper letters to Societe de Mecanique de Gennevilliers in Paris, and any other letters that may be helpful to him. I am sure that you can supply him with letters from Vickers which will allow him to make some special study of English steel mill practice, as this is a point Mr. Lothrop wishes to check up while he is in England.

Very truly yours, The Timken Roller Bearing Co.,
——— ———, Vice Pres. & Treas.

The Timken Roller Bearing Co., Canton, Ohio,

For the attention of Mr. Klinedinst

DEAR SIRS:

With reference to our letters of Oct. 6th, and Nov. 15th. last, we are disappointed that we have not received either a cablegram or a letter from you in reply.

As we pointed out to you, the matter was urgent, and we have quite recently received an enquiry from the Ford Company of Manchester for 50,000 bearings. As, naturally, we are very anxious to secure this order we are taking it for granted that you will help us and have quoted prices on the basis of a royalty of only 2½% for yourselves. The prices quoted are—

No. 09075	Assembled Cones	.....	1/5d, each
09076	"	"	1/5d, "
14120	"	"	2/5-3/4d. "

and even at these figures we shall make no profit out of the transaction, whereas, if we secure the order you will at any rate make 2½% on the value of same.

As mentioned in our letter of Nov. 15th., the Ford Company are particularly anxious to use bearings made in this country and previously they have been supplied by the Skefko Company, and as every bearing supplied by the Skefko Company means a loss of an order for Timken bearings we think you will agree that it is important we should [fol. 5708] receive every assistance to enable us to compete with these people.

In Mr. Ely's letter to Mr. McCormack dated August 27th. last, which was replied to fully by Mr. Jacob on the 14th. December, Mr. Ely asks us to state the extra amount of business we should be able to secure with a reduction of 5% and a reduction of 2½%. Mr. Jacob in his reply pointed out that this was rather too difficult a question to answer, but it is cases like the one we are now corresponding about which will show you that unless we obtain your assistance business will certainly go past us.

Trusting that if you have not already done so you will give the matter your immediate attention.

We remain,

Yours faithfully, For British Timken Limited, W. W. Sharpe, General Manager.

[fol. 5709] British Timken, Limited

WEH/LC 2nd January, 1924.

Messrs The Timken Roller Bearing Co., Canton, Ohio, U.S.A.

For the attention of Mr. Ely.

Dear Sirs,

We now have some particulars to put before you concerning the Ford car business in England as referred to

in your communication to us of the 28th November. This matter has been held up for some time as negotiations have been reopened with the Ford Motor Co. of Manchester with a view to seeing whether this business cannot be diverted to us. While appreciating the assistance you have already offered by furnishing a complete set of Ford front wheel bearings at a price of $2.12 per set, this figure is hopelessly out of it on this side. We will give you an example to show you exactly what we mean—

Ass. Cones Nos. 09075 & 6

Your price	29¢
Converted into sterling =	1s 4d
Duty into England 33.1/3% =	5½d
	1s 9½d
Transport cost say 10% =	2½d
	2s 0d

You will see from this compilation that we should have [fol. 5710] to sell the assembled cone just a fraction over 2/- to cover dead cost whereas we are prepared to manufacture this same cone and supply the Ford Motor Co. at 1/5d. We do not say that there is going to be a great deal in it for us except that it will keep our shops occupied and help to pay overhead charges, but we give you the figures to show that importation from America is no help to us as far as the Manchester business is concerned. The figures we quote of the small assembled cone are applicable also to the cups and the larger bearing.

As far as the Italian business is concerned for the Ford car, our Mr. Rodway was in that country a week or so back and we have just submitted a revised price for this job. At the moment of writing sufficient time has not elapsed for it to get through to the proper party but if there is any further assistance you can give us in connection with this job we shall take advantage of your kind offer.

Bearing No. 247 which you refer to in your letter is a size which we designed ourselves and has identical dimensions to No. 237/233, the only difference being that it incorporates an additional roller. It is perhaps one of our

most popular bearings and we must have supplied many thousands during the last few years.

Yours faithfully, For British Timken Limited,
W. W. Sharpe, General Manager.

[fol. 5711] British Timken Limited

WWS/DC 21st June, 1924.

The Timken Roller Bearing Company, Canton, Ohio.

For the attention of Mr. Heman Ely

DEAR SIRS:

The Triumph Cycle Company

We are trying very hard to persuade the above firm—who are one of the largest manufacturers of motor bicycles in this country—to adopt Timken bearings. They have tried a set of our bearings and also a set of Skefko bearings. Both have proved satisfactory, and it is now only a question of price as to who will secure the order.

We have submitted a quotation of 2/6½d. per bearing, based on a low figure for overhead charges—which we cannot expect to reach for many months to come—a very small percentage for selling charges, etc., 2½% royalty, and no profit. We are hoping that you will agree, if we secure this order—which will be for 20,000 bearings to commence with—to be content with the 2½% included in our quotation, and we should also like to have your confirmation that in cases where we have this keen competition with the Skefko Company you will agree to be satisfied with this lower royalty. We will, of course, advise you in each case when we have secured orders on this basis.

At the present time we are supplying a few motor-cycle manufacturers, but if we could persuade the Triumph Company to adopt Timken bearings it would be of the greatest assistance to us in securing business from other manufacturers. As you know, there is a very large trade done in [fol. 5712] motor-cycles in this country, and practically all of them are fitted with simple and cheap cup and cone ball bearings. As these motor-cycles are generally over-loaded and bearing troubles are, therefore, very frequent, the public are now beginning to realise that a machine which constantly breaks down through bearing trouble is not very cheap, and we receive numerous enquiries for conversions.

These enquiries we make use of by taking the matter up with the manufacturers with a view to persuading them to make a change. We enclose herewith copy of a typical letter received from the owner of a motor bicycle.

We feel sure you will accede to our request regarding royalty, as without your co-operation we cannot secure the business, and your letter of May 20th. advising us that you are also feeling competition from the Skefko Company in America leads us to think that you will sympathize with us.

Yours faithfully, For British Timken Limited, W. W. Sharpe, General Manager.

[fol. 5713] British Timken Limited

WWS/DC 10th. July, 1924.

The Timken Roller Bearing Company, Canton, Ohio, U.S.A.

For the attention of Mr. Heman Ely

DEAR SIRS:

We are in receipt of your letter of the 27th. ulto. in regard to Skefko competition.

Since writing our letter of the 16th. June we have seen representatives of the Skefko Company, and have learnt from them that the quotation to Ford of Canada was submitted from this country, but we were unable to ascertain the price quoted.

There is no doubt that the Skefko Company have now become very dangerous competitors, and in the case of the Standard Company, as we told you some time ago, they were able to secure orders from this firm by quoting lower prices than we did. In respect of this particular order, as the Standard Company insist upon British-made bearings, and as we are the only two manufacturers who can supply, it simply means that they are playing us up one against the other with a view to keeping the price down. We have, therefore, agreed to quote for their requirements—which are likely to amount to about fifty thousand bearings—at a figure which is a few pence per set below the Skefko Company's price, and as we understand from the Standard Company that they prefer our make of bearing to the Skefko we have every reason to hope that we shall secure the order; but even if we do so and have to pay you a

royalty of 5% on this particular order there will be no [fol. 5714] profit left to us, as we have based our quotation on charges which we can never expect to reach and a royalty of only 2½%, the price we have quoted being 17/3d. per set of 4 bearings, the set consisting of 2 each Nos. 247/243 and 319/313.

In this connection we are waiting to hear from you regarding the price we have quoted to the Triumph Company. The figure we have now quoted to the Triumph is 2/6½d., but we believe that the Skefko Company's quotation is only 2/3d. per bearing, the number of which is 1156X/1126X. We believe that next year the majority of the leading motorcycle manufacturers in this country will be fitting roller bearings, and that the Skefko Company will be our biggest competitor. As you know, the bearing we supply to the Ford Company does not come up to the same standard as that we supply to other manufacturers, and we are experimenting still further with a view to cheapening the manufacture of Ford bearings and bearings for motorcycles.

We will, as you request, let you know every two months what orders we have in hand for the Ford Company. When they placed bulk orders with us we agreed to maintain their list prices and not to offer their dealers or our own dealers better terms than they themselves were able to offer. On that account we have received practically no replacement business as they have supplied all the replacements themselves. We have now told the Ford Company that in view of the fact that we have large stocks of bearings suitable for Ford cars available for sale, the arrangement then made must be cancelled, and we are offering our dealers increased discounts to enable us to secure orders. We have received an acknowledgment of our letter from the Ford Company.

Yours faithfully, For British Timken Limited, W. W. Sharpe, General Manager.

[fol. 5715] July 11, 1924.

British Timken Limited, Ward End, Birmingham, England.

Attention: Mr. W. W. Sharpe, General Manager

Dear Sir:

We have carefully considered yours of the 21st of June, requesting that we allow you to pay only 2½% royalty on business you secure in competition with the Skefko Company, and having particular reference to a pending order from the Triumph Cycle Company.

We have just agreed upon a modification of the royalty with very considerable loss of revenue to us, and it is problematical whether there will be any increase in business and which will be sufficient to offset the loss from the reduction we have given you.

We prefer to see the terms of royalty as finally agreed upon between us to remain as per our revised Agreement, and then after the operation under this revised Agreement for a half year or a year, take another look at the situation. You have not under the revised royalty arrangement operated hardly at all, as yet, and we are sure with the superiority of your goods over Skefko that you can meet their competition.

We trust that you will not in the future make quotations on the assumption of our making a reduction in royalty, as you place us thereby in an embarrassing position and we wish to co-operate with you at all times as fully as possible, but we feel that now the benefits you are receiving under our Agreement are coming to you under very favorable terms.

Please continue to give us at all times specific and detailed information of your sales and your competition.

Very truly yours, The Timken Roller Bearing Co.,
—— ——, Vice Pres. & Treas.

[fol. 5716] (Pending to September 2nd, 1924)

Aug. 13, 1924.

British Timken, Ltd., Ward End, Birmingham, England.

Attention Mr. W. W. Sharpe, Gen. Mgr.

DEAR SIR:

Referring to your favors of July 10th and 26th believe that you are planning to have your Mr. Loader call upon us at an early date. We are confident that when Mr. Loader gets in personal touch with our latest processes of manufacture that you by taking advantage of these to a limited degree can materially reduce your costs. This is a matter which you can appreciate cannot well be handled by correspondence. The advances we have made in the past few months in methods which result in a better product and at a reduced cost are quite startling.

We know that you are not now profiting to as great an extent as you might were you in close touch with our entire operation and in this connection we are now making changes in the design of our bearing, which we think can best be taken up and covered in person with your Mr. Rodway. We hope that you can arrange for him to accompany Mr. Loader. These changes in design have been determined upon after a long period of experiments and tests, which have resulted in our producing a bearing with much reduced friction, longer life, quieter and with increased carrying capacity. The main dimensions of the bearings, of course, remain the same, that is, inside diameter, outside diameter, width, etc. and the new product will be directly interchangeable with the old.

We are confident that if you will inaugurate these changes you can much more easily meet the Skefko competition and establish and maintain as pre-eminent a position in England and on the Continent as we hold here and perhaps more so. We hope you will not overlook the importance of having your Mr. Loader and Mr. Rodway call upon us as early as possible, as we know it will result in increased business and added profits to you.

Very truly yours, Timken Roller Bearing Company,
—— ——, Vice Pres. & Treas.

[fol. 5717] British Timken Limited

17th October, 1924.

Messrs. The Timken Roller Bearing Co., Canton, Ohio, U. S. A.

For attention of Mr. H. Ely

Dear Sirs:

As you know, our financial year ended on the 30th September last and you will therefore be expecting to hear from us regarding our future prospects, etc.

During the past year we manufactured and sold over 350,000 bearings as against under 300,000 in the previous year, but the nett value of this year's output, namely £174,000 is lower than it was for the previous year, this being chiefly due to the fact that we have had to cut down our prices to a great extent to compete with the Skefko Co., and the Ball Bearing Manufacturers.

During the past year we have supplied only 17,000 bearings to the Wolseley Company whereas during the previous year they took over 42,000 bearings from us. Roughly our output has been distributed as follows:

50% Service business (Home, Foreign and Colonial)
45% to Manufacturers of Motor Vehicles and Industrial Machinery.
5% to the Wolseley Company.

Until a few months ago there was a combine in this Country of Ball Bearing Manufacturers, the most important Companies interested being:

The Skefko Co.
Ransome Marles Bearing Co.
The Hoffmann Bearing Co.

Unfortunately for us the Skefko Co. have broken away from this combine and, being in a position to quote for [fol. 5718] tapered roller bearings as well as ball bearings, have grouped the lot together and quote for the complete car bearing equipment. We have lost orders from both the Rover Co. and the Standard Co. on this account. We are, however, hoping that we shall get back their business, and we have in addition got quite a number of new customers and are hopeful that this next year's business will show a great improvement on that of last year.

We are gradually making headway in the Industrial Bearing business, which, as you know, we only started pushing seriously about a year ago, and this is certain to considerably improve during the next year.

As regards bearings for motorcycles, our chief competitors, the Skefko Co. have, after we have had great trouble in interesting motorcycle manufacturers in the Timken Bearing and securing business, annexed the manufacturers in the market, and we are asked to reduce our prices or lose the order. As an instance, we quoted 2/6d for bearing No. 00060X/00152. We could not afford to lose the order and therefore had to accept this price.

There is not yet much improvement in commercial vehicle business although a few of the best known Manufacturers such as Lehland, Halley & Commer cars, are beginning to place orders with us. Last year our business in bearings for commercial vehicles was very disappointing due to the fact that very few commercial vehicles were sold. There is no doubt that the Morris car is doing very well and they have been the cause of the Ford Company's output dropping very considerably. We believe that their 1-ton Van is not a great success and the Ford Co. hold their own in this direction. For over 6 months we have received no orders from the Ford Co. although we are continually calling upon them and have been promised that after the Olympia Show, which opened on the 17th inst., we shall be asked to quote for their future requirements. From information we receive from time to time there is no doubt that our bearings have stood up remarkably well and that the Skefko bearing has given quite a lot of trouble.

Business on the Continent and in our Colonies has been [fol. 5719] reasonably good especially Australia. There should be a great improvement in India and Africa during this next year. France is a disappointment to us because, as you know, they pay very little in Royalties of which you receive the greater portion and their replacement business is not nearly as good as it should be. They attribute this to Skefko competition a factory having been erected in France where they manufacture tapered roller bearings, and also to the fact that the name "Timken" is not so well known as in this Country. We are at present negotiating regarding a renewal of the Agreement which expires at the end of December as, although we know that they are not

doing as well as they ought to, it would be difficult to find another Firm to do any better.

We have recently lost an order for the Swift Co. which has gone to the Bock Company although we were willing to quote even lower than they have quoted, but we were told that the order could not be placed owing to failures they had had some years ago with Timken bearings, whereas Bock bearings had been tried and given every satisfaction. We believe there is something behind this, as, although the Swift Co. have had failures in the past, at the present time they admit that our bearings are giving satisfaction. We are told that it is possible the Bock Co. may not be able to supply their requirements in which case we should be given the order. On this account we should like to hear from you as to the position of the Bock Co. in America as they only manufacture very small quantities in this Country.

We enclose a detailed report of what we have done during the past year and trust that this will be of interest.

Yours faithfully, For British Timken Ltd., W. W. Sharpe, General Manager.

Copy Report.
DX 236

[fol. 5720] British Timken, Limited

WEH/LC 16th October, 1924.

British Timken Limited Business

A survey of our activities in Birmingham for the year ending September 30th last and prospects for the new financial year just commenced. To make it as concise as possible, it is sub-divided under several headings.

1. Motor Car Industry. This industry is the one upon which our business as bearing makers principally depends and unfortunately in England it is still in a more or less parlous condition; comparatively few motor car makers are producing profitably, and in consequence are cramped in their efforts to develop, which in turn reflects upon our own activities. In spite of this, and the fact that competition is keen, the figures for last year are encouraging and we are able to report progress all along the line. We can put

amongst Timken bearing users, manufacturers who have hitherto used nothing but ball races, e. g. Arrol-Johnston, Sunbeam Motor Co., Calcott, Humber (new models) etc. Perhaps the outstanding achievement in this regard is Crossley Motors Ltd., who have just given us a contract for their front wheel bearings, they having left us after the trouble they experienced in 1920 when our roller stock was at fault. At the forthcoming Motor Show we hope to be able to report a larger percentage of British cars on Timken bearings than was the case last year, when it was a little over 50%.

2. Commercial Vehicle Industry. In this field, which is essentially one where Timken excels, we are making slow but sure progress. Old war-time stock is still on the market and purchasers to-day can buy at low prices complete Packard, Peerless or Pierce-Arrow lorries, which have been renovated and will give reasonably good service. While this stock is still about manufacturers are suffering from a dearth of orders. The Leyland concern are using Timkens on all the wheels of their models, the Crossley Government Subsidy Lorry is also similarly equipped. The wellknown Albion Lorry people are also trying out several sets, while we still do good business with Steam Lorry Manufacturers.

3. Competition. As competition is now so extraordinarily keen, both from ball bearing and tapered roller bearing makers, it was decided some time back to strengthen our outside staff and to intensify our propaganda work. The British Bock Bearing Co. is very active and by ascertaining the sizes we have recommended or are being fitted, they try hard to influence customers in their favour.

The competitor which has caused us the greatest uneasiness is the Skefko Co. with their large organization. As you know already they have come into the tapered bearing field and through their methods of doing business are [fol. 5721] a force to be reckoned with. They have launched an intensive advertising campaign and have admitted to us that they are cutting prices right and left in order to gain a footing in what has previously been our field. They are able by virtue of their being ball bearing specialists to quote manufacturers a lump sum for the whole of their bearing equipment, which may include both ball races and tapered roller bearings, and clients inform us that their propositions when put forward in this manner are too at-

tractive to pass over. Whether their roller bearing will stand the test of time is a matter that we shall be able to speak of more authoritatively next year; at present they have secured two or three of our customers who have always used Timken by the methods referred to, but happily where we have lost one customer we have gained two new ones, and we have confidence in the final issue.

When it was announced that the Import Duty on motor car parts was to be lifted a firm known as Messrs Guiterman & Sons of London commenced to advertise the Gilliam bearing and were about to make an onslaught on the British market. At the time of writing we have no evidence that they have done any business worth speaking of and do not think they have imported any quantity.

There are also the ball bearing manufacturers who are perturbed at the progress we are making and it was only recently that the ring of ball bearing makers, which includes Messrs. Hoffman, Skefko, Ransome & Marles, and one or two more, was broken up, the result being that they are now engaged upon a price cutting expedition. In many jobs we have quoted below actual cost prices and even then we are far and away above what the ball bearing people have quoted in their fight against each other.

4. Output and Production. Our sales for the 12 months ending September 30th are a little over 350,000 bearings which, although insignificant against your own, is a record for Great Britain. This is actually 20% greater than last year and our aim for the forthcoming 12 months is to touch half million, there being every prospect of our accomplishing it. This time of the year is what is looked upon as the dead season in the motor car world but the orders we are booking are remarkable good, and when the busy season comes along towards Christmas and the New Year we expect to have our plant occupied to its fullest extent.

On several occasions Mr. Ely has offered to send over to Birmingham supplies of Canton made bearings to help us with our British business. While appreciating the spirit which prompts this, there is an unmistakable demand for the British made bearing and by reason of the political situation in this country the majority of motor car makers will only have an article that is made at home, although we know quite well that the American product would give them equally good service. The question of price enters into the

matter also and although you have offered us Ford bearings at low prices we have already showed you that we are producing and selling these at a price which is about equal to your own. Further, we have closely studied for many years the peculiarities of the English motor car designer and engineer and claim that we know exactly what he wants and how to deal with him in regard to the limits of inaccuracy, overall width, finish of the bearing, etc., etc.

The standard of our product has never been higher and in fact we attribute much of our progress to the excellent [fol. 5722] behaviour of the bearings. Replacement under guarantee was barely .1% and considering that the British manufacturer who has been educated up to extremely fine ball bearing limits demands something similar in the Timken bearing, we feel that this record is not a bad one.

5. Ford Business. Our business with the Ford organization, which started in January last, has unfortunately been a partial failure. The plain fact of the matter is that the Ford car is not now selling so well on the English market and since June last the plant in Manchester has been virtually closed, no bearings being needed at all either from us or the Skefko who, as you remember, secured a certain portion of their business. Being under no obligation to the Ford Co. we are supplying replacements freely all over the country and evidence is not wanting that the genuine Timken bearing is demanded by users, imitations being in disfavour. This fact cannot be overlooked should the Ford people put something on the British market which will sell.

6. Home Service. Our home service organization is second to none; in every important centre throughout the country an adequate stock of bearings is installed so that no-one need be held up for many hours in want of a replacement. Constant advertising in the local press, the liberal distribution of useful literature, and efficient service, have shown excellent results and it is now only necessary for our representative to keep the machinery up to concert pitch.

7. Motor Cycle Business. The motor cycle and sidecar is a most popular form of locomotion in this country and through the constant breaking up of cheap cup and cone ball races, we have endeavoured to interest manufacturers in a better proposition—the Timken bearing. Here again we

are up against price, as the methods of making ball races for this job is extraordinarily cheap and no tapered bearing maker could ever hope to come down so low. Nevertheless, we have repeatedly visited every motor cycle maker in the country, have made application drawings and have advertised freely. At the time of writing three or four of the wellknown makers are about to use them and we expect to see the result of this propaganda work after the Motor Cycle Show which is to be held in November. This is a case where the motor cycle makers are simply waiting for public demand, which we are doing everything to foster.

8. Industrial Business. In this line it was decided some months ago to appoint a special representative whose duty it has been to visit every engineering concern in the country. The results in terms of bearings sold is not large at the moment but there is no question that within the next 12 months it will be considerable. Our bearing is now being used in machinery and industrial apparatus of every conceivable class and its behaviour throughout has been remarkable. This business really resolves itself under two headings, one being "The high class engineering job where the bearing must be of super quality", and the other "Industrial work such as Conveyors, Mine Tubs, etc. where a bearing of lower grade is quite good enough." At an early date we will prepare you a list showing the various applications that have been made as they should be of interest to your Engineering Staff.

[fol. 5723] 9. *France.* Under this heading we believe you are familiar with the position as the agreement is just about to be renewed; we are sorry to say that the progress made there is nothing like what has been accomplished in England. New arrangements are contemplated which we feel sure will increase the turnover on the French market considerably.

10. *Germany and Italy.* In these two countries there has been a distinct step forward. A large number of German makers are considering the Timken bearing and samples are already under trial in rail motors and heavy colliery tubs. We have already referred to this in one of our earlier communications but would like to add here that we have every hope of doing large business during the next 12 months despite the restrictions that are placed upon imports into Germany. Competition is keen, the German

ball race is very good and at the same time cheap. The Skefko-Norma organization is also making a tapered roller bearing. An import duty has to be paid but in spite of this we still think that the genuine Timken bearing will be demanded.

As far as Italy is concerned, we have had a set back there as our representative went into liquidation, saddling us with a heavy bad debt. The firm has been reconstituted and an order has been booked for the well known Isotta Fraschini, which is Italy's super car. There again competition is keen, the largest motor car maker, Messrs Fiat, being interested in a ball bearing concern. Our representative is working very hard on our behalf and we are confident that his efforts will be duly rewarded.

11. *Other Overseas Territory.* We are able to report here a much increased turnover in the business transacted. We have clients that are regularly purchasing supplies from Norway and Sweden, Finland, Denmark, Belgium, Spain, Portugal, Roumania, Czecho-Slovakia, South Africa, India, Australasia, etc., and are just on the point of opening up negotiations for supplies to Russia. Wherever automobiles are operating we follow immediately with an authorized representative and a suitable stock wherever possible, the Timken bearing now being advertised in almost every language and is known the world over. Our shipments overseas have been 1500 bearings per week and our aim for the forthcoming 12 months is to double this.

The above is but a brief resume of our activities in Birmingham but we hope it will convey something of what we are doing. Difficulties there are at every turn but our object is to surmount them and to show infinitely better results than have been recorded in the past.

[fol. 5724] Copy

October 20, 1924.

British Timken Limited, Ward End, Birmingham, England.

Attention: Mr. A. Jacob, Director.

Dear Sir:

We are just in receipt of your favor of the 10th, advising us of change in your plant organization, and advising that you are dispensing with Mr. Rodway's services.

We would appreciate your advising us, if you will be so good, as to the causes which actuated you in making this move. Have Mr. Rodway's services been unsatisfactory in any respect, and if so, we would appreciate being advised as to the details.

Some little time ago we wrote you asking if we could not expect an early visit from some of your organization. We feel that a visit at this time is very important and will prove of very considerable value to you, inasmuch as we are making changes in some details of design of our bearing which will be a very decided improvement. These details can be much more thoroughly and easily discussed in person than by correspondence, and we hope on this account you will dispatch someone for a visit to our works at a very early date.

In addition to this important matter, there is also the advantage that you can gain from an inspection of our processes that have been developed during the past four years. We have had more advance in this period than in our whole previous history, to the end of making a better bearing, and making it cheaper.

If you are to successfully meet competition and show a profit you should have intimate contact with all these matters, and we hope we will have early advice from you that some one or more of your staff who can properly digest these matters will be with us in the very near future.

Very truly yours, The Timken Roller Bearing Co.,
——— ———, Vice Pres. & Treas.

Herman Ely. 10

[fol. 5725] October 23, 1924.

British Timken Limited, Ward End, Birmingham, England.

Attention: Mr. W. W. SHARPE, General Manager.

Dear Sir:

We wrote you some time ago regarding the advisability of some of your staff calling upon us here at Canton, and you were considering sending Mr. Loader and Mr. Rodway, but the last word we had from you was that the matter was being discussed and you would let us know your decision shortly.

We now have advice that Mr. Rodway is not longer with you, and he cannot therefore of course call upon us in your interests.

In writing Mr. Jacob a day or two ago we again stressed the importance of your getting in touch in detail with our developments here, both as to methods and processes of manufacture, as well as details of changes in design which we are making in our bearing, which greatly improve its efficiency, life and durability.

We believe that both your Engineering and Production Departments should be represented, and we assure you that we will expedite their time so that they can make every minute count. It should not be necessary for your representatives on a trip of this sort to require more than a week's time at our Works here, and we cannot impress upon you too strongly how urgent we feel it is that they make this trip at this time.

In connection with the use of Timken Bearings, we have received advices from Germany as to the activities of the S. K. F. Company in the manufacture of taper roller bearings. At the present time the taper roller bearings are manufactured on an extensive scale only in the Swedish Plant, for the reason that it is more convenient to supply British, French and Belgian markets from there; but they are interesting the German motor car industry and will no doubt start the manufacture of these bearings in Germany in a short time.

[fol. 5726] We feel that this competition is a menace to you, and you can successfully meet it if you are in touch with our new designs and latest developments.

You can also still further meet it with a sub-licensee contract in Germany, and we wonder what has become of your sub-licenses negotiations for Germany and Italy. We know that the German matter has been under negotiation for the past five or six years, but apparently without any conclusions in the matter, and we would like to have your early advices as to where this matter stands.

We hope that we will have your advices very shortly that representatives of your Production and Engineering Department are on their way to us for a visit.

Very truly yours, The Timken Roller Bearing Co.,
——— ———, Vice Pres. & Treas.

Heman Ely. B

[fol. 5727] British Timken Limited

Heman Ely. BES
Secretary

5th November 1924.

Messrs. The Timken Roller Bearing Company, Canton, Ohio.

Dear Sirs,

We have to acknowledge the receipt of your letter of the 20th October, for which we are obliged.

With reference to the question of a visit from one of our representatives, this matter has received our careful attention and we are making arrangements for our *Mr. Loader* to leave for your Works in January next.

We shall hope to advise you definitely the name of the boat by which he will travel and the date of his expected arrival on your side.

We wish that Mr. Loader's stay should not be prolonged as his services are really urgently required at this end, and we shall be glad, therefore, if you will do everything you can to enable Mr. Loader to do his business expeditiously and render his visit as profitable as possible.

Replying to your enquiry as to the causes which actuated us in disposing of Mr. Rodway's services—we have done this purely on the ground of economy and not because Mr. Rodway's services have been unsatisfactory.

Following Mr. Lothrop's conversation with the writer we reviewed our Staff and found that the organisation was sufficient to cope satisfactorily with the business—without Mr. Rodway—and on the ground of economy we decided upon this course.

Yours faithfully, British Timken Limited. A. Jacob, Secretary.

[fol. 5728] November 17, 1924

British Timken Limited. Ward End, Birmingham, England.

Attention: Mr. A. Jacob, Secretary.

Dear Sir:

We are pleased to note by yours of November 5th that Mr. Loader will call upon us early in January. We are

sure that much good will result from Mr. Loader's visit here, and you may be assured that we will expedite his time so that he can use it to the utmost advantage.

In connection with Mr. Loader's visit, we hope you will also send with Mr. Loader one of your Engineers, because as we have previously advised you, we are now just about making changes in detail covering the design of the Timken bearing, and this is as much or more an engineering matter than a production matter.

We hope therefore that we will have your further advice that not only Mr. Loader will call upon us, but one of your Engineers as well.

Very truly yours, The Timken Roller Bearing Co.,
——— ———, Vice Pres. & Treas.

Heman Ely. B.

[fol. 5729] British Timken Limited

Heman Ely. B.
Secretary

3rd December 1924

Messrs. The Timken Roller Bearing Co., Canton, Ohio.

Dear Sirs,

We duly received your two letters of the 7th and 17th November with regard to the visit of our Mr. Loader to you.

We have given very careful consideration to your suggestion but greatly regret to state that at the present time we are quite unable to spare anyone-else to accompany Mr. Loader to the United States, but hope that you will be able to give him sufficient information to render his visit profitable in all respects in the production of Timken Roller Bearings.

Yours faithfully, British Timken Limited, A. Jacob,
Director.

[fol. 5730] British Timken Limited

29th October, 1925.

M. T. Lothrop, Esq., C/o Messrs The Timken Roller Bearing Co., Canton, Ohio, U.S.A.

Dear Mr. Lothrop,

It is usual about this time of the year to send over a report of our activities here in Birmingham, but as Mr. Ely is not with you I am not quite sure to whom it should be addressed. I thought it better to send this to you personally as you have firsthand knowledge of our organization and will I am sure be interested in what we have to report at the same time putting it forward to the right quarter.

I hope you are keeping fit and with kindest regards,

Yours faithfully, W. W. Sharpe

Yes Best Compliments

Yard Engd.
Birmingham

2[illegible]th October 1925.

As our financial year ends on September 30th. it is customary at this period to review our business for the past 12 months and inaugurate plans for the new working year. Our remarks for the sake of clearness are made under several headings.

1. Output and production. As predicted in our report last year the sales for the 12 months ending September 30th were just a few short of 500,000 bearings, representing an increase of 40%. The prospects for the forthcoming 12 months were never brighter, our order books are full at the moment (an unusual thing in the Autumn Season), and our shops are just about able to fulfil customers' requirements. Towards May and June last we began to fall behind with our orders and to cope with the rising demand an extra shift of men was engaged to run the machines for 16 hours daily this being in operation as we write. Even now we are not satisfied that is satisfactory service is being given to the increasing number of Timken users, and from Monday next, November 2nd, three shifts of men will be engaged to work the 24 hours daily in 8- hour stretches. Our output per week will then total 2[illegible],000 bearings of all sizes and Mr. Lothrop who is familiar with the layout of our plant will agree that this is an achievement of which we might justifiably be proud. From this you will gather that we start the new year year at full blast in there being every indication that orders will increase rather decrease. It is our expectation that close upon a million bearings will be made and sold during the 1925/1926 Season.

2. Our Product. The standard of our product is still very high and there is no doubt that the rapid progress made during the last year is attributable to this, as the English manufacturer demands the best on every occasion. Replacements under guarantee have been a negligible quantity, less than .06% of the output, practically all of these being from material faults difficult to detect. Our output is mainly of the "V" type bearing and being so busy in getting output it is no easy matter to change over to the "J" type, although this is constantly in our minds and has actually been accomplished on several sizes.

3. Automobile Industry. The motor car industry in Great Britain has had on the whole a successful season in 1925 and the prospects for 1926 are quite as rosy. The 11 H.P. car suitable for the small Man's pocket is now well established and preparations are now in hand to turn out large numbers Many new Names are now included in the list of Timken users, as you will have seen from the schedule sent you recently, and as we are now supplying thousands of bearings to front axle and brake specialists the Timken bearing is much more widely distributed. You may remember on last year's report that that at the Motor Show Timken bearings were on [illegible]% of the exhibits whereas this year it had increased to just a little over 60% As for the Commercial lorry side, this business is just beginning to come into its own after 5 very lean years. As a war legacy we were saddled with thousands of old American Timkens, Perlegs and Timken bearings, and these are pretty well all gone today, and the market is opened for the English maker. There is a general move here Timken-wards away from fleeting business which English manufacturer has clung to so tenaciously, and we are ready to cope with this in next year's programme.

There is also the Motor Cycle business which we entered some 12 months ago; it is now beginning to show excellent results in bearing

quantities, although naturally it is very thin in[illegible], such firms as Douglass, New Imperial, Matchless, Velocette, Brough, Ariel, B.S.A. are all on Timken and we expect to do it to at 4,000 weekly for such customers.

4. Continental Business. In the continent of Europe we have made rapid strides and are selling thousands of bearings to all the manufacturing countries such as Belgium, Germany and Italy. Such firms as Minerva of Belgium, Opel of Germany, and Fiat of Italy, are all using our bearings and the latest recruit is the famous Alpine Steyr of Austria, to mention a few of the most important. The Fiat of Italy is our pet achievement, having already had orders for 6,000 sets for the famous model 509, which you may have heard about in the States; the application for this job is pinion and differential. Some 800 sets are on order for another model, and we are just discussing lorry applications which will involve many thousands of bearings, and the stage is all set for us to pull this off.

At the same time business with Continental Europeis no easy matter as financial considerations enter into it which make it exceedingly difficult to achieve rapid progress. You have only to look at the exchange rates to see, that with fluctuating money and all countries trying to economise in purchasing abroad, what we mean. Our business with the Linke-Hoffmann-Lauchhammer A.G. organization has been a little disappointing, they being embroiled in some financial reorganisation Having spent a great deal of labour and money in getting this German business going, we are not likely for some time at least to see any return, but yourill see how wary one has to be.

Nevertheless since our last report we have succeeded to a certain extent in popularising the genuine Timken bearing on the Continent, and believe that in time our efforts will be rewarded As for the remainder of our territory, thebusiness we get is necessarily all replacement, and this is catered for by a large organisation of Service Dealers in every centre. The business here is slowly but surely growing with the increasing number of cars on the road.

5. Competition. The Skefko Co. who will remember entered the tapered bearing field, are still engaged in it but they have not made a great deal of headway during the last 12 months. Their range of sizes is extremely limited and there seems no desire on their part to increase it; in fact everything seems to point to their having awakened to the fact that to steal a large slice of our business is more difficult than it looks, and having secured all Ford orders this year we have more or less cut they say the foundation of their business int this line. They are still doing the Standard Company's front wheel bearings, although in this case we have secured a contract for their pivot bearings, and they have one or two motor cycle jobs that we know of, all exceptionally thi lines. We feel that the aggressive policy adopted by us is slowly and surely [illegible].

As to the Buck Company, they [illegible] manufacture of a few sizes in Glasglow but they trouble us very little. They follow our applications round very closely and try hard to keep us out on price, but from information gathered they are having somewhat lean time of it.

On the Continent the Skefko Norma organisation and Fitchel & Sachs, both of Germany, have come out with tapered bearings, but judging from the motor concerns now using our bearings they have not got very far. In Sweden the

Skefko Company there are making tapered bearings and are apparently only doing the Ford sizes; while our representative in Stockholm reports great activity on their part in this line, he is still able to sell large quantities of our Ford bearings, so that there is not much to fear.

6. France. We are frankly very disappointed with what the Societe Mecanique de Tennevilliers are doing for the Timken business in France. While in England and other Continental countries we are making great strides forward, there is little or no progress in France. Many reasons are put forward for this state of affairs but at the bottom of it all is the formidable ball bearing interests; we are making and selling more in a week in England than the S.K.F. sell in 6 months, and the position there is one of our most serious problems. Exactly what will have to be done we cannot say at the moment but we are giving much thought to it.

7. Industrial Business. The engineering trade in this country is in a very parlous condition and consequently we have not done a large business here, although in terms of bearings sold it is distinctly better than the previous year. A month or so back we secured large orders from a concern making Robin's Conveyors over here and expect to do larger business still what bearings ~~must~~ have been used in this class of work have given remarkably good results throughout, and it only needs a resuscitation in the engineering trade generall to bring us in plenty of work. Our business last year can be sub-divided as follows:-

British Motor Manufacturers	65%
British Home Service	1%
Industrial Business	4%
Motor Cycle Business	5%
Overseas Business	25%

We think this covers most of the ground but if there are any other points which interest you and will write us, we will be very pleased to report further.

Messrs Timken Porter Lathrop Buckwalter Foss Duntzig Riblet
July 27, 28, 29, 1936

REPORT BRITISH TIMKEN LIMITED
BIRMINGHAM-ENGLAND

British Timken was visited during the writer's visit to England on July 27, 28 and 29. Following is a list of their important personnel, together with their respective positions those marked with an asterisk are the ones interviewed during this visit.

Mr. W. Dallow*	Director Wolsley Motors
Mr. Ellis*	Industrial Department
Mr. L. Chew*	Production Metallurgist
Mr. Hill*	Service Department
Mr. Mobley*	Sales Department
Mr. Wood*	Auto Sales Engineering Department
Mr. Leader*	Production
Mr. Hill	Auto Representative
Mr. H. Boden	Industrial Representative
Mr. Glassey	Motor Cycle Representative
Mr. A. Jacob	Director British Timken

Mr. Jacob, who is the managing director in charge of British Timken, unfortunately was away on his vacation at the time of the writer's visit and the works is practically operated by Messrs. Wood, Mobley, Ellis and Hill. They seemed very pleased to have us visit them and obtained all the information that I was able to give them. It was unfortunate that the time was so limited as we were merely able to scratch the surface. They seemed exceedingly sorry that I could not stay for a month and visit all of their present customers and prospective customers but of course this was out of the question.

The writer took over and delivered to them all of our latest data in connection with the new standards of bearings, automotive application, variety of industrial applications, steel mill, and also the present outside of the railroad end of our business. This made a very complete volume which was left with them to digest at their convenience.

In regard to bearing manufacture they are only making the Ford Bearings in the F type at present but they have now decided to make all new bearings in the J type and at any time that they replace any of their bearing equipment they will change over from the F to the J type. I was very much surprised to find that they were not completely sold on the J type bearing and a discussion which lasted several hours was entered into by all of the department heads. This discussion naturally became of a very technical nature. It seems that they have obtained samples of the J type bearing and furnished them to their customers. One particular steep angle bearing furnished to one of the highest class German companies failed on account of the wear on the large end of the roll. The writer pointed out that the cause of this failure was due to the steep angle on the rib and too much undercut, but the technical discussion which ensued opened up this subject very thoroughly and the writer's belief is that they were finally convinced that the J type bearing is a considerable improvement over the F type.

Mr. Wood was anxious to learn how we figured our capacities and pointed out that while we claimed so much for the J type bearing we still retained our old capacity ratings. It was explained that our ratings were very conservative but that we were now recommending bearings for automotive and industrial applications which were even [illegible] than these, however, with the old F type bearing we were absolutely opposed to recommending any bearing over 100 % of its capacity.

The use of moly steel also came in for considerable discussion and the writer was surprised to learn that they are still using chrome steel and not moly. The advantages of the moly steel were fully discussed and pointed out to them, but their principal difficulty seems to be in obtaining moly steel from Vickers. The writer had also thought that we could furnish them with moly steel cheaper than they could purchase it in England in spite of the freight charges, and this idea was very favorably considered by them at present. However, it was learned on returning through Mr. Lathrop, that Mr. Jacobs insists on obtaining steel through Vickers.

They are exceedingly interested in direct oil-hardening steel and are actually making rolls for production of this material and they have also made a few cups and cones and are seriously considering direct oil-hardening steel for their future production. This material is known as open-hearth steel; that is, oil hardened carom steel, Firth's Brand, CHX composition.

Carbon	1.0%
Manganese	.3%
Phosphorus	.015%
Sulphur	.025%
Chromium	1.50%
Silicon	.25%

Their Metallurgist, Mr. Chew, would like to receive our expert opinion on this material, especially as the writer talked so strongly in favor of the case-hardened moly steel.

They are not yet using the multi-perforated cups due principally to the cost of dies in which they are exceedingly limited in obtaining any new equipment. Mr. Lander, who has charge of Production, toured the writer through the plant but I was not very much impressed on account of the antique equipment which they necessarily have to use for the production of bearings. The only two machines of particular interest were the centerless Cincinnati grinder for grinding the outside diameter of cups which is done at the first operation. Also, an old-fashioned centerless grinder which apparently chamfers the flat on each end instead of using a center, the rolls being centered by means of the slight radius on either end. One of the principal production units going through the Works at present was the universal joint they had developed which will be mentioned later in this report.

The British-Timken feel that they are making bearings to far closer tolerances and accuracy than we are in the States and they were very glad to hear of our closer limit bearings that we are now introducing, not only for the automobile industry but for the machine tool builders.

Mr. Lander is anxious to obtain full particulars of the type of machine we are using for grinding the undercut of the P type bearing and our Production Department should see that this is mailed to him.

Our latest practice on bearing recommendations was fully discussed with their Engineer Mr. Wood, who was very interested in our recommendations, especially for front wheels where we are going over 100% of the bearing capacity. Several of his later recommendations were analyzed and our findings on the axle testing machine with reference to steep angle bearings were thoroughly discussed with him. He seemed to be very much surprised to hear of this as he was inclined to favor the steep angle bearings for pinion applications.

The writer feels that a system should be worked out whereby Mr. Wood can be kept up to date on our latest recommendations, possibly by means of sending him typical layouts of all automotive applications as they are adopted for production. In this way he will be kept right up to date rather than having to find out from experience information which we will be able to give him first hand. They are particularly interested in rear axle bevel drive applications at present and we should give them all assistance possible in their production.

Wood was exceedingly interested in the T type bearing, especially for steering knuckle applications and all of the latest developments in the automotive field were fully discussed with him. Due to the limited time it was necessary to discuss these matters in the evening and then it was only possible to merely touch the high spots.

Hypoid gearing was rather new to them and we not made any progress in England to date.

The British Timken Company have developed a line of Timken-equipped universal joints and already have several accounts such as the Thornycroft Truck and the Alvis car using this joint as standard equipment. This joint consists of a spider which British Timken are making carrying four roll assemblies, operating on the integral cone ends of the spider. The thread-adjusted cup fits into the yoke and is locked by a bolt and a clamp to lock the thread. The whole joint in the case of the Alvis car is completely enclosed in an oil-tight case but the Thornycroft is an open construction, each bearing being separately enclosed and lubricated. Assembly drawings of the three sizes of joints which were now in production were brought back for our investigation and study. Photostat of the typical application is attached hereto.

While this joint would be very expensive for American adoption it seems to be very favorably received in England and from all reports gives a very good account of itself, especially due to its adjustable features.

Mr. Wood was exceedingly interested in the transmission bearing application studies we have made and copy of the transmission bearing abstract was left with him for further thought.

Mr Wood was rather inclined to be ultra-conservative in his bearing recommendations and did not like to load a bearing more than 100% under any conditions no matter how favorable. This 100% included both the radial and thrust loads added together so that he always figured the absolute thrust load on a bearing which he added to the radial load to obtain the recommended bearing. It would therefore be advisable to send him some typical up-to-date work sheets showing both sides of the sheet, together with the application studies of all of the up-to-date automotive layouts.

He was surprised and a little skeptical about the Salmkin type of construction with the adjustable cups for pinion application but we assured him that by the use of molybdenum steel this was a very satisfactory construction.

The British-Timken Company have a very large motorcycle equipment business and the Ford size bearing is practically universal for these. Timken Bearings are also quite practical in the steering heads of motor-cycles and the P type bearing was of particular interest for this application.

Considerable time and discussion were had with their Mr. Hill, who is Service Manager, on various difficulties he has experienced in service but it is the writer's opinion that Mr. Hill is inclined to give the user too much credit for perfect workmanship as in several instances of failures that were discussed with him it seemed to be out of the question that the user could possibly make even the very slightest of errors in machining or fitting practice.

They have experienced trouble from time to time with washers on the V type bearing and it was pointed out that this would be eliminated by the adoption of the P type although Mr. Hill himself was very much opposed to the P type bearing on account of the possibility of wear on the large end of the roll. The writer feels that after discussion with Mr. Hill that he was more favorably inclined toward the P type bearing.

Mr. Hobley, in charge of Automotive Sales, seems to be of a more progressive type than the average Englishman and there is no doubt but what the sales problems are entirely different from conditions here in the United States. In the first place they have a tremendous handicap in price, the average Timken Bearing price being 10% higher than the ball bearing. Ball bearings have been favored by the British engineers and have been universally used so that the 10% price handicap to start off with is quite serious. The writer had drawn up a list of all automobile, commercial vehicle and motor-cycle accounts in Europe and went completely through these accounts with them to find out what the production was, where Timken Bearings were used, and, if not used, their reasons for this state of affairs. Some of the outstanding features of these accounts are as follows:

MORRIS-OXFORD
MORRIS-CROWLY - are the largest production cars in England and do not contain

British-Timken -6-

a large Timken business. The reason for this is that they are associated with Metropolitan Vickers Electrical Manufacturers just the same as the Vickers, Viters and Fro Departments [illegible].

AUSTIN, who is another big producer making about 1½ cars per week, did not use any Timken Bearings due to the fact that they are Metro-Vickers, one of the Austin directors being opposed to the Vickers Company.

ROLLS ROYCE do not use any Timken Bearings on account of their engineering practices. By the way, Rolls-Royce was visited and is covered in a separate report.

Last year the best British-Timken customer was the Fiat Company in Italy and they have now lost their entire business on account of the Fiat Company manufacturing their own bearings. This bearing is an exact duplicate of the V type British-Timken bearing. In spite of the loss of the Fiat business British-Timken are enjoying even more business than they had last year and feel that they are making considerable progress in the taper roller bearing business. Their production will run well over half a million bearings. This is considered remarkable in view of the present coal strike which is still on and is hampering a large number of engineering companies.

The industrial business is running about 5% of their total volume and is rather quiet at present. Mr. Ellis has complete charge of the industrial department in addition to being their tool designer and shop equipment man. He was quite interested in the miscellaneous studies we showed him and was full of questions on various types of applications.

On questioning Mr. Hobley as to their biggest sales resistance he was of the opinion that the engineering fraternities in Europe favored the ball bearing, and it was the writer's opinion that this could be overcome far better with the F type than the V type and I went on to quote them examples, such as the Oberland situation, as to what the F type bearing had done for ourselves. They are very anxious to get several copies of our new Engineering Journal and this matter should be taken care of by our Advertising Department. This will be especially useful for their Industrial Department and our future program on the Engineering Journal was explained to them fully.

The writer also gave them information regarding our new centerless grinder machines but they lack interest in this as the management are opposed to obtaining any new equipment on account of lack of funds. The same remarks apply to the Heald Simmatics we are now using for internal grinding.

The writer had considerable conversation with Mr. Ellis regarding the bearings which were slightly off spec and they were at a loss to understand how a discrepancy of this kind could possibly come about and it was learned that they have taken steps to correct all bearings and make them theoretically correct. Mr. Ellis was quite interested in our railroad developments and was glad to get the various studies which we delivered to them.

At the time of the visit the writer was unaware of the Bock purchase, and was very agreeably surprised to hear of this on returning to the States. Bock competition was discussed with the British Timken and they advised that they were glad of this competition as it assisted them materially in selling Timken Bearings. In spite of the British and Continental production, the European, and especially the Britisher, will not put all his eggs in one basket and must have at least two sources of supply. This is attributed to the fact that the labor situation is so doubtful and strikes, especially in the Engineering industry, are very common. They therefore consider the Bock Company as making just sufficient bearings to be termed another source of supply and the writer doubts if they will feel particularly glad regarding the Bock purchase from their own business standpoint.

The one outstanding feature of the writer's visit to England is the attitude of the British public toward the United States. The feeling when the writer left England 15 years ago was very friendly and brotherly but the British public are now feeling very bitter toward the United States on account of the war loan. They feel that it would be better for every one

British Finbas -2-

concerned if the United States debt were cancelled and they do not hesitate to enter into a discussion on this subject as it seems to be the one spirit of co-operation among Britishers. The general British attitude is fairly well completely covered in the letter of Premier Blommenvoss to President Coolidge a few days ago.

F WOOLEY

[fol. 5733] Copy

DEFENDANT'S EXHIBIT No. 237

UNITED STATES DISTRICT COURT, NORTHERN DISTRICT OF OHIO, EASTERN DIVISION

In Equity No. 5761

DETACHABLE BIT COMPANY, Plaintiff,

vs.

TIMKEN ROLLER BEARING COMPANY, Defendant

Bill of Complaint

The plaintiff, Detachable Bit Company, for its bill of complaint alleges:

1. That the plaintiff, Detachable Bit Company, is a corporation organized and existing under and by virtue of the laws of the State of Delaware and having a place of business at 50 East 42nd Street, New York, New York.

2. That defendant, Timken Roller Bearing Company, is a corporation organized and existing under and by virtue of the laws of the State of Ohio and has a regular and established place of business at Canton, Ohio, within the Northern District of Ohio, Eastern Division.

3. That this is a suit in equity for infringement of Letters Patent of the United States; for an accounting to plaintiff for damages suffered by plaintiff and its predecessors in interest and for the profits realized by defendant, by reason of defendant's repeated violations of its express and implied obligations to plaintiff and its predecessors in interest; for an injunction restraining defendant from contin- [fol. 5734] uing and repeating the acts herein complained of, and for further equitable relief as more fully appears in the appended prayer for relief; that plaintiff is without adequate legal remedy for the wrongs herein complained of; that the matter in dispute herein, exclusive of interest and costs, exceeds the sum or value of $3,000.

4. That on and prior to December 23rd, 1936, The Detachable Bit Corporation of America was a corporation organized and existing under the laws of the State of Dela-

ware having a place of business at Bridgeville, Pennsylvania.

5. That on or about December 23rd, 1936, the plaintiff purchased from said corporation all of its property and assets, and by proper instruments in writing plaintiff became and now is the successor in interest to the said Detachable Bit Corporation of America as to all rights of action at law and in equity of which said Detachable Bit Corporation of America was then possessed. Profert of said instruments in writing is hereby made.

6. That heretofore and prior to the 18th day of April, 1922, one Fred W. Thurston, then a resident of San Francisco, California, was the original, first and sole inventor of certain new and useful improvements in mining and rock drills having detachable bits, for which he was entitled to Letters Patent of the United States; that on said [fol. 5735] 18th day of April, 1922, said Fred W. Thurston made application in due form of law to the Commissioner of Patents for such Letters Patent; that thereupon such proceedings were had that on the 18th day of December, 1923, Letters Patent No. 1,477,855 were granted to the said Fred W. Thurston in conformity with the requirements of the statutes in such cases made and provided; that thereafter, to wit, on the 5th day of May, 1925, in conformity with and pursuant to the statutes of the United States, said Letters Patent No. 1,477,855 were reissued to said Fred W. Thurston as Reissue No. 16,061 for the balance of the term of said original patent. Profert of said Reissue Letters Patent or a duly authenticated copy thereof is hereby made.

7. That heretofore and prior to the 23rd day of April, 1925, one Fred W. Thurston, then a resident of New York City, New York, was the original, first and sole inventor of certain new and useful improvements in mining and rock drills having detachable bits, for which he was entitled to Letters Patent of the United States; that on said 23rd day of April, 1925, said Fred W. Thurston made application in due form of law to the Commissioner of Patents for such Letters Patent; that thereupon such proceedings were had that on the 13th day of September, 1927, Letters Patent No. 1,642,183 were granted to the said Fred W. Thurston in conformity with the requirements of the statutes in such cases made and provided; that thereafter, to wit, on the

7th day of January, 1930, in conformity with and pursuant to the statutes of the United States, said Letters Patent No. 1,642,183 were reissued to said Fred W. Thurston as Reissue No. 17,557 for the balance of the term of said [fol. 5736] original Letters Patent. Profert of said Reissue Letters Patent or a duly authenticated copy thereof is hereby made.

8. That in the making of such patented improvements and in the commercial development of the same the said Fred W. Thurston devoted much time and effort and spent large sums of money, with the result that the problem of utilizing removable or renewable cutters or bits in the drilling of rock, ore, and the like, was successfully solved, and the cost of such drilling, theretofore universally accomplished by means of one-piece integral drill rods which require frequent re-sharpening, was materially reduced.

9. That on or about the 29th of September, 1926, The Detachable Bit Corporation of America was organized under the laws of the State of Delaware for the purpose of acquiring the business of said Fred W. Thurston in such detachable bit drills, and to generally continue and carry on the development and exploitation of detachable bit drills originated by the said Fred W. Thurston; that pursuant to the above an exclusive license to manufacture, use and sell detachable bit drills embodying the inventions described and claimed in the above designated Letters Patent and Reissue Letters Patent, was on or about October 7, 1926 granted by the said Fred W. Thurston to the said Detachable Bit Corporation of America, and thereafter and until the assignment to plaintiff on December 23, 1936 of its entire business and assets as above alleged, The Detachable Bit Corporation of America carried on the business in de- [fol. 5737] tachable bit drills originated by the said Fred W. Thurston, and spent large sums of money in the development and exploitation of said detachable bit drills, as hereinafter set forth.

That thereafter, to wit, on May 22, 1929, said Fred W. Thurston transferred and assigned to The Detachable Bit Corporation of America by proper instrument in writing duly recorded in the United States Patent Office, Liber L139, Page 49, the entire right, title and interest in and to said Letters Patent and said Reissue Letters Patent, subject to certain reversionary and residuary interests of the

said Fred W. Thurston; thereafter, to wit, on June 14, 1935, by proper instruments in writing duly recorded in the United States Patent Office, Liber V163, Page 68, the said Fred W. Thurston assigned and transferred to The Detachable Bit Corporation of America the reversionary and residuary rights in said Letters Patent. Profert of said instruments in writing is hereby made.

10. That on or about the 23rd day of December, 1936, by proper instrument in writing, The Detachable Bit Corporation of America assigned to plaintiff the entire right, title and interest in and to said Reissue Letters Patent Nos. 16,061 and 17,557, together with all rights of recovery for past infringement thereof, and plaintiff now is the sole owner of said Reissue Letters Patent and all rights thereunder. Profert of said instrument in writing is hereby made.

11. That prior to the 9th day of July, 1929, said Detachable Bit Corporation of America had expended and was expending large sums of money in improving and perfecting detachable drills embodying the principles disclosed in [fol. 5738] the above mentioned patents, and in devising, inventing and perfecting processes for the manufacture of the same; that as a consequence of such expenditures, improved detachable bit drills and improved processes and methods for the manufacture of the same had been developed by said corporation, its officers and employees, and said corporation had accumulated valuable engineering and sales data pertaining to said drills and detachable bits, and such processes and methods, engineering and sales data were maintained in secrecy by plaintiff and comprised trade secrets of said corporation, that such trade secrets were of great value to said corporation, and that said corporation had built up a large and profitable business in the manufacture and sale of said improved detachable bit drills, such business being due to substantial measure to the improvements and trade secrets developed, invented and devised by said corporation, its officers and employees as aforesaid.

12. That on and prior to July 9, 1929, defendant was engaged in the business of manufacturing and selling bearings and other products made of steel, and in the manufacture of steel for use in the fabrication of such products, and defendant was not at that time and had not been engaged in the manufacture or sale of detachable bit drills.

13. That prior to July 9, 1929, defendant represented to the aforesaid Detachable Bit Corporation of America that defendant was a large producer of steels of the types required by said corporation for fabricating drills and detachable bits; that defendant, by reason of its experience and activity in its own business, was peculiarly equipped [fol. 5739] and competent to advise and assist said Detachable Bit Corporation of America with respect to manufacturing, metallurgical, merchandising, administrative and other problems incident to the enlargement of the manufacturing, distributing and selling business of said corporation; and defendant proposed that said Detachable Bit Corporation of America and defendant might profitably engage in a joint venture in which the knowledge and experience of said Detachable Bit Corporation of America concerning the manufacture of detachable bit drills as aforesaid and the metallurgical and merchandising knowledge and experience of defendant would be combined and that by such combined efforts the business of said Detachable Bit Corporation of America could be expanded to nation-wide proportions to the great benefit of Detachable Bit Corporation of America.

And defendant further proposed that the joint venture should be carried out in the following manner, to wit:

Defendant would advance to Detachable Bit Corporation of America a sum of money to be expended in experimental and devolpment work, including experimentation with various different steels to be obtained from defendant, and market research, that Detachable Bit Corporation of America would disclose to defendant all particulars of its manufacturing operations and give defendant all information that it had acquired during its years of development and exploitation of its said drills and detachable bits, and would cooperate with defendant in developing at the expense of Detachable Bit Corporation of America new kinds of steel for its drills and bits, and new and improved processes of manufacturing said drills [fol. 5740] and bits, and that plaintiff would conduct at its own expense market investigations in different parts of the country to which plaintiff had not then extended its business and that if the results of such investigation and development work satisfied defendant that the business of the Detachable Bit Corporation of America in drills

and bits could, with additional capital, be expanded into a large nation-wide business on a quantity production basis and furnish an outlet for a large quantity of defendant's steel, defendant would continue the joint venture by purchasing plaintiff's stock in sufficient amount to provide the necessary additional working capital for such expansion.

14. That on or about July 9, 1929, as a consequence of negotiations and of the aforesaid representations made by defendant, said Detachable Bit Corporation of America and defendant entered into said joint venture, and, pursuant thereto, defendant undertook to purchase for Ninety-Three Thousand Dollars ($93,000.) certain seven per cent one year convertible notes or debentures of said Detachable Bit Corporation of America in the principal amount of One Hundred Thousand Dollars ($100,000.), secured by the property and assets of said Detachable Bit Corporation of America, and said Detachable Bit Corporation of America undertook to purchase from defendant at current prices its entire requirements of steel, and undertook to give to defendant full information concerning its detachable bit rock drill business and granted to defendant an option for one year to enter into a further agreement to continue the said joint venture for a period of years, said agreement obligating said Detachable Bit Corporation of America to pay a stated part of its net profits to defendant and [fol. 5741] providing for the purchase by defendant of certain shares of stock of said Detachable Bit Corporation of America, all as by said option agreement will more fully and at large appear.

15. That thereafter and during the period between about July 9, 1929 and about March 1, 1930, defendant purchased notes of said Detachable Bit Corporation of America in the principal amount of One Hundred Thousand Dollars ($100,000.) for the sum aforesaid, and said Detachable Bit Corporation of America purchased steel from defendant for the manufacture of detachable bit drills, tried out new markets for the sale of detachable bit drills, and furnished to defendant full and detailed reports covering its experimental, manufacturing and sales business, fully disclosed to defendant, through defendant's employees and representatives, all of the trade secrets and improvements in detachable bit drills and processes for making the same

that had been theretofore developed by said Detachable Bit Corporation of America, its officers, agents and employees, and generally performed all of the duties and obligations on its part to be performed pursuant to said joint venture, all at the instigation and with the approval and cooperation of defendant, and that during such period, said Detachable Bit Corporation of America expended large sums of money, totaling more than One Hundred Thousand Dollars ($100,000.) in experimental work with steel purchased from defendant and in trying out new markets for detachable bit drills as aforesaid.

16. That the disclosures to defendant of experimental, manufacturing and sales information by said Detachable Bit Corporation of America as aforesaid were made in confidence and for the sole and exclusive purpose of assisting [fol. 5742] defendant in determining the advisability of exercising its option to purchase a portion of the capital stock of said Detachable Bit Corporation of America and continue said joint venture, and by accepting such disclosures from said Detachable Bit Corporation of America and participating in such joint venture as aforesaid, defendant obligated itself not to use such disclosures for its separate benefit and not to compete with said Detachable Bit Corporation of America in the manufacture and sale of detachable bit drills; and defendant further agreed with Detachable Bit Corporation of America that in the event defendant did not purchase the stock of Detachable Bit Corporation of America to carry on the said joint venture, that all benefits of said research and development work and market investigations in the field of detachable bits would inure to the sole benefit of Detachable Bit Corporation of America and that defendant would not manufacture and sell detachable bit drills or detachable bits for such drills in competition with said Detachable Bit Corporation of America, its successors and assigns, during the life of the above mentioned Letters Patent or any of them.

17. That thereafter, and on or about March 1, 1930, and prior to the due date of the aforesaid notes, defendant, without good or sufficient cause, demanded that Detachable Bit Corporation of America repurchase from defendant forthwith said notes in the principal amount of One Hundred Thousand Dollars ($100,000.), and defendant threat-

ened to force said Detachable Bit Corporation of America into receivership in the event said notes were not so repurchased, and because of such demand and threat, the president and principal stockholder of said Detachable Bit Corporation of America purchased said notes from defendant prior to the date of maturity of said notes.

[fol. 5743] 18. That defendant did not exercise its option to purchase capital stock of the Detachable Bit Corporation of America, and, relying upon defendant's obligation and agreement to respect its patent rights and not to compete with it in the manufacture and sale of drills and detachable bits, the Detachable Bit Corporation of America continued its own efforts to develop the market for drills and detachable bits, and notwithstanding its limited capital and the industrial depression which occurred during the years 1930-1932, the Detachable Bit Corporation of America succeeded in progressively increasing its sales in the business of detachable bits, and but for the acts of defendant herein complained of, said business would have continued as a profitable and growing business.

19. That thereafter, to wit, during the six years immediately preceding the filing of this complaint, in violation of its obligations and agreement aforesaid, and with deliberate intent to deprive The Detachable Bit Corporation of America of its business and of the profits and advantages accruing to Detachable Bit Corporation of America therefrom, and in infringement of the above designated reissue patents, defendant, in direct competition with said Detachable Bit Corporation of America, manufactured and sold, and is now manufacturing and selling drills and detachable bits of the type manufactured by said Detachable Bit Corporation of America, such bits being designed to fit the drill rods manufactured and sold by the Detachable Bit Corporation of America, and defendant has employed in such business the confidential information obtained from said Detachable Bit Corporation of America in the course of said joint venture as aforesaid, and defendant particu-

[fol. 5744] larly sought out and approached the customers of the Detachable Bit Corporation of America and sold detachable bit drills to such customers and others at prices below the prices of said Detachable Bit Corporation of America for like drills, and that as a direct consequence

and result of said wrongful acts of defendant, the business of said Detachable Bit Corporation of America decreased, and said Detachable Bit Corporation of America was forced to discontinue its business and to dispose of its assets to plaintiff as hereinabove set forth; that defendant continued and still continues such wrongful acts and that by reason thereof plaintiff and its predecessor, said Detachable Bit Corporation of America, have suffered damage in the amount of Three Million Dollars ($3,000,000.) and have suffered other great and irreparable injury, which damage and injury will continue unless defendant is enjoined by this Court.

20. That defendant induced and caused its employees, Tracy V. Buckwalter and John B. Baker who, as such, had ready access to all of plaintiff's confidential records and information, to make application for United States Letters Patent for improvements in detachable bit drills, and defendant obtained Letters Patent No. 1,876,565, dated September 13, 1932, No. 1,953,095, dated April 3, 1934, and Nos. 2,052,011 and 2,052,019 dated August 25, 1936, on said improvements disclosed in said applications, as assignee of its said employees, that the inventions and improvements disclosed and claimed in said Letters Patent embody, are based on and developed from the information obtained by defendant from said Detachable Bit Corpora-
[fol. 5745] tion of America in confidence and through confidential relations as aforesaid, and that plaintiff is entitled to the benefits of the protection afforded by said Letters Patents.

21. That detachable bit drills have been manufactured and sold continuously by the defendant since about September 1, 1932, and are now being so manufactured and sold, and such detachable bit drills constitute infringements of the above designated Reissue Letters Patent Nos. 16,061 and 17,557, and of the above designated patents Nos. 1,876,565, 1,953,095, 2,052,011 and 2,052,019 issued to defendant as assignee of John B. Baker, which said patents should have been, pursuant to the obligations and agreements of defendant, assigned to Detachable Bit Corporation of America.

22. That the manufacture and sale of such detachable bit drills in infringement of plaintiff's patent rights has resulted in great damage to plaintiff and its predecessor in

business, Detachable Bit Corporation of America, and has resulted in substantial profits to defendant.

23. That plaintiff and its predecessor in business and all parties manufacturing and selling detachable rock bits under said Reissue Letters Patent Nos. 16,061 and 17,557, have given notice to the public of such patent rights by marking the same, or the containers in which they were sold, in full compliance with the requirements of the statutes in such cases made and provided.

24. Plaintiff's predecessor in business, Detachable Bit Corporation of America, gave due notice in writing to defendant of its infringement of said Reissue Letters Patent Nos. 16,061 and 17,557 on or about the 12th day of April, 1933, but defendant refused to desist from such infringe-[fol. 5746] ment and is now continuing the same and threatens to continue such infringement unless restrained by injunction of this Court.

Wherefore, plaintiff prays:

I. For an injunction.

1. Restraining the defendant herein, its officers agents and employees, from manufacturing and selling detachable bit drills embodying the inventions described and claimed in the above designated Letters Patent, to wit, Reissue Nos. 16,061 and 17,557, and Nos. 1,876,595, 1,953,095, 2,052,011 and 2,052,019 or any of them.

2. Restraining the defendant herein, its officers, agents and employees, for the full term of the above designated Letters Patent and Reissue Letters Patent, from manufacturing and selling for its own benefit and profit detachable bit drills of the type or character now being manufactured by defendant or of any character or of any type of construction to compete with the detachable bit drills manufactured by plaintiff's predecessor in business, Detachable Bit Corporation of America.

3. Commanding defendant to assign to the plaintiff the entire right, title and interest in and to the above designated Letters Patent Nos. 1,873,565, 1,953,095, 2,052,011 and 2,052,-019 together with all rights of recovery for past infringement thereof.

II. For a temporary injunction pending the outcome of this suit of like tenor and effect.

III. For a decree that defendant pay to plaintiff all profits realized from the manufacture and sale of detach-[fol. 5747] able bit drills during the six years immediately preceding the filing of this suit and from the manufacture and sale of detachable bit drills subsequent to the filing of such action.

IV. For a decree that defendant pay to plaintiff all damages suffered by plaintiff and its predecessor in business The Detachable Bit Corporation of America by reason of the acts of defendant herein complained of, including the competition with plaintiff and its said predecessor in business in the manufacture and sale of detachable bit drills.

V. For a decree that the defendant pay to plaintiff all profits realized by defendant from the manufacture and sale of detachable bit drills in infringement of the above designated Letters Patent, to wit, Reissue Letters Patent Nos. 16,061 and 17,557, and Letters Patent Nos. 1,876,565, 1,953,095 and 2,052,011 and 2,052,019 as well as an amount equal to three times the damages suffered by plaintiff and its predecessor in business, The Detachable Bit Corporation of America, because of such infringement.

VI. For an accounting to determine the amounts of damages and profits awarded to plaintiff.

VII. For costs and such further relief as to this Court may be deemed just and proper.

Detachable Bit Company; By (Signed) Chas. A. Corcoran, President.

Attest: (Signed) G. Strunck, Secretary; Hull, Brock & West, Solicitors for Plaintiff; (Signed) W. B. Morton, Of Counsel.

[fol. 5748] State of New York,
County of New York, ss:

Charles A. Corcoran, being duly sworn, deposes and says that he is the President of Detachable Bit Company, the plaintiff in the foregoing bill of complaint; that he had read the same and knows the contents thereof, and that the same is true of his own knowledge, except as to the mat-

ters therein stated to be on information and belief, and that as to those matters he believes them to be true.

Chas. A. Corcoran (signed.)

Subscribed and sworn to before me this 9th day of August, 1938. Ada I. Asheld (signed), Notary Public. Ada I. Asheld, Notary Public, Queens County. Queens Co. Clerk's No. 2409. Queens Co. Register's No. 6292. Cert. filed in New York Co. New York Co. Clerk's No. 195. New York Co. Reg. No. 9A146. Commission expires March 30, 1939. (Seal.)

[fol. 5749] UNITED STATES DISTRICT COURT, NORTHERN DISTRICT OF OHIO, EASTERN DIVISION

In Equity No. 5761

DETACHABLE BIT COMPANY, Plaintiff

versus

TIMKEN ROLLER BEARING COMPANY, Defendant

Amended Answer

Now comes defendant, The Timken Roller Bearing Company, impleaded in this cause as "Timken Roller Bearing Company," and for its amended answer to plaintiff's pleadings denominated "bill of complaint" and "bill of particulars" says:

First Defense

1. Defendant admits the allegations in the first paragraph in plaintiff's bill of complaint.

2. Defendant admits the allegations in the second paragraph in plaintiff's bill of complaint.

3. For its answer to the allegations in the third paragraph in plaintiff's bill of complaint defendant admits that this suit, in form, is an action in equity for alleged infringement of letters patent of the United States, for an accounting to the plaintiff for alleged damages arising from said alleged infringement and for alleged violations of certain express and implied obligations which plaintiff claims to hold against defendant. Defendant denies, however, the

[fol. 5750] existence of any of such claims and rights in favor of plaintiff and that plaintiff is entit' d to any legal or equitable relief whatsoever and to any sum in damages.

4. Answering the allegations in the fourth paragraph in plaintiff's bill of complaint defendant says it is without knowledge or information sufficient to form a belief as to the truth of said allegations.

5. Answering the allegations in the fifth paragraph in plaintiff's bill of complaint defendant admits that under date of December 23, 1936, a certain instrument of assignment was executed purporting to transfer to plaintiff certain alleged patents and reissue patents but defendant denies that such transfer contained the terms and had the legal effect asserted in said paragraph in plaintiff's bill of complaint.

6. Answering the allegations in the sixth paragraph in plaintiff's bill of complaint defendant admits that one Fred W. Thurston made application for letters patent to the commissioner of patents on or about April 18, 1922, and that letters patent No. 1,477,855 were issued to said Fred W. Thurston on or about December 18, 1923. Defendant further admits that said Fred W. Thurston applied for a reissue of said letters patent and that a reissue thereof, bearing No. 16,061, was granted to said Fred W. Thurston on or about May 15, 1925. Each and every other allegation in said paragraph defendant denies and defendant denies that said letters patent No. 1,477,855 and said reissue letters patent No. 16,061 were or are valid.

7. Answering the allegations in the seventh paragraph in plaintiff's bill of complaint defendant admits that said Fred W. Thurston on or about April 23, 1925, applied for letters patent to the commissioner of patents and that pursuant to said application, on or about September 13, 1927, certain letters patent bearing No. 1,642,183 were granted to said Fred W. Thurston; that subsequently said Fred W. [fol. 5751] Thurston applied for a reissue of said letters patent No. 1,642,183 and on or about January 7, 1930, a reissue of said letters patent, bearing No. 17,557, was granted to said Fred W. Thurston. Each and every other allegation in said paragraph in plaintiff's bill of complaint defendant denies and defendant denies that said letters patent No. 1,642,183 or the reissue thereof, No. 17,557, were or are valid.

8. Answering the allegations in the eighth paragraph in plaintiff's bill of complaint, defendant denies each and every allegation therein.

9. Answering the allegations in the ninth paragraph in plaintiff's bill of complaint defendant admits that a certain corporation, named The Detachable Bit Corporation of America, was organized under the laws of the State of Delaware on or about September 29, 1926. Defendant further admits that on or about May 22, 1929, said Fred W. Thurston, purported to transfer and assign to said The Detachable Bit Corporation of America said letters patent and reissue letters patent subject to certain reversionary and residuary interests of said Fred W. Thurston, which said instrument was recorded as alleged; that subsequently, to-wit, on June 14, 1935, said Fred W. Thurston purported to assign certain rights in said letters patent and reissue letters patent to said The Detachable Bit Corporation of America, which said instrument was recorded as alleged. Defendant denies that said assignment had the legal effect claimed in said ninth paragraph in plaintiff's bill of complaint and denies each and every other allegation in said ninth paragraph in plaintiff's bill of complaint.

10. Answering the allegations in the tenth paragraph in plaintiff's bill of complaint defendant admits that on or about December 23, 1936, said The Detachable Bit Corporation of America purported to assign to plaintiff certain [fol. 5752] alleged rights and interests in and to said reissue letters patent, numbers 16,061 and 17,557, but defendant denies that said purported assignment had the legal effect asserted in the tenth paragraph in plaintiff's bill of complaint and each and every other allegation in the tenth paragraph in plaintiff's bill of complaint defendant denies.

11. Answering the allegations in the eleventh paragraph in plaintiff's bill of complaint defendant denies each and every allegation therein.

12. Defendant admits the allegations in the twelfth paragraph in plaintiff's bill of complaint.

13. Answering the allegations in the thirteenth paragraph in plaintiff's bill of complaint defendant says that prior to the execution of a certain written contract bearing date of July 9, 1929, between defendant and The Detachable Bit Corporation of America, there were certain negotiations between the representatives of defendant and said The

Detachable Bit Corporation of America, all of which negotiations defendant avers were merged into a written contract between said parties bearing said date. Further answering the allegations in the thirteenth paragraph in plaintiff's bill of complaint defendant denies each and every allegation therein.

14. Answering the allegations in the fourteenth paragraph in plaintiff's bill of complaint defendant admits it purchased debentures of The Detachable Bit Corporation of America in the face amount of $100,00 for the sum of $93,000 but avers that said purchase was pursuant to a written contract bearing date of July 9, 1929. Defendant further admits that in said written contract The Detachable Bit Corporation of America undertook to purchase from defendant its requirements of steel. Each and every other allegation in said fourteenth paragraph in plaintiff's bill of complaint defendant denies and defendant denies that [fol. 5753] there was any joint venture between defendant and said The Detachable Bit Corporation of America arising out of said written contract dated July 9, 1929, or otherwise.

15. Answering the allegations in the fifteenth paragraph in plaintiff's bill of complaint defendant admits that it purchased certain notes of The Detachable Bit Corporation of America in the face amount of $100,000 but avers that said purchase was pursuant to said written contract dated July 9, 1929, and that from time to time said The Detachable Bit Corporation of America purchased steel from defendant between the dates of July 9, 1929, and March 1, 1930. Each and every other allegation in said fifteenth paragraph in plaintiff's bill of complaint defendant denies.

16. Answering the allegations in the sixteenth paragraph in plaintiff's bill of complaint defendant denies each and every allegation therein.

17. Answering the allegations in the seventeenth paragraph in plaintiff's bill of complaint defendant admits that shortly prior to March 1, 1930, it requested payment of the notes purchased by defendant of The Detachable Bit Corporation of America. Each and every other allegation in said seventeenth paragraph in plaintiff's bill of complaint defendant denies. Further answering the allegations in said seventeenth paragraph in plaintiff's bill

of complaint defendant avers that various extensions of time for the repurchase of said notes by The Detachable Bit Corporation of America from defendant were agreed upon by and between defendant and said The Detachable Bit Corporation of America and that said notes were repurchased by said The Detachable Bit Corporation of America from defendant on or about May 27, 1930.

18. Answering the allegations in the eighteenth paragraph in plaintiff's bill of complaint, defendant admits that it did not exercise its option to purchase capital stock [fol. 5754] of said The Detachable Bit Corporation of America. Each and every other allegation in said eighteenth paragraph in plaintiff's bill of complaint defendant denies.

19. Answering the allegations in the nineteenth paragraph in plaintiff's bill of complaint defendant denies each and every allegation therein.

20. Answering the allegations in the twentieth paragraph in plaintiff's bill of complaint defendant admits that letters patent of the United States No. 1,876,565 were granted to it September 13, 1932, on the application and assignment of Tracy V. Buckwalter and that letters patent No. 1,953,095 dated April 3, 1934, and No. 2,052,011 and No. 2,052,019 both dated August 25, 1936, were granted to it upon applications and assignments of John B. Baker and defendant states that all of said patents are now owned by defendant and the equitable and legal titles thereto remain in defendant. Defendant denies that said Thurston or plaintiff or plaintiff's predecessor ever contributed anything whatsoever to initiating, conceiving, developing, improving, completing or perfecting any of the inventions set forth in said Buckwalter and Baker patents or to the expenses thereof, and defendant states that the applications for said patents were filed and prosecuted and assigned to defendant in good faith and at its expense and are now the sole and exclusive property of defendant. Defendant denies all other allegations in respect of said Buckwalter and Baker patents and inventions not hereinbefore specifically admitted.

21. Answering the allegations in paragraph 21 in plaintiff's bill of complaint defendant admits that it commenced the manufacture of a detachable rock bit prior to September 1, 1932. Each and every other allegation in said para-

graph 21 in plaintiff's bill of complaint defendant denies. [fol. 5755] 22. Answering the allegations in paragraph 22 in plaintiff's bill of complaint defendant denies each and every allegation therein and avers that plaintiff has at no time, to the knowledge of defendant, engaged in the manufacture or sale of detachable rock bit drills of any kind.

23. Answering the allegations in paragraph 23 in plaintiff's bill of complaint defendant says that it is without knowledge or information sufficient to form a belief concerning the allegations in said paragraph 23.

24. Answering the allegations in paragraph 24 in plaintiff's bill of complaint defendant says that on April 12, 1933, The Detachable Bit Corporation of America notified defendant that defendant was infringing reissue patent No. 16,061 and other patents identified only as similar thereto; that upon receipt of said notice defendant wrote a letter to said The Detachable Bit Corporation of America wherein defendant asked it to identify such other similar patents, denied that its product was covered by reissue patent No. 16,061 or No. 17,557, gave said The Detachable Bit Corporation of America a booklet descriptive of defendant's product and offered samples thereof and suggested that, on inspection of such product, said The Detachable Bit Corporation of America would agree that there was no infringement of said reissue patents Nos. 16,061 and 17,557; that said The Detachable Bit Corporation of America gave no reply to said letter. Defendant further admits that since receiving said letter, as aforesaid, it has manufactured a rock bit which defendant avers in no wise infringes upon any letters patent or reissue letters patent claimed to be owned by plaintiff herein. Each and every other allegation in paragraph 24 in plaintiff's bill of complaint defendant denies.

25. Answering the allegations in the paragraph numbered 2 in plaintiff's bill of particulars defendant denies each and every allegation therein.

[fol. 5756] 26. Answering the allegations in the paragraph numbered 3 in plaintiff's bill of particulars defendant says that from time to time during the years 1929, 1930 and a part of 1931 representatives of The Detachable Bit Corporation of America discussed various problems relating to the manufacture of detachable rock drills with

representatives of defendant for the purpose of acquiring such information as the defendant had on various subjects associated therewith, especially on the matter of the kind of steels to be used by said The Detachable Bit Corporation of America in the manufacture of said detachable rock drills. Except as heretofore qualifiedly admitted, defendant denies each and every other allegation in said paragraph numbered 3 in plaintiff's bill of particulars.

27. Answering the allegations in the paragraph numbered 4 in plaintiff's bill of particulars defendant denies each and every allegation therein and avers that persons who used the detachable rock bit manufactured by defendant after its manufacturing operations had commenced, in preference to any detachable rock bit drill manufactured by either Detachable Bit Corporation of America or its licensee, did so by reason of the superiority of the product manufactured by defendant.

28. Answering the allegations in the paragraph numbered 5 in plaintiff's bill of particulars defendant denies each and every allegation therein.

29. The paragraphs numbered 6 and 7 in plaintiff's bill of particulars require no specific answer at this time.

30. Answering the allegations in the paragraph numbered 8 in plaintiff's bill of particulars defendant denies each and every allegation therein.

31. Answering the allegations in the paragraphs numbered 9 (a) and 9 (b) in plaintiff's bill of particulars, defendant denies each and every allegation in said paragraphs.

[fol. 5757] 32. Further answering defendant says that plaintiff is not the owner of any rights or claims, legal or equitable, against defendant arising out of any alleged breach of express or implied contracts between defendant and The Detachable Bit Corporation of America or any alleged breach of confidence between defendant and The Detachable Bit Corporation of America or any rights, legal or equitable, for infringement of letters patent or reissue letters patent issued to said Fred W. Thurston and that plaintiff fails to state a claim against defendant upon which relief can be granted.

33. Further answering defendant says that shortly prior to January 1, 1929, The Detachable Bit Corporation

of America, through one of its representatives, inquired of defendant whether defendant was in a position to supply a certain kind of steel which said The Detachable Bit Corporation of America wished to have; that after said inquiry was made, as aforesaid, there were several discussions between representatives of The Detachable Bit Corporation of America and defendant's representatives concerning the kinds of steel which said The Detachable Bit Corporation of America could successfully use in the manufacture of the kind of detachable rock bits and couplings with which said The Detachable Bit Corporation of America was experimenting at that time. Defendant says that it recommended a kind of steel for use in the manufacture of bits and during the month of April 1929 shipped steel to said The Detachable Bit Corporation of America of that kind and quality. Defendant says that the service which it was rendering to The Detachable Bit Corporation of America at that and at all subsequent times in recommending kinds of steel to be used is the kind of service which is ordinarily rendered by steel manufacturers to customers.

34. Defendant says that it was not until sometime during the month of May 1929 that there was any discussion [fol. 5758] between the representatives of The Detachable Bit Corporation of America and this defendant concerning the making of any kind of contract between said The Detachable Bit Corporation of America and defendant. Defendant says that late in May and early in June 1929 defendant was approached by The Detachable Bit Corporation of America and requested to furnish certain moneys to said The Detachable Bit Corporation of America, it being represented by said The Detachable Bit Corporation of America that at that time said corporation was out of funds to carry on its operations; that pursuant to negotiations had between said The Detachable Bit Corporation of America and defendant a certain written contract, dated July 9, 1929, was executed by said The Detachable Bit Corporation of America and by defendant.

35. Defendant says that said contract, dated July 9, 1929, as aforesaid, among other things, contained the following terms and provisions: Said The Detachable Bit Corporation of America agreed to purchase from defendant at current market prices its requirements of such

steels as defendant was equipped to produce; defendant agreed to purchase from The Detachable Bit Corporation of America $100,000 principal amount of 7% one year convertible notes or debentures at 93% of par, this amount being one half of an issue of $200,000 principal amount of such notes to be issued by said The Detachable Bit Corporation of America bearing date July 1, 1929, and maturing July 1, 1930. Said notes contained an option of conversion into stock of said The Detachable Bit Corporation of America at $20 per share within nine months after their issue.

36. Attached to said written contract dated July 9, 1929, as aforesaid, was a further written document designated "Schedule A." by the terms of said written contract of July 9, 1929, defendant was given the option until [fol. 5759] 3:00 p. m. on June 30, 1930, to execute a further written contract in the form of said Schedule A provided that notice of defendant's intention to so execute said new contract, in the form of Schedule A, was given to said The Detachable Bit Corporation of America not later than March 31, 1930. Defendant says that said Schedule A, as attached to said contract of July 9, 1929, among others, contained the following terms and provisions: Said The Detachable Bit Corporation of America was to agree to buy its requirements of such steels as defendant was or later became equipped to make from defendant at a price determined as follows: production cost to defendant plus 10% plus $5 per ton of 2,000 pounds; that an interchange of information between defendant and said The Detachable Bit Corporation of America was to take place concerning manufacturing, metallurgical, merchandising, administrative and other problems of said The Detachable Bit Corporation of America; said The Detachable Bit Corporation of America was to agree to pay to defendant an amount equivalent to 16% of the annual net profits of said The Detachable Bit Corporation of America; defendant was to agree, upon the execution of said Schedule A, to purchase from said The Detachable Bit Corporation of America 20,000 shares of stock of said The Detachable Bit Corporation of America. By its terms said Schedule A, if executed as a contract, was to be in force for a period of nine years with certain options to defendant for renewal thereof.

37. Defendant says that it did not execute any contract in the form of said Schedule A and on the contrary within

the period specified in said contract of July 9, 1929, to-wit, prior to March 31, 1930, notified said The Detachable Bit Corporation of America that it did not intend to exercise said option to execute a contract in the form of said Schedule A and at that time requested the repurchase by said The Detachable Bit Corporation of America of the debentures purchased by defendant pursuant to said written contract of July 9, 1929.

[fol. 5760] 38. Defendant says that on numerous occasions while said written contract of July 9, 1929, was in effect The Detachable Bit Corporation of America requested information from defendant concerning the kinds of steel to be used in the manufacture of detachable rock bits and couplings therefor and information concerning certain manufacturing difficulties which said The Detachable Bit Corporation was having in the production of said rock bit drills. Defendant further says that at the request of said The Detachable Bit Corporation of America it undertook to test the rock bit drills which said The Detachable Bit Corporation of America was attempting to manufacture; that all of such testing as well as all other assistance rendered by defendant to said The Detachable Bit Corporation of America was at the sole expense of defendant excepting only that said The Detachable Bit Corporation of America furnished defendant certain rock bit drills for testing purposes.

39. Defendant says that at no time was anything in the nature of a trade secret revealed to defendant by said The Detachable Bit Corporation of America and that the information which defendant gave to said The Detachable Bit Corporation of America was based upon the knowledge, information and skill which defendant had developed over a long period of years in the manufacture of steel and steel products; that the assistance and information which was given by defendant to said The Detachable Bit Corporation of America from the date of said contract, to-wit, July 9, 1929, to the date upon which defendant notified said The Detachable Bit Corporation of America that it did not intend to execute said contract in the form of said Schedule A, on or about March 30, 1930, was the kind of assistance which manufacturers of steel usually give customers.

40. Defendant further says that during the remaining part of 1930 as long as said The Detachable Bit Corporation

[fol. 5761] of America actively engaged in an attempt to manufacture detachable rock bit drills and during part of 1931 defendant continued to supply steel to said The Detachable Bit Corporation of America and defendant continued to give to said The Detachable Bit Corporation of America the same kind of assistance and information as it had given during the year 1929 and up to March 30, 1930.

41. Defendant says that at no time did it have any control over the corporate affairs of The Detachable Bit Corporation of America and that at no time was there any joint venture or limited partnership of any kind whatsoever between defendant and The Detachable Bit Corporation of America. Defendant further says that there was no confidential relationship between defendant and said The Detachable Bit Corporation of America at any time.

Second Defense

42. For its second defense defendant says that immediately after notice was given to said The Detachable Bit Corporation of America of defendant's intention to refrain from exercising the option to execute a contract in the form of said Schedule A and on or about February 11, 1930, a written agreement was entered into by and between defendant and said The Detachable Bit Corporation of America which provided, among other things, for the repurchase by said The Detachable Bit Corporation of America of the notes in the face amount of $100,000 held by defendant and which said contract contained the further provision, to-wit:

> "In consideration of the purchase and sale of said notes, it is agreed that all Contracts and Agreements, including those dated July 9, 1929, existing between The Timken Roller Bearing Company and The Detachable Bit Corporation of America and/or J. B. Shearer, are cancelled and terminated and each party thereto is released from all further obligations thereunder. But it is understood that $3,843.00 now due on open account by your Company (The Detachable Bit Corporation of America) to us (The Timken Roller Bearing Company), and any other obligations incurred [fol. 5762] in the ordinary course of business, are not released but will be paid in ordinary course. When the notes are taken up, mutual releases shall be executed and delivered if necessary."

that subsequently, on March 6, 1930, the time for the repurchase of said notes by said The Detachable Bit Corporation of America was extended to April 8, 1930. Defendant says that on or about May 27, 1930, payment was made to defendant by said The Detachable Bit Corporation of America of the sum of $96,000 plus $2,819.40, accumulated interest, for the repurchase of said notes and said mutual release thereupon became operative. Defendant says that by reason of the foregoing release plaintiff is barred in law and in equity from the prosecution of all alleged claims set forth in plaintiff's bill of complaint and bill of particulars excepting only the claims for alleged patent infringement.

Third Defense

43. For its third defense defendant says that it commenced the manufacture of a detachable bit, developed solely and entirely by defendant's engineers, prior to September 1932; that said The Detachable Bit Corporation of America knew that defendant had commenced the manufacture of said detachable rock bit shortly thereafter.

44. Defendant says that on or about April 12, 1933, it received a letter from said The Detachable Bit corporation of America alleging in substance that defendant was infringing upon reissue patent No. 16,061 and other patents not specifically named. Defendant says that to this communication a reply was addressed to The Detachable Bit Corporation of America stating that defendant was not infringing upon said reissue patent or upon any other patent of which defendant had any knowledge and of which said The Detachable Bit Corporation of America claimed [fol. 5763] to be the owner and defendant requested said The Detachable Bit Corporation of America to advise defendant of any other patents upon which it claimed that defendant was infringing. Defendant says that it received no answer to its said communication.

45. Defendant says that during the year 1933 from time to time there were some oral discussions between representatives of said The Detachable Bit Corporation of America and defendant and other bit manufacturers, at which times said representatives of the Detachable Bit Corporation of America and the licensee of said The Detachable Bit Corporation of America were notified that

defendant had been advised by patent counsel that the detachable rock bit which defendant was manufacturing and selling did not in any way infringe any patent of which said The Detachable Bit Corporation of America claimed to be the owner. Defendant further says that it obtained the opinions of various patent counsel, all of whom advised defendant that the rock bit which defendant contemplated manufacturing did not in any wise infringe the patents of which said The Detachable Bit Corporation of America claimed to be the owner and referred to in the complaint as the Thurston patents.

46. Defendant says that since 1932 it has proceeded with the development and exploitation of said detachable rock bit; that it has expended large sums of money in experimental work, in procuring and equipping a factory for the manufacture of said rock bits of defendant's design, in fostering the sales of said rock bits all over the United States; that defendant rented a plant in the city of Mt. Vernon, Ohio, commencing on or about October 1, 1935, at which defendant employs approximately 185 people; that the operations in said Mt. Vernon plant have gone on continuously since 1935; that as a result of all the foregoing defendant has expended in excess of $500,000.

47. Defendant further says that at no time prior to the [fol. 5764] commencement of this action on August 10, 1938, has any demand been made upon this defendant by said The Detachable Bit Corporation of America or by plaintiff herein charging this defendant with the breach of any express or implied contract, oral or written, dated July 9, 1929, or with the breach of any confidential relationship or the appropriation of patentable ideas by any of its employes; that the only notice given to defendant was the notice given, as aforesaid, on April 12, 1933, of the alleged infringement of patents of which said The Detachable Bit Corporation of America claimed to be the owner. Defendant says that until the filing of this lawsuit on or about August 10, 1938, neither said The Detachable Bit Corporation of America nor the plaintiff attempted by any legal action to prevent the defendant from proceeding with the expenditures of money and with the sale of detachable rock bits.

48. Defendant says that plaintiff, Detachable Bit Company, has a great many of the same officers and stockholders

as were officers and stockholders in The Detachable Bit Corporation of America; that by reason of the laches of said The Detachable Bit Corporation of America and of plaintiff, Detachable Bit Company, plaintiff is barred from prosecuting this action in both law and equity.

Fourth Defense

49. For its fourth defense defendant says that if an oral joint venture agreement had been entered into containing the obligations set forth in paragraphs 13, 14, 15 and 16 of plaintiff's bill of complaint and in the paragraphs numbered 8, 9 (a) and 9 (b) of plaintiff's bill of particulars, all of which defendant expressly denies, defendant avers that such an oral agreement would have been void, unenforceable in law or in equity and in violation of the [fol. 5765] following provisions of the statute of frauds of the State of Ohio:

> "Sec. 8621. What agreements to be in writing. No action shall be brought whereby to charge the defendant, upon a special promise, to answer for the debt, default or miscarriage, of another person; nor to charge an executor or administrator upon a special promise to answer damages out of his own estate; nor to charge a person upon an agreement made upon consideration of marriage, or upon a contract or sale of lands, tenements, or hereditaments, or interest in, or concerning them, nor upon an agreement that is not to be performed within one year from the making thereof; unless the agreement upon which such action is brought, or some memorandum or note thereof, is in writing, and signed by the party to be charged therewith, or some other person thereunto by him or her lawfully authorized."

also the following section of the statute of frauds of the State of New York, to-wit: Section 31, Book 40, McKinney's Consolidated Laws of New York:

> "Every agreement, promise or undertaking is void, unless it or some note or memorandum thereof be in writing, and subscribed by the party to be charged therewith, or by his lawful agent, if such agreement, promise or undertaking:
>
> "1. By its terms is not to be performed within one year from the making thereof or the performance of

which is not to be completed before the end of a lifetime;"

50. Defendant says that the alleged oral contracts set forth in plaintiff's bill of complaint and plaintiff's bill of particulars, the existence of which defendant denies, by their terms were not to be performed or completed within one year from date thereof.

51. For answer to so much of said bill of complaint and bill of particulars as charge defendant with infringement of said Thurston reissue patents No. 16,061 and No. 17,557 defendant pleads the following defenses and denies each and every allegation in the bill of complaint and bill of particulars relating to said reissue patents not elsewhere admitted or denied.

[fol. 5766] Fifth Defense

52. Defendant denies that it is infringing or ever has infringed reissue letters patent No. 16,061 or reissue letters patent No. 17,557 or any right of plaintiff therein; and defendant denies that it ever made or sold any detachable bits that fitted or were designed to fit drill rods manufactured and sold by The Detachable Bit Corporation of America.

Sixth Defense

53. The alleged invention set forth in said reissue patent No. 16,061 was not new at the date of alleged invention thereof by said Thurston but previously thereto, and more than two years prior to the date of the filing of said Thurston's original application for patent therefor, said alleged invention and all material and substantial parts thereof had been disclosed in each of the following letters patent of the United States and other countries, namely:

United States letters patent No. 245,433 dated August 9, 1881, to Henry H. Beach and Bernard W. Arnold, of Litchfield, Illinois

United States letters patent No. 250,385 dated December 6, 1881, to Daniel Cook, of San Francisco, California, as assignee of Henry F. Parsons, of San Francisco, California

United States letters patent No. 295,347 dated March 18, 1884, to Duncan Cameron, of Randolph, New York

United States letters patent No. 347,397 dated Au-

gust 17, 1886, to James Throckmorton and Joseph G. Throckmorton, of Harvey's Pennsylvania

United States letters patent No. 455,963 dated July 14, 1891, to Rufus A. Farrar, of New York, New York, and Edward Tingue, of New York, New York, assignee of one-half interest

United States letters patent No. 542,542 dated July 9, 1895, to Thomas Symonds, of Leominster, Massachusetts

United States letters patent No. 580,351 dated April 6, 1897, to P. Sanford Ross, of Jersey City, New Jersey, assignee of one-half interest and Arthur H. Folger, [fol. 5767] Administrator of Thomas Symonds, of Leominster, Massachusetts, deceased

United States letters patent No. 580,352 dated April 6, 1897, to Arthur H. Folger, Administrator of Thomas Symonds, of Leominster, Massachusetts

United States letters patent No. 635,415 dated October 24, 1899, to Henry Aylmer, of Richmond, Canada, and James Henry Plummer, of Toronto, Canada, assignee of one-half interest

United States letters patent No. 692,755 dated February 4, 1902, to Aylmer Drill Manufacturing Company, of Montreal, Canada, as assignee of Henry Aylmer, of Sherbrooke, Canada

United States letters patent No. 803,911 dated November 7, 1905, to John George Leyner, of Denver, Colorado

United States letters patent No. 893,596 dated July 21, 1908, to Robert Hutchison Anderson, of Germiston, Transvaal

United States letters patent No. 897,336 dated September 1, 1908, to Robert Hutchison Anderson, of Germiston, Transvaal

United States letters patent No. 971,901 dated October 4, 1910, to Arthur Knapp, of Houma, Louisiana

United States letters patent No. 1,054,181, dated February 25, 1913, to Carl Davenport, of Sheffield, England, and Richard Nicholson, of Sheffield, England, assignee of one-half interest

United States letters patent No. 1,062,342 dated May 20, 1913, to N. Harper Steward, of Philadelphia, Pennsylvania, as assignee of John MacConnell, of Philadelphia, Pennsylvania

United States letters patent No. 1,106,966 dated August 11, 1914, to N. Harper Steward, of Philadelphia, Pennsylvania, as assignee of Carl Pauli, of Roselle Park, New Jersey

United States letters patent No. 1,135,546 dated April 13, 1915, to Frank Ondra, of Johannesburg, Transvaal, South Africa, and Max Pollak, of Johannesburg, Transvaal, South Africa, assignee of one-half interest

United States letters patent No. 1,136,545 dated April 20, 1915, to Frank C. MacDonald, of Butte, Montana, Administrator of the estate of Joseph D. MacDonald, of Butte, Montana

United States letters patent No. 1,136,987 dated April 27, 1915, to William Henry Wakfer, of South Norwood, England, and Samuel Peck, of Wallington, England, assignee of one-half interest

United States letters patent No. 1,211,080 dated January 2, 1917, to Ingersoll-Rand Company, of Jersey City, New Jersey, a corporation of New Jersey, as assignee of Russell S. Carter, of Hewlett, New York. [fol. 5768] United States letters patent No. 1,225,629 dated May 8, 1917, to Sewell S. Hensley, of Mexia, Texas

United States letters patent No. 1,296,078 dated March 4, 1919, to Arthur L. Hawkesworth, of Butte, Montana

United States letters patent No. 1,324,304 dated December 9, 1919, to Robert E. Carmichael, of Damon, Texas, and George Hamman, of Houston, Texas, assignee of one-half interest

United States letters patent No. 1,328,325 dated January 20, 1920, to Arthur L. Hawkesworth, of Butte, Montana

United States letters patent No. 1,342,814 dated June 8, 1920, to Sidney H. Huston, of Houston, Texas

United States letters patent No. 1,355,793 dated October 12, 1920, to Fred W. Thurston, of San Francisco, California, as assignee of Henri Bernay, of San Francisco, California

United States letters patent No. 1,359,955 dated November 23, 1920, to Fred W. Thurston, of San Francisco, California, as assignee of Henri Bernay, of San Francisco, California

United States letters patent No. 1,370,440 dated March 1, 1921, to Arthur L. Hawkesworth, of Butte, Montana

United States letters patent No. 1,375,997 dated April 26, 1921, to Fred W. Thurston, of San Francisco, California, as assignee of Henri Bernay, of San Francisco, California

British letters patent No. 3,515 of February 17, 1908, to Edward Lloyd Wynyard Bellhouse, of Greno House, Grenoside, City of Sheffield, England

British letters patent No. 5,496 of March 5, 1904, to George Barnsley, of Cornish Works, Sheffield, England

British letters patent No. 11,913 of October 21, 1847, to William Gostwyck Gard, in the County of Cornwall, England

British letters patent No. 25,158 of December 4, 1905, to Robert Hutchison Anderson, of Germiston, Transvaal, South Africa

British letters patent No. 17,515 of July 23, 1910, to Richard Nicholson of 16 Newbould Lane, Sheffield, England, and Carl Davenport of Sheffield, England

54. The alleged invention set forth in said reissue patent No. 17,557 was not new at the date of alleged invention thereof by said Thurston but previously thereto, and more than two years prior to the date of filing of said Thurston's original application for patent therefor, said alleged invention and all material and substantial parts thereof had been disclosed in each of the following letters patent of the United States and other countries, namely:

[fol. 5769] United States letters patent No. 285,493 dated September 25, 1883, to The Union Hardware Company, of Torrington, Connecticut, as assignee of James E. Langdon, of Torrington, Connecticut.

United States letter patent No. 291,819 dated January 8, 1884, to The Union Hardware Company, of Torrington, Connecticut, as assignee of George B. Turrell, of South Orange, New Jersey.

United States letters patent No. 319,144 dated June 2, 1885, to The Eagle Tube Company, of New York, New York, as assignee of Nathan Stephens, of Brooklyn, New York, and Matthew L. Ritchie, of New York, New York.

United States letters patent No. 797,415 dated August 15, 1905, to Frank Eder, of Thayer, Missouri.

United States letters patent No. 806,510, dated December 5, 1905, to William J. Tibbitt, of Philadelphia, Pennsylvania.

United States letters patent No. 1,049,624 dated January 7, 1913, to Gebrueder Siemens & Co., Lichtenberg, near Berlin, Germany, a German Copartnership, as assignee of Eduard Viertel, of Treptow, near Berlin, Germany, and Hermann Viertel, of Lichtenberg, near Berlin, Germany.

United States letters patent No. 1,054,181 dated February 25, 1913, to Carl Davenport, of Sheffield, England, and Richard Nicholson, of Sheffield, England, as assignee of one-half interest.

United States letters patent No. 1,212,141 dated January 9, 1917, to Walter E. Kimber, of Harlesden, London, England.

United States letters patent No. 1,394,791 dated October 25, 1921, to Benjamin F. Runyan, of Houston, Texas, and James P. Markham Jr., of Houston, Texas, as assignee of fifty-one percent interest.

United States letters patent No. 1,510,134 dated September 30, 1924, to Republic Carbon Company, Inc., of Niagara Falls, New York, a corporation of Delaware, as assignee of Bartley E. Broadwell, of Niagara Falls, New York.

United States letters patent No. 1,671,579 dated May 29, 1928, to Edgar E. Greve, of Bellevue, Pennsylvania.

British letters patent No. 17,515 of July 23, 1910, to Richard Nicholson, of 16, Newbould Lane, Sheffield, England, and Carl Davenport, of Sheffield, England.

Union of South Africa (Transvaal) patent 136/13 dated March 13, 1913, to James Bell, of Johannesburg, Transvaal, South Africa.

55. The alleged inventions set forth in said Thurston reissue patent No. 16,061 were not new at the date of alleged invention thereof by Thurston but previously there- [fol. 5770] to had been disclosed and described in the following printed publications, namely:

Printed book of Eustace M. Weston entitled "Rock Drills, Design, Construction and Use," published by McGraw-Hill Book Company in 1910, at New York, New York, particularly pages 151, 168-173 and 177 thereof.

"The Testing and Application of Hammer Drills," by Benjamin F. Tillson—"Engineering and Mining Journal," Volume 103, No. 14, April 7, 1917, pages 582-592.

"Breakage and Heat Treatment of Rock-drill Steel," by Benjamin F. Tillson—"Transactions of the American Institute of Mining and Metallurgical Engineers," Volume 66 (1921), pages 758-778.

"Promoting Efficiency in Drilling Ore and Rock," by B. F. Tillson—"Engineering and Mining Journal," Volume 113, No. 3, pages 104-107 inclusive, January 21, 1922.

"Handbook of Rock Excavation, Methods and Costs," by Halbert Powers Gillette, published by Clark Book Company, Inc., New York, 1916, pages 45 and 46; ch. 3, especially pages 54-56; ch. 4, pages 141-145; pages 381-383.

"Analysis of Some Drill-Steel Tests," by Francis B. Foley—"Transactions of the American Institute of Mining and Metallurgical Engineers," Volume 66 (1921), pages 789-795.

"Machinery's Encyclopedia," published in 1917 by "The Industrial Press" in New York, Volume 1, pages 75 and 76, and Volume 6, pages 417 and 418, also page 265.

"Mining and Scientific Press" for December 10, 1921, page 806

56. The alleged inventions set forth in said Thurston reissue patent No. 17,557 were not new at the date of alleged invention thereof by Thurston but previously thereto had been disclosed and described in the following printed publications, namely:

Schwamb & Merrill—"Elements of Mechanism," page 10, 1905, published by John Wiley & Sons, New York

"Machinery's Encyclopedia," published by "The Industrial Press" in New York, 1917, Volume VI, pages 268, 269, 270, 271 and 275

"Knight's American Mechanical Dictionary," (1876), page 2061, figure 4704

"Appleton's Cyclopedia of Applied Mechanics," published by D. Appleton & Company, New York, New York (1899) Volume 2, page 718

Report No. 1474 of the American Society of Mechanical Engineers, published 1915, pages 25, 26, 27, 28 and 29

[fol. 5772] 57. (a) The alleged invention set forth in said reissue patent No. 16,061 was not new at the date of alleged invention thereof by said Thurston but previously thereto

and more than two years prior to the filing of the original application of said Thurston for letters patent therefor said alleged invention had been in public use by the following persons and each of them, namely: Aurthur L. Hawkesworth, John S. Myhre, Mark James, John A. O'Neill and Hawkesworth Detachable Drill Company, and others, all of Butte, Montana, and Samuel T. Blair, of Anaconda, Montana, such use having been made in mines of the Anaconda Copper Mining Company in and around Butte and Anaconda, Montana, and being well known to the above named persons, to Maurice W. Hawkesworth and E. R. Borcherdt of Butte, Montana, and to officers and employees of said corporations; (b) Also by Howard R. Drullard, now of San Francisco, California, at the Elm Orlu Mining Company, Butte, Montana; (c) Also by H. J. Rahilly, of Butte, Montana, in mines of the Anaconda Copper Mining Company in the vicinity of Butte, Montana; (d) Also by customers of Sullivan Machinery Company, of Chicago, Illinois, and Michigan City, Indiana, whose names and addresses are not now known to defendant but which it asks leave to insert herein when discovered; (e) Also by each of the persons named in paragraph 53 hereof as patentees and inventors at the places of their respective residences as herein set forth.

58. The alleged invention set forth in said reissue patent No. 17,557 was not new at the date of alleged invention thereof and more than two years prior to the filing of the original application of said Thurston for letters patent therefor, said alleged invention had been in public use by Charles A. Dobbel, now of Palo Alto, California, and by E. F. Terry, formerly of Denver, Colorado, now of Phillipsburg, New Jersey, such use having been made at the [fol. 5773] Eureka, Utah, mine of Chief Consolidated Mining Company, and elsewhere, which use was known to Howard R. Drullard, now of San Francisco, California, formerly of Salt Lake City, Utah, to Frank M. Matheson, of Salt Lake City, Utah, to Peter H. Scheib, now of Long Beach, California, formerly of Denver, Colorado, and to officers and employees of the former Denver Rock Drill Manufacturing Company, of Denver, Colorado, now Gardner-Denver Company.

59. The alleged invention set forth in said reissue patent No. 16,061 had been on sale in the United States more than

two years prior to the filing of the original application for patent therefor at Butte, Montana, by The Hawkesworth Detachable Drill Company and by The Sullivan Machinery Company at Chicago, Illinois.

60. The alleged invention set forth in said reissue patent No. 16,061 was not a patentable invention at the date of alleged invention thereof by said Thurston but merely involved the exercise of ordinary judgment in selecting from old and well known materials such as were considered suitable for making the parts of an old mechanical device.

61. The alleged invention set forth in said reissue patent No. 17,557 was not a patentable invention at the date of alleged invention thereof by said Thurston but involved merely the exercise of ordinary judgment in selecting an old and well known screwthread, to-wit: a screwthread with a continuously curved and undulatory contour, and substituting same for a different old and well known thread in an old and well known detachable drill.

62. The alleged invention set forth in said reissue patent No. 16,061 was not a patentable invention at the date of alleged invention thereof by said Thurston but merely involved the exercise of ordinary judgment in selecting from old and well known coupling means such as were considered suitable for coupling together the parts of an old detachable bit drill.

[fol. 5774] 63. Said reissue patent No. 16,061 does not comply with the statutory requirement that

> "Before any inventor or discoverer shall receive a patent for his invention or discovery he * * * shall file in the Patent Office a written description of the same, and of the manner and process of making, constructing, compounding and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art or science to which it appertains, or with which it is most nearly connected, to make, construct, compound and use the same;"

in the following particulars:

> "It fails to give the composition of the steels used in the several parts;
> It fails to disclose how to form each part or what is meant by the word "form";
> It fails to disclose how to temper each part;

The terms "vanadium steel," "chrome-nickel steel" and "chrome-vanadium steel," designated as the preferred materials for the drill rod, intermediate member and bit, respectively, are each terms covering wide ranges of steels differing in composition and physical properties and in the heat treatment required to produce certain physical properties and none of such terms is specific enough to identify a material suitable for making a drill bit part, and there is no designation whatever of any specific heat treatment of any of said steels.

64. Said reissue patent No. 16,061 does not comply with the statutory requirement that it shall particularly point out and distinctly claim the alleged improvement or invention, but, on the contrary, the claims of said patent are vague, indefinite and functional in this, that its claims purport to define the alleged invention only by designating properties of its parts, which properties are stated in vague and uncertain terms.

65. Defendant further states that the subject matter of claims 13 and 14 of said reissue patent No. 16,061 was not covered by original patent No. 1,477,855 and not omitted from the original patent No. 1,477,855 by inadvertence, accident or mistake but, on the contrary, was omitted deliberately and with the intention of limiting the original [fol. 5775] patent to the claims contained therein, wherefore said claims 13 and 14 are invalid and plaintiff is bound and estopped, by the proceedings in the Patent Office on the application for said original patent No. 1,477,855, against maintaining said claims 13 and 14 of said reissue patent No. 16,061.

66. Defendant further states that said original patent No. 1,477,855 and said reissue patent No. 16,061 are for a different invention from the matter described and claimed in the original application for said original patent No. 1,477,855 and contain new matter that involves a departure from the invention set forth and claimed in the original application in the following particulars, to-wit: The two paragraphs descriptive of the properties of the several parts, beginning in line 59 on page 3 of the specifications of said reissue patent and ending in line 96 on page 3 (page 3, line 39, to page 3, line 76, of said original patent) were not in the original application for said patent No.

1,477,855, but represent matter added during the prosecution of said application.

67. Defendant further states that said reissue patent No. 16,061 is for a different invention from the matter described and claimed in said original patent No. 1,477,855 and contains new matter that involves a departure from the invention set forth and claimed in the original patent in the following particulars, to-wit:

The drill rod was originally designated in patent No. 1,477,855 (Specification page 3, line 4) as having "*shock and* fatigue" resisting properties; whereas it is designated in the reissue patent as having only "fatigue" resisting properties (page 3, line 20):

The member 12 was designated in the Specification of said original patent as "the intermediate member" (page 1, lines 97 and 101; page 3, line 24) whereas it is designated in said reissue patent as "the intermediate *or coupling* member" (page 1, line 101; page 2, line 3; page 3, line 42);

The statement "I use the word 'intermediate' in describing the part 12, not necessarily in the sense of 'interposed' but in the broader sense that it is the intermediary connecting element in the drill construction" (reissue Specification page 5, lines 38-43) is [fol. 5776] new matter not in the original patent specification;

Said member 12 was designated in the specification of said original patent as having a "shock absorbing and cushioning function during a drilling operation" (page 3, lines 27-29); whereas it is designated in said reissue patent as having "a shock-absorbing and in certain constructions of the invention, a more pronounced cushioning function during a drilling operation" (page 3, lines 45-48);

Figure 2a of the drawing of said reissue patent is a new figure not present in the original patent and the descriptive matter relating thereto, Specification, page 1, lines 77-82, and page 3, lines 103-109, is new matter added in the reissue patent and not present in the original patent;

In the original specification (page 3, lines 11-17) it was stated: "The drill rod, as shown in Figs. 1 and 2, *is* made from ordinary commercial stock which is de-

signed for tool purpose; such stock in the formation of this portion of the drill *being upset* and threaded at the end designed to support the bit"; whereas the corresponding portion of the reissue specification (page 3, lines 29-35) states: "The drill rod, as shown in Figs. 1 and 2 *may be* made from ordinary commercial stock designed for tool purposes; such stock in the formation of this portion of the drill being threaded at the end designed to support the bit *and in some cases upset and shouldered.*"

The designation of the toughness of the intermediate member, as such that "it may have shock absorbing properties greater than wrought iron" (reissue Specification page 3, lines 128-129) was not in the specification of said original patent;

The designation of the bit as avoiding brittleness "such as might be encountered in the ordinarily tempered tool-steel" (reissue Specification page 3, lines 11, 12) and the statement that "the bit may have wear-resisting properties greater than tool steel" (reissue Specification page 3, lines 12-14) are new matter not present in the specification of said original patent;

The designation of the drill rod as having "anti-fatigue properties greater than those of mild steel" (reissue Specification page 3, lines 25-27) is new matter not present in the original specification;

The original specification (page 4, lines 85, 86) had the statement "The use of fillets also contribute to this result," but this statement was omitted from the specification of said reissue patent; the word "may" in line 50 of page 2, referring to the fillets, was not in the original specification; and the words "and sustain shock during the same" (in lines 49-50 of page 4 of the original patent) are omitted from the reissue patent (page 4, line 76);

[fol. 5777] The portion of the specification of said patent beginning on page 4 in line 110 and ending on page 5 in line 7 of the reissue specification is new matter not present in the original specification;

In the original specification (page 3, lines 6-9) the material of the drill rod 11 was thus described; "This drill rod is preferably made of a vanadium steel which *is not* adapted to take a cutting edge but which has

long-wearing qualities . . . . . "; whereas in the reissue specification (page 3, lines 22-27) it is thus described: "This drill rod is preferably made of a vanadium steel which *may not be* adapted to take a cutting edge but which has *long-enduring* qualities *and anti-fatigue properties greater than those of mild steel* . . . . "

68. Defendant further states that the subject matter of claim 10 of said reissue patent No. 17,557 was not covered by original patent No. 1,642,183 and not omitted from the original patent No. 1,642,183 by inadvertence, accident or mistake but, on the contrary, was omitted deliberately and with the intention of limiting the original patent to the claims contained therein, wherefore said claim 10 is invalid and plaintiff is bound and estopped, by the proceedings in the Patent Office on the application for said original patent No. 1,642,183 against maintaining said claim 10 of said reissue patent No. 17,557.

69. Defendant further states that said reissue patent No. 17,557 is for a different invention from the matter described and claimed in said original patent No. 1,642,183 and contains new matter that involves a departure from the invention set forth and claimed in the original patent in this, that the drawings, specification and claims of said original patent were intentionally and purposely limited to a construction comprising three separate parts, namely, a drill rod, a bit and a separate intermediate or coupling member, whereas said claim 10 purports to cover a drill having "two or more sections"; and the statement beginning in line 27 on page 5 of said reissue specification, "The screw threads of undulatory contour may be applied in any of the forms of rotary impact mining drill set forth in my Letters Patent [fol. 5778] No. 1,477,855 granted Dec. 18, 1923, and in reissued Letters Patent thereof No. 16,061, granted May 5, 1925," is new matter not found in the specification of said original patent No. 1,642,183.

Seventh Defense

70. For its seventh defense to the averments and allegations of plaintiff's bill of complaint and plaintiff's bill of particulars relating to said reissue patents, defendant realleges, reavers and reaffirms the allegations and averments

of its Third Defense heretofore set forth in paragraphs numbers 43 to 48, inclusive, the same as though fully repeated in this seventh defense and says that by reason of the averments and allegations in said paragraphs of said Third Defense, which constitute laches on the part of plaintiff and said The Detachable Bit Corporation of America and which show a change of position on the part of defendant to its great detriment in reliance upon the aforesaid delay of plaintiff and said The Detachable Bit Corporation of America, plaintiff is barred in law and in equity from prosecuting any claim based upon said reissue patents or either of them.

Eighth Defense

71. For its eighth defense this defendant says that if an oral or written joint venture agreement had been entered into containing the obligations set forth in paragraphs 13, 14, 15 and 16 of plaintiff's bill of complaint and in paragraphs numbered 8, 9 (a) and 9 (b) of plaintiff's bill of particulars, all of which defendant expressly denies, defendant avers that any action at law or in equity on such a written or oral agreement is barred by the statute of limitations.

[fol. 5779] Wherefore, having fully answered, defendant asks that plaintiff's bill of complaint and bill of particulars be dismissed at plaintiff's costs.

Luther Day, 1759 Union Commerce Building, Cleveland, Ohio; H. C. Pontius, 1110 First National Building, Canton, Ohio; John G. Ketterer, 1110 First National Building, Canton, Ohio; Joseph J. Gravely, 705 Olive Street, St. Louis, Missouri.

[fol. 5780] IN THE DISTRICT COURT OF THE UNITED STATES, FOR THE NORTHERN DISTRICT OF OHIO, EASTERN DIVISION

In Equity No. 5761

DETACHABLE BIT COMPANY, Plaintiff,

vs.

TIMKEN ROLLER BEARING COMPANY, Defendant

Memorandum Opinion

WILKIN, J.

This case is based upon two separate causes of action, referred to by counsel as the Equity Action and the Patent Action. There is no reason for a lengthy or discursive opinion. The issues have been thoroughly analyzed and the law clearly presented in thorough briefs. In disposing of the case the court need do no more than indicate its findings and rulings.

Equity Action

This cause of action was based upon the allegations of a fiduciary relationship referred to as a joint venture. It was claimed that something like a partnership had existed between the defendant and the plaintiff's predecessor in title and that because of that relationship and disclosures made during the existence of that relationship the defendant should be restrained from entering into competition with the plaintiff and should account to the plaintiff for any profits derived from such competition.

The court finds that the dealings of the parties did not create such a joint venture as imposes equitable or fiduciary responsibilities. There was wanting in the relationship of the parties that common interest, that sharing of liabilities and profits, burdens and benefits which make a partnership or joint venture. There was no relationship of trust and confidence such as exists between a guardian and ward or a trustee and the beneficiary of his trust. The parties met on an equal footing and dealt at arms length. There [fol. 5781] was no agreement to assume the relation of partners. There was no agreement to share profits and losses. There was no agreement for joint control of property. The parties in their dealings acted as separate corporations.

The evidence presents no more than the usual cooperation between a manufacturer and his customer for the development and expansion of the business of the customer. It is true that the parties would receive benefit from such expansion; but the benefit of each would be separate and distinct from the benefit of the other. The interest of the defendant was in increased sales of the raw material or specially treated steel. The interest of the Detachable Bit Corporation was in the sale of its fabricated drills and bits.

It is true that some closer coordination between the parties was contemplated. An option was reserved by the defendant for some interest in Detachable Corporation. The right was reserved to convert notes into stock. But the evidence that a joint interest was contemplated for the future is evidence that it was not accepted immediately. The contracts and practices of the parties exclude all belief in such identity of interest as would create a joint venture. *In re Taub*, 4 F. (2d) 993; *Bloom* v. *Leech*, 120 Oh. St. 239; *Hutchinson* v. *Birdsong*, 207 N. Y. Supp. 273.

The law which imposes upon those occupying a position of trust and confidence the duty to observe the utmost good faith is well settled, and this court would not willingly undermine its salutary influence. The cases cited by the plaintiff, however, were cases where joint ventures were clearly discernible, and this case may be distinguished from them by its want of that identity of interest necessary to bring it within the surveillance of equitable jurisdiction. If this case were held to be one of joint venture, manufacturers generally would have to forego cooperation with customers and dealers in sales development for fear of being held accountable as partners in a joint venture.

[fol. 5782] So far as disclosures are concerned, the evidence reveals that most of them were from the defendant to the Detachable Corporation. The defendant company had had a broader experience in metallurgy and manufacture. The detachable bit business was still in its experimental stage. The evidence reveals that the defendant made suggestions regarding uses of steel, steel treatment, and manufacturing processes.

The defendant finally determined to terminate such cooperation and it asked for payment of the notes which it held against the Detachable Corporation. Whether or not

that was a kind thing to do in the circumstances, or whether or not, in view of its effect on good will generally, it was a wise thing to do, are inquiries beyond the purview of this court's jurisdiction. It seems to the court that the defendant was within the exercise of its legal rights. And evidently Detachable Corporation thought so at the time, because it did not then complain of such termination, but, on the contrary, arranged to pay such notes before maturity and continued to deal with defendant.

No doubt the defendant obtained some knowledge from its association with the Detachable Corporation which would prove of value to it in developing a drill business of its own. But the evidence inclines one to the belief that such knowledge related to mistakes which should be avoided rather than to valuable practices revealed or disclosed in confidence.

Patent Action

Coming now to a consideration of the patent action, the court is constrained to find the patents of the plaintiff invalid because of indefiniteness, impracticability, and anticipation. The claims relied upon in Reissue patent 16061 fail to make a disclosure sufficiently definite to satisfy the requirements of Title 35 Section 33 U. S. C. A. The claims used indeterminate adjectives which describe a function instead of a structural device. They refer to a bit "formed and tempered to have wear-resisting properties", and a [fol. 5783] drill rod "formed and tempered to have anti-fatigue properties" and an intermediate member "tempered to have shock-absorbing properties". The evidence discloses that the efforts of both parties during their contractual relationship were directed to the discovery of the means of realizing the properties described in the patent. Their combined efforts failed to develop a commercially useful bit.

The Detachable Bit Corporation was organized *to develop* manufacturing processes by which the bit assemblies which Thurston had made by hand could be manufactured on a quantity basis and at a price to compete with the conventional drill steel. It was not successful in its effort. The language of the patent shows and the history of the company proves that the patent was indefinite and impracticable. Even the assembly of parts which the patent preferred and which the Detachable Corporation attempted to develop had

to be abandoned. Detachable's licensee, Flannery, with the patents and the experience of the Detachable Corporation before it failed in its efforts for practical development. So far as the evidence discloses, the manufacturers of detachable bits now employ the two-piece assembly.

That the idea of a detachable bit was old at the time plaintiff's patent was obtained, can not be disputed. The evidence revealed that detachable bits were in use as early as 1855. The plaintiff, indeed, does not claim that its invention covers detachable bits. Its claim is that the discovery in the Thurston patent was—

> ". . . first, that the stresses resulting from the terrific pounding to which a percussively driven rock bit is subjected in service, were concentrated at the joint between the bit and the rod when the bit and rod were made of separable parts, and, second, that a joint in the form of a threaded sleeve when made of steel of such composition and heat-treatment as to give it shock-absorbing properties as its dominant characteristic, would withstand these shocks and stresses."

[fol. 5784] The evidence discloses that drills consisting of two pieces, bit and rod, had been used prior to the plaintiff's patent. Different heat-treatment for bit and rod was also known and used. The plaintiff's construction was anticipated by the Diamond Drill "E" rod and other structures (Throckmorton No. 347,397, Hawkesworth No. 1,296,078, and Bell South African patent No. 136/13) and the Denver Rock Drill Manufacturing Company in 1924 listed for sale "Detachable Bits".

The plaintiff relies also upon claims 8, 9, and 10 of Reissue patent 17557:

> "A sectional mining drill having a coupling and its sections coupling formed with and united by screw threads of smooth, continuously curved and undulatory form". (As stated in claim 8).

The court finds, however, that such claims were anticipated by prior patents, prior publications, and prior public use. The general shape of such a thread is familiar in such articles as lamp sockets, glass jars, and other articles having a screw socket. The continuously curved thread was previously used in connections subjected to great stress

but requiring detachability, (Tibbitt No. 806,510; Davenport No. 1,054,181; Nicholson British patent of 1910, No. 17,515), and was described in the South African patent to Bell dated March 13, 1913 for a drill with a detachable bit. As to publications, see "Machinery's Encyclopedia", published by The Industrial Press in New York, 1917, Volume VI, pages 268, 269, 270, 271 and 275; and "Knight's American Mechanical Dictionary" (1876), page 2061. In view of the evidence in this case, the court is constrained to overrule the presumption of validity which attends the grant of a patent.

As to the issue of infringement, the court is of opinion that the defendant's products would infringe the claims of Reissue patent 17557 if it were valid. But having held such Reissue patent invalid because of anticipation, there can be no infringement.

[fol. 5785] In view of the foregoing determinations, it is not necessary for the court to pass upon the issue of laches. But the court has already commented upon the apparent acceptance by the Detachable Corporation of the conduct of the defendant when it called for payment of notes not yet due. The assignee of course can have no stronger claim than had the Detachable Corporation. The facts upon which plaintiff's cause of action is based were well known to the Detachable Corporation. It knew of the competition of defendant in 1932. In 1933 a notice was sent claiming infringement. But no complaint was made of any wrongful conduct on the part of the defendant aside from patent infringement. Not until this action was commenced in 1938 was any legal action taken to enforce such claims. In the meantime the defendant had been proceeding with its manufacture of drills with detachable bits, and some of its officers had died. No satisfactory reason or excuse was offered for the failure of Detachable Corporation to enforce its claim at an earlier date.

Complaint dismissed at plaintiff's costs.

—— ——, Judge.

[fol. 5786] Copy

In the District Court of the United States for the Northern District of Ohio, Eastern Division

In Equity No. 5761

Detachable Bit Company, Plaintiff,

vs.

Timken Roller Bearing Company, Defendant

Findings of Fact and Conclusions of Law

Findings of Fact

(1) Plaintiff, Detachable Bit Company, is a Delaware Corporation, with its principal office in New York. Defendant, Timken Roller Bearing Company, is an Ohio corporation with is principal Office at Canton, Ohio.

(2) In 1936 plaintiff acquired by purchase the entire assets of the Detachable Bit Corporation of America, a corporation of Delaware, organized in 1926, and dissolved after the sale of its assets to the plaintiff. Such assets include the patents in suit, together with all legal rights thereunder, and all other causes of action belonging to the assignor.

(3) The complaint presents two causes of action, designated by counsel the Equity Action and the Patent Action. The equity action is based on certain business relations between the Detachable Corporation and the defendant beginning in 1929. The patent action charges infringement of two patents, Reissue No. 16061 and Reissue No. 17557.

Findings of Fact As to Equity Action

(1) In 1928 Detachable Corporation was undertaken to develop a detachable rock-drill bit and to perfect manufacturing processes and types of steel to be used. Defendant was engaged in the manufacture of steel. Dealings between the two companies commenced with the purchase of a sample order of steel by Detachable Corporation prior to June, 1929. Defendant became interested in the development of Detachable's device as a possible outlet for its [fol. 5787] steel, and Detachable wished to benefit by the

knowledge and experience of defendant's expert metallurgists.

(2) The defendant and Detachable Corporation entered into a written contract on July 9, 1929, by which defendant agreed to sell to Detachable Corporation, and it agreed to buy from defendant, its steel requirements, and defendant agreed to buy from Detachable Corporation $100,000 principal amount of 7% one-year convertible notes which, at the option of the holder, could be converted into stock of Detachable Corporation at any time within nine months after their issue.

(3) During the period from July 1, 1929 to about February 1, 1930, defendant and Detachable cooperated in attempts to improve Detachable's product and its methods of production. The defendant's engineers made suggestions regarding uses of steels, steel treatment, and manufacturing processes, and tests made near Canton.

(4) Cooperation between the parties ceased in February, 1930. Defendant notified Detachable that it would not exercise the option provided in the contract of July 9, 1929, and demanded and received payment of the unmatured notes.

(5) Detachable Corporation continued to manufacture its device until March, 1931, when it turned over the manufacture and sale to the Flannery Bolt Company of Pennsylvania as its exclusive licensee. Detachable had not enjoyed financial success, and operations by the Flannery Company likewise failed. The latter ceased operations under the license in March, 1936.

(6) The defendant commenced the manufacture and sale of a detachable bit during the year 1932 in competition with Detachable's licensee, and is now conducting a substantial business in the manufacture and sale of such devices.

(7) There was, in the relationship of the defendant and Detachable Corporation, no sharing of liabilities, profits, burdens and benefits; there was no relationship of trust and confidence such as exists between a guardian and ward or a trustee and the beneficiary of his trust; the parties met on an equal footing and dealt at arms length; there was no agreement to assume the relation of partners, share [fol. 5788] profits and losses, nor for joint control of property; the parties in their dealings acted as separate corporations, and there was no more than the usual cooperation between a manufacturer and his customer for the

development and expansion of the business of the customer, the interest of the defendant being in increased sales of its raw material or specially treated steel, and that of Detachable Corporation being in the sale of its fabricated drills and bits.

(8) Most disclosures were from the defendant to the Detachable Corporation. The defendant obtained some knowledge from its association with the Detachable Corporation which would prove of value to it in developing a drill business of its own, but such knowledge related to mistakes which should be avoided rather than to valuable practices revealed or disclosed in confidence.

Conclusions of Law As to Equity Action

(1) The dealings of the parties did not create such a joint venture as imposed equitable or fiduciary responsibilities, and therefore in the things and acts complained of by plaintiff there was no breach of legal duty by the defendant.

(2) The complaint should be dismissed insofar as it relates to the equity or breach of confidence phase of the case.

Findings of Fact As to Patent Action

(1) The claims relied on in Reissue No. 16061 use indeterminate adjectives which describe a function instead of a structural device. They refer to a bit "formed and tempered to have wear-resisting properties" and a drill rod "formed and tempered to have anti-fatigue properties" and and an intermediate member "formed and tempered to have shock-absorbing properties".

(2) The idea of a detachable bit was old at the time plaintiff's patent was obtained. They were in use as early as 1855. Drills consisting of two pieces, bit and rod, had been used prior to the plaintiff's patent. Different heat treat- [fol. 5789] ment for bit and rod was also known and used. The plaintiff's construction was anticipated by the Diamond Drill "E" rod and other structures (Throckmorton No. 247,397, Hawkesworth No. 1,296,078, and Bell South African patent No. 136/13); and the Denver Rock Drill Manufacturing Company in 1924 listed for sale "Detachable Bits".

(3) Claims 8, 9, and 10 of Reissue patent No. 17557 were anticipated by Tibbitt No. 806,510, Davenport No. 1,054,181,

Nicholson British patent of 1910, No. 17515, and South African patent to Bell dated March 13, 1913. As to publications, "Machinery's Encyclopedia", published by The Industrial Press in New York, 1917, Volume VI, pages 268, 269, 270, 271 and 275; and "Knight's American Mechanical Dictionary" (1876), page 2061, described the continuously curved thread claimed in Thurston Reissue patent No. 17557.

Conclusions of Law As to Patent Action

(1) The claims relied on in Reissue patent 16061 fail to make a disclosure sufficiently definite to satisfy the requirements of Section 33 Title 35, U. S. C. A.

(2) The claims relied on in Reissue patent No. 16061 are invalid, in addition, by reason of anticipation.

(3) The claims relied on in Reissue patent No. 17557 are invalid by reason of anticipation.

(4) The complaint should be dismissed insofar as it relates to the patent action.

[fol. 5790] UNITED STATES DISTRICT COURT, NORTHERN DISTRICT OF OHIO, EASTERN DIVISION

In Equity No. 5761

DETACHABLE BIT COMPANY, Plaintiff,

vs.

TIMKEN ROLLER BEARING COMPANY, Defendant

Final Judgment

Entered September 25, 1941

This cause came on to be heard upon the pleadings, and the evidence and briefs of counsel, and was duly submitted to the Court; upon consideration whereof, the Court finds upon the issues in this cause in favor of the defendant. It is, therefore,

Ordered, adjudged and decreed that the bill of complaint be and it is hereby dismissed, and judgment is rendered for the defendant; it is further ordered that the defendant

recover from the plaintiff its costs herein to be taxed by the Clerk; to all of which the plaintiff excepts.

Wilkin, Judge.

The Timken Roller Bearing Company (1)

M. B. U. Dewar, Esquire (2)

and

Timken Holdings Limited (3)

Copy

Agreement

cancelling previous Agreements and Bye-Laws of Timken Holdings Ltd. and for transfer by Mr. Dewar to the Canton Company of his shares in Timken Holdings Ltd.

Stibbard Gibson & Co., 71, St. Mary Axe, London, E. C. 3.

[fol. 5793] This Agreement is made the — day of ——, One thousand nine hundred and forty eight between The Timken Roller Bearing Company of Canton Ohio in the United States of America (for short "the Canton Company") of the first part Michael Bruce Urquhart Dewar of Milton Farm Milton Ernest near Bedford in the County of Bedford (for short "Mr. Dewar") of the second part and Timken Holdings Limited a Company incorporated in England (for short "the Holdings Company") of the third part supplemental to the following Agreements videlicet:

Date	Parties
1935 September 7	The Canton Company (1) and Mr. Dewar (2)
1943 June 5	The Canton Company (1) Mr. Dewar (2) and The Holdings Company (3)
1943 June 5	The Canton Company (1) and Mr. Dewar (2)

and supplemental also to the Articles of Association of the Holdings Company and the Bye-laws as to voting and the Bye-laws as to Directors now in force under Articles 65 and 76 of the said Articles of Association and supplemental also to the Registered Participating Rights created

and issued by the Holdings Company under the said Articles of Association and now outstanding.

Preamble

A. The Share capital and Registered Participating Rights of the Holdings Company now outstanding consist of the following shares of One shilling each fully paid and Participating Rights belonging to the respective proprietors following videlicet:

[fol. 5794]

Proprietors	"A" shares	Distinctive numbers inclusive	"B" shares	Distinctive numbers inclusive	Participating rights	Distinctive numbers inclusive
The Canton Company	573	3 to 575	738	1251 to 1988	261	3 to 117 1251 to 1396
Mr. Dewar or Assignees	675	576 to 1250	511	1989 to 2339 2341 to 2500		
Andrew Jameson Matthews Duncan (Nominee of the Canton Company)	1	1			1	1
Frederick John Pascoe (Nominee of Mr. Dewar)			1	2340		
Cecil William Bateson (Nominee of the Canton Company)	1	2			1	2
	1250		1250		263	

B. The following participating rights formerly belonging to Mr. Dewar or his nominees have been redeemed.

Mr. Dewar	235	576 to 710 1989 to 2058 2341 to 2370
Frederick John Pascoe (Nominee)	1	2340
William Dallow (Nominee)	1	2339
	237	237

C. The holdings Company is the registered proprietor of the following shares of One Pound each fully paid in British Timken Limited (for short "British Timken")

Shares held by the Holdings Company as Trustee for the Canton Company	86,104
Shares held by the Holdings Company as required for redemption of participating rights belonging to the Canton Company	18,936
	105,040

[fol. 5795]

Shares held by the Holdings Company as Trustee for Mr. Dewar or his assigns	94,960
	200,000

Now this Agreement witnesseth as follows namely:

1. The Parties hereto declare that in the events which have happened the said Agreements are no longer operative except certain provisions contained therein and consequent thereon the said agreements are hereby entirely cancelled and at an end but the provisions contained in another agreement to be forthwith made between the Canton Company and Mr. Dewar shall take the place of the said excepted provisions so far as it is desired to keep them in force.

2. The parties to this agreement declare that in the events which have happened the whole of the said Two hundred thousand shares in British Timken which are held by the Holdings Company are now divisible into two categories videlicet:

(a) One hundred and five thousand and forty shares which belong in fact directly or indirectly to the Canton Company Eighty six thousand one hundred and four of such shares being held by the Holdings Company as nominee or Trustee for the Canton Company and Eighteen thousand nine hundred and thirty six of such shares being held by the Holdings Company in absolute ownership but subject to the right vested in the Canton Company as the holder of the Participating Rights in the Holdings Company belonging to it to have such shares added to the shares in British Timken held by the Holdings Company as the nominee of The [fol. 5796] Canton Company and

(b) Ninety four thousand nine hundred and sixty shares which belong in fact to Mr. Dewar or his assigns being held by the Holdings Company as nominee or Trustee for Mr. Dewar or his assigns.

3. The Holdings Company The Canton Company and Mr. Dewar as the holders by themselves or their nominees of all the share capital of The Holdings Company hereby declare that the said Bye-Laws of the Holdings Company are rescinded and at an end for all purposes.

4. Mr. Dewar agrees to sell and the Canton Company agrees to purchase at the price of Fifty nine pounds seven shillings One thousand one hundred and eighty seven shares of One shilling each being all the shares in the Holdings Company belonging to Mr. Dewar and registered in the name of Mr. Dewar or his nominees and consequent thereon the Holdings Company will become a wholly owned subsidiary Company of the Canton Company and the said shares sold by Mr. Dewar to the Canton Company shall be transferred by Mr. Dewar to the Canton Company or as it shall direct as and when required by the Canton Company.

In witness whereof this agreement has been executed by the Canton Company Mr. Dewar and the Holdings Company.

Wm. E. Umstattd, President.

Signed and sealed by or on behalf of The Timken Roller Bearing Company in the presence of:

H. E. Markley, Canton, Ohio, Assistant Secretary.

[fol. 5797] Signed sealed and delivered by the above named Michael Bruce Urquhart Dewar in the presence of:

—— ——.

Sealed with the Seal of Timken Holdings Limited pursuant to a resolution of the Board of Directors in the presence of the undersigned Director and Secretary of the Company.

—— ——, Director. —— —— Secretary.

———

[fol. 5798] DEFENDANT'S EXHIBIT No. 240

Dated: 22nd March, 1948.

The Timken Roller Bearing Company and M. B. U. Dewar, Esq.

Agreement with Respect to British Timken Limited

[fol. 5799] This agreement made the twenty-second day of March, One thousand nine hundred and forty-eight betweer The Timken Roller Bearing Company of Canton, Ohio in the United States of America (for short "The

Canton Company") of the one part and Michael Bruce Urquhart Dewar of Little Horwood Manor Bletchley, in the County of Buckingham Esquire (for short "Mr. Dewar") of the other part.

Witnesseth:—that the parties hereto declare and agree as follows viz:—

1. (a) Upon the death of Mr. Dewar or if he shall become incapacitated by ill health or otherwise for a consecutive period of six months from discharging his duties as a Director of British Timken Limited (for short "British Timken") The Canton Company shall have an option to purchase all or any of the 94960 ordinary Shares in British Timken now belonging to Mr. Dewar or his assigns being the Ordinary Shares numbered 5 to 204, 52701 to 100000, 113127 to 125000, 390505 to 393504, 333911 to 359536, 359537 to 360000, 393505 to 400000 all inclusive (hereinafter referred to as "the Dewar Shares")

(b) In the event of Mr. Dewar or his assigns or his or their legal representatives (hereinafter referred to as "the Dewar Shareholders") desiring to sell all or any of the Dewar Shares the Canton Company shall have an option to purchase all or any of such Shares which option shall be independent of the option in favor of the Canton Company provided for in paragraph (a) hereof

(c) In the event of the Canton Company or its successor or its or their assigns (hereinafter referred to as "the Canton Shareholders") desiring to sell all or any of the Ordinary Shares in British Timken now belonging to the [fol. 5800] Canton Company and numbered 1 to 4, 205 to 52700, 100001 to 113126, 275001 to 300000, 330001 to 333910, 380001 to 390504 all inclusive (hereinafter referred to as "the Canton Shares") Mr. Dewar shall have an option to purchase all or any of such Shares

(d) In the event of any of the Dewar Shareholders desiring to sell all or any of the Dewar Shares or in the event of any of the Canton Shareholders desiring to sell all or any of the Canton Shares the Shareholder so desiring to sell (hereinafter called "the seller") if the seller is a Dewar Shareholder shall give notice to the Canton Company and the seller if the seller is a Canton Shareholder shall give notice to Mr. Dewar of the seller's desire to sell and the number of shares which the seller desires to sell and the seller will not sell or transfer any of such shares during

a period of three months from the date on which such notice is given and at any time during that period of three months the Canton Company or Mr. Dewar as the case may be may exercise the purchase option hereinbefore conferred by notice in writing served upon the seller.

(e) The said option arising upon the death or incapacity of Mr. Dewar shall be exercisable by the Canton Company at any time during a period of six months from and after such death or from and after the expiration of the said six months incapacity period as the case may be and shall be exerciseable by notice in writing served upon the Dewar Shareholders within the period of six months during which it is exerciseable.

(f) The price to be paid for any Shares purchased under any of the said options shall be such price as the parties selling and purchasing shall agree or failing agreement at the average price of similar shares of British Timken on [fol. 5801] the London Stock Exchange over a period of thirty days immediately preceding the date on which the option under which the Shares are purchased became exerciseable.

(g) Any sale of Shares which are purchased under any of the said options shall be completed by the delivery of the certificates for the shares purchased, together with duly executed transfers thereof against payment of the purchase price within one month after the option is exercised.

2. Notwithstanding anything hereinbefore contained Mr. Dewar or any of the other Dewar Shareholders shall be at liberty to sell all or any of the Dewar Shares and the Canton Company or any of the other Canton Shareholders shall be at liberty to sell all or any of the Canton Shares to a transferee on purchase or otherwise who has been previously approved in the former case by the Canton Company and in the latter case by Mr. Dewar or his legal representatives provided that the Transferee delivers in the former case to the Canton Company and in the latter case to Mr. Dewar or his legal representatives an undertaking addressed in the former case to the Canton Company and in the latter case to Mr. Dewar or his legal representatives declaring that the shares transferred and the transferee shall be subject to the conditions to which such shares and the Transferor in respect of the same were subject previous to the transfer and binding the transferee to perform and observe the said conditions accordingly.

3. If at any time the profits of British Timken available for the payment of dividend before deduction of any taxes on profits upon an average of three consecutive years as shewn by the audited annual accounts of British Timken are reduced below Fifty thousand pounds for one year Mr. [fol. 5802] Dewar or his legal representatives and a representative of the Canton Company shall meet and consult together as to the manner in which the voting rights in respect of the Dewar Shares and the Canton Shares shall be exercised and upon any question arising at such meeting the decision, of the holders of a majority of the Dewar shares and the Canton Shares shall prevail and any holder of such shares not present at such meeting may authorize in writing any person present at such meeting to join in such decision on his behalf.

In witness whereof this Agreement has been executed by or on behalf of the parties the day and year first above written.

Signed and Sealed by or on behalf of the Timken Roller Bearing Company in the presence of ——, Canton, Ohio, Secretary-Treasurer, ——, President.

Signed, Sealed and Delivered by the above named Michael Bruce Urquhart Dewar in the presence of —— ——, 2 —— Lane, EC. ——. (Seal.)

[fol. 5803] DEFENDANT'S EXHIBIT 242

Wolseley Motors Limited

March 10th, 1924.

Heman Ely, Esq., Vice President & Treasurer, Messrs. The Timken Roller Bearing Coy. Ltd., Canton, Ohio.

DEAR SIR:

We think it as well, as Mr. Lothrop is sailing for the States on the 12th instant, to write to you, setting out a Resumé of the points we have discussed with him during his visit here.

We would like, in the first instance, to thank you for having sent him over, and he has certainly done all that

lay in his power to make his visit a useful one to us. We have found him at all times most courteous and considerate in discussing the various matters which arose between us.

We, on our part, have done all that is possible to make his visit a success. Immediately on his arrival on the 23rd January he got in touch with us from London, and we arranged for him to come to Birmingham at once, as Mr. Caillard and the undersigned, as well as the Offices and Works, are all situated here. Mr. Lothrop was immediately put in touch with the various executive officers, and spent about a week with us. He left here on the 2nd February for London, accompanied by Mr. Rodway, en route for Paris. Mr. Rodway introduced him there to the S.M.G., and went over the Works with him on the 4th and 5th February, after which, we understand, Mr. Lothrop went for a tour on the Continent, and Mr. Rodway returned here. About ten days ago we had a telephone message from Mr. Lothrop in London to say that he had returned, but that he did not wish to come to Birmingham again unless it was absolutely necessary.

We made arrangements for one of our Representatives to meet him in Sheffield, a few days after his arrival in London, at the Works of Messrs. Vickers Limited, so that he could see anything there in which he was interested.

Finally the undersigned saw Mr. Lothrop in London on Saturday, the 8th instant, and impressed upon him the importance of laying before you immediately on his return the various points discussed with him, and the necessity of a prompt decision being come to.

We are sure you will understand that, in view of the fact that Mr. McCormack wrote to you as long ago as the 6th June 1923 with regard to the question of high Royalty, and the effect it was bound to have on our business, we are naturally expecting a definite reply from you at a very [fol. 5804] early date. We wrote again to you very fully on the 14th December 1923, pressing for an early decision. Your reply to this letter was to send over Mr. M. T. Lothrop, and your letter of the 31st December 1923 referred to his visit here. We gathered from the third paragraph of that letter that Mr. Lothrop's visit required to be of the shortest possible duration, as you could not afford to spare him for long, but subsequent events hardly seem to have borne out this view.

Further, with regard to the fifth paragraph of your letter, it transpired that Mr. Lothrop was not apparently vested with any powers to discuss the business aspect of the situation, about which we have been pressing you for some decision.

We will now deal with the various points in detail:

1. Patents

We understood from Mr. Lothrop that you concurred that all the Patents relating to the design of the Bearings have now expired. On the other hand, he informed us that you considered that your British Patent No. 184771 (which is still unexpired) is of real value. This particular Patent, is, however, a Patent relating to a method of manufacture, and, our Patent Agents are definitely of opinion that this Patent is invalid on account of anticipation. Since Mr. Lothrop's return from France, we understand that he proposes to arrange for some Patent Agents, acting on your behalf, to get in touch with our Patent Agents, Messrs. H. N. & W. S. Skerrett, but so far the latter have not heard anything from them.

We are sure you will realise that it is of the utmost importance that a decision should be come to with regard to this matter with the greatest possible speed. We cannot help feeling that it is a very great pity that if this was your view, you did not instruct your Patent Agents to get in touch with us on the subject, when you received our communication of the 14th December last, as a great deal of time would thereby have been saved.

In any case, even if this Patent should transpire to be valid, seeing that it relates to a process of manufacture only, and not to the design of the Bearing, it would be exceedingly difficult to detect any infringements, and our position will thereby be correspondingly weakened.

2. Ford Business

We have recently made a determined attempt to secure this business, and we are pleased to say that we have obtained orders from the Ford Company for 58,000 Bearings, of a value of approximately £7,848. We have received orders also from various Ford Service Dealers and from our own Service Dealers for Timken Bearings for replacements in Ford Cars to the extent of approximately another

10,500 Bearings since the 1st January last. In order to obtain this business, we were compelled to put in an exceedingly cut quotation; the price we are obtaining from the Ford Company being calculated on the basis of the actual cost of Wages and Materials, plus a percentage for Works Charges (whish is substantially less than the actual percentage at which we are running). To this we have added [fol. 5805] 2½% for your Royalty, as we got the impression from Mr. Lothrop that you would be prepared to consider a 2½% Royalty on this business. We are sure you will realise the unhappy position in which we are placed, and we *must* have an immediate decision on this point.

We would like to draw your attention to the fact that on the 7th September last, we had a letter from you, signed by Mr. Klynedenst, referring to a letter we had addressed to you on the 18th June last, in which he stated that you would do your utmost to assist us to get the Ford business. We wrote subsequently on October 6th, November 15th and on the 1st January last, definitely requesting you to agree to a Royalty of 2½% on this business, but to *none* of these communications have we had any reply whatever. A favorable opportunity occurred, however, to secure business, and we did so, with a definite provision of 2½% only for Royalty. We have, therefore, placed ourselves entirely in your hands in so doing; but we are sure you will understand that this is not a position which can continue. We are the strongest believers in business being conducted on business-like lines, and these are not business-like lines. We desire to make it perfectly clear that we have made no provision in the price for gross profit, selling, or establishment charges, other than pure Works Charges.

3. Royalties Generally

We set out the position, so far as this matter is concerned, very clearly on page 2 of our letter of the 14th December last. Naturally the position is affected by the validity or otherwise of any Patents which remain; but the value of these Patents is now definitely limited—as we have already pointed out to you—and the measure of protection which we have is considerably less. Added to this, as competition becomes keener, the payment of a big Royalty becomes more and more detrimental to securing business.

4. Prices of Your Supplies to Us

We were very interested in the figures Mr. Lothrop showed us of your Works Costs of the various types of Bearings you make as compared with the prices you charge to us, which apparently leave a very substantial profit. We gathered that your point is that you are adhering to the arrangement, that you shall charge us with a price 10% only in excess of your most favorable price to other parties, and that you are doing this—notwithstanding that your other Purchasers buy from you on a very much larger scale than we do. We would like to point out, however, that in all ordinary businesses in this country, it is imperative to supply Export Purchasers on a much more favorable basis of price, notwithstanding that their business is much less in volume than domestic purchasers of our goods, and that this is a well understood basis of trade. Having regard to your position we should not have thought that you would have found it necessary to tax us with an additional 10%. We are, however, entirely in your hands in this matter, but we refer to it in passing. It is not a point of anything like the same importance to us as the main question of Royalty.

[fol. 5806] 5. Visit of Our Representative

You suggested in your letter of the 20th September last that we should send over a Representative to get into touch with the progress that you have made in manufacturing processes. We have been giving careful consideration to this matter, and should be glad to send over Mr. Loder, our Works Manager, at a later date. On the occasion, however, of Mr. Rodway's and Mr. Loder's visit in 1920, they were in America for some four or five months, and during the bulk of this time they were not given access to your Works, and their time was badly wasted in consequence. As we cannot afford to spare Mr. Loder for any considerable time, we naturally do not wish to send him until we know that the way is clear for him to obtain immediate access to your Works, and to have all the information, to which we are entitled under our Agreement, placed at his disposal.

6. Organisation

We believe that Mr. Lothrop will be able to assure you that our Organisation, although naturally on a smaller

scale than your own, having regard to the limitation of the market, is a thoroughly live and active one, and that the various Officers are exclusively engaged in doing nothing else than manufacturing, and forwarding the interests of Timken Bearings.

Since writing to you, we have added another Sales Representative to our Staff, Mr. H. Boden, who has been appointed expressly for the purpose of obtaining business in lines other than Motor Car Work. He has already got in touch with a number of good Firms, and we hope that business will result from our efforts in this direction before long.

It may be that Mr. Lothrop will comment to you on a point which he referred to whilst here, that is to say, his view that we had a Staff which was too large in comparison with the number of productive workers which we employed. We explained the position to him on two grounds:

(1) That in England the number of Bearings supplied to any one Manufacturer is very substantially less than would be the case in your country. The Staff work, therefore, entailed in considering applications of Bearings, as compared to the ultimate number of Bearings ordered, must necessarily be substantially greater. We might spend—and often do have to do so—a considerable time in considering the application of Bearings to the Axles of the particular type of car, and ultimately secure business, which, however, may amount to an order for a few hundred Bearings, or at the best probably to about 5/10,000.

In your country we have no doubt that, when the application of Bearings has been agreed, you may obtain an order for hundreds of thousands of Bearings for that particular application. It is perfectly clear, therefore, that the number of Staff workers, as compared with the productive workers, must be substantially lower.

[fol. 5807] (2) We explained also that we have been compelled, on account of depression in trade, to maintain an organisation larger than we really require, but which we could not disperse, as we expected—and, as events have proved, justifiably so—that business would tend to increase. The result is that we hope in a short time to be turning out about 10,000 Bearings a week with the same Staff as that which we have employed

for 5,000 Bearings a week. The conditions which rule in this country are so entirely different from those which obtain in yours, that it is hardly possible to apply the same principles in both countries.

7. General Position

We think the foregoing remarks will have given you as up-to-date a view of the state of affairs as it is possible to give, and no doubt they will be amplified by Mr. Lothrop on his arrival.

We have endeavoured to convey through him to you what we believe to be the value of our relationship with you, and that our mutual benefit will be best secured by our working in the closest unison. Certainly we cannot see that any good purpose can possibly be served by our endeavouring to work independently. We feel sure, however, you will realise that the position has changed considerably having regard to:

(a) Patent position.
(b) The keen competition which exists.

Having regard to these factors, we are definitely of the opinion that an adjustment of the percentage payable in respect of Royalty is imperative and we really must ask you to be so good as to give a *definite and prompt reply* to this most urgent matter.

Yours faithfully, Wolseley Motors Limited. A. Jacob, Director.

[fol. 5808] DEFENDANT'S EXHIBIT 243

March 25, 1924.

British Timken Limited, Ward End, Birmingham, England.

Attention: A. Jacob, Esq., Director

DEAR SIRS:

We are in receipt of letter of March 10th from the Wolseley Motors Limited, and have also the report from our Mr. M. T. Lothrop.

We wish to take this opportunity of thanking you for

the courtesies extended Mr. Lothrop, as we certainly appreciate your co-operation with him in his work.

In connection with the various points which you raise, and on which Mr. Lothrop has reported, it seems that we need the advice of our solicitor, and we are therefore instructing Mr. A. J. M. Duncan to immediately get in touch with you on these various matters. Mr. Duncan has our views on this matter, in detail, and can treat with you directly and to better advantage than we can by long-range correspondence from this side.

We are sure that you will wish to meet all matters now open in an open way, and it is our sincere desire that any changes we may make in our present arrangements will be for our mutual benefit and the further use of Timken Bearings. We will appreciate it if you will expedite any conferences with Mr. Duncan, to the end that we may get in full agreement on all matters now open.

Very truly yours, The Timken Roller Bearing Co.,
—— ——, Vice Pres. & Treas.

Heman Ely.B.

Proposal exceeds our instructions to you and we believe is more than they expect to get.

Item one, We wish to limit two and one half percent to Ford only because minimum quantities of fifty thousand might include several other customers and mean large proportion of their total business.

Item two, Instead of renewal option for second five year term if either party desires to discontinue after first five years that party should give notice six months before expiration.

Item three, Name should also be registered now in England and Continent so as to give us full protection and clear title.

Item four, New contract should date from first quantity Ford orders.

Please take firm stand on foregoing and advise by cable.

Timken.

CURRENT EXPORT BULLETIN

DEPARTMENT OF COMMERCE
Office of International Trade
Washington 25, D. C.

Case No. 2 42.14 Civil
DEFENDANT'S EXHIBIT
No. 248

Current Export Bulletins are issued by the Export Supply Branch, Office of International Trade, Department of Commerce, for the guidance of all concerned with export regulations and interpretations. The Bulletins supplement the Comprehensive Export Schedule, the latest issue of which is No. 24, dated September 10, 1947. Copies of the Comprehensive Export Schedule may be obtained from the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at 25 cents per copy.

Number 431 December 31, 1947

SUBJECT: EXPORT LICENSING POLICY

A. It has always been the desire of those responsible for the administration of export control to employ a procedure for the distribution of licenses which would maintain the greatest degree of competitive private trade.

Throughout the war years and the early postwar period, many factors combined to dictate a policy of reserving the bulk of export quotas for the firms which had established America's foreign trade during a base period of severe competition and no controls. These concerns were generally those best able to supply a given market; they had earned their position in the market by an investment of effort, resources, and "Yankee ingenuity" which investment could not properly be subjected to a hostile licensing procedure; if they had converted to war production, they were entitled to a period of reconversion in which foreign markets would not be arbitrarily assigned to others.

However, the historical method of selecting exporters has become increasingly anachronistic. It depends upon base periods which are becoming more and more remote. Prewar bases are now almost a decade removed from today's trade conditions. Further, the reconversion argument has, after 2 years, lost most of its force. Freezing a pattern of shipment which was once fiercely competitive can no longer assure competitive conditions in foreign trade.

The Office of International Trade, therefore, seeks a modification of its licensing policy which will supplant the anachronism of so-called "traditional" licensing with a more competitive selection of the exporters who supply foreign markets with the limited quantity of scarce material which can be authorized for export.

No single solution of this problem seems possible, but one basic principle may provide guidance: that distribution of licenses is most nearly competitive which permits shipments most closely approximating those which would take place in the absence of any U. S. Government restrictions on export. The application of this principle, as contracted with the historical method, would not discriminate against small businessmen and merchant exporters, who would be able to share in export trade to the full extent of their ability to meet more truly competitive conditions.

If this principle be accepted, two main types of licensee selection suggest themselves: First, the approval of those export shipments which the Office of International Trade and the importing government find make the least demand upon the latter's limited supply of dollar exchange; second, the approval of those license applications which are accompanied by evidence of the lowest price contracts for comparable material under comparable conditions of supply. Licensed exportations from the United States have recently come into severe criticism because of the very wide disparity sometimes existing between prevailing domestic prices and those charged foreign purchasers. Discussions with members of the United States trade community, the Congress, and foreign governments has emphasized the necessity of checking this added drain on limited dollar exchange balances.

Beginning with the first quarter of 1948, the Office of International Trade, in an effort to reduce both the dollar burden abroad, and the inflationary impact at home, of United States exports, establishes the following licensing policy:

B. *Licensing Policy*

1. *Private Trade Channels:*

a. Where the American exporter is the presently established channel through which shipments of a given commodity to a given country are effected, whether the purchaser abroad is a private importer or an agency of an importing government, licenses will continue to be issued to the private American exporter, but on the following conditions:

(1) Where the customary channel of importation is through a private importer, licenses naming private importers as consignees will be given preference and licenses for shipment to foreign government distributive agencies will be considered only under the most exceptional circumstances.

(2) Where the importing government desires the Office of International Trade to approve export license applications naming an agency of the importing government as consignee, requests for this privilege will be considered by the Office of International Trade, provided such requests do not constitute an unwarranted departure from current established trade practices.

b. If under either of the conditions described above, the importing government desires to recommend the approval of certain of the applications submitted by American exporters, the Office of International Trade will issue its licenses after review of the recommendations received from the embassy of the importing country. For the purpose of this review, the importing government will submit to the Office of International Trade through its embassy in Washington complete specifications of the commodities being purchased, together with the prices to be paid to the exporters. The Office of International Trade will review all export license applications submitted. With respect to those quotas on which the recommendations of the importing government are appropriate, and where the Office of International Trade concurs in those recommendations, such cases will be approved; all other cases will be rejected or returned without action to the applicant.

The requirements set forth herein have been approved by the Bureau of the Budget and assigned number BB 41-R1046 in accordance with Regulation A pursuant to the Federal Reports Act of 1942.

c Where the embassy of the importing country is not in a position to assist in the identification of those export contracts which will provide the desired shipments with minimum impact on dollar exchange balances, applications will then be approved so as to minimize the consumption of dollar exchange in the acquisition of goods of comparable type, grade and condition of supply.

d Exporters are required to submit with each license application evidence of the accepted firm order covering the proposed shipment. This evidence must include the specifications for the commodity and the total price which the exporter will receive for it. Where the normal trade practice in a commodity precludes the establishment of a firm export price at time of acceptance of the foreign order, applications will be considered in the absence of an answer to question 9 (d) of Form IT 419, provided the manner in which price will be determined is shown (e. g., price on United States commodity exchange plus specified mark-up)

e Where commodities are licensed for export on a basis of the specific end use to which the material will be applied abroad, applications will be considered for approval only if they satisfy the applicable end-use requirements. Quotas oversubscribed by applications covering valid end-uses will be distributed among applicants in accordance with the foregoing.

2. *Foreign Government Purchasing Missions:*

a. Where the importing country maintains a purchasing mission in the United States for the procurement of any commodity, the country may request a continuation of governmental procurement with respect to such commodity. Where these requests are approved, the Office of International Trade will validate export licenses submitted in accordance with part B 1 above for those firms with which the foreign purchasing mission makes contracts. It is not intended to extend by this procedure the use of the foreign purchasing mission as a procurement device; the necessity for such procurement will be subject to continuous review in line with the announced policy of the United States to maximize the restoration of private trade

b. The purchasing mission will, moreover, before it buys the commodity, establish to the satisfaction of the Office of International Trade the competitive nature of its procurement. This will take the form generally of a public request for sealed bids from American suppliers, giving complete specifications for the commodity to be purchased. The mission will furnish the Office of International Trade with a copy of the specifications, a list of the suppliers submitting bids, the bids submitted by each, and a statement of the amounts purchased from each firm. Upon receipt of this information, the Office of International Trade will validate licenses for the bidders successful in making contracts with the purchasing mission. Subsequently, the Office of International Trade will examine the bids in detail and any necessary modifications will be brought to the attention of the purchasing mission for consideration in future contract negotiations.

c While it is the wish of the Office of International Trade to minimize the issuance of export licenses to applicants other than private U. S. exporters, it is recognized that during a transition period, the length of which may vary with the commodity or destination in question, it may be necessary to authorize the exportation of some quotas in the name of the foreign purchasing mission itself. Where this is the case, the above-described procedures will be modified accordingly, but the same evidence of competitive practices will be required.

3. *U. S Government Procurement:*

Certain allocations will continue to be programmed for purchase in their entirety by agencies of the U. S. Government. Where this procedure must be continued, licenses where required will be issued to the U. S. purchasing agency making the export shipment. The Office of International Trade reiterates, however, its continued desire to minimize the extent of Governmental procurement for export whether such procurement is performed by U. S. or foreign government agencies. Exports of such governmentally-procured material will be authorized only where it is evident that alternative techniques are inappropriate.

C. Transition Period

The new export licensing policy announced in this bulletin will become effective January 2, 1948. Because of the physical task involved in implementing this policy it cannot be made immediately applicable to all commodities presently controlled for export. The commodities listed in Part D will be subject to the revised policy in the first calendar quarter of 1948. Many of these commodities have already been licensed to specified areas in this manner. Licensing of commodities not listed in Part D will follow present procedures until further anouncement.

All export license applications for the commodities listed below which have not been validated against fourth quarter quotas will be returned, if necessary, to the applicants for resubmission, along with the required information on price and the required evidence of an accepted firm order. In order to obtain consideration against first quarter quotas, all applications for the listed commodities, including resubmissions, should be filed on or before January 23, 1948.

D. Commodities Subject to New Licensing Policy

Mr. A. J. M. Duncan, Stibbard, Gibson & Co., 71 St. Mary Axe, London, E.C.3, England

DEAR MR. DUNCAN:

In our statements to the Securities and Exchange Commission for the year 1948, Timken Holdings Ltd. must be listed as a wholly-owned subsidiary. In order to be sure all our information on this is accurate, would you supply me with the following information:

1. Balance Sheet and operating statement as of close of last fiscal year.
2. List of assets including those held in nominee.
3. Names of Directors and Officers.

I am assuming that in line with my letter of May 24, 1948, it was satisfactory to Michael that we credit his note given in the purchase of French Timken shares with the amount of £59.7.0 to cover the sale of his shares of Timken.

Holdings to the Timken Roller Bearing Company of which it then becomes a wholly-owned subsidiary.

Sincerely yours, W. Robert Timken.

WRT/hbm
cc: R. C. Brower

[fol. 5819] Stibbard, Gibson & Co.

(Thomas Cooper & Co.)

12th April, 1949.

DEAR MR. TIMKEN:

Timken Holdings Ltd.

I have your letter dated 23rd March, and I have now received the information which you require from this Company to enable me to reply to your letter.

1. I enclose the Revenue Account and Balance Sheet at 30th April 1948, the close of the last fiscal year of the Company. A note on this document contains a list of the assets belonging to the Company, that is to say, 18,936 Ordinary Shares £1. each fully paid in British Timken Limited.

2. The names of the Directors are given in the heading of the Directors Report attached to the Revenue Account and Balance Sheet.

3. The name of the Secretary is Miss Jessica E. Stockford.

What you suggest with respect to the sum of £59. 7. 0 payable to Mr. Dewar for his shares in Timken Holdings Ltd. is satisfactory to him.

$250.00 per Ernst & Ernst As of May 1948. (Handwritten Note.)

Can you give me any indication as to the date when the further hearing in the anti-trust proceedings is likely to materialize?

Yours faithfully, (S.) A. J. M. Duncan.

W. Robert Timken, Esqre.

[fol. 5822] PLAINTIFF'S EXHIBIT No. 2 (Decree)

This Agreement is made the Twenty-Second day of March One thousand nine hundred and forty-eight between The Timken Roller Bearing Company of Canton, Ohio in the United States of America (for short "the Canton Company") of the first part Michael Bruce Urquhart Dewar of Milton Farm Milton Ernest near Bedford in the County of Bedford (for short "Mr. Dewar") of the second part and Timken Holdings Limited a Company incorporated in England (for short "the Holdings Company") of the third part.

Date	*Parties*
1935 September 7	The Canton Company (1) and Mr. Dewar (2).
1943 June 5	The Canton Company (1) Mr. Dewar (2) and The Holdings Company (3).
1943 June 5	The Canton Company (1) and Mr. Dewar (2).

And Supplemental Also to the Articles of Association of the Holdings Company and the Bye-Laws as to voting and the Bye-Laws as to Directors now in force under Articles 65 and 76 of the said Articles of Association and Supplemental Also to the Registered Participating Rights created and issued by the Holdings Company under the said Articles of Association and now outstanding.

Preamble

A. The Share capital and Registered Participating Rights of the Holdings Company now outstanding consist of the following shares of One shilling each fully paid and Participating Rights belonging to the respective proprietors following videlicet:

[fol. 5823]

Proprietors	"A" shares	Distinctive numbers inclusive	"B" shares	Distinctive numbers inclusive	Participating Rights	Distinctive numbers inclusive
The Canton Company	573	3 to 576	738	1251 to 1988	261	3 to 117 1251 to 1396
Mr. Dewar or Assignees	675	576 to 1250	511	1989 to 2339 2341 to 2500		
Andrew Jameson Matthews Duncan (Nominee of the Canton Company)	1	1			1	1
Frederick John Pascoe (Nominee of Mr. Dewar)			1	2340		
Cecil William Bateson (Nominee of the Canton Company)	1	2			1	2
	1250		1250		263	

B. The following participating rights formerly belonging to Mr. Dewar or his nominees have been redeemed.

Mr. Dewar	235	576 to 710 1989 to 2058 2341 to 2370
Frederick John Pascoe (Nominee)	1	2340
William Dallow (Nominee)	1	2339
	237	237

Shares held by the Holdings Company as Trustee for the Canton Company	86,104
Shares held by the Holdings Company and required for redemption of participating rights belonging to the Canton Company	18,936
	105,040

C. The Holdings Company is the registered proprietor of the following shares of One Pound each fully paid in British Timken Limited (for short "British Timken")

[fol. 5824]

Shares held by the Holdings Company as Trustees for Mr. Dewar or his assigns	94,960
	200,000

Now This Agreement Witnesseth as follows namely:

1. The Parties hereto declare that in the events which have happened the said Agreements are no longer operative except certain provisions contained therein and consequent thereon the said agreements are hereby entirely cancelled

and at an end but the provisions contained in another agreement to be forthwith made between the Canton Company and Mr. Dewar shall take the place of the said excepted provisions so far as it is desired to keep them in force

2. The parties to this agreement declare that in the events which have happened the whole of the said Two hundred thousand shares in British Timken which are held by the Holdings Company are now divisible into two categories videlicet:

(a) One hundred and five thousand and forty shares which belong in fact directly or indirectly to the Canton Company Eighty six thousand one hundred and four of such shares being held by the Holdings Company as nominee or Trustee for the Canton Company and Eighteen thousand nine hundred and thirty-six of such shares being held by the Holdings Company in absolute ownership but subject to the right vested in the Canton Company as the holder of the Participating Rights in the Holdings Company belonging to it to have such shares added to the shares in British Timken held [fol. 5825] by the Holdings Company as the nominee of The Canton Company and

(b) Ninety four thousand nine hundred and sixty shares which belong in fact to Mr. Dewar or his assigns being held by the Holdings Company as nominee or Trustee for Mr. Dewar or his assigns

3. The Holdings Company and the Canton Company and Mr. Dewar as the holders by themselves or their nominees of all the share capital of The Holdings Company Hereby Declare that the said Bye-Laws of the Holdings Company are rescinded and at an end for all purposes.

4. Mr. Dewar agrees to sell and the Canton Company agrees to purchase at the price of Fifty nine pounds seven shillings One thousand one hundred and eighty seven shares of One shilling each being all the shares in the Holdings Company belonging to Mr. Dewar and registered in the name of Mr. Dewar or his nominees and consequent thereon the Holdings Company will become a wholly owned subsidiary Company of the Canton Company and the said shares sold by Mr. Dewar to the Canton Company shall be transferred by Mr. Dewar to the Canton Company or as it shall direct as and when required by the Canton Company

In Witness whereof this agreement has been executed by the Canton Company Mr. Dewar and the Holdings Company

(S.) Wm. E. Umstattd, President.

Signed and Seal by or on behalf of The Timken Roller Bearing Company in the presence of: (S.) H. E. Markley, Canton, Ohio, Assistant Secretary.

[fol. 5826] (S.) M. B. U. Dewar.

Signed, Sealed and Delivered by the above named Michael Bruce Urquhart Dewar in the presence of: (S.) A. Millward, (Company Secretary.) Oak Ledge Duston (illegible).

Sealed with the Seal of Timken Holdings Limited pursuant to a resolution of the Board of Directors in the presence of the undersigned Director and Secretary of the Company (S.) F. J. Pascoe, Director, (S.) Jessica E. Shockford, Secretary.

[fol. 5827] Dated: 22nd March, 1948

The Timken Roller Bearing Company (1), M. B. U. Dewar, Esquire (2), and Timken Holdings Limited (3)

Agreement Cancelling Previous Agreements and Bye-Laws of Timken Holdings Ltd. and for Transfer by Mr. Dewar to the Canton Company of His Shares in Timken Holdings Ltd.

[fol. 5828] PLAINTIFF'S EXHIBIT 3 (Decree)

This agreement made the twenty-second day of March One thousand nine hundred and forty eight between The Timken Roller Bearing Company of Canton Ohio in the United States of America (for short "The Canton Company") of the one part and Michael Bruce Urquhart Dewar of Little Horwood Manor Bletchley, in the County of Buckingham Esquire (for short "Mr. Dewar") of the other part.

Witnesseth: —that the parties hereto declare and agree as follows viz:

1. (a) Upon the death of Mr. Dewar or if he shall become incapacitated by ill health or otherwise for a con-

secutive period of six months from discharging his duties as a Director of British Timken Limited (for short "British Timken") The Canton Company shall have an option to purchase all or any of the 94960 ordinary Shares in British Timken now belonging to Mr. Dewar or his assigns being the Ordinary Shares numbered 5 to 204, 52701 to 100000, 113127 to 125000, 390505 to 393504, 333911 to 359536, 359537 to 360000, 393505 to 400000 all inclusive (hereinafter referred to as "the Dewar shares")

(b) In the event of Mr. Dewar or his assigns or his or their legal representatives (hereinafter referred to as "the Dewar Shareholders") desiring to sell all or any of the Dewar Shares the Canton Company shall have an option to purchase all or any of such Shares which option shall be independent of the option in favor of the Canton Company provided for in Paragraph (a) hereof

(c) In the event of the Canton Company or its successor or its or their assigns (hereinafter referred to as "the Canton Shareholders") desiring to sell all or any of the Ordinary Shares in British Timken now belonging to the Canton [fol. 5829] company and numbered 1 to 4, 205 to 52700, 100001 to 113126, 275001 to 300000, 330001 to 333910, 380001 to 390504 all inclusive (hereinafter referred to as "the Canton Shares") Mr. Dewar shall have an option to purchase all or any of such Shares

(d) In the event of any of the Dewar Shareholders desiring to sell all or any of the Dewar Shares or in the event of any of the Canton Shareholders desiring to sell all or any of the Canton Shares the Shareholder so desiring to sell (hereinafter called the "the seller") if the seller is a Dewar Shareholder shall give notice to the Canton Company and the seller if the seller is a Canton Shareholder shall give notice to Mr. Dewar of the seller's desire to sell and the number of shares which the seller desires to sell and the seller will not sell or transfer any of such shares during a period of three months from the date on which such notice is given and at any time during that period of three months the Canton Company or Mr. Dewar as the case may be may exercise the purchase option hereinbefore conferred by notice in writing served upon the seller.

(e) The said option arising upon the death or incapacity of Mr. Dewar shall be exerciseable by the Canton Company at any time during a period of six months from and after

such death or from and after the expiration of the said six months incapacity period as the case may be and shall be exerciseable by notice in writing served upon the Dewar Shareholders within the period of six months during which it is exerciseable.

(f) The price to be paid for any Shares purchased under any of the said options shall be such price as the parties selling and purchasing shall agree or failing agreement at the average price of similar shares of British Timken on [fol. 5830] the London Stock Exchange over a period of thirty days immediately preceding the date on which the option under which the Shares are purchased became exerciseable.

(g) Any sale of Shares which are purchased under any of the said options shall be completed by the delivery of the certificates for the shares purchased, together with duly executed transfers thereof against payment of the purchase price within one month after the option is exercised.

2. Notwithstanding anything hereinbefore contained Mr. Dewar or any of the other Dewar Shareholders shall be at liberty to sell all or any of the Dewar Shares and the Canton Company or any of the other Canton Shareholders shall be at liberty to sell all or any of the Canton Shares to a transferee on purchase or otherwise who has been previously approved in the former case by the Canton Company and in the latter case by Mr. Dewar or his legal representatives provided that the Transferee delivers in the former case to the Canton Company and in the latter case to Mr. Dewar or his legal representatives an undertaking addressed in the former case to the Canton Company and in the latter case to Mr. Dewar or his legal representatives declaring that the shares transferred and the transferee shall be subject to the conditions to which such shares and the Transferor in respect of the same were a subject previous to the transfer and binding the transferee to perform and observe the said conditions accordingly.

3. If at any time the profits of British Timken available for the payment of dividend before deduction of any taxes on profits upon an average of three consecutive years as shown by the audited annual accounts of British Timken are reduced below Fifty thousand pounds for one year Mr. [fol. 5831] Dewar or his legal representatives and a representative of the Canton Company shall meet and consult

together as to the manner in which the voting rights in respect of the Dewar Shares and the Canton Shares shall be exercised and upon any question arising at such meeting the decision of the holders of a majority of the Dewar Shares and the Canton Shares shall prevail and any holder of such shares not present at such meeting may authorize in writing any person present at such meeting to join in such decision on his behalf.

In Witness whereof this Agreement has been executed by or on behalf of the parties the day and year first above written.

(S.) Wm. E. Umstattd, President.

Signed and Sealed by or on behalf of the Timken Roller Bearing Company in the presence of:—

(S.) R. C. Brower, Canton Ohio, Secretary-Treasurer.

(S.) M. B. U. Dewar. L.8.

Signed, Sealed and Delivered by the above named Michael Bruce Urquhart Dewar in the presence of:—

(Signature and address illegible.)

[fol. 5832] Dated: 22nd March, 1948

The Timken Roller Bearing Company and M. B. U. Dewar, Esq.

Agreement with respect to British Timken Limited

[fol. 5833] PLAINTIFF'S EXHIBIT No. 4 (Decree)

An Agreement made the seventh day of September One thousand nine hundred and thirty five between The Timken Roller Bearing Company of Canton Ohio United States of America (hereinafter called "the American Company") of the one part and Michael Brue Urquhart Dewar of Number 10, Mayfair Place London, W. (hereinafter called "Mr. Dewar") of the other part with respect to a Company incorporated in England on the Thirty first day of August One thousand nine hundred and thirty five and named Timken Holdings Limited hereinafter called "the Holdings Company".

Now It is hereby agreed as follows:

1. Each of them the American Company and Mr. Dewar hereby declares by way of honourable understanding and

not as a legally binding agreement that if the other of them or any of his nominees or any Company controlled by him shall give a transfer notice under Article Number 28 of the Articles of Association of the Holdings Company in respect of all or any of the shares in the Holdings Company owned by the other party or his nominees or any Company controlled by him with or without participating rights connected therewith and the shares comprised in such transfer notice or any of them with the connected rights (if any) are not purchased by the other members of the Holdings Company to whom the same are offered pursuant to the said Article then

(a) The declaring party will not unreasonably stand in the way of the other party or his nominees or the controlled [fol. 5834] Company aforesaid selling such unpurchased shares or any of them with the connected rights (if any) to any person (not being a person to whom the declaring party shall object on reasonable grounds) at any price not being less than that at which such shares and rights (if any) shall have been offered to the Members pursuant to the said transfer notice and

(b) In the event of the other party or his nominees or the controlled Company aforesaid effecting a sale the declaring party will do all acts and things in his power in order to procure the registration of the transfer of the said shares and rights (if any) to the purchaser thereof and in particular will exercise the voting rights conferred by any shares in the Holdings Company held or controlled by the declaring party in such manner and give all such consents and sanctions as may be reasonably required and procure any Directors of the Holdings Company controlled by the declaring party to pass all resolutions necessary for procuring the registration of such transfers.

2. (a) Upon the death of Mr. Dewar or in the event of his being incapacitated by ill-health or otherwise for a consecutive period of six months from discharging his duties as a Director of a Company incorporated in England and named British Timken Limited the American Company shall have an option (exerciseable within six months after the death of Mr. Dewar or after the expiration of the said period of six months as the case may be) of purchasing [fol. 5835] all the shares in the Holdings Company together

with the connected participating rights (if any) belonging to Mr. Dewar or his nominees or any Company controlled by him at the date of his death or the expiration of the said period of six months (as the case may be) at their fair value to be determined failing agreement by an award of two London Chartered Accountants as Arbitrators one to be appointed by each party or an Umpire to be appointed by the said Arbitrators such reference to arbitration to be deemed for all purposes a reference to arbitration under the English Arbitration Act 1889 or any statutory modification or re-enactment thereof for the time being in force.

(b) The said option shall be exerciseable by notice in writing served upon Mr. Dewar or in the case of his death his legal personal representatives within the said period of six months and if it is exercised the sale of the shares and rights if any shall be completed by delivery of duly executed transfers of and the certificates for the shares and rights if any against payment of the purchase price within seven days after the price has been agreed or determined by arbitration as aforesaid.

3. (a) The provisions of Clause 2 of this Agreement shall apply also to Forty seven thousand five hundred shares in British Timken Limited at present registered in the name of the Holdings Company and held by that Company as to Forty one thousand shares as nominee (that is, bare Trustee) for Societe Americano Europeenne de Participations and as to Six thousand five hundred shares as nominee for Mr. Dewar.

(b) The Provisions of Clause 2 of this Agreement (with the substitutions of three months for six months) shall apply also to the said Forty seven thousand five hundred shares in the event of the said Societe or Mr. Dewar de- [fol. 5836] siring to sell or transfer all or any of the said Forty seven thousand five hundred shares and in such event the said Societe or Mr. Dewar as the case may be will give notice in writing of such desire to the American Company and will not sell or transfer such shares or any of them until three months from the date of such notice has expired but will be at liberty to sell or transfer such shares or any of them not purchased by the American Company under the option contained in the said Clause 2 at any time during a period of six months after the expiration of the said period of three months.

4. For the purposes of this Agreement all shares in the Holdings Company registered in the name of Societe Americano Europeenne de Participations and the connected participating rights shall be deemed to be shares and rights belonging to Mr. Dewar and under his control.

5. This Agreement shall be construed and have effect as an agreement made in England and in accordance with the Laws of England.

In Witness whereof this Agreement has been executed by or on behalf of the parties hereto the day and year first above written,

The Timken Roller Bearing Company; By (S.) Wm. E. Umstattd, President.

Signed and Sealed by or on behalf of The Timken Roller Bearing Company in the presence of

(S.) Bessie E. Stokey, Canton, Ohio, U. S. A., Stenographer.

(S.) M. B. U. Dewar.

Signed Sealed and Delivered by the above named Michael Bruce Urquhart Dewar in the presence of

Mary H. Wilson, 10, Mayfair Place, Shorthand typist.

[fol. 5837] Dated 5th September, 1935

Timken Roller Bearing Company and M. B. U. Dewar, Esqre.

Agreement as to Shares and Interests in Timken Holdings Limited

---

[fol. 5838] Filed October 3, 1949.

PLAINTIFF'S EXHIBIT No. 5 (Decree)

This Agreement the fifth day of June One thousand nine hundred and forty three between the Timken Roller Bearing Comp ny a Company incorporated in the United States of America of Canton Ohio U.S.A. (hereinafter referred to as "the American Company") (1) and Michael Bruce Urquhart Dewar of Stagenhoe Park Hitchin in the County of Hartford (hereinafter referred to as "Mr. Dewar") (2)

Supplemental to an Agreement made the Seventh day of September One thousand nine hundred and thirty five between the parties hereto which Agreement is hereinafter referred to as "the Canton Dewar Agreement"

Whereas (a) Timken Holdings Limited a Company incorporated in England (hereinafter referred to as "the Holdings Company") has a share capital of One hundred and twenty five pounds divided into One thousand two hundred and fifty "A" shares of One shilling each and One thousand two hundred and fifty "B" shares of One shilling each all of which have been issued and are fully paid

(b) At the date of this Agreement Mr. Dewar is the registered proprietor of Six hundred and seventy five "A" shares and Five hundred and ten "B" shares in the Holdings Company and nominees of Mr. Dewar namely Frederick John Pascoe and William Dallow are the registered proprietors each of one "B" share in the Holdings Company

(c) The Holdings Company has issued Five hundred Participating Rights under Article 5 of its Articles of Asso- [fol. 5839] ciation (hereinafter referred to as "the Holdings Articles") and Mr. Dewar is the registered proprietor of Two hundred and thirty five Participating Rights and each of his said nominees is the registered proprietor of one Participating Right

(d) At the date of this Agreement the Holdings Company is the registered proprietor of Two hundred thousand shares of One pound each fully paid in British Timken Limited a Company incorporated in England (hereinafter referred to as "the British Company") which shares are held by the Holdings Company as to Thirty six thousand shares in absolute ownership (hereinafter referred to as "owned British shares") and as to One hundred and sixty four thousand shares as nominee (that is bare Trustee) on behalf of the American Company of Mr. Dewar and such last mentioned shares are hereinafter referred to as "nominee British shares"

(e) At the date of this Agreement Five hundred Participating Rights only have been issued by the Holdings Company although the Holdings Company has received Thirty six thousand owned British shares and a number of nominee British shares

(f) Under paragraph D of Article 5 of the Holdings

Articles the number of Participating Rights which should or might have been created in Seven hundred and twenty in respect of the Thirty six thousand owned British shares only

(g) It was anticipated that if the American Company exercised the option to purchase shares in the Holdings Company together with connected Participating Rights if any belonging to Mr. Dewar or his nominees or any Company controlled by him granted to the American Company [fol. 5840] by Clause 2 of the Canton Dewar Agreement the American Company would have become the purchaser in fact or in effect of the whole of the owned British shares and nominee British shares belonging to Mr. Dewar or his nominees or any Company controlled by him and there have been and may be changes in the holdings of shares in the Holdings Company Participating Rights and owned British shares and nominee British shares and it is desired to give effect to the intention of the Canton Dewar Agreement

Now it is hereby agreed as follows:

1. The subject matter of the options granted to the American Company by Clause 2a and Clause 3 of the Canton Dewar Agreement shall be all the shares in the Holdings Company and all the Participating Rights issued by the Holdings Company and all the owned British shares belonging to the Holdings Company and all the nominee British shares held by the Holdings Company which belong to or are held on behalf of Mr. Dewar or his nominees or any Company controlled by him at the date when the option becomes exerciseable

2. Clauses 3 and 4 of the Canton Dewar Agreement are hereby cancelled as no longer applicable

3. In the event of Mr. Dewar desiring to sell or transfer all or any of the shares and Participating Rights forming the subjects matters of the Canton Dewar Agreement as hereinbefore referred to he or his legal representatives shall give notice in writing to the American Company of his or their desire to sell or transfer any of such shares or Participating Rights and he or his legal representatives will not sell or transfer any of such shares or Participating Rights until three months from the date on which such notice is given but will be at liberty to sell or trans- [fol. 5841] fer such shares or Rights or any of them not purchased by the American Company under the said

option at any time during a period of six months after the expiration of such period of three months

In witness whereof this Agreement has been executed the day and year first above written

The Timken Roller Bearing Company, /s/ Wm. E. Umstattd, President; /s/ R. C. Brower, Secretary. /s/ M. B. U. Dewar.

Signed sealed and delivered by the above named Michael Bruce Urquhart Dewar in the presence of /s/ F. J. Pascoe, 65 Chester Rd. Astor, Birmingham.

[fol. 5842] Dated: 5th June, 1943

The Timken Roller Bearing Company and Michael Bruce Urquhart Dewar, Esquire

Agreement supplemental to Agreement dated 7th September, 1935

[fol. 5843] Filed October 3, 1949.

PLAINTIFF'S EXHIBIT No. 6 (Decree)

This agreement is made the Fifth day of June One thousand nine hundred and forty three Between The Timken Roller Bearing Company a Company Incorporated in the United States of America of Canton Ohio, U. S. A. (hereinafter referred to as "The American Company") (1) Michael Bruce Urquhart Dewar of Stagenhoe Park Hitchin in the County of Hertford (hereinafter referred to as "Mr. Dewar") (2) and Timken Holdings Limited a Company incorporated in England (hereinafter referred to as "the Holdings Company") (3)

Supplemental to

(a) The Articles of Association of the Holdings Company hereinafter referred to as "the Holdings Articles" and in particular Article No. 4 with respect to the Share Capital of the Holdings Company and Article No. 5 with respect to registered Participating Rights to be created

under such Article which Rights as subsequently created are hereinafter referred to as "participating Rights"

(b) The By-Laws as to voting and Directors adopted by the subscribers of the Memorandum of Association of the Holdings Company hereinafter respectively referred to as "the Holdings By-Laws as to voting" and "the Holdings By-Laws as to Directors" which By-Laws were adopted in pursuance of Articles 65 and 76 respectively

Whereas

(a) The Share Capital of the Holdings Company was originally and still is One hundred and twenty five pounds divided into One thousand two hundred and fifty "A" shares of One shilling each and One thousand two hundred [fol. 5844] and fifty "B" Shares of One shilling each all of which have been issued and are fully paid and at the date of this Agreement belong to the American Company and Mr. Dewar or the nominees and are hereinafter referred to as "Holdings Shares" and the Holdings Shares are now registered as follows:

Registered Proprietor	Number of A shares	Distinctive numbers inclusive	Number of B shares	Distinctive numbers inclusive
The American Company	573	3 to 575	738	1251 to 1988

William Dallow			1	2339
	1,250		1,250	

(b) The Holding Company has issued Participating Rights all of which are now outstanding and at the date of this Agreement belong to the American Company and Mr. Dewar or their nominees and are registered as follows:

Registered proprietor	Number of participating rights	Distinctive numbers inclusive
The American Company	261	3 to 117 1251 to 1396
Nominees of the American Company		
Andrew Jameson Matthews Duncan	1	1
Cecil William Bateson	1	2
Mr. Dewar	235	576 to 710 1989 to 2058 2341 to 2370
Forward	498	
[fol. 5845]		
Nominees of Mr. Dewar		
Frederick John Pascoe	1	2340
William Dallow	1	2339
	500	

(c) At the date of this Agreement the Holdings Company is the registered proprietor of Two hundred thousand shares of One pound each fully paid in British Timken Limited a Company incorporated in England hereinafter referred to as "the British Company" which shares are held by the Holdings Company as to Thirty six thousand shares in absolute ownership hereinafter referred to as "owned British Shares" and as to One hundred and sixty four thousand shares as nominee (that is bare Trustee) on behalf of the American Company or Mr. Dewar and such last mentioned shares are hereinafter referred to as "Nominee British Shares" Twenty five thousand of the owned British Shares were originally acquired by the Holdings Company and the remaining Eleven thousand of the owned British Shares were allotted by the British Company to the Holdings Company as bonus in respect of the said twenty five thousand owned British Shares

(d) At the date of this Agreement Five hundred Participating Rights only have been issued by the Holdings Company although the Holdings Company has received Thirty six thousand owned British Shares and a number of Nominee British Shares whereas under paragraph D of Article 5 of the Holdings Articles the number of Participating

Rights which should or might have been created and issued is Seven hundred and twenty in respect of the Thirty six thousand owned British Shares only and it is desired to provide that no more than the said Five hundred Partici-
[fol. 5846] pating Rights shall be issued without the consent of The American Company and Mr. Dewar and that on redemption of a Participating Right the holder shall be entitled to have Seventy two British Shares transferred to him instead of a share of surplus assets

(e) At the date of this Agreement the One hundred and sixty four thousand Nominee British shares are held by the Holdings Company as to Eighty six thousand one hundred and four Shares as nominee on behalf of the American Company and as to Seventy seven thousand eight hundred and ninety six shares as nominee on behalf of Mr. Dewar

(f) The parties hereto have agreed to alterations being made in the conditions of the Participating Rights and in the By-Laws as to Voting and the By-Laws as to Directors and otherwise in their mutual rights and obligations as hereinafter appearing

Now it is hereby declared and agreed by and between the parties hereto as follows:

1 The Holdings Company shall forthwith convene an Extraordinary General Meeting for the purpose of passing a Special Resolution to effect an alteration in the Holdings Articles in the terms of the Resolution contained in the Schedule hereto and the American Company and Mr. Dewar shall attend the Meeting in person or by proxy and vote in favour of the Resolution

2. The American Company and Mr. Dewar who hold respectively a majority of the A Shares for the time being issued and a majority of the B Shares for the time being issued hereby consent to the By-Laws as to voting and the By-Laws as to Directors being altered in manner following:
[fol. 5847] (a) Bylaws No. 2 of the Bylaws as to voting is hereby cancelled

(b) The commencing words in Bylaw No. 3 of the Bylaws as to voting down to and including the words "Participating Rights" are hereby cancelled

(c) Bylaws No. 4 and No. 5 of the Bylaws as to voting are hereby cancelled and the following Bylaws are substituted for such cancelled Bylaws respectively:

"4. On a poll taken at any General Meeting of the Company with respect to an ordinary resolution the members of the Company shall have votes in accordance with the following rules.

(i) During the first control period every member of the Company holding A shares shall have four votes for every A share held by him and every member of the Company holding B shares shall have one vote for every B share held by him

(ii) After the termination of the first control period every member of the Company holding B shares shall have four votes for every B share held by him and every member of the Company holding A shares shall have one vote for every A share held by him

5. On a poll taken at any General Meeting of the Company with respect to an extraordinary or special resolution every member of the Company shall have one vote for every share whether an A share or a B share held by him"

(d) Bylaws No. 6 of the Bylaws as to Directors is hereby cancelled and the following Bylaw is substituted for such cancelled bylaw:

"6. Michael Bruce Urquhart Dewar shall not be liable to [fol. 5848] removal from office as an A shareholders' Director of the Company so long as he or a Nominee of his or any Company controlled by him or a Nominee of such Company continue to hold in the aggregate not less than 40,000 shares in British Timken Limited a Company incorporated in England on the 4th day of June 1920."

3. The Holdings Company shall forthwith convene an Extraordinary General Meeting for the purpose of passing an Ordinary Resolution varying the Bylaws as to voting and the Bylaws as to Directors in the manner hereinbefore provided and the American Company and Mr. Dewar shall attend the meeting in person or by proxy and vote in favour of the Resolution

In witness whereof this Agreement has been executed the day and year first above written

The Schedule above referred to

Resolution

That the Articles of Association of the Company be and they are hereby altered in manner following:

1. Article 5 is hereby cancelled and in lieu thereof the following Article shall be substituted for such cancelled Article:

"5. (A) At the date of the adoption of this Article as one of the Articles of Association of the Company the Company holds shares in British Timken Limited a Company incorporated in England (hereinafter referred to as "the British Company") to the number of 200,000 of which 36,000 are held by the Company in absolute ownership (hereinafter referred to as "owned British Shares") and 164,000 are [fol. 5849] held by the Company as nominee (that is bare trustee) for the beneficial owners (hereinafter referred to as "Nominee British Shares")

"(B) The business of the Company will include the holding of the shares in the British Company the management and control of such shares the exercise of voting and other rights in respect of such shares and the receipt and disposal of monies and other benefits receivable in respect of such shares"

"(C) The Company will carry on no business other than the business hereinbefore mentioned without the sanction of a special resolution of the Company in general meeting"

"(D) At the date of the adoption of this Article the Company has created and issued 500 Registered Participating Rights under paragraph C of Article 5 of the original Articles of Association of the Company and these Participating Rights are still outstanding and no further Participating Rights shall be created or issued"

"(E) Every Participating Right now issued and the share in the Company bearing the same distinctive number shall be held together in the same ownership and shall not be transferred or otherwise allowed to fall into separate ownerships"

"(F) A holder of Participating Rights shall be entitled at any time to give notice to the Company requiring it to redeem all or any of the Participating Rights belonging to such holder and thereupon the Company shall redeem the Participating Rights referred to in the notice by transferring to such holder 72 owned British Shares in respect

of each Participating Right redeemed and the Company shall retain owned British Shares to a number sufficient to [fol. 5850] provide for such redemption and shall not incur any debts or liabilities which may prevent the Company from fully completing such redemption

"(G) The owned British Shares which shall become transferable under the last preceding paragraph shall not actually be transferred to the holder of the Participating Rights which are redeemed but shall be retained by the Company and shall become and be nominee British Shares held by the Company as nominee on behalf of the holder of the redeemed Participating Rights"

"(H) i. The whole of the dividends and other benefits derived from the nominee British Shares shall belong to the Beneficial Owners on behalf of whom the shares are held and shall be accounted for to them accordingly"

"ii. The whole of the dividends and other benefits derived from the owned British Shares shall belong to the members of the Company holding Participating Rights pro rata according to the numbers of the Participating Rights held by such members respectively"

"(I) The beneficial owner or owners of 60,000 shares in the British Company being either owned British Shares or Nominee British Shares or partly one and partly the other of such classes of shares shall be entitled to the rights following and for this purpose a holder of Participating Rights shall be deemed to be the beneficial owner of 72 owned British Shares"

"(i) The Beneficial Owner or Owners aforesaid shall [fol. 5851] be entitled at any time or times to nominate one person to act as a Director of the British Company and to cancel such nomination"

"(ii) The Beneficial Owner or Owners aforesaid shall be entitled once in each calendar year at their own expense to employ a Chartered Accountant who shall be at liberty to examine the books of account and records of the British Company and to take notes and extracts therefrom"

"(K) The Company will exercise or cause to be exercised any Shareholder's or Director's voting rights belonging to it or under its control and at the like expense will execute and do such other deeds acts and things within its power as may be necessary in order (a) to procure the appointment of such nominee as such Director (b) to maintain him

in office until such nomination is cancelled (c) when a nomination is cancelled to terminate the appointment of such nominee as such Director (d) to procure for such Chartered Accountant the facilities required to enable him to make such examination and take such notes and extracts and the Company will maintain the appointment of a Director whose nomination is not cancelled and will be obliged to procure the facilities aforesaid only so long as the beneficial owner or owners aforesaid continue to be beneficial owner or owners of 60,000 shares in the British Company and a beneficial owner aforesaid shall not be entitled to nominate or join in nominating a Director of the British Company so long as there is a Director of the British Company nominated by him or whom he has joined in nominating and any person nominated under this Article [fol. 5852] to act as a Director of the British Company shall himself acquire the shares in the British Company required to qualify him as such Director"

[fol. 5854] TIMKEN HOLDINGS LIMITED

Special Resolution Passed 16th June, 1943

At an Extraordinary General Meeting of the above-named Company duly convened and held at 65, Cheston Road, Aston, in the City of Birmingham, on Wednesday, the 16th day of June, 1943, the following Resolution was duly passed as a Special Resolution:

RESOLUTION

That the Articles of Association of the Company be and they are hereby altered in manner following:

1. Article 5 is hereby cancelled and in lieu thereof the following Article shall be substituted for such cancelled Article:—

"5. (A) At the date of the adoption of this Article as one of the Articles of Association of the Company the Company holds shares in British Timken Limited a Company incorporated in England (hereinafter referred to as 'the British Company') to the number of 200,000 of which 36,000 are held by the Company in absolute ownership (hereinafter referred to as 'owned British Shares') and 164,000 are held by the Company as nominees (that is 'bare trustee') for the beneficial owners (hereinafter referred to as 'Nominee British Shares').

(B) The business of the Company will include the holding of the shares in the British Company the management and control of such shares, the exercise

of voting and other rights in respect of such shares and the receipt and disposal of moneys and other benefits receivable in respect of such shares.

(C) The Company will carry on no business other than the business hereinbefore mentioned without the sanction of a Special Resolution of the Company in General Meeting.

(D) At the date of the adoption of this Article the Company has created and issued 500 Registered Participating Rights under paragraph C of Article 5 of the original Articles of Association of the Company and [fol. 5855] these Participating Rights are still outstanding and no further Participating Rights shall be created or issued.

(E) Every Participating Right now issued and the share in the Company bearing the same distinctive number shall be held together in the same ownership and shall not be transferred or otherwise allowed to fall into separate ownerships.

(F) A holder of Participating Rights shall be entitled at any time to give notice to the Company requiring it to redeem all or any of the Participating Rights belonging to such holder and thereupon the Company shall redeem the Participating Rights referred to in the notice by transferring to such holder 72 owned British Shares in respect of each Participating Right redeemed and the Company shall retain owned British Shares to a number sufficient to provide for such redemption and shall not incur any debts or liabilities which may prevent the Company from fully completing such redemption.

(G) The owned British Shares which shall become transferable under the last preceding paragraph shall not actually be transferred to the holder of the Participating Rights which are redeemed but shall be retained by the Company and shall become and be Nominee British Shares held by the Company as nominee on behalf of the holder of the redeemed Participating Rights.

(H) (i) The whole of the dividends and other benefits derived from the Nominee British Shares shall belong to the Beneficial Owners on behalf of whom the shares are held and shall be accounted for to them accordingly.

(ii) The whole of the dividends and other benefits derived from the owned British Shares shall belong to the members of the Company holding Participating Rights pro rata according to the numbers of the Participating Rights held by such members respectively.

(I) The Beneficial Owner or Owners of 60,000 shares in the British Company being either owned British Shares or Nominee British Shares or partly one and partly the other of such classes of shares shall be entitled to the rights following and for this purpose a holder of Participating Rights shall be deemed to be beneficial owner of 72 owned British Shares.

(i) The Beneficial Owner or Owners aforesaid shall be entitled at any time or times to nominate one person to act as a Director of the British Company and to cancel such nomination.

(ii) The Beneficial Owner or Owners aforesaid shall be entitled once in each calendar year at their [fol. 5856] own expense to employ a Chartered Accountant who shall be at liberty to examine the books of account and records of the British Company and to take notes and extracts therefrom.

(K) The Company will exercise or cause to be exercised any shareholder's or Director's voting rights belonging to it or under its control and at the like expense will execute and do such other deeds, acts and things within its power as may be necessary in order (a) to procure the appointment of such nominee as such Director (b) to maintain him in office until such nomination is cancelled (c) when a nomination is cancelled to terminate the appointment of such nominee as such Director (d) to procure for such Chartered Accountant the facilities required to enable him to make such examination and take such notes and extracts and the Company will maintain the appointment of a Director whose nomination is not cancelled and will be obliged to procure the facilities aforesaid only so long as the Beneficial Owner or Owners aforesaid continue to be Beneficial Owner or Owners of 60,000 shares in the British Company and a Beneficial Owner aforesaid shall not be entitled to nominate or join in nominating a Director of the British Company so long as there is a Director of the British Company

nominated by him or whom he has joined in nominating and any person nominated under this Article to act as a Director of the British Company shall himself acquire the shares in the British Company required to qualify him as such Director."

M. B. U. Dewar, Director, Chairman of Meeting.

[fol. 5858] CERTIFICATE OF INCORPORATION

No. 304640

THE COMPANIES ACT, 1929

Company Limited by Shares

MEMORANDUM OF ASSOCIATION OF TIMKEN HOLDINGS LIMITED

1. The name of the Company is "Timken Holdings Limited."

2. The registered office of the Company will be situated in England.

3. The objects for which the Company is established are:

(A) To carry on business as an Investment and Trust Company and engage in all kinds of financial and other transactions and in particular but without prejudice to the generality of the foregoing objects, to enter into and carry into effect with or without modification an Agreement in the terms of a draft expressed to be made between Michael Bruce Urquhart Dewar of the one part and this Company of the other part and identified by the signature of Andrew Jameson

Matthews Duncan a Solicitor of the Supreme Court being an agreement for the acquisition of certain shares in British Timken Limited and to hold, manage or control such shares or any of them and exercise [fol. 5859] voting and other rights and receive and dispose of monies and other benefits receivable in respect of such shares or any of them.

(B) To manufacture, build, repair and deal in all parts of and accessories to motor cars and vehicles of every description, cycles, engines, chassis and bodies, and aircraft, including electric motors and other electric appliances, and all kinds of machinery, tools, appliances and materials for use in relation to the manufacture, running, storage and repair of motor cars, vehicles, cycles, engines, chassis, bodies and aircraft respectively, or the parts or accessories thereof respectively, and to apply for and take out letters patent in connection therewith.

(C) To supply and deal in petrol and other volatile oils and spirits, and all kinds of lubricating oils and other lubricants and all kinds of fuel for developing locomotive power.

(D) To manufacture, supply and deal in all kinds of personal and other equipment for the use of drivers, tourists and the public generally, for use in connection with motor cars, aircraft, including (without prejudice to the generality of this clause) wearing apparel and maps and guide books.

(E) To carry on business as mechanical and electrical engineers, and to buy, sell, manufacture, repair and deal in machinery, metals, implements and hardware of all kinds.

(F) To acquire by grant, purchase, licence, or exchange, and to use, work and sell or otherwise turn to account any patent or patent rights, brevets d'invention, or other rights which may be deemed to be in the interests of the Company.

(G) To purchase, take on lease, or otherwise acquire and undertake, all or any part of the business, property and liabilities of any person or company carrying on any business which the Company is authorised to carry on, or possessed of property suitable for the purposes of the Company, and to acquire, hold and deal in the

shares or securities of any such company or of any other company whatsoever.

(H) To remunerate any person or company for services rendered or to be rendered, in placing or assisting to place, or guaranteeing the placing of any of the shares of the Company's capital, or any debentures or other securities of the Company, or in or [fol. 5860] about the formation or promotion of the Company, or the conduct of its business, or of any other company promoted or financed by this Company.

(I) To purchase, take on lease, or in exchange, hire or otherwise acquire, any real or personal property and any rights or privileges which the Company may think necessary or convenient for the purposes of its business, and to construct, maintain and alter any buildings or works necessary or convenient for the purposes of the Company.

(J) To borrow or raise money on mortgage, debentures or debenture stock, or in such other manner as the Company shall think fit, and to charge all or any of the Company's property or assets, present or future, including its uncalled capital, and to lend money on such terms as to repayment or otherwise as may be necessary or convenient for the purposes of the Company.

(K) To subscribe for, take, purchase, or otherwise acquire and hold, shares or other interests in, or securities of, any other company having objects altogether or in part similar to those of this Company, or carrying on any business capable of being conducted so as directly or indirectly to benefit this Company, or to promote such company.

(L) To pay all expenses of and in connection with the incorporation or promotion of this or any other company which this Company is hereinbefore authorised to promote, and the obtaining the subscription of any shares or securities thereof, and procuring or obtaining settlements and quotations upon the London or Foreign, Colonial or Provincial Stock Exchanges of any such shares or securities.

(M) To draw, make, accept, indorse, discount, execute, and issue promissory notes, bills of exchange, bills of lading, warrants, debentures or other securities of the Company.

(N) To sell or dispose of the undertaking of the Company or any part thereof in such manner and for such consideration as the Company may think fit, and in particular for shares (either fully or partly paid up), debentures or securities of any other company, and to improve, manage, develop, exchange, lease, dispose of, turn to account or otherwise deal with all or any part of the property and rights of the Company. [fol. 5861] (O) To distribute among the Members of the Company in kind any property of the Company, and in particular any shares, debentures, or securities of other companies belonging to this Company, or of which this Company may have the power of disposing.

(P) To act as Executors, Administrators, Trustees and Nominees and undertake and execute any Trusts and Duties of Representation and carry on Executorship, Administration, Trustee or Nominee business of any kind and either gratuitously or otherwise.

(Q) To do all or any of the above things in any part of the world and either as principals, agents, contractors, trustees or nominees or otherwise, and either alone or with others, and either through agents, contractors, trustees or nominees or otherwise.

(R) To do all such other things as are incidental or the Company may think conducive to the attainment of the above objects or any of them.

4. The liability of the Members is limited.

5. The share capital of the Company is £125, divided into 1,250 "A" shares of 1/- each and 1,250 "B" shares of 1/- each.

The shares constituting the original share capital of the Company shall confer upon the holders thereof respectively the rights and privileges expressed to be attached thereto by or pursuant to the Articles of Association of the Company filed with this Memorandum of Association.

Subject as aforesaid any new shares which from time to time may be created, may from time to time be issued with such preferred, deferred or other special rights, or such restrictions, whether in respect of dividend, voting, return of capital or otherwise, as the Company may from time to

time by Special Resolution determine and the rights or privileges for the time being attached to any class of shares in the original or any increased capital may be modified or abrogated with such consent or sanction as is provided by the Articles of Association of the Company for the time being.

We, the several persons whose names, addresses, and descriptions are subscribed are desirous of being formed into a Company in pursuance of this Memorandum of Association, and we respectively agree to take the number of shares in the capital of the Company set opposite to our respective names.

[fol. 5863] THE COMPANIES ACT, 1929

COMPANY LIMITED BY SHARES

ARTICLES OF ASSOCIATION

of

TIMKEN HOLDINGS LIMITED

PRELIMINARY

1. The regulations in Table "A" in the first schedule to the Companies Act, 1929, shall not apply to the Company.

2. In these presents, if not inconsistent with the subject or context, the words standing in the first column of the table next hereinafter contained shall bear the meanings

set opposite to them respectively in the second column thereof.

Words	Meanings
The Statutes.	The Companies Act, 1929, and every other Act for the time being in force concerning joint stock companies and affecting the Company.
The Act.	The Companies Act, 1929.
These Presents.	The Articles of Association, as originally framed, or as from time to time altered by special resolution.
The Office.	The Registered Office of the Company.
[fol. 5864] The Seal.	The Common Seal of the Company.
The United Kingdom.	Great Britain and Northern Ireland.
Year.	Year from the 1st January to the 31st December inclusive.
In Writing.	Written, or expressed by any substitute for writing, or partly one and partly the other.
Writing under hand.	In the case of a corporation a writing signed on behalf of the Corporation by its secretary or some other person duly authorised to sign on behalf of the Corporation.

And the expression "Secretary" shall include a temporary or assistant Secretary and any person appointed by the Directors to perform any of the duties of the Secretary.

Save as aforesaid any words or expressions defined in the Statutes shall, if not inconsistent with the subject or context, bear the same meaning in these presents.

Private Company

3. The Company is a Private Company and accordingly:

(A) The right to transfer shares in the Company shall be restricted in manner hereinafter appearing.

(B) The number of members of the Company (not including persons who are in the employment of the Company, and persons who, having been formerly in the employment of the Company, were, while in that employment, and have continued after the determination of that employment to be members of the Company) shall be limited to fifty; provided that where two or more persons hold one or more shares in the Company jointly they shall for the purposes of this paragraph be treated as a single member.

(C) No invitation shall be given to the public to subscribe for any shares or debentures of the Company.

4. (A) The original share capital of the Company is £125 divided into 1,250 "A" Shares to be numbered 1 to 1,250 both inclusive and 1,250 "B" Shares to be numbered 1,251 to 2,500 both inclusive all of 1/- each.

(B) The "A" Shares and the "B" Shares confer upon the holders thereof respectively the special rights or privileges as regards voting, appointing Directors and otherwise conferred by or pursuant to these presents, but except as otherwise provided by or pursuant to these presents the "A" Shares and the "B" Shares rank pari passu as a single class of Ordinary Shares and the expression "Ordinary Shares" as hereinafter used means and includes both the "A" Shares and the "B" Shares.

5. (A) Under the Agreement mentioned in Clause 3 (A) of the Company's Memorandum of Association the Company is to agree to purchase or acquire as nominees, i.e., bare trustees on behalf of the transferors 125,000 shares of £1 each fully paid in a Company incorporated in England and named British Timken Limited and the business of the Company will include the holding of the shares so purchased or acquired, the management and control of such shares, the exercise of voting and other rights in respect of such shares, and the receipt and disposal of monies and other benefits receivable in respect of such shares.

(B) The Company will carry on no business other than the business hereinbefore mentioned without the sanction of a Special Resolution of the Company in General Meeting.

(C) The Company from time to time as required will create registered Participating Rights (hereinafter referred to as "the Participating Rights") to a number not exceeding in all 2,500 and the Participating Rights will bear consecutive distinctive numbers from 1 to 2,500 both inclusive and a Participating Right shall be issued only to the member holding the share bearing the same distinctive number and every member to whom a Participating Right is issued will receive a certificate as to the Participating Rights to which he is entitled.

(D) Every member of the Company from whom the Company receives by purchase or otherwise in absolute ownership 50 of the said shares in British Timken Limited will receive from the Company one Participating Right

provided that he holds the share in the Company bearing the same distinctive number and that Participating Right and the share bearing the same distinctive number shall be held together in the same ownership and shall not be transferred or otherwise allowed to fall into separate ownerships.

[fol. 5866] (E) If and when a holder of Participating Rights has become entitled under the Articles in the Section of these presents headed "Transfer of Shares" to transfer any shares with the connected Participating Rights to any person on a bona fide sale then at any time during the period of one month during which he is so entitled such holder shall be entitled to give notice to the Company requiring the Company to redeem all or any of such connected Participating Rights and thereupon the Company shall redeem the Participating Rights referred to in the notice by transferring to the holder at the expense of the holder (and as nearly as possible in kind) a share of the surplus of the assets of the Company over and above the amount of assets required to make provision for the paid up share capital of the Company and the debts and liabilities of the Company if any in the proportion which the redeemed Participating Rights bear to the whole of the Participating Rights for the time being outstanding and except as hereinbefore provided the Participating Rights shall be irredeemable.

Provided Always that the right to give notice to the Company requiring the Company to redeem Participating Rights shall not come into operation unless the prescribed price for the Shares with the connected Participating Rights which the holder has become entitled to transfer shall be such sum as the Auditors of the Company shall by certificate made at the request of the Directors certify to be in their opinion the fair value of the Shares with the connected Participating Rights.

(F) If and when 5% of the Participating Rights which have been granted in connection with the "A" Shares in the Company or 5% of the Participating Rights which have been granted in connection with the "B" Shares in the Company have been redeemed all the Shares in the Capital of the Company shall cease to be "A" Shares or "B" Shares and shall become Ordinary Shares of one class and

all special rights or privileges for the time being attached to either class of shares shall be abrogated.

(G) If and so long as a share in the Company is issued but a Participating Right bearing the same distinctive number as that share has not been issued, the holder of that share shall not be entitled to any share or interest in the profits of the Company nor any right to any share or interest in the surplus of the assets of the Company over and above the amount required to make provision for the paid up share capital of the Company nor any voting or other rights conferred by the share and if and when a Participating Right is redeemed all right to any share or interest in the profits of the Company and all right to any share or interest in the surplus of the assets of the Company over and above the amount required to make provision for the paid up share capital of the Company and all voting and other rights conferred by the share bearing the same distinctive number as the redeemed Participating Right shall be abrogated and at an end.

(H) The holder or holders for the time being of at lease 30% of the Participating Rights for the time being outstanding shall be entitled (i) at any time or times to nominate one person to act as a Director of British Timken Limited and to cancel such nomination and (ii) once in [fol. 5867] each year at their own expense to employ a Chartered Accountant who shall have the privilege of examining the books of account and records of British Timken Limited and taking notes and extracts therefrom and the Company will exercise or cause to be exercised any Shareholder's or Director's voting rights vested in it or under its control and will execute and do such other acts and things within its power as may be necessary in order to procure the appointment of such nominee as a Director of British Timken Limited and maintain him in that office and procure for the said Chartered Accountant the privilege aforesaid so long in the case of a nominee Director as his nomination has not been cancelled and so long in the case of either (i) or (ii) as the holder or holders aforesaid or some of them continue to hold at least 30% of the Participating Rights for the time being outstanding but so long as a Director of British Timken Limited holds office pursuant to a nomination by a holder of Participating Rights under this provision no further nomination can be made

under this provision by that holder or in respect of the Participating Rights in respect of which such Director was nominated and any person nominated to act as a Director of British Timken Limited shall himself acquire the shares necessary to qualify him as such Director.

6. No part of the funds of the Company shall be employed in the purchase of or in loans upon the security of the Company's shares.

Modification of Rights

7. The special rights attached to the "A" shares and the "B" shares respectively may, with the consent in writing under hand of the holders of a majority of the said shares of each class for the time being issued (but not otherwise), be modified or abrogated, and may be so modified or abrogated either whilst the Company is a going concern or during or in contemplation of a winding up. The special rights attached to any other class of shares in the Company's capital at any time issued with special rights may be modified or abrogated either with the consent in writing under hand of the holders of a three-fourths of the shares of the class for the time being issued or with the sanction of an extraordinary resolution passed at a separate general meeting of such holders, but not otherwise. To every separate general meeting of any class of shareholders (whether held pursuant to this article or to any other provision of these presents) all the provisions of these presents relating to general meetings or to the proceedings thereat shall, mutatis mutandis, apply, except that the necessary quorum shall be two persons at least holding or representing by proxy one-tenth of nominal amount of the shares of the class for the time being issued (but so that if at any adjourned meeting of such holders a quorum as above defined is not present, those members who are present shall be a quorum), and that the holders of shares of the class shall, on a poll, have one vote in respect of every share of the class held by them respectively.

[fol. 5868] Shares

8. Except as otherwise authorised by writing under hand of the holders of a majority of the "A" shares for the time

being issued and of the holders of a majority of the "B" shares for the time being issued, no further shares shall be issued unless the further shares so issued shall consist of equal numbers of "A" shares and "B" shares and unless the further "A" shares so issued are issued to the holders of the "A" shares for the time being issued in proportion to the numbers of the "A" shares for the time being held by them respectively and unless the further "B" shares so issued are issued to the holders of the "B" shares for the time being issued in proportion to the numbers of the "B" shares for the time being held by them respectively.

9. Subject to the provisions of the last preceding Article and to any other express provision of these presents the shares shall be at the disposal of the Directors, and they may allot, grant options over, or otherwise dispose of them to such persons, at such times, and on such terms as they think proper. The Directors shall, as regards any allotment of shares, comply with the provisions of the Act, if and so far as such provisions may be applicable thereto.

10. The Company (or the Directors on behalf of the Company) may exercise the powers of paying commissions conferred by the Act. Provided that the rate per cent, or the amount of the commission paid or agreed to be paid shall be disclosed in the manner required by the Act, and shall not exceed 10 per cent. of the price at which the shares are issued. The Company (or the Directors on behalf of the Company may also on any issue of shares pay such brokerage as may be lawful.

11. If any shares of the Company are issued for the purpose of raising money to defray the expenses of the construction of any works or buildings, or the provision of any plant which cannot be made profitable for a lengthened period, the Company (or the Directors on behalf of the Company) may, subject to the conditions and restrictions mentioned in the Act, pay interest on so much of such share capital as is for the time being paid up, and may charge the same to capital as part of the cost of construction of the works, buildings or plant.

12. No person shall be recognized by the Company as holding any share upon any trust, and the Company shall not be bound by or recognize any equitable, contingent, future or partial interest in any share, or any interest in any fractional part of a share, or (except only as by these

presents otherwise provided) any other right in respect of any share, except an absolute right to the entirety thereof in the registered holder.

[fol. 5869] 13. Every person whose name is entered as a member in the register of members shall be entitled without payment to one certificate for all his shares, or upon payment of such sum, not exceeding ls., for every certificate after the first as the Directors shall from time to time determine, to several certificates, each for one or more of his shares. Every certificate shall be issued under the seal, and shall bear the signatures of one or more Directors and the Secretary, and shall specify the shares to which it relates, and the amount paid up thereon. Provided that in the case of a share held jointly by several persons, the Company shall not be bound to issue more than one certificate therefor, and delivery of a certificate for a share to one of several joint holders shall be sufficient delivery to all.

14. If a share certificate be defaced, lost or destroyed, it may be renewed on payment of such fee (if any), not exceeding ls., and on such terms (if any) as to evidence and indemnity as the Directors think fit.

Lien

15. The Company shall have a lien on every share (not being a fully paid share) for all monies, whether presently payable or not, called or payable at a fixed time in respect of such share; and the Company shall also have a first and paramount lien and charge on all shares standing registered in the name of a single member for all the debts and liabilities of such member or his estate to the Company, and that whether the same shall have been incurred before or after notice to the Company of any equitable or other interest in any person other than such member and whether the period for the payment or discharge of the same shall have actually arrived or not, and notwithstanding that the same are joint debts or liabilities of such member or his estate and any other person, whether a member of the Company or not. The Company's lien (if any) on a share shall extend to all dividends payable thereon.

16. The Company may sell, in such manner as the Directors think fit, any shares on which the Company has a lien, but no sale shall be made unless some sum in respect

of which the lien exists is presently payable, nor until the expiration of fourteen days after a notice in writing, stating and demanding payment of the sum presently payable, and giving notice of intention to sell in default, shall have been given to the holder for the time being of the share or the person entitled by reason of his death or bankruptcy to the share.

17. For giving effect to any such sale the Directors may authorise some person to transfer the share sold to the Purchaser thereof.

18. The proceeds of sale shall be applied in or towards payment or satisfaction of the debt or liability in respect whereof the lien exists, so far as the same is presently payable, and any residue shall (subject to a like lien for debts or liabilities not presently payable as existed upon the [fol. 5870] shares prior to the sale) be paid to the person entitled to the shares at the time of the sale. Upon the execution of the transfer by the person authorised by the Directors to transfer the share and by the Purchaser and the delivery to the Company of the executed transfer duly stamped the purchaser shall be registered as the holder of the shares and he shall not be bound to see to the application of the purchase money, nor shall his title to the shares be affected by any irregularity or invalidity in the proceedings in reference to the sale.

Calls on Shares

19. The Directors may from time to time make calls upon the members in respect of any monies unpaid on their shares, and each member shall (subject to receiving at least one month's notice specifying the time or times and place of payment) pay to the Company at the time or times and place so specified the amount called on his shares.

20. A call shall be deemed to have been made at the time when the resolution of the Directors authorising the call was passed.

21. The joint holders of a share shall be jointly and severally liable to pay all calls in respect thereof.

22. If a sum called in respect of a share is not paid before or on the day appointed for payment thereof, the person from whom the sum is due shall pay interest on the sum from the day appointed for payment thereof to the time of actual payment at such rate, not exceeding 10 per cent.

per annum, as the Directors determine, but the Directors shall be at liberty to waive payment of such interest wholly or in part.

23. Any sum which by the terms of issue of a share becomes payable upon allotment or at any fixed date, whether on account of the amount of the share or by way of premium, shall for all the purposes of these presents be deemed to be a call duly made and payable on the date on which, by the terms of issue, the same becomes payable, and in case of non-payment all the relevant provisions of these presents as to payment of interest and expenses, forfeiture or otherwise, shall apply as if such sum had become payable by virtue of a call duly made and notified.

24. The Directors may make arrangements on the issue of shares for a difference between the holders in the amount of calls to be paid, and in the times of payment.

[fol. 5871] 25. The Directors may, if they think fit, receive from any shareholder willing to advance the same, all or any part of the monies uncalled and unpaid upon any shares held by him, and upon all or any of the money so advanced, may (until the same would but for such advance become presently payable), pay interest at such rate not exceeding (unless the Company in general meeting shall otherwise direct) 10 per cent. per annum, as may be agreed upon between the Directors and the shareholder paying such sum in advance.

Transfer of Shares

26. For the purposes of the Articles in this Section of these presents headed "Transfer of Shares" so long as any participating rights are not redeemed and are outstanding all references to shares in the case of a share bearing the same distinctive number as that borne by any outstanding participating right shall mean and include the share together with its connected participating right.

27. Subject to the other provisions of these presents with respect to the transfer of participating rights and shares, any share may at any time be transferred to a person who is already a member or (with the consent in writing under hand of the holders of a majority of the shares for the time being issued other than those held by the transferor) to a person who is not already a member.

28. Except in the case of a transfer of shares expressly authorised by the last preceding article, the right to trans-

fer shares in the Company shall be subject to the following restrictions, in addition to the other provisions of these presents with respect to the transfer of participating rights and shares, namely:

(A) Before transferring or requiring the Company to register a transfer of any shares the person, whether a member of the Company or not, proposing to transfer the same (hereinafter called "a retiring member") shall give a notice in writing (hereinafter called "a transfer notice") to the Company, that he desires to transfer the same. The transfer notice shall state the price per share which the retiring member is willing to accept for the shares comprised therein and shall constitute the Company his agent for the sale of the shares therein mentioned or any of such shares at that price (hereinafter called "the prescribed price") to any member of the Company. A transfer notice once given shall not be revocable except with the consent of the Company during the next 90 days following the day on which the notice is given. Shares of different classes shall not be included in the same transfer notice, [fol. 5872] and a transfer notice which includes shares of different classes may be treated as invalid.

(B) If the Company within a period of 90 days after receiving a transfer notice shall find members (hereinafter called "purchasers") willing to purchase the shares therein mentioned, or any of such shares, and shall give notice in writing thereof to the retiring member, he shall be bound, upon payment of the prescribed price, to transfer the shares mentioned in the transfer notice, or those for which the Company has found purchasers, to the respective purchasers thereof.

(C) Every notice given by the Company under paragraph (B) stating that it has found a purchaser for any shares shall state the name and address of the purchaser and the number of shares agreed to be purchased by him, and the purchase shall be completed at a place and time to be appointed by the Company, not being more than 28 days after the date on which the notice is given.

(D) If in any case a retiring member, after having become bound to transfer any shares to a purchaser,

shall make default in transferring the shares, the Company shall have power to appoint some person to execute a transfer of the shares to the purchaser and upon execution of the transfer by the purchaser and the delivery to the Company of the executed transfer duly stamped the Company may receive the purchase money, and shall thereupon cause the name of the purchaser to be entered in the register as the holder of the shares, and shall hold the purchase money in trust for the retired member. The receipt of the Company for the purchase money shall be a good discharge to the purchaser, and he shall not be bound to see to the application thereof, and after the name of the purchaser has been entered in the register in purported exercise of the aforesaid powers, the validity of the proceedings shall not be questioned by any person.

(E) If the Company shall not within a period of 90 days after receiving a transfer notice find members willing to purchase all the shares mentioned in the transfer notice, and give notice in writing thereof to the retiring member, or if the Company shall within the period aforesaid give to the retiring member notice in writing that the Company has no prospect of finding purchasers for such shares, or any of them, the re- [fol. 5873] tiring member shall at any time within one month after receiving such notice or the expiration of the said period of 90 days (as the case may be) be at liberty (subject only to the power of the Directors to decline to register a transfer hereinafter contained) to transfer the shares, or those for which the Company has not found purchasers, to any person on a bona fide sale of such shares at any price not being less than the prescribed price, but so that before passing any such transfer the Directors may require to be satisfied in such manner as they may reasonably require that the shares included in the transfer notice are being transferred in pursuance of a bona fide sale for the consideration stated in the transfer without any deduction, rebate allowance or benefit whatsoever to the purchaser.

(F) All shares included in a transfer notice shall be offered by the Company in the first instance for sale at the prescribed price to all members holding Ordin-

ary Shares (other than the member giving the transfer notice) on the terms and so that in case of competition the shares so offered shall be sold to the members accepting the offer in proportion (as nearly as may be and without increasing the number sold to any member beyond the number applied for by him) to their existing holdings of Ordinary Shares. All offers of shares under this paragraph shall be made by writing sent through the post in prepaid registered letters addressed to the members at their respective registered addresses as appearing in the register and every such offer shall limit a period of 60 days from the posting of the letters containing the same within which the offer must be accepted or in default will be treated as declined.

29. The legal personal representatives of any deceased member shall be bound at any time after the expiration of six months from the date of his death, if and when called upon in writing by the Directors so to do, either to apply to be themselves registered as holders of or to give a transfer notice in respect of all the shares registered in the name of the deceased member at the date of his death, or such of the same as still remain so registered, and should such legal personal representatives fail either to apply to be so registered or to give such transfer notice within a period of 14 days after being so called upon, they shall be deemed to have given such transfer notice at the expiration of the said period of 14 days and the provisions of these presents shall have effect accordingly.

30. If any member shall be adjudged bankrupt, his trustee in bankruptcy shall be bound forthwith to give to the Company a transfer notice in respect of all the shares registered in the name of the bankrupt member, and in default [fol. 5874] of such transfer notice being given within one month of the bankruptcy, the trustee in bankruptcy shall be deemed to have given such notice at the expiration of the said period of one month and the provisions of these presents shall have effect accordingly.

31. The "prescribed price" for any shares of any class included in a transfer notice given or deemed to be given under either of the two last preceding articles shall be such sum as the auditors of the Company shall by certificate made at the request of the Directors certify to be, in their

opinion, the fair value of a share of that class in the Company.

32. All transfers of shares shall be effected by transfer in writing in the usual common form.

33. The instrument of transfer of a share shall be executed both by the transferor and transferee, and the transferor shall be deemed to remain the holder of the share until the name of the transferee is entered in the register of members in respect thereof.

34. The Directors may, in their discretion, and without assigning any reason therefor, decline to register any transfer of shares not being a transfer expressly authorised by these presents.

35. The Directors may also decline to recognize any instrument of transfer, unless

(A) Such fee, not exceeding 2s. 6d., as the Directors may from time to time require is paid to the Company in respect thereof; and

(B) The instrument of transfer is accompanied by the certificate of the shares to which it relates, and such other evidence as the Directors may reasonably require to show the right of the transferor to make the transfer.

36. The register of transfers may be closed at such times and for such period as the Directors may from time to time determine, provided always that it shall not be closed for more than thirty days in any year.

37. There shall be paid to the Company in respect of the registration of any probate, letters of administration, certificate of marriage or death, power of attorney or other document relating to or affecting the title to any shares such fee, not exceeding 2s. 6d., as the Directors may from time to time require or prescribe.

[fol. 5875] Transmission of Shares

38. In case of the death of a shareholder the survivors or survivor where the deceased was a joint holder, and the executors or administrators of the deceased where he was a sole holder, shall be the only persons recognised by the Company as having any title to his shares, but nothing herein contained shall release the estate of a deceased joint

holder from any liability in respect of any share jointly held by him.

39. The executors or administrators of a deceased sole holder of shares shall be entitled upon such evidence as to their title being produced as may from time to time be required by the Directors and upon their claiming such registration by notice in writing to the Company, to be registered themselves as holders of the shares of the deceased member. They shall also be entitled, unless and until they shall have been so registered themselves and subject to the restrictions on transfer of shares hereinbefore contained, to sell and transfer the shares of the deceased member.

40. The Trustee in bankruptcy of a member becoming bankrupt shall not be entitled to be registered himself as holder of the shares of the bankrupt member but shall be entitled, subject to the restrictions on transfers of shares hereinbefore contained, to sell and transfer the same.

41. A person becoming entitled to a share in consequence of the death or bankruptcy of a member shall be entitled to receive and may give a discharge for all dividends and other money payable in respect of the share, but he shall not be entitled to receive notices of or to attend or vote at meetings of the Company of save as aforesaid to any of the rights or privileges of a member unless and until he shall have become a member in respect of the share.

Forfeiture of Shares

42. If a member fails to pay any call or instalment of a call on the day appointed for payment thereof, the Directors may at any time thereafter, during such time as any part of such call or instalment remains unpaid, serve a notice on him requiring payment of so much of the call or instalment as is unpaid, together with any interest and expenses which may have accrued.

43. The notice shall name a further day on or before which and the place where the payment required by the notice is to be made, and shall state that in the event of non-payment at or before the time and at the place appointed the shares on which the call was made will be liable to be forfeited.

[fol. 5876] 44. If the requirements of any such notice as aforesaid are not complied with any share in respect of

which such notice has been given may at any time thereafter before payment of all calls and interest and expenses due in respect thereof has been made be forfeited by a resolution of the Directors to that effect.

45. A forfeited share may be sold, re-allotted or otherwise disposed of, either to the person who was before forfeiture the holder thereof or entitled thereto, or to any other person, upon such terms and in such manner as the Directors shall think fit, and at any time before a sale or disposition the forfeiture may be cancelled on such terms as the Directors think fit.

46. A shareholder whose shares have been forfeited shall cease to be a member in respect of the forfeited shares, but shall notwithstanding the forfeiture remain liable to pay to the Company all monies which at the date of forfeiture were presently payable by him to the Company in respect of the shares, with interest thereon at seven per cent. per annum from the date of forfeiture until payment.

47. A statutory declaration in writing that the declarant is a Director of the Company and that a share has been duly forfeited on a date stated in the declaration shall be conclusive evidence of the facts therein stated as against all persons claiming to be entitled to the share. The Company may receive the consideration (if any) given for the share on any sale or disposal thereof and the Directors may authorise some person to transfer the share to the person to whom the share is sold or disposed of and upon the execution of the transfer by the transferee and the delivery to the Company of the executed transfer duly stamped the transferee shall thereupon be registered as the holder of the share and shall not be bound to see to the application of the purchase money (if any), nor shall his title to the share be affected by any irregularity or invalidity in the proceedings in reference to the forfeiture, sale, or disposal of the share.

Increase of Capital

48. The Company in general meeting from time to time with the sanction in writing under hand of the holders of a majority of the "A" shares for the time being issued, and the holders of a majority of the "B" shares for the time being issued (but not otherwise), may increase its capital by such sum to be divided into shares of such classes

and amounts as the resolution of the General Meeting shall prescribe.

49. The new shares shall be subject to the same provisions with reference to payment of calls, lien, transfer, transmission, forfeiture and otherwise, as the shares in the present capital.

[fol. 5877] Alterations of Capital

50. The Company in general meeting with the sanction in writing under hand of the holders of a majority of the "A" shares for the time being issued and of the holders of a majority of the "B" shares for the time being issued (but not otherwise) may by ordinary resolution—

(A) Consolidate and divide all or any of its share capital into shares of larger amount than its existing shares.

(B) Cancel any shares which, at the date of the passing of the resolution, have not been taken, or agreed to be taken, by any person, and diminish the amount of its capital by the amount of the shares so cancelled.

(C) Sub-divide its shares, or any of them, into shares of smaller amount than is fixed by the Memorandum of Association (subject, nevertheless, to the provisions of the Act), and so that the resolution whereby any share is sub-divided may with the sanction aforesaid determine that, as between the holders of the shares resulting from such sub-division, one or more of the shares shall have any such preferred or other special rights, or shall have such deferred rights, or shall be subject to such restrictions as compared with the others as the Company has power to attach to unissued or new shares.

And may by special resolution—

(D) Reduce its capital in any manner authorised by law.

General Meetings

51. A General Meeting shall be held in every year, at such time (not more than fifteen months after the holding of the last preceding general meeting) and place as may be determined by the Directors. The general meetings referred to

in this article shall be called ordinary meetings. All other general meetings shall be called extraordinary meetings.

52. The Directors may call an extraordinary meeting whenever they think fit, and extraordinary meetings may also be convened on such requisition; or in default may be convened by such requisitionists, as prescribed by the Act.

Notice of General Meetings

53. Subject to the provisions of the Act relating to special resolutions, seven days' notice at the lease (inclusive of the day on which the notice is served or deemed to be [fol. 5878] served and of the day for which the notice is given) specifying the place, the day, and the hour of meeting, and in case of special business, the general nature of such business, shall be given in manner hereinafter mentioned to such members as are, under the provisions herein contained, entitled to receive notices from the Company. With the consent in writing under hand of all the members entitled to receive notices from the Company, a meeting may be convened by a shorter notice and in such manner as such members may think fit.

54. The accidental omission to give notice of the meeting to, or the non-receipt of such notice by, any member, shall not invalidate the proceedings at any general meeting.

Proceedings at General Meetings

55. All business shall be deemed special that is transacted at an extraordinary meeting, and also all business that is transacted at an ordinary meeting, with the exception of sanctioning dividends, the consideration of the accounts and balance sheet and the ordinary reports of the Directors and Auditors, the election of Auditors and other officers in the place of those retiring, and the fixing of the remuneration of the Auditors.

56. No business shall be transacted at any general meeting unless a quorum is present when the meeting proceeds to business. Two members present in person shall be a quorum for all purposes.

57. If within 15 minutes from the time appointed for the meeting a quorum is not present, the meeting, if convened on the requisition of members, shall be dissolved. In any other case it shall stand adjourned to the same day in the next week, at the same time and place, and if at such ad-

journed meeting a quorum is not present within fifteen minutes from the time appointed for holding the meeting, the meeting shall be dissolved.

58. The chairman (if any) of the Board of Directors shall preside as chairman at every general meeting of the Company. If there be no such chairman, or if at any meeting he be not present within fifteen minutes after the time appointed for holding the meeting, or be unwilling to act as chairman, the members present shall choose some Director, or if no Director be present, or if all the Directors present decline to take the chair, they shall choose some member present to be chairman.

59. The chairman may, with the consent of any meeting at which a quorum is present (and shall if so directed by the meeting) adjourn the meeting from time to time and from place to place, but no business shall be transacted at any adjourned meeting except business which might lawfully have been transacted at the meeting from which the adjournment took place. When a meeting is adjourned for ten days or more, notice of the adjourned meeting shall be given as in the case of an original meeting. Save as afore- [fol. 5879] said, it shall not be necessary to give any notice of an adjournment or of the business to be transacted at an adjourned meeting.

60. At any general meeting a resolution put to the vote of the meeting shall be decided on a show of hands unless a poll is (before or on the declaration of the result of the show of hands) demanded by some member present in person or by proxy and entitled to vote. Unless a poll is so demanded, a declaration by the chairman that a resolution has been carried, or carried unanimously, or by a particular majority, or lost or not carried by a particular majority, and an entry to that effect in the minute book shall be conclusive evidence of the fact without proof of the number or proportion of the votes in favour of or against such resolution.

61. If a poll is duly demanded, it shall be taken in such manner as the chairman may direct, and the result of a poll shall be deemed to be the resolution of the meeting at which the poll was demanded.

62. In the case of an equality of votes, whether on a show of hands or on a poll, the chairman of the meeting at

which the show of hands takes place or at which the poll is demanded shall not be entitled to a second or casting vote.

63. A poll demanded on the election of a chairman or on a question of adjournment shall be taken forthwith. A poll demanded on any other question shall be taken at such time and place as the chairman directs.

64. The demand for a poll shall not prevent the continuance of a meeting for the transaction of any business other than the question on which the poll has been demanded.

Votes of Members

65. The Subscribers of the Memorandum of Association of the Company by writing under hand may adopt by-laws prescribing the rights of attending and voting at General Meetings of the Company to be conferred by or attached to the different classes of shares in the Company's share capital, and the Company in General Meeting with the consent in writing under hand of the holders of a majority of the "A" shares for the time being issued, and the holders of a majority of the "B" shares for the time being issued, may by ordinary resolution adopt new by-laws for the foregoing purposes and from time to time rescind or vary any such by-laws. Any by-laws so adopted and for the time being in force shall be as effective and binding upon the Company and all its members as though the provisions thereof were incorporated in these presents. Subject to the provisions of any by-laws of the Company adopted pursuant to this article and for the time being in force and the provisions of [fol. 5880] these presents with respect to participating rights, on a show of hands every member who (being an individual) is present in person or (being a corporation) is present by a proxy not being himself a member, shall have one vote, and on a poll every member who is present in person or by proxy shall have one vote for every share of which he is the holder.

66. In the case of joint holders of a share the vote of the senior who tenders a vote, whether in person or by proxy, shall be accepted to the exclusion of the votes of the other joint holders, and for this purpose seniority shall be determined by the order in which the names stand in the register of members.

67. A member of unsound mind, or in respect of whom an order has been made by any Court having jurisdiction in

lunacy, may vote, whether on a show of hands or on a poll, by his committee, curator bonis, or other person in the nature of a committee or curator bonis appointed by such Court, and such committee, curator bonis, or other person may on a poll vote by proxy.

68. No member shall be entitled to vote at any general meeting unless all calls or other sums presently payable by him in respect of shares in the Company have been paid.

69. On a poll votes may be given either personally or by proxy.

70. The instrument appointing a proxy shall be in writing under the hand of the appointer or of his attorney duly authorized in writing, or if the appointer is a corporation either under the common seal or under the hand of an officer or attorney so authorized.

71. No person shall act as a proxy unless either he is entitled on his own behalf to be present and vote at the meeting at which he acts as proxy or he is appointed to act at that meeting as proxy for a corporation.

72. The instrument appointing a proxy and the power of attorney or other authority (if any) under which it is signed, or a notarially certified copy of such power or authority, shall be deposited at the office not less than 48 hours before the time appointed for holding the meeting or adjourned meeting at which the person named in the instrument proposes to vote, and in default the instrument of proxy shall not be treated as valid. No instrument appointing a proxy shall be valid after the expiration of 12 months from the date named in it as the date of its execution.

73. An instrument of proxy may be in the following form, or in any other form which the Directors shall approve.

[fol. 5881] Timken Holdings Limited

I, —— ——, of —— ——, being a member of the above named Company hereby appoint —— ——, of —— ——, or failing him —— ——, of —— ——, as my proxy to vote for me, and on my behalf, at the ordinary (or extraordinary or adjourned as the case may be) general meeting of the Company to be held on the —— day of ——, 19—, and at any adjournment thereof.

As Witness my hand this —— day of ——, 19—.

74. A vote given in accordance with the terms of an instrument of proxy shall be valid, notwithstanding the previous death or insanity of the principal or revocation of the proxy, or of the authority under which the proxy was executed, or the transfer of the share in respect of which the proxy is given, provided that no intimation in writing of such death, insanity, revocation or transfer shall have been received by the Company at the office before the commencement of the meeting or adjourned meeting at which the proxy is used.

Directors

75. The first Directors shall be appointed by an instrument in writing under the hands of the subscribers of the Memorandum of Association of the Company, and such subscribers may appoint any one or more of their number to be first Directors.

76. The Subscribers of the Memorandum of Association of the Company by writing under hand may adopt by-laws prescribing the maximum and minimum number of directors, and prescribing and regulating the appointment, removal and remuneration of the directors, and if thought fit their retirement by rotation or otherwise, and the Company in General Meeting with the sanction in writing under hand of the holders of a majority of the "A" shares for the time being issued and of the holders of a majority of the "B" shares for the time being issued, may by ordinary resolution adopt new by-laws for the foregoing purposes, and from time to time rescind or vary any such by-laws. Any by-laws so adopted and for the time being in force shall be as effective and binding upon the Company and all its members as though the provisions thereof were incorporated in these presents, and so long as any such by-laws are in force directors shall only be appointed and removed from office and be subject (if at all) to retirement by rotation or otherwise as thereby provided.

77. It shall not be necessary for a Director to hold any share qualification.

78. If and whenever there are no by-laws in force adopted pursuant to the last preceding article, the number of the directors shall not be less than three and the Company in [fol. 5882] General Meeting may by ordinary resolution appoint directors and fix their remuneration and by extraordinary resolution may remove any director from office.

79. The office of a Director shall be vacated in any of the following events, namely:—

(A) If (subject as regards a Managing Director to the provisions of any contract between him and the Company) he resign his office by writing under his hand left at the office.

(B) If he become bankrupt or compound with his creditors.

(C) If he be found lunatic or become of unsound mind.

(D) If he be incapacitated by ill-health from performing his duties for a continuous period of six months, and the Directors resolve that his office be vacated.

(E) If he be convicted of an indictable offence.

80. A Director may hold any other office or place of profit under the Company (other than the office of Auditor) in conjunction with his office of Director, and no Director or intending Director shall be disqualified by his office from contracting with the Company, either with regard to his tenure of any such other office or place of profit, or as vendor, purchaser or otherwise, nor shall any such contract, or any contract or arrangement entered into by or on behalf of the Company in which any Director is in any way interested, be liable to be avoided, nor shall any Director so contracting or being so interested be liable to account to the Company for any profit realized by any such contract or arrangement by reason of such Director holding that office, or of the fiduciary relation thereby established, but the nature of his interest shall be disclosed by him at the meeting of the Directors at which the contract or arrangement is first taken into consideration, if his interest then exists, or in any other case at the first meeting of the Directors after the acquisition of his interest as provided by the Act. Provided, nevertheless, that a Director shall not vote in respect of any contract or arrangement in which he is so interested, and if he shall do so his vote shall not be counted, but this prohibition shall not apply to any arrangement for giving any Director any security or indemnity in respect of money lent by him to or obligations undertaken by him for the benefit of the Company, nor to any contract by a Director to subscribe for or underwrite

shares or debentures of the Company, and it may at any time be suspended or relaxed to any extent, and either generally or in respect of any particular contract, arrangement or transaction, by extraordinary resolution of the Company.

[fol. 5883] Powers of Directors

81. The business of the Company shall be managed by the Directors, who may pay all expenses incurred in getting up and registering the Company and may exercise all such powers of the Company as are not by the statutes or by these presents required to be exercised by the Company in general meeting, subject nevertheless to any regulations of these presents, to the provisions of the statutes, and to such regulations, being not inconsistent with the aforesaid regulations or provisions, as may be prescribed by extraordinary resolution of the Company, but no regulation so made by the Company shall invalidate any prior act of the Directors which would have been valid if such regulation had not been made. The general powers given by this article shall not be limited or restricted by any special authority or power given to the Directors by any other article.

82. The Directors may establish any local boards or agencies for managing any of the affairs of the Company, either in the United Kingdom or elsewhere, and may appoint any persons to be members of such local boards, or any managers or agents, and may fix their remuneration, and may delegate to any local board, manager or agent any of the powers, authorities and discretions vested in the Directors, with power to sub-delegate, and may authorise the members of any local board, or any of them, to fill any vacancies therein, and to act notwithstanding vacancies, and any such appointment or delegation may be made upon such terms and subject to such conditions as the Directors may think fit, and the Directors may remove any person so appointed, and may annul or vary any such delegation, but no person dealing in good faith and without notice of any such annulment or variation shall be affected thereby.

83. The Directors may from time to time and at any time by power of attorney under the seal appoint any company, firm or person or any fluctuating body of persons, whether nominated directly or indirectly by the Directors, to be the attorney or attornies of the Company for such purposes and with such powers, authorities and discretions (not exceed-

ing those vested in or exercisable by the Directors under these presents) and for such period and subject to such conditions as they may think fit, and any such power of attorney may contain such provisions for the protection and convenience of persons dealing with any such attorney as the Directors may think fit and may also authorise any such attorney to sub-delegate all or any of the powers, authorities and discretions vested in him.

84. The Company may exercise the powers conferred by the Act with regard to having an official seal for use abroad and for keeping Dominion registers and such powers shall be vested in the Directors.

[fol. 5884] 85. The Directors may exercise all the powers of the Company to borrow money, and to mortgage or charge its undertaking, property and uncalled capital, and to issue bonds, debentures, debenture stock, and other securities. Provided that no bonds, debentures, debenture stock or other securities in the nature of loan capital shall be issued without the sanction in writing under hand of the holders of a majority of the "A" shares for the time being issued and of the holders of a majority of the "B" shares for the time being issued, but so that nothing herein contained shall be held to resfrict the power of the Directors to obtain (without such sanction) temporary loans from the Company's bankers and others in the ordinary course of business or to create mortgages or charges upon the Company's undertaking or property and to issue debentures or other securities for securing the same.

86. All cheques, promissory notes, drafts, bills of exchange, and other negotiable or transferable instruments, and all receipts for money paid to the Company, shall be signed, drawn, accepted, endorsed, or otherwise executed, as the case may be, in such manner as the Directors shall from time to time by resolution determine.

Managing Director

87. The Directors may from time to time appoint one or more of their body to the office of Managing Director for such period and on such terms as they think fit. Provided that a Managing Director shall ipso facto vacate office as such if he cease from any cause to be a Director, or (subject to the terms of any contract between him and the Company) if the Directors resolve that his term of office as Managing Director be determined.

88. A Managing Director shall receive such remuneration (whether by way of salary, commission, or participation in profits, or partly in one way and partly in another) as the Directors may determine, but so that such remuneration shall not exceed such rate or amount as from time to time shall be sanctioned by writing under hand of the holders of a majority of the "A" shares for the time being issued and of the holders of a majority of the "B" shares for the time being issued.

89. The Directors may entrust to and confer upon a Managing Director any of the powers exercisable by them as Directors upon such terms and conditions and with such restrictions as they think fit, and either collaterally with or to the exclusion of their own powers, and may from time to time revoke, withdraw, alter or vary all or any of such powers.

Proceedings of Directors

90. The Directors may meet together for the dispatch of business, adjourn and otherwise regulate their meetings [fol. 5885] as they think fit. A director may, and the Secretary on the requisition of a Director shall, at any time summon a meeting of the Directors. It shall not be necessary to give notice of a meeting of Directors to any Director for the time being absent from the United Kingdom.

91. Questions arising at any meeting shall be determined by a majority of votes and in case of an equality of votes the Chairman shall have a casting vote.

92. The quorum necessary for the transaction of the business of the Directors may be fixed by the Directors, and unless so fixed at any other number shall be two.

93. The continuing Directors or a sole continuing Director may act notwithstanding any vacancies in the Board.

94. The Directors may elect a chairman of their meetings and determine the period for which he is to hold office, but if no such chairman be elected, or if at any meeting the chairman be not present within five minutes after the time appointed for holding the same the Directors present may choose one of their number to be chairman of the meeting.

95. A resolution in writing, signed by all the Directors for the time being in the United Kingdom, shall be as effective as a resolution passed at a meeting of the Directors duly convened and held.

96. A meeting of the Directors for the time being, at

which a quorum is present, shall be competent to exercise all powers and discretions for the time being exercisable by the Directors.

97. The Directors may delegate any of their powers to committees consisting of such member or members of their body as they think fit. Any committee so formed shall in the exercise of the powers so delegated conform to any regulations that may be imposed on them by the Directors.

98. The meetings and proceedings of any such committee consisting of two or more members shall be governed by the provisions of these presents regulating the meetings and proceedings of the Directors, so far as the same are applicable and are not superseded by any regulations made by the Directors under the last preceding article.

99. All acts done by any meeting of Directors, or of a committee of Directors, or by any person acting as a Director, shall, notwithstanding it be afterwards discovered that there was some defect in the appointment of any such [fol. 5886] Director, or person acting as aforesaid, or that they or any of them were disqualified, or had vacated office, be as valid as if every such person had been duly appointed, and was qualified and had continued to be a Director.

Minutes

100. The Directors shall cause minutes to be made in books provided for the purpose—

(A) Of all appointments of officers made by the Directors.

(B) Of the names of the Directors present at each meeting of Directors and of any committee of Directors.

(C) Of all resolutions and proceedings at all meetings of the Company and of the Directors and of committees of Directors.

The Seal

101. The seal of the Company shall not be affixed to any instrument except by the authority of a resolution of the Board and shall be so affixed in the presence of at least one Director and the Secretary, both of whom shall sign every instrument to which the seal is so affixed in their presence.

Alternate Directors

102. Any Director may at any time appoint any person approved by the Board (such approval not to be unreasonably withheld) to be an alternate Director of the Company, and may at any time remove any alternate Director so appointed by him from office. An alternate Director so appointed shall not be entitled to receive any remuneration from the Company.

103. An alternate Director shall (subject to his giving to the Company an address within the United Kingdom at which notices may be served upon him) be entitled to receive notices of all meetings of the Board, and to attend and vote as a Director at any such meeting at which the Director appointing him is not personally present, and generally to perform all the functions of his appointer as a Director in the absence of such appointer.

104. An alternate Director shall ipso facto cease to be an alternate Director if his appointer ceases for any reason to be a Director.

105. All appointments and removals of alternate Directors shall be effected by writing under the hand of the Director making or revoking such appointment left at the office.

[fol. 5887]

Dividends and Reserves

106. Subject to the provisions of these presents with respect to participating rights, the profits of the Company available for dividend and resolved to be distributed shall be applied in the payment of dividends to the holders of the "A" and the "B" shares pari passu as a single class of shares. The Company in general meeting may declare dividends accordingly.

107. No dividend shall be payable except out of the profits of the Company, or in excess of the amount recommended by the Directors.

108. All dividends shall be declared and paid according to the amounts paid on the shares in respect whereof the dividend is paid, but no amount paid on a share in advance of calls shall, while carrying interest, be treated for the purposes of this article as paid on the share. All dividends shall be apportioned and paid pro rata according to the amounts paid on the shares during any portion or portions of the period in respect of which the dividend is paid,

but if any share is issued on terms providing that it shall rank for dividend as from a particular date, such share shall rank for dividend accordingly.

109. The Directors may from time to time pay to the members such interim dividends as appear to the Directors to be justified by the profits of the Company.

110. The Directors may from time to time set aside out of the profits of the Company (including therein premiums obtained on the issue of shares) and carry to reserve or reserves such sums as they think proper, which shall, at the discretion of the Directors, be applicable for meeting contingencies, or for repairing or maintaining the works, plant and machinery of the Company, or for equalizing dividends, or for the payment of special dividends or bonuses, or for any other purpose to which the profits of the Company may properly be applied, and pending such application may, at the like discretion, either be employed in the business of the Company, or be invested in such investments (other than shares of the Company) as the Directors may from time to time think fit.

111. The Directors may deduct from any dividend payable to any member all sums of money (if any) presently payable by him to the Company on account of calls or otherwise.

112. No dividend shall bear interest as against the Company.

113. Any dividend may be paid by cheque sent through the post to the registered address of the member or person [fol. 5888] entitled thereto, and in case of joint holders to any one of such joint holders. Every such cheque shall be made payable to the order of the person to whom it is sent.

114. If several persons are registered as joint holders of any share, any one of them may give effectual receipts for any dividend or other monies payable on or in respect of the share.

Capitalisation of Profits

115. The Company in general meeting may, upon the recommendation of the Directors, and with the consent in writing under hand of the holders of a majority of the "A" shares for the time being issued and of the holders of a majority of the "B" shares for the time being issued, resolve that any undivided profits of the Company (including profits carried and standing to any reserve or reserves

or other special account), be capitalised, and accordingly that the Directors be authorised and directed to appropriate the profits resolved to be capitalised to the members in proportion to the amounts paid up on the issued Ordinary shares held by them respectively, and to apply such profits on their behalf, either in or towards paying up the amounts, if any, for the time being unpaid on the shares held by such members respectively, or in paying up in full unissued shares or debentures of the Company of a nominal amount equal to such profits, such shares or debentures to be allotted and distributed, credited as fully paid up, to and amongst such members in the proportion aforesaid, or partly in one way and partly in the other.

116. Whenever such a resolution as aforesaid shall have been passed, the Directors shall make all appropriations and applications of the undivided profits resolved to be capitalised thereby, and all allotments and issues of fully paid shares or debentures, if any, and generally shall do all acts and things required to give effect thereto, with full power to the Directors to make such provision by the issue of fractional certificates or by payment in cash or otherwise as they think fit for the case of shares or debentures becoming distributable in fractions, and also to authorise any person to enter on behalf of all the members holding Ordinary Shares into an agreement with the Company providing for the allotment to them respectively, credited as fully paid up, of any shares of debentures to which they may be entitled upon such capitalisation, or (as the case may require) for the payment up by the Company on their behalf, by the application thereto of their respective proportions of the profits resolved to be capitalised, of the amounts or any part of the amounts remaining unpaid on their existing shares, and any agreement made under such authority shall be effective and binding on all such members.

Accounts

117. The Directors shall cause true accounts to be kept:

[fol. 5889] (A) Of the sums of money received and expended by the Company and the matters in respect of which such receipt and expenditure takes place; and

(B) Of the assets and liabilities of the Company.

(C) Of all sales and purchases of goods by the Company.

118. The books of account shall be kept at the office, or at such other place as the Directors think fit, and shall always be open to the inspection of the Directors. No member (other than a Director) shall have any right of inspecting any account or book or document of the Company except as conferred by statute or authorised by the Directors or by the Company in general meeting.

119. Once at least in every year, except the year in which the Company is incorporated, the Directors shall lay before the Company a proper profit and loss account and a balance-sheet containing a general summary of the capital, the assets, and the liabilities of the Company arranged under suitable heads, both made up to a date not more than six months before the meeting, and such profit and loss account shall be made up for the period, in the case of the first account, since the incorporation of the Company and in any other case since the preceding account.

120. Every such balance-sheet as aforesaid shall be signed on behalf of the Board by two of the Directors, and shall be accompanied by a report of the Directors as to the state of the Company's affairs and the amount which they recommend to be paid by way of dividend to the members, and the amount (if any) which they have carried or propose to carry to reserve. It shall also have attached to it the Auditors' report, and any other documents prescribed by the Statutes.

121. A copy of the profit and loss account, balance-sheet, and Directors' and Auditors' reports and other documents aforesaid (if any) shall, seven days previously to the meeting, be delivered or sent by post to the registered address of every member.

Audit

122. The Company shall at every ordinary meeting appoint an Auditor or Auditors to hold office until the next ensuing ordinary meeting, and the provisions of the Act with respect to Auditors shall apply and be observed.

123. A Director or officer of the Company or a body corporate shall not be capable of being appointed Auditor of the Company.

124. The Directors may fill any casual vacancy in the office of Auditor, but while any such vacancy continues the surviving or continuing Auditor or Auditors (if any) may act.

[fol. 5890] 125. The remuneration of the Auditors shall be fixed by the Company in general meeting, except that the remuneration of any Auditors appointed before the first annual general meeting or to fill any casual vacancy may be fixed by the Directors, and the remuneration of an Auditor appointed by the Board of Trade may be fixed by the Board of Trade.

126. A person other than a retiring Auditor shall not be capable of being appointed an Auditor at an ordinary meeting unless notice of an intention to nominate that person to the office of Auditor has been given by a member to the Company not less than 14 days before the meeting, and the Company shall send a copy of any such notice to the retiring Auditor and shall give notice thereof to the members not less than 7 days before the meeting, provided that if after a notice of the intention to nominate an Auditor has been so given an ordinary meeting is called for a date 14 days or less after that notice has been given, the notice, though not given within the time required by this provision, shall be deemed to have been properly given for the purposes thereof and the notice to be given by the Company may, instead of being given within the time required by this provision, be given at the same time as the notice of the meeting.

127. The Auditors' report to the shareholders made pursuant to the statutory provisions as to audit for the time being in force shall be read before the Company in general meeting and shall be open to inspection as prescribed by the Act by any shareholder, who shall be entitled to be furnished with a copy of the balance sheet and Auditors' report at such charge not exceeding sixpence for every hundred words as the Directors determine.

Notices

128. Any notice or document may be served by the Company on any member either personally or by sending it through the post in a prepaid letter addressed to such member at his registered address as appearing in the register of members. In the case of joint holders of a share all notices shall be given to that one of the joint holders whose name stands first in the register of members, and notice so given shall be sufficient notice to all the joint holders.

129. Any member described in the register of members by an address not within the United Kingdom who shall from time to time give to the Company an address within the United Kingdom at which notices may be served upon him shall be entitled to have notices served upon him at such address.

130. Any notice or other document, if served by post, shall be deemed to have been served at the time when the letter containing the same is posted, and in proving such service it shall be sufficient to prove that the letter containing the notice or document was properly addressed, stamped and posted.

[fol. 5891] 131. Any notice or document delivered or sent by post to or left at the registered address of any member in pursuance of these presents shall, notwithstanding that such member be then dead or bankrupt, and whether or not the Company have notice of his death or bankruptcy, be deemed to have been duly served in respect of any share registered in the name of such member as sole or joint holder, unless his name shall at the time of the service of the notice or document have been removed from the register as the holder of the share, and such service shall for all purposes be deemed a sufficient service of such notice or document on all persons interested (whether jointly with or as claiming through or under him) in the share.

Winding Up

132. If the Company shall be wound up the Liquidator may with the sanction of an extraordinary resolution divide amongst the members in specie the whole or any part of the assets of the Company, and may with the like sanction vest the whole or any part of such assets in trustees upon such trusts for the benefit of the members as the Liquidator with the like sanction shall think fit.

Indemnity

133. The Directors, Managing Directors, Auditors, Secretary and other officers for the time being of the Company and the Trustees (if any) for the time being acting in relation to any of the affairs of the Company, and their respective executors or administrators, shall be indemnified and secured harmless out of the assets of the Company from and against all actions, costs, charges, losses, dam-

ages and expenses which they or any of them, their or any of their executors or administrators, shall or may incur or sustain by reason of any act done, concurred in, or omitted in or about the execution of their duty or supposed duty in their respective offices or trusts, and none of them shall be answerable for the acts, receipts, neglects or defaults of any other of them, or for joining in any receipt for the sake of conformity, or for any bankers or other persons with whom any moneys or effects of the Company shall be lodged or deposited for safe custody, or for the insufficiency or deficiency of any security upon which any moneys of the Company shall be placed out or invested, or for any other loss, misfortune or damage which may happen in the execution of their respective offices or trusts, or in relation thereto. But the provisions of this article shall only have effect in so far as they are not avoided by the provisions of the Act.

[fol. 5893] Timken Holdings Limited

By-laws

Stibbard, Gibson & Co., 21, Leadenhall Street, London, E.C.3.

[fol. 5894] As to Voting and Directors, Adopted by the Subscribers of the Memorandum of Association of the Company.

By-laws as to Voting.

1. For the purposes of these by-laws the expression "the first control period" means the period from the date of the adoption of these by-laws until the date in or after

the year 1936 of the holding of an ordinary meeting of British Timken Ltd., a Joint Stock Company incorporated in England on the 4th day of June, 1920, at which, for the first time either (i) accounts of British Timken Ltd. are submitted which show that during the financial year or period covered by such accounts the net profits earned by British Timken Ltd. for such year or period (before charging income tax or any other tax on profits) have been at a rate which is less than £15,000 per annum plus £15 per annum in respect of every sum of £100 paid up (whether by way of capital or premium) on any shares issued after the date of the adoption of these by-laws otherwise than by way of capitalisation of profits (hereinafter referred to as "the minimum rate of profits"); or (ii) no dividend is declared on any shares of British Timken Ltd., or the dividend or dividends declared on the shares of British Timken Ltd. (including as dividends declared or part thereof any interim dividends already paid in respect of that year or period) are at a rate which does not require for the payment thereof (in the gross and subject to deduction of tax) a sum equal to five-sixths of the minimum rate of profits for such year or period.

Provided always that the meaning of the expression "the first control period" for the purposes of these by-laws may be altered from time to time by writing under hand of the holders for the time being of a majority of the "A" shares for the time being issued and a majority of the "B" shares for the time being issued and for the purposes of these by-laws the expression "the first control period" shall from time to time mean the period as last defined by or pursuant to these by-laws.

2. No member other than a member holding "A" shares or "B" shares in respect of which the corresponding participating rights have not been redeemed shall be entitled to attend or vote at any meeting of the Company.

[fol. 5895] 3. Subject to the provisions of the Articles of Association of the Company and these by-laws with respect to participating rights, on a show of hands every member present in person and entitled to vote shall have one vote. For the purposes of this by-law a corporation represented at the meeting by a proxy or other duly authorised representative not being himself a member entitled to vote shall be deemed to be present thereat in person.

4. Subject to the provisions of the Articles of Association of the Company and these by-laws with respect to participating rights, on a poll taken on an ordinary resolution

(i) During the first control period each "A" share shall confer on the holder thereof four votes and each "B" share one vote only.

(ii) After the termination of the first control period, each "B" share shall confer on the holder thereof four votes and each "A" share one vote only.

5. Subject to the provisions of the Articles of Association of the Company and these by-laws with respect to participating rights, on a poll taken on an extraordinary or special resolution each "A" share and each "B" share shall confer on the holder thereof one vote.

By-laws as to Directors

1. For the purposes of these by-laws the expression "the first control period" shall have the same meaning as in the by-laws as to Voting as from time to time adopted by the Company pursuant to Article No. 65.

2. The number of the Directors shall not be less than three nor more than five in number.

3. The Directors shall be appointed either by the holders of the "A" shares or by the holders of the "B" shares and the holders of shares of each of such classes shall be entitled to appoint and be represented by two Directors and during the first control period the holders of the "A" shares and after the termination of such period the holders of the "B" shares shall be entitled to appoint and be represented by a third Director. The Company in general meeting shall have no power to appoint or remove Directors.

4. For the purpose of giving effect to the foregoing by-laws and subject to the foregoing limitations upon the number of Directors to be appointed by the holders of shares of each class the "A" shareholders or the "B" shareholders may at any time and from time to time appoint any person to be an "A" shareholders' Director or a "B" shareholders' Director (as the case may be) and (subject to the following by-law No. 6) remove from office any "A" shareholders' Director or any "B" shareholders' Director

(as the case may be) and if thought fit appoint another [fol. 5896] Director in his place.

5. Of the first Directors Michael Bruce Urquhart Dewar, William Dallow and Frederick John Pascoe shall be deemed to be "A" shareholders' Directors and Andrew Jameson Matthews Duncan shall be deemed to be a "B" shareholders' Director for all the purposes of these by-laws.

6. The said Michael Bruce Urquhart Dewar shall not be liable to removal from office as an "A" shareholders' Director so long as he or any Company controlled by him continues to hold not less than 20 per cent. of the share capital of the Company for the time being issued in respect of which the corresponding participating rights have not been redeemed.

7. All appointments and removals of Directors by the holders of a class of shares under these by-laws shall be effected by writing under the hand of holders of a majority of the issued shares of that class left at or sent to the Registered Office of the Company and shall take effect as and when such writing is received at such office.

8. Every Director appointed under these by-laws shall hold office until he is removed under the foregoing by-laws by the class of shareholders whom he represents or dies or vacates office under Article No. 79 of the Articles of Association of the Company. Provided that if at the termination of the first control period the "A" shareholders have their full representation upon the Board, they shall forthwith remove one of the "A" shareholders' Directors from office or procure one of them to resign office and in default of their so doing within seven days after the termination of the first control period the "B" shareholders may at any time thereafter by writing under hand of the holders of a majority of the "B" shares for the time being issued remove from office one of the "A" shareholders' Directors to be selected by them and if so thought fit appoint another person to be a "B" shareholders' Director in his place.

9. The remuneration of the Directors shall be at such rate or of such amount as the Company in general meeting may from time to time by ordinary resolution with the sanction in writing under hand of the holders of a majority of the issued "A" shares and a majority of the issued "B" shares determine. Such remuneration shall in default of

any direction to the contrary given by the resolution voting the same or of any agreement to the contrary between the Directors be divided between the Directors equally. A Director holding office for part only of a year shall be entitled to a proportionate part of a full year's remuneration. The Directors shall also be entitled to be repaid by the Company all such reasonable travelling (including hotel and incidental) expenses as they may incur in attending meetings of the Board, or of Committees of the Board, or general meetings, or which they may otherwise incur in or about the business of the Company.

10. Any Director who by request performs special services, or goes or resides abroad for any purposes of the Company, may be paid such extra remuneration by way of [fol. 5897] salary, percentage of profits or otherwise as the Board may determine.

11. The holder of any share in the Company bearing the same distinctive number as that borne by a participating right which has been redeemed shall not be regarded as a holder of that share for the purposes by these by-laws as to Directors, and such share shall not be regarded as an issued share.

A. J. M. Duncan, J. I. Pickering, Subscribers of the Memorandum of Association.

[fol. 5898] PLAINTIFF'S EXHIBIT 8 (DECREE)

IN THE DISTRICT COURT OF THE UNITED STATES FOR THE NORTHERN DISTRICT OF OHIO, EASTERN DIVISION

Civil Action No. 24,214

UNITED STATES OF AMERICA, Plaintiff,

vs.

THE TIMKEN ROLLER BEARING COMPANY, Defendant

APPLICATION BY PLAINTIFF FOR AN ORDER ADMITTING IN EVIDENCE EXHIBITS IN CONNECTION WITH THE HEARING ON FORM OF FINAL JUDGMENT

Now comes the plaintiff in the above-entitled cause and moves this honorable Court to admit into evidence, and in-

corporate as part of the record in the above-entitled cause, plaintiff's Exhibit 8 (Decree), consisting of the following:

Section 28 of The Trade Marks Act, 1938 (1 & 2 Geo. 6, ch. 22);

31 *Halsbury's Statutes of England* 776, footnote to the said Section 28 of The Trade Marks Act, 1938;

Sections 107 through 113 of The Trade Marks Rules, 1938, Statutory Rules and Orders, 1938, No. 661;

Irene G. R. Moses, *Trade Marks Practice at the Patent Office*, London, 1946, pp. 80-84, 274;

and to permit the substitution of the attached true copies thereof for the originals from which such Exhibit was copied.

(S.) Bertram C. Dedman, Stanley D. Rose, Attorneys for the plaintiff.

Copy received November 28th, 1949.

(S.) Luther Day, Attorney for defendant.

[fol. 5899] Section 28 of The Trade Marks Act, 1938, (1 & 2 Geo. 6, ch. 22)

Registered users

28. (1) Subject to the provisions of this section, a person other than the proprietor of a trade mark may be registered as a registered user thereof in respect of all or any of the goods in respect of which it is registered (otherwise than as a defensive trade mark) and either with or without conditions or restrictions.

The use of a trade mark by a registered user thereof in relation to goods with which he is connected in the course of trade and in respect of which for the time being the trade mark remains registered and he is registered as a registered user, being use such as to comply with any conditions or restrictions to which his registration is subject, is in this Act referred to as the "permitted use" thereof.

(2) The permitted use of a trade mark shall be deemed to be use by the proprietor thereof, and shall be deemed not to be use by a person other than the proprietor, for the purposes of section twenty-six of this Act and for any other purpose for which such use is material under this Act or at common law.

(3) Subject to any agreement subsisting between the parties, a registered user of a trade mark shall be entitled to call upon the proprietor thereof to take proceedings to prevent infringement thereof, and, if the proprietor refuses or neglects to do so within two months after being so called upon, the registered user may institute proceedings for infringement in his own name as if he were the proprietor, making the proprietor a defendant.

[fol. 5900] A proprietor so added as defendant shall not be liable for any costs unless he enters an appearance and takes part in the proceedings.

(4) Where it is proposed that a person should be registered as a registered user of a trade mark, the proprietor and the proposed registered user must apply in writing to the Registrar in the prescribed manner and must furnish him with a statutory declaration made by the proprietor, or by some person authorized to act on his behalf and approved by the Registrar,—

(a) giving particulars of the relationship, existing or proposed, between the proprietor and the proposed registered user, including particulars showing the degree of control by the proprietor over the permitted use which their relationship will confer and whether it is a term of their relationship that the proposed registered user shall be the sole registered user or that there shall be any other restriction as to persons for whose registration as registered users application may be made;

(b) stating the goods in respect of which registration is proposed;

(c) stating any conditions or restrictions proposed with respect to the characteristics of the goods, to the mode or place of permitted use, or to any other matter; and

(d) stating whether the permitted use is to be for a period or without limit of period, and, if for a period, the duration thereof;

and with such further documents, information or evidence as may be required under the rules or by the Registrar.

(5) When the requirements of the last foregoing subsection have been complied with, if the Registrar, after considering the information furnished to him under that sub-

section, is satisfied that in all the circumstances the use of the trade mark in relation to the proposed goods or any [fol. 5901] of them by the proposed registered user subject to any conditions or restrictions which the Registrar thinks proper would not be contrary to the public interest, the Registrar may register the proposed registered user as a registered user in respect of the goods as to which he is so satisfied subject as aforesaid.

(6) The registrar shall refuse an application under the foregoing provisions of this section if it appears to him that the grant thereof would tend to facilitate trafficking in a trade mark.

(7) The Registrar shall, if so required by an applicant, take steps for securing that information given for the purposes of an application under the foregoing provisions of this section (other than matter entered in the register) is not disclosed to rivals in trade.

(8) Without prejudice to the provisions of section thirty-two of this Act, the registration of a person as a registered user—

(a) may be varied by the Registrar as regards the goods in respect of which, or any conditions or restrictions subject to which, it has effect, on the application in writing in the prescribed manner of the registered proprietor of the trade mark to which the registration relates;

(b) may be cancelled by the Registrar on the application in writing in the prescribed manner of the registered proprietor or of the registered user or of any other registered user of the trade mark; or

(c) may be cancelled by the Registrar on the application in writing in the prescribed manner of any person on any of the following grounds, that is to say,—

(i) that the registered user has used the trade mark otherwise than by way of the permitted use, or [fol. 5902] in such a way as to cause, or to be likely to cause, deception or confusion;

(ii) that the proprietor or the registered user misrepresented, or failed to disclose some fact material to the application for the registration, or that the circumstances have materially changed since the date of the registration;

(iii) that the registration ought not to have been effected having regard to rights vested in the applicant by virtue of a contract in the performance of which he is interested.

(9) Provision shall be made by the rules for the notification of the registration of a person as a registered user to any other registered user of the trade mark, and for the notification of an application under the last foregoing subsection to the registered proprietor and each registered user (not being the applicant) of the trade mark, and for giving to the Applicant on such an application, and to all persons to whom such an application is notified and who intervene in the proceedings in accordance with the rules, an opportunity of being heard.

(10) The Registrar may at any time cancel the registration of a person as a registered user of a trade mark in respect of any goods in respect of which the trade mark is no longer registered.

(11) Any decision of the Registrar under the foregoing provisions of this section shall be subject to appeal to the Court.

(12) Nothing in this section shall confer on a registered user of a trade mark any assignable or transmissible right to the use thereof.

* * * * * * *

[fol. 5903] 31 *Halsbury's Statutes of England*, p. 776:

(Footnote to Section 28 of The Trade Marks Act, 1938, 1 & 2 Geo. 6, ch. 22)

This section re-enacts s. 8 of the 1937 Act (1930 Statutes 958), except sub-s. (12) thereof. That section altered the old law under which the use of a trade mark by persons other than the proprietor would have invalidated the trade mark. The present section, while it does not legalize the general licensing of trade marks, enables the proprietor to sanction the use of a registered mark by others, when it is consistent with the public interest that he should be permitted to do so.

[fol. 5904] Sections 107 through 113 of The Trade Marks Rules, 1938, Statutory Rules and Orders, 1938, No. 661

Registered Users

Application for entry of Registered User

107. An application to the Registrar for the registration under Section 28 of a person as a registered user of a registered trade mark shall be made by that person and the registered proprietor on Form TM—No. 50.

Entry and notification

108. The entry of a registered user in the register shall state the date on which it was made. In addition to the trade or business address of the registered user it may include an address for service, if an application by him on Form TM—No. 33 therefor has been approved. A notification in writing of the registration of a registered user shall be sent to the registered proprietor of the trade mark, to the registered user, and to every other registered user whose name is entered in relation to the same registration of a trade mark, and shall be inserted in the Journal.

Registered proprietor's application to vary entry

109. An application by the registered proprietor of a trade mark for the variation of the registration of a registered user of that trade mark under paragraph (a) of Section 28 (8) shall be made on Form TM—No. 51, and shall be accompanied by a statement of the grounds on which it is made and, where the registered user in question consents, by the written consent of that registered user.

Application by registered proprietor or user to cancel entry

110. An application by the registered proprietor or any registered user of a trade mark for the cancellation of the registration of a registered user of that trade mark under paragraph (b) of Section 28 (8) shall be made on Form [fol. 5905] TM—No. 52, and shall be accompanied by a statement of the grounds on which it is made.

Application under Section 28 (8) par. (c) to cancel entry.

111. An application by any person for the cancellation of the registration of a registered user under paragraph (c)

of Section 28 (8) shall be made on Form TM—53, and shall be accompanied by a statement of the grounds on which it is made.

Notification and hearing

112. The Registrar shall notify in writing applications under the last three foregoing Rules to the registered proprietor and each registered user (not being the applicant) under the registration of the trade mark. Any person so notified who intends to intervene in the proceedings shall within one month of the receipt of such notification give notice to the Registrar on Form TM—No. 54 to that effect and shall send therewith a statement of the grounds of his intervention. The Registrar shall thereupon send copies of such notice and statement to the other parties, so that the intervention may be known to the applicant, the registered proprietor, the registered user whose registration is in suit, and any other registered user who intervenes. Any such party may, within such time or times as the Registrar may appoint, leave evidence in support of his case, and the Registrar after giving the parties an opportunity of being heard may accept or refuse the application or accept it subject to any conditions, amendments, modifications or limitations he may think right to impose.

Registered user's application under Section 34 (2)

113. Applications under Section 34 (2) shall be made on Form TM—No. 18, or TM—No. 20, or TM—No. 21, or TM—No. 33 as may be appropriate, by a registered user of a trade mark, or by such person as may satisfy the Registrar that he is entitled to act in the name of a registered user; and the Registrar may require such evidence by [fol. 5906] statutory declaration or otherwise as he may think fit as to the circumstances in which the application is made.

Cancellation by Registrar

In case of the registration of a registered user for a period, in accordance with paragraph (d) of Section 29 (4), the Registrar shall cancel the entry of the registered user at the end of the period. Where some or all of the goods are struck out from those in respect of which a trade mark is registered, the Registrar shall at the same time strike them out from those specifications of registered users of

the trade mark in which they are comprised. The Registrar shall notify every cancellation or striking out under this paragraph to the registered users whose permitted use is affected thereby and the registered proprietor of the trade mark.

[fol. 5907] Irene G. R. Moses,

Trade Marks Practice at the Patent Office,

London, 1946, pp. 80-84:

III. Registered Users

Definition

The practice of the registration of a person, other than the proprietor of a trade mark, as a registered user was introduced by section 28 of the Trade Marks Act, 1938.[19]

Section 28 (1) provides: "Subject to the provisions of this section, a person other than the proprietor of a trade mark may be registered as a registered user thereof in respect of all or any of the goods in respect of which it is registered (otherwise than as a defensive trade mark) and either with or without conditions or restrictions."

The use of a trade mark by a registered user in accordance with section 28 is called the "permitted use." The registered user is not a licensee of a trade mark and the proprietor must retain control over the "permitted use" in a manner approved by the Registrar. (See paragraphs below as to the requirements relating to control, and as to the procedure for registration of a registered user.)

Procedure for Registration

Application for registration as a registered user must be made in writing to the Registrar by both the registered pro- [fol. 5908] prietor and the proposed registered user on Form TM—No. 50 (section 28 (4), rule 107). The regis-

---

[19] Before the Act of 1938, any use of a trade mark by a person other than the registered proprietor, or his successor in business, was held to make the mark deceptive and to jeopardize the registration, *Bowden Wire Ltd.* v. *Bowden Brake Co. Ltd.* (No. 1) (1913) 30 R. P. C. 45, 580; (1914) 31 R. P. C. 385.

tered proprietor (or someone authorised by him and approved by the Registrar) must make a statutory declaration giving particulars of the following matters (section 28 (4)): (*a*) The relationship, existing or proposed, between the proprietor and the proposed registered user, including the degree of control (proposed to be exercised) by the proprietor over the permitted use, and whether the proposed registered user is to be the sole registered user or whether there are to be any other restrictions on the application by other persons as registered users; (*b*) the goods in respect of which registration is proposed; (*c*) any conditions or restrictions proposed with respect to the characteristics of the goods, to the mode or place of the permitted use, or to any other matter, and (*d*) whether the permitted use is to be for a period or without any limit of time, and if it is for a period only, the duration of that period.

Information given to the Registrar for the purpose of section 28 will, at the request of the applicant, be withheld from trade rivals, this does not apply to any particulars which appear on the register (section 28 (7)).

Conditions of Registration: Relationship Between Proprietor and the Registered User

The actual form of relationship between the proprietor and a registered user is not specified, the essential requirement being that the proprietor should retain proper control over the "permitted use." It is the practice of the Registrar to call for a written agreement [20] dealing with the proposed permitted use. Although an oral agreement is not [fol. 5909] necessarily precluded from recognition and acceptance, it would be necessary to produce satisfactory proof that such an agreement existed and what were the terms, parties, consideration and date thereof. In the absence of such proof, it is unlikely that the Registrar would consider that the degree of control which would be exercised over the permitted use was sufficient to justify registration.

The simplest form of relationship is a financial one where the proposed registered user is a subsidiary company completely controlled by the registered proprietor as the parent

[20] See Appendix II for a precedent for such an agreement (see p. 274).

company. In such a case, the Registrar would accept simple conditions such as the following: "The trade mark is to be used by the Registered User only so long as the Registered User is completely controlled by the Registered Proprietor." Where the relationship between the parties is based on an agreement between them, and not on their financial relationship, rather more elaborate conditions and restrictions are required. The main provisions of such an agreement are: (1) A right given by the proprietor to the user to use the mark in accordance with the terms of an entry under section 28 (to be effected before the agreement becomes operative), and an undertaking by the user to place the mark only on goods made in accordance either with prescribed specifications or standards of quality laid down or directions given by the proprietor; (2) a right given to the proprietor to inspect the goods and the methods of manufacturing on the premises of the user or to have samples of the goods submitted to him on request, (3) a right given to the proprietor to terminate the agreement at short notice (such as one to three months) if he is not satisfied that any of the other provisions of the agreement is being observed, e. g., if the right of inspection were denied.

[fol. 5910] Registration and Notification Thereof

When all the requirements of sub-section 4 of section 28 have been complied with the Registrar may allow registration of the proposed registered user as a registered user if he considers the proposed use of the mark would not be contrary to the public interest (section 28 (5)). The entry on the register must state the goods in respect of which the permitted use is granted and any conditions or restrictions attached to it, the date on which it is made and the trade or business address of the registered user (sections 1, 28 (5), rule 108).[21]

The registration must be notified in writing to the registered proprietor, the registered user, and any other registered user of the same mark. It must also be published in the *Trade Marks Journal* (rule 108).

---

[21] Also an address for service if an application under Form TM—No. 33 has been approved (rule 108).

When Registration Allowed

The Registrar may refuse an application under section 28 if it appears to him that the registration would constitute, or lead to, trafficking in trade marks (section 28 (6)). Registration may also be refused because of any one of the following reasons, if the proposed permitted use would merely amount to a license, if the proprietor does not purport to exercise proper control over the permitted use, if the particulars given under sub-section 4 of section 28 are insufficient (see p. 80) or if the Registrar considers that in the particular circumstances registration would be contrary to the public interest.

It may generally be said that a registration under section 28 is justified if the proposed permitted use would consti- [fol. 5911] tute an infringement of the trade mark if it were not protected by registration under section 28. A use which is stated by section 4 (3) not to be an infringement would not justify registration under section 28. In some cases registration under section 28 may be allowed where the proposed registered user obtains goods in bulk from the registered proprietor and repacks them in accordance with directions given by the registered proprietor. If any doubt exists whether or not the manner in which the proposed registered user deals with the goods amounts to infringement the Registrar would probably approve registration under section 28.

Rights and Limitations

Subject to his compliance with the conditions of his registration and the terms of his agreement with the proprietor, a registered user is entitled to use the trade mark upon all or any of the goods for which he is so registered. Use of the mark by the registered user will be considered use by the registered proprietor for the purpose of section 26,[22] or for any purpose under the Trade Marks Act, 1938, or under the Common Law, for which use by the proprietor is material (section 28 (2)).

No powers of assignment or transmission are conferred by the Act on a registered user in respect of a trade mark

---

[22] Section 26 deals with removal or variation of a trade mark for non-use.

for which he has been registered as a registered user (section 28 (12)). If a trade mark is infringed a registered user can (subject to any agreement between him and the proprietor) call upon the proprietor to take proceedings to protect the mark. If the proprietor refuses or refrains from taking proceedings within two months of [fol. 5912] his being notified by the registered user, the latter can take proceedings in his own name and make the proprietor a defendant [23] (section 28 (3)).

Cancellation or Variation

Variation of the registration of a registered user of a trade mark may be obtained by the registered proprietor of the mark, either as regards the goods for which the registered user is registered or the conditions attached to his registration. Application must be made in writing to the Registrar (Form TM—No. 51) and accompanied by a statement of the grounds on which the application is based, and if the registered user consents to the variation his written consent should be included (section 28 (8) (*a*), rule 109).

Application to the Registrar for the cancellation of the registration of any person as a registered user may be made by the registered user himself, or the registered proprietor, or any other registered user, or any other person, on any of the following grounds: (i) that the registered user has used the mark other than as allowed by the permitted use, or so as to cause deception and confusion, or (ii) that some facts material to the application were not disclosed by the proprietor or registered user, or that circumstances have changed since the date of registration, or (iii) that the registration ought not to have been effected having regard to rights vested in the applicant by virtue of a contract in the performance of which he is interested (section 28 (8) (*b*), (*c*)).

Application for cancellation is made in writing on Form TM—No. 52 if made by the registered user whose registration is in suit or the proprietor or any other registered user of the same mark (rule 110), and on Form TM—No. 53 if made by any other person (rule 111). In both cases

[23] A proprietor so added will not be liable in costs unless he enters an appearance and takes part in the proceedings (section 28 (3)).

the application must be accompanied by a statement of grounds (rules 110 and 111).

[fol. 5913] The Registrar may at any time cancel the registration of a person as a registered user in respect of any goods when there is no longer any subsisting registration of the trade mark for those goods (section 28 (10, rule 113). The registration of a person as a registered user for a specified period under section 28 (4) (d) will be cancelled by the Registrar at the end of that period (rule 113).[24]

Notification to other Registered owners. Intervention in Cancellation and Variation Proceedings

Notification of the registration of a person as a registered user must be sent to all other registered users of the same trade mark (section 28 (9), rule 108). The Registrar must notify in writing applications under section 28 (8) for the variation or cancellation of the registration of a registered user,[25] the registered proprietor and each registered user of the mark, but not including the applicant (rule 112). The applicant and any person notified who intervenes are entitled to be heard by the Registrar (section 28 (9)).

Notice of intervention must be sent within one month of receiving a notification as above (Form TM—No. 54) and accompanied by a statement of the grounds on which the intervention is based. Copies of the notice and statement are sent to all parties interested (i. e., the applicant, the registered proprietor, the registered user whose registration is in suit and any other registered user who intervenes), who shall all be given an opportunity of leaving evidence in support of their case within the time appointed by the Registrar (rule 112). The Registrar will hear the parties and may accept the application or refuse it absolutely, or accept it subject to conditions (rule 112). The Registrar's decision is subject to appeal to the court (section 28 (11)).

---

[24] The Registrar will notify all registered users whose registrations are thereby affected, rule 113.

[25] *Lacteosote, Ltd.* v. *Alberman* (1927) 44 R.P.C. 211; (1927) 2 Ch. 177.

[fol. 5914] Correction of Errors on the Register and Change of Name, etc.

A registered user may apply to the Registrar to correct any error on the register connected with his registration, or to enter any change in his name, address or description (section 34 (2)). Application is made in writing by the registered user or a person able to satisfy the Registrar he can act for him, and evidence by statutory declaration or otherwise may be required (rule 113). Application is made on Forms TM—Nos. 18, 20, 21 or 33, as the case may be (rule 113).

[fol. 5915] Appendix II, Part A—Precedents, p. 274.

1. *Registered User's Agreement: Agreement Between a Proprietor of a Trade Mark and a Proposed Registered User.

An agreement made the — day of —— 19— between A.B. (hereinafter called "the Proprietor") of the one part and C. D. (hereinafter called "the User") of the other part.

Whereas the Proprietor is the registered proprietor of the Trade Mark No. ——, registered in Class —— in respect of ——— (hereinafter referred to as "the goods"), ——— and whereas the User is desirous of manufacturing the goods and using the said Trade Mark in relation thereto and of being registered as a registered user of the Trade Mark under the provisions of Section 28 of the Trade Marks Act, 1938.

Now it is hereby agreed as follows:

(1) The Proprietor hereby authorises the User, during such time as the User shall be registered as a registered user of the Trade Mark, to use the Trade Mark upon or in relation to goods manufactured by the User in accordance with specifications laid down, directions given, and information supplied by the Proprietor from time to time and will join with the User in making application to the Registrar of Trade Marks for the purpose of securing the registration of the User as a registered user of the Trade

* This is the simplest agreement that would be acceptable by the Registrar.

Mark under the provisions of the Trade Marks Act, 1938, and this Agreement shall not come into effect until the User shall have been so registered.

(2) The User undertakes to manufacture the goods in strict accordance with specifications laid down, directions given, and information supplied by the Proprietor from time to time and to use the Trade Mark in relation only to such goods and will permit the Proprietor or his authorised representative at all reasonable times to enter the User's premises for the purpose of inspecting the goods and the methods of manufacturing them and will, if called upon by the Proprietor to do so, submit samples of the goods for the inspection of the Proprietor.

(3) This Agreement shall continue in force from year to year unless determined by either of the parties giving six months' notice in writing to the other party, but in the event of either party committing a breach of any of the provisions of this Agreement it shall be lawful for the other party by giving one month's notice in writing to determine the Agreement and upon such notice being given the User will not thereafter make any use of the Trade Mark.

Copy received November 10th, 1949.

(S.) Robert B. Hummel, Attorney for Plaintiff.

[fol. 5918] Memo of the Conference held in London on October 12th, 1949.

Present: Mr. M. B. U. Dewar, Mr. F. J. Pascoe, Mr. Wm. Dwight Whitney, Mr. H. N. Skerrett, Mr. A. J. M. Duncan.

For British Timken Ltd: Mr. W. E. Umstattd, Mr. J. G. Ketterer, Dr. S. Ladas.

For the Timken Roller Bearing Company: Mr. M. B. U. Dewar, Mr. F. J. Pascoe.

For Societe Anonyme Francaise Timken

From time to time during the past two years various questions of procedure have arisen between the Timken

Roller Bearing Company, British Timken Limited, and Societe Anonyme Francaise Timken in respect of handling applications for the registration of the Trade Mark "Timken" in different countries. It has been suggested that a definite procedure should be decided upon to the end that the distinctive character of the mark be maintained, as required in the 1938 contract between the Companies, and to the further end that each of the three Companies shall have the use of the mark contemplated by the 1938 contract, so long as the same remains effective as to both parties.

After exchange of views the following has been agreed:

(A) With respect to civil law countries which are included in the British Timken Company's territory as defined in the Agreement of 1938 American Timken obtained registrations for the Trade Mark "Timken" generally in the years 1922 and 1924, with the exception of Germany and France. Before and since the dates when these registrations were obtained by the American Company in the countries in question, bearings manufactured by the American Company and marked with the Trade Mark "Timken" were sold for ultimate destination to those countries as parts of assembled equipment, and also for replacement bearings for such equipment. On the other hand, British Timken has sold bearings manufactured by it and bearing the Trade Mark in the same countries.

[fol. 5919] In the past two years, British Timken filed independently applications for registration or obtained registrations in a number of these civil law countries. As a result of this action American Timken has filed opposition to certain of these applications by British Timken, and it is deemed desirable to eliminate expense and preserve the position in these countries as it existed in 1938. The American Timken has been assured by its Trade Mark Counsel Adviser, Dr. Stephen Ladas, that the registrations in its name in the civil law countries in question have properly been obtained by it and are entirely proper and valid, and that the right of use of the Trade Mark by British Timken in such countries is in the nature of a licence to use the Trade Mark which is lawful and proper under the law of such countries.

The British Company will withdraw its applications or cancel the registrations obtained by it in the following countries:

Iceland
Switzerland
Hungary
Belgium
Luxemburg
French Morrocco
Belgian Congo
Lebanon
Yugoslavia
Austria
Spain
Finland
Czechoslovakia
Syria
Roumania

(B) British Timken will cancel the registrations obtained by it in British Guiana, since this country is in South America. The registrations in the name of American Timken in that country will remain in effect.

(C) In the following countries where the Trade Mark has been registered in the name of American Timken, the registrations will be allowed to remain in the name of such Company and British Timken will not file applications in any of such countries. The countries in question are:

Egypt
Fiji Islands
[fol. 5920] Gambia
Hong Kong
Iran
Sierra Leone
Southern Rhodesia
Zanzibar
Cyprus
Seychelles

American equipment containing Timken bearings has doubtless been shipped to these countries for many years past, although it may be difficult to ascertain the precise dates since when such use began. On the other hand, Brit-

ish Timken has sold bearings of its origin to such countries, although again the date of first user may be difficult to ascertain. Under the circumstances, Dr. Ladas recommended that the American Company's registrations, having become incontestable by the lapse of the legal term, be allowed to stand.

It is expected that the law in these countries will be amended in the near future as the British law has been amended in 1938 so as to permit registered user by a party other than the registered proprietor, in which event the British Company will be entered as a registered user.

(D) In the following British countries, both the American Company and the British Company have obtained registrations for the Trade Mark "Timken", although in different classes. It is deemed advisable that the mark, from the point of view of preserving its distinctiveness, should be owned by only one of the Companies. The American Company will cancel its own registrations in such countries with the understanding that the British Company will obtain additional registrations in the classes in which the American Company owned such registrations, or, alternatively, will assign such registrations to the British Company. These countries are Sudan, Gold Coast, South West Africa, Nigeria, Mauritius, Nyassland. This decision was arrived at on the advice of Dr. Ladas, concurred in by Mr. Skerrett, because the registrations in the name of the British Company are prior in date to the registrations of the American Company, and although the two have registered the Trade Mark in different classes, the goods in respect of which the registrations have been obtained are [fol. 5921] related goods and a third party might dispute the ownership of the Trade Mark by either Company. It is, of course, understood that the American Company will continue to use the Trade Mark in such countries under the provisions of the Agreement of 1938, and in due course the American Company will be entered as the registered user in such countries when the law has been amended to permit such procedure.

(E) The British Company shall proceed to register the Trade Mark in Gibraltar under the Ordinance just issued which provides that a Trade Mark may be registered based on a British registration, and since the British Company owns the registrations in Great Britain, it alone can register the Trade Mark in Gibraltar. As the Ordinance also

provides for registered user, the American Company will be entered as registered user in that country.

(F) The British Company will proceed to register the Trade Mark "Timken" in *Pakistan* on the basis of its registrations in India, and the American Company will withdraw its own applications in that country. This was recommended by Dr. Ladas, and concurred in by Mr. Skerrett, because under the Pakistan Act the registered proprietor of a Trade Mark in India may extend its registration to Pakistan, and the British Company as owner of the registration in India may do so without having to prove distinctiveness of the Trade Mark in Pakistan. As Pakistan has provisions for registered user, the American Company will be entered as a registered user in that country.

(G) The British Company will withdraw its applications in *Palestine* and *Trans-Jordan*, or assign registrations obtained by it to American Timken for these two countries, whichever may be deemed the advisable course to follow depending upon the status of the applications and on advice of local Counsel to be obtained by the American Company. When the law of these countries has been amended to provide for registered user, the British Company will be entered as a registered user.

(H) The American Company owns the Trade Mark "Timken" in *Australia* where it was registered by it many [fol. 5922] years ago, and each the American and British Companies has used the Mark there. An amendment of the trade mark law has now been promulgated in Australia in January, 1949 which provides that in a case of licenced use of a trade mark, application for registered user with respect to the licensee should be filed within one year. Steps will be taken immediately to enter British Timken as a registered user in Australia in accordance with this new law. A special agreement, as called for by the regulations under the new law, prescribing the conditions for the use of the Trade Mark will be drawn up and signed by both Companies, after approval by respective Counsel.

(I) The British Company will maintain the registrations obtained by it in the following countries: Great Britain, South Africa, Ireland, New Zealand, Singapore, India, Basutoland, Ceylon, Kenya, Northern Rhodesia, Bechanaland, Jersey, Guernsey, Tanganyika, Malta, Uganda, Swaziland and Germany. Also, it will maintain the application it has filed in British North Borneo. In any of

these countries in which the registered user procedure is available, American Timken will be entered as a registered user, and as the law of any of the other countries is amended in the future to allow a registered user, the American Company will be so entered, while in the meantime American Timken will continue to use the Mark in these countries as provided for in the Agreement in 1938.

(J) Since the British Trade Mark Act of 1938 requires the filing of a special agreement between the registered proprietor of a trade mark and the proposed registered user, prescribing the conditions for the use of the trade mark by the latter, the two Companies will draw up and sign such a special agreement with advice of Counsel. Dr. Ladas will draft such an agreement and obtain approval by Mr. Skerrett.

(K) In all countries in which the Trade Mark is registered in the name of the American Company it is understood that the British Company is licensed to use the Trade Mark under the provisions of the Agreement of 1938, and in such countries where registered user is possible, even though specific reference has not been made heretofore in [fol. 5923] this memorandum, the British Company will be entered as registered user of the Mark.

(L) It is understood that with respect to any country in which the Mark has not been registered or applied for by any of the three Companies heretofore, before any registration is sought, the three Companies will consult as to the Company which is to apply for registration.

(M) In all applications for entry of the American Company of the British Company respectively, as registered user, the right to be granted to the registered user shall be the right defined by the Agreements of 1938.

(N) The French Company will maintain the registration in France.

IN THE DISTRICT COURT OF THE UNITED STATES
FOR THE NORTHERN DISTRICT OF OHIO,
EASTERN DIVISION

Civil Action No. 24,214

UNITED STATES OF AMERICA,
Plaintiff-Appellee,

vs.

THE TIMKEN ROLLER BEARING COMPANY,
Defendant-Appellant

STATEMENT AS TO JURISDICTION

This is a direct appeal to the Supreme Court of the United States from a final judgment of the District Court of the United States for the Northern District of Ohio, Eastern Division, in an action in equity by the United States against the defendant-appellant charging a conspiracy in violation of Sections 1 and 3 of the Sherman Anti-Trust Act (26 Stat. 209, 15 U. S. C. §§ 1 and 3), in which judgment was rendered against the defendant-appellant. In compliance with Rule 12 of the Rules of the Supreme Court of the United States, as amended, defendant-appellant submits herewith its statement particularly disclosing the basis upon which the Supreme Court has jurisdiction on appeal

to review the judgment of the District Court entered in this cause.

Opinion Below

A copy of the opinion of the District Court which it adopted as its findings of fact and conclusions of law is reported in *United States* v. *The Timken Roller Bearing Company,* 83 Fed. Supp. 284, and is attached hereto.

Jurisdiction

The judgment of the District Court herein was entered on February 15, 1950. Motions by the defendant-appellant for a new trial, and to amend and to make new, and additional, findings of fact and conclusions of law which involved reconsideration of certain basic findings of fact and the alteration of the conclusions of the Court, and for judgment for the defendant-appellant, were filed, pursuant to Rules of Civil Procedure 59(b) and 52(b), on February 24, 1950, and were overruled by order of the District Court entered June 14, 1950. A petition for appeal to the Supreme Court of the United States was presented by the defendant-appellant to the District Court and by it allowed on July 28, 1950.

Jurisdiction of the Supreme Court to entertain this appeal is conferred by Section 2 of the Expediting Act of February 11, 1903, as amended (32 Stat. 823; 36 Stat. 1167; 58 Stat. 272; 62 Stat. 989; 15 U. S. C. § 29; 49 U. S. C. § 45).

The following decisions sustain the jurisdiction of the Supreme Court to review the judgment on direct appeal in this case: *Standard Oil Co.* v. *United States,* 221 U. S. 1; *United States* v. *Bausch & Lomb Optical Co.,* 321 U. S. 707; *United States* v. *Crescent Amusement Co.,* 323 U. S. 117; *Hartford Empire Co.* v. *United States,* 323 U. S. 386; *United States* v. *Line Material Co.,* 333 U. S. 328; *United States* v. *United States Gypsum Co.,* 333 U. S. 364.

Statute Involved

The Sherman Act of July 2, 1890, 26 Stat. 209, as amended (15 U. S. C. §§ 1, 3 and 4):

"SEC. 1. Every contract, combination in the form of trust or otherwise, or conspiracy, in restraint of trade or commerce among the several States, or with foreign nations, is hereby declared to be illegal: * * * Every person who shall make any contract or engage in any combination or conspiracy declared * * * to be illegal shall be deemed guilty of a misdemeanor, and, on conviction thereof, shall be punished by fine not exceeding $5,000, or by imprisonment not exceeding one year, or by both said punishments, in the discretion of the court."

"SEC. 3. Every contract, combination in form of trust or otherwise, or conspiracy, in restraint of trade or commerce in any Territory of the United States or of the District of Columbia, or in restraint of trade or commerce between any such Territory and another, or between any such Territory or Territories and any State or States or the District of Columbia, or with foreign nations, or between the District of Columbia and any State or States or foreign nations, is declared illegal. Every person who shall make any such contract or engage in any such combination or conspiracy, shall be deemed guilty of a misdemeanor, and, on conviction thereof, shall be punished by fine not exceeding $5,000, or by imprisonment not exceeding one year, or by both said punishments, in the discretion of the court."

"SEC. 4. The several district courts of the United States are invested with jurisdiction to prevent and restrain violations of this act; and it shall be the duty of the several district attorneys for the United States, in their respective districts, under the direction of the Attorney General, to institute proceedings in equity to prevent and restrain such violations. Such proceedings may be by way of petition setting forth the case and

praying that such violation shall be enjoined or otherwise prohibited. When the parties complained of shall have been duly notified of such petition the court shall proceed, as soon as may be, to the hearing and determination of the case; and pending such petition and before final decree, the court may at any time make such temporary restraining order or prohibition as shall be deemed just in the premises."

The Issues and the Rulings Below

The defendant-appellant, The Timken Roller Bearing Company, is engaged in the manufacture of tapered roller bearings and owns 30.25 per cent of the capital stock of British Timken, Ltd. (hereinafter called British Timken), a British joint stock company manufacturing ball bearings and straight and tapered roller bearings, and 50 per cent of the capital stock of Societe Anonyme Francaise Timken (hereinafter called French Timken), a French corporation which manufactured tapered roller bearings. The amended complaint, filed against the defendant-appellant alone, alleges that beginning in 1928 and continuously thereafter, these three companies have conspired and combined in restraint of interstate and foreign commerce of the United States by entering into contracts, agreements and understandings, and continuously planning and acting together, to eliminate competition between themselves and with others in the manufacture and sale of anti-friction bearings in all markets of the world. The alleged means have consisted of allocating to each company an exclusive territory into which the other companies shall not sell nor ship anti-friction bearings except in completed articles of manufacture and for replacement of bearings therein; fixing and agreeing upon prices of replacement bearings shipped into each other's territory, and upon prices of bearings sold and shipped to Russia; allocating the use of the trademark "Timken" to each of the companies in its territory, and

requiring that British Timken and French Timken shall use that trademark exclusively and surrender it to the defendant upon termination of such contracts, agreements and understandings; entering into agreements with other manufacturers in certain territories regulating and allocating the sale of bearings; and furnishing aid to each other in restricting and eliminating in their respective territories competition from others.

The defendant-appellant denies engaging in the combination and conspiracy charged.

Some discussion of the facts, disclosed by correspondence and the uncontroverted testimony of the defendant's witnesses, is necessary to an understanding of the questions involved.

The defendant's principal product, the tapered roller bearing, was an invention originally covered by product patents. In 1909, the defendant, then a young and comparatively small company with its principal office and place of business at Canton, Ohio, licensed Electric Ordnance & Accessories Co., Ltd. (hereinafter called E. & O. A.), a wholly-owned subsidiary of Vickers, Ltd., a very large English business enterprise, to manufacture and sell the patented bearings in the United Kingdom and on the Continent, upon payment of royalty of 15 per cent of net sales. Under the two agreements between the defendant and E. & O. A. covering the United Kingdom and Europe, respectively, E. & O. A. was licensed to manufacture and sell only "so far as the licensor lawfully can do so", was given an exclusive territory and restricted thereto, was prohibited from manufacturing or selling anti-friction bearings other than those made under the patents, was required to use the mark "Timken" exclusively in the sale thereof and to follow the instructions as to method of manufacture which the defendant was required to provide, and its price was restricted to some extent.

The rights of E. & O. A. under these agreements were transferred in 1920 to Wolseley Motors, another wholly-owned Vickers subsidiary engaged in the manufacture of motorcars. In the same year British Timken was organized as a wholly-owned subsidiary of Wolseley Motors and took over the latter's interest in the 1909 agreements.

Prior to 1920, E. & O. A. had granted a sub-license under the 1909 agreements to Societe Mechanique Genvilliers (hereinafter called S. M. G.) in France.

In 1924, one of the defendant's executives visited British Timken and was told that British Timken felt that the defendant had no right under any condition to the name "Timken", the jealously guarded family name of its founders, in the United Kingdom. This confirmed the defendant's fears, inspired by its trademark counsel in 1920, that British Timken might have acquired rights in the mark and that the defendant might have trouble in obtaining control thereof in the United Kingdom and other portions of the British Empire upon termination of the 1909 agreements. It had already discovered that S. M. G. in France and one Prausnitzer, a sales agent of Vickers in Germany, had registered the trademark "Timken" for themselves in those countries, which added to its difficulties.

The Vickers subsidiaries had obtained one substantial reduction in royalty to meet competition, and British Timken was seeking a further one. Advised by its counsel that, although the principal patents were expiring, the agreements would not terminate until other patents had expired, and that the trademark license was valuable to British Timken, the defendant agreed in 1924 to a further reduction in royalty and a five-year extension of the agreements for the principal purpose of obtaining amendments thereto which would insure its ultimate control of the trademark within the United Kingdom. Accordingly, the 1909 agreements were amended to provide that the name "Tim-

ken" should belong exclusively to the defendant as licensor, and that British Timken, as the licensee, should be "deemed to be using the said name as part of the subject matter of the license", and upon expiration or termination of the agreements should cease to use the name. However, subsequent advice of British trademark counsel in 1926 cast doubt on the effectiveness of this amendment under British law, and both the defendant's American and British trademark counsel suggested that a very practical way to cure the whole situation as to the trademark would be for the defendant to acquire British Timken.

In 1925 or 1926, Vickers fell into considerable financial difficulties, in which its subsidiary, Wolseley Motors, the parent of British Timken, became involved, and advice received by the defendant indicated that British Timken was not progressing in the way it should, due to antiquated machinery, lack of funds, and other reasons.

M. B. U. Dewar, a British businessman who held a high position with Vickers, was put in charge of Wolseley Motors, and consequently, of British Timken. On a trip to this country he visited the defendant, and was advised that in its opinion British Timken's costs could be cut 25 per cent by the introduction of the defendant's manufacturing methods. Early in 1927, shortly after his return to England, he wired the defendant stating that he had an opportunity to acquire British Timken, but was unwilling to do so unless the 1909 agreements were extended for a period of ten years. He also inquired whether the defendant would be interested in loaning him money or investing in British Timken. The defendant seized this opportunity, replying that it would prefer to participate in the purchase of British Timken to the extent of one-half or more, and at the same time advised its American trademark counsel that it was negotiating for the purchase of control of British Timken and wanted his

ideas as to what should be done about the foregoing trademark situation.

During negotiations in England between Dewar and the defendant's representative, a former executive who had left the defendant but acted as its agent, Dewar expressed the desire to have the defendant as his "partner" in the operation of British Timken in order to insure the defendant's interest therein, and this was relayed to the defendant. The negotiations resulted in Heads of Agreement executed May 16, 1927, to be implemented by more formal agreements and other action, by which the defendant and Dewar agreed, in substance, (1) to acquire jointly British Timken, each putting up approximately half of the necessary funds to purchase the stock from Vickers, Ltd.; (2) to a method of control, through reorganization, of British Timken to provide for two classes of stock, of which Class A, owned predominantly by Dewar, should control the election of directors so long as the company made a certain annual profit, control to pass to Class B, owned predominantly by defendant, if it should fail to do so; (3) that the parties should have first refusal on each other's stock in case of sale, and that the defendant should have an option to purchase Dewar's stock upon his death, or incapacity to act as managing director; (4) that Dewar should be managing director while Class A shares controlled; (5) that the defendant and British Timken should enter into an agreement extending for ten years the terms of the existing agreements between them, subject to modifications, and generally upon such terms and conditions as might be mutually agreed upon, including provisions "for protection of the name Timken and securing the exclusive reversion of the name in all countries" to defendant at termination of the agreement; and that arrangements should be made for the formation of continental companies for the manufacture and/or sale of bearings.

This arrangement for control by Dewar's stock of the ordinary affairs of British Timken was made because he was of the opinion that the company should have British control of its ordinary capital in order to be a British controlled company as to customers and the British Government, for products of foreign companies, although locally manufactured, were unpopular in the United Kingdom, and under foreign control his investment would be in jeopardy.

The provision with respect to the organization of continental companies embodied, informally, agreements made by the defendant's representative and Dewar that they would organize jointly a new corporation in France to manufacture and sell bearings there and acquire the trademark "Timken" from S. M. G. because of the unsatisfactory way in which that company had conducted the business, and that they would jointly negotiate with Prausnitzer to take over control of his company, Deutsche Timken Gesellschaft (hereinafter called German Timken), and the German trademark, giving him a stock interest if necessary, both of these enterprises to be owned and operated by Dewar and the defendant on the same basis as British Timken.

All of these things were done. The first business agreement complained of was made between the defendant and British Timken, effective January 1, 1928. It provided, among other things, for the licensing of the trademark "Timken" by British Timken, and for carrying out the terms and provisions of the joint venture as heretofore outlined. Subsequent business agreements were made in 1934 and 1938, which changed in minor respects the original business agreement of 1928, but the essential details of the arrangement between the companies was not changed from that contained in the original agreement. The trademark licensing provisions contained in all of the business agreements were based upon the recognized legal and equitable ownership of the trademark "Timken" by the defendant.

While German Timken was discontinued during the Nazi regime in 1934, British Timken and French Timken have been operated by Dewar in close collaboration with the defendant ever since 1927. Among others too numerous to detail here demonstrating the existence of the joint enterprise, are the facts that the great majority of tapered roller bearings manufactured by the three companies are identical, that the defendant has provided bearing designing service for British Timken and French Timken, has made all of its information as to improved methods, machines, and general "know-how" available to them as a matter of course, and continually has sent its own employees to their plants to install its own methods of production and to assist them in designing and selling bearings, and has trained their employees in its plants.

The three companies have been operated much like departments of one enterprise, each staying within its designated territory ordinarily, the basic idea being that bearings manufactured according to Timken methods and distributed under that name and mark shall be sold by any one of the three companies in the territory of another when necessary to meet competition from other organizations such as the Swedish bearing Trust, S. K. F., and its subsidiaries located in various countries of the world.

While some stock of British Timken was sold to the British public in 1935 because of Dewar's desire to cash in on some of his investment therein, arrangements were made to maintain control of that company upon the same basis as it has always existed between the defendant and Dewar, through the means of a holding company for British Timken stock remaining to the defendant and Dewar. While this company has been dissolved, substantially the same arrangement is in effect today. The defendant owns 30.25 per cent and Dewar 25 per cent of British Timken stock, or combined majority voting control of 55.25 per cent.

Similarly, the defendant and Dewar, who each own 50 per cent of the common stock of French Timken, have an arrangement by which Dewar operates that company and is entitled to control its ordinary affairs so long as it pays a certain profit, the parties having first refusal on each other's shares therein in case of desire to sell, and the defendant having an option on Dewar's stock in event of his death, incapacity or retirement.

While the methods of perpetuating these arrangements with respect to British Timken and French Timken have varied in form as the parties have readjusted their affairs from time to time, they have never deviated from the fundamental arrangements for joint control and operation of British Timken and French Timken. The whole relation of defendant, Dewar and the other two Timken companies is strikingly similar to that involved in *United States* v. *Scophony Corporation*, 333 U. S. 795, which was regarded by the Court as constituting "what practically, if not also technically, was a joint adventure * * *."

The plaintiff relied principally upon documentary evidence as showing that the defendant carried out the territorial allocations and engaged in other activities, all of which would be natural in furtherance of the joint venture, such as preferential prices by the defendant to British Timken and French Timken, reference of inquiries emanating from their territories to them, assistance in "combatting" competition of others, etc. Further, British Timken entered into a quota arrangement with S.K.F.'s subsidiary in the United Kingdom, and French Timken with S.K.F.'s subsidiary in France in order to escape extinction, both of which were known to the defendant, and the latter of which was approved by it. Both of these agreements ended in 1939, when World War II commenced, and have not been renewed.

The defendant's principal contentions in the District Court were that the burden was upon the plaintiff to show, not only that restraints of trade and commerce had occurred, but also that they were unreasonable, under the "rule of reason" first announced in *Standard Oil Co.* v. *United States*, 221 U. S. 1, and that any restraints imposed by the arrangements between the defendant, British Timken and French Timken for allocation of exclusive territories as between themselves and incidental arrangements as to prices on replacement sales of bearings, and the furnishing of aid to each other, were not unreasonable, but, instead, were reasonably ancillary to the formation of a joint venture between the defendant and Dewar to conduct an anti-friction bearing business in foreign countries through the instrumentality of British Timken and French Timken, to the transfer of know-how by the defendant to British Timken, and to the joint use of the trademark "Timken" throughout the world by the three Timken companies.

The District Court did not "find the facts specially and state separately its conclusions of law," Rule 52(a), although requested so to do by the defendant, but, instead, adopted its opinion as its findings of fact and conclusions of law upon motion of the plaintiff to that effect. The Court did not deem it necessary to make findings as to many of the facts appearing from the uncontroverted evidence, some of which have been discussed herein, particularly those as to the relations between the defendant and Dewar.

The final judgment of the District Court enjoins the defendant-appellant from carrying out its agreements with Dewar, British Timken, and French Timken, requires it to divest itself of its stock and other financial interests therein, and imposes exhaustive restrictions upon its relations with those companies and the public.

The Questions Are Substantial

This case involves, among others, two basic and fundamental legal questions of vital importance today to American business and the investment of American capital abroad.

First, the question of whether the joint venture in the general nature of a partnership between the defendant, an American manufacturer, and Dewar, a British subject, to conduct foreign business through the instrumentality of foreign corporations justified the restraints imposed by the territorial allocations insisted upon by Dewar for protection of his investment, is one which, insofar as it relates to the Sherman Act, has been before the Supreme Court only once, so far as we can find, namely, in *United States* v. *Bausch & Lomb Optical Co.*, 321 U. S. 707. In that case a divided court affirmed the decision of the district court which held that an arrangement between a manufacturer and a distributor of lenses by which the former agreed to manufacture exclusively for, and not to sell in competition with, the latter, "though not a partnership in legal form", was "functionally a joint enterprise", and that the restraints imposed were reasonable and not in violation of the Sherman Act, where the evidence disclosed that there remained substantial competition in the industry, *United States* v. *Bausch & Lomb Optical Co.*, 45 Fed. Supp. 387.

While the relationship between defendant and British Timken and French Timken was not that of manufacturer and distributor, they were engaged in a joint enterprise in the nature of a partnership. Although the District Court said that "Defendant did not build plants in Europe or purchase subsidiaries abroad" and "it simply acquired substantial interests in a dominant manufacturer of bearings in England, participated in the formation of and investment in the stock of a potential competitor in France" (Memoran-

dum, Par. 160), the evidence is uncontroverted that the operation of British Timken has been constantly controlled by the defendant and its partner, Dewar, and that French Timken was an entirely new enterprise similarly invested in and controlled by them. The uncontroverted evidence in the instant cause discloses that ball, roller and other antifriction bearings of all types compete with respect to 90 per cent of original installation business, which constitutes 95 per cent of the business done by the industry, the other 5 per cent consisting of replacement sales; that, while the defendant and the other Timken companies naturally manufacture a very large proportion of tapered roller bearings because they have developed and advocated this particular type of roller bearing, they only produce, together, approximately 23.2 per cent of the estimated production of antifriction bearings in the United States, the United Kingdom and France; and that competition, and the number of competitors, in tapered roller bearings alone in this country has increased materially since inauguration of the joint venture in 1927. The evidence discloses further that nationalistic prejudice against foreign goods, nationalistic policies calling for licensing of exports, imports and foreign exchange, and other reasons, have required, as a practical matter, since 1927 and prior thereto, that an American company desiring to sell successfully bearings in foreign countries must establish plants therein owned by local legal entities, accompanied by partial investment of local capital, and operated and managed by local citizens. Therefore, the question, whether affording protection to the investment made by local businessmen for the purpose of securing these legitimate business advantages by agreeing not to compete with the enterprise violates the Sherman Act, is one of great importance, particularly at the present time when the administration is seeking to encourage the employment of

American industrial and scientific techniques abroad under the "Point Four" program.

Second, this cause involves a further question of great importance, namely, the right of an American company to license the use of its trademark abroad on a territorial basis, for in the amended complaint the plaintiff prayed that the defendant be enjoined from "transferring, selling or assigning the trademark 'Timken' to or for the use" of British Timken or French Timken "so as in any manner to exclude the defendant from using the trademark 'Timken' anywhere in the world."

In discussing the matter of licensing the trademark the District Court said (Court's Memorandum, Par. 192) "Whether within the provisions of the Sherman Act commerce may be restrained to the extent that it is reasonably ancillary to protect a trademark has not been decided or discussed by the courts."

The views expressed by the District Court as to the application of the Sherman Act, and otherwise on this point, are contrary not only to other decisions as to controlled licensing of trademarks in the United States, but also we submit to the proper interpretation of the Sherman Act as its enforcement may bear upon the licensing of trademarks on an international basis. Controlled licensing on a territorial basis has been recognized as valid by the lower courts, *Keebler Weyl Baking Co.* v. *J. S. Ivins Sons, Inc.*, 7 Fed. Supp. 211; *Knight* v. *Miller*, 283 Fed. 816; *Coca-cola Co.* v. *Bennett*, 238 Fed. 513, and other cases, and the imposition of territorial and other restraints ancillary to such licensing has been held legal, *Coca-cola Bottling Co.* v. *Coca-cola Co.*, 296 Fed. 796. The domestic statutory law of trademarks is now set forth in the Lanham Act, effective July 5, 1947, 60 Stat. 427, 15 U. S. C. § 1051, *et seq.* Sections 5 and 10 of that Act recognize the controlled licensing of trade-

marks in the United States and are declaratory of its policy on that subject. Sections 44 (i) and 45 of the Lanham Act, which extend the protection of the Act to nationals of foreign countries who are parties to international conventions to which the United States is a party, further evidence this policy. The United States is party to two general international conventions covering trademarks, the International Convention for Protection of Industrial Property, originally adopted in 1883 and revised at various times, the last revision having been made in 1934, and the Inter-American Convention for Trademark and Commercial Protection adopted at Washington in 1929. The first of these conventions contemplates the licensed use of a trademark by affiliated companies as long as the quality and standard of the trademark owner are maintained, while the second provides that the use and exploitation of trademarks may be transferred separately for each country. The effect of the District Court's decision in this case is to deny to the defendant, not only the right to use controlled licensing of its mark outside of the United States, but also the same use of its trademark as is extended by the Lanham Act to nationals of foreign countries who use and license trademarks in the United States.

In the international field the system of licensing trademarks is a very common, and, in fact, often necessary, means of using them. Owners thereof who have a substantial goodwill in foreign countries are often prevented from exporting their goods thereto and competing directly therein because of customs duties, transportation expenses, and nationalistic policies of such foreign countries for localization of industry therein, development of a domestic economy, spread of work, and reduction of demand for foreign exchange. Licensing arrangements make it possible for American business firms to expand their market and maintain and develop goodwill in their trademarks in foreign

countries. Thus, a final pronouncement by this Court as to the impact of the Sherman Act on the licensing of trademarks abroad is of great importance to American business at this time.

All of the ultimate, and many of the subsidiary, findings of fact made by the District Court are clearly erroneous.

The fact that the District Court has ordered divestiture of the defendant's stock holdings and other financial interests, "direct or indirect", in British Timken and French Timken, when, according to the Court's own findings, the defendant has never used its stock interests in those companies to control their operations, and those investments were not illegally acquired in the conduct of the alleged combination found by the Court to have existed, also raises a question of substance as to the Court's jurisdiction to "prevent and restrain" violations of the Sherman Act within the meaning of Section 4 of the Act (15 U. S. C. § 4) *United States* v. *National Lead Co.*, 332 U. S. 319.

It is submitted that for these reasons alone the questions presented by this appeal are substantial and of public importance, but the defendant-appellant also relies on all other points raised in the Assignment of Errors.

APPENDIX

IN THE DISTRICT COURT OF THE UNITED STATES FOR THE NORTHERN DISTRICT OF OHIO, EASTERN DIVISION

Civil Action No. 24214

UNITED STATES OF AMERICA, *Plaintiff*,

vs.

THE TIMKEN ROLLER BEARING COMPANY, *Defendant*

MEMORANDUM—March 3, 1949

FREED, J.:

1. The instant action was brought by the United States under favor of Section 4 of the Sherman Antitrust Act to prevent and restrain the continuing violations of Sections 1 and 3 of the Act. Permanent injunction with adequate protection to prohibit the violations is sought.

2. The complaint charges, that the defendant and the co-conspirators entered into contracts, agreements and understandings to eliminate competition between themselves and with others, in the manufacture and sale of anti-friction bearings in all the markets of the world, including the United States. It recites that they allocated the respective territories in the world in which each party might manufacture and sell anti-friction bearings and that they prevented one party from selling or shipping anti-friction bearings into the territory allocated to any other party, except in completed articles of manufacture and for replacement bearings in those articles. It further charges that they fixed and agreed upon prices of bearings shipped into the territory allocated to any other party and that they fixed and agreed upon prices of anti-friction bearings sold and shipped to Russia. They allocated the use of the trade mark "Timken" to each of the parties in their respective designated territories and required that the co-conspirators not manufacture and sell bearings, except under the mark

"Timken". The agreements required the co-conspirators to surrender to defendant the rights in the name "Timken" upon the termination of the contracts between them. It is claimed, in certain of the designated territories they entered into agreements with other manufacturers to regulate and allocate the sale of anti-friction bearings and they aided and assisted each other in restricting and eliminating in their respective territories competition from others in the manufacture and sale of anti-friction bearings.

3. It is alleged in the complaint that the combination and conspiracy resulted in unreasonable restraint of imports into and exports from the United States. It is further alleged that the current world shortage of anti-friction bearings and decreased European production caused by the war, has created large potential export markets for anti-friction bearings of American manufacture. Notwithstanding this, the continuation of the conspiracy and combination will restrain and prevent defendant from seeking and acquiring many world markets with the eventual consequence of reducing its production of bearings and employment of labor.

4. The factual and legal questions to be determined in respect of the charges of the complaint are posed by the Government as follows:

5. Within the purview of the Sherman Act is it illegal for the "defendant and two foreign corporations, which between them manufacture and sell a substantial portion of the world's production of anti-friction bearings, to regulate interstate and foreign commerce by private arrangements embodying the following restrictive practices"?

> "(a) Allocation, by agreement, of trade territories throughout the entire world, each agreeing with limited exceptions, not to manufacture and sell in the other's territory;
>
> "(b) Imposition by agreement, of price restrictions upon products sold by any party in the territory of another;
>
> "(c) Agreement to exclusively exchange present and future know-how and inventions, patented or unpatented;

"(d) Use by agreement, of a common trade mark "Timken" in their respective territories, compulsory use of that mark by the foreign conspirators, prohibition against their dealing in products under any other name and requiring that they cease using the name upon termination of the agreement;

"(e) Mutual co-operation and assistance to protect each others' markets and to eliminate the competition of outsiders;

"(f) Participation in foreign cartels which restrict exports by United States producers."

6. The defendant, The Timken Roller Bearing Co., is an Ohio corporation with its principal offices located at Canton, Ohio. It employs upwards of 16500 employees at its various plants located in Ohio and in Colorado, in the United States and St. Thomas, Ontario in Canada. Its foreign sales are handled by two wholly owned corporations: Timken Roller Bearing and Service Limited and The Timken Roller Bearing Co. of South America, Canadian and Ohio corporations respectively. Defendant manufactures tapered roller bearings, alloy steel, seamless tubing and removable rock bits.

7. British Timken Limited, named a co-conspirator, (hereinafter referred to as British Timken) is a British Joint Stock Company which maintains its plant and principal offices at Birmingham, England. It employs approximately 2400 workmen and manufactures tapered roller bearings and axle boxes for railroad cars. Its wholly owned subsidiary, Fischer Bearings Co., Ltd., manufactures straight roller bearings and ball bearings.

8. Societe Anonyme Francaise Timken, also named a co-conspirator (hereinafter referred to as French Timken), is a French corporation with its plant and offices at Asnieres, France. It employs approximately 510 people and manufactures tapered roller bearings.

9. The assertion of the Government that defendant, British Timken and French Timken dominate the tapered roller bearing market of the world and a substantial portion of

the total anti-friction bearing market is challenged by defendant.

10. The evidence discloses that defendant is "many times over" the largest manufacturer of tapered roller bearings in the world. Its gross sales in 1947 were $77,097,756.00.

11. According to the figures compiled by the Anti-Friction Bearing Manufacturers Association, defendant's percentage of the tapered roller bearing industry in the United States was as follows:

Year	
1941	71.0%
1942	77.9%
1943	82.2%
1944	80.3%
(7 months) 1945	78.9%

12. Presently defendant's output of tapered anti-friction bearings constitutes 25% of the total production of anti-friction bearings in the United States.

13. British Timken, during the period from 1927 to date, produced a large volume of all the tapered bearings in England. It manufactured more than 90% in 1927, the percentage decreased to 70%, and later returned to more than 90%. It produces approximately 20% of all the British anti-friction bearings. British Timken's sales including those made by its subsidiary, Fischer Bearings Co., Ltd., totaled $14,700,000 in 1947.

14. French Timken manufactures about 80% of the tapered bearings in France, which constitutes 10% of all the anti-friction bearings. Its sales in 1947 totaled $2,274,723.

15. Command of such volume of business spells out the dominant position of defendant, British Timken and French Timken both in the tapered and anti-friction bearing industry. Oxford Varnish Corporation et al. v. Ault & Wiborg Corporation, 83 Fed. (2d) 764, U. S. v. Columbia Steel Co., 334 U. S. 495, 527.

16. It was aptly stated during the trial that practically every shaft that turns and every vehicle that rolls is dependent on anti-friction bearings. Their crucial importance to our present industrial economy required no demonstration. Modern machinery, such as trucks, automobiles, farm machinery, locomotives, aeroplanes, in fact every product which has rotating parts, relies on anti-friction bearings for continued operation.

17. Friction bearings and anti-friction bearings have distinctive characteristics. Friction bearings slide over the shaft and depend solely on oil or other similar substance to reduce friction. Anti-friction bearings, on the other hand, consist of a circular group of steel rollers or balls revolving between two circular raceways which reduce friction between moving mechanical parts.

18. There are two general types of anti-friction bearings: roller bearings and ball bearings. Tapered roller bearings are a style of roller bearings.

19. While tapered bearings compete with other types of anti-friction bearings and to a much lesser extent with friction bearings, tapered bearings because of their design and applicability for particular use, enjoy freedom from competition, just as for certain definite uses, ball bearings are free from competition.

20. They constitute a distinctive type of anti-friction bearing which fulfills a requirement not supplied or satisfied by others. Whatever competition exists between the different types of anti-friction bearings, is present only up to the point of the adoption, in the design of a specific type of bearing, in the proposed equipment or machinery. Once that particular type of bearing is incorporated, other types cannot be substituted for replacement. The replacement bearings must be of the same size and character.

21. The original installations constitute approximately 95% of the output of roller bearings and the replacement sales the balance of 5%.

22. In our highly mechanized industries, roller bearings serve as vital links in the chain of their assured existence

and sustained progress. Defendant, British Timken and French Timken exercise a potent force in the making and marketing of these products, essential to the maintenance of the economic welfare of the United States and of the entire world.

23. In order to view the conduct of defendant in the proper perspective during the period of time when it is accused of violating the antitrust laws, it is essential to examine its prior activities which the Government claims culminated in the agreements, contracts and understandings to eliminate competition, assailed in this action.

24. On June 16, 1909, the first of a series of written agreements, licensing the production and distribution of tapered roller bearings was concluded between defendant and Electric & Ordnance Accessories Company Limited, (a predecessor of British Timken and a subsidiary of Vickers Ltd., a British trust comprised of many companies and described as manufacturing everything from battleships to baby carriages). Under its provisions defendant granted to E. & O. A. the exclusive license to "make, use, exercise and vend" in the United Kingdom and the Isle of Man roller bearings of all kinds made pursuant to the specifications of British patents which defendant then owned or under patents later to be granted to or acquired by defendant. It contained definite territorial restrictions. Defendant was prohibited from making or selling to others, or from licensing others to do it, or from selling its own manufactured bearings for shipment into the territory of E. & O. A. It was, however, permitted to make and sell or license others to make and sell bearings for vehicles manufactured outside and shipped into the territory of E. & O. A.

25. E. & O. A. was prohibited from selling bearings outside of its territory and from selling bearings in its territory, knowing them to be for shipment outside. E. & O. A. was allowed to sell bearings in its own territory for vehicles manufactured there for export elsewhere. The license was so conditioned that E. & O. A. was prevented from manufacturing or selling any anti-friction bearings, except those made under the licensed patents and except those assembled

in other articles produced or sold by E. & O. A. E. & O. A. was obliged to use the designation "Timken" exclusively on all the bearings made or sold by it. It was incumbent on E. & O. A. to use all the instructions for manufacture given to it by defendant which defendant agreed to supply. Defendant in turn was privileged to utilize any improvements made by E. & O. A. in its manufacturing process. E. & O. A. had the right to determine the sale price for its bearings, provided that the deficiency between its lowest price and the lowest sale price of defendant would not be in excess of the United States tariff chargeable on the bearings from any part of E. & O. A.'s territory.

26. In another agreement executed on the same day defendant granted to E. & O. A. the full and exclusive right to "license and authority to make use exercise and vend" roller bearings of all kinds under certain French and Russian patents and under a German patent application as soon as the patent or other equivalent grant shall have been obtained in the territories covered by the patents. It provided that so long as the agreement is in force, E. & O. A. shall have "full and exclusive right license and authority until all the said Patents shall have been granted or after all or any of the said Patents shall have ceased to exist (but only so far as the Licensor can then lawfully do so) to make use exercise and vend articles embodying the subject matter of such Patents or Patent and Roller Bearings of every kind whatsoever in that part of the said territory where the Patents or Patent shall not have been granted or shall have ceased to exist."

27. Defendant also granted to E. & O. A. an exclusive license to manufacture and sell articles, embodying the subject matter of the British patents referred to in the first agreement and roller bearings of every kind whatsoever (whether covered by patents or not) throughout Europe (except the United Kingdom, France and Russia and except Germany after the patent or grant shall be issued or made there) and throughout the whole of the British Colonies, Protectorates and Dependencies except Canada. It contained the identical restrictions set forth

in the first agreement in respect of sales in the other party's territory. The provisions of the first agreement pertaining to price regulations, to the compulsory use of the mark "Timken" by E. & O. A., to the requirement that E. & O. A. use instructions as to method of manufacture, to the furnishing of data by defendant, to the privilege of defendant to utilize improvements made by E. & O. A. were embodied in the second agreement in identical language.

28. The agreements of June 16, 1909 were modified on April 6, 1920, by two separate instruments between defendant and Wolseley Motors of England (another Vicker's subsidiary). The rights of E. & O. A. were assigned to Wolseley. The territorial divisions remained as they had been designated. The respective areas were redefined as licensor's area (defendant) and licensee's area (Wolseley). Defendant was permitted, however, to sell to manufacturers in defendant's territory who in turn, were allowed to export bearings to Wolseley's territory for use in their products. Wolseley was granted the same privilege in its territory.

29. The price for replacement sets for use in Ford cars in Wolseley's territory was fixed. Defendant and Wolseley placed on record their desire and intention, that bearings made in their respective territories "shall not be sold at prices which shall be unreasonable and unfair to the party in whose territory the Roller Bearings are sold" without accepting any legal obligation for it.

30. The modifying agreements further provided, that if the principal agreement (June 16, 1909) should be rescinded, Wolseley should abandon the use of the name "Timken" as part of its name (if so used) and in all other respects, and secure to defendant the exclusive use of the name "Timken".

31. In 1924 and 1925 after all the basic patents pertaining to the tapered roller bearing had expired, two agreements were executed between defendant and British Timken. They merely modified the prior agreements and continued them for a term of five years to January 1, 1929. In the meantime British Timken succeeded to the rights of Wolse-

ley Motors (its parent company). Royalties payable by British Timken were reduced from fifteen per cent to five per cent. They recited that the name "Timken" should belong exclusively to defendant and that during the continuance of the principal agreements as modified from time to time British Timken should be deemed to be using it as a part of its exclusive license and upon the expiration of the agreements British Timken should change its name and do everything necessary to secure for defendant the exclusive right to the name "Timken".

32. These various agreements constituted the basis of relations between defendant and British Timken, including its predecessors E. & O. A. and Wolseley Motors, subsidiaries of Vickers. Against the backdrop of these prior relations we must view the conduct of defendant to resolve the questions raised by the charges of anti-trust violations beginning in 1928.

33. As to the existence of these license contracts, which contained restrictions of territories, fixing of prices, covenants of defendant and British Timken not to compete with each other there is no dispute. The only comment of defendant in that regard is that, "Vickers in its zeal to protect itself may have exacted too broad a license."

34. The Government points out that in 1927, prior to the time defendant and British Timken associated in their challenged conduct in the bearing industry they were prosperous and growing concerns. This is amply supported by the evidence.

35. Since it was founded, defendant held a commanding position in its field of manufacture. By 1928 it became the Titan of the roller bearing industry. It had purchased the assets of its principal competitors in the United States. Conflicting claims were made, during the trial, as to the exact percentage of the total tapered roller bearing market controlled by defendant. It is of no moment what the precise figures were. Defendant's assertions that it was "many times over the largest manufacturer of tapered roller bearings in the world" and that "Timken Tapered Roller Bear-

ings are standard equipment in a majority of all makes of automobiles, trucks and busses. Railroad cars and locomotives, steel mill roll necks, machine tool spindles, oil field machinery, compressor crankshafts, paper making machines—these are but a few of industry's tough jobs in which Timken Bearings have become dominant" are sufficient indication of the position of defendant in the industry.

36. Although defendant in its advertising characterized itself and its product in this fashion in 1941, its relative position was the same in 1928. British Timken's potent leadership in the industry compared favorably with that of defendant. It showed a substantial growth from the time the principal contracts were made and increased its productive capacity, experience in manufacture and sales output to an extent, that it became a potential formidable competitor in the field of roller bearings. It experienced a relatively greater growth in the business than did defendant. It had but one competitor in Great Britain and sold approximately 90% of all the tapered roller bearings there. So the accused agreements between 1928 and 1938 were made between two manufacturers, who on the basis of the evidence, were properly characterized as the largest manufacturer in the world and the largest manufacturer in Great Britain respectively.

37. Around 1926, Michael B. U. Dewar, an English businessman, became vice chairman of Wolseley Motors. British Timken was then a subsidiary of Wolseley Motors. As a member of a British commission, while on a visit to the United States to make an economic study, he spent some time at defendant's plant. In 1927, shortly after his return to England, he became interested in personally acquiring British Timken. As an officer of Wolseley Motors, he knew of the existing agreements between defendant and British Timken, of their provisions pertaining to territory, royalty and trade mark. He also knew that the contracts were to expire on January 1, 1929.

38. On March 10, 1927, Dewar wrote to defendant's president, advising that he had become chairman of British Timken and raising the question of the continuation of the

existing agreements between British Timken and defendant. In this letter mention was made that he contemplated making an offer to Vickers for the purchase of British Timken and expressed the thought that it would require about £300,000. He commented, "I do not know whether your Company would care to be interested if I were to make such an offer either permanently or on the basis of the money loaned being repaid out of profits."

39. On March 28, Dewar cabled defendant, inquiring whether it would be prepared to extend its agreements with British Timken for ten years, if he were to take it over and stating that he had to make up his mind within the next ten days and should like to do it, but did "not think it wise without a ten year's arrangement with" defendant.

40. Defendant cabled Dewar in reply, that it was willing to consider an additional ten year license and reduction of royalty, that with its cooperation costs could be reduced 25 per cent or more and further saying that it would be more interested in joining with him in purchasing the British company from Vickers.

41. Additional cables and personal negotiations between an executive of defendant and Dewar followed, which eventuated in a written instrument named, "Heads of Agreement" dated May 16, 1927 signed by defendant and Dewar. It was in effect a memorandum of the concurrence of the parties on the basic subject matters of the negotiations to be later "embodied in more formal documents as soon as practicable".

42. Inter alia, it provided that defendant would contribute £52,500 and Dewar £47,500, for the purchase of the stock of British Timken; that upon the issuance of two classes of shares Dewar would hold the majority of the class which controlled the company; that such control would cease in the event a stipulated minimum net profit was not earned and a specified dividend was not paid periodically; that Dewar was to be the managing director while the shares he owned controlled the company.

43. The contract likewise provided that a new agreement would be entered into between defendant and British Timken "extending for ten years the terms of the existing Agreements between them subject to modifications and generally upon such terms and conditions to be mutually agreed" including among others "Any practicable steps to be taken for the protection of the name Timken and securing the exclusive reversion of the name in all countries to the American Company at the termination of the Agreement."

44. The control of British Timken accordingly passed from Vickers to defendant and Dewar. Each owned about 50 per cent of the stock, but Dewar was the managing director and conducted its affairs.

45. Under these recited circumstances and following these preceding events, British Timken, defendant and French Timken made a series of agreements and engaged in a course of conduct which are labeled by the Government, "a broad combination and conspiracy to suppress all competition between the parties * * *".

46. What were these agreements and what did these companies do to warrant the charge leveled against them?

47. On January 1, 1928 a "business agreement" consisting of three written instruments of the same date was made between defendant and British Timken, to be in effect for a period of ten years. Simultaneously all existing contracts between them were cancelled.

48. The agreement of 1928 followed generally the pattern of those which preceded it. The world was divided into respective territories for the manufacture and sale of bearings in this language: "For the purpose of this Agreement the United Kingdom of Great Britain and Northern Ireland and all other countries of Europe and all colonies or dependencies of said United Kingdom and European countries except in or adjacent to North or South America shall be deemed to be the territory of the British Company and the rest of the world shall be deemed to be the territory of the American Company."

49. Exclusive license was granted to British Timken under existing or future patents of defendant for the duration of the agreement. In turn British Timken was to assign absolutely and for all time its existing and future patent rights in defendant's territory.

50. They agreed to inform each other in respect of all inventions and improvements regardless whether they were patented or not patented. Advice as to methods of manufacture was to be furnished by defendant, and British Timken was obliged to follow it.

51. Each party agreed not to sell bearings directly, or to others for shipment into the other party's territory, except as assembled component parts of completed articles manufactured in its own territory and for bearing replacement purposes in such completed articles. In the event such sales in or into the other party's territory were made, they were obliged to advise each other of the details of the sales and pay an amount of ten per cent of the net sales price.

52. They agreed to endeavor to maintain the distinctive character of the trade mark "Timken". British Timken agreed not to manufacture or sell bearings except under the trade mark and only in accordance with the provisions of the agreement, and to eliminate the name "Timken" from its corporate name and to refrain from its use as a trade mark upon the termination of the contract.

53. Prior to 1924, British Timken or its predecessor exclusively licensed a French company, La Societe de Mecanique de Genevilliers," (hereinafter referred to as S. M.G.), to manufacture Timken roller bearings in France and its colonies. S. M. G. registered the trade mark "Timken" in France and her colonies, where it was the only manufacturer of tapered roller bearings until 1928, when its license agreement was terminated.

54. Early that year steps were taken by Dewar, with the consent and cooperation of defendant, to organize Societe Francaise Timken (French Timken) which accordingly came into existence in July of 1928. The ownership of its stock was divided between defendant and British Timken.

Dewar, however, during the entire time under consideration, controlled its operations and supervised its business activities. French Timken purchased from S. N. G. the trade mark rights in the name "Timken" for 12,000 francs.

55. A "business agreement" was entered into between British Timken and French Timken, on the model of the one between defendant and British Timken, allocating to French Timken France and her colonies, dependencies and mandates (except those in North and South America) as its exclusive territory for the manufacture and sale of anti-friction bearings.

56. French Timken rented a plant, purchased machinery from defendant and British Timken and commenced operations by first importing semi-finished products from defendant and British Timken. By 1933 it was engaged in the manufacture of all the component parts of roller bearings.

57. In Germany, one Prausnitzer, the owner of a company called Deutsche Timken Gesselschaft, had registered the trade mark "Timken". Defendant and British Timken organized a new German company with the same name, gave Prausnitzer a 20.25 per cent interest in it and named him manager in order to acquire the trade mark and Prausnitzer's assignment of his company. An agreement similar to the one made with French Timken was consummated between British Timken and Deutsche Timken Gesselschaft, which allocated Germany as the German company's exclusive territory for the distribution of anti-friction bearings. In 1934 the German company's business was discontinued and British Timken again took over the territory.

58. Before the expiration of the 1928 contract, another agreement between defendant and British Timken became effective (on January 1, 1935), for sixteen years, which was substantially the same as the 1928 contract.

59. In it were found, however, the following provisions: "The American Company (Timken) in its territory may accept and execute orders for bearings for ultimate destination in the British Company's (British Timken's) territory for use for bearing replacement purposes in such completed

articles of manufacture but such right shall not authorize sales to or known to be destined for manufacturers in the British Company's territory or sales at prices in conflict with the wishes of the British Company and the American Company from time to time will notify the British Company of the details of the sales authorized under this paragraph and will pay to the British Company an amount equal to five per cent (5%) of the net sale price thereof."

60. Conversely the same provision is made as to prices and payments to defendant for sales of replacement bearings by British Timken in defendant's territory.

61. Russia became the joint territory of defendant and British Timken. Business transacted there was conditioned as follows:

62. "The prices and terms at or upon which offers are made and orders are accepted shall so far as practicable be mutually agreed from time to time but nevertheless either of the parties hereto shall be at liberty to quote and accept orders at low prices and extended times for payment without the consent of the other party after having first submitted the prices and other terms to the other party for its consideration and remarks provided that any such quotation or acceptance shall not involve under cutting some quotation already made by the other party."

63. The agreement of June, 1928 between French and British Timken was modified in a new contract on July 15, 1935. It too, provided that bearing replacement sales might be made by defendant, French Timken and British Timken in and into their respective territories. The prices had to be satisfactory to the company into whose territory bearings were sold. French Timken was obliged to sell no bearings other than under the trade mark "Timken".

64. The present operations of defendant, British and French Timken in the world market of anti-friction bearings are carried on under the provisions of and subject to the restrictions of two contracts both dated November 28, 1938. They are, the "Tripartite Contract" between defendant, British and French Timken and the agreement between de-

fendant, British Timken and Dewar, which is supplemental to the Tripartite Agreement. These are the final understandings which superseded all the numerous others and are to govern the conduct of the parties until the end of 1965.

65. The lengthy recital of the contents of the prior agreements was felt desirable for the purpose of showing the evolution of exclusive licenses under patents, into agreements which are not based on the prerogatives enjoyed by the limited patent monopoly.

66. Defendant and Dewar have to date maintained controlling stock interest in British Timken. In 1935 stock was sold to the general public, which resulted in defendant owning 30.25 per cent and Dewar 25 per cent of the shares. Defendant and British Timken own all the stock of French Timken.

67. Considerable testimony was offered to explain the reasons for the making of the large number of contracts, why they were modified and extended from time to time and various covenants were inserted in them and why the present contracts have such long duration. In the basic questions involved, the reasons advanced are of no significance. The controlling facts are that they were made and that they contained certain provisions which may bring them under the condemnation of the Sherman Act.

68. The 1938 contracts are each entitled "Business Agreements" and contain substantially the same provisions present in the 1935 agreements.

69. To summarize their salient features, the contracts provided for exclusive marketing areas which prevented the parties from selling in each other's territories, fixed prices on all replacement bearings sold in each other's territories, fixed prices on bearings sold in Russia and compelled British Timken and French Timken to manufacture and sell bearings only under the terms of the agreements and under the trade mark "Timken".

70. The evidence is overwhelming and uncontradicted that defendant, British Timken and French Timken reli-

giously adhered to their contractual obligations to make the territorial divisions inviolate. Indeed, in some instances, they refused to disturb the allocated territories even where exceptions were made in the agreements. For example, although the contracts permitted sales of replacement bearings outside of the allocated territory D. P. Hess (assistant to the president of the defendant company), confirmed the arrangements he made with British Timken in a memorandum on February 16, 1932 as follows:

> "*Prices on Service Bearings Into Our Territory*
>
> Arrangements completed to effect that British Timken will not quote on any inquiry coming in and state product should be obtained from us. There are two exceptions to this:
>
> (1) When customer demands British product.
>
> (2) When S. K. F. or F. S. are in competition.
>
> Both the latter are quoting 70 off on the Continent and we are having our trouble.
>
> Hong Kong will be American territory starting at once."

71. Each of the parties refused orders for shipment outside of its territory, referring them to the company in whose territory they were to be used. During the period from July 1, 1945 to February 20, 1947, alone, defendant transmitted 402 inquiries or orders to British Timken and French Timken. In each instance the customer who placed the order was advised that either British or French Timken had the exclusive right to supply the bearings.

72. The steady and persistent effort to assure the exclusive right of each party to manufacture and sell in its own domain is emphatically illustrated in the various letters and memoranda of the officers of the contracting parties and particularly of the officers of defendant. They bear out the Government's contention that the respective trade provinces were to be preserved regardless of the unsatisfied demand for bearings in the various parts of the world. Over the

entire span of years during which the restrictions existed, the parties did not deviate from their course of conduct. Even when the world gradually became engulfed in armed conflict, provisions were made to supply customers by specific arrangements so as to retain the trade division.

73. In 1929, the Ford Motor Company, attempted to purchase a quantity of tractor bearings from defendant for use in its Cork, Ireland plant, which was in British Timken territory. Defendant, instead of filling the order, made the bearings, and shipped them to British Timken for resale to Ford. In that connection Hess wrote:

> "This is causing us, frankly, a great deal of changing in our plan of operations, as it meant putting all of this type of machinery to making these large bearings, on double shift and operating them seven days per week; but we feel that you need this help very badly at the present time, and our joint efforts must be made to keep competition out of this Ford situation.
>
> "You may be interested to know that the Ford Motor Company, Detroit, upon receiving advices that your deliveries were not satisfactory, from their English and Cork representatives, immediately placed an order with us for approximately 5,000 sets of bearings, and of course they would have to pay our prices for them. We felt this would be a very serious handicap to your future sales, as they would constantly hold up the fact to you and possibly to us, that you could not handle their production after we had used our efforts, as you know, successfully to have them turn over this entire production to you.
>
> • • • • • • •
>
> "We are shipping these bearings to Ford, Cork, Ireland, freight prepaid, and are going to bill you your selling prices to Ford. • • •
>
> "As you understand, these prices for the differential bearings in particular, are very materially below the prices that we sell Ford, and these quotations to you must be held in strictest confidence, as we certainly would be asked to explain the difference in prices we

bill to Ford and the prices to you; and our explanation of this would be that we are billing you such prices on account of the close relationship between the two corporations, and that the British Timken Company is standing whatever losses may be incurred."

74. On December 5th, 1939 L. M. Klinedinst (vice president of defendant) wrote to all interested employees of defendant as follows:

> "Since the turmoil in Europe certain situations are arising that make it necessary for each and every one of our key men to thoroughly understand the setup between British Timken Limited, Birmingham, England, and The Timken Roller Bearing Company, Canton, Ohio.
>
> * * * * * * *
>
> "The contract provides that we shall not ship or knowingly permit our customers to ship bearings into their territory for use in the manufacture of any equipment whatsoever. Where customers wish us to make shipments into their territory for manufacturing purposes, we are to advise them of our arrangement with British Timken Limited and you are to immediately advise us of such conversations, negotiations, etc., so that we can in turn contact the British Timken Company.
>
> "Undoubtedly many of our manufacturing customers buy bearings from us for service purposes and occasionally for manufacturing purposes and in turn reship them into British Timken's territory. That, of course, we have no knowledge of and we cannot stop.
>
> * * * * * * *
>
> "There are a number of American manufacturers using Timken bearings who operate plants in British Timken's territory. Some of these plants have used both SKF tapered roller bearings and Timken bearings. Inasmuch as it is becoming more and more difficult to secure anti-friction bearings from the Swedish

companies, these American manufacturers who own these foreign plants will probably call on us to make deliveries of bearings from here. Please note that such deliveries are in direct violation of the British Timken contract, and where such requests are made refer them to us as we may want to effect some arrangement with British Timken to fill such requirements rather than have the American company buy one of the competing makes of tapered roller bearings and have them shipped into British Timken's territory. In such an event, both companies would lose."

75. Again on December 6, 1939 in another communication he wrote:

"It is our interpretation of these arrangements that we are not permitted to sell or ship bearings into or known to be destined to British Timken's territory without paying them a 5% commission, and even under such circumstances our prices must be acceptable to them. We have a mutual understanding with British Timken that on unsolicited inquiries for bearings going into each other's territory that we are at liberty at all times to quote prices representing a 50% discount from American list on standard bearings and pay a 5% commission on the net sale thereof. We insist that all of our men respect our agreement with British Timken and on any usual cases to consult the Home Office for further instructions.

76. On January 29, 1940 in "Inter-Organization Correspondence", W. R. Timken, (vice president of defendant) referring to Klinedinst's letters, reiterated their contents in this manner:

"In view of the confused conditions of international trade and the increased demands of the British and French governments for bearings for war purposes, it is probable that we will receive more and larger inquiries for bearings destined for the territories of our British and French associates. We have also had reports that companies using SKF bearings are hav-

ing difficulties in getting deliveries, and this, too, may be a factor in our receiving inquiries for delivery in the territories of our associates.

"Our agreement provides that we are not to sell bearings into Europe or possessions of European countries, excluding Russia and North and South America, except for service, and in the case of service, only under certain price conditions. Our agreement does *not* permit us to sell original equipment bearings directly or to domestic manufacturers knowing them to be destined for shipment into British or French Timken territories. However, this does not include bearings assembled into completed articles of manufacture or component parts of completed articles of manufacture subsequently shipped into their territory.

"When inquiries are made for bearings which may be shipped into our associates' territories, please report the matter immediately to Canton giving full information as to number, size, quantity, specification, and the exact use of the bearings. In addition, you should use your best efforts to persuade the customer that our British and French associates are both able and eager to supply their foreign requirements and that they manufacture a product comparable in every way to our own.

"When emergency shipment of small orders is demanded, we have the permission of our associates to fill such orders. We do not, however, wish to take advantage of this permission except where it is unavoidable. These cases must be taken up with Canton as outlined above for it is necessary that complete information be given to the associate involved. Should the Canton office see fit to fill any such orders that does not mean we will continue to accept them, and the customer should be urged to place all future orders with British or French Timken as the case may be."

77. A report from R. E. Forsythe, (assistant to the president of defendant) to Klinedinst on December 3, 1940 entitled "Sales Into British Timken's Territory" described

the temporary arrangement precipitated by the war. He said:

"* * * It had not been our practice in the past when we shipped bearings for British Timken directly to their export customers to give them a discount from our standard established prices such as we gave them when the bearings went to Birmingham, but they asked that we now do so due to prevailing circumstances. In other words, when we made shipments to their customers direct, they would advise us the prices at which the material should be charged and then we were to credit British Timken's account with the difference between the amount received from the customer and the price we would ordinarily have charged British Timken had the bearings gone to Birmingham.

"We agreed to do the above on a temporary basis, reserving the right to rescind the price concession at our discretion, and in this connection British Timken was to guarantee the credit of their agents so long as we followed their instructions regarding terms of shipment.

"Since the time that hostilities broke out in earnest in Europe we have continuously received inquiries emanating from British Timken's sales territory requesting catalogs and prices on our bearings. In many cases we were advised that they had formerly been supplied their Timken bearings from Birmingham, but they now desired to establish an American source of supply in case they could no longer secure bearings from England, and in some cases these inquiries came from British Timken distributors and French Timken agents. We have either referred the inquiries to Birmingham, or if it were a specific inquiry covering a definite lot of bearings we quoted our protective discount of 50% off American list. We have received definite orders from their sales territories which upon being referred to British Timken were turned down at their instructions.

* * * * * * *

"Mr. Winspur (of the British Purchasing Commission) advised me more or less confidentially that he had learned that all orders from Bearing Service Company in Australia had to be placed through Birmingham due to contractual relations and stated that he felt it would be necessary for the Australian Government to probably take over these orders and place them through the British Purchasing Commission. In discussing this with Mr. Harrison a few days before he left Canton, he asked if we would cover them in the amount of 5% on such sales inasmuch as they had the defense contract, but we made him absolutely no promises of any kind.

. . . . . .

"We have picked up from several sources in the United States the story that The Bower Roller Bearing Company is making every effort to take advantage of present conditions in order to establish themselves in world markets, and such conditions as described above only serve to give them an entree into these fields. We have also heard that SKF is buying Bower bearings and are either re-packaging them or having their name stamped in the bearings and selling them to their regular cutomers in export markets. Naturally, we feel that present conditions do not add to the prestige of the Timken name and also that Bower who is a dangerous competitor is now being given an opportunity to secure a foothold from which it may be very hard to dislodge them after the war is over."

78. The strict adherence to the territorial restrictions applicable to Australia became a matter of grave concern to British Timken's distributors and eventually to the British Purchasing Commission. There was a serious interference in Australian war production due to British Timken's inability to supply bearings. The threat of sales by competitors to supplant the meager amount of available bearings and the clamor of Australian distributors,

eventuated in the relaxation of the theretofore inflexible provisions of the contracts. For the period of the war emergency, defendant was permitted at first to fill only Australian orders and later orders emanating from any place in British Timken's territory, but only through British Timken's distributors and only at prices designated by it.

79. The voluminous correspondence on this subject matter bears out the critical situation which existed and which required the reluctant alteration of established policy.

80. For example, on September 20, 1940, C. S. Gibson (technical representative of British Timken at Melbourne), in a letter advised Forsythe of the proposed visit of an official of Roller Bearing Service Company of Australia to Canton and further said:

> "• • • It seems impossible to rely on Birmingham to efficiently handle orders, and of course, neither I nor our Distributors are officially allowed to correspond with you direct. Mr. Harrison will, I expect, give you details of lots of other matters which have been held up unduly, but I pointed out to him that possibly you may not be able to help him much, as this territory is controlled by British Timken Ltd.
>
> • • • • • • •
>
> "• • • On the other hand, you will appreciate the rather absurd position existing at the present moment, inasmuch that we are getting practically all our supplies from yc and yet it is almost impossible to get any information from Birmingham. Why not take over Australia and New Zealand for the duration of the war? I hope that you have been asked by Birmingham to quote for the complete equipment of 20 alternatively 35 locomotives and tenders for the New Zealand Railways. This is a case where the customer is extremely anxious to place the order with us, but for some extraordinary reason, we do not seem to be able to produce a price."

81. R. R. Thomas of Bearing Service in writing to Forsythe commented:

"Our cable to Mr. Harrison may have been a little difficult for you to understand but we are engaged at the moment in replying to a cable from Mr. Pascoe and we are very concerned to make sure that Mr. Harrison does not ask you specially to request that our orders to direct to Canton and then for us, in our enclosed letter, to ask Timken to do the opposite. In other words, we do not want you to think for one moment that we would ever let you down in the slightest particular.

* * * * * * *

"I am asking Mr. Harrison to try and meet Mr. Dewar and casually give him a copy as per our enclosure stating to him that he might wish to make some enquires while he is in America."

82. The cable to which he made reference was sent by Pascoe (chief executive director of British Timken and director of French Timken) to Bearing Service reading:

'Canton report confusion caused by receiving requests for deliveries and prices direct from Australia presumably Bearing Service Company Stop This is directly opposite to our instructions Stop How does it occur? Stop Please take immediate steps to rectify.'

83. Subsequently Thomas wrote to Gibson:

"Not only was that opportunity missed but after more than twelve months of war, after large quantities of ball bearings have become available in this country, we still await our first considerable shipment from Canton and we still, in some unfortunate cases convert Timken users back to ball bearings.

* * * * * * *

"In some urgent cases we have been reminded by the Ministry of Munitions that we were retarding the Defense program by not supplying information

promptly and we were asked whether we were prepared to do something about it or whether they would communicate direct with the British Purchasing Commission.

* * * * * * * *

"With all respect, we request Mr. Pascoe to accept this following recommendation which we make in the light of many years experience of this market.

(a) That all our orders be forwarded to British Timken, Ltd.

(b) That in all other matters connected with shipments of goods, we be encouraged to communicate freely with Canton, at the same time sending a copy to Birmingham."

84. On December 4, 1940 Klinedinst wrote Dewar, who was then in the United States:

"We were advised by the British Purchasing Commission that they will very likely take over all of the purchases of anti-friction bearings for Australia. This will present a problem, the solving of which we must ask your help.

"Undoubtedly as these inquiries come to the British Purchasing Commission they will ask all tapered roller bearing manufacturers in this country to quote prices, and following the same assumption further, they will give the business to the lowest bidder. That is one phase of it. On the other hand, should your Australian distributors specify on their orders that they must definitely be supplied Timken bearings, then, we presume, they would come to only Timken for quotations, or would they take it upon themselves to buy from the cheapest source?

"Regardless of how this works out, we have the problem of what prices to quote and how to distinguish between bearings that are to be used essentially for service and those to be used in production. There is another angle that may enter into this—the Purchasing

Commission may go, for instance, to the General Motors Export Corporation for prices on bearings for General Motors equipment and, naturally, there should be uniformity in prices. Surely we feel it is necessary to have two distinct prices if this is possible—one covering bearings for service and the other for production.

"We have in mind a number of American manufacturers who have assembly plants in Australia, and if the British Purchasing Commission takes over that phase of the business those bearing purchases would come through them rather than through the International Harvester Company, or General Motors, or whoever may have plants in Australia.

"We have in mind a situation that developed several months ago. When we quoted the British Purchasing Commission on a large quantity of bearings at the established government buying agency price—#30—our competitor, The Bower Roller Bearing Company quoted on this same inquiry at about a #17 price and The Bower Company got the business.

"We do not want to see The Bower Company or any other American manufacturer of tapered roller bearings find a foothold in Australia or in any other territories covered by you, but we feel this will happen on a straight competitive bidding proposition because it is not possible to definitely control the price at which other tapered roller bearing people will sell their products for foreign consumption.

"The simplest way out of this, as we see it, is for British Timken to instruct all of their foreign service connections to very definitely and positively specify Timken tapered roller bearings. That will give the British Purchasing Commission no leeway. If that can be done, the problem is virtually solved.

* * * * * * * *

"We feel, Mr. Dewar, that the awkward situation now presenting itself might have been avoided had

British Timken permitted us to handle their outside orders direct.

"Mr. Harrison of The Bearing Service Company of Melbourne spent quite some time with us recently and was very bitter in his criticism of our deliveries. We found in many cases we had never received an order from British Timken for the sizes so badly needed.

"The policy followed by your Australian people was to send the order to British Timken, they would fill such parts of it as they could and the balance of it was transferred to us. That meant a very great delay, and that was why we suggested sometime ago that you have such parts ordered and shipped direct from Canton."

85. On December 18, 1940, Gibson addressed a personal note to Forsythe, saying among other things:

"On the 11th December, the following cablegram was received by Bearing Service Co. of Aust. Pty. Ltd. Melbourne from Mr. Harrison. This was sent from Los Angeles on the 10th December:—

'Canton Advise Dewar Agreed Yesterday Their Handling, Australia Direct He Cabled Pascoe This Effect Now Awaiting Confirmation Birmingham'

"As you can imagine this is some of the best news I have had in years. So far I have not received any advice from Birmingham about it. I feel that Birmingham will do their best to avoid this arrangement, although if Mr. Dewar has agreed to it, half the battle is won. I can think of quite a number of reasons as to why Mr. Dewar would agree, and no doubt I will hear this story from you in due course.

. . . . . .

"I do not know if you will be taking over this part of the business, and am of the opinion that it is quite possible that Birmingham will want to retain it. Should you be taking it over, it will of course be necessary for you to compete with prices ex Ford factories in Canada, and you will know what the position is with

them. You may prefer to retain the business in this way but as you can imagine, I am naturally anxious to have it direct."

86. The Australian government representatives called on defendant in February 1941 to build a plant in Australia. Wm. E. Umstattd (president of defendant) reported to his associates in a memorandum:

"Mr. Gutteridge, an engineer who has been sent to this country by the Australian Government to negotiate for the establishment of manufacturing plants in Australia, visited us at 3 P.M. with Mr. Chamberlain who is at present Technical Engineer with the British Minister of Munitions in Washington.

"Gutteridge and Chamberlain called on us to see if we would be interested in establishing a bearing plant in Australia to manufacture all types of anti-friction bearings. They said that the anti-friction bearing business in Australia has amounted to about $1,000,000 per year for the past several years, but within the past twelve months this figure has increased approximately 100%. Mr. Gutteridge said that the Australian Government was insisting that a plant be built in Australia and that adequate tariff protection would be given to such an industry.

"I explained to Gutteridge and Chamberlain that Australia was controlled by British Timken and that under no circumstances would we consider building a plant in Australia. I pointed out to them that it would be almost impossible to get delivery on any machine tools suitable for the manufacture of anti-friction bearings and that no bearing manufacturer in this country had excess machinery which could be shipped to Australia. Mr. Gutteridge wanted to know if we would be interested in establishing a plant in Australia if he could secure priorities for the necessary equipment. I told him that I did not think he could secure such priorities, but if he did we would not be interested as I had previously pointed out that

British Timken controlled the sale of Timken bearings in Australia."

87. The inquiry of the British Purchasing Commission was answered in the same vein by Umstattd:

> "Your letter of February 26th has been received.
>
> "When Messrs. Chamberlain and Gutheridge visited us about ten days ago we told them that under no circumstances would The Timken Roller Bearing Company establish a plant for the manufacture of bearings in Australia. We have a contract with British Timken Limited which precludes our establishment of a manufacturing plant in Australia. Such a plant would have to be built by British Timken Limited."

88. These communications demonstrate that the parties not only sought the preservation of their respective sales fields, but that they supported the agreements by the maintenance of price fixing arrangements. The protective discount policy insured the parties against competition from each other in replacement bearings. Defendant sold at a 70% discount for export in its own territory, but quoted prices representing a 50% discount from the American list on standard bearings in response to unsolicited inquiries from British Timken's territory.

89. Other steps were taken to prevent outsiders from disturbing the agreements as the particular situation required.

90. In January of 1928 D. E. Hobley, (sales manager of British Timken), wrote to Hess:

> "In Budapest, Hungary, Timken bearings are serviced by Mr. Michael Pal, and he has been doing remarkably good business for us during the last year. In the same city there is a house called Messrs. Denes & Friedmann, who are the representatives of the Timken-Detroit Axle Company through their British connection. As you know, we have established service prices for bearings identical with your own and operate with

the same discounts, but we are much alarmed to find that Messrs. Denes & Friedmann can sell Timken Axle sizes considerably cheaper than our own distributor.

• • •

"It seems to us that the Timken Detroit Axle Co. are taking advantage of their position inasmuch as they buy from you at low prices and ship them over to our territory on a small margin of profit and this does interfere with our service prices."

91. In February 1928 Hess replied to Hobley:

"We have finally concluded arrangements with Timken Detroit Axle Company with reference to the sale of our bearings through their distributors in Europe, and particularly in Budapest, Hungary.

"Mr. Emmett, of the Automotive Products Company, London is in touch with this situation, and I believe it would be wise for you to call upon him. He will receive instructions from Timken Detroit to the effect that he should not undersell us or you on service bearings."

92. They deviated from adherence to protective prices only in cases where competition of outsiders required that it be done.

93. In June, 1944 E. H. Austin (defendant's manager of Service Sales), wrote:

"Joe Cornell handed me your letter of June 2 which resulted in my discussing this with Mr. Klinedinst. I think before we definitely commit ourselves to quoting 70% on general sizes and 60% on Ford on the orders to which you refer, we better find out just exactly what is involved—bearing sizes, quantities, etc. Perhaps you could tell us a little bit more about Cymot, Ltd. for it is well that we are given what information is available on any of these companies that we give consideration to quoting our export prices in British Timken markets.

"You brought up an age old subject, namely, the policy that we should employ in quoting on inquiries emanating from British Timken territory. I pointed out to Mr. Klinedinst the weakness in our pricing policy in the British Timken market, emphasizing the fact that buyers for the B T market are becoming familiar with the fact that we are protecting British Timken and by so doing do not have a price that is anywhere near competitive to Bower. As a result, it now develops that we don't even get inquiries for a lot of reqnirements. They are automatically referred to our competitors. Naturally it cannot be expected that Bower will establish an export policy comparable to ours in territories that we cover and another pricing policy to be in line with us in British Timken territories."

94. In the joint territory of Russia, the pricing provisions spelled out in written contracts were carried out to the letter.

95. The contractual obligations for the interchange of information relating to the manufacture of bearings and of all inventions and discoveries, whether they were patented or not were construed by defendant, British and French Timken to be for their mutual benefit only, to the exclusion of all others. Accordingly any information pertaining to their manufacture was denied to outsiders unless consent was obtained from the party affected. In December, 1932 Hess wrote Dewar:

"Upon my return to this famous country I find a cable from Birmingham with reference to a statement made by Ford Dagenham that we have granted Ford America a license to manufacture Timken bearings according to our patents, and it puzzled me just a little bit because this is the situation I described to you when I explained that we had dropped the Bower suit and had given Ford such a license as they describe. We, however, explained to them that we could give them no such license for England or any European plant as

British Timken was our exclusive licensee and that anything in this regard which they desired would have to be discussed with you."

96. The inhibition imposed by the contracts on British and French Timken, not to manufacture or sell tapered roller bearings, except under the name "Timken" was observed and both companies throughout the years before and after 1928, to date, have become identified as producers of "Timken" bearings. The goodwill they built up and the competitive position they acquired in the allocated territories was under the name "Timken". The retention of the goodwill and place of dominance in their business field depended on the continued right to use the name. The severance of contractual relations meant the termination of their ability to profit by the many years of experience in manufacture and successful business dealings with their customers. In turn no competitor of British or French Timken was permitted to use the trade mark "Timken".

97. In addition to dividing the world into restricted manufacturing and marketing areas, maintaining price fixing arrangements, and interchange of discoveries, know how and inventions to the exclusion of others, defendant, British Timken and French Timken co-operated to shut out the competition of other dealers in tapered roller bearings.

98. The rigid territorial divisions were followed at all times except when adherence to such restrictions would result in the possibility of loss of business. They were made for the dual purpose of protection against each other and to eliminate the competition of other tapered bearing producers.

99. Dewar's testimony in this regard was:

"We had a common enemy in the Swedish S. K. F. who had begun the manufacture of tapered roller bearings, and our general policy was that if a tapered roller bearing was sold it had got to be a Timken and not a S. K. F. To us it was really immaterial whether it was made in the United States or whether it was made in

Great Britain or France, provided it carried the name 'Timken'. We used to sell at the request of the American Company in the Argentine and the American Company has sold at our request in our territories."

100. Hobley, (in charge of British Timken's sales) commented:

"The whole object of that arrangement was that if clients in our territory insisted on buying bearings from Timken we would let them do so. If there were clients in the Timken Company's territory who wished to buy from Great Britain we would supply them. A commission would be granted in either case. That was in order to combat competition; that was the whole basis of it."

101. Klinedinst wrote to Dewar on December 4, 1940:

"We are primarily interested, of course, in keeping Timken bearings to the front during this trying period and the further desire to help you in every way possible since we know how difficult it is to eradicate a competitor in foreign fields after he once gets a start."

102. W. R. Timken, during the trial, in answer to the question: "What is the procedure that you follow now on orders from British Timken territory?", replied:

"Well, I would say it varies, depending upon what territory it is and whether they can make delivery. Where they can make delivery they would naturally get the business. You see, during the war we felt there was a very great opportunity to improve the Timken position in Australia and the East Indies, due to the fact that we thought at that time the SKF of Sweden was completely cut off from export, and we were willing to try to under mine their position by any means we could, including selling bearings at a loss if necessary."

103. The sales of bearings by defendant, British Timken and French Timken, to each other were on a most favorable

basis to supplement the plan of strict compliance with the allocated areas and to protect themselves from competition by outsiders. In December, 1929, Hess, in a letter told Dewar:

> "With this situation confronting us we are going to be bothered by rather serious competition from S.K.F., and the thought has occurred to us that it may be possible for you to supply bearings for our industrial requirements in Canada. According to our records there is a 15% duty on English products as compared with our 30% and, if you can sell bearings at low enough base prices, there is no question but that we can hold—or I should rather say get—a big bulk of this industrial bearing business in Canada."

Dewar replied:

> "I should love to help you compete with S.K.F. in Canada. I heard quite casually the other day from a representative of the American motor industry, (who was in London and whom I met but whose firm I do not know) that for their assembly factory in Canada they have placed an order with S.K.F. for bearings which will be manufactured in Luton, as they were able to buy these *taper roller* bearings made by S.K.F. Luton more cheaply in Canada than they can buy yours.
>
> "I do want to take every possible step we can to keep S.K.F. out of the taper roller bearing business anywhere."

In August, 1939 the matter of SKF (a Swedish bearing manufacturer) competition continued to concern defendant and British Timken. Klinedinst wrote Dewar:

> "We are having our troubles with the SKF Company not only in this country but in Canada as well and in many foreign countries such as Japan, South America, and elsewhere due to their making price reductions very far below those that we have ever extended to anyone in their respective field.
>
> . . . . . .

"However, the thought that we have in mind is that we should make a study of the Canadian situation with the thought in mind that perhaps some arrangement might be set up whereby we could be appointed exclusive Canadian distributors for British Timken handling tapered rollers, balls, and straight rollers, not only for service requirements but for new installations as well in all of the various industries. There would be some advantages in this and perhaps many disadvantages. We can see, however, that industrial and service bearings shipped by SKF from Sweden into Canada take a duty of 17½% while they are free from England. This would give us that advantage.

"While this arrangement might not be feasible, it is certainly worth while thinking about, and it appears to us a good club to put over the SKF Company's head."

104. Defendant and British Timken made certain that the alloy steel made by defendant, especially adapted for the manufacture of bearings, was not made available for use by their competitors.

105. In a letter in September, 1934, Dewar told Hess:

"The position is one of considerable difficulty because I do not feel inclined to agree to give you carte blanche to sell tubing in our territory; it might conceivably react to our disadvantage if your tubing were sold to our competitors."

Hess in reply, stated defendant's policy:

"• • • please understand that under no circumstances would we sell our tubing to any one in the world who might as a result harm British Timken, French Timken or American Timken. We have not yet reached this necessity in merchandising our Steel and Tube product."

106. The collaboration of defendant, British Timken and French Timken to eliminate competition with each other and to eliminate the competition of other bearing producers

was augmented by agreements of British Timken and French Timken with their competitors abroad, to share customers and sales in certain markets and to stabilize prices. Hess referred to the association resulting from the agreement as a cartel in reporting on its success to H.H. Timken (the founder and at the time president of defendant Company).

107. Aside from the cartel arrangement, discussions were had concerning prices between defendant, British Timken and their foreign competitors.

108. In December, 1932, Dewar wrote J.D. Spray (director and vice president of defendant company):

> "I take it that you are trying to improve the price level in the Canadian market. Is it your suggestion that you and ourselves should try to arrive at a general arrangement with SKF regarding quotations to Ford in Canada and at Dagenham, or for other manufacturers in Canada as well as Ford? As I believe you are aware, we have not as yet had to reduce our f.o.r. prices for Canada as low as we have had our prices driven down for Ford Dagenham.
>
> "During Mr. Hess's visit, he told us of certain events on your side of the water. The result of this information has been that we are engaged at present in negotiating an arrangement with SKF to cover orders placed by Ford Dagenham. As the SKF position is at present, their English Company is only interested in Dagenham. Their Swedish Company is interested in the Canadian market and in all the other places where they assemble cars.
>
> "As you probably know, we have at present practically the whole of the Ford European business with the exception of a percentage in England and with the exception entirely of their German orders. Our proposed agreement for Dagenham will be on the basis of us having 70% and SKF having 30% of the work.
>
> "I would add, in addition, that we hope to come to an arrangement on Service work for all Bearings in England as part of the same arrangement."

109. Dewar also reported to Hess about a meeting in Paris at which British Timken, R.I.V. (a large Italian bearing manufacturer), and S.K.F. were represented. He said among other things:

> "After that I re-iterated that in my opinion—and it was an opinion only as I had no right in any sense whatever to speak for the T.R.B., Canton, and I had no knowledge of what was in their thought—I felt that the key to such very close cooperation, as joint manufacturing, lay between SKF, Gothenburg, and the T.R.B. in canton.
>
> "Mr. Batt then informed us that he had had some discussions of an informal nature with T.R.B. regarding the possibility of stabilizing prices in the Canadian market."

110. Although the cartels were formed without defendant's execution of the actual agreements, they were the result of the understandings and cooperation of defendant with British and French Timken to bring them about. Defendant's territory was affected. It was the beneficiary of their operations. Its officials were in consultation with the officers of British and French Timken concerning them, they prompted and approved the agreements.

111. In November of 1932 Hess wrote H. H. Timken:

> "One thing is very encouraging about the operation of the cartel. Between SKF and ourselves we have raised prices about 5% and come to a definite agreement as to service prices in France.
>
> • • • • • • •
>
> "Dewar and I have been discussing what to do in case they try to reduce our volume to the quota figure and after considering various plans, we have come to the conclusion to try and hold our present volume (about $400,000.00 sales annually) and in exchange for this higher quota, offer SKF one half of our steel tonnage in France. This seems like a good move and

will possibly be quite acceptable to SKF as their steel production in Sweden must be very low at this time."

112. The report of Hess in September, 1933, on his European trip, sheds considerable light on defendant's part in the cartel operation:

"During the current year, real progress has been made in cooperation with SKF to not only stabilize sales prices but to raise them generally, and contracts for the last half, do in many cases, call for a 5% increase in prices. The need for this is vital when we consider the fact that automotive and commercial vehicle sales prices have declined about 30% since 1929. This is due almost entirely to SKF competition but our present relations with them in England are quite cordial and we feel that for the next year we face no further price cuts. This relationship with SKF started with our offering to split the Ford business on a 70-30 basis during my visit last fall, but it is interesting to know that we continue to receive 90% of Ford business, due in all probability to the fact that we are considered 100% British, and of even more importance, we give Ford excellent service and have assigned one man to spend practically all of his time at Dagenham.

* * * * * * *

"Both Mr. Dewar and Mr. Pascoe are watching the R.I.V. (Italian) situation very carefully and Mr. Dewar is keeping in constant friendly contact with Angellis, head of R.I.V. Our latest information is that the R.I.V. plant is very slack due to the let-down in Russian orders, and our British associates feel that they will use every means to sell this output at low prices, all over the world. This, of course, might affect us materially in South America and Canada where we have maintained good service prices, but it is the writer's opinion we shall have no great difficulty in the U.S.A. as long as the present tariff is maintained and with the depreciated dollar.

"As is generally known, we are members of the French anti-friction bearing cartel. This cartel was started in July 1932 and expires at the end of this year."

113. The cartel agreement between SKF and French Timken provided for a division of all of the French bearing business on a percentage basis, French Timken only participating in the tapered roller bearing market; SKF, in both ball and tapered markets.

114. As stated in the agreement, "In order to arrive at the allocation of the market as provided in as precise a manner as possible, an intimate commercial collaboration will be established between the two contracting parties, which will have to determine by agreement the tariff prices and discounts for the retail market, the prices and delivery dates quoted for all large orders or important customers." The parties agree to contact each other "at least every month" and to push the standardization of bearing sizes.

115. The cartel agreement between SKF and British Timken was not only an arrangement on prices of bearings and the percentage of the total bearings each was permitted to sell, but the parties agreed not to sell replacements of the other's bearings. The division of business as to specific customers was set up on a quota basis. When one of the parties exceeded its quota on a certain customer that party was required to raise its prices until there was compliance with the agreement.

116. The lengthy recital of letters, reports and memoranda paints such a clear picture of the conduct of the accused companies over the period of years that the Court feels it serves the necessary purpose of pointing out the patent reasons for resolving the factual issues which are involved. It leaves no room for dispute or contradiction on the salient facts.

117. The evidence conclusively establishes to the satisfaction of the Court the assertions of the Government: that defendant, British Timken and French Timken have manu-

factured and sold during the period from 1928 to date a substantial portion of the world's production of anti-friction bearings and that they have imposed restraints on foreign commerce; by (1) allocating trade territories throughout the entire world each agreeing with limited exceptions not to manufacture or sell in the other's territory; by (2) fixing of prices on products sold by any party in the territory of the other party; by (3) mutual cooperation and assistance to protect each other's markets and to eliminate the competition of outsiders and by (4) participation in foreign cartels which restrict exports by United States producers.

118. The contentions that defendant stifled or eliminated competition and restrained trade, by exclusively exchanging present and future know-how and inventions, patented or unpatented, and by compulsory use of the trade mark "Timken" by British and French Timken, by prohibition against their dealing in products under any other name, and by requiring that they cease using that name upon the termination of the agreements, will be discussed later in this opinion.

119. The analysis of the evidence is susceptible of but one conclusion. It discloses an extensive and far reaching combination to smother all competition between defendant, British and French Timken and to stifle or suppress competition of other manufacturers by joint effort against them or by agreement with them.

120. It is readily seen that the present relationship of the parties in not only the culmination of the successive agreements beginning in 1928. The combination is, as well, the outgrowth of the principal agreements in 1909, when world markets were divided and competition was eliminated. Those contracts were not merely patent licenses for the manufacture of tapered roller bearings in limited areas, but they encompassed fields beyond the ambit of the existing patent rights. U. S. v. U. S. Gypsum Co., 333 U. S. 364, U. S. v. National Lead Co., 63 Fed. Sup. 513, 523, aff'd 332 U. S. 319, Morton Salt Co. v. G. S. Suppiger Co., 314 U. S. 488, Ethyl Gasoline Corp. v. U. S. 309

U. S. 456. The territorial restrictions applied to markets where defendant had no patent rights. Interstate Circuit, Inc. v. U. S., 306 U. S. 208, 228. They included future development and inventions in the industry. U. S. v. National Lead Co., supra, Ethyl Gasoline Corp. v. U. S., supra, Pope Manufacturing Co. v. Gormully, 144 U. S. 224.

121. After the expiration of the principal patents, the restrictions imposed continued. Without the benefit of the limited monopoly power of the patents the agreements followed the same pattern. They no longer revolved around the patents, but were without pretense contracts for the avowed purpose of suppressing competition. Duncan (Timken's London counsel) pointedly said in November 1927:

> "As we understand the position, the main advantage derived by the English Company under the Agreement will be the advice and information to be received from you, the right to use the name "Timken" and the absence of your competition. Do you not think that it would be better to accentuate these advantages in the Agreement, rather than leave them merely as incidents in a patent license?"

122. When in 1928 the American, British and French companies agreed to continue their activities, British Timken had grown from infancy in the bearing industry to a position of dominance and was a potential competitor with whom defendant had to reckon.

123. The relationship effected and maintained was not that which prevails between a manufacturer and its exclusive foreign agents for the distribution of its product. Each company was a manufacturer and distributor, independent of the others, but joined for the sole and only purpose of mutual benefits. It is not even contended that defendant, British Timken and French Timken ever competed.

124. The inflexible territorial limitations imposed by the parties on each other, which they violated only to prevent

others from encroaching on the protected markets, were designed for the purpose of preventing competition and were reinforced by price agreements. The word "Timken" had become synonymous with tapered roller bearings. To lend support to the desire to eliminate the competition of other producers, defendant supplied British and French Timken, and them alone, with know-how in the production of bearings. It insisted that bearings produced and sold by them be identified by the name "Timken".

125. The cartel agreements in France, England and Italy were made by British Timken and French Timken with the knowledge, approval and cooperation of defendant to effectuate the plan of excluding competition of others in the territories of defendant, British and French Timken.

126. The extent to which they were successful in impeding competition is of no moment. It is sufficient that that was the end sought to be accomplished. Associated Press v. U. S., 326 U. S. 1, 12, U. S. v. Socony-Vacuum Oil Co., Inc., 310 U. S. 150. The French Anti-Friction cartel, the English SKF-British Timken cartel and the agreements with Bock and R.I.V. fortified defendant in the overall plan of suppressing competition in the sale of tapered bearings.

127. It is an imperative of the Sherman Act that all combinations in restraint of international trade and all agreements to restrict competition be condemned. U. S. v. National Lead Co., supra, U. S. v. Addyston Pipe & Steel Co., 85 Fed. 271, 291, U. S. v. Aluminum Co. of America, 148 Fed. (2d).

The very aim of all the antitrust laws is to ban conduct and practices which destroy free and unhampered competition. That postulate has been repeatedly announced by the courts even before the legislative enactment. Within the last decades the decisions reiterating it have covered thousands of printed pages. They have been regarded as inimical to economic freedom. The Government refers to the instant combination as an international cartel, which appellation is assailed by defendant. That name applied to the combination has no significance, other than to label

it as a pool of "separate firms to maintain prices above a competitive figure". (Webster's New International Dictionary). It is merely descriptive of the combined relationship between defendant, British Timken and French Timken. If the term connotes vice or illegality it is clearly applicable.

128. The strict allocation of markets to the members of a combination of competitors in the various parts of the world and the eradication of competition among them violates the Sherman Act. U. S. v. American Tobacco Co., 221 U. S. 106, U. S. v. National Lead Co., supra.

129. The contracts by which it was agreed that in a particular area anti-friction bearings might be sold by only one of the members of the combination, necessarily were intended to and had the effect of eliminating competition. The Supreme Court repeatedly recognized the inherent danger of such agreements to our system of free enterprise, and held that agreements or arrangements for dividing markets were illegal under the Sherman Act. U. S. v. American Tobacco Co., supra, U. S. v. Addyston Pipe & Steel Co., supra, U. S. v. National Lead Co., supra.

130. The fact that defendant, British and French Timken were manufacturing and selling only tapered bearings does not immunize the combination against the operation of the antitrust laws. It is true that there is competition between tapered and other types of anti-friction bearings to the limited extent pointed out earlier. The prohibitions of the Sherman Act, however, are equally applicable to combinations in restraint of trade when only part of the commerce is stifled. As was said in Eastman Kodak v. Federal Trade Commission, 158 Fed. (2d) 592, 594, cert. denied 330 U. S. 828:

> "Hence it will not do to say that all film is in the same class. If a purchaser wants a color film he must be able to buy it from more than one manufacturer if there is to be 'free and open competition with commodities of the same general class'; that he can buy a black and white film will not serve to destroy the monopoly of the sole producer of color film."

and in U. S. v. Yellow Cab Co., 332 U. S. 218, 225:

> "Hence it is enough if some appreciable part of interstate commerce is the subject of a monopoly, a restraint or a conspiracy."

and again in U. S. v. Socony-Vacuum Oil Co., 310 U. S. 150, 225 (footnote 59): "And the amount of interstate or foreign trade involved is not material (Montague & Co. v. Lowry, 193 U. S. 38) since § 1 of the Act brands as illegal the character of the restraint not the amount of commerce affected."

131. The benefits of a competitive price system under the Sherman Act would be lost to the vast number of manufacturers whose machinery and equipment are geared to use only tapered bearings, if the operation of the Act were to be construed otherwise.

132. The practice of selling only at prices agreeable to the party into whose territory the sales were made and the provisions of the contracts for agreed prices on replacement parts and the other price fixing arrangements of defendant, British and French Timken must be condemned as violations of the Sherman Act. U. S. v. Masonite Corp., 316 U. S. 265.

In U. S. v. Socony-Vacuum, supra, the Supreme Court said:

> "Thus for over forty years this Court has consistently and without deviation adhered to the principle that price-fixing agreements are unlawful per se under the Sherman Act and that no showing of so-called competitive abuses or evils which those agreements were designed to eliminate or alleviate may be interposed as a defense.
>
> . . . . . .
>
> "Whatever economic justification particular price-fixing agreements may be thought to have, the law does not permit an inquiry into their reasonableness. They are all banned because of their actual or potential threat

to the central nervous system of the economy." (Footnote 59).

In U. S. v. Line Material Co., 333 U. S. 287, it was said:

> "Price fixing in any form is perhaps the most powerful of all inducements for abandonment of competition. It offers security and stability; it eliminates much of the uncertainty of competitive practices; it promises high profits."

and again in U. S. v. Paramount Pictures, Inc., 334 U. S. 131, 143:

> "We start, of course, from the premise that so far as the Sherman Act is concerned, a price-fixing combination is illegal per se. United States v. Socony-Vacuum Oil Co., 310 U. S. 150; United States v. Masonite Corporation, supra. We recently held in United States v. Gypsum Co., 333 U. S. 364, 400, that even patentees could not regiment an entire industry by licenses containing price-fixing agreements."

133. Both the territorial sales limitations and price fixing constitute a menace to international trade in tapered bearings.

134. No less harmful and injurious to the unrestricted flow of commerce in tapered bearings was and continues to be the association of defendant, British and French Timken for the purpose of protecting each other's markets and the exclusion of outsiders from the tapered bearing market. Such conduct is denounced by the antitrust laws. Associated Press v. U. S., supra; Montague & Co. v. Lowry, supra; Standard Sanitary Mfg. Co. v. U. S., 226 U. S. 20; U. S. v. Trenton Potteries Co., 273 U. S. 392.

135. The participation in the foreign cartels by defendant completed the circle within which the combination operated to forestall competition. The circumstances outlined above under which defendant took part in the operation of the cartels leave no room for escape for defendant

from the prohibitions of the Sherman Act. The ban on restraints of imports and exports has been consistently enforced by the courts. United States v. General Dyestuff Corp., 57 Fed. Sup. 642; United States v. Nord Deutscher Lloyd, 223 U. S. 512. What was so well said in United States v. National Lead Co., supra, 524, is equally pertinent when applied to the facts in this case:

> "The several agreements relating to manufacture and trade within the European markets are but some of the links in the chain which was designed to enthrall the entire commerce * * *."

136. Nor does the fact that the cartel agreements were made on foreign soil relieve defendant from responsibility. U. S. v. Nord Deutscher Lloyd, supra. They had a direct and influencing effect on trade in tapered bearings between the United States and foreign countries.

137. There is no charge made in the complaint that the parties engaged in the practice of exclusively exchanging present and future know-how and inventions, patented or unpatented. Evidence seeking to establish such claim was offered at the trial. Although it does not convincingly appear that either the exclusive exchange of know-how or the enforcement of the trade mark restrictions alone served as direct instruments to eliminate competition, they have been most helpful in buttressing other illegal conduct to achieve the desired result. They were integral parts of the general scheme to suppress trade.

138. Are the contentions urged by the defendant sufficient to overcome such manifest violations of the Sherman Act?

139. The first contention of defendant is that even if the agreements between the three Timken companies for division of territory, and any incidental arrangements as to price contained therein were made, any restraint resulting therefrom to constitute a violation of the Act, must be found to be unreasonable. Defendant's position is that it undertook to extend its activities by the purchase of British

Timken and the formation of French Timken with Dewar. It protests that it was not done for the purpose of eliminating competition and that it did not have that effect, that there has been no intent to unduly restrain trade but that it was done for good business reasons. Defendant says the division of markets between the companies was reasonably ancillary to the acquisition of British Timken and the formation of French Timken.

140. In advancing the argument that only such contracts or combinations are within the condemnation of the Act as prejudice the public interest by unduly restricting competition or obstructing trade, defendant concedes that:

141. "It would appear, superficially, that contractual provisions like those involved in the case at bar that American Timken will not sell bearings in the territories of British and French Timken, respectively, and vice versa, tend to prevent competition between the parties."

142. The contention made invites a discussion of the rule of reason doctrine applied by the courts to the Sherman Act. A vast body of decisions may be found dealing with the doctrine. For the present purpose, it will suffice to say, that it is now firmly established that the statutory provision, "Every contract, combination * * * in restraint of trade * * * is hereby declared to be illegal * * *" means that all unreasonable restraints of trade offend the Act. Standard Oil Co. v. U. S., 221 U. S. 1; U. S. v. Columbia Steel Co., supra. It is equally well recognized that the determination of what constitutes unreasonable restraint is the province of the courts. Judicial construction of the law has declared certain restraints unreasonable. With but rare exceptions, since the decisions in the Standard Oil case and the American Tobacco case in 1911, activities which theretofore were stricken down as illegal restraints have been regarded since as unreasonable per se.

143. In view of the settled law and the facts, defendant's contention that the restraints were reasonable must be rejected as untenable. The restraints on commerce, here

proved by abundant evidence. have been denounced as unreasonable per se.

144. Defendant seeks to draw a parallel between the instant facts and those in the Columbia Steel case, supra. By contradistinction from the facts in that case defendant, British Timken and French Timken are separate corporations who in their respective territories, both before and after their agreements, were potential competitors in the tapered bearing market. They were the largest dealers in tapered bearings in their respective territories. They occupied dominant positions in the entire anti-friction bearing industry. Defendant did not acquire British and French Timken.

145. The defense that the combination was formed without intent to restrain trade, for good business reasons, was denied validity in numerous cases. If good business reasons and expressions of good intent would serve as justifications for restraining trade and stifling competition the Sherman Act would render no aid to the free flow of commerce. The Act aims to bulwark the national economy and insists that individual interests give way to the benefit of all. Standard Sanitary Mfg. Co. U. S., supra, 49; Addyston Pipe & Steel Co. v. U. S. supra; Eastern States Retail Lumber Dealers' Association v. U. S., 234 U. S. 600.

146. There is nothing in the evidence to indicate a lack of intent to restrain trade. Indeed, all that the evidence discloses is an intent to form a smoothly operating combination to control commerce in the tapered bearing industry throughout the entire world.

147. In the face of the numerous agreements and the clear expressions of defendant's officers in the volumes of letters and memoranda offered in evidence, it is difficult to understand how anyone can disclaim a clear intent to restrict competition.

148. It is likewise difficult to place credence in the assertion that there was no intent to restrain trade when one

reads the following comments of defendant's president, pertaining to domestic trade:*

> "Louie Klinedinst and I were in New York last week and had a long talk with Fred Hughes and Lester Sigourney of New Departure and arrived at a mutually satisfactory selling price for flanged type bearings both ball and tapered roller. We held the price on these bearings at a point where a nice profit will be made for both companies, and I feel that we did a pretty good job as New Departure might have been out of line if we had not told them our prices, and in that event we should have had to cut our prices."

and

> "All three of the principals involved agreed that the patent was not valid and that if any license was taken out it would be merely a move for legalizing the fixing of prices so that we would not be threatened by either the Clayton or Sherman laws."

149. It is next urged by defendant that any restraints imposed by the agreements were ancillary to the creation of a close relation between it and Dowar, analogous to a partnership or joint venture. It is suggested that the purpose was to expand its bearing business in European markets, and necessarily involved the investment of large sums in the acquisition and development of British and French Timken and hence not in violation of law. In this connection defendant assumes that since the parties could lawfully agree to be excluded from each other's territories, they could lawfully agree also that any incursions into each other's territories should be made only at prices agreeable to the party in whose territory the sale was made. It says that such a provision was reasonably ancillary to prevent competition by defendant with the corporations through which the common undertaking was conducted.

---

* Letter dated April 5, 1933; Umstattd to H. H. Timken.

150. Both the assumption made and the conclusion reached are wholly erroneous. The common undertaking was a joint venture only in the sense that they jointly undertook to continue the manufacture and distribution of bearings with all the limitations and restrictions which had theretofore been imposed. The joint venture was not ancillary to the agreement. Regardless of the descriptive term used to denote the affiliation, it did not constitute a legal basis for the avoidance of the consequences of the conduct which eliminated competition.

151. Throughout the trial great emphasis was placed on this phase of the defense. The record abounds with repetition of "joint venture", "partnership", "partnership in the laymen's sense". All of the defendant's officers and employees took great pains to make reference time and again to "our joint venture" and to "our partners".

152. It will be recalled that the relationship of defendant, British Timken and French Timken in respect of the manufacture and sale of bearings did not originate with the agreement between defendant and Dewar. Ever since 1909 defendant had maintained the territorial market restrictions with the predecessors of British Timken, and in France with the predecessor of French Timken.

153. The agreements made in 1928 and the activities restricting commerce, were antedated by other agreements and activities of similar nature. Licensing of patents first served as the basis for the restrictions, but they were continued despite the expiration of the patents. Although the question, whether the early agreements founded on patent ownership transgressed the law may not be in issue in this case, the fact that in their essence they set the pattern for the restraints, is of great and fundamental importance. The only substantial change in the relationship of the parties resulting from the Dewar-defendant contract was that defendant acquired a stock ownership in British Timken and French Timken. The execution of the 1928 contracts did not mark the beginning of new business contacts. They merely extended the restrictive arrangements which

had existed for almost twenty years between potential competitors.

154. The only conclusion which may properly be drawn is, that the restraints were not ancillary to the "joint venture". To the contrary, the arrangements were made to carry on effectively the combination; to eliminate competition between the parties and to frustrate any competition of outsiders.

155. The underlying motive of Dewar for making the agreement which was recognized by defendant was Dewar's desire to escape defendant's competition and to continue the existing contracts.

156. Both British Timken and French Timken were managed and operated by Dewar. Except for such powers possessed by virtue of its stock ownership and the contracts, defendant had no control over the business conduct of either. While it is true that officers and employees of defendant visited the plants of the two foreign companies from time to time to give advice in respect of the improved production and it is also true that technological information was supplied by defendant, all such assistance was in support of the combination to eliminate competition among the parties and with others.

157. British Timken and French Timken retained their corporate independence and jealously guarded their interests in dealings with defendant. A few years after the Dewar-defendant contract was made, Dewar asserted the "very separate and distinct entities of the various Companies concerned" and Hess abandoned, even in name, the partnership fiction when he wrote in October of 1934:

> "* * * some of the things we formerly did willingly and freely, without any recompense, as affecting only our partner Michael Dewar, and ourselves, now becomes a matter of these same things being done for another company in which we hold a 25% interest only. Thus, as you will see from my various future letters, we feel it is quite desirable to definitely set up in our new agreements several points beyond question of a

doubt that in the past would only be the occasion of a simple letter from either of us to each other, thus settling any divergence of opinion in almost every instance."

158. In 1948 Dewar, when his depositions were taken in London, proclaimed: "'Me' is British Timken."

159. It is quite obvious from these expressions of the officers of the respective companies that even if the stock investment of defendant and the co-operation between them indicated a pre-existent fiction of a "joint venture" or partnership in their own judgment, by 1934 neither believed that such relationship existed.

160. The facts are that defendant did not build plants in Europe or purchase subsidiaries abroad. It simply acquired substantial interests in a dominant manufacturer of bearings in England, participated in the formation of and invested in the stock of a potential competitor in France. The repeated assertion that it was in a joint venture or was a member of a partnership does not make it so.

161. Even if we were to assume, arguendo, that there was a "joint venture" between the parties and that an Ohio corporation could become partner in a business undertaking with a citizen of England or an English corporation (10 Ohio Jurisprudence § 632, § 857, Ohio v. Standard Oil Co., 49 O.S. 137), no immunity is afforded to defendant from the violations of the Sherman Act.

162. The argument is predicated on the oft quoted opinion of Judge Taft, later Chief Justice Taft, in Addyston Pipe and Steel Co., supra, in which restraints of trade resulting from a legal partnership agreement were held not to run afoul of the law. That decision does not uphold the type of conduct which is here attacked.

163. If a joint venture or partnership is formed for the purpose of a lawful business enterprise and restraints result from the right to protect established business interests no violation of law occurs. But if the association is formed for the purpose of continuing a combination to allocate

exclusive sales territories in the world, to fix prices and to eliminate competition both within and without the combination, it cannot hide from the effects of the law under the cloak of a joint venture or partnership. Were it otherwise, an easy way could be found to circumvent the law by entering into agreements purportedly to protect a joint venture or partnership.

164. Defendant also asserts that any restraints imposed by the contracts were ancillary to its agreements to furnish know-how to British Timken and other Timken companies. It says that the covenants by which it agreed not to compete in the territory in which British and French Timken were to use this know-how and by which each of them in turn, agreed not to compete in defendant's territory were reasonably ancillary to the sale of the know-how under the contracts. It concludes that the law permits the restriction not to compete in each other's territory as a recompense for its contribution to the foreign companies of advice and instruction in the manufacture of bearings and the quality of steel used and information with respect to inventions, discoveries and practices whether patented or not.

165. In taking this position it principally relies on the Addyston Pipe case, supra. It is pointed out that the agreements "by the seller of property or business not to compete with the buyer in such a way as to derogate from the value of the property or business sold" and "by the buyer of property not to use the same in competition with the business retained by the seller" were held in that case to be ancillary restraints not in violation of the Sherman Act.

166. Defendant goes so far as to argue "that, due to the more restrictive nature of a patentee's monopoly, he is more restricted in the conditions which he may impose, than is the seller of unpatented property such as know-how, which is available to any member of the public who can discover it" and "that the legal principle which supports a patentee's agreement not to sell in the licensed territory is just as applicable to one who licenses or transfers know-how".

167. The precise legal basis for the argument so advanced is not disclosed. Analogy is drawn between Fowle v. Park, 131 U. S. 88 and Dr. Miles Medical Company v. Park & Sons Company, 220 U. S. 373 and the instant case.

168. It must be noted at the outset of the discussion of the problem, that the know-how furnished by defendant to the other companies was not a secret process for the manufacture of tapered roller bearings. Other manufacturers were admitted to the plants of British and French Timken, where they could observe all the know-how put into operation. In the extensive record of the testimony dealing with the assistance given by the officials and technical staff, there is no trace of any secret process which was imparted by them. No contention was made at any time that such was the case. The know-how consisted of designs, data showing how defendant manufactured its product, the advice of defendant's employees and help of like nature.

169. Reference is made to a patentee's right to impose restrictions in respect of the patented products.

170. The patent monopoly is so circumscribed as not to be an instrument in restraint of trade to a greater extent than is consistent with the privileges granted. The proposition of law has been firmly established that the patent does not empower its owner to restrain trade in processes or devices which are not embraced within the scope of his patent. U. S. v. Line Material Co., supra; Standard Sanitary Co. v. U. S., supra; U. S. v. U. S. Gypsum, supra. The law has too jealously guarded the benefits derived from a free flow of commerce to permit even the reward for the development of the useful arts and sciences to be greater than essential to encourage inventions.

171. The limitations imposed by the judicial opinions on the use of patents to restrain trade are too well-known to justify a lengthy discussion of them. Those opinions only serve as guide posts to resolve the question here presented.

172. In order to sustain the argument of defendant, this Court is asked to find that one who transmits his skill in

the manufacture of a product to another is entitled to a greater reward than one who is instrumental in the advancement of science by his inventive genius. Such finding would be obviously wrong.

173. In Ethyl Gasoline Corp. v. U. S., supra, 456, the court said:

> "He may not, by virtue of his patent, condition his license so as to tie to the use of the patented device or process the use of other devices, processes or materials which lie outside of the monopoly of the patent licensed."

174. During the existence of the tapered bearing patents defendant could not legally allocate markets on processes which were not within the ambit of its patent monopoly. Therefore, it defies all sense of logic to say that upon the expiration of the patents defendant could lawfully engage in like conduct and practices upon the theory of supplying know-how on unpatented processes.

175. One who possesses greater knowledge or superior skill in the manufacture of a product is entitled to be fairly and adequately compensated if he furnishes his knowledge or skill to others. He is not entitled, however, to exact as a price for such contribution, complete freedom from competition. The quid pro quo for furnishing of know-how cannot be an absolute license to avoid the provisions of the Sherman Act. The harm caused thereby would be too great a tribute to knowledge and skill when viewed in the light of public policy.

176. It would seem that after the lapse of years since the passage of the Sherman Act, every type of economic venture has been under the scrutiny of judicial eyes to determine whether it clashes with the mandate of the Act. The ingenuity of business enterprise, however, makes it inevitable that new practices be examined as they arise. So in this instance a phase of business conduct must be weighed in the light of the general principles of the antitrust laws without the benefit of specific decisions for guidance.

177. We are, here, confronted with a situation, wherein a patentee upon the expiration of its patent monopoly, seeks to justify the perpetuation of the favored position it enjoyed by virtue of the patent through the ingenious theory of furnishing know-how. If lawful restraints and monopolies could be predicated on the ownership of know-how they could last ad infinitum. This Court cannot subscribe to such unharnessed privilege.

178. The contracts to divide the world into exclusive marketing areas cannot be defended as ancillary to the transfer of know-how by defendant.

179. The next contention advanced by defendant is, that if any restraints were imposed by the Business Agreements, they were ancillary to the licensing of the trade mark "Timken" to British and French Timken and therefore were not contrary to law.

180. Neither factual nor legal justification may be found to give merit to the contention.

181. Defendant maintains that the objectives which it desired in 1928 to achieve in respect of the mark were:

> "(1) The affirmation of its equitable ownership of the mark in England and in various portions of the British Empire.
>
> (2) The disposition of the French and German trade-mark problems to the end that it would ultimately become the owner of the trade-mark registrations in those countries.
>
> (3) The removal of any possibility of challenge to it of its registrations in certain European countries wherein, as has been shown, they could be questioned on the basis of prior use.
>
> (4) The establishment of a reversionary right in it in the mark on termination of the contract with the British and French Companies."

182. It is readily discernible from the recital of these objectives that defendant had serious doubt of its owner-

ship of the mark in 1928 in the various territories assigned to British and French Timken. In fact in some markets British Timken's predecessor was the owner of the mark. In France S. M. G. had registered it. In Germany one Prausnitzer was the sole owner of the trade mark "Timken". It is apparent from the testimony that defendant could not use the mark in a great portion of the world.

183. At that time defendant was primarily concerned, therefore, not in safeguarding the trade mark rights which it then possessed, but rather in acquiring the rights obtained by other manufacturers, as a consequence of the early patent license agreements, in areas where defendant had agreed not to manufacture and sell. Its own covenants not to make or sell bearings in territories allotted to others brought about the situation that the trade mark "Timken" was registered and owned by others.

184. Defendant's assertion that it was the sole equitable owner of the mark is unimpressive. The agreements attempted to remedy its dubious trade mark rights.

185. Its own counsel in England, forcibly brought the matter to defendant's attention in a letter on April 2, 1927 as follows:

> "We are glad to note that you are endeavoring to obtain a controlling interest in British Timken. This is in line with our own suggestions and will put you in control of the trade-mark 'Timken' all over the world, whereas, under existing conditions, there is a danger that, if your present license agreement with British Timken should be terminated, you might not be able to prevent others from establishing a right to use the word 'Timken' in certain countries from which you are excluded by the agreement from doing business."

186. Despite counsel's optimism concerning world control of the mark, great difficulty was encountered in effecting trade territories, specifically recited in them as follows:

187. It is true that from the inception of the business dealings with foreign producers and distributors, defendant

scrupulously guarded its right in the trade name. Every agreement contained a provision that on all bearings sold, the name "Timken" be affixed. It is also true that the officials of defendant impressed company counsel with the importance of the preservation of the trade mark. But the trade mark provisions of the challenged contracts were subsidiary and secondary to the central purpose of allocating trade territories, specifically recited in them as follows:

> "The Companies parties hereto for their mutual advantage and convenience in working have agreed to make arrangements for an interchange between them of information and facilities and in connection therewith to define their respective territories and for other purposes in manner hereinafter appearing."

188. The evidence conclusively proves that defendant entered into the agreements not for the purpose of exercising its right to protect the trade mark "Timken" from its unlawful use by British and French Timken nor to protect the public from British or French Timken passing off their products as those of defendant, but for the purpose of preventing competition in the sale of bearings. Through the years 1909-1924, defendant enjoyed freedom from competition, because of its patent monopoly. It now attempts to defend the extension of this right on the basis of granting British and French Timken the use of its trade mark.

189. Assuming that the restraints were reasonably ancillary to protect the trade mark and that the law sanctions such ancillary restraints, defendant's contention nevertheless is founded on the tenuous premise that it was the equitable owner of the mark outside of the marketing territory allocated to it.

190. Defendant did not and could not have a right to license a trade mark in markets where it did not own the mark.

191. Defendant maintains that the trade mark is its property; that the ownership of any property is in a limited sense monopolistic; that in the exercise of such a limited

monopoly power, defendant has the right to exact as a consideration for the use of its property, an agreement with others not to compete.

192. The conflict between the Sherman Act and the limited patent monopoly has been the subject matter of innumerable litigated cases. The courts have attempted to harmonize the opposing basic policies inherent in their respective economic concepts. They tried to fit the antitrust laws within the frame work of the Constitutional grant of a patent monopoly. Whether within the provisions of the Sherman Act commerce may be restrained to the extent that it is reasonably ancillary to protect a trade mark has not been decided or discussed by the courts.

193. Trade marks in our economic system provide the method by which one seller may be enabled to distinguish his goods from those of another. Fundamentally the basic function of the law pertaining to trade marks is to safeguard the good will of one manufacturer or distributor against the sale of another's merchandise as his. Canal Co. v. Clark, 80 U. S. 311, Hanover Star Milling Co. v. Metcalf, 240 U. S. 403. The right to protect it is bestowed by the law not only to reward business enterprise and prevent piracy on successful and established ventures, but at the same time to prevent deception of the public into believing that they are purchasing one product instead of another.

194. The trade mark right as all other rights is not without bounds. The owners rights are canalized within the exercise of the trade mark's accepted and defined functions. The law is replete with decisions which set out their functions and limitations.*

195. Some of them are lucidly delineated in United Drug Co. v. Theodore Rectanus Co., 248 U. S. 90, 97, 98 as follows:

> "The asserted doctrine is based upon the fundamental error of supposing that a trade-mark right is a

* Whatever extension of trade mark rights is encompassed in the Lanham Act (Title — U.S.C.A. sec. 1051 *et seq.*), its enactment did not open the door to employ a trade mark as an instrument to undermine the antitrust laws. This is borne out with transparent clarity by its legislative history.

right in gross or at large, like a statutory copyright or a patent for an invention, to either of which, in truth, it has little or no analogy. Canal Co. v. Clark, 13 Wall. 311, 322; McLean v. Fleming, 96 U. S. 245, 254. There is no such thing as property in a trade-mark except as a right appurtenant to an established business or trade in connection with which the mark is employed. The law of trade-marks is but a part of the broader law of unfair competition; the right to a particular mark grows out of its use, not its mere adoption; its function is simply to designate the goods as the product of a particular trader and to protect his good will against the sale of another's product as his; and it is not the subject of property except in connection with an existing business. Hanover Milling Co. v. Metcalf, 240 U. S. 403, 412-414.

"The owner of a trade-mark may not, like the proprietor of a patented invention, make a negative and merely prohibitive use of it as a monopoly. See United States v. Bell Telephone Co., 167 U. S. 224, 250; Bement v. National Harrow Co., 186 U. S. 70, 90; Paper Bag Patent Case, 210 U. S. 405, 424.

"In truth, a trade-mark confers no monopoly whatever in a proper sense, but is merely a convenient means for facilitating the protection of one's good-will in trade by placing a distinguishing mark or symbol—a commercial signature—upon the merchandise or the package in which it is sold."

196. In order to resolve the instant question all that need be said is that the trade mark right is not comparable to the right the owner has in a chattel or realty; it is not a right in gross or at large; it is not such a right as is awarded to an inventor in the product of his invention. U. S. v. Masonite Corp., 316 U. S. 265.

197. Even the patent monopoly is not broad enough to encompass the power to engage in conduct and practices to eliminate competition such as were employed by defendant, British and French Timken. U. S. v. National Lead, supra; U. S. v. Line Material Co., supra; Hartford-Empire

v. U. S., 323 U. S. 386, 433; Mercoid v. Mid-Continent Co., 320 U. S. 661, 665; Standard Sanitary Co. v. U. S., supra; U. S. v. Gypsum, supra; Ethyl Gas v. U. S., supra; U. S. Masonite Corp., supra; Federal Trade Commission v. Beech-Nut Co., 257 U. S. 441; Interstate Circuit v. U. S., supra; U. S. Paramount Pictures, 334 U. S. 131, 143 (see note 12).

198. A trade mark is not the product of invention. The privileges which are accorded to the owner of a patent are predicated upon invention and are safeguarded to carry out the Constitutional intent to promote the progress of science and the useful arts. If a trade mark were to be given the power of monopoly, it would not be limited in time as in the case of a patent. The public would not benefit from an invention and there would not be the ultimate gain which flows from the disclosure of a patent. That is the foundation for the patent monopoly.

199. A trade mark brands a product as to its origin. The law empowers the owner or the originator of a mark to protect his wares against the imitator who seeks to palm off merchandise as his by the use of the same mark. He is given the right to enjoin such practices. The public interest is served by that protection which in the exercise of all rights is paramount. Deception is prevented.

200. The trade mark may become a detrimental weapon if it is used to serve a harmful or injurious purpose. If it becomes a tool to circumvent free enterprise and unbridled competition, public policy dictates that the rights enjoyed by its ownership be kept within their proper bounds. If a trade mark may be the legal basis for allocating world markets, fixing of prices, restricting competition, the unfailing device has been found to destroy every vestige of inhibition set up by the Sherman Act. The rights pertaining to trade marks and trade names were well known long before that legislative enactment was passed by Congress. It is certain that it was never intended that the consequences of violations of the antitrust laws may be escaped by the licensing of trade marks.

201. Defendant vigorously asserts its position, that since exports and imports of anti-friction bearings from and into the United States in foreign commerce over the years have been relatively insignificant, an injunction to prevent the alleged restraints would be a vain and needless gesture on the part of the Court. The basic purpose of the Sherman Act, it says, is to insure trade on a competitive basis. The argument goes that inasmuch as there is no price competition in bearings imported into or exported from the United States, and since it is impossible for American manufacturers or foreign manufacturers to engage in the exporting or importing of bearings to each other's markets on a successfully commercial basis, the illegality which is essential to the granting of equitable relief does not exist.

202. Several days were devoted, in the trial of the case, to defendant's effort to sustain this contention. Tables of figures were offered in addition to the statements of defendant's officials, to prove that the volume of exports and imports in tapered roller bearings was negligible. Whether the absence of trade was the result of the competitive restrictions charged by the Government or of natural economic forces was not pointed out.

203. Several witnesses testified that the economic dislocation of world markets precipitated by the first world war, and the depression which followed, caused a near chaotic condition in foreign commerce. It was augmented, they said, by the policies of the various nations to encourage purchase of domestic goods. The "Buy British" slogan was mentioned as illustrative of this program, in which nearly all countries engaged. The tariff regulations, the formation of the sterling bloc, the fluctuation of currency values, the government restrictions against imports and exports also contributed to the net result, they maintained, that producers were unable to compete with foreign manufacturers on a profitable basis. They concluded that this condition has prevailed not only in the roller bearing industry, but it affected all industries.

204. In the consideration of this claim the question immediately arises: If all the impediments to foreign trade

existed ever since 1914, which became more and more pronounced to the present day, why were the contracting parties, defendant, British Timken and French Timken so concerned about airtight agreements to keep each one within its own commercial domain? The repeated and persistent provisions of the successive contracts, for territorial restrictions, contradict any claim of lack of ability to compete.

205. Local and national pride in domestic goods and sales resistance to foreign made products have always been obstacles to import and export trade. The ingenuity of the American businessman, fortified by the advantages of free competition in many instances has been able to penetrate the strongest tariff walls.

206. The evidence bears out the fact that there was and there is actual and potential competition in the international roller bearing market. The contracts were consummated for the very purpose of regulating and restricting it.

207. How else could this portion of Dewar's testimony be explained:

Q. Is it your intention to say that it was immaterial to you who sold as between American Timken and British Timken at all times, or just when you were in competition with S.K.F.?

A. Our main object in life was to sell Timken tapered roller bearings. Naturally, I did not want the American Timken Company to sell bearings in our territory unless —well, in our territory.

Q. In other words, you did not mean that as between a bearing made in Canton and one made in Birmingham, you did not care which was sold in your territory—they both have the name "Timken" on them?

A. Yes.

Q. But you are interested in selling bearings made in Birmingham in your territory?

A. Yes, certainly; but if we were unable to sell a bearing made in Birmingham, we preferred to sell in our territory a bearing made in Canton or in France rather than a S.K.F. bearing made in Gothenburg.

Q. So in other words, if you were trying to get the business from S.K.F., it was then that it was immaterial to you which Timken bearing was sold?

A. Well, I should have put it the other way round: it was when S.K.F. was trying to get the business from us. After all, we started.

Q. You used the phrase 'common enemy' referring to Swedish S.K.F. Were they a common enemy at all times, or were they not during some time?

A. They were a common enemy all the time.

Q. And they were a common enemy at the time you entered into the arrangements in France in 1934, and the arrangements in England in 1932?

A. They were largely a common enemy from the time we ever heard of them up to now inclusive.

Q. So that they were a common enemy with whom you had friendly arrangements?

A. We occasionally had a truce—like the Russians and the Germans.

and that of William R. Timken:

Q. Now, you said Mr. Dewar wanted to know where he stood.

A. Yes.

Q. In what respect? Would you be a little more explicit?

A. Well, he wanted to know where his—what he was putting his money into. He didn't want to get into a dog fight with us.

Q. About territories in which to sell bearings, you mean?

A. Yes, it would hardly be economical to support two sets of distributors in the same country, for instance. Therefore, he wanted a clear understanding of what territories his company would serve.

208. It is not merely conjecture to conclude, that had it not been for the rigid restrictions provided in the contracts and their strict enforcement in actual practice, the volume of business with foreign countries would have been considerable in size. The officers of defendant admitted that the need for bearings from the United States was

continuously shown by the inquiries made by foreign purchasers. Small competitors of defendant in the United States were able to make shipments abroad on a relatively large scale. The last war accentuated the demand, but defendant adhered to its obligation as a member of the combination and refused to make sales. Forsythe's report to Klinedinst:

"We have received definite orders from their sales territories which upon being referred to British Timken were turned down at their instructions." is convincing evidence of the potential competition and the destructive effect of the combination.

209. Political and social changes have repeatedly caused fluctuations in international trade. Our own economy has always been affected by the currents of trade regulations abroad. But violent as the variations have been, commerce with foreign nations has remained one of the great influences on our own economic welfare. The provisions of the Sherman Act, pertaining to free competition with other nations, have not become a dead letter as a consequence of the world events of the past thirty-five years.

210. The evidence presented is convincing that defendant, British Timken and French Timken have formed a world cartel in tapered roller bearings. They have divided the world into exclusive sales territories. They have fixed prices. They agreed to and have effectively eliminated competition among themselves. They agreed to and did attempt to eradicate the competition of outsiders. They combined with competitors to fix prices. The defenses offered do not constitute justifications for such patent violations of the antitrust laws.

211. The Government is entitled to a decree. The exact nature of the needed remedy to prevent future violations will be determined at a hearing set for that purpose.

Freed, United States District Judge.

THE TIMKEN ROLLER BEARING COMPANY,
Appellant,

vs.

THE UNITED STATES OF AMERICA,
Appellee.

BRIEF OF APPELLANT
In Opposition to Appellee's Statement Opposing Appellant's Statement of Jurisdiction and Motion to Dismiss or Affirm.

I. THE APPELLEE'S STATEMENT OPPOSING JURISDICTION AND MOTION TO DISMISS OR AFFIRM WERE NOT FILED AND SERVED WITHIN THE TIME SPECIFIED BY RULE 12, PARAGRAPH 3.

Rule 12 of this Court provides that a statement opposing jurisdiction must be served within 15 days after the appeal papers are served, which in this case expired on August 15, 1950. It was not until August 16, 1950, 16 days after the acknowledgment of service by the Solicitor General on July 31, that the appellee filed in the District Court and served on counsel for the appellant its statement and motion to dismiss or affirm. We call this matter to the Court's attention for such disposition as to it may seem fit pursuant to Rule 12, paragraph 6, which provides that, if there is a failure to comply with its provisions, the Court "may take such action as it deems proper."

II. THE APPELLEE'S MOTION TO DISMISS THE APPEAL SHOULD BE DENIED.

The appellee's motion to dismiss is based upon the ground that the excessive number of assignments of error makes it impossible to determine the grounds upon which the appellant relies in seeking a reversal of the judgment of the District Court. If, therefore, the assignment of errors is fairly sufficient to apprise this Court and opposing counsel of the grounds upon which the appellant relies, the motion is not well taken.

The assignment of errors contains separate headings setting forth general assignments of error each relating to a particular subject as follows: holding of the court; failure to hold; final judgment; failure to make findings of fact and conclusions of law; purported findings of fact; purported conclusions of law; requested findings of fact; and a few general assignments which are self-explanatory. Under each of these general headings are set forth specific assignments of error explaining and supporting the general assignments. While it is true that, due to the nature of this case, and the unusual situation, hereinafter discussed, created by the adoption by the District Court of its memorandum opinion as its findings of fact and conclusions of law, the specific assignments are numerous, we are quite sure that an examination of the assignment of errors itself will disclose, clearly and unmistakably, that it does state the grounds of error upon which the appellant relies in seeking a reversal of the judgment of the District Court.

It is the position of the appellant, specifically asserted and preserved by appropriate action in the court below, that the District Court did not state its findings of fact and conclusions of law in the manner required by law and the Federal Rules of Civil Procedure, and that the memorandum opinion of the Court, adopted by it as its findings

and conclusions, does not meet the requirements of Rule 52 thereof which provides that "if an opinion or memorandum of decision is filed, it will be sufficient if the findings of fact and conclusions of law appear therein" in that it does not include findings of underlying, subsidiary and ultimate facts on all issues in the case, separately found; includes discussion of portions of the evidence and the Court's reasoning with respect thereto; mingles statements of fact with arguments and inferences of the Court; and does not set forth the Court's conclusions of law separately stated.

The greater number of the specific assignments of error relate to alleged defects in purported findings and conclusions in the District Court's opinion, and its failure to make, at the appellant's request, additional findings and conclusions.

As a result of the District Court's action, in adopting its memorandum opinion as its findings of fact and conclusions of law and in overruling the appellant's objections thereto, we were required in preparing our assignment of errors to examine and analyze many of the paragraphs of the memorandum opinion to determine which of them might be regarded as proper findings and conclusions, for we had to proceed upon the assumption that the District Court's memorandum opinion might be upheld by this Court as constituting sufficient findings and conclusions despite our contention to the contrary. In so doing we could not safely undertake to group isolated statements of fact as to each subject contained in the numbered paragraphs which the District Court had adopted as its findings and conclusions, and assign as error that the composite thereof constituted a single finding of fact which was erroneous, for to have done so might have invited the contention that such a broad assignment was too indefinite in form and in contravention of Rule 9 of this Court which

requires that the assignment of errors "shall set out separately and particularly each error asserted." In the latest treatise on the subject of procedure in this Court, *Supreme Court Practice*, by Stern and Gressman (1950), it is stated (p. 210):

> "Error should be assigned to each finding of fact appellant wishes to challenge as unsupported by evidence."

We were thus relegated to assigning separately as error each material statement of fact which we considered to be unsupported by evidence. These are assignments, numbers 42 to 110, inclusive.

The same is true of the District Court's purported conclusions of law, which are the subjects of assignments, numbers 111 to 136, inclusive. It was incumbent upon us to assign as error those which, as applied in the case at bar, we consider erroneous. And, here again, we were required to select the statements which appeared to be the conclusions of law upon which the District Court relied in entering its judgment, and could not safely attempt to interpret the memorandum opinion and group the statements of abstract principles therein contained with other statements which might be specifically applicable to the case at bar. Hence, the necessity of assigning as error, separately and particularly, the statements we deemed to be the purported erroneous conclusions of law of the District Court.

Assignments numbers 135 to 196, inclusive, based upon the District Court's failure to make new and additional findings of fact and conclusions of law, cover in substance those requested in our motion after judgment which do not duplicate findings and conclusions purportedly made by the District Court in its memorandum opinion. The only other conceivable way in which error could have been assigned in this regard would have been to incorporate the requested findings and conclusions by reference, but such an assign-

ment would be of doubtful legality, and in any event, would have required the reviewing court and opposing counsel to examine more material than that contained in these assignments.

As to the assignments relating to the judgment, numbers 10 to 38, inclusive, the provisions therein, except those by which the court retained continuing jurisdiction and assessed costs against the defendant, are either in the nature of general orders of injunction against the appellant or such as may be deemed to be beyond the permissible discretion of an equity court, even assuming that the District Court was right in holding against the appellant on the merits of the case. Moreover, certain provisions constitute violations of the appellant's constitutional rights, *Hartford Empire Company v. United States*, 323 U. S. 386. Error in retaining jurisdiction and assessing costs is assigned on the basis that the entire judgment was erroneous, in order to forestall any possible contention that the appellant has waived its contentions as to the merits of the case by failing to assign error in entering the judgment in its entirety.

In the preparation of the assignments of error we have examined the records in other similar cases, in which, as here, the assignments were necessarily quite numerous.

Counsel for the appellant, in preparing their assignments of error, have attempted so to do in conformity to the applicable rules and general practice. We respectfully submit that there is no defect therein sufficiently grave to deprive the appellant of its right to ask this Court to consider the merits of the judgment of the District Court and thus afford it the only right of review available to it under the law.

III. THE APPELLEE'S MOTION TO AFFIRM THE JUDGMENT OF THE DISTRICT COURT SHOULD BE DENIED.

(1) The Joint Venture.

It should be made clear that the joint venture is the relationship arising from the agreements between the appellant and its British associate, Dewar.

Contrary to the appellee's first contention on this point, the affirmance in *United States v. Bausch & Lomb Optical Company*, 321 U. S. 707, by a divided court of the judgment of the District Court, is a precedent by analogy in the case at bar, although it did not relate to international trade. The opinion of the District Court in that case discloses that the words "joint venture" are not "casually used" therein, contrary to the statement of the appellee. It also demonstrates that the ancillary restraints doctrine is not limited to a situation in which the seller of a business agrees not to compete for a period of time with the buyer thereof, as the appellee's statement suggests. In that case, the District Court stated (p. 398) that the standards set forth in "the classic opinion" in *United States v. Addyston Pipe & Steel Company*, 85 Fed. 271, are "substantially similar" to those set forth in the *Restatement of the Law of Contracts*, §§ 515, 516. The Court then quoted Section 516 of the *Restatement of the Law of Contracts*. The pertinent part of the quotation is as follows (p. 398):

> "'The following bargains do not impose unreasonable restraint of trade unless effecting, or forming part of a plan to effect, a monopoly: * * *
>
> "'A bargain by a partner not to interfere by competition or otherwise with the business of the partnership while it continues, or subject to reasonable limitations after his retirement;'"

The Court referred to the statement in the *Addyston Pipe Co.* case that the "very statement of the rule implies that the contract must be one in which there is a main purpose,

to which the covenant in restraint of trade is merely ancillary," and then said (p. 398):

> "*The arrangement, though not a partnership in legal form, is functionally a joint enterprise*[1] in which one will produce and the other market the commodity. United States v. Addyston Pipe & Steel Co., supra, 85 F. at page 281."

The court then held that no monopoly had resulted from the arrangement. In the case at bar, the restraints imposed by the agreements between the appellant, British Timken and French Timken were reasonably necessary to the formation and conduct of the joint venture in the general nature of a partnership between the appellant and Dewar, as well as for other reasons, and no monopoly was intended nor resulted.

Whether such an arrangement is vertical or horizontal is a matter of no moment because the necessary effect in either case would be to prevent competition between actual or potential competitors on the basis of independent price fixing, which is the ultimate core of competition, *United States v. Socony Vacuum Oil Company*, 310 U. S. 150, 226, note 59, citing *Handler, Federal Anti-Trust Laws—a Symposium* (1931), pages 91, *et seq.*

The appellee's second contention is that any agreement which allocates exclusive territory to actual or potential competitors is illegal *per se*, regardless of whether or not it is ancillary to a lawful main purpose.

As to this contention, it has been held that an agreement, the only purpose of which is to allocate territory, fix prices, or to foreclose the market to others, is illegal *per se* and can never be justified on the basis of reasonableness. Moreover, it has also been decided that a bargain, which might otherwise involve a reasonable ancillary restraint of trade, is illegal if it effects, or forms part of a plan to effect, a monopoly, *United States v. Addyston Pipe*

[1] Emphasis throughout is ours.

& Steel Company, 85 Fed. 271. However, where there is a valid main purpose to which the restraint is ancillary, and neither a monopolistic purpose or effect, exclusive allocation of territory is not illegal *per se.* It was so held as a matter of common law (which is the basis of the Sherman Act, *Apex Hosiery Company v. Leader,* 310 U. S. 469, 498), in *Fowle v. Park,* 131 U. S. 88, 97, and under the Sherman Act, *Thomas v. Sutherland,* 52 Fed. (2d) 592; *Kentucky Natural Gas Corporation v. Indiana Gas & Chemical Corporation,* 118 Fed. (2d) 831; *Cole Motor Car Company v. Hurst,* 228 Fed. 280, cert. den. 247 U. S. 511. The situation is the same as that relating to price fixing, as to which it is well settled that an agreement, the main purpose of which is to fix prices, is illegal *per se, United States v. Socony Vacuum Oil Company,* 310 U. S. 150, *supra,* but that an agreement providing for fixing prices ancillary to a legal main transaction, such as the granting of a patent license, is not illegal *per se, United States v. General Electric Company,* 272 U. S. 476, adhered to on this point, *United States v. Line Material Company,* 333 U. S. 287, and *United States v. United States Gypsum Company,* 333 U. S. 364.

We assume that this Court will review the District Court's purported findings of fact which may be contrary to our contentions on this point, which we believe are clearly erroneous and opposed to the uncontroverted evidence in the record, *United States v. United States Gypsum Co.,* 333 U. S. 364. The situation in this respect is not like that presented in *United States v. Yellow Cab Company,* 338 U. S. 338, in which the lower court credited the testimony of witnesses for the successful party, who were observed by the court, instead of documentary evidence offered by the other party. In the case at bar the appellee's case was based on documentary evidence and on portions of depositions taken at the appellant's instance in England, with the exception of the testimony of one witness, the chief sales executive at the time of the appellant, who testified principally as to the nature of its business.

(2) Licensing of the Trademark.

The second important question relates to the right of an American company to license its trademark abroad.

First, the appellee states that "whatever right an American company might have to license its trademark abroad, it would have this right only upon a national basis * * *." Presumably, this means that, if an American company owns a trademark in several foreign countries, it would not be possible to license it in all of such countries to the same person, but it would have to be licensed in each country to a different person. Obviously, no authority is cited for this proposition and, if it is to be a rule of law by which American business should be bound, certainly a declaration on this subject by this Court is essential.

Second, appellee contends that actually no question of licensing trademarks abroad is involved here, because "appellant does not own the mark 'Timken' in such important areas of potential competition as Great Britain, France and Germany."[2] The District Court made no finding whatsoever as to whether the appellant owned or did not own the mark generally, or in any particular country. The appellee offered no proof as to the ownership of the trademark and the uncontroverted evidence is that the appellant is the owner thereof, not only in the three countries mentioned in the appellee's statement, but in substantially all of the commercially important countries of the world as well.

The difficulty with this position of the appellee is that it proceeds on the assumption that registration and ownership are necessarily one and the same thing, and its confu-

---

[2] This is a surprising contention because there is no allegation in the amended complaint that the appellant does not own the trademark "Timken," but instead the prayer for relief supports no possible interpretation other than that it is the owner thereof, because the appellee prays for an order enjoining the appellant from selling, assigning or transferring the mark to British Timken or French Timken in such a way as to exclude its use by the appellant anywhere in the world.

sion on this point is quite apparent. Ever since the joint acquisition by the appellant and Dewar of British Timken and German Timken, and their joint organization of French Timken, in 1927 and 1928, the *registrations* of the trademark "Timken" in some countries have been held by the foreign Timken companies as a matter of convenience. However, ownership thereof by the appellant has been expressly recognized by the parties at all times, as the provisions for its disposition in favor of the appellant at the termination of the 1938 business agreement conclusively demonstrate.

The appellee next states, in this connection, that:

> "In fact, appellant is at present taking steps to obtain a *license* of the mark in Great Britain from British Timken."

This is a serious misconception of the purpose and intent and, in fact, the language of the memorandum agreement between the appellant and British Timken of October, 1949, paragraph I of which provides, substantially, that British Timken "will maintain the registrations obtained by it" in specific countries and the appellant "will be entered as a *registered user*" thereof in any of those or other countries where that is, or shall become, possible.

Third, the appellee contends that the judgment of the District Court provides for nothing that interferes with the right of the appellant to license the trademark. However, an examination of Section VII of the final judgment itself will show how completely unfounded this statement is.

As illustrative of the appellant's position in this regard, and without attempting at this time to refer to all of the probable effects upon the appellant of the judgment of the District Court upon this subject, and particularly Section VII thereof, we call this Court's attention to some of the respects in which this section interferes seriously, with the right of the appellant to license its trademark.

By certain of the terms of Section VII of the judgment, the defendant is enjoined and restrained from entering into, performing, adhering to, maintaining, furthering or renewing, directly or indirectly, any contract, agreement, etc. with British Timken or French Timken for

> "C. The transfer of any right or immunity under a trademark or name, relating to the production of antifriction bearings, upon the condition or requirement that British Timken and/or French Timken * * * shall:
>
> 1. allocate or divide territories or markets for the production, sale or other distribution of antifriction bearings; * * *
>
> 5. exclude any producer or distributor from any market for antifriction bearings, or interfere with or restrict any producer or distributor in competing in any such market; * * *
>
> 8. receive, grant, disclose, render available or exchange, in such a way as to deny any third person access thereto, (a) information, advice, assistance, or rights with respect to any invention, discovery, improvement, practice, formula, pattern, device, process, method, or other technical information relating to the production of antifriction bearings, or (b) any material or machinery used in the production of antifriction bearings, or any information, advice, assistance or rights with respect to any such material or machinery."

This language discloses to what great lengths the District Court went in its judgment on the subject of trade mark licensing. The judgment by its terms not only interferes with the licensing of the trademark, but imposes restrictions with respect thereto which, if applied generally, would make it virtually impossible for an American owner of a trademark to license it abroad.

Thus, under Section VII, C, 1, it would be impossible for the appellant to license a trademark on a territorial basis. If we assume, as the appellant contends, that it is the owner of the trademark throughout the world, it could

not license either British Timken or French Timken to use it in any single country or group thereof unless the license was mutually nonexclusive and covered all countries in which the appellant owned the mark. Otherwise, there would be an allocation or division of territories for the production, sale or distribution of bearings in violation of the judgment. More than that, the appellant as owner of the trademark in the United States, could not license it abroad to British Timken and French Timken and exclude them as licensees, by agreement, from the use of the mark in America as that would likewise involve an allocation of territories in contravention of Section VII, C, 1.

Examining the language of Section VII, C, 5, we find that to comply with the terms thereof, if it appeared desirable to American Timken, as owner of the trademark, to grant a license thereof in a foreign country to British Timken, but it did not wish to license that company in other areas of the world, it could not grant the contemplated license unless it also licensed the use of the trademark to British Timken in every country in the world where the appellant owned the mark.

In Section VII, C, 8, American Timken, as licensor of its trademark, is required to extend to all third parties the same information which it gives to its trademark licensees, British Timken and French Timken, on the subject of its product or the means and methods and equipment used in its manufacture. Generally speaking, under the law of this country, it is essential to the validity of a trademark license that the owner thereof supply information concerning its product to its licensee in order to make sure that the quality thereof is maintained by the licensee. To hold that the licensor must give the same information to all third parties is certainly to establish a new rule in the field of trademark licensing law and one which should be examined by this Court.

The appellee has cited no authority in support of the provisions of the judgment to which specific reference has just been made, and it is the appellant's view that the District Court's judgment on the subject of trademark licensing is not supported by any authority.

The principal cases relied upon by the appellant upon the general subject of the licensing of trademarks, are those relating to the use of patents and copyrights, namely, the *National Lead, Ethyl Gasoline Corporation, Interstate Circuit, Inc.*, and *Paramount Pictures* cases but do not sustain the broad proposition for which they are cited by the appellee.

The only trademark decision referred to is the *Rectanus* case, and it did not involve trademark licensing.

Apparently, the appellee's purpose in referring to patent and copyright cases is to intimate that the rights of the owner of a trademark are less than are those of the owner of a patent.

This idea of a lesser right in a trademark as compared with that in a patent is very confusing. Practically, a trademark is entirely different from a patent. Patents and copyrights are limited monopolies granted because the public is interested in having the invention or creation disclosed, described and registered. The patentee may grant as many licenses as he pleases. In contrast, a trademark is not the result of monopoly but is a symbol to distinguish one product from another competing product. It serves as an indication of origin or as a guarantee of quality of certain products, and when such mark is used by the owner or by the licensee, it must be used under conditions which preserve its functions to serve as such a symbol. Restraints on manufacture in connection with patent licensing must be carefully circumscribed and restricted, but this is not so as to a trademark, the value of which depends upon its use and its function as a symbol.

The owner of a patent may prevent, by reason of his patent monopoly, other persons from using or manufacturing the patented process or product but the owner of a trademark cannot prevent other persons from manufacturing the identical article covered by the mark. He can only prevent third parties from applying the same symbol to the goods as is applied by him as the owner of the trademark. Thus, the theory that the licensing of a trademark is necessarily restrictive is a false one, and the contention that cases relating to the licensing of patents and copyrights are necessarily applicable to a case which involves the licensing of a trademark, and is not a sound one.

The District Court regarded this question as being new and important, for in paragraph 192 of its memorandum opinion, this statement is found:

> "The conflict between the Sherman Act and the limited patent monopoly has been the subject matter of innumerable litigated cases. The courts have attempted to harmonize the opposing basic policies inherent in their respective economic concepts. They tried to fit the antitrust laws within the frame work of the constitutional grant of a patent monopoly. *Whether within the provisions of the Sherman Act commerce may be restrained to the extent that it is reasonably ancillary to protect a trademark has not been decided or discussed by the courts.*"

(3) Divestiture.

The equity jurisdiction of the District Court is prescribed by Section 4 of the Sherman Act, 26 Stat. 209, which provides that it is vested with jurisdiction "to prevent and restrain violations" of the Sherman Act. We contend that under the decisions of this Court divestiture can be decreed only (1) where the property involved was acquired illegally in the conduct of a combination to monopolize, in order to take from the defendant the fruit of his wrongdoing, or (2) where it has been used for the purpose of carrying out a

combination in restraint of trade, in order to prevent resumption of past illegal practices. The appellee goes further, contending that divestiture can properly be ordered for the purpose of removing an inducement to the defendant not to compete. The only purpose of such divestiture would be "to prevent and restrain" the defendant from failing to compete, but the Sherman Act "does not compel competition," *United States v. United States Steel Corporation*, 251 U. S. 417, 451. It is demonstrable that *United States v. Crescent Amusement Company*, 323 U. S. 173, *United States v. National Lead Company*, 332 U. S. 319, and *United States v. Paramount Pictures, Inc.*, 334 U. S. 131, cited by the appellee involved findings of fact which justified divestiture on one or both of the two bases therefor above set forth. That portion of the decision in the *National Lead Co.* case which sustained the action of the District Court in refusing to require divestiture of domestic plants because there was no finding by the lower court that these plants "had been acquired or used in a manner violative of the Sherman Act" (p. 351) sustains the appellant's position.

Illegal acquisition was not in issue in the case at bar, because the amended complaint charged that the conspiracy commenced in 1928 (after the acquisition by the appellant and Dewar of British Timken stock in 1927), and the District Court made no finding that such acquisition was illegal nor an integral part of the agreement imposing alleged restraints.

There is no finding by the District Court that the appellant ever used its stock in either British Timken or French Timken to control them, but, on the contrary, the District Court held that Dewar exercised control of the ordinary affairs of these companies (Memorandum Opinion, pars. 44, 54). The appellee's claim that appellant exercised control over British Timken through its one out of four directors, is patently unsound. Its statement that the record

discloses that the appellant in 1935 used its influence to bring about a 30 year extension of the 1935 business agreement is contrary to the uncontroverted evidence which discloses that such extension was insisted upon by the English brokers who negotiated with Dewar for the sale by the appellant and Dewar of a portion of their stock in British Timken. There was no finding by the District Court on this point, because the reason for the extension was considered unimportant (Memorandum Opinion, par. 67).

Therefore, there is here presented the important question as to whether the District Court, under its jurisdiction to "prevent and restrain" violations of the Sherman Act, could properly order divestiture merely to induce competition rather than to prevent and restrain interference with it.

Respectfully submitted,

LUTHER DAY,

Maintenance of the Joint Adventure, and of the Trademark Licenses, Since 1927 56

Transactions Involving Adjustments by American Timken and Dewar as to Companies Controlled by Them 57

The Mass of Technical Information and Assistance Supplied by American Timken to British Timken and French Timken Under the Joint Venture and Pursuant to the Trademark License 65

Specification of Errors to be Urged 71

Summary of Argument 71

Argument 81

I. Any Restrictive Provisions in the Business Agreements Between American Timken, British Timken and French Timken Are Reasonable and Proper Parts of the Joint Adventure Between American Timken and Dewar Which Originated in the Heads of Agreement of May 16, 1927 81

II. Any Restrictive Provisions in the Business Agreements Between American Timken, British Timken, and French Timken Are Reasonable and Proper Parts of the License of the Trademark "Timken" by American Timken to British Timken and French Timken 99

1. American Timken Owns and Has Owned, the Trade-Mark "Timken," Either by Registration, or Equitably, in All Important Countries of the World 101

The Fact that American Timken Was Unable to Obtain Registration of the Trademark in Certain Countries is Unimportant Because Registration is Not the Sole Test of Ownership of a Trademark 109

Acquisition of the Trademark in France and Germany, Where Registrations Had Not Been Obtained by American Timken 114

The French Trade-Mark Situation 115

The German Trademark Situation 116

2. American Timken Has Validly Licensed Use of the Trade-mark, By Controlled Licensing Thereof, to British Timken and French Timken 120

The Lanham Act (60 Stat. 427) Effective 1947, Evidences United States Congressional Policy in Favor of Controlled Licensing of Trade-marks 123

The Timken Companies Under Their Agreements Have Conformed to the Requirements of Controlled Licensing of Trade-marks 124

The Policy of the United States as Evidenced by the International Conventions to Which this Country is a Party Supports the Controlled Licensing of a Trade-mark 125

3. The Territorial Provisions Set Up in the License of the Trademark "Timken" From American Timken to British Timken and French Timken in the Respective Countries Assigned to Each Company Are Not Violative of the Sherman Act 131

III. The Purported Findings of Fact Upon Which the District Court Based Its Judgment Are Clearly Erroneous 139

1. The District Court's Conclusion That At Various Times American Timken Was Combining With Potential or Actual Competitors is Clearly Erroneous 139

American Timken and E. & O. A. 140

American Timken and the Vickers Subsidiaries from 1909 to 1927 140

American Timken and British Timken in 1927, at the time of American Timken's acquisition of the latter 141

American Timken and French Timken 143

2. The District Court's Findings as to the "Dominant" Position of the Timken Companies in the Alleged Tapered Roller Bearing Industry and Market are Clearly Erroneous 144

3. The Treatment by the District Court of the Three Timken Companies as Independent Operating Units For the Purpose of Determining That They Had Combined in Violation of the Sherman Act, and Its Failure to Consider Evidence Which Demonstrated That They Were Engaged in a Joint Venture, and Its Conclusion That Their Relation Was Merely a Continuation of an Illegal Combination in Restraint of Trade Created By American Timken and Vickers' Subsidiaries Under the 1909 License Agreements, as Amended, Are Clearly Erroneous 146

4. The District Court's Findings that the Three Timken Companies Had Combined to Control the Alleged Tapered Roller Bearing Industry, from 1928 and Thereafter, by Stifling Competition of Outsiders, or Combining With Them, Are Clearly Erroneous 153

IV. The District Court Erred in Not Making Proper Findings of Fact, Separately Found, and Conclusions of Law, Separately Stated, as Required by Rule 52 of the Rules of Federal Procedure... 162

V. The Final Judgment of the District Court is Erroneous, Beyond Its Jurisdiction, Exceeds the Permissible Limits of the Discretion Conferred Upon It, and Deprives American Timken of Its Property Without Just Compensation and Without Due Process of Law Contrary to the Fifth Amendment of the Constitution of the United States 165

1. The Injunction Against Assignment, License, Receipt or Transfer of Patents, Know-How, Material, Machinery, and Trademark or Name "in Such a Way as to Deny Any Third Person Access Thereto" is Erroneous 165

2. The Injunction Against American Timken's Agreeing With British Timken, French Timken or Any Subsidiary, Successor, Assign, Agent, Sales Representative, or Distributor Thereof to Fix, Maintain or Adhere to Prices or Other Terms and Conditions of Sale or Resale of Anti-friction Bearings in the United States is Erroneous 170

3. The Injunction Against Refusal to Sell Bearings Where the Reason For Such Refusal Is That They Are For Resale or Other Distribution in British or French Territory, and Against Discrimination As to Availability As to Prices, Terms and Conditions of Sale or Failing to Provide Services and Assistance Relating to the Distribution or Use Thereof Comparable to That Made Available to Distributors and Users in American Timken's Territory, Where the Reason For Such Refusal, Discrimination or Failure is That They Are For Use, Resale or Distribution in a Country or Area Other Than American Timken's Territory, is Erroneous 173

4. The Injunction Against American Timken's Entering Into Any Agreement With British Timken or French Timken For the Transfer of Any Right or Immunity Under Any Trademark or Name Relating to the Production of Anti-friction Bearings, Upon the Conditions Forbidden, Is Erroneous 178

5. The Provisions of the Final Judgment which Require American Timken to Divest Itself of All Stockholdings and Financial Interests in British Timken and French Timken, and Enjoin It from Acquiring Any Further Interest and Participation in Their Affairs, Are Erroneous 184

Principles Governing Divestiture 185

Divestiture to break up monopoly power not applicable 189

Divestiture to remove "fruits" of wrongdoing not applicable 189

Divestiture to prevent unlawful use of stock not applicable 190

Divestiture to break up combination not applicable 191

Necessity of determining field of competition and district court's failure to do so 192

Ineffectiveness of Divestiture to Create Competition—the Invalid Basis Suggested by Appellee 195

Probable Prevention of Foreign Trade in "Timken" Trade-Marked Bearings Resulting from Divestiture 197

Hardship and Loss to American Timken from Divestiture 199

Conclusion 202

THE TIMKEN ROLLER BEARING COMPANY,
Appellant,

v.

THE UNITED STATES OF AMERICA,
Appellee.

APPEAL FROM THE DISTRICT COURT OF THE UNITED STATES FOR THE NORTHERN DISTRICT OF OHIO, EASTERN DIVISION.

BRIEF FOR THE APPELLANT, THE TIMKEN ROLLER BEARING COMPANY.

This is an appeal from a judgment of the district court against The Timken Roller Bearing Company, defendant in that court, appellant in this Court, in a civil action for an alleged violation of Sections 1 and 3 of the Sherman Act, granting equitable relief to the United States of America, plaintiff in that court and appellee herein.

OPINION BELOW.

The opinion of the district court (R. 958) is reported in *United States v. The Timken Roller Bearing Company*, 83 Fed. Supp. 284 (D.C. N.D. Ohio, 1948).

JURISDICTION.

The judgment of the district court herein was entered on February 15, 1950 (R. 1172). Motions by the appellant for a new trial, and to amend, and to make new, and additional, findings of fact and conclusions of law were filed on

February 24, 1950 (R. 1181), and overruled on June 14, 1950 (R. 1252). A petition for appeal was allowed on July 28, 1950 (R. 1253-1255). The jurisdiction of this Court is conferred by Section 2 of the Act of February 11, 1903, as amended (32 Stat. 823; 36 Stat. 1167; 58 Stat. 272; 62 Stat. 989; 15 U. S. C. § 29; 49 U. S. C. § 45). Probable jurisdiction of the case was noted by this Court on November 6, 1950 (R. 1327).

QUESTIONS PRESENTED.

The appellant, The Timken Roller Bearing Company (hereinafter called American Timken), in 1927 acquired jointly with Michael B. U. Dewar, an English businessman, all of the stock of British Timken, Ltd. (hereinafter called British Timken), an English corporation, and now owns 30.26% of its ordinary shares of stock. Since Dewar's death on December 21, 1950, American Timken has taken steps to exercise an option to acquire his 23.74% thereof. American Timken and Dewar also jointly caused Societe Anonyme Francaise Timken (hereinafter called French Timken), a French corporation, to be organized in 1928, and since then American Timken has owned, and now owns, 50% of its stock, and has acted to exercise its option, which accrued at Dewar's death, to acquire more stock giving it voting control, and it expects to purchase the balance of the stock from Dewar's holding company pursuant to an agreement giving it the first refusal thereof.[1] The district court found

---

[1] These facts are stated in substance in support of a motion in the district court, a copy of which is attached to a motion for postponement of oral argument filed in this Court which was denied in March, 1951.

In the district court this case was tried, considered and decided upon the basis that Dewar was alive. His death has had two principal effects in that, first, it terminated the joint adventure between him and American Timken hereinafter referred to, and also made operative the options on his British and French Timken stock. Be-

(Continued on following page)

that business agreements and other arrangements between the three companies, which have been engaged principally in the manufacture and sale of tapered roller bearings invented and patented by the founders of American Timken, constituted an illegal combination in restraint of trade, contrary to Sections 1 and 3 of the Sherman Act. The questions presented are:

1. Whether the restraints of trade, if any, resulting from the business agreements, contracts and understandings between American Timken and British Timken and French Timken have been at all times, and are, reasonably and lawfully ancillary to the creation and maintenance of a lawful joint adventure and enterprise by American Timken and Dewar through their joint acquisition and control of

---

(*Continued from preceding page*)

cause of these changes in the factual and legal situation after perfection of the appeal to this Court, American Timken, having determined that it was the proper course of procedure under the authorities, of which *Roemer v. Simon*, 91 U. S. 149, is the leading case, moved the district court that it request leave of this Court to take additional evidence due to the changed circumstances and to reconsider its judgment herein in the light thereof. At the same time, feeling free so to do under the broad provisions of the district court's order staying execution of its final judgment (R. 1255), it has taken steps to exercise the options, advising the district court of its intention so to do in the motion filed therein.

The motion in the district court was filed January 24, 1951, and was heard and submitted on February 14, 1951. The court advised counsel, in substance, that due to pressure of other business the motion could not be considered for at least thirty days, being advised by counsel that, in all probability, this appeal would be set for hearing in this Court in the month of April, 1951. In this situation American Timken filed its motion in this Court seeking postponement of the oral argument until the October Term, 1951, in order to enable the district court to decide the motion before it. The district court has just overruled this motion, on April 10, 1951.

American Timken has taken this action in both courts on the theory that this appeal should not be considered and decided upon the basis that Dewar is still alive when he is, in fact, dead, and believing that the motion which it filed in the district court was the only proper and authorized method to get before it and this Court new facts, due to the changed circumstances, so that this case may be considered and decided in the light thereof.

British Timken and German Timken (now defunct), and joint organization and control of French Timken, to develop foreign trade and good will of American Timken in anti-friction bearings under a license of the trademark "Timken."

2. Whether such restraints of trade, if any, have been at all times, and are, reasonably and lawfully ancillary to the licensing of the trademark "Timken" by American Timken to British Timken and French Timken, including the supplying of exclusive information by American Timken to them as to the production of anti-friction bearings in connection with such trademark licenses.

3. Whether the purported findings of fact upon which the district court based its final judgment are clearly erroneous.

4. Whether the district court erred in not making, as requested by American Timken, proper findings of underlying ultimate and subsidiary facts on all issues in the case, separately found, and conclusions of law separately stated, as required by Rule 52 of the Federal Rules of Civil Procedure (because the findings of fact and conclusions of law did not sufficiently appear in the memorandum filed by the court); in adopting, upon the motion of the appellee, the court's memorandum opinion as its findings of fact and conclusions of law; and in overruling American Timken's motion after judgment that the court adopt, in lieu of such purported findings and conclusions the proposed findings and conclusions submitted by it with its motion.

5. Whether the final judgment of the district court is erroneous, beyond its jurisdiction, exceeds the permissible limits of the discretion conferred upon it, deprives American Timken of its property without just compensation and without due process of law, contrary to the Fifth Amendment to the Constitution of the United States, and should be reversed, in that:

(a) It enjoins American Timken in perpetuity from granting to, or receiving from, British Timken and French Timken exclusively "in such a way as to deny any third person access thereto" know-how, machinery, materials and patents, even though it was not alleged in the amended complaint that these constituted any part of the means adopted by American Timken and its alleged co-conspirators to carry on the alleged conspiracy, and in this respect deprives it of its property without due process of law, contrary to the Fifth Amendment;

(b) It enjoins American Timken in perpetuity from entering into any agreement with British Timken or French Timken, or any subsidiary, successor, assign, sales agent, representative or distributor thereof, to fix resale prices of anti-friction bearings produced by American Timken, thus depriving it of its rights under the Miller-Tydings Act (50 Stat. 693, 15 U. S. C. § 1);

(c) It enjoins American Timken in perpetuity from refusing to sell anti-friction bearings to any person at prices and on terms corresponding with those regularly offered to purchasers of the same classification for resale in American Timken's territory, and from failing to provide services or assistance relating to the disposition or use thereof comparable to that made available to distributors or users of bearings in American Timken's territory, where the reason for such refusal is that the bearings are for resale, or other distribution, in the territory of British Timken or French Timken, or in some country in other than American Timken's territory, as defined in the final judgment, thus exceeding the court's jurisdiction to prevent and restrain violations of the Sherman Act under Section 4 thereof, and depriving American Timken of its property without just compensation and without due process of law, contrary to the Fifth Amendment of the Constitution of the United States;

(d) It enjoins American Timken from entering into any agreement with British Timken or French Timken for the transfer of any right or immunity under any trademark or name relating to the production of anti-friction bearings upon the condition that either of them shall allocate or divide territories for the production or sale of anti-friction bearings, exclude any producer or distributor from any market for anti-friction bearings, or receive, grant, or exchange know-how or materials or machinery used in the production of anti-friction bearings in such a way as to deny any third person access thereto, thus depriving American Timken of its lawful right to license the trademark "Timken," or any other trademark, in various respects;

(e) It requires American Timken to divest itself of all its stockholdings and financial interest, either direct or indirect, in British Timken and French Timken, when the uncontroverted evidence in the record discloses, and the district court found, that such stockholdings and interest were not acquired in connection with the alleged conduct of the alleged conspiracy and the stock had not been used to control British Timken and French Timken in the carrying out thereof, the only basis upon which the appellee urged such divestiture being that the ownership of such investments by American Timken would constitute an inducement and incentive not to compete with British Timken and French Timken, and the uncontroverted evidence in the record discloses that such divestiture would constitute a hardship to, and punishment of, American Timken.

STATUTES INVOLVED.

The Act of July 2, 1890, 26 Stat. 209, known as the Sherman Act, as amended (15 U. S. C. §§ 1, 3 and 4), provides in part as follows:

"SEC. 1. Every contract, combination in the form of trust or otherwise, or conspiracy, in restraint of trade or commerce among the several States, or with foreign nations, is hereby declared to be illegal: * * * Every person who shall make any contract or engage in any combination or conspiracy declared * * * to be illegal shall be deemed guilty of a misdemeanor, and, on conviction thereof, shall be punished by fine not exceeding $5,000, or by imprisonment not exceeding one year, or by both said punishments, in the discretion of the court."

"SEC. 3. Every contract, combination in the form of trust or otherwise, or conspiracy, in restraint of trade or commerce in any Territory of the United States or of the District of Columbia, or in restraint of trade or commerce between any such Territory and another, or between any such Territory or Territories and any State or States or the District of Columbia, or with foreign nations, or between the District of Columbia and any State or States or foreign nations, is declared illegal. Every person who shall make any such contract or engage in any such combination or conspiracy, shall be deemed guilty of a misdemeanor, and, on conviction thereof, shall be punished by fine not exceeding $5,000, or by imprisonment not exceeding one year, or by both said punishments, in the discretion of the court."

"SEC. 4. The several district courts of the United States are invested with jurisdiction to prevent and restrain violations of this act; and it shall be the duty of the several district attorneys for the United States, in their respective districts, under the direction of the Attorney General, to institute proceedings in equity to prevent and restrain such violations. * * *"

STATEMENT.

The appellee, on July 31, 1946, brought this suit under Section 4 of the Sherman Act against American Timken alone to prevent and restrain an alleged combination in unreasonable restraint of trade between American Timken and British Timken and French Timken, in violation of Sections 1 and 3 of the Sherman Act (R. 1).

The amended complaint (R. 13-25) alleges that, beginning in 1928 and continuously thereafter the three Timken companies have conspired and combined in restraint of interstate and foreign commerce of the United States by entering into contracts, agreements and understandings, and continuously planning and acting together, to eliminate competition between themselves and with others in the manufacture and sale of anti-friction bearings in all markets of the world. The alleged means have consisted of allocating to each company an exclusive territory into which the other companies shall not sell nor ship anti-friction bearings except in completed articles of manufacture and for replacement of bearings therein; fixing and agreeing upon prices of replacement bearings shipped into each other's territory, and upon prices of bearings sold and shipped to Russia; allocating the use of the trademark "Timken" to each of the companies in its territory, and requiring that British Timken and French Timken use that trademark exclusively and surrender it to American Timken upon termination of such contracts, agreements and understandings; entering into agreements with other manufacturers in certain territories regulating and allocating the sale of bearings; and furnishing aid to each other in restricting and eliminating in their respective territories competition from others.

The amended complaint further alleges that the combination has resulted in "unreasonable" restraint of imports into, and exports from, the United States and that, although the apparent shortage of anti-friction bearings has created large potential export markets for those of Ameri-

can manufacture and American Timken has expanded its productive facilities during World War II, nevertheless, the continuation of the combination will prevent it from seeking and acquiring many foreign markets and will thus reduce its production of bearings and employment of labor (R. 22, 23).

The appellee prays an injunction against the combination, cancellation of certain business agreements between the three companies, that American Timken be enjoined from transferring the trademark "Timken" to the other companies in such a way as to exclude it from using the trademark throughout the world, and that it be required to divest itself of its stock holdings and financial interests in British Timken and French Timken (R. 23, 24).

The evidence introduced at the trial on the part of the appellee consisted of approximately 191 exhibits, the oral testimony of one witness, the vice president in charge of sales of American Timken, and portions of depositions taken by American Timken, while the evidence of American Timken consisted of 249 exhibits, the oral testimony of several officials and employees of American Timken and certain other witnesses, and portions of such depositions.

Following the trial and the submission of briefs, the district court filed a memorandum on March 3, 1949, holding that American Timken had engaged in a combination in restraint of foreign commerce (R. 958).

Thereafter, acting purportedly pursuant to Rule 4B of the district court, which requires the prevailing party to prepare a draft of findings of fact and conclusions of law, the appellee submitted a proposed journal entry adopting the district court's memorandum as its findings and conclusions. American Timken filed a motion that the district court reject and disregard this document and require the appellee to submit a draft of findings and conclusions as required by Federal Rule of Civil Procedure 52(a) on the ground that the court's memorandum did not contain findings and conclusions as contemplated by the Federal Rules

of Civil Procedure and the decisions of this Court (R. 1018). The district court overruled the motion (R. 1021), and entered an order adopting its memorandum as its findings and conclusions (R. 1020).

The district court's purported findings of fact and conclusions of law are intermingled in 211 numbered paragraphs (R. 958). Error has been assigned to what appear to be each of the court's ultimate findings and to others which are clearly erroneous (R. 1256, 1269-1288).

The district court's memorandum clearly shows that it proceeded throughout, in its consideration of this case, upon the assumption that American Timken, British Timken and French Timken were not only separate and distinct corporate entities, but also independent operating units and factors, and potential or actual competitors, in a mythical tapered roller bearing industry.[2] Proceeding upon this fundamentally mistaken theory, the court held that the various cooperative activities in which they had engaged constituted a combination in restraint of trade. The court disregarded uncontroverted evidence introduced by American Timken which disclosed that British Timken had been acquired and French Timken organized as integral parts of a joint enterprise between American Timken and Dewar to promote the manufacture and sale in foreign countries of tapered roller bearings manufactured according to the methods developed by American Timken under license of the trademark "Timken." This evidence disclosed that the agreements and arrangements between American Timken and Dewar involved complicated contractual arrangements for control of these companies and the conduct of their business startlingly similar to those involved in *United States v. Scophony Corporation*, 333 U. S. 795, characterized by this

[2] There was no hint nor suggestion in the amended complaint of the existence of such an industry. Except in the opening paragraph where American Timken is described as a manufacturer of tapered roller bearings every reference therein is to the anti-friction bearing industry.

Court as creating "*what practically, if not also technically, was a joint adventure*[3] * * * ."

Thus, the significance of many of the purported findings of fact can be determined only if viewed in relation to other undisputed facts which they ignore or fail properly to evaluate.

American Timken, after the entry of final judgment, filed a motion asking the court (R. 1181) to amend it and to make new, and additional, findings of fact and conclusions of law by adopting those submitted by it with the motion as Exhibit A thereto (R. 1190-1250), which included the facts largely ignored by the district court. This was overruled (R. 1252).

On August 1, 1949, the appellee, pursuant to Rule 4A of the district court, filed a proposed final judgment (R. 1022), and American Timken filed objections thereto (R. 1035-1082), and submitted its draft of judgment which it proposed as a substitute for the draft submitted by appellee. After a further hearing (R. 1082-1169) at which evidence was taken as to the form of the decree, the district court on February 15, 1950 (R. 1172) entered its final judgment in which it incorporated to a large extent several of the drastic and involved provisions contained in the appellee's proposed draft. The unconstitutional aspects of these provisions were called to the district court's attention in American Timken's objections to the appellee's draft and are discussed hereinafter under Section V hereof.

Subsequent to the filing of the appeal, and after probable jurisdiction had been noted by this Court, Dewar died, on December 21, 1950, and the joint enterprise between him and American Timken came to an end, giving rise to new questions which will be discussed hereinafter. However, the facts relied upon by American Timken with respect to the joint enterprise are still of vital importance in determining whether or not the conduct of American Timken and

---

[3] Italics throughout are ours unless otherwise indicated.

British Timken and French Timken was legal at the time the district court considered the case and entered final judgment therein, and whether the remaining contractual rights, consisting of the business agreements between the three companies and those between American Timken and Dewar, were legal at the time they were entered into, thus preventing their being stricken down even after Dewar's death.

THE TIMKEN COMPANIES AND THEIR POSITION IN THE INDUSTRY IN WHICH THEY COMPETE.

Although it is not charged that American Timken has attempted to *monopolize*, or has combined with British Timken and French Timken in an attempt to monopolize, the industry in which they operate, in violation of Section 2 of the Sherman Act, nevertheless the impression to be drawn from the district court's memorandum is that these three companies, each allegedly dominant in its particular territory, combined to control, or, in other words, monopolize, the industry in which they compete throughout the world.[4]

[4] The district court stated that command of their volume of business "spells out the dominant position of the defendant, British Timken and French Timken both in the *tapered* and *anti-friction* bearing industry" (Mem. par. 15; R. 961); that by 1928 American Timken "became the Titan of the *roller* bearing industry" (Mem. par. 35; R. 965); that, although conflicting claims had been made at the trial "as to the exact percentage of the total *tapered roller* market controlled by" American Timken, the precise figures were unimportant, because its advertising in 1941 to the effect that it was many times over the largest manufacturer of tapered roller bearings in the world, was "sufficient indication of the position of (American Timken) in the industry" (Mem. par. 35; R. 965, 966), and that "British Timken's potent leadership in the industry compared favorably with that of" American Timken, the former having become a "potential formidable competitor in the field *of roller bearings*," and that "the accused agreements between 1928 and 1938 were made between two manufacturers, who on the basis of the evidence, were properly characterized as the largest manufacturer in the world and the largest manufacturer in Great Britain respectively" (Mem. par. 36; R. 966); that in 1928 British

(Continued on following page)

The italicized words in note 4 below show that it is not clear from the district court's memorandum as to whether the industry referred to was a bearing, anti-friction bearing, roller bearing or tapered roller bearing industry, although the court appears to have had the last named in mind.

Since the decision of the district court appears to have been largely influenced by the theory that American Timken, as the "Titan" of an alleged domestic tapered roller bearing industry, acquired a substantial interest in the "dominant" manufacturer in that industry in England, helped organize, and acquired a half interest in, the "dominant" manufacturer therein in France, and thereafter combined with them to "control" the industry throughout the world, the most useful way to commence the statement of facts would appear to be to define the industry in which the three Timken companies compete with others, describe its operation, particularly with relation to foreign trade, and demonstrate their position in it.

The Scope of the Bearing Industry.

Generally speaking, the bearing industry consists of the manufacture and sale of two types of bearing, namely, friction bearings and anti-friction bearings (Mem. pars. 17-19; R. 961, 962).

(*Continued from preceding page*)

Timken "had grown from infancy in the *bearing* industry to a position of prominence and was a potential competitor with whom (American Timken) had to reckon" (Mem. par. 122; R. 996); that British Timken and French Timken were potential competitors of American Timken in "the *tapered bearing* market," where they were "the largest dealers in tapered bearings in their respective territories," and "occupied dominant positions in the entire *anti-friction bearing* industry" (Mem. par. 144; R. 1001, 1002); that "all that the evidence discloses is an intent to form a smoothly operating combination to control commerce in the *tapered bearing* industry throughout the world" (Mem. par. 146; R. 1002); and that American Timken "acquired substantial interests in a dominant manufacturer of bearings in England, participated in the formation of and invested in the stock of a potential competitor in France" (Mem. par. 160; R. 1005).

Friction bearings merely slide on the shaft and depend solely on oil or some similar substance to reduce friction, while anti-friction bearings consist of a circular group of steel rollers or balls revolving between two circular raceways which reduce friction between moving mechanical parts (Mem. par. 17; R. 961).

Bearings are subject to one or both of two kinds of pressure, namely, radial load, which consists of pressure from the top, and end thrust load, which consists of pressure from the side. In many instances there is a resultant pressure which is both radial and end thrust load (R. 465, 466). Both ball bearings (R. 38; 477) and roller bearings (R. 38; 477) are designed to take radial and end thrust loads in varying degrees depending on the purpose for which they are to be used. The load on friction bearings, in general, is radial (R. 476). Thus it is seen that competition between particular types of bearings depends to a large extent on the nature of the radial and end thrust loads to which the particular bearing will be subjected in the point at which it is to be located, and, therefore, upon its economy as adequately designed to meet these loads, and the salesmanship of its manufacturer.

Special friction bearings are, in general, much cheaper than anti-friction bearings (R. 484). Many companies which manufacture other products make their own friction bearings and there are other companies which specialize in making them (R. 484-485). There are well over a thousand companies manufacturing friction bearings in the United States alone (R. 484).

Many more friction bearings are produced in the United States than anti-friction bearings (R. 59; 484) and they are in competition therewith "in almost every instance where a piece of mechanism moves" (R. 484). An important part of the business of all anti-friction bearing manufacturers is to induce users of friction bearings to substitute anti-friction bearings therefor (R. 61). Thus, prior to 1922 American Timken's business was practically all in the

automotive field, but at that time it inaugurated a sales program to bring about the use of its tapered roller bearings in the general industrial field, and, since then, one of its greatest problems has been to persuade customers to accept its anti-friction bearings in place of their friction, or "plain," bearings (R. 61-63).

Manufacturers of all types of anti-friction bearings always have been regarded as competing in what is called the anti-friction bearing industry.[5]

There are two general types of anti-friction bearings, roller bearings and ball bearings, tapered roller bearings being a style of the former (Mem. par. 18; R. 962).

There are also other styles of roller bearings consisting principally of the straight and hourglass types (R. 38) and they are used on many applications, in fact "almost every place where there is any mechanical movement" (R. 470, 471).

Ball bearings are of many types for many different purposes (R. 467) and are designed to take radial and some end thrust loads (R. 467). They compete with roller bearings, and particularly tapered roller bearings, as to much the same applications as those as to which roller bearings compete among themselves (R. 474), and had a wide and general acceptance in the trade before tapered roller bearings came on the market, having been in general use for 25 years prior to that time (R. 472). They were brought to America originally from Europe (R. 57, 58; 499, 500).

---

[5] They were so regarded for the purpose of organizing an association to enable the industry to conform to the National Industrial Recovery Act, 48 Stat. 195, which has continued as the Anti-Friction Bearing Association, the trade association of that industry (R. 494, 495). Most of the larger producers of anti-friction bearings, including American Timken, belong to the Association (R. 494). Moreover, the United States Tariff Commission, in its reports to the Congress, recognizes that ball and roller bearings, including tapered roller bearings, constitute the anti-friction bearing industry (Deft's. Exh. 173, R. 2223; offered, R. 801), and the amended complaint alleges a combination in restraint of trade in anti-friction bearings (R. 17).

The greatest sales problem which American Timken had, while it was engaged primarily in the automotive field, prior to entering into the industrial field in 1922, was to convince automobile manufacturers that they should use tapered roller bearings instead of ball bearings (R. 57, 58). Aside from the field in which small bearings, such as diminutive types which can be seen only with a magnifying glass (Deft's. Phys. Exh. 54, offered, R. 486), are used almost to the exclusion of roller bearings, and that in which large roller bearings are more practical due to the bulky housing required for large ball bearings (R. 59, 60), ball bearings and roller bearings compete (R. 60, 61).

It is estimated that in at least 90% of the places where anti-friction bearings are used either ball bearings or roller bearings can be applied (R. 489).

As American Timken's vice president in charge of sales testified, "the whole thing becomes a matter of engineering and price and salesmanship" (R. 60). Whether a particular type of anti-friction bearing is used depends upon salesmanship and its economical use in the particular spot (R. 65; 489).

The Method of Marketing Bearings.

While it may be difficult to understand why anti-friction bearings with different designs and types of rollers compete with each other on the basis of salesmanship and economy the answer is clear when the method of marketing them is known.

Unlike many products which are sold to the general public, bearings are sold for incorporation into other end products, such as automobiles and machines of various kinds. Therefore, bearing sales fall into two main categories, namely, original installation business, constituting approximately 95%, and replacement sales, constituting 5%, of business done (Mem. par. 21, R. 962).

Since the introduction of a bearing to prevent friction between a moving part and a stationary part can be ac-

complished by different means, competition for original installation business resolves itself primarily into an engineering design problem. Therefore, sale of bearings for original installation involves contact with the customer by American Timken's sales engineers in competition with those of other manufacturers of all types of anti-friction bearings. They obtain from the customer's design engineers layouts of the end product which show the points at which bearings are to be located. Engineers for the various companies manufacturing ball, straight roller, tapered roller and other types of anti-friction and friction bearings who are competing for the original installation business on a particular machine then prepare layouts showing how their bearings can best be used therein, which are submitted to the customer, accompanied by their respective propositions (R. 43, 61, 64-66; 498). The customer then decides upon the type of bearing to be used, depending upon economy in the price of a suitable bearing and its mounting (R. 65).

American Timken maintains sales engineers in sales offices located in the principal cities of the United States for the purpose of securing original installation business in this manner (R. 498), and British Timken and French Timken do the same (R. 391).

Competition between different types of anti-friction bearings for original installation business ends at the point of the adoption of the design for the specific type to be used in the customer's machine. Once the particular type of bearing is incorporated, other types, with rare exceptions (R. 65), cannot be substituted for replacement so that such bearings must be of the same type and character as the original bearings (Mem. par. 20, R. 962). However, this does not mean that there is no competition for replacement business. Thus, tapered roller bearings manufactured by competitors of American Timken are interchangeable with its bearings (R. 530). Bearing assemblies, manufactured by American Timken and its competitors, consisting of cup and cone, fit the same opening and are interchangeable,

and cups manufactured by the former's competitors are sometimes combined by its customers with cones made by it, or vice versa (R. 534).

Obviously, since, after the original installation of bearings in a machine or other end product has been made no other type ordinarily can be substituted, a satisfied customer is most likely to order a replacement bearing from the manufacturer who provided the bearing originally installed (R. 394; 669; 890). Therefore, the sale of bearings for original installation provides the basis for replacement sales (R. 889, 890).

Replacement business is conducted by American Timken through authorized distributors and stocking jobbers who purchase various sizes of bearings at discounts from list prices which are changed from time to time in order to meet competition (R. 893, 894). British Timken (R. 892) and French Timken (R. 152) follow the same practice. In addition to that which comes to dealers or jobbers, replacement business, consisting of unsolicited inquiries to the manufacturer from persons who have had no previous contact with its sales organization, runs between $15,000 and $25,000 in value per year to American Timken (R. 890, 895).

Thus it is seen that, due to the inherent nature of the bearing industry, competition therein, which depends primarily on ingenuity in the design of bearings to meet the requirements of a particular job and the cost of a particular type thereof as applied to the job, is on a broad scale indeed.

To say, as did the district court (Mem. pars. 19-20, R. 962), that tapered roller bearings, while they compete with other types of anti-friction bearings and to a much lesser extent with friction bearings, nevertheless, because of their design and applicability for particular use, enjoy freedom from competition and fulfill a requirement not supplied or satisfied by others, and to conclude, therefore, that there is a distinct tapered roller bearing industry, is to disregard

completely the great mass of uncontroverted evidence in the record by officials of American Timken and British Timken as to actual conditions of competition in the bearing industry.

One might as well say that SKF is the dominant manufacturer in the barrel type roller bearing industry, or that the Chrysler Corporation is the Titan of the Chrysler motor car industry!

The Position of the Timken Companies in the Bearing Industry.

American Timken was first organized by Henry Timken and his sons, H. H. Timken and W. R. Timken, about 1898 or 1899 as The Timken Roller Bearing Axle Company and was moved from St. Louis, Missouri, to Canton, Ohio, about 1902. It manufactured axles and tapered roller bearings (R. 457). The tapered roller bearing was invented by the joint efforts of Henry Timken and one Heinzelman, and was a patented product (R. 465). American Timken at the present time manufactures tapered roller bearings, alloy steel, seamless tubing and removable rock bits, and employs approximately 16,500 persons (Mem. par. 6; R. 960). Its sales in 1947 were approximately $77,000,000 (Mem. par. 10; R. 960). Although no figures are available as to the position of anti-friction bearing manufacturers in relation to manufacturers of friction bearings, the record discloses that American Timken manufactures approximately 25% of the total production of anti-friction bearings in the United States (Mem. par. 12; R. 961). In 1927, when American Timken acquired British Timken with Dewar, its sales represented approximately 23.6% of those of the domestic anti-friction bearing industry.[6] American Timken

---

[6] This figure is arrived at by comparing the value of total production of anti-friction bearings in the United States in 1927, $99,849,000, shown by Defendant's Exhibit 178 (R. 2257, offered, R. 849) with American Timken's net sales in that year, $23,590,179 shown by Defendant's Exhibit 229 (R. 2544, offered, R. 948).

manufactures 50% of roller bearings made in the United States (R. 495), and manufactured from 71 to 81.2% of tapered roller bearings produced therein in the years 1941 through 7 months of 1945 (Mem. par. 11, R. 960, 961), and not to exceed 85% thereof in 1927 (R. 54).

In 1927, American Timken was competing in the manufacture of tapered roller bearings with approximately 8 other companies (R. 52, 53), and at the present time competes with 14 manufacturers thereof (R. 69, 70; 490). There are now more manufacturers than ever before (R. 48). It also competes with 18 manufacturers of roller bearings (R. 70, 71; 490), 25 of ball bearings (R. 71) and 6 of special type bearings, such as the SKF barrel type bearing and the spherangular bearing (R. 71). Some of these companies manufacture more than one type of bearing. Among these competitors are Hyatt, a division of General Motors Corporation, which manufactures tapered and straight roller bearings (R. 490), and American SKF, a subsidiary of Swedish SKF, parent of the largest organization for the manufacture of anti-friction bearings in the world (R. 490, 491). Bower which sold $20,000,000 worth of bearings in 1947 (R. 75), and which entered the field about 1927, has grown much faster than American Timken since that time (R. 72). Another strong competitor is New Departure (R. 72).

British Timken and French Timken are much smaller than American Timken.

British Timken manufactured about 5% of anti-friction bearings in England in 1927 (R. 211), and now manufactures about 20% thereof (Mem. par. 13, R. 961). In 1927 it was competing with such ball bearing manufacturers as Hoffman, Ransome & Marles, Skefko, the English subsidiary of SKF, and two other smaller companies (R. 272). Skefko also manufactured tapered roller bearings after American Timken's basic British patents expired in 1924 and had cut heavily into British Timken's market therefor, as will be seen hereinafter. British Timken has manu-

factured from 70% to 90% of tapered roller bearings produced in England since 1927 (Mem. par. 13, R. 961), and employs approximately 2,400 people at the present time (Mem. par. 7, R. 960). Its sales, including those of its subsidiary, Fischer Bearings Company, Ltd., which manufactures ball bearings, totalled $14,700,000 in 1947 (Mem. par. 13, R. 961).

French Timken employs only 510 people (Mem. par. 8, R. 960), and its sales in 1947 totalled only $2,274,723 (Mem. par. 14, R. 961). It manufactures approximately 10% of all anti-friction bearings made in France, including 80% of tapered roller bearings (Mem. par. 14, R. 961). Other manufacturers of tapered roller bearings in France are French SKF, Rossi and Renault, which also manufacture ball bearings and other types of anti-friction bearings (R. 441, 442).

As in the case of American Timken, the high percentage of tapered roller bearings manufactured by British Timken and French Timken is accounted for by the fact that they have pioneered in the field of tapered roller bearings in the markets which they have served. Because the production of ball bearings therein greatly exceeded that of tapered bearings, the ball bearing companies were very well known, and the sale of tapered roller bearings has involved largely displacing ball bearings (R. 396, 397), the tapered roller bearing competing therewith 90% of the time (R. 210).

Some idea of the Timken companies' present position in world trade may be obtained from Defendant's Exhibit 184 (R. 2291; offered, R. 874, 875), a report to the Congress on "Post-War Imports and Domestic Production of Major Commodities" by the Tariff Commission, in which it is stated as to anti-friction bearings (R. 2293):

> "In the United States there are 20 to 30 manufacturers, the largest of which is a subsidiary of an automobile manufacturer. Two large firms are affiliated, respectively, with a Swedish and a British bearing maker.

> "The Swedish company (commonly called S.K.F.) has a large plant in Sweden and subsidiaries which are the largest producers in Germany and France. The pre-war output of this company is estimated at about one-third of the world supply."

As to the situation in 1934, see Defendant's Exhibit 173 (R. 2223; offered, R. 801; 2224).

It is quite obvious, therefore, that far from being dominant in the anti-friction bearing industry, in which they compete with others primarily, American Timken and British Timken occupied in 1927, and the three Timken companies occupy now, relatively modest positions in their respective spheres of operation.

Foreign Commerce in Anti-Friction Bearings.

Since the district court held (R. 1174) that American Timken had combined with British Timken and French Timken "in restraint of trade and commerce in anti-friction bearings *between the United States and foreign nations*," it becomes important to discuss the nature of foreign trade in that general type of bearings.

A great mass of uncontroverted testimony by the witnesses for American Timken and certain of its exhibits disclose (1) that the only practical way for it to develop foreign trade in tapered roller bearings was, in 1927, and is now, by having them manufactured by affiliated foreign corporations managed by nationals of the countries in which they operate, and (2) that, for various reasons, there has been in the past, and is now, little, if any, foreign commerce in anti-friction bearings.

Inability to compete for foreign bearing business except through foreign affiliates.

The foreign countries in which the world's machinery, aside from that built in the United States, is chiefly manufactured are located in Western Europe. Bearings are

invariably components of such machinery, and the demand for anti-friction bearings outside of the machinery producing countries consists of replacement, as distinguished from original installation, business (R. 847). During most of the period from 1928 to date, outside of the United States, Germany was the largest manufacturer of capital goods, the United Kingdom second, and France third (R. 669).

Since practically all of the manufacturing of machinery outside of the United States from 1927 to date, has taken place in the Western European nations, it has been necessary to obtain original installation business from customers located there in order to do any business with them, due to the natural tendency of replacement sales to follow original installation business and, therefore, to go to the manufacturer who originally made the bearings (R. 394; 519-521; 669). For example, if a machine were owned by a manufacturer located in an Eastern European country and the bearings originally installed therein were of German make, they would ordinarily be replaced with bearings of the same German make.

The record discloses without contradiction, in substance, that an American manufacturer of anti-friction bearings, at any time from 1927 on, could not have exported bearings manufactured in the United States to the United Kingdom, France, or the other Western European countries which constitute substantially the only free manufacturers of capital goods in the world outside of the United States, in successful competition with those manufactured therein.[7] See testimony of deVegh, qualified (R. 774, 775) international economist (R. 782, 783; 796; 868); Pascoe,

---

[7] The principal foreign countries in which anti-friction bearings have been produced during the period covered by the complaint in this case, 1928 to date of the judgment, are Sweden, Germany, Italy, the United Kingdom, France and Switzerland, probably ranking in the order named (Deft's. Exh. 173, R. 2223; offered, R. 801; R. 2224), all of which are located in Western Europe.

second in command of British Timken and intimately connected with the bearing industry since 1930 (R. 395, 396); Umstattd, President of American Timken, qualified (R. 503, 504) from business experience, study and travel (R. 510, 511); Hess, President of American Bosch Corporation (R. 315), and formerly assistant to the President of American Timken and in charge of its foreign business, qualified also (R. 316, 317; 667, 668), by business experience and visits to British, French and German Timken (R. 667 ; and DeKrafft, qualified (R. 808-812) as a business consultant with foreign experience (R. 824). Lemarie, Director of French Timken, so testified as to the situation in France (R. 443).

It also appears that it was necessary for a manufacturer to establish plants to produce bearings in those Western European countries in which original installation business was to be obtained (R. 392-394; 505-511; 668, 669).

The only countries in Europe in which it would have been profitable during this period to establish a bearing plant were England, France, Germany, and possibly Italy (R. 551).

Not only has it been necessary for an American manufacturer of bearings to operate plants in England, France and Germany since 1927 in order to obtain original installation bearing business therein, but also it has been advisable to operate them under local management with local personnel (R. 505, 506).

There are numerous reasons why establishment of plants in foreign countries, incorporated and operated as local concerns, is necessary.

First, manufacturers of capital goods are reluctant to purchase bearings from producers who are not located nearby because they desire to have speedy technical advice and service available due to the technical nature of the business (R. 392; 513, 514).

Second, there is always a national hostility toward the product of foreigners in countries where there is a strong manufacturing economy, and a pronounced national interest in supporting the product of manufacturers located therein, which has always been of special importance to American Timken because the tapered roller bearing was first developed by it and has been essentially an American product competing largely with the ball bearing, an older product developed locally in the Western European countries before tapered roller bearings were sought to be sold therein (R. 382, 383; 396, 397). Evidence of the "Buy British" attitude in England as early as 1924 appears from a report attached to a letter of October 17, 1924 constituting part of Defendant's Composite Exhibit 236 (R. 2554, offered, R. 944) in which the sales manager of British Timken stated that, while American Timken had offered to send British Timken American-made bearings to help it with its British business, the majority of motor car makers would have only a British-made article (R. 2589); from the fact that Dewar insisted upon British control of British Timken as a condition of his participation in its acquisition in 1927 because a "product made by foreigners though produced here is unpopular. All letterheads must carry a list of directors and the nationality of each other than British" (Deft's. Exh. 16, R. 1735; offered, R. 262); and from Dewar's testimony that a special agreement was made by American Timken and British Timken, for British Timken representation in Argentina, because the British-owned railways in that country wished to place orders for cars and locomotives in England fitted with Timken bearings (R. 181). The same attitude in France resulted in French Timken's having a Frenchman do all its contact work while the director of the company at the time, an Englishman, stayed in the background (Deft's. Exh. 129, R. 2077, 2082; offered, R. 647).

Third, the method of selling bearings for original installation requires the services of engineers who are famil-

iar with the practices of a particular country in which sales are to be made and with the temperament of the customers of that nationality (R. 395, 396; 506; 668).

Fourth, during the entire period from 1927 on, restrictions on imports, exports and foreign exchange imposed by England, France, Germany and other Western European countries have made it necessary to manufacture bearings in those countries in which they are to be sold for original installation, and practically impossible to export bearings manufactured in the United States to those countries in successful price competition with bearings manufactured therein. DeVegh testified at length as to the economic situations in those countries and the various details of the restrictions imposed by them resulting in the evolution of a complete change in foreign trade, commencing in 1914 at the time of World War I, from free competition on the basis of price, regulated only by tariff restrictions, to a trade administered and controlled by governments under rigid licensing systems in which price competition has no place because they are administered according to the political and economic theories of the particular countries which impose them (R. 774-807; 834-888). He testified further as to the restrictive situation with respect to foreign trade resulting from current control of exports, imports and foreign exchange in the United Kingdom since World War II (R. 832-863) and expressed the opinion that, due to the licensing systems, which are designed to encourage full domestic production and permit imports from America only when they cannot be obtained elsewhere without dollars, it will be impossible for an American manufacturer of anti-friction bearings to sell any substantial quantity thereof into the British Empire and the sterling area countries generally in competition with those manufactured in the Empire in the foreseeable future (R. 864, 865) and that the same is true with respect to France and Europe in general (R. 866-868).

The record is replete with practical examples of the effect of these restrictions on trade, such as the inability of British Timken to purchase American tubing after the break in the sterling dollar exchange in 1931 (Deft's. Exh. 116, R. 2034, offered R. 641); the necessity for many years of an import license in Australia and evidence that the article to be imported cannot be obtained from the United Kingdom or from a sterling area country (R. 761, 765-767); and testimony of DeKrafft as to his experiences with English currency controls (R. 817, 821, 823).

Fifth, there is a strong national interest in each country in having an economy which is as nearly integrated as possible and not dependent upon an outside source of supply for such an important item in the economy, particularly from the military point of view, as anti-friction bearings (R. 779, 780). Witnesses gave uncontroverted testimony as to this attitude in England (R. 504); France (R. 443); Russia (R. 392; 753-755; 515, 516); Holland, Spain, Australia and Brazil (R. 393, 394); Canada (R. 510); Germany (R. 750, 751); and Switzerland (R. 755).

Sixth, continental bearings are largely manufactured to metric rather than inch measurements, which makes it much more practical to have a plant in a metric country when sales are to be made there (R. 507).[8]

Seventh, high tariffs in the United Kingdom, France and Germany have made it advisable to establish plants there. Defendant's Exhibit 180 (R. 2259, offered, R. 851) is a schedule obtained from the Department of Commerce showing the latest tariff rates prevailing in various countries, including the United Kingdom, France and Germany as of 1947 (R. 850-852). It indicates that the United Kingdom imposes a tariff similar to our own, namely 33½% ad valorem on roller bearings, and that France ordinarily

---

[8] Out of 500 sizes of bearings manufactured by French Timken, 100 to 110 are metric because this is necessary to sell bearings to all companies controlled by the French government (R. 442).

imposes a tariff of 28% thereon (suspended January 1, 1948) plus additional levies on imports of approximately 12.36% which have not been suspended. A high French tariff motivated Hess in 1927 to recommend that a plant be established in France for the purpose of performing at least the finishing operation on bearings in order to avoid the full impact of the French tariff in effect at that time (Deft's. Exh. 32, R. 1834; offered, R. 372; 1838), which was one reason for the joint organization by American Timken and Dewar of French Timken (Hess, R. 378, 379).

The negligible amount of exports and imports of bearings.

As a result of some or all of the foregoing causes, export trade of the United States in anti-friction bearings over the years has been negligible.

Defendant's Exhibit 173 (R. 2223; offered, R. 801), a report of the United States Tariff Commission issued in October, 1934, on the subject of anti-friction bearings (R. 801) analyzes the exports thereof from the United States as follows (R. 806):

> "Domestic exports to principal markets.
>
> "Domestic bearings are exported principally to Canada with lesser amounts going to European countries, Latin American countries, Japan, Australia, and the Philippine Islands with occasional large shipments to Soviet Russia. Export statistics, by principal markets, are given in the following table.
>
> * * *
>
> "Exports from the United States are principally bearings used in the manufacture of automobiles in Canada in plants affiliated with American automobile producers. The balance of the exports are largely repair and replacement parts for American-made machines and devices, and types of bearings not produced in Europe."

Table 13 (R. 2235, 2236) constituting part of Defendant's Exhibit 173, shows that exports to Canada during the cen-

sus years from 1923 to 1933 were consistently higher than to other countries "for the well-known reason that Canada is in its manufacturing geared to American industry, especially to automobile production, and so forth, and is largely supplied by subsidiaries of American corporations located in Canada," (DeVegh, R. 839), and that on the average exports to Canada constituted 64.1%, to the United Kingdom 6.5%, and to France 1.5%, respectively, of exports from the United States (R. 2236). Defendant's Exhibit 175 (R. 2238-2255; offered, R. 842) is a compilation of exports and imports of the ten major producing and consuming countries in the years 1934 and 1938 prepared from original statistics of each individual country (R. 842) which brings Defendant's Exhibit 173 up to 1938 (R. 843). Defendant's Exhibit 176 (R. 2256; offered, R. 847) shows the value of exports of anti-friction bearings from the United States to Europe, the United Kingdom, and the rest of the world from 1927 to 1947, and brings the story of exports from the United States up to date, including the war and post-war years (R. 846). It shows that the bulk of American anti-friction bearings exported went to non-European countries except during the war (R. 847). The figures contained in these tables corroborate for the entire period, 1927 through 1947, the statement quoted from Defendant's Exhibit 173, namely, that exports from the United States consist chiefly of those to Canada for original installation, made to plants affiliated with American manufacturers, and of replacement parts to other regions of the world for American-made machines and devices.

Imports of anti-friction bearings into the United States have also been negligible.

They are analyzed as follows in Defendant's Exhibit 173 (R. 2223; offered, R. 801; 2226):

> "The domestic producers have established a high reputation through high quality products and service. Mass production methods are generally used in the American plants, and two of the largest bearing fac-

tories are owned by one of the principal domestic automobile producers.

"Production in Europe is principally in Sweden, Italy, Germany, the United Kingdom, and France. The principal foreign company is Swedish controlled (S. K. F.) and has plants in each of the above countries, except Italy, and in the United States and Czechoslovakia and has agencies and offices throughout the world. This company is as favorably situated as the domestic producers in relation to raw material, equipment, and skilled workmen, and produces high quality bearings. *Imports into the United States are principally from the S. K. F. plants and from Hoffman of England. These imports go largely to their American affiliates and are largely sizes and types which they do not advantageously produce here.* In earlier years large quantities of bearings came from Italy. There is no foreign competition in domestic markets in cheap bearings which represent a very small part of the total domestic consumption."

Table 4 of Defendant's Exhibit 173 demonstrates that exports from the principal producing countries into the United States from 1923 to 1933 were comparatively small. It was stated in the report contained in Defendant's Exhibit 173 that imports amounted to less than 1% of the American production (R. 2226). Defendant's Exhibit 177 (R. 2256A; offered, R. 848) is a table showing the value of imports of anti-friction bearings into the United States from 1923 to 1943, and in 1947, which was prepared from information obtained from the United States Department of Commerce (R. 847; R 848). It shows that, of the European countries known as producers of anti-friction bearings, only Germany, Italy (until 1929), Sweden and the United Kingdom imported regularly into the United States even as high as $100,000 worth of bearings annually, and that, after the 1929 depression, the Italian manufacturer gave up its attempt to sell bearings in the United States (R. 848).

Inability of British Timken and French Timken to compete in the United States.

The uncontroverted evidence in the record is that British Timken could not have sold bearings in competition in the United States in 1927 and thereafter (R. 272, 273; 412, 513, 514), and that this would be more pronounced in the case of French Timken (R. 514). The principal reasons for this condition, which will continue indefinitely, are (1) the high protective tariff of the United States, and (2) the comparatively high cost of manufacture by European manufacturers.

The United States tariff at the present time is 8 cents per pound, plus 35% ad valorem (Deft's. Exh. 182, R. 2283; offered, R. 869). Table 5 of Defendant's Exhibit 173 (R. 2223; offered, R. 801; 2229) shows that from 1923 to 1933 the United States tariff on bearings averaged between 54.4% and 61.9% of the declared value (R. 837). Table 8 shows that the rate on roller bearings varied between 53.6% in 1923 and 65.3% in 1933. In short, duty on an imported bearing would range on the average from 55 to 60% of the value thereof (R. 837). Defendant's Exhibit 183 (R. 2287; offered, R. 870) gives the same type of information for roller bearings in the years from 1926 to 1943 (R. 870). The high tariff would prevent foreign manufacturers from selling their bearings in this country on a profitable basis (deVegh, R. 870). Pascoe (R. 412) and Umstattd (R. 513) based their opinions that British Timken could not have sold bearings on any practical commercial basis in the United States in part on the existence of this barrier.

In addition to the tariff handicap, the cost of production in the United Kingdom and European countries is higher than that in the United States because orders there are much smaller, which prevents "long runs" of bearings on particular orders and necessitates much more frequent setting up of machines, with different tooling, to take care

of different orders for different sizes, thus increasing tremendously the unit cost of production. (R. 333, 640; Deft's. Exh. 115, R. 2034; offered, R. 640). Pascoe testified that for this reason, as well as others, British Timken's price level has always been higher than that of American Timken (R. 411). Defendant's Exhibit 114 (R. 2030; offered, R. 638; R. 2031), a comparison in 1930 of American Timken's costs with those of British Timken, and Defendant's Exhibit 128 (R. 2054; offered, R. 647; R. 2068) a report comparing their standard bearings costs in 1932, show that American Timken's costs were approximately half those of British Timken even after the latter had adopted American methods of production for a period of several years from and after 1927.

Thus for many reasons, it would have been absolutely impractical for American Timken to attempt to compete for original installation business in foreign trade by exporting its products from this country, and the only practical method for successfully introducing its tapered roller bearings in foreign markets was to acquire or create foreign plants, preferably incorporated as foreign corporations and staffed and managed by local personnel, in order to obtain the best results, and to manufacture bearings locally therein; and that it would have been impossible for British Timken or French Timken to compete in this country for business over the period from 1928 on, during which the combination is alleged to have taken place. The conclusions of the district court to the contrary in the face of this mass of uncontroverted evidence are found in paragraphs 204 through 209 of its memorandum (R. 1015 to 1017), and are not convincing.

EARLY EFFORTS OF AMERICAN TIMKEN TO PROMOTE THE SALE OF TAPERED ROLLER BEARINGS IN THE EUROPEAN AND ENGLISH MARKETS.

While the amended complaint alleges that the combination and conspiracy between American Timken and the other two Timken companies had begun in or about the year 1928 (R. 17), it also sets forth certain facts as the "Background of the Conspiracy" (R. 16), and the district court found it to be essential to examine American Timken's prior activities, which the appellee claimed "culminated in the agreements, contracts and understandings to eliminate competition, assailed in this action" (Mem. par. 23, R. 962). The district court placed great importance on this background as appears from the examination of paragraphs 152 through 155 of its memorandum (R. 1003-1004), in which it disposed of one of American Timken's main contentions largely upon the basis thereof.

However, the evidence discussed by the district court in this connection constituted only a very small portion of that introduced, all of which was uncontroverted, and none of which tended to establish in the slightest degree any intention on the part of American Timken to gain control of the industry in which it competed, either alone or by combination, during the "background" period, i.e., from 1909 through 1927.

On the contrary, the evidence discloses merely that American Timken, commencing in 1909, entered into license agreements with a subsidiary of a large English concern which, between 1909 and 1927 proved to be unsatisfactory for two reasons; namely, first, the tapered roller bearing business in England and on the European continent was not developed by the licensee as actively as it should have been; and, second, certain trademark difficulties developed in respect of the trademark "Timken," the family name of the founders of the company, in England, France and Germany, the full details of which will be explained hereinafter.

In 1909, American Timken, then a young and very small company[9] licensed The Electric & Ordnance Accessories Company, Ltd. (hereinafter called E. & O. A.), a subsidiary of Vickers, Ltd., a large English enterprise "described as manufacturing everything from battleships to baby carriages" (Mem. par. 24; R. 962, 963), to manufacture and sell tapered roller bearings in the United Kingdom under one agreement covering three basic British product patents (Deft's. Exh. 189, R. 2305; offered, R. 936), and, on the Continent, under a second contemporaneous agreement (Deft's. Exh. 190, R. 2322; offered, R. 936, 937), covering two French patents, a Russian patent and a German patent (as soon as the latter could be obtained) upon payment of a royalty of 15% of net sales. Under these two agreements E. & O. A. was licensed to manufacture and sell only "so far as the licensor lawfully can do so," was given an exclusive territory and restricted thereto, was prohibited from manufacturing or selling anti-friction bearings other than those made under the patents, was required to use the mark "Timken" exclusively in the sale thereof and to follow the method of manufacture and the instructions which American Timken was required to provide, and its price was restricted to some extent (Mem. par. 24-27; R. 962-964).

The execution of the two license agreements certainly does not indicate the intention of strong potential competitors to divide the world and eliminate competition, which might be implied from the district court's statement. At the time these agreements were made, American Timken was in its infancy, attempting to promote a new product in competition, principally, with the older well established ball bearing companies, since the tapered roller bearing did not become soundly established in this country until some time in the 1920's (R. 499). E. & O. A. was not a

---

[9] As late as 1905 American Timken employed only 65 people (R. 57).

"potential" competitor in 1909, since it did not manufacture tapered roller bearings prior to the making of this agreement, but was instructed by Vickers to start their manufacture in that year (R. 427). It was doing work on electrical motors, heating apparatus, etc., and some government ordnance work (R. 427, 428), and commenced the bearing operation in 1909 in one shop about 200 feet by 400 feet with not more than a couple of dozen employees (R. 428).

Thus, actually American Timken in 1909 undertook to arrange for the development of foreign trade in patented tapered roller bearings under the name "Timken" by one of the largest British concerns, having outlets all over the world, at a time when American Timken was not in any position to undertake such distribution on its own behalf.[10]

E. & O. A. continued the manufacture of tapered roller bearings under the patent license agreements until some time in 1920 when the patent rights were assigned to Wolseley Motors, Limited, another Vickers subsidiary (Mem. par. 28, R. 964).

Some time prior to 1924 E. & O. A., or its successor in interest, sublicensed a French manufacturer, Societe Mecanique de Gennevilliers (hereinafter called SMG) under the 1909 license agreements (Mem. par. 53, R. 969).

---

[10] The fact that the 1909 license agreements contained provisions that the licensee should

> "* * * use the word 'Timken' exclusively in connection with the Roller Bearings made or sold by it under this agreement and in connection with the sale of such Bearings."

and that,

> "* * * the Licensee shall be entitled to describe itself as sole Licensee within the same limits."

(Deft's. Exh. 189, R. 2305; offered R. 936; Art. XI, R. 2316); (Deft's. Exh. 190, R. 2322; offered R. 936, 937; Sec. 32, R. 2333), demonstrates that American Timken was seeking to project its goodwill ahead of its business by requiring the use of the surname of its founders in connection with the foreign sale of tapered roller bearings. *A license to use the name, therefore, was clearly implied.*

The first two documents in Defendant's Exhibit 236 (R. 2554-2556; offered R. 944) demonstrate that American Timken objected to the transfer of operations from E. & O. A. to Wolseley Motors because it did not view with favor having bearings manufactured by a motor car manufacturer; that it was dissatisfied with operations by E. & O. A.; that Wolseley Motors was attempting to placate American Timken by providing for an entirely separate organization, with separate offices, plant, officials, and staff under an entirely different name, to manufacture the bearings; and that British Timken representatives were denied access to American Timken's plant until a satisfactory agreement was reached about March 29, 1920 (R. 2556). In this connection, it will be noted that the 1909 license agreements were amended by supplemental agreements dated April 6, 1920 between American Timken and Wolseley Motors as the assignee of E. & O. A. (Mem. par. 28; R. 964) and signed by Ely, American Timken's representative, in the presence of an English witness in London (Deft's. Exh. 191, R. 2338; offered R. 936, 937; R. 2342; and Deft's. Exh. 192, R. 2343; offered R. 936, 937; R. 2346), and that British Timken was originally organized on April 20, 1920 (Deft's. Exh. 199; R. 2359; offered R. 937, 938).

The 1920 Modifications of the 1909 Agreements and Efforts to Deal With the Trademark.

Pursuant to this agreement, the 1909 license agreements were modified in 1920 by supplemental agreements which changed them in some unimportant particulars (Mem. pars. 28, 29; R. 964), and further provided that if the principal agreements should be "rescinded" Wolseley should abandon the use of the word "Timken" as part of its name and in all other respects and secure to American Timken the exclusive use thereof (Mem. par. 30; R. 964, 965). This provision did not cover the situation as to what was to be done with the name and trade-mark "Timken" in the

event that the 1909 agreements were not rescinded but instead expired in accordance with their terms, and American Timken was advised by its American trademark counsel that these 1920 supplemental agreements should be revised in order to have the licensee definitely recognize American Timken's proprietary right in the word "Timken" and agree that all rights in that word should revert to it at the expiration of the license agreements (Deft's. Exh. 63, R. 1947, offered R. 579; Deft's. Exh. 66, R. 1952; offered R. 580). American Timken's American trade-mark counsel suggested that it obtain registration of the British trademark in England (Deft's. Exh. 65, R. 1950; offered R. 579), and this led to further correspondence between American Timken, its American trade-mark counsel, British Timken and English trade-mark solicitors with a view to obtaining registration of the mark, first by American Timken and later, when this was found not feasible, by British Timken, subject to an agreement as to its disposition at the expiration of the 1909 license agreements.[11] American Timken instructed its American trade-mark counsel to proceed to obtain registration by British Timken with an agreement for the assignment of the registration by it to American Timken upon termination of the 1909 license agreements, as amended, and to proceed with registration in other European countries without waiting for this matter to be settled (Deft's. Exh. 80, R. 1964; offered R. 586). It thereupon proceeded to obtain registration of the trade-mark in twenty-two countries in the years 1922, 1923 and 1924 (Deft's. Exh. 87, R. 1972; offered, R. 587), including all of the important European countries, except France

[11] Deft's. Exh. 67, R. 1953; offered R. 580; Deft's. Exh. 68, R. 1953; offered R. 580; Deft's. Exh. 69, R. 1954; offered R. 581; Deft's. Exh. 70, R. 1955; offered R. 581; Deft's. Exh. 71, R. 1956; offered R. 583; Deft's. Exh. 72, R. 1957; offered R. 583; Deft's. Exh. 73, R. 1959; offered R. 584; Deft's. Exh. 74, R. 1959; offered R. 584; Deft's. Exh. 76, R. 1960, offered R. 585; Deft's. Exh. 77, R. 1961; offered R. 585; Deft's. Exh. 78, R. 1962; offered R. 585; Deft's. Exh. 79, R. 1963; offered R. 585.

and Germany in which it could not obtain registrations because the mark had already been registered by others as hereinafter set forth.

American Timken was only able to do this after it registered the surname "Timken" as its mark in the United States in 1921, pursuant to the act of March 19, 1920 which permitted, for the first time, the registration of a surname as a trade-mark in this country (R. 577) because the law of most foreign countries requires an American applicant to supply a certified copy of its home application for the mark.

According to Dr. Ladas, an expert on international trademark law (R. 603-605), prior use of the trademark in 13 of these countries by British Timken, which was doing business therein, put American Timken's registrations of the mark therein in jeopardy, in the absence of an agreement with British Timken (Ladas, R. 609, 610; 613-615).

Unsatisfactory Production and Sales Methods of the Vickers Subsidiary (1920-24).

Umstattd, who commenced to attend the meetings of the officers of American Timken in 1922 (R. 517), testified that they were of the opinion that British Timken was not advancing nearly as fast as American Timken in new fields of endeavor, such as the industrial field, and had not taken full advantage of the technical information which American Timken was passing on to it (R. 517), and that he learned that the British licensee's methods were inferior to American Timken's, its costs were higher and its quality of bearing at that time was quite inferior (R. 517).

This uncontroverted testimony is corroborated by correspondence between Ely, former vice president and treasurer of American Timken (R. 252), and various representatives of Vickers' subsidiary and others, disclosing that American Timken was dissatisfied because of its inferior manufacturing and sales methods; failure to push sales

vigorously in new fields, such as the industrial field; lack of cooperation to observe or take advantage of American Timken's manufacturing methods in order to reduce costs; continuous insistence upon cutting the rate of royalty, which resulted in its reduction from an original 15% to 5% on ordinary business and 2½% on business in England with Ford, one of American Timken's principal customers; and domination of the business by Wolseley Motors, a motorcar manufacturer competing with the other automobile makers, which were the principal prospective customers for bearings. This correspondence is contained in Defendant's Exhibit 236 (R. 2554; offered R. 944), a collective exhibit containing 27 unnumbered documents which illustrate the situation as it was portrayed to American Timken through Ely.

Threatened Claims by British Timken to the Mark, and the Resultant 1925 Amendments to the 1909 Agreements.

Finally, in 1924, after repeated requests by British Timken that the rate of royalty be reduced from 10% to 2½% on large volume business in order to meet competition from Skefko, the SKF subsidiary in England (Deft's. Exh. 236, R. 2554; offered R. 944; R. 2567; 2571, 2577 and 2578), Lothrop, at that time Works Manager for American Timken, was sent to England to observe British Timken's operations and to bring it up to date on American Timken's practices of production (Deft's. Exh. 83, R. 1966; offered R. 586).

Upon Lothrop's return, he advised Ely that the British Timken representatives had given him the impression that American Timken had no right under any condition to the name "Timken" in England (Deft's. Exh. 83, R. 1966; offered, R. 586; R. 1967). On February 23, 1924 Ely received a letter from American Timken's trademark counsel (Pltf's. Exh. 173, R. 1683; offered R. 949, 950) in which

the latter advised that an arrangement which Lothrop apparently had made with British Timken, to refer the matter of the value of the license of its remaining British patents to the British patent solicitors of American Timken and British Timken, was unsatisfactory because it wholly overlooked the license of the trademark from American Timken to British Timken.[12]

A month later, on March 25, 1924, Ely answered British Timken's latest request for a reduction of royalty (Deft's. Exh. 242, R. 2662; offered, R. 946), stating that American Timken's English solicitor, A. J. M. Duncan, would get in touch with British Timken (Deft's. Exh. 243, R. 2668, offered, R. 947), and on the same day wrote Duncan (Deft's. Exh. 83, R. 1966; offered, R. 586), stating that "the one thing we prize over all others is the name 'Timken,' and we must have entire control of this name" (R. 1967), and that, as a last resort "in order to get everything that we desire in clearing the name 'Timken,' and in having entire control of it, we could consider even down to 2½% on the Ford business only, and 5% on all other business" (R. 1969).

Duncan's negotiations with British Timken resulted in an agreement by which the royalty payable by British Timken and by SMG, its French sublicensee, was reduced to 5% on ordinary business and 2½% on Ford business commencing January 1, 1925 (Deft's. Exh. 244, R. 2669; offered, R. 947; Deft's. Exh. 245, R. 2670; offered, R. 947; Deft's. Exh. 246, R. 2670; offered, R. 947; Deft's. Exh. 247; R.

---

[12] The trade-mark counsel stated in part (R. 1683):

"* * * Judging from your letter, Mr. Lothrop seems to have in mind that the patent lawyers will undertake to pass on the extent of legal protection afforded to the British licensee by the several British patents with a view to determining the justice of the British Company's claim to a reduction of its royalty. *The defect in this proposition is that it wholly overlooks the trade-mark license, that is to say, the great value to the British Company of the right to use the word 'Timken' on its products and the further great right of excluding you from competition with it.*"

2671; offered, R. 948). The two formal agreements evidencing this modification of the 1909 license agreements as to the United Kingdom (Deft's. Exh. 88, R. 1991; offered, R. 587), and as to Europe (Deft's. Exh. 194, R. 2347; offered, R. 936, 937), extended the prior agreements for a term of five years to January 1, 1929, reduced the royalties as hereinbefore specified, and provided that the name "Timken" should belong exclusively to American Timken, and that British Timken should be deemed to be using it as part of its exclusive license and, upon the expiration of the agreements, should change its name and do everything necessary to secure to American Timken the exclusive right to the name "Timken" (Mem. par. 31, R. 965).[13]

---

[13] Section 4 of the agreement as to the United Kingdom (Deft's. Exh. 88, R. 1991; offered, R. 587), provided as follows (R. 1992):

"4. The name 'Timken' shall belong exclusively to the Licensor Company and during the continuance of the Principal Agreement as modified from time to time the Licensee Company shall be deemed to be using the said name as part of the subject matter of the licence contained in the Principal Agreement and shall have the right to use the said name accordingly and upon the expiration or other determination of the Principal Agreement as modified from time to time the Licensee Company will take such steps as may be necessary to change its name and will otherwise cease to have any right in the said name or to make use of the same in any way and during the continuance and after the expiration or sooner determination of the Principal Agreement as modified from time to time the Licensee Company will execute and do at the expense of the Licensor Company such acts and things as may be reasonably necessary to secure for the Licensor Company so far as practicable an exclusive right to use the said name in connection with bearings and other products dealt in by the Licensor Company and to secure and protect so far as practicable the property and rights of the Licensor Company in respect of the said name and enable the Licensor Company to obtain or preserve the exclusive right aforesaid but nothing herein contained shall in any way affect or restrict the right of the Licensor Company to change its name in any manner during the continuance of this Agreement."

Section 5 of the agreement as to Europe (Deft's. Exh. 194, R. 2347, offered R. 936, 937), was substantially identical (R. 2349).

Continued Unsatisfactory Progress of British Timken After the 1925 Amendments.

Even after this agreement had been reached on June 19, 1924 (Deft's. Exh. 247, R. 2671; offered, R. 948), and although British Timken's request that the royalty be reduced to 2½% on all large volume business had been specifically rejected and had been limited to Ford business, British Timken officials continued to ask for reduction to 2½% on various orders other than Ford business (Deft's. Exh. 236, R. 2554; offered, R. 944; R. 2580, 2581, 2583).

Defendant's Exhibit 236 also demonstrates that in 1924 British Timken was just getting under way in the industrial field (R. 2586); that its sub-licensee in France, SMG, had been a disappointment because of competition from SKF (R. 2586); that in 1925 British Timken was "frankly very disappointed" with the business done by SMG in France (R. 2601); and that in the summer of 1926 E. W. Wooler, an official of American Timken, found on a visit to British Timken that it was using antique equipment (R. 2603), had no interest in new equipment because the management was opposed thereto on account of lack of funds (R. 2605), and that the average Timken bearing prices in England were 10% higher than those of ball bearings, which was a very serious handicap (R. 2604).

At about this time, in 1926, Vickers had become overextended and was in considerable financial difficulties (R. 230). Wolseley Motors had even been under the necessity of pledging the share capital of British Timken, which it owned entirely, to a bank to support an over-draft which was guaranteed to Wolseley by Vickers (R. 232). Dewar, previously managing director of Vickers' largest subsidiary, director of its Commercial Board, and chairman of its Sales Committee for all its subsidiaries (R. 230, 231), had been appointed Vice Chairman of Wolseley Motors in order to try to save as much as he could for Vickers out of the Wolseley Motors re-organization (R. 230). This undoubt-

edly accounts for the unsatisfactory condition of affairs which Wooler found on his visit.

Thus, the information available to American Timken, both from British Timken, and otherwise, demonstrated that neither British Timken nor its sub-licensee in France, SMG, were giving to it an adequate return for the use of its name and methods in their respective spheres of trade.

Failure of the 1925 Amendments to the 1909 License Agreements to Cure the Trademark Situation.

Although American Timken had obtained for the first time, by means of the 1925 amendments to the 1909 license agreements, specific recognition by British Timken that it and its sub-licensee, SMG, were using the name and trade-mark "Timken" as licensees thereof with a duty to do everything necessary to return it to American Timken upon the expiration of the license agreements, this provision was inadequate because it referred in terms only to the name "Timken," and not to the trade-mark also, and might be construed as merely requiring that British Timken change its name at the termination of the agreements. Moreover, if American Timken were to maintain that this contract was intended also to apply to the trade-mark, its ability to enforce the agreement was doubtful, because under British law at that time a trade-mark could not be assigned in gross and could only be validly transferred to American Timken provided the assignor also transferred its entire business (R. 610, 611). The 1925 supplemental agreements contained no such agreement by British Timken, and American Timken was advised by English trademark counsel in January, 1926 (Deft's. Exh. 99, R. 2005; offered, R. 594; R. 2006), that, in the absence of such transfer of the good will, upon termination of the license agreements it must establish its own rights by user. This would have required it, practically, to establish a plant of its own in the United Kingdom

upon the abandonment of the mark by British Timken and to manufacture bearings there under its trade-mark.

Moreover, American Timken, even after the making of the 1925 supplemental agreements was in a situation in which it was unable to obtain registration of the trade-mark "Timken" in France, because British Timken's sub-licensee in that country, SMG, had obtained in 1921 (Deft's. Exh. 37, R. 1849; offered, R. 447) prior registration thereof (Mem. par. 53, R. 969) without the knowledge of, and to the consternation of American Timken (Deft's. Exh. 81, R. 1965; offered, R. 586; Deft's. Exh. 82, R. 1965; offered, R. 586). SMG's registration in France, being by the first user, was incontestable under French law (R. 612), and American Timken had no claim on SMG, except, perhaps, as a sub-licensee of the trademark from British Timken.

American Timken also had been unable to obtain registration of the trade-mark in Germany because one Prausnitzer, the German representative of British Timken, had already registered the mark there in 1916 (Deft's. Exh. 44, R. 1907; offered, R. 454) and had successfully opposed American Timken's application (R. 292; Deft's. Exh. 89, R. 1993; offered R. 590). Under German law, Prausnitzer, as the first registrant, had incontestable title to the trade-mark, irrespective of prior use (Ladas, R. 613), so that he could exclude American Timken from the German market.

In the course of attempting to reach some arrangement as to these registrations in the United Kingdom, Germany and France by joint registration in 1925 and 1926,[14] American Timken received from its English solicitor (Deft's.

[14] See Deft's. Exh. 89, R. 1993; offered R. 590; Deft's Exh. 90, R. 1995; offered R. 590; Deft's. Exh. 91, R. 1996; offered, R. 591; Deft's. Exh. 92, R. 1997; offered, R. 591; Deft's. Exh. 93, R. 1999; offered, R. 591; Deft's. Exh. 94, R. 2000; offered, R. 592; Deft's. Exh. 95, R. 2001; offered, R. 592; Deft's. Exh. 96, R. 2001; offered, R. 593; Deft's. Exh. 97, R. 2002; offered, R. 593.

Exh. 98, R. 2003, offered, R. 594), a copy of an opinion which he had obtained from eminent British trade-mark counsel. (Deft's. Exh. 99, R. 2005; offered, R. 594), in which they recommended that a pending joint application for registration of the trademark by British Timken and American Timken be abandoned (R. 2006), that the existing agreements be terminated, and that one of two alternatives be adopted, either (1) to make a new agreement, or (2) "*to combine the interests of the Companies by one practically absorbing the other*" (R. 2007).

Early in January, 1927, American Timken's American trademark counsel made the same suggestion, stating (Deft's. Exh. 100, R. 2008, offered, R. 595), that the trademark difficulties with respect to Great Britain, New Zealand, France and Germany "*could be surmounted if you were to take over the business of British Timken.* This would merge the somewhat conflicting titles of yourselves and British Timken, and, from a legal standpoint, is by far the best way of handling the situation" (R. 2008-2009). At the time this procedure did not seem feasible, for American Timken's secretary replied on February 2, 1927 that such a course would be "a very large order, and we do not know now and we may not know for years whether this will be advisable." (Deft's. Exh. 101, R. 2009; offered, R. 595).

Thus, by the beginning of 1927, it was apparent that British Timken, hampered by the financial difficulties of its parent corporation, Wolseley Motors, and the latter's parent Vickers, as well as by its own inefficient management, and its sub-licensee in France, SMG, were not producing satisfactory results for American Timken, and that the best way to dispose of the latter's complicated trade-mark difficulties in Great Britain, Germany and France would be to acquire British Timken if this were possible and practicable.

THE ACQUISITION, BY AMERICAN TIMKEN AND DEWAR, OF BRITISH TIMKEN, AND THEIR CREATION OF FRENCH TIMKEN.

In 1926 Dewar, then Vice Chairman of Wolseley Motors and, therefore, in charge of its subsidiary, British Timken, visited the United States as a member of a British Commission to study economic conditions, and spent some time at American Timken's plant (Mem. par. 37, R. 966). He discussed costs of production with Lothrop, then President of American Timken, with a view to reducing British Timken's costs (R. 234), and on February 11, 1927, sent cost data to Lothrop on the four sizes of bearings which British Timken manufactured in largest quantity (Deft's. Exh. 1, R. 1714, offered, R. 237; Deft's. Exh. 2, R. 1715; offered, R. 237).

In 1927, shortly after his return to England, Dewar first became interested in personally acquiring British Timken. As an officer of Wolseley Motors he knew of the existing contracts between American Timken and British Timken and their terms, and that they would expire on June 21, 1929 (Mem. par. 37; R. 966).

On March 10, 1927 (only two months after American Timken's trademark counsel had recommended that it acquire British Timken, if possible) Dewar wrote to Lothrop advising that he had become chairman of British Timken, that he contemplated making an offer to Vickers for its purchase which would require about £300,000, and that he did not "know whether your company (American Timken) would care to be interested if I were to make such an offer either permanently or on the basis of the money loaned being paid out of profits" (Mem. par. 38; R. 966, 967). Subsequently, on March 28, 1927, Dewar cabled American Timken asking if it would extend its agreement with British Timken for ten years if he took it over, because he would like to do so "but did not think it wise without a ten years arrangement with" the latter. On the next day American

Timken cabled Dewar that it was willing to consider an additional ten-year license and a reduction of royalty, and that British Timken's operation costs could be reduced 25% or more, and further stated that

> "* * * we would be more interested, however, in joining with you in purchasing the company from Vickers and making the necessary investment" (Mem. par. 40, R. 967).

Dewar replied on March 30, stating that the matter was urgent, that it was essential that the company should have British control of its ordinary capital,[15] and that he was prepared to put up approximately half (Deft's. Exh. 7, R. 1725; offered, R. 250).

On the same day American Timken wrote Dewar forwarding a comparison of its costs with those of British Timken, and stating that "we believe it is entirely possible for your costs to be reduced 25% or more" (Deft's. Exh. 3, R. 1716; offered, R. 237), and on the next day, March 31, 1927, cabled Dewar that it was willing to become interested in British Timken to the extent of one-half or more of the amount necessary to acquire and reorganize it, and asking if it should send a representative to close the deal (Deft's. Exh. 8, R. 1725; offered, R. 251). On April 1, 1927, Dewar acceded to this suggestion (Deft's. Exh. 9, R. 1726; offered, R. 251), and on the same day American Timken advised its American trade-mark counsel that it was negotiating the purchase of *a controlling interest* in British Timken, and asked for (Deft's. Exh. 102, R. 2010, offered, R. 596), and obtained (Deft's. Exh. 103, R. 2011; offered, R. 596; Deft's. Exh. 104, R. 2011; offered, R. 597), advice as to what should be done regarding the name registration, and instructed its

---

[15] He was of this opinion because British Timken would then be a British controlled company so far as British consumers, including the Government, were concerned, and this was important because foreign controlled companies always met with greater sales resistance in England than British controlled companies (R. 250).

representative that the registration of the name "Timken" in the United Kingdom, France and Germany must be definitely cleared up (Deft's. Exh. 105, R. 2013; offered R. 597; R. 2014).

American Timken thus seized the opportunity to acquire a controlling interest in British Timken, as suggested by both its American and British trade-mark counsel.

Negotiations Between American Timken and Dewar.

Ely, who had left the company on amicable terms, was appointed agent for American Timken in negotiations with Dewar (Deft's. Exh. 11, R. 1727; offered, R. 251; Deft's. Exh. 12, R. 1727; offered, R. 252) and, after he arrived in London on April 13, 1927, had almost daily conferences with the latter covering every phase of British Timken (R. 257). In the negotiations between them, Ely insisted that the name "Timken" should be kept the property of American Timken so far as possible (R. 258). Dewar insisted upon British control of the ordinary operations (R. 259) because a product made by foreigners, although produced in England, was unpopular, and, under foreign control, his investment in the business would be in jeopardy (Deft's. Exh. 16, R. 1735, offered R. 262; Dewar, R. 259-262), and Ely agreed thereto provided American Timken should be protected if the profits of British Timken should fall below a certain figure (R. 259; 263). They agreed that control should go to American Timken if Dewar should become incapacitated or die, and that each should have first options on the other's shares of British Timken in the event that either should desire to sell (R. 264). It was agreed that a company owned and operated by American Timken and Dewar should be organized to manufacture bearings in France because SMG was operating in an unsatisfactory manner (R. 263; 288), because of the French tariff and of French hostility to foreign products and because, also, the largest automobile manufacturer in France, Citroen, had

decided to use tapered bearings (R. 289). They also discussed the German situation and decided to form a German company to operate the same way as in France (R. 263; 292).

During the course of these negotiations, Ely, in England, making his recommendations and report to American Timken, stated in a very instructive letter (Deft's. Exh. 17, R. 1735; offered, R. 265):

> "I feel that there are three plans that should be given consideration.
>
> "1st. Our complete control of British Timken or its successor, without other stock holders, other than qualifying directors' shares, and this is the plan I would recommend if there was available in our organization the proper person or persons, to spend a year to 2 years reorganizing plant, sales etc. capable of contacting properly in Germany, and starting there a small company, and making entirely new arrangements in France. The present arrangement is most unsatisfactory.
>
> "2nd. Our control with a working minority of British interest. This also requires time in making proper and suitable connections and would be probably the best plan, if Mr. Dewar, or a man of his type were available. To my straight question to Mr. Dewar on this set-up, he said 'No' without qualification.
>
> "3rd. British control of new Company, only so long as British control operates Company with satisfactory profit and dividends. This is the plan I now recommend, and will cover in more detail.
>
> "In connection with the third plan its whole success depends upon the ability of the British control.
>
> "This brings us to Mr. Dewar—* * *."

Ely then recommended the third plan because Dewar was willing to accept it and was a man of exceptional ability and business contacts. He stated that Dewar expected to cut British Timken costs twenty to twenty-five per cent

with American Timken's assistance and wanted the latter "very much *as partners*,"[16] because, as a partner, it would then have an interest in the profitable operation of British Timken.

On May 12, 1927, pursuant to an agreement reached with Dewar, American Timken offered to purchase all of the shares of British Timken from Vickers, provided that an arrangement satisfactory to the purchasers should be made with Prausnitzer by British Timken (Deft's. Exh. 19, first document, R. 1742; offered, R. 267). This condition was withdrawn on Ely's recommendation that American Timken and Dewar deal directly with Prausnitzer (Deft's. Exh. 20, R. 1743; offered, R. 268), and the offer was accepted (Deft's. Exh. 19, second document, R. 1742; offered, R. 267). In Ely's cable advising American Timken that the offer had been accepted by Vickers (Deft's. Exh. 20, R. 1743; offered, R. 268), he stated that "an old agreement of Vickers with Prausnitzer provides for cancellation and surrender of name which solicitors feel could be accomplished with slight if any cost" This demonstrates that one of American Timken's purposes in purchasing a one-half interest in British Timken was to cure the German trade mark situation.

The Basic Agreement Between American Timken and Dewar.

On May 16, 1927, American Timken and Dewar executed a written instrument called "Heads of Agreement" which constituted in effect the memorandum of the concurrence of the parties on the basic subject matter of the negotiations, to be later "embodied in more formal documents as soon as practicable" (Mem. par. 41; R. 967).

This document (Deft's. Exh. 15, R. 1730; offered, R. 260) provided (1) that American Timken would contribute

[16] Dewar confirmed making this statement to Ely (R. 262, 265).

£52,500 and Dewar £47,500 (i.e. 52½% by American Timken, and 47½% by Dewar) for the purchase of the entire 50,000 shares of stock of British Timken, 26,250 to be issued to American Timken and 23,750 to Dewar; (2) that the articles of incorporation of British Timken should be altered to provide for two classes of shares, Dewar to own the majority of the "A" class, which should control the company with respect to its ordinary affairs until a minimum net profit of £15,000 was not earned and a dividend of "twenty-five per cent gross" was not paid in any year, in which event such control should pass to American Timken, as owner of a majority of the shares of the "B" class; (3) that shareholders should be able to transfer shares with the consent of the majority, but must first offer them to the other shareholders; (4) that Dewar was to be the managing director while the shares he owned controlled the company; (5) that upon his death, or incapacity for six months to perform the duties of director, American Timken should have the right to purchase his shares; (6) that a new agreement should be entered into between American Timken and British Timken extending for ten years the terms of the existing 1909 license agreements between them, subject to modifications, and generally upon terms and conditions to be mutually agreed upon, including among others, any practical steps to be taken for the protection of the name "Timken," and securing the exclusive reversion thereof in all countries to American Timken at the termination of the new agreement; and (7) that arrangements should be made for the formation of continental companies for the manufacture and/or sale of bearings subject to a royalty to be divided between American Timken and British Timken.

The Comparative Insignificance of British Timken at the Time of its Purchase.

At the date of the purchase of British Timken by American Timken and Dewar, British Timken even though it was manufacturing a large percentage of the tapered roller bearings made in the United Kingdom because it had specialized in their manufacture, was by no means the "dominant" manufacturer of bearings and "potential competitor (in 1928) with whom defendant had to reckon," which the district court pictured it to be (Mem. par. 122; R. 996). At this time, British Timken owned virtually no manufacturing equipment, and that which it owned was obsolete (Deft's. Exh. 31, R. 1800; offered, R. 318; R. 1801); it leased its plant and machine tools from Wolseley Motors (R. 240, 241); had practically no assets, *other than a certain amount of good will* [17] (R. 241); its largest net sales in its history to that time were £240,202 in 1926 (Deft's. Exh. 230, R. 2545; offered, R. 943), or approximately $1,000,000, as compared with American Timken's $24,362,805 of sales in that year (Deft's. Exh. 229, R. 2544; offered, R. 943); it employed not to exceed 500 people and manufactured not to exceed 100 sizes of tapered roller bearings, mostly automobile sizes (R. 430) while American Timken was employing between 3500 and 4000 people as early as 1919 (R. 456) and in 1927 was making 887 cone, 359 cup, and 54 thrust bearing sizes (Deft's. Exh. 185, R. 2296; offered, R. 902); even three years later, in 1930, its cost of manufacture of three of the four sizes of bearings which it produced in the largest quantities was approximately 200% of American Timken's on two sizes, and 135% on the third (Deft's. Exh. 114, R. 2030; offered, R. 638); its management was "more

---

[17] This goodwill, consisting of the right to use the name and trademark "Timken," was valued by Ely at £30,000 out of £100,000 paid for British Timken (Deft's. Exh. 20, R. 1743; offered, R. 268), yet in 1927 the right of Vickers' subsidiary to use that name was to terminate in one and one-half years under the 1909 license agreements.

or less asleep," as Ely advised American Timken during the negotiations (Deft's. Exh. 17, R. 1735; offered, R. 265; R. 1739); the existing license agreement between American Timken and British Timken had only about one and a half years to run; and, as Dewar testified in substance, the latter probably could not have continued to manufacture and sell bearings in the absence of the relation it had had with American Timken (R. 276).

The Implementation of the Heads of Agreement of 1927.

Pursuant to a more formal agreement, made on March 16, 1928 (Deft's. Exh. 197, R. 2354; offered, R. 937), which carried out the Heads of Agreement in accordance with its provision that the agreements therein should be embodied in a more formal document, American Timken and Dewar jointly caused the following things to be done.

New by-laws (Deft's. Exh. 198, R. 2356; offered, R. 937) and new articles of association (Deft's. Exh. 199, R. 2359; offered, R. 937; R. 2363, 2364) of British Timken were adopted. The by-laws carried out the agreement between American Timken and Dewar as to control (R. 2356-2358) and Section 26 of the amended articles gave shareholders the first refusal on each others' stock (R. 2371-2373).

An agreement was made between British Timken and Dewar which made him managing director thereof (Deft's. Exh. 24, R. 1763; offered R. 278).

An agreement was entered into between American Timken and Dewar as to options on shares of British Timken (Deft's. Exh. 200, R. 2394; offered, R. 938) which gave the former an option on Dewar's shares in British Timken as well as in any subsidiary company controlled by British Timken in the event of his death or incapacity, and gave each party the first refusal of the other party's shares in British Timken and in every subsidiary company in the event that either should desire to sell. This agree-

ment was supplemented by a contemporaneous agreement (Deft's. Exh. 201, R. 2397; offered R. 938).

A business agreement (Deft's. Exh. 23, R. 1754; offered, R. 274) between American Timken and British Timken was entered into as of January 1, 1928 to be in effect for ten years, and all existing contracts between them were cancelled (Mem. par. 47, R. 968). It contained all the essential features of a trademark license, including provisions for the use of the trademark "Timken," for the preservation of its distinctiveness as such by both parties, and for its return to American Timken at the termination of the agreement. It also contained the essential requirement that American Timken would supply British Timken with technical information regarding the design and manufacture of bearings which British Timken was required to follow. It provided for the areas in which British Timken was authorized to use the mark and the term of such use. It also contained provisions for patent licenses between the parties and for the exchange of engineering know-how between them. This agreement established equitable ownership of the English trademark in American Timken under the then existing English law (Ladas, R. 612), and amounted thereunder to a waiver by British Timken of any right it might have had to set aside, on the ground of prior user by British Timken, registration of the trademark "Timken" in any foreign country in which American Timken had registered the trade mark (Ladas, R. 615, 616).

An agreement was entered into by American Timken, British Timken, Dewar and Prausnitzer (Deft's. Exh. 44, R. 1907; offered, R. 454; Deft's. Exh. 45, R. 1922; offered, R. 454) on March 13, 1928 by which American Timken, British Timken and Dewar acquired the majority of an increased issue of common shares of Prausnitzer's company, Deutsche Timken Gesellschaft (hereafter called German Timken), gave Prausnitzer a 20 to 25% interest in it and named him manager in exchange for the trade mark (Mem. par. 57, R. 970), and the articles of incorporation of German

Timken were changed in such a way as to give to British Timken control (through ownership of a special class of stock) of its management in ordinary matters, and to American Timken control of extraordinary matters, and to the other shareholders first refusal of Prausnitzer's stock in the event of his death, incapacity, insolvency or retirement.

A business agreement between British Timken and German Timken modeled upon the business agreement of January 1, 1928 between American Timken and British Timken was entered into (Deft's. Exh. 47, R. 1935; offered, R. 454) which allocated Germany as German Timken's exclusive territory for the distribution of anti-friction bearings (Mem. par. 57, R. 970). German Timken was discontinued in 1934 (Mem. par. 57, R. 970) when "the Hitler situation became rather acute" (R. 293).

On July 11, 1928, pursuant to correspondence (Deft's. Exh. 202, R. 2399; offered, R. 938; Deft's. Exh. 203, R. 2403; offered, R. 938; Deft's. Exh. 204, R. 2403; offered, R. 939; Deft's. Exh. 205, R. 2404; offered, R. 939) between American Timken, Dewar and Duncan, American Timken's British solicitor, statutes of incorporation of French Timken were adopted (Deft's. Exh. 206, R. 2412; offered, R. 939), drawn in such a way as to give to British Timken control (through its special B shares) over its ordinary affairs, and to American Timken over extraordinary matters. The B shares were originally owned by British Timken (Deft's. Exh. 250, R. 2673; offered, R. 956; Deft's. Exh. 251, R. 2673; offered, R. 956), thus carrying out the arrangement for ordinary control of the enterprise by Dewar through British Timken. As shown by Defendant's Exhibit 249 (R. 2672C; offered, R. 956) American Timken in 1928 advanced all of the funds necessary for the initial operation of this company and thereafter its investment was never less than 70% of the funds actually invested therein.

A business agreement on the model of the one between American Timken and British Timken was entered into

between British Timken and French Timken on June 16, 1928 (Deft's. Exh. 29, R. 1789; offered, R. 291).

French Timken purchased from SMG the trademark rights and the name "Timken" (Mem. par. 54, R. 969), commenced operations by first importing semi-finished products from British Timken, and by 1933 was engaged in the manufacture of all the component parts of tapered roller bearings (Mem. par. 56, R. 969, 970).

MAINTENANCE OF THE JOINT ADVENTURE, AND OF THE TRADEMARK LICENSES, SINCE 1927.

The original agreement between American Timken and Dewar obviously contemplated that he should contribute his skill, sales contacts and active management of the enterprise, and that American Timken should license its trademark and contribute its know-how, and general backing, during a period which was to extend for at least ten years. Upon termination of this relationship, into which American Timken entered primarily because of Dewar's personal characteristics and ability, by Dewar's death, American Timken was protected by its options to acquire his stock and thus take over control of the companies acquired or organized pursuant to the venture, and ultimately to have its trademark rights returned to it. In the meantime Dewar was to control the operations of the companies while managing them.

This fundamental arrangement was maintained at all times. Even when a portion of the stock of British Timken was sold to the public in 1935, the parties were careful to maintain joint control thereof at that time, so that American Timken now owns 30.26%, and Dewar's estate 23.74%, of its issued and outstanding common shares. Thus, the other stockholders of British Timken have been allowed to participate in its profits but have had no real voice in its management. The contractual arrangements for this joint control of British Timken were maintained consistently at all times, as will be seem.

The fact that there was a definite joint adventure, is demonstrated by a vast amount of evidence, not commented on by the district court,[18] which shows (1) that American Timken and Dewar maintained their basic relationship throughout, even when adjustments as to the companies controlled by them were made from time to time to meet changes in circumstances; and (2) that British Timken and French Timken, making and selling bearings under the trademark "Timken," were operated in close collaboration with American Timken, practically as parts of one enterprise in the foreign field.

Transactions Involving Adjustments by American Timken and Dewar as to Companies Controlled by Them.

The significant transactions which demonstrate how the essential relationship between American Timken and Dewar was maintained up to the time of his decease are as follows.

In 1929 Porter, Vice President in charge of automotive sales of American Timken at the time (R. 51), visited British Timken (Deft's. Exh. 113, R. 2025; offered, R. 637; R. 2025), and inaugurated negotiations with Dewar. Defendant's Exhibits 207 through 227[19] demonstrate that an

[18] The district court appears to have considered such evidence, as well as other evidence relating to the business agreements between the Timken companies, unimportant, stating as to the latter, that testimony as to why they were modified and extended and various covenants were inserted in them, and why the present contracts have such long duration, are "of no significance" because "the controlling facts are that they were made and that they contained certain provisions" which might make them illegal under the Sherman Act (Mem. par. 67, R. 971, 972).

[19] Deft's. Exh. 207, R. 2450; offered, R. 939; Deft's. Exh. 208, R. 2451; offered, R. 939; Deft's. Exh. 209, R. 2451; offered, R. 939; Deft's. Exh. 210, R. 2451; offered, R. 939; Deft's. Exh. 211, R. 2452; offered, R. 939; Deft's. Exh. 212, R. 2452; offered, R. 940; Deft's. Exh. 213, R. 2453; offered, R. 940; Deft's. Exh. 214, R. 2453; offered, R. 940; Deft's. Exh. 215, R. 2454; offered, R. 940; Deft's. Exh. 216, R. 2454; offered, R. 940; Deft's. Exh.

(Continued on following page)

increase in capitalization in French Timken was desired at that time in order to handle the business of Citroen, the largest French motorcar manufacturer, which was going to give French Timken its business (R. 289).

Dewar, however, was unwilling to invest more of his own funds in French Timken because his interest in the enterprise was at the maximum. Strough, secretary of American Timken at the time (R. 586), cabled Porter that "Dewar should not object to our desire to keep him *equal partner* in growing business" (Deft's. Exh. 221, R. 2457; offered, R. 941), and that American Timken was willing to increase Dewar's financial compensation, assuming that he would obligate his share of the venture for the funds advanced by it to keep him an equal partner.

Dewar proposed that American Timken advance the necessary funds to French Timken and that one-third of British Timken's profits after 1929 be devoted to repaying the advances (French Timken common stock to be issued in their place), subject to the condition that the 1928 ten-year business agreement between American Timken and British Timken should be extended to fifteen years (Deft's Exh. 219, R. 2456; offered, R. 940).

The business agreement was extended by a letter agreement (Deft's. Exh. 25, R. 1766; offered, R. 280), and Dewar's proposal was carried out by a complicated program, which preserved the essential relationship between the parties, although it changed the form thereof to some extent. The parties transferred their French Timken common stock to an American holding company, International & Commercial Investments, Inc. (hereinafter called ICI); their sub-

scriptions thereto being in the ratio of 105 for American Timken to 95 for Dewar, or 52½% for American Timken to 47½% for Dewar, the ratio of their original investments in British Timken, and, by means of the corporate structure of ICI and agreements between the parties at that time, arrangements were made for Dewar to control French Timken until it should fail to earn 15% on its invested capital, American Timken obligated itself to purchase preferred stock of ICI in order to provide funds which the latter could invest in French Timken, and a British Timken annual dividend of one-third of its annual profits was devoted to purchase of ICI common stock until its preferred stock should be retired. These agreements are incorporated in Defendant's Exhibits 224 (R. 2462; offered, R. 941), 225 (R. 2465; offered, R. 941), 226 (R. 2474; offered, R. 941), and 227 (R. 2476; offered, R. 942). The parties thus, in effect, mortgaged one-third of Dewar's profits in British Timken to pay for his increased interest in French Timken, while maintaining the same essential relation as between them with respect to French Timken.

Again, in 1934, when the value of British Timken stock had increased greatly, Dewar desired to realize on part of his investment therein and to avoid the existing arrangement by which his share of one-third of the profits was used to pay for his interest in French Timken through purchase of common stock in ICI. He therefore came to this country and presented to American Timken's officials a memorandum, as a basis for negotiations, in which he proposed that he and American Timken should each sell a portion of their shares in British Timken on the British market while maintaining control thereof through the formation of a holding company (Deft's. Exh. 26, R. 1766; offered, R. 281). At this time American Timken had invested in French Timken, pursuant to the arrangements made in 1929 to increase its financing, either by purchase of preferred shares of ICI or by loans, over $823,000 as against Dewar's investment of $31,960 (Deft's Exh. 249, R. 2672C; offered, R. 956). In

this memorandum Dewar discussed French Timken's losses, pointed out that its control under the existing agreements should pass into American Timken's hands, stated that he would like, either to have the latter take over, or to make a new arrangement for his control, and asked for cancellation of the existing agreements and a new agreement for a definite sum to be invested by him in ICI (R. 1769, 1770).

As a result of these negotiations, Heads of Agreement (Deft's. Exh. 228, R. 2483; offered, R. 942; first document, R. 2483) were executed on August 15, 1934, by which the parties rearranged their joint venture to provide (1) for an increased number of shares of British Timken, all of one class, American Timken and Dewar each to sell one-half of their holdings thereof to the public at a specified price; (2) for transfer of the remaining 50% of shares of British Timken owned by Dewar and American Timken to a holding company organized in such a way as to maintain the same rights as to voting control between them as had been provided formerly by the articles of association and by-laws of British Timken and with the same options of the parties on each other's shares in the event of sale; (3) for adjustment by American Timken and Dewar (contingent upon consummation of the sale of British Timken stock to the public) of their interests in French Timken, German Timken and ICI, and its wholly-owned subsidiary, International Bearings Investments, Inc. (hereinafter called "IBI") pursuant to which American Timken and Dewar would each own a one-half interest in each of these corporations, Dewar would pay American Timken $250,000 in cash out of the proceeds of the sale of his British Timken stock, and would give it his note without interest in the amount of $150,000, secured by pledge of his one-half interest in French Timken, German Timken, ICI and IBI, and payable only from distributions with respect thereto in excess of $7500 per year, he to have control of French Timken during his lifetime and active management thereof until it should fail to pay annually $24,000 in dividends or other distribu-

tions from accrued earnings, and control to pass to American Timken in the event of his death, retirement, or in the event of French Timken's failure to make such payments; (4) for amendment of the 1928 business agreement between American Timken and British Timken in certain respects, and its continuance in effect for fifteen years after the sale of the British Timken stock to the public, and (5) for freeing of French Timken from any obligation to pay royalties or service fees to American Timken or British Timken.

Acting pursuant to the Heads of Agreement of August 15, 1934, American Timken and Dewar caused various agreements and other documents to be executed for the purpose of carrying them out. Defendant's Collective Exhibit 228 (R. 2483; offered R. 942) contains, in addition to the Heads of Agreement, certain of the documents and correspondence relating to this matter which show that the parties caused corporate action to be taken by British Timken and made a series of agreements in the fall of 1934 to be effective if and when the British Timken stock should be sold (R. 2488-2495; 2509-2511; 2523-2525); caused the sale in June, 1935, of 50% of their increased stock in British Timken (R. 2525, 2526), American Timken purchasing 10,000 shares at the sale,[20] and the organization of a holding company known as Timken Holdings, Limited,[21] to "'continue the implementation" (Dewar, R. 282, 283) of the original agreement as to control of British Timken as between American Timken and Dewar, as specified in the Heads of Agreement, by means of class A and B shares of Timken Holdings (R. 914, 915; 2513; 2526-2528; 2529-2533); and deposited in the Westminster Bank of London, England,

---

[20] This was done because American Timken felt that "it should maintain somewhat greater ownership" in British Timken than was reached by its joint holdings with Dewar (R. 912).

[21] Plaintiff's Decree Exhibit 7 (R. 2697; offered, R. 1159, 1160) is a copy of the articles of incorporation and by-laws of Timken Holdings, Ltd.

in the joint names of American Timken, Pascoe and a Luxembourg corporation, called the Lux Company, Dewar's holding company,[22] as trustees, all of the stock of, and 236 promissory notes issued by, French Timken, pursuant to a trust agreement providing for the pledge of Dewar's interest in French Timken and German Timken, which had now become one-half thereof, to secure payment of his note to American Timken as specified in the Heads of Agreement of August 15, 1934 (R. 2534-2543).

This agreement provides in substance for the payment of the Lux Company's $150,000 note to American Timken out of Dewar's share of the profits from French Timken and also from German Timken's assets, and assures American Timken control of French Timken if its indebtedness is not reduced by $24,000 in any year after 1927. At the present time there is a balance of $165,000 in the Westminster Bank account (R. 920) available to repay the balance of American Timken's advances to French Timken, and thus to enable it to salvage some of its unequal investments in that company.

Thus, in 1934 and 1935, American Timken, in order to keep Dewar satisfied, permitted sale of 50% of their British Timken stock to the public, insured its control by purchasing 10,000 shares at the sale, and made careful provision with Dewar to preserve their control of British Timken and also their relation as between themselves both as to British and French Timken. Dewar was permitted to realize on part of his investment but, as a condition, was required to pay $250,000 of the proceeds toward his half interest in French and German Timken in accordance with the policy previously exhibited (Deft's. Exh. 211, R. 2452; offered,

---

[22] The Lux Company was a holding company for Dewar, apparently referred to as the Luxembourg Company No. 2 in a previous agreement of September 29, 1934, providing for the procedure, contingent upon sale of the shares of British Timken, which was subsequently carried out (Deft's. Exh. 228, R. 2483; offered R. 942; R. 2495, 2496).

R. 939) to keep him "an equal partner in a growing business."

In connection with this rearrangement of the relations between themselves, the parties caused American Timken and British Timken to enter into a new business agreement (Mem. pars. 58-62; R. 970, 971) effective January 31, 1935, which incorporated some changes requested by Dewar in his memorandum which constituted the basis of the 1934 negotiations between the parties. Although this agreement was originally effective for 16 years, it was subsequently amended to extend for 30 years to January 1, 1935 (Deft's. Exh. 131, R. 2090; offered, R. 654; Deft's. Exh. 132, R. 2092; offered R. 655; Deft's. Exh. 133, R. 2092; offered, R. 655; Deft's. Exh. 134, R. 2093; offered, R. 655; Deft's. Exh. 135, R. 2093; offered, R. 656) at the insistence of the English brokers with whom Dewar negotiated because they felt British Timken stock could not be sold to the public without a long-term agreement with American Timken "particularly for the use of the name," since the good will of British Timken "rested largely in the association with" American Timken (Dewar, R. 284).

The business agreement of June 19, 1928 between French Timken and British Timken was also modified in a new contract, on July 15, 1935 (Mem. par. 63, R. 971), which incorporated the amendments agreed upon by American Timken and Dewar in the Heads of Agreement of August 15, 1934.

Another significant transaction occurred in 1936 when Dewar recommended to American Timken certain action with respect to the funds of French Timken (Deft's. Exh. 231, R. 2547; offered, R. 943; Deft's. Exh. 232, R. 2547; offered, R. 944; Deft's. Exh. 233, R. 2548; offered, R. 944; Deft's. Exh. 234, R. 2551; offered, R. 944; Deft's. Exh. 235, R. 2553; offered, R. 944), which he stated was equivalent to taking such funds away from French Timken's control but *"so far as our partnership is concerned"* was for its ulti-

mate benefit (Deft's. Exh. 233, R. 2548; offered, R. 944; R. 2549).

In 1938, the parties caused two new business agreements to be entered into, one between American Timken, British Timken and French Timken (Deft's. Exh. 27, R. 1771; offered, R. 291), and the other between American Timken, British Timken and Dewar respecting the operations of French Timken (Deft's. Exh. 28, R. 1780; offered, R. 291), amounting in effect, to a guaranty by the latter's shareholders of its performance of the first 1938 agreement (R. 916; 930-931), which superseded the preceding business agreements, and were to govern their relations until the date specified in the 1935 amendments to the 1928 business agreements, namely, 1965 (Mem. par. 64; R. 971).

In March, 1948, in connection with a new issue of preferred stock by British Timken (R. 923), American Timken and Dewar rearranged their relations with respect to British Timken for the last time and entered into an agreement (Deft's. Exh. 239, R. 2656; offered, R. 945) which permitted Dewar to withdraw his British Timken stock from the control of Timken Holdings, Limited, and a contemporaneous agreement (Deft's. Exh. 240, R. 2659; offered R. 945) which took the place of Timken Holdings, Limited, in defining and maintaining the relation between the two parties. The latter agreement gives American Timken an option to purchase specified shares, constituting all the ordinary shares of British Timken owned by Dewar at the time of the agreement (which constituted 23.74% of its voting stock) in the event of his death or his being incapacitated for six months to act as its director, or in the event that he desires to sell his shares, and also gives American Timken the right to control the vote of Dewar's shares combined with its shares if at any time the profits of British Timken available for dividends based on an average of three consecutive years are reduced below £50,000 for one year.

The Mass of Technical Information and Assistance Supplied by American Timken to British Timken and French Timken Under the Joint Venture and Pursuant to the Trademark License.

At all times since the inception of their relation in 1927 the basic plan of operation between American Timken and Dewar has been to manufacture bearings in England, France and Germany to be interchangeable with bearings manufactured by American Timken, according to methods developed by it, and accompanied by its full collaboration in giving British, French and German Timken the benefit of patents and know-how which it has developed over the years. The uncontroverted evidence of Umstattd (R. 521, 522), Dewar (R. 105; 176, 177), Pascoe (R. 400, 401; 414, 415) and Hobley, former sales manager of British Timken (R. 173; 438), is, in substance, that the whole purpose of the parties was to sell Timken bearings all over the world in competition with bearings manufactured by competitors and that if for some reason one Timken company could not sell advantageously in a portion of its territory another should make the sale.[23] This system, of course, has overcome difficulties resulting from conditions of foreign exchange and production facilities of the companies (R. 521). The foreign Timken companies have been able to sell immediately types of bearings which they were not equipped to produce in large quantity by calling upon American Timken to supply them until they were tooled up to produce on a commercial basis if the market warranted (Dewar, R. 115; Pascoe, R. 400; Moreland, R. 748-750). The same reasons that make it advisable for American Timken, in the conduct of its operations in

---

[23] In the event of such sales the company making the same pays compensation of a specified percentage, or other amount, to the company in whose territory the sale is made, for the selling and servicing job performed by the latter (R. 417), as in Australia during the last war (R. 417) where British Timken was maintaining technical engineers at its own expense (R. 414, 417).

the United States, to divide its sales activities among district offices which do not compete with each other in their respective districts, dictate the same policy as between the associated Timken companies (R. 933).

The fundamental basis of this joint method of operation has been interchangeability of bearings manufactured by the three companies, which are in most instances identical (R. 106; 406, 407). The part numbers of new bearings developed by American Timken, British Timken and French Timken are assigned by American Timken according to a system maintained by it and kept in its master book in its engineering department in Canton (R. 406, 407; 695-697), and blueprints covering the design of new bearings are automatically exchanged as a matter of routine (R. 406, 407; 692).

A substantial amount of American Timken's uncontroverted evidence, all of which was ignored by the district court, demonstrates in detail the close cooperation which has existed between American Timken and British Timken and French Timken for the purpose of securing integrated production and sale of bearings under the trademark "Timken," consisting largely of the transfer of "know-how" from American Timken to British Timken and French Timken in order to establish and maintain in them American Timken's methods in the design, production and sale of tapered roller bearings.

The policy of installing and using American Timken's methods in the operation of British Timken and French Timken to the greatest extent practicable has never been departed from, and is being maintained today. Dewar himself testified that it had always been British Timken's policy to carry out American Timken's suggestions (R. 311, 313), and that, in his opinion, it was "difficult to conceive that we could have started out" without its cooperation (R. 276). Pascoe testified that there is a constant "stream of information" from American Timken (R. 407-409) as to production methods, machines and products which has

helped British Timken materially in reducing its costs and increasing production (R. 410, 411). British Timken's methods are practically identical with those used by "Timken America" (Ellis, R. 433, 434). The same know-how has been communicated principally by British Timken to French Timken (R. 309; 419), and has been practically all one way, from American Timken to the foreign Timken companies (R. 527).

With respect to the all important design of bearings to meet the requirements of customers for original installation business, when British Timken develops a need for a certain bearing, it cables American Timken for a bearing of a certain size and designates the dimensions, and American Timken then works out the design and sends British Timken the part number and detailed prints as soon as possible together with prints of the tooling to be used in manufacturing it (R. 694).

In addition to designing new bearings for British and French Timken, American Timken gives them its new ideas with respect to designs and any information which they may request for bearing applications which it is making. It sends British Timken copies of its weekly reports to heads of sales and engineering departments showing the type of work and bearing applications being done for its customers (R. 708-711). Defendant's Exhibit 163 (R. 2141; offered, R. 710), and Defendant's Exhibit 163A (R. 2146; offered, R. 710) are typical reports. If British Timken requests it, American Timken gives it the same complete information which it would give to its own men in the field with respect to any particular bearing application (R. 711, 712). Defendant's Exhibit 164 (R. 2153; offered, R. 713) is a tabulation of all of this type of work which American Timken has done for British Timken and French Timken from 1937 to date (R. 713, 714).

In addition to this assistance in the design and application of bearings, American Timken has often sent men to British Timken to assist and instruct its engineers in

the design of new types of bearings such as industrial and railroad bearings (Moreland, R. 747-749); (Eastburg, R. 681-683). American Timken also assisted in organizing British Timken's bearing design department (Deft's. Exh. 154, R. 2128; offered, R. 664; Deft's. Exh. 155, R. 2129; offered, R. 665; Deft's. Exh. 156, R. 2130; offered, R. 665).

Installation and perpetuation of American Timken's methods of production at British Timken and French Timken has been, of course, one of the most important factors of the joint enterprise.

Hess, assistant to the President of American Timken, went to England as soon as British Timken had been acquired in order to help "in making tapered roller bearings like we made or as close to it as possible" (R. 317). His report on this trip (Deft's. Exh. 31, R. 1800; offered, R. 318) demonstrates the extensive study which he made and the tremendous amount of innovation which was necessary. His recommendations included purchase of some parts from American Timken, purchases of new machinery, and passing of the 1927 British Timken dividend called for in the agreements between American Timken and Dewar in order to enable the purchase of the machinery (R. 1825-1827).

Thereafter, employees of American Timken, expert on various processes, went to the British and French Timken plants almost every year, except the war years 1939 to 1945 (R. 525, 526), as needed, to introduce and maintain American Timken's methods. The testimony and reports of several of these men demonstrate the great amount of work done in this respect. See evidence of Sloan (R. 718-726; Deft's. Exh. 167, R. 2158; offered, R. 720; Deft's. Exh. 168, R. 2172; offered, R. 724), Shuler (R. 726-735; Deft's. Exh. 169, R. 2185; offered, R. 729), Nauman (R. 735-742) and Travis (R. 742-746). American Timken even procured a man from another company to go to British Timken and give it technical information as to forging practices which the former did not, itself, use (R. 431, 432-433).

Conversely, the record discloses that at least nine employees of British Timken (R. 670; 688; 699; 714-716) and two from French Timken (R. 670; 688; 715) have come to American Timken's plant for instruction and training.

New methods, designs, bearings, materials, machine tools and tooling which are worked out in American Timken's extensive research department, to which only ten of its employees are admitted without pass (R. 706), are sent to British Timken "more or less as a matter of routine" (R. 703). This research department is five times as large as British Timken's (R. 278) and the latter has benefited greatly from periodic visits of its officials thereto for the purpose of studying American Timken's methods (R. 277, 278). American Timken has also assisted British Timken and French Timken in the acquisition of new machine tools and equipment at no profit to itself (R. 704, 705; 916, 917). Defendant's Exhibits 162 (R. 2131; offered, R. 706), 162-A (R. 2134; offered, R. 706), and 162-B (R. 2135; offered, R. 706), are lists of such equipment purchased since 1928.

One of the most significant facts indicating the existence of a joint enterprise is the elaborate system set up by American Timken in 1927 for comparison of British Timken and French Timken costs with its own (R. 357-359). British Timken and French Timken both submitted very detailed data as to their costs for the purpose of this comparison. The number and details of these reports are shown in Defendant's Exhibit 113 (R. 2025; offered, R. 637) and in Defendant's Exhibit 141 (R. 2104; offered, R. 659), a memorandum specifying the data received from 1928 up to the time Hess left the company in 1936 (R. 659). Sample reports of various kinds from British Timken[24]

---

[24] Deft's. Exh. 109, R. 2016; offered, R. 636; Deft's. Exh. 110, R. 2019; offered, R. 636; Deft's. Exh. 111, R. 2019; offered, R. 636; Deft's. Exh. 112, R. 2020; offered, R. 637; Deft's. Exh. 120, R. 2041; offered, R. 643; Deft's. Exh. 121, R. 2048; offered, R. 644; Deft's. Exh. 122, R. 2049; offered, R. 645; Deft's. Exh. 123, R. 2050; offered, R. 645; Deft's. Exh. 124, R. 2051; offered, R. 645; Deft's. Exh. 125, R. 2051; offered R. 646.

and French Timken[25] to American Timken, and correspondence demonstrating American Timken's insistence on them appear in the record. Costs of British Timken and French Timken were compared with those at American Timken's Canton and Columbus plants in percentages of a standard cost, or par value, of 100% (R. 638, 639; Deft's. Exh. 114, R. 2030; offered, R. 638; R. 2031; Deft's. Exh. 145, R. 2109; offered, R. 660; R. 2110). Defendant's Exhibits 115 (R. 2034; offered, R. 640), 116 (R. 2034; offered, R. 640), 117 (R. 2036; offered, R. 641), 118 (R. 2038; offered, R. 642), and 119 (R. 2039; offered, R. 643) are correspondence demonstrating how these cost comparisons were used to pick out expensive points in the foreign Timken companies' cost structures, and to cure them by sending American Timken's employees to cut costs by improving methods of production.

With respect to sales and advertising, American Timken has sent its employees to British Timken and French Timken to assist them in selling bearing applications (Moreland, R. 747, 748; 751, 752; 755, 756; Eastburg, R. 683-686), and has furnished them with copies of engineering journals and periodic additions thereto (R. 716, 717).

American Timken also supplies British Timken and French Timken with copies of its three mediums of advertising (Deft's. Exh. 188, R. 2302; offered, R. 918) as soon as they are prepared (R. 917, 918).

Thus it can be seen that American Timken has assisted British Timken and French Timken in every way possible in the production and sale of bearings, pursuant to the

basic plan for licensing the trade-mark "Timken" and for the integrated sale of tapered roller bearings by those companies throughout the world thereunder.

Other facts relating to the case are discussed under Section III, *infra*.

SPECIFICATION OF ERRORS TO BE URGED.

American Timken specifies as errors to be urged each of the errors assigned (R. 1257-1315) as summarized in points numbers 1, 2, 4, 5, 7, 8 and 9 of its Statement of Points to be Relied Upon (R. 1327-1332), except those specified by assignments of error numbers 8 and 200-203, inclusive.

SUMMARY OF ARGUMENT.

I.

In 1927, pursuant to a plan agreed upon with a British business man, M. B. U. Dewar, in Heads of Agreement entered into between them, American Timken, a manufacturer of tapered roller bearings in the United States, joined with Dewar in the purchase of a small British company, British Timken, Limited, for the sum of £100,000, or approximately $500,000. Of this price American Timken paid 52½% and Dewar paid 47½%. Prior to the date of the purchase the English company had been a patent and trade-mark licensee of American Timken, and was manufacturing tapered roller bearings. Although subsequently some of the stock was sold to the public, at all times since that date control of this company has been maintained by American Timken and Dewar by contract between them until the latter's death in December, 1950.

Pursuant to the plan, a new company, French Timken, was organized by American Timken and Dewar in 1928, and it acquired the French trademark "Timken." The plant was acquired and equipped, 70% of the cost being supplied by American Timken and 30% by Dewar. Later Dewar's interest was increased to 50% and American Tim-

ken's interest was decreased to 50%, but there have been no other owners of the company since its organization until Dewar's death in December, 1950.

Also pursuant to the plan, a controlling interest in German Timken was acquired at the same time by a joint capital contribution of American Timken and Dewar and the German "Timken" trademark registration was acquired by it. This company was dissolved in 1934 when the Hitler regime came into power in Germany.

Pursuant to the plan, agreements were entered into between American Timken and Dewar providing for the management and operation of these companies by Dewar. The agreements also defined their rights as against each other, and preserved the closely knit character of the enterprise as between them. The relationship between American Timken and Dewar was always regarded by, and referred to by, them from the beginning as a "partnership," and their agreements, supplemented by the corporate setups of its instrumentalities, created a joint adventure between American Timken and Dewar to manufacture and sell tapered roller bearings under the trademark "Timken" in foreign countries through the three instrumentalities, British Timken, French Timken and German Timken. This joint adventure was strikingly similar to the arrangement held by this Court to constitute a practical joint adventure in *United States v. Scophony Company of America*, 333 U. S. 795.

Whatever restraints were contained in the agreements between the parties were reasonably ancillary to a valid main purpose, namely, the creation and conduct of the joint adventure, and they are not, therefore, unreasonable. This Court so held in *United States v. Bausch & Lomb Optical Co.*, 321 U. S. 707, with respect to the agreement of a manufacturer not to compete with its customer and distributor in the distribution of the product manufactured for the customer. In such a case the restrictions imposed are clearly analogous to those resulting from the agreement of

a partner not to compete with the partnership, which has always been regarded as creating a reasonably ancillary restraint of trade.

It was, of course, reasonable and proper that the territories in which British Timken and French Timken would operate should be described in the agreements between American Timken and Dewar, and it is the contention of American Timken that such agreements spelling out the areas of operation were also reasonably ancillary to the creation of the joint adventure.

The imposition of these restrictions, under the circumstances, did not unduly prejudice the public interest, because the combination of the operations of these three companies pursuant to the joint adventure did not tend to monopolize trade in anti-friction bearings in the markets in which they compete.

Therefore, no violation of Sections 1 and 3 of the Sherman Act was shown justifying the rendition of any judgment by the district court against American Timken, and the death of Dewar subsequent thereto, even though it terminated the joint adventure, should not prevent the culmination of the agreement between him and American Timken by which the latter has the option to convert British Timken and French Timken into its majority-owned and wholly-owned subsidiaries, respectively, pursuant to its options on Dewar's stock therein at his death, which it has exercised.

II.

Reference has been made to the fact that prior to its acquisition in 1927 by American Timken and Dewar, British Timken had been a patent and trademark licensee of American Timken. When the first license agreements were made between American Timken and E. & O. A., a predecessor of British Timken, in 1909, the former projected its good will into the British and European markets by requiring the

use of the name "Timken" by E. & O. A. in connection with the manufacture and sale of bearings by that company. An amendment of the 1909 license agreements was negotiated with British Timken in 1925, the effect of which was explicit recognition by British Timken of its position as a licensee of the name "Timken" during the term of the license.

By 1928 American Timken was the registered owner of the trademark "Timken" in all of continental Europe except Germany and France, such registrations having been obtained shortly after 1920 when, for the first time, American Timken was able to obtain registration in the United States of this surname as its trademark and used such American registration as the basis of obtaining registrations abroad.

In England American Timken was the equitable owner of the trade-mark, and at the time French Timken and German Timken obtained the registrations of trademarks in those two countries, pursuant to the Heads of Agreement of 1927 between American Timken and Dewar, the former was the equitable owner and licensor of the mark to those two companies by reason of the agreements therein contained and the subsequent investment of its funds in those two companies jointly with Dewar based upon the understanding that it was to be the owner and licensor of the mark to them.

The fact that American Timken had not obtained registration of the trademark in certain countries is unimportant because registration is not the sole test of ownership of a trademark.

In all the negotiations with Dewar for the purchase of British Timken and the organization of French Timken and German Timken, Dewar recognized that American Timken was the owner of the trademark. Beginning in 1928 and continuing with the business agreements of 1935 and 1938, American Timken has validly licensed the use of the trademark by controlled licensing thereof to British Timken and

French Timken. The Lanham Act evidences the policy of this country in favor of controlled licensing of trademarks under conditions which will prevent deception of the public as to the quality of the goods produced under the license. This is also international policy, fostered by the United States and evidenced by the Conventions between various governments, including the United States, which permit controlled licensing thereof. The uncontroverted evidence discloses that American Timken, pursuant to the policy by which tapered roller bearings manufactured by the three Timken companies are interchangeable and of the same quality, has at all times insured that the principles of controlled licensing of the trademark to British Timken and French Timken shall be carried out.

The territorial provisions of the business agreements in connection with the licensing of the trademark by American Timken to British Timken and French Timken are not violative of the Sherman Act, but instead, just as in the case of a patent license, are reasonably ancillary to the main transaction by which the trademark is licensed as held in the only decision on this point, *The Coca-Cola Bottling Co. v. The Coca-Cola Co.*, 269 Fed. 796.

III.

The purported findings of fact upon which the district court based its judgment are clearly erroneous.

(1) The district court's conclusions that American Timken divided up world markets commencing in 1909 when it licensed a subsidiary of Vickers, Ltd. to commence manufacturing tapered roller bearings and that thereafter it combined with potential or actual competitors, dominant in a mythical roller bearing industry, are contrary to the uncontroverted evidence in the record. In 1909 American Timken was a very small company commencing the manufacture of a new patented product which was not established in this country until the 1920s. The Vickers subsidiary, E. & O. A., had never previously manufactured

bearings. E. & O. A.'s successor by assignment of the 1909 license agreements, Wolseley Motors, another subsidiary of Vickers, was a motor car manufacturer, and British Timken, the wholly-owned subsidiary organized by Wolseley Motors in 1920 to take over the business, was not a potential or actual competitor of American Timken from that time until its acquisition by American Timken and Dewar, jointly, in 1927. It was continually in difficulty, appealing to American Timken for assistance, and, due to antiquated methods, lack of finances and other reasons did not develop the business satisfactorily in England.

SMG, British Timken's sublicensee under the 1909 license agreements until 1928, also was not an actual or potential competitor of American Timken, and its performance was unsatisfactory even to British Timken. The district court's finding that American Timken invested in and organized a potential competitor in France when French Timken was created jointly by it and Dewar in 1928, and necessarily commenced the manufacture of tapered roller bearings on a small scale backed by American Timken's funds, indicates the paucity of evidence upon which these findings that American Timken combined with dominant potential competitors are based.

On the contrary, the uncontroverted evidence discloses that the 1909 license agreements were not different from ordinary license agreements involving patents and trademarks, and that, due to the failure of the Vickers subsidiaries and SMG to develop the business properly, as well as trademark difficulties, American Timken had very good business reasons for taking over British Timken with Dewar and organizing a new French company, French Timken, to develop business on the continent, rather than that American Timken was attempting to bolster up a combination for the express purpose of suppressing competition in foreign trade in anti-friction bearings inaugurated by the 1909 license agreements.

(2) The district court's finding that American Timken had combined to suppress competition in the "tapered roller bearing industry" is clearly erroneous, because contrary to a great mass of uncontroverted evidence in the record which shows that the Timken companies compete in the anti-friction bearing industry with companies which, particularly in foreign markets, are much more powerful than are the Timken companies. Ball bearings were firmly entrenched, not only in this country but also in the British and European markets, long before tapered roller bearings were invented and tapered roller bearings compete with other styles of roller bearings, with ball bearings and with special types of anti-friction bearings in 90% of the instances in which competition exists, as well as with friction bearings on many types of business.

(3) The district court's decision was based essentially on an ultimate finding, unsupported by evidence and reached in disregard of uncontroverted evidence, which caused it to disregard entirely the uncontroverted evidence demonstrating that American Timken and Dewar had carried on a joint adventure from 1927 on, and that the licensing of the trademark in restricted territories was entirely proper. This finding was, in substance, that American Timken and the Vickers subsidiaries had divided up world markets and eliminated competition by reason of the 1909 license agreements, and that, after the basic British product patents covering tapered roller bearings had terminated in 1924, American Timken and British Timken, the Vickers subsidiary, nevertheless extended the 1909 license agreements, by amendments thereto in 1925, for an additional five-year period, with the result that the license agreements were no longer valid contracts "but were without pretense contracts for the *avowed* purpose of suppressing competition." The district court therefore found that the agreement made between American Timken and Dewar in 1927 merely *continued* this combination *for the specific*

purpose of suppressing competition and that the agreement between them, conceding for the sake of the argument that it was a valid joint adventure in form, was merely a "cloak" for this purpose.

This essential and basic finding, which swept away American Timken's defense in this respect, was clearly erroneous because the district court completely ignored uncontroverted evidence which showed that American Timken, in extending the 1909 license agreements, acted pursuant to advice of its trademark counsel that, even though the basic British bearing patents had ceased in 1924, nevertheless the agreements licensed use of the trademark "Timken" by American Timken to British Timken, which justified their continuance and the continued payment of royalty by the latter to the former. The one item of evidence relied upon by the district court as indicating an "avowed" purpose to suppress competition was a letter by American Timken's British solicitor to it (which of course was not binding upon it), which expressed the same point of view as that of its American trademark counsel.

Since the question of whether the license of a trademark is a valid basis for restrictive territorial provisions is still one which, as the district court stated, has not been decided by the courts, this evidence failed to disclose an intentional combination to restrain trade which would justify the conclusion that a joint adventure, otherwise valid, was merely a cloak for a combination in restraint of trade, and that, therefore the restraints imposed thereby, which would otherwise be ancillary to the creation of a lawful joint adventure, were unreasonable.

(4) The evidence relied upon by the district court as demonstrating conduct of an intentional restraint of trade by the three Timken companies from 1928 on is just as reconcilable with the conduct of a legal joint adventure as with the conduct of a combination for the pur-

pose of suppressing competition and controlling world trade in tapered roller bearings, and therefore the district court's decision to the contrary is clearly erroneous.

In view of all of the foregoing, it is clear that a mistake has been committed by the district court, in that, in basing its decision upon findings that there was an intentional combination in restraint of foreign trade, and, therefore, it should disregard much of the evidence introduced by American Timken, it overlooked and disregarded vital facts disclosed by the uncontroverted evidence.

IV.

The district court erred in not making proper findings of fact and conclusions of law as required by Rule of Federal Procedure 52, in that it adopted its memorandum as its findings and conclusions, with the result that there are not specific findings of all of the underlying and subsidiary facts which must be found to determine all of the issues which this case presents, the purported findings contain discussions of portions of the evidence and the court's reasoning, and statements of fact are mingled with reasoning and inferences, contrary to the intent of the rule as announced by the decisions of this Court. The district court's failure to make proper findings and conclusions as urged by American Timken has resulted in the necessity of the detailed discussion of the facts in this brief.

V.

The decree is erroneous and without precedent, exceeds the permissible limits of the discretion conferred upon the district court by Section 4 of the Sherman Act, and deprives American Timken of its property without due process of law in the following respects:

(1) In enjoining American Timken from assigning, licensing, receiving or transferring patents, know-how, material, machinery or trademark or name "in such a way as

to deny third persons access thereto," because it is not charged that the exclusive exchange of any of the above was an essential part of the violation found by the district court, and these provisions in effect confiscate American Timken's property without due process of law.

(2) In enjoining American Timken from refusing to sell bearings or to provide services with respect thereto, in certain territories, it interferes with the right of a company to decide where, on what terms and to what extent it will carry on its business, and to select its customers and manner of doing business, and, in effect, forces it to do business.

(3) In enjoining certain arrangements with respect to the trademark and name "Timken," it interferes with valuable rights of American Timken in the family name of its founder, under both United States and foreign law.

(4) In ordering American Timken to divest itself of its stock interests in British and French Timken, and enjoining further acquisitions thereof, it achieves no remedial purpose under the Sherman Act, but imposes a penalty and severe hardship under circumstances without precedent in the field of anti-trust law, and will prevent American Timken and its customers from competing effectually in foreign markets by depriving the former of control of its trademark "Timken."

ARGUMENT.

I.

ANY RESTRICTIVE PROVISIONS IN THE BUSINESS AGREEMENTS BETWEEN AMERICAN TIMKEN, BRITISH TIMKEN AND FRENCH TIMKEN ARE REASONABLE AND PROPER PARTS OF THE JOINT ADVENTURE BETWEEN AMERICAN TIMKEN AND DEWAR WHICH ORIGINATED IN THE HEADS OF AGREEMENT OF MAY 16, 1927.

The facts stated demonstrate that American Timken and Dewar acted throughout from 1927, and thereafter, contemporaneously intending and considering that they were to be "partners," pursuant to a definite agreement and program, defined in the Heads of Agreement of May 16, 1927, from which they never departed.

Pursuant to this program, they jointly acquired British Timken and German Timken, and organized French Timken, and maintained, by means of agreements and provisions in the corporate articles and by-laws of these instrumentalities by which the joint venture was conducted, an elaborate system of control both as against outsiders and between themselves, with provision for turning the joint venture over to either partner in the event the other should desire to withdraw, and to American Timken in the event of Dewar's decease by means of the options provided for in their agreements.

As will be seen, it is not necessary that this joint enterprise should have constituted what is known as a "joint adventure" in a technical legal sense in order to decide the question of whether any restraints of foreign commerce imposed by its operation violated the Sherman Act. In fact, while no general partnership was created, because the relation was limited to business to be conducted in the territories assigned to the European Timken companies, it contained the elements of a limited partnership or joint venture with respect to a particular line of business. See

Kasishke, et al. v. Baker, 146 Fed. (2d) 113 (CCA 10, 1948), in which the court held on facts quite similar to those involved here that a joint venture was created.

The fact that American Timken and Dewar understood that they were to be "partners" when the latter communicated this desire to American Timken, during their negotiation of the joint enterprise in 1927 supported by their subsequent contemporaneous characterizations of their relations as such in 1929 and 1936,[26] establishes that such was

---

[26] The district court referred to only two items of evidence as rebutting these clear indications of the nature of the relation intended to be created, both of which are reconcilable with the partnership theory.

In Plaintiff's Exhibit 175 (R. 1687; offered, R. 950) Hess, paving the way for the rearrangement of the joint adventure upon sale of stock of British Timken to the public, stated that the partners were arranging a new 15 year deal, and that "In the so-called 'New Deal' we feel and hope that our past pleasant cordial relationship will continue, but at the same time it is the writer's opinion that we now have to consider that 50% of British Timken stock will be in the hands of the public" so that arrangements which might have been covered previously by "a simple letter" between the partners should be covered completely by formal agreements, because "*should you in the future wish to retire* from active participation in British Timken; *we might be very unwilling*, as far as American Timken is concerned *to continue the same relationship with some future partner as in the past*" (R. 1689). Dewar replied (Pltf's. Exh. 176, R. 1691; offered, R. 950) that he had no "thought of retiring from active business," but that, either his "interest would remain in my family" so that "there would be some other Dewar" and that with this thought in mind he had procured Pascoe "*in order to preserve continuity of management and association* with yourselves," or that American Timken would purchase his interest in British Timken upon his decease in which event American Timken would own "the controlling interest in British Timken" and appoint its own management.

This correspondence merely indicates the desire of American Timken to make provision for the situation which would occur *when the partnership with Dewar should end* by his decease. The district court quoted part of this letter (Mem. par. 157, R. 1004, 1005).

The district court also stated (Mem. par. 158, R. 1005), that in 1948 Dewar "proclaimed: 'Me' is British Timken." The com-

(Continued on following page)

the relation which the parties intended to, and did, create. As the court said in *Reid v. Shaffer*, 249 Fed. 553 (CCA 6, 1918), in which a joint venture was found to exist, "the relation of the parties to each other is determined by their intention" (p. 560). Thus, in *First Mechanics Bank v. Commissioner of Internal Revenue*, 91 Fed. (2d) 275 (CCA 3, 1937) the court, finding the existence of a joint venture, referred to evidence that the president of the corporate venturer had addressed the individual venturer "as a 'partner with us'" in their correspondence (p. 278), and, in summarizing facts showing "that the relationship of joint venture was intended and created by the parties" (p. 279), included such evidence of intention.

The district court's reference to the repeated characterization of the joint enterprise as such by American Timken's witnesses at the trial (Mem. par. 151, R. 1003) including statements by such as Hess (R. 317; 371), who was no longer employed by American Timken and had no personal interest in the outcome of the case, contained no mention of the above *contemporaneous* references to the relationship made at a time when there was no possible ulterior purpose to be served thereby.

The relation between American Timken and Dewar

(Continued from preceding page)

plete lack of probative value of this statement, removed from its context, appears as follows in his testimony as part of the *defendant's* case:

"Q. What would you say, occupying the position which you have with British Timken and being an engineer yourself, as to the value of the cooperation that British Timken get from American Timken along the lines suggested by that paragraph in the contract and of your own knowledge?

A. It is difficult to conceive that we could have started without that.

Q. And if it did assist you in starting, as you have just suggested, state whether or not it has been of great value, or not to you throughout the years? *By 'to you' I mean 'to British Timken.'*

A. *'Me' is British Timken.* It has been of very great advantage."

is strikingly similar to that involved in *United States v. Scophony Corporation of America*, 333 U. S. 795. In that case Scophony, Ltd., a British corporation, undertook to introduce its patented product into this country. To that end, it organized Scophony Corporation of America jointly with American motion picture and television interests, setting up a system of control through class A shares owned by the British company and class B shares owned by the American interests, accompanied by agreements for exclusive licensing of patents by the British company to the American company, hemispheric division of territories between them and the interchange of technical information. With respect to this complicated arrangement, this Court said (p. 811):

> "First was the phase of attempting to set up in this country as manufacturer and seller of television equipment. When that failed, the company turned to licensing and exploiting its patents by other means. *This was done through the complicated arrangements for what practically if not also technically was a joint adventure with other companies.* That project was carried out not merely through corporate forms and arrangements but by contracts binding the participating companies to the common enterprise, as well as the special medium of executing it, American Scophony. In this each corporate participant had its special functions, controls and restrictions created in part by share ownership in American Scophony, but also in important respects by contract both beyond the stock controls and dictating their character."

The arrangements, very similar to those made in the case at bar, are described in more detail in note 22 of the opinion in that case (p. 811). On the basis of the existence of such a practical joint adventure, this Court held that, because Scophony, Ltd. was engaged therein, it was "transacting business" and was "found" in this country for the purpose of service of process upon two of its directors located here. The contention of the British company that it merely held

an investment in Scophony Corporation of America, and therefore was not "found" in this country, was denied.

We are aware of the fact that this Court has said in such cases as *United States v. Yellow Cab Company*, 332 U. S. 218, that common ownership and control of various corporations are impotent to liberate a combination in restraint of trade from the impact of the Sherman Act, because an unreasonable restraint may result as readily from a conspiracy among those affiliated or integrated under common ownership as from one among those otherwise independent (p. 227).

However, if a particular relation, involving something more than mere joint ownership of corporations, is to be regarded as a joint adventure for one purpose, as it was in *United States v. Scophony Corporation of America*, 333 U. S. 795, *supra*, then certainly it should be so considered for all purposes, including that disclosed in the case at bar.

That a restraint of trade must be unreasonable in order to violate the Sherman Act, *Standard Oil Company v. United States*, 221 U. S. 1, is, of course, axiomatic. A restraint may be unreasonable either because (1), although otherwise reasonable, it is accompanied by a specific intent to accomplish a forbidden restraint; or (2) because it falls within that class which are unreasonable *per se*, such as price fixing or concerted refusal to deal; or (3) for the reason that, regardless of specific intent, it creates unreasonable power over the particular market involved, with resultant unreasonable lessening of competition therein, and, therefore, prejudices "the public interests by unduly restricting competition or unduly obstructing the course of trade,"[27] *United States v. Paramount Pictures, Inc.*, 334 U. S. 131, 173-174, and *United States v. Columbia Steel Company*, 334 U. S. 495, 522.

---

[27] *Nash v. United States*, 229 U. S. 373, 376; *Thomson v. Cayser*, 243 U. S. 66, 84; *Appalachian Coals, Inc. v. United States*, 288 U. S. 344, 360; *Sugar Institute, Inc. v. United States*, 297 U. S. 553, 597; *Apex Hosiery Co. v. Leader*, 310 U. S. 469, 501.

The question here presented is whether any restraints arising from the creation and operation of the joint adventure in the case at bar have been unreasonable for any of these three reasons. The question of whether there was a specific intent to accomplish the forbidden restraint of stifling competition will be discussed in Section III, *infra*.

The fundamental question otherwise involved on this point is whether it is unreasonable for two parties to a joint adventure, American Timken and Dewar, to arrange for the areas in which the business operations of the companies involved were to be conducted. The territorial provisions of the business agreements were not for all purposes exclusive. The provisions of the 1938 business agreement are typical of those which appeared in all of the earlier contracts. Paragraph 6A and B thereof, provides in material part as follows (Deft's. Exh. 27, R. 1771; offered, R. 291; R. 1776):

> "6. Each of the Companies parties hereto as a covenantor Company hereby covenants with each of the other Companies parties hereto as a covenantee Company that during the life of this Agreement the covenantor Company will not directly or indirectly make or sell or authorize others to make or sell bearings in the territory of the covenantee Company or in the territory of the covenantor Company knowing them to be for shipment into the territory of the covenantee Company save and except as follows to-wit:
>
> "(A) The covenantor Company may make or sell or authorize others to make or sell in its territory bearings for delivery or shipment into the territory of the covenantee Company as assembled component parts of completed articles of manufacture manufactured in the territory of the covenantor Company or as assembled component parts of completed units of manufacture manufactured in the territory of the covenantor Company for incorporation into such completed articles of manufacture.
>
> "(B) The covenantor Company in its territory may accept and execute orders for bearings for ulti-

mate destination in the territory of the covenantee Company for use for bearing replacement purposes in such completed articles of manufacture but such right shall not authorize sales to or known to be destined for manufacturers in the territory of the covenantee Company or sales at prices in conflict with the wishes of the covenantee Company and the covenantor Company from time to time will notify the covenantee Company of the details of the sales authorized under this paragraph and will pay to the covenantee Company an amount equal to five per centum of the net sale price received under any sales so authorized not being sales made through or at the request of the covenantee Company."

It is clear from this language that an American manufacturer of equipment (automobiles, trucks, etc.) whose equipment contained bearings manufactured in the United States could not be prevented by the agreements from selling either the completed product or component parts thereof in the territory in which manufacturing operations were conducted by the other parties to the agreement. It is equally clear that bearings as spare parts for such equipment could be supplied by such a manufacturer. It will be noted, of course, that the agreement stated that the prices at which such replacement bearings were to be supplied would be agreeable to the party in whose territory the bearings were being sold, but the record is clear that this provision of the contract has never been followed by the parties since the first agreement was made in 1928 (R. 896). In only one segment of the bearing business were the parties excluded from sales in the territory assigned to the other parties to the agreement, sales of bearings for original installation in equipment manufactured in such areas. The only other reference to prices in the agreements was in respect of sales to Russia, in the 1938 agreements, and the record is clear that at no time has this provision ever been invoked by the parties under the contract (R. 898, 899). There was no attempt made in the

agreements by American Timken to establish prices for the sale of bearings by British Timken or French Timken, nor did the agreements contemplate that either British Timken or French Timken would participate in the establishment of prices by American Timken.

Thus, the question of reasonableness becomes immediately apparent—whether a contract containing the provisions just outlined can lawfully be made a part of a joint adventure for the ownership and operation of foreign businesses. Exclusive cross licensing of patents and exchange of future know-how and inventions, patented or unpatented, were, of course, incidental to the creation of the joint adventure.

This Court resolved this question in *United States v. Bausch & Lomb Optical Company*, 321 U. S. 707, in which it held that the elimination of competition between parties to a joint adventure does not constitute an unreasonable restraint *per se* and does not violate the Sherman Act, if the result is not to prejudice the public interest by unduly restricting competition or obstructing the course of trade.

The statement of the facts in this Court's opinion discloses that Soft-Lite Lens Company, Inc., the sole distributor of pink tinted lenses under the trade name "Soft-Lite," limited itself to the distribution of lenses, and entered into an arrangement with the Bausch & Lomb Optical Company, a manufacturer of optical glass, by which the latter manufactured the glass and ground the lenses for the former. The parties agreed to an exclusive arrangement by which Soft-Lite purchased exclusively from Bausch & Lomb and the latter agreed not to sell its pink tinted glass to lens manufacturers, *or pink tinted lenses to the optical trade*, and that any orders therefor which it might receive would be transmitted to Soft-Lite (p. 711). Moreover, the parties cooperated in other ways, such as price fixing on adjuncts for trade distribution, such as cleaning cloths; an agreement by Bausch & Lomb to sell second quality lenses only in foreign

countries where Soft-Lite had no offices and at prices acceptable to both parties; and discussion of prices to wholesalers to which Soft-Lite sold, some of which were subsidiaries which had been acquired by Bausch & Lomb (pp. 711-714).

Although the district court, in *United States v. Bausch & Lomb Optical Company*, 45 Fed. Supp. 387 (D. C. S. D. N. Y. 1942), found that Soft-Lite had violated the Sherman Act by controlling resale prices of its wholesalers and retailers, it absolved Bausch & Lomb from any guilt in connection with its restrictive arrangement with Soft-Lite. The Government's appeal on this branch of the case, in which it urged that the "agreement of Bausch & Lomb not to sell pink tinted glass or lenses to any competitor of Soft-Lite, *and not to compete with Soft-Lite in the marketing of any pink tinted lens* unreasonably" restrained "commerce in violation of the Sherman Act" (pp. 718, 719), was denied by this Court, it being "equally divided upon the issue raised" thereby (p. 719).

The basis of the district court's decision was that the restrictive agreement was reasonably ancillary to a joint enterprise analogous to a partnership as well as a bargain for exclusive dealing and, since it did not unreasonably interfere with competition in the industry, was not violative of the Sherman Act. The district court said (45 Fed. Supp. 387, 398):

> "In a lay sense, the withdrawal of Bausch & Lomb from competition with Soft-Lite in the distribution of pink tinted lenses, and its refusal to sell pink tinted glass to competitors of Soft-Lite pursuant to arrangement, is a restraint of trade."

The court then referred to the rule of reason, stating that the "classic opinion" in *United States v. Addyston Pipe & Steel Company*, 85 Fed. 271 (CCA 6, 1898), aff'd. 175 U. S. 211, set forth standards for determining whether a restraint is unreasonable substantially similar to those

contained in the *Restatement of the Law of Contracts*, §§ 515 and 516; quoted § 516;[28] pointed out that in the *Addyston Pipe* case the court had specified that a reasonable restraint is such only as affords a fair protection to the interests of the party in favor of whom it is given and is not so large as to interfere with the interests of the public, and that the contract must be one in which there is a lawful main purpose, to which the covenant in restraint of trade is merely ancillary; and then said (p. 398):

> "In the case at bar the main purpose of the contract is to provide a source of supply for Soft-Lite. The restraining covenant is for the protection of the purchaser who is spending large sums to develop his good will and enlarge the public patronage of a relatively new article of commerce. *The arrangement, though not a partnership in legal form, is functionally a joint enterprise* in which one will produce and the other market the commodity. United States v. Addyston Pipe & Steel Co., supra, 85 F. at page 281.

---

[28] "'§ 516. *Instances of Reasonable Restraints.*

"'The following bargains do not impose unreasonable restraint of trade unless effecting, or forming part of a plan to effect, a monopoly:

"'(a) A bargain by the transferor of property or of a business not to compete with the buyer in such a way as to injure the value of the property or the business sold;

"'(b) A bargain by the buyer or lessee of property or of a business not to use it in competition with or to the injury of the seller or lessor;

"'(c) A bargain to enter into partnership with an actual or possible competitor;

"'(d) *A bargain by a partner not to interfere by competition or otherwise with the business of the partnership while it continues*, or subject to reasonable limitations after his retirement;

"'(e) A bargain to deal exclusively with another;

"'(f) A bargain by an assistant, servant, or agent not to compete with his employer, or principal, during the term of the employment or agency, or thereafter, within such territory and during such time as may be reasonably necessary for the protection of the employer or principal, without imposing undue hardship on the employee or agent.'"

"It is clearly a 'bargain to deal exclusively with another,' Restatement, supra, § 516.

"It is not necessary to find and I do not find that Soft-Lite's specifications for the glass constituted a secret formula for the protection of which a restraining covenant would be proper. There is nothing contrary to public policy in the arrangement. Nothing in the evidence indicates that Bausch & Lomb enjoyed a monopoly in the manufacture of glass for lenses, whether pink or otherwise. On the contrary, the evidence is clear that other manufacturers of lenses have had access to pink glass from other sources and that the success of Soft-Lite has stimulated emulation and competition. See Federal Trade Commission v. Raymond Bros.-Clark Co., 1924, 263 U. S. 565, 44 S. Ct. 162, 68 L. Ed. 448, 30 A. L. R. 114.

"I conclude that the exclusive arrangement between Bausch & Lomb and Soft-Lite taken independently of the distribution system is not violative of the Sherman Act."

The only bargain for exclusive dealing in the foregoing case was that for the mutually exclusive sale and purchase of pink tinted glass and lenses. Therefore, the basic justification for Bausch & Lomb's agreement not to compete with Soft-Lite in the marketing of pink tinted lenses must have been the fact that the arrangement, "though not a partnership in legal form," was "functionally a joint enterprise," and the court necessarily held that the agreement by Bausch & Lomb not to compete with the enterprise was reasonably ancillary to the arrangement between the parties for the same reason as would be a bargain by a partner not to interfere by competition with the business of the partnership.

The doctrine of this case is similar to that applied in *Kinsman v. Parkhurst*, 18 Howard (U. S.) 289, in which a covenant by a part owner of a patent to form a partnership for the manufacture and sale of a patented product by only one of the partners, and the discontinuance there-

of on his own account was held legal at common law; *Morse Twist Drill & Machine Company v. Morse*, 103 Mass. 73, 75, in which a covenant of one organizer of a corporation which purchased his business and patents not to compete therewith was held valid; and *Anchor Electric Company v. Hawkes*, 171 Mass. 101, in which the partnership principle was also applied by analogy in the case of a corporation.

The relation between the parties in the *Bausch & Lomb* case was much less similar to a partnership or joint venture than was that between American Timken and Dewar here, because he and American Timken invested their funds in the instrumentalities of the enterprise, British and French Timken, whereas there was no such close relation between Bausch & Lomb and Soft-Lite, and here the control provisions have operated just as they would in a partnership or joint adventure whereas in the *Bausch & Lomb* case there was no such close integration between the parties.

Obviously, the arrangement between Bausch & Lomb and Soft-Lite effectively prevented that competition between them on the basis of independent price fixing, which is the ultimate core of competition, *United States v. Socony Vacuum Oil Company*, 310 U. S. 150, 226, note 59, citing *Handler, Federal Antitrust Laws—a Symposium* (1931) pp. 91, *et seq.*, just as effectively as though the parties had agreed upon exclusive territories for the distribution of pink tinted lenses or upon prices thereof.

Where there is a valid main purpose to which the restraint is ancillary, and neither a monopolistic purpose nor effect, exclusive allocation of territory is not illegal *per se*. This, and other courts, have so held as a matter of common law (which is the basis of the Sherman Act, *Apex Hosiery Company v. Leader*, 310 U. S. 469, 498), *Fowle v. Park*, 131 U. S. 88, 97, and, under the Sherman Act, *Thoms v. Sutherland*, 52 Fed. (2d) 592; *Kentucky Natural Gas Corporation v. Indiana Gas & Chemical Corporation*, 118 Fed. (2d) 831;

Cole Motor Car Company v. Hurst, 228 Fed. 280, cert. den. 247 U. S. 511. The situation is the same as that relating to price fixing, as to which it is well settled that an agreement, the only purpose of which is to fix prices, is illegal *per se*, *United States v. Socony Vacuum Oil Company*, 310 U. S. 150, *supra*, but that an agreement providing for fixing prices ancillary to a legal main transaction, such as the granting of a patent license, is not. *United States v. General Electric Company*, 272 U. S. 476, adhered to on this point, *United States v. Line Material Company*, 333 U. S. 287, and *United States v. United States Gypsum Company*, 333 U. S. 364.[29]

Thus, it is clear that parties to a joint adventure in the nature of a partnership, even though it involves corporations as its instrumentalities, as in *United States v. Scophony Corporation of America*, 333 U. S. 795, and *United States v. Bausch & Lomb Optical Company*, 321 U. S. 707, *supra*,[30] may properly covenant not to compete with it during the period of its operation. This justifies the covenant of American Timken not to compete with the European Timken companies by selling bearings in the latters' territories.

It is just as clear that the agreements by each of the European Timken companies not to compete with American Timken, one of the joint adventurers, in its territory, provided for reasonable restraints ancillary to the joint adventure. Otherwise, American Timken would have been using not only the money which it invested in the enterprise, but also its know-how and such patents as it might have, to

---

[29] See *Packet Co. v. Bay*, 200 U. S. 179, in which the restraints contained in a patent license agreement, *Bement Co. v. National Harrow Co.*, 186 U. S. 70, were likened to a covenant against engaging in business by the seller ancillary to sale of a business (p. 185).

[30] The district court, although these two controlling decisions were called to its attention, made no reference thereto in its memorandum, possibly for reasons discussed in Section III, *infra*.

create competition for itself. Therefore, the agreement was similar in principle to a bargain by the buyer of property not to use it in competition with the seller, or that of a servant or agent not to compete with his employer or principal during the term of the employment or agency or thereafter, which are long recognized forms of valid ancillary restraints, *Restatement of the Law of Contracts*, § 516, subparagraphs (b) and (f), *supra* note 28, justifiable because they secure the seller or employer "against an increase of competition of his own creating," *United States v. Addyston Pipe & Steel Company*, 85 Fed. 271, 281.

The extension of the 1928 business agreements for five years from 1929 merely continued the term of the joint enterprise and obviously was intended to protect Dewar during the time that he was obligating his interest in British Timken to reimburse American Timken for making advances to keep him as an "equal partner" therein. Assistance from American Timken and absence of its competition with British Timken and French Timken for this additional period insured British Timken's making the profits out of which Dewar's obligation was to be paid. American Timken was entitled to the continuing protection of the covenants in its favor for reasons previously stated.

The sale of stock of British Timken to the public in 1935 and the extension of the period of the joint venture in connection therewith for thirty years, did not change the situation. Plaintiff's Exhibit 175, *supra*, note 26, shows that American Timken was willing to continue with Dewar as its partner for an additional period of time, but desired that the agreements between the Timken companies should cover every contingency because of the possibility of Dewar's decease. The subsequent correspondence of the parties in 1936 shows that they regarded the "partnership" between them as continuing after this re-arrangement of their affairs was made.

Obviously, agreements between corporations ordinarily are not made to terminate upon the death or with-

drawal of an individual and, therefore, the business agreements were made to extend to a certain date, 1965. It was anticipated that the venture would terminate, in the event of Dewar's death, by American Timken's taking over the control and management of British and French Timken, in which event it was quite obvious that the restrictive provisions would become meaningless, even if not done away with, because it was not to be expected that American Timken would compete with its own majority-owned subsidiaries, or vice versa, in the respective territories which they had previously served, for the same reasons that "a subsidiary will in all probability deal only with its parent for goods the parent can furnish," *United States v. Columbia Steel Company*, 334 U. S. 495, 523.

However, the insistence of the English brokers who marketed the British Timken stock on a long term agreement constituted another altogether independent justification for continuance of the restrictive covenants, because they were reasonably ancillary to the sale of the stock by protecting the purchasers thereof in the enjoyment of their property. This type of restraint is similar to that of the seller of a business who makes such a covenant to protect his purchaser. See *S. Jarvis Adams Company v. Knapp*, 121 Fed. 34 (C. C. A. 6, 1903); *Knapp v. S. Jarvis Adams Company*, 135 Fed. 1008 (C. C. A. 6, 1905), *National Enameling & Stamping Co. v. Haberman*, 120 Fed. 415 (C. C. Conn. 1903), *Peterson v. Johnson Nut Company*, 204 Minn. 300, 283 N. W. 561 (1939); *Diamond Match Company v. Roeber*, 106 N. Y. 473, 13 N. E. 419 (1887); and *Connors Bros. Ltd. v. Connors* (1940), 4 All Eng. Rep. 179 (Privy Council). On the other hand, American Timken in agreeing to sell part of its stock and at the same time to extend the period of the business agreements pursuant to which it was required to assist British and French Timken, was entitled to a continuance of protection against competition of its own making. *Thoms v. Sutherland*, 52 F. 2d 592 (C. C. A. 3, 1931); *Alden v. Wright*, 175 App. Div. 692, 162 N. Y.

Supp. 668 (App. Div., 1st Dept. 1916), *Wilgus v. Indian Lake Amusement Company*, 37 N. E. (2d) 210 (Oh. App., 1941), and *Fishman v. Fishman*, 137 N. J. Eq. 151, 43 Atl. (2d) 837 (N. J. Ch. 1945) aff'd. per curiam, 137 N. J. Eq. 454, 45 Atl. (2d) 325 (N. J., 1946).

Certainly, it cannot be contended that the maintenance of this joint venture has had the effect of prejudicing the public interest by unduly restricting competition or obstructing the course of trade.

The Timken companies compete with others in the anti-friction bearing industry, and it is obvious from the previous discussion that they have been subjected to most strenuous competition, even with respect to tapered roller bearings alone since the patents have expired and are being subjected to increasingly stronger competition, by such companies as Bower in this country and SKF in foreign markets.

American Timken's 25% production of the anti-friction bearing industry in this country has not changed since 1927 while British Timken has only 20% of the production in England, and French Timken 10% of that in France. The three companies combined would appear therefore not to have in excess of 23.2% of the production in that industry at the present time. Certainly, these percentages are modest as compared with the percentages of the industry involved in such cases as *United States v. United States Steel Corporation*, 251 U. S. 417. After considering the cases in which this question was involved, Judge Learned Hand, in *United States v. Aluminum Company of America*, 148 Fed. (2d) 416, *supra*, stated that, in determining whether or not a company has a monopoly in a particular industry "it is doubtful whether sixty or sixty-four per cent would be enough; and certainly thirty-three per cent is not" (p. 424). In *United States v. Columbia Steel Company*, 334 U. S. 495, *supra*, this Court held that, even if it should be assumed that in the future United States Steel Corporation could be expected to sell 13 per cent of the total

of structural steel products in Consolidated's trade area, and the latter 11 per cent (a total of 24 per cent), it could not be said that there would be an unreasonable restraint of trade resulting from the elimination of competition between Consolidated and the United States Steel structural fabricating subsidiaries.

Under all of these circumstances, it is clear that the joint operation of the Timken companies cannot result in giving them such a dominant position in the industry as to unduly restrain competition or obstruct trade. They are in the same position as were the parties in *United States v. Bausch & Lomb Optical Co.*, 321 U. S. 707, *supra*, in which the court emphasized the growth of competition after the organization of the joint venture in that case. It is significant in this connection that it is not charged that the Timken companies have attempted to monopolize the industry.

Nor has it been shown that the operation and practices of the Timken companies under their business arrangements have prejudicially affected the public interest in any manner.

On the contrary, the public interest has frequently been benefited thereby, as, for example, during World War II when British Timken, losing, through bombings, bearings and materials therefor needed in the war effort, was able to obtain exact replacements quickly from American Timken, SKF being of no assistance because of the metric sizes of its bearings (Pascoe, R. 408-410).

If, as we contend, the operation of the joint venture from 1927 to the date of Dewar's decease on December 21, 1950, long after the final judgment of the district court, was legal, then it goes without saying that there was no basis in fact for the judgment by the district court against American Timken.

Moreover, now that American Timken is in a position to become the majority stockholder of British Timken and the sole stockholder of French Timken by the exercise of

the options which it was granted as a part of the original plan, and the two corporations, therefore, will become its subsidiaries, the legal questions involved are those presented by the corporate integration cases such as *United States v. United States Steel Corporation*, 251 U. S. 417; *United States v. Paramount Pictures*, 334 U. S. 131; and *United States v. Columbia Steel Company*, 334 U. S. 495, *supra*. In the latter case this Court pointed out (page 527) that "the same tests which measure the legality of vertical integration by acquisition are also applicable to the acquisition of competitors in identical or similar lines of merchandise." Certainly, for the same reasons as those previously urged with respect to the joint venture, during its continuance, it is obvious that the acquisition by American Timken of these two subsidiaries will not prejudice the public interest by unduly restricting competition or obstructing the course of foreign commerce of the United States.

II.

ANY RESTRICTIVE PROVISIONS IN THE BUSINESS AGREEMENTS BETWEEN AMERICAN TIMKEN, BRITISH TIMKEN, AND FRENCH TIMKEN ARE REASONABLE AND PROPER PARTS OF THE LICENSE OF THE TRADEMARK "TIMKEN" BY AMERICAN TIMKEN TO BRITISH TIMKEN AND FRENCH TIMKEN.

This case presents an important question in respect of the right of the owner of a trade-mark to license it in various countries of the world, and the further question as to the terms upon which such licenses may be granted.

In paragraph 192 of its memorandum opinion (R. 1011) the district court made this observation:

> "Whether within the provisions of the Sherman Act commerce may be restrained to the extent that it is reasonably ancillary to protect a trade-mark has not been decided or discussed by the courts."

Preliminarily, it should be stated that the appellee's position as to ownership of the mark by American Timken, in connection with its licensing thereof, has been inconsistent throughout this case.

In the amended complaint references to the use of the trade-mark by American Timken appear at two points. In Section VI under the heading "Offenses Charged:" and in subparagraph (e) of paragraph 20 the appellee alleged that one of the means of carrying out the combination was (R. 18, 19):

> "allocating the use of the trade-mark 'Timken' to each of the parties in its designated territory, requiring that the co-conspirators not manufacture, sell or otherwise deal in bearings except under the trade-mark 'Timken' and requiring said co-conspirators to agree to surrender to the defendant rights in the name 'Timken' upon termination of such contracts, agreements and undepstandings;"

And in paragraph 5 of the prayer of the amended complaint the relief sought in respect of the trade-mark is as follows (R. 24):

"That the defendant Timken be enjoined from transferring, selling or assigning the trade-mark 'Timken' to or for the use of co-conspirators Limited or Francaise, or the successors and assigns thereof, so as in any manner to exclude the defendant from using the trade-mark 'Timken' anywhere in the world."

From this language there are two very clear conclusions to be drawn. First, the case was tried on the theory that American Timken was the owner of the trade-mark "Timken"; and, second, the relief sought was to prevent it from licensing the trade-mark to British Timken or French Timken on an *exclusive basis*. There never has been any amendment of the pleadings, and the case proceeded to trial on the basis of the allegations made in the amended complaint. It was not until oral argument in the case that the plaintiff in the district court adopted any position to the effect that American Timken did not own the trade-mark "Timken," and that, as a result, it did not have such ownership as would sustain the licensing of the trade-mark.

In the appellee's motion filed in this Court in opposition to American Timken's Statement of Jurisdiction the claim was made that it did not own the trade-mark in substantial areas of the world. In fact, there was no finding by the district court, as will appear from an examination of its memorandum (R. 958-1018), on the question of the ownership of the trade-mark.

One point should be made clear at the outset and that is that the license of the trade-mark granted by American Timken to French and British Timken was never an *exclusive* license. The provisions in the 1938 business agreement as to the trade-mark are typical of those which appeared in all of the earlier contracts with British Timken and French Timken and there was at all times a common use of the trade-mark for some purposes.

1. American Timken Owns and Has Owned, the Trade-Mark "Timken," Either by Registration, or Equitably, in All Important Countries of the World.

The facts as to the early trade-mark situation are important for several reasons.

First, as bearing on the question of the intent, purpose and motive of American Timken in interesting itself in the acquisition of British Timken and the establishment of French Timken, American Timken contended in the district court, and reasserts its contention in this Court, that it desired to correct any problems which might have arisen prior to 1927 as to the ownership of the trade-mark "Timken," and did not intend in any way to thwart international trade illegally.

Second, the facts demonstrate that American Timken at all times owned the trade-mark "Timken." As heretofore stated, while this action was commenced by the appellee on the theory that American Timken was the owner of the trade-mark, nevertheless, belatedly and without any amendments of pleadings or otherwise, it has undertaken to contend that American Timken does not own it.

The 1909 agreements between American Timken and E. & O. A. were, basically, patent licenses but in addition they served the purpose of developing goodwill for the ultimate benefit of American Timken in the mark. When they were made American Timken was not manufacturing or selling in the British or European markets. At that time it was devoting all its resources to the business of exploiting the development and sale of tapered roller bearings—a type of anti-friction bearing which was new in the anti-friction bearing market and was competitive with other anti-friction bearings, namely, ball and straight roller bearings, the use of which had been widely extended in Europe theretofore and which had been brought to the United States after much development work had been done on them in Europe (R. 499-500). No such pre-

liminary work had been done in Europe on tapered roller bearings, and the business of promoting their development and sale by American Timken in America was distinctly a new, and essentially an American, business.

It is clear that the early agreements were made for the purpose of developing the foreign market for tapered roller bearings. Because of the novelty of the product, and of the then short existence of the business life of American Timken in America, it is not surprising to find that the 1909 agreements required the licensee to manufacture and sell American Timken's patented bearings under the name "Timken" exclusively (see *supra*, p. 34).

This constituted, essentially, an attempt by American Timken to project its good will ahead of its business by requiring the use of the surname of its founder in connection with the product of the British licensee, and causing the foreign public to identify them by that name.

Therefore, there was a clear inference of the right of American Timken to demand that the use of the name "Timken" be discontinued at the termination of the 1909 license agreements.

As has been stated, American Timken was not making sales in England or Europe as of the time the 1909 contracts were executed. No European manufacturer of products in which anti-friction bearings were used would have considered making itself dependent upon a type of anti-friction bearing untried in the European market, the manufacturing source of which was 3,000 miles away. It could not be said that American Timken assigned in effect to the British licensee any common law rights in a trade-mark by making the 1909 agreements. Rather it projected its reputation into the territory of the British licensee ahead of American Timken's use there of the name "Timken" as a trade-mark. In fact, the record discloses that the latter was not using the word "Timken" as a trade-mark on any of its products as of that date. By stipulation it is

agreed that it commenced marking its product with the mark "Timken" in 1912 (R. 949).

The British licensee commenced the manufacture of tapered roller bearings on a small scale in 1909, and continued manufacturing on that scale during the First World War until 1920. The record shows (Ellis, R. 430) and (Hobley, R. 436) that at all times its product bore the trade-mark "Timken." The effect of this user by the British licensee over the years was to create as between it and American Timken, certain rights of user in the word "Timken." At the same time there existed in American Timken the equitable right described by Dr. Ladas when he gave his opinion as to the effect of the contract under English law (Ladas, R. 612).

While there was no provision in either of the 1909 agreements by which the British licensee was obligated to assign to American Timken, upon termination, the common law rights which it might have acquired in the mark by its use on the bearings under the agreements, on the other hand, the provisions therein requiring the British licensee

> "to use the name 'Timken' exclusively in connection with the Roller Bearings made or sold by it under the agreement"

and to always describe itself as a licensee, necessitate the interpretation that it amounted to an agreement on the part of the British licensee that its rights to the trade-mark terminated with the end of the agreement, so that, at least on the abandonment thereof, American Timken could then acquire new rights in the trade-mark by using it on its own product (Ladas, R. 627).

As previously seen, in 1920 the rights of E. & O. A., as licensee of American Timken, were assigned to Wolseley Motors, another subsidiary of Vickers, the assignment being made with the consent of American Timken.

In the meantime, with the enactment by Congress of the Trade-mark Act of March 19, 1920, permitting, for the

first time, the registration of surnames which had been used in commerce for more than one year, American Timken registered, in 1921, the mark "Timken" in the United States for use on its products (R. 577), which had been in effect for a substantial period of time prior thereto (R. 949).

As detailed in the Statement (*supra*, pp. 36-38) at this time American Timken, which had been concerned as early as 1911 about maintaining exclusive rights in the name of its founders (Deft's. Exh. 60, R. 1945; offered, R. 577; Deft's. Exh. 61, R. 1946; offered, R. 578), became concerned about its rights therein in England and other foreign countries, and proceeded to obtain registrations of the trade-mark in many of them as early as 1922 after it had laid the necessary ground work by obtaining registration in this country. The following is a list of the registrations in British Timken territory and the dates upon which they were obtained (Deft's. Exh. 87, R. 1972-1991; offered, R. 587):

Australia	in 1923	Jugoslavia	in 1924
Austria	" 1923	Luxembourg	" 1923
Belgium	" 1922	Netherlands	" 1922
Bulgaria	" 1923	Norway	" 1922
Czechoslovakia	" 1923	Poland	" 1926
Denmark	" 1923	Portugal	" 1924
Finland	" 1923	Roumania	" 1923
Greece	" 1926	Spain	" 1923
Hungary	" 1923	Sweden	" 1923
India	" 1923	Switzerland	" 1923
Italy	" 1922	Turkey	" 1923

Nevertheless, British Timken, in the absence of agreement to the contrary, could have contested some of these registrations on the ground of prior use in the countries in which American Timken had obtained them.

In 1924, pursuant to the negotiations detailed in the Statement (*supra*, pp. 39-41), American Timken, shocked

by the statements made by British Timken to Lothrop, and willing to do practically anything to preserve its right in the name (Deft's. Exh. 83, R. 1966; offered, R. 586), obtained express recognition by British Timken that it was using American Timken's name as licensee, and, in fact the 1925 amendments to the 1909 license agreements were based upon continuation, by express license, of what had previously been an implied trade-mark license. However, these amendments were not properly worded to cover the trade-mark as such, and American Timken was advised later that there could be no such license of a trade-mark in gross under English law, as distinguished from a sort of equitable license, accomplished by agreement of the licensee to cease using the mark upon expiration of the agreement.

As previously seen, British trade-mark counsel, in 1926, advised that this type of contract could be enforced (Deft's. Exh. 99, R. 2005; offered, R. 594; R. 2006), and Ladas testified that it gave American Timken equitable ownership of the mark under English law at that time (R. 612).

It is clear from all the testimony that before 1909 and thereafter American Timken had the right to use the name "Timken," for it was the surname of its founder. The question of the status of American Timken's rights under the 1909 license agreement as to the United Kingdom, inasmuch as it was to be enforced in England, is preeminently a question of English law. In the trial in the lower court, the appellee offered no proof whatsoever on the subject of English or, in fact, any foreign law. In contrast, Dr. Ladas testified that under English law prior to, and after, 1928 it was possible for one party to have legal ownership of the mark while another had the equitable ownership thereof (R. 612). *This evidence is undisputed in the record.*

The business agreement of 1938 (Deft's. Exh. 27, R. 1771; offered, R. 291; R. 1773) defines the territory of British Timken as consisting of:

(1) The United Kingdom of Great Britain and Northern Ireland.

(2) All countries in Europe with the exception of France and Russia, and

(3) All colonies and dependencies of Great Britain and European countries other than France (except those adjacent to America).

As to the United Kingdom and Ireland, Ladas' opinion, interpreting the agreements under British law, is clear that American Timken was, at all times prior to 1938, the equitable owner of the mark in England and that as the result of an amendment to the English Trademark Law in 1938 (Ladas, R. 611), British Timken is now in a position, without having to transfer its goodwill, to comply fully with the requirement of the contract that the mark, including British Timken's registration thereof, be assigned to American Timken upon termination of the agreement.

French Timken is also a party to the 1938 Agreement and Dr. Ladas testified that it is in a position to transfer all right, title and interest in the trademark to American Timken upon the termination thereof (Ladas, R. 626).

It has been urged in the course of the trial of this case that the trademark difficulties of American Timken in France and Germany and in England were the result of the 1909 agreements which from time to time have been referred to as unlawful although never have opposing counsel given any clear statement of the basis of their characterization of these agreements as unlawful. As a matter of fact, there is no sound basis for calling them unlawful. It was impossible for American Timken to register the mark "Timken" in foreign countries until it had registered the mark in the United States, *Ladas, Protection of Industrial Property,* 477, 538; *Derenberg, Trademark Protection and Unfair Trading,* 716. Such registration was impossible until the amendment of the American Trademark Act in 1920. Thus, it was not pos-

sible for American Timken to register the mark in either France or Germany where registrations had been obtained, as heretofore outlined, by SMG and by Prausnitzer. The difficulty was, not the 1909 agreements, but the fact that it was impossible for American Timken to register a mark that consisted of the surname of the founder of the company in a foreign country until there was an American registration to support the foreign registration.

As to the three groups of countries included in British Timken territory, the situation was as follows.

In the United Kingdom of Great Britain and Northern Ireland, no registration could be obtained by American Timken because it could not show that the surname "Timken" had acquired a secondary meaning as indicating association of such name in the public mind in Great Britain with American Timken (R. 620).

On the European continent, American Timken had obtained registrations in all countries of Europe except France and Germany.

The only country in Europe where no registration was obtained by American Timken was Russia. There no registration was obtained, undoubtedly because, long after the establishment of the Soviet regime in Russia in 1919, the value of a trade-mark registration in that country was seriously questioned. Even today, few companies in the United States consider it worth while to obtain registration therein since, as is well known, imports into Russia are made only by Soviet controlled State trusts and there is no free international commerce.

With regard to France and Germany, no valid registration could be obtained by American Timken since the mark had already been registered with priority by other persons.

In all colonies and dependencies of Great Britain and of European countries the situation was as follows:

French colonies—No registration could be obtained there since a French registration extends to the whole

French Empire, with the exception of Morocco and Tunis (R. 450-451, 624).

Spanish colonies—American Timken's Spanish registration extended to all Spanish colonies.

Portuguese colonies—American Timken's registration in Portugal extended specifically to the Portuguese colonies but no direct registration may be obtained in them. It follows that the company which has a registration for a trade-mark in Portugal has practical protection in the colonies, since another party cannot obtain registration for the same or similar mark in Portugal with the view to extending it thereto (R. 631, 632).

British colonies—These are of several groups:

Colonies in which there is no special registration of trade-marks, or where only the owner of a British registration may obtain local colonial registration (R. 616). The inability of American Timken to obtain in its name registration in Great Britain explains why these colonies could not be covered by local registration..

Colonies in which separate registration could be obtained, but because of their commercial or industrial unimportance American trade-mark owners often avoid obtaining local registration. Such colonies are, for instance, Gambia, Gold Coast Colony, Southern Rhodesia, Nigeria, and the like.

British dominions. Of these, two were excluded from British Timken's territory: Canada and Newfoundland (as adjacent to North America). In two, registrations were obtained by American Timken, Australia and India in 1923 (Deft's. Exh. 87, R. 1972; offered, R. 587). This left only the Union of South Africa and New Zealand. In these two, as well as in a large number of other British colonies of the second group, American Timken could not obtain registration because "Timken" was unregisterable *per se* as a surname, and American Timken was not in a position to show secondary meaning of the mark.

Dutch colonies—Two of these, Dutch Guiana and Dutch West Indies were excluded from British Timken's territory because adjacent to South America. In the third Dutch colony, Netherlands East Indies, no registration had been obtained.

It is clear from the foregoing discussion that American Timken had acquired equitable title to the trademark and that it was a rather unimportant portion of British Timken's territory in which such title was not evidenced by registration as early as 1928.

The Fact that American Timken Was Unable to Obtain Registration of the Trademark in Certain Countries is Unimportant Because Registration is Not the Sole Test of Ownership of a Trademark.

It is well settled in common law countries, including the United States, that registration is nothing more than evidence of a right established by user. This Court so held in *American Trading Company vs. H. E. Heacock Company*, 285 U. S. 247, stating (p. 257):

> "Accordingly we must assume that it was the intention of the Congress in the Federal Trademark Act in 1905 to provide with respect to trademarks used in commerce between continental United States and the Philippine Islands a protection similar to that which was accorded by the Act to the use of trademarks in interstate commerce. *As to the latter, the Federal Statute did not attempt to create exclusive substantive rights in marks*, or to afford a refuge for a piracy through registration under the Act, but to provide appropriate procedure and to give the described protection and remedies where property rights existed. The acquisition of such property rights in trademarks rested upon the laws of the several states."

See also *United Drug Company vs. Rectanus*, 248 U. S. 90; 99; 2 *Callman, Unfair Competition and Trade-Marks*, 1670, and 2 *Nims on Trade-Marks*, 732. On the same point see *M'Ilhenny Company v. Gaidry*, 253 Fed., 613 (CCA 5,

1918); *General Baking Company v. Gorman*, 3 Fed. (2d), 891 (CCA 1, 1925); *Macauley v. Malt-Diastase Company*, 4 Fed. (2d), 944 (C. A., D. C., 1925); *Mulhens & Kropff, Inc. v. Ferd Muelhens, Inc.*, 38 Fed. (2d), 287 (D. C., S. D., N. Y., 1929); *E. F. Pritchard Company v. Consumers Brewing Company*, 136 Fed. (2d), 512 (CCA 6, 1943); *May v. Goodyear Tire & Rubber Company*, 10 Fed. Supp. 249 (D. C. D. Mass., 1935); *Slaymaker Lock Co. v. Reese*, 24 Fed. Supp., 69, (D. C. E. D. Pa., 1938); *Charles Broadway Rouss, Inc. v. Winchester Co.*, 300 Fed. 706 (CCA 2, 1924); *Armstrong Paint & Varnish Works v. Nu-Enamel Corporation*, 305 U. S. 315.

A second proposition illustrates the unimportance of registration in respect to ownership of a trademark. *A licensee of a trademark may hold a registration in its name during the term of the license.*

While the appellee commented in the court below upon the fact that registration of the mark for certain countries (Great Britain and Northern Ireland, New Zealand and the Union of South Africa) are in the name of the licensee, British Timken, and contended that this indicated that American Timken is not the owner of the mark, the rule is well established that a licensee may register a mark during the period of his license and that such registration is in no wise inconsistent, either with the ownership of the mark by the licensor, or with the licensee's right of user as licensee for the term of the license. Thus, in *Scandinavia Belting Company vs. Asbestos & Rubber Works of America*, 257 Fed. 937 (CCA 2, 1919), the court said (p. 955):

> "But in the case now before us this court holds that one who has the exclusive right to use a trade-mark in the United States has such a special ownership therein as entitles him to its registration *during the period of his exclusive use.* 'Ownership' is the right by which a thing belongs to some one in particular to the exclusion of all others. And the right to the exclusive use of this trade-mark in this country was in this plaintiff for a period of 27 years or 7 years be-

yond the registration period fixed by the statute. To say that the relation which existed between the English and the American company was that of agency does not help the defendant, for if it be conceded that the relation is that of agency it must also be conceded that it is an agency coupled with an interest, and the right to the exclusive use is one which cannot be withdrawn, and an interest sufficient to prevent revocation is sufficient to make the plaintiff such a special 'owner' of the trade-mark as entitled it to register the same under the provisions of the act. To hold that one who has the exclusive right to use a trademark has no right to have it registered under the act would be, in our opinion, subversive of the policy and intent of the statute."

Cf. *LaLanne vs. F. R. Arnold & Company*, 39 Fed. (2d), 269 (Ct. Cust., Pat. App., 1930) and *Smith vs. Dental Products Company*, 140 Fed. (2d), 140 (CCA 7, 1944).

Thus, it is clear that under American law there is no particular significance attached to registration where the agreement between the parties is clearly a license agreement. It should be stated again, however, that the problem of whether the same rule applies in the jurisdictions abroad where the registrations were in the names of the licensees is substantially a problem of local law there. The 1938 business agreement, like the earlier agreements, was not called specifically a trademark license, obviously because in England, at that time, it was not possible to have an out-and-out license of the trademark (Ladas, R. 611), although a license of a trademark was possible in all other countries covered by the agreements (Ladas, R. 619) However, a license was intended because the Heads of Agreement of 1927 contemplated a new business agreement extending the terms of the 1909 license agreements, as amended in 1925, which provided for trade mark licenses.

The record discloses that, under the 1938 contract, American Timken owns the trademark throughout the world. The question of ownership in a given country in

volves the law of that country, for rights in a trademark do not extend beyond the confines of individual countries. Therefore, if the appellee proposed to contend that the appellant was not the owner of the mark "Timken," it was incumbent upon it to offer proof concerning the law of the countries in which it was claimed that American Timken was not the owner thereof. *No such proof was adduced on behalf of the appellee.*

There is a third reason why registration is not determinative of the right to license use of a trademark.

The position taken by the appellee, that an American company cannot invade a foreign market by licensing a foreign company to develop good will in its trademark in one or more foreign countries before the American company actually has invaded that market to the point that it can evidence its ownership in the mark by registration in that area, is clearly unsound. Indeed, under the authorities cited below, the appropriate interpretation of the 1909 agreements was that American Timken was using the operations of its first licensee under the 1909 agreements to develop good will in the name "Timken" in advance of any activity of American Timken in the market covered by the license agreements. The law of the United States is that one of the legitimate functions of a trademark license is to develop good will in the name of the licensor by licensing the use of the mark in an area where the licensor had not previously invaded. This was the holding of the Circuit Court of Appeals for the Sixth Circuit in *E. F. Pritchard Company vs. Consumers Brewing Company*, 136 Fed. (2d) 512 (CCA 6, 1943) in which the Court said (p. 519):

> "It is true, as contended by appellee, that a naked license to use a trade-mark is of no more validity than a naked assignment thereof. *Lea v. New Home Sewing Machine Co.*, C. C. N. Y., 139 F. 732. But a trade name, like a trade-mark, may be assigned, licensed, or lent, as long as it remains associated with the same

product or business with which it has become associated in the public mind. An owner of a trade name who lends the use of such a trade name, may resume its exclusive use according to the terms of the lending. *Cardinal v. Taylor,* 302 Mass. 220, 19 N. E. 2d 58. A manufacturer of a certain commodity, by agreeing to allow the purchaser thereof the use of its trade name for a certain period did not lose the exclusive right to the name after the expiration of the term; *J. F. Rowley Co. et al. v. Rowley,* 3 Cir., 18 F. 2d 700; *and one may introduce his trade-mark and create a demand for his variety of goods in a new territory by licenses. Vermont Maple Syrup Co., Inc. v. Johnson Maple Syrup Co. et al.,* D. C. Vt., 272 F. 478."

In *Vermont Maple Syrup Company v. F. N. Johnson Maple Syrup Company,* 272 Fed. 478 (D. C. D. Vt., 1921), the Vermont Company, the licensee of the Johnson Company, having learned that the mark of the latter was not registered, took out registration in its own name under the laws of the United States and of various New England states and then claimed that it was the first one to use the mark in that area and that it thereby acquired the exclusive use of the mark, notwithstanding that it was the licensee, and sued to enjoin the Johnson Company from using the mark in that area. The court held that the Vermont Company should be enjoined from infringing the mark, because "a person may introduce his trademark and create a demand for his variety of goods in new territory by licenses" (p. 479).

Thus, even though it be conceded arguendo that American Timken was not the "owner," by user, of the mark in certain areas (and we do not use the term "owner" in this instance as synonymous with registrant) it was entirely proper for it to license the use of the mark in these areas in which its business had not been expanded to the point that by use it could claim to be the owner of the mark. This is a proper means of developing good will in advance of actual ownership of the mark so that upon termination of

the license, the licensor will have had it developed for his use and benefit as a result of the good will efforts of the licensee.

We think that from all the foregoing that there can be no serious question as to the right of American Timken as owner of the mark "Timken" to license its use.

Acquisition of the Trademark in France and Germany, Where Registrations Had Not Been Obtained by American Timken.

In discussing the action of American Timken in trying to resolve the trademark situation in 1927, the district court made an observation (Mem. par. 183; R. 1009), in our view totally unsupported by any evidence, that:

> "At that time defendant was primarily concerned, therefore, not in safeguarding the trademark rights which it then possessed, but rather in acquiring the rights obtained by other manufacturers, as a consequence of the early patent license agreements, in areas where defendant had agreed not to manufacture and sell * * *"

In fact, any reasonable analysis of the situation in respect of the trademark leads to exactly the opposite conclusion from that expressed by the court.

Let us assume that it had been possible for the trademark "Timken" to have fallen into unfriendly hands in many European countries, including England and France, as well as the other countries in which there could have been a question as to how successful American Timken might have been in maintaining its ownership of the trademark. It is to be borne in mind that at no time was American Timken foreclosed from these countries by the 1909 agreements, for in all of them there was a provision making it possible for American Timken to supply bearings to American automobile manufacturers for inclusion in the cars which they manufactured and sold in those countries. More than that, each such American manufacturer who used Tim-

ken bearings in his cars also could sell replacement bearings for such purpose in any European country. If the ownership of the mark "Timken" had been established in a foreign company, not only would American Timken have been foreclosed from selling bearings directly in such country, but any American manufacturer using Timken bearings would also have been prevented from shipping his equipment into such country if it was equipped with bearings marked "Timken." The problem of supplying bearings to literally thousands of American manufacturers without the trademark "Timken" on them would have been well-nigh insurmountable.

Therefore, instead of pursuing the objective stated by the district court, in truth, American Timken was maintaining a competitive position for itself and its customers in the European market by undertaking to straighten out the trademark situation.

The French Trade-Mark Situation.

The registration by SMG, British Timken's sub-licensee, of the mark in 1921 (see p. 44, *supra*), was *prima facie* incontestable in France unless American Timken was prepared to show in a French court that its use of the mark in France antedated the use there by SMG. American Timken had no direct contractual relationship with SMG by which the former might urge an interpretation that the equitable rights to the trademark belonged to it.

While, in the district court the appellee made much of the fact that a sub-licensee of American Timken's British licensee had registered the mark in France, all that can be fairly deduced from the proof as to this situation is that American Timken's British licensee was extremely careless in making its contract with the French company by failing to provide, either for registration in its own name of the mark in France, or for its return to the former upon termination of the sublicense with the French company.

Quite clearly it was proper, lawful and appropriate for American Timken to have for one of its purposes in the 1927 negotiations with Dewar the recognition of the former's rights in the French trademark in France. Far from being evidence of anything unlawful, that act on the part of American Timken displayed a measure of foresight calculated to keep it and its customers in the United States in a competitive position in the French market.

The German Trademark Situation.

Under the German law the registration of the trademark by Prausnitzer during World War I (p. 44, *supra*), was incontestable since the first registrant acquires title thereto (Ladas R. 613). Prior user was of no avail whatever, so that neither American Timken nor British Timken could dispute his title to the trademark. Both companies could have been excluded from the German market at the whim of this registrant, who had the right to apply the mark "Timken" to roller bearings of his own manufacture or those of any party sold by him. Moreover, Prausnitzer could have exported from Germany to all countries in which neither British nor American Timken had yet used the mark, and thus could have acquired by first user or by registration rights in the trademark "Timken" adverse to both companies.

In the district court the appellee sought to imply some ulterior purpose of American Timken in undertaking to obtain return of the registration of the mark in Germany. On any fair analysis, however, what does its action actually imply? Is there any real significance in the fact that a German national, Prausnitzer, registered an American surname for a kind of goods made by American Timken in the United States and by its English licensee in England, when Prausnitzer himself was not engaged in any manufacturing enterprise? The real fact, of course, is that Prausnitzer was able, because of the combination of the law in Ger-

many with the disruption of trade with Germany resulting from wartime conditions, to place himself in a strong bargaining position as to the trademark "Timken," of which he took full advantage. Certainly the fact that American Timken undertook to recover the registration of the mark from its piratical holder raises no presumption of any desire or intent to violate the antitrust laws or to restrain competition. Prausnitzer was not a manufacturer. There was no threat of competition from him but his position in respect of the mark was a serious one in that he could have prevented the importation into Germany of bearings, or products containing bearings, marked "Timken." Instead, the obvious result, and purpose, of its reacquiring the registration of the mark in Germany was to keep it and its customers in a stronger competitive position there than it otherwise would have been.

In the district court the appellee claimed that as of 1928 there were many areas in the world in which American Timken did not own the trademark "Timken." In fact, by that time the English situation had been crystallized to the point of an acknowledgment by British Timken in the 1925 amendments to the 1909 agreements that American Timken was the equitable owner of the trademark in England. Only in France and Germany were there outstanding registrations of the mark which had been obtained in the fashion heretofore outlined. Elsewhere on the continent of Europe there was no registration in the name of British Timken or any third party, for as has been pointed out as soon as it was possible to do so American Timken had actually obtained registrations in practically every commercial area of the world.

There is not, of course, the slightest evidence in the record to sustain any claim that consideration was ever given by American Timken to acquiring the ownership of the mark "Timken" in France for the purpose of suppressing competition by SMG, the then holder of the registration in that country. In fact, the record shows that

the principal manufacturing operations of the licensee, SMG, were devoted to ball bearings and its production of tapered roller bearings was so insignificant as to make any contention that such a purpose motivated American Timken's officers clearly contrary to the undisputed evidence (R. 440, 441).

All of this activity preceded the making of the 1928 contracts and, what is of perhaps even greater importance, took place long before there was any suggestion or hint of a possibility of making a contract looking toward the acquisition of whole or part ownership in British Timken.

In conclusion on this point, American Timken, in making the arrangement with Dewar in 1927, wished to acquire an interest in British Timken and to establish French Timken and German Timken in part to resolve finally the trademark situation. The mass of uncontroverted evidence in the Statement, including particularly the advice by American trademark counsel in 1927, shows this.

The effect of the 1928 business agreement with British Timken was to establish the equitable ownership of the mark in England, which had been recognized by the 1925 supplemental agreements with British Timken in a form that was not completely satisfactory to American Timken. By the establishment of French Timken, through the investment of American Timken and Dewar, and its purchase from SMG of the trademark registration in France, the French trademark problem was settled, and by the acquisition of German Timken, in which American Timken also invested a substantial amount, the trademark situation in Germany was disposed of by having an assignment from the registrant, Prausnitzer, to the German company. Upon dissolution of that company, the mark was transferred to British Timken inasmuch as it was licensed to use it in that area. Obviously, equitable ownership of the trademark in France and Germany by American Timken was recognized by the parties as early as the Heads of Agreement of 1927

in which, in Section 10(a), it was specifically provided that "any practical steps to be taken for the protection of the name Timken and securing the exclusive reversion of the name *in all countries*". (Deft's. Exh. 15, R. 1730; offered, R. 260; 1733) to American Timken at termination of the new business agreement between American Timken and British Timken extending the substance of the existing agreements between them for ten years. The Statement also discloses that during the negotiations prior to the making of the Heads of Agreement American Timken's representative, Ely, and Dewar agreed upon the formation, acquisition or organization of companies in France and Germany to manufacture and sell tapered roller bearings under the trademark "Timken." Thus, the whole plan contemplated acquisition of the French and German trademarks and licensing thereof to the Timken companies in those countries with equitable ownership and the ultimate right to the trademark at termination of the business agreements between the companies vested in American Timken. The agreement plainly called for a reversion of the trademark rights developed by the British and French companies to American Timken upon termination of the agreement.

While the provisions of the 1928, the 1934 and the 1938 agreements are not identical, in dealing with the subject of the use of the trademark, those contained in paragraphs 3 and 4 of the 1938 agreement (Deft's. Exh. 28, R. 1780-1789; offered, R. 291; R. 1782, 1783) are substantially the same as those contained in the earlier agreements[31] and are

---

[31] "3. (A) Each of the parties hereto will use his best endeavours to maintain the distinctive character of the Trade-Mark 'Timken' and refrain from any act calculated to prejudice the rights of the parties hereto in respect thereof as now existing.

(B) It is intended that if the American Company shall so request then the British Company in its territory and if the American Company or the British Company shall so request then the French Company in its territory shall join with the requesting Company in an application for concurrent registration of the

(Continued on following page)

clearly based upon ownership of the trademark by American Timken.

2. American Timken Has Validly Licensed Use of the Trade-mark, By Controlled Licensing Thereof, to British Timken and French Timken.

The ownership of any property is in a limited sense monopolistic. It is so to the extent that any person, as the owner, can exclude any other person from a variety of rights in respect of his property, but the right that is called property, associated as it is with such exclusions, is that which the courts have undertaken to protect under our system of jurisprudence. See *Trade-Marks—Monopoly or Competition*, 43 Mich. Law Rev. 659.

In the well-known *Trade-Mark* cases, *United States v. Steffens*, 100 U. S. 82, this Court said in defining a trademark that (p. 92):

> "* * * It is a *property right* for which damages may be recovered in an action at law and the violation of which will be enjoined by a Court of Equity with compensation for past infringement. * * *"

(Continued from preceding page)

Trade-Mark 'Timken' if and so far as such registration is possible in the territory of the requested Company.

(C) It is intended that if and when the Business Agreement shall be terminated so far as regards the British Company or the French Company the British Company in the former case if and so far as it may be requested in writing by the American Company and the French Company in the latter case if and so far as it may be requested in writing by the American Company or the British Company shall cause the name 'Timken' to be eliminated from its corporate name and from the name of any person firm or Company controlled by it and shall refrain and cause any person firm or Company controlled by it to refrain from using the name 'Timken' as part of or in connection with his their or its name or as a Trade-Mark or Trade Name or otherwise and shall refrain from any act calculated to obstruct or delay the requesting Company in any steps which it may take with a view to establishing the right of the requesting Company to the use exclusively so far as practicable of the said name in the territory of the requested Com-

(Continued on following page)

In *Dupont Powder Company v. Masland*, 244 U. S. 100, this Court made the much quoted statement that (p. 102):

> "* * * The word 'property' as applied to trade-marks and trade secrets is an unanalyzed expression of certain secondary consequences of the primary fact that the law makes some rudimentary requirements of good faith * * *"

In *Bourjois & Co. v. Katzell*, 260 U. S. 689, the Court said (p. 692):

> "* * * *The monopoly in that case (of a patent) is more extensive but we see no sufficient reason for holding that the monopoly of trade-mark so far as it goes is less complete.* It deals with a delicate matter that may be of great value but that easily is destroyed and therefore should be protected with corresponding care. * * *"

What then is the "property" that is referred to in the decisions from which quotations have just been set forth? What is the nature of the "monopoly" possessed by the owner of a trade-mark? A trade-mark represents an authentic seal which denotes the origin and the quality

---

(Continued from preceding page)

pany and so far as practicable shall assign or cause any person firm or Company controlled by it to assign to the requesting Company or as it may direct any Trade-Mark or other rights in respect of the said name in its ownership or control.

"4. (A) It is intended that so long as the British Company or the French Company is actually engaged in the manufacture of bearings the British Company shall follow any advice given by the American Company and the French Company shall follow any advice given by the American Company or the British Company with respect to the manufacture of bearings pursuant to the Business Agreement so far as the same shall be economically practicable under the circumstances of the business of the Company advised.

(B) It is also intended that the manufacturing operations of the British Company and the French Company shall at all reasonable times be open to inspection in the former case by the American Company and in the latter case by the American Company and the British Company or the representatives of the Company desiring such inspection."

of the goods that bear it. This Court in *Mishawaka Rubber & Woolen Mfg. Co. v. S. S. Kresge Co.*, 316 U. S. 203, stated (p. 205):

> "The protection of trade-marks is the law's recognition of the psychological function of symbols. If it is true that we live by symbols, it is no less true that we purchase goods by them. A trade-mark is a merchandising short-cut which induces a purchaser to select what he wants, or what he has been led to believe he wants. The owner of a mark exploits this human propensity by making every effort to impregnate the atmosphere or the market with the drawing power of a congenial symbol. Whatever the means employed, the aim is the same—to convey through the mark, in the minds of potential customers, the desirability of the commodity upon which it appears. Once this is attained, the trade-mark owner has something of value. If another poaches upon the commercial magnetism of the symbol he has created, the owner can obtain legal redress * * *."

Thus, when courts refer to the protection of a trade-mark, they speak, essentially, of the protection of the business and the goodwill which it represents. Mr. Justice Holmes expressed this idea in *Prestonettes v. Coty*, 264 U. S. 359 as follows (p. 368):

> "* * * A trade-mark only gives the right to prohibit the use of it so far as to protect the owner's goodwill against the sale of another's product as his. * * *"

It is this right of ownership which this Court has held is sufficient to support a controlled license of a trade-mark.

The right of the owner of a trade-mark to license it has been recognized by the enactment by Congress of the Lanham Act, the international conventions to which the government of the United States is a party, and decisions of this and other courts in the United States.

All of these references show that there is no fundamental policy in the United States against the controlled licensing of a trade-mark. Admittedly, whether a proper

license is executed in a given country is a matter that must be controlled by the law of that country.[32]

The Lanham Act (60 Stat. 427) Effective 1947, Evidences United States Congressional Policy in Favor of Controlled Licensing of Trade-marks.

Section 5 of the Lanham Act permits licensing of the trade-mark to "related" companies;

> "Where a registered mark or a mark sought to be registered is or may be used legitimately by related companies, such use shall inure to the benefit of the registrant or applicant for registration, and such use shall not affect the validity of such mark or of its registration provided such mark is not used in such manner as to deceive the public."

The term "related company" is defined in Section 45 of the Act as follows:

> "The term 'related company' means any person who legitimately controls or is controlled by the registrant or applicant for registration in respect to the nature and quality of the goods or services in connection with which the mark is used."

---

[32] Seemingly, the appellee concedes the soundness of this position for, in its "Statement Opposing Jurisdiction and Motion to Dismiss or Affirm" this statement appears:

> "The second important question alleged to be involved in this case is the right of an American company to license the use of its trademark 'Timken' abroad on a territorial basis. Whatever right an American company might have to license its trademark abroad, it would have this right only upon a national basis and only if (1) the law of the nation in question permits the licensing of trademarks and (2) the American company complies with the requirements of such law."

The amazing thing is that having adopted this position, the appellee should undertake to challenge the ownership of, and the licensing of the trademark by, American Timken in this case, when no proof of any sort was offered by the appellee on either subject. On the contrary, the uncontroverted evidence offered on behalf of American Timken shows beyond any question that the licenses given were permitted by the laws of the various countries and that there has been full compliance with the laws of the various jurisdictions covered by the licenses given to British Timken and French Timken.

This designation obviously includes "control" by way of contract and clearly contemplates a situation in which a licensor is required to take steps to see that the product manufactured pursuant to the trade-mark license is in quality the equal of the product of the licensor.

The licenses given by American Timken to British and French Timken correspond to the policy exhibited by Sections 5 and 45 of the Lanham Act, in that they provide means for control of these "related companies," "in respect to the nature and quality of the goods or services in connection with which the mark is used" as specified by Section 45 of the Lanham Act. Section 4 of the 1938 business agreement, quoted *supra* note 21, provides for such control by American Timken, the licensor.

This Court upheld a controlled license in *Bacardi Corporation of America v. Domenech*, 311 U. S. 150, discussed *infra*.

The Timken Companies Under Their Agreements Have Conformed to the Requirements of Controlled Licensing of Trade-marks.

In practice, British Timken and French Timken, as licensees of American Timken, correspond to its "related companies," as defined in the Lanham Act, or controlled licensees under the rules laid down by the United States courts.

The Statement discloses that information in respect of the manufacture of anti-friction bearings furnished by American Timken to the licensees of its trade-mark falls generally into three categories. They are, first, information concerning bearing applications, second, that concerning design of bearings to fit the applications, and third, that as to tooling to be used on machine tools for the manufacture of bearings. In the latter connection and closely associated with it is the necessity of further information as to how to use the machines and tools after the latter have been designed.

The testimony is simply overwhelming that there has been a constant stream of information on all points from American Timken to British and French Timken which commenced as soon as the first agreements were signed in 1928 and has been constant since that time, resulting in full compliance with the "guarantee" requirements of the law relating to trademark licensing.

The Policy of the United States as Evidenced by the International Conventions to Which this Country is a Party Supports the Controlled Licensing of a Trade-mark.

While, as we have noted, the Lanham Act as such does not have extra-territorial effect, one of the purposes of the enactment of the law was to bring our trademark law into conformity with the international conventions to which this country is a signatory and to give effect to their provisions. This purpose is expressed in Section 45 of the Act in the following language:

> "The intent of this act is * * * to provide rights and remedies stipulated by treaties and conventions concerning trademarks, trade names and unfair competition entered into between the United States and foreign nations."

The efforts of the United States Government toward the adoption of international legislation with respect to licensing of trade-marks date from at least 1910. The United States has been, since 1910, a party to the Pan American Convention for Trade-Marks and Other Rights of Industrial Property and since 1887 a party to the International Convention for the Protection of Industrial Property of 1883 which has been revised several times, most recently in 1934.

The United States took the initiative for the adoption of the Pan American Convention for the Protection of Trade-Marks signed at Buenos Aires on August 20, 1910 at the Fourth International Conference of American

States.[33] This Convention, ratified by the United States on March 21, 1911,[34] contains Article VII which provides:

> "The ownership of a trade-mark includes the right to enjoy the benefits thereof, and the right of assignment or *transfer* in whole *or in part* of its ownership *or its use* in accordance with the provisions of the laws of the respective States."

Thus, the United States, ever since 1910, has had an agreement with its twenty sister Republics to the south that the owner of a trade-mark may license the use thereof as a part of the whole system of the inter-American protection of trade-marks.

At the special Pan American Conference convened in Washington in 1929 the General Inter-American Convention for Trade-Mark and Commercial Protection[35] was adopted on February 20, 1929 which contains Article 11, consisting of two paragraphs, the first of which deals with assignment of trade-marks and the second with licenses. The text of this article reads:

> "The transfer of the ownership of a registered trade-mark in the country of its original registration shall be effective and shall be recognized in the other Contracting States * * *
>
> "The use and exploitation of trade-marks may be transferred separately for each country and such transfer shall be recorded upon the production of reliable proof that such transfer has been executed in accordance with the internal law of the State in which the transfer took place * * *".

This is a reiteration of the provision of the 1910 Convention, set forth even more clearly and explicitly. At the London Conference for revision of the International Con-

[34] 39 Stat. at L., Pt. 2, p. 1675.

[35] 46 Stat. 2907. The convention is commented upon and applied by this Court in *Bacardi Corporation v. Domenech*, *supra*.

vention for the Protection of Industrial Property in 1934,[36] it was the United States Government itself which proposed a similar provision on licensing of trade-marks in the desire to create international legislation on this subject for the forty-odd countries party to such International Convention, just as it had helped to create such in the relations of the twenty-one American Republics. Its proposal for amendment of the Convention[37] read as follows:

> "Moreover, the countries of the Union will permit the use of the same trade-mark by companies related to each other so that the products sold by them are manufactured according to the same processes and technical formulas with the result that their appearance and nature are equivalent, provided that these products are duly marked with the name of the company who places them on sale with the indication of the country or place where they have been manufactured or produced."

It was on the basis of this proposal of the United States Government that the official conference undertook to insert a provision on licensing of trade-marks in the International Convention and that finally the text of Article 5 (c)(3)[38] was adopted, on the insistence primarily of the American delegation, as follows:

> "The simultaneous use of the same mark on identical or similar products by industrial or commercial establishments considered as joint owners of the mark according to the provisions of the national law of the country where protection is sought, shall neither prevent registration nor diminish in any way the protection accorded the said mark in any country of the Union, provided the said use does not result in inducing the public into error and is contrary to public interest."

[37] *Ibid.* p. 281.

[38] See *Actes*, pp. 281, 388, 460, 515.

While the proposal of the American Government was not adopted in the exact language proposed, in the final form of the amendment adopted the principle of licensing the use of a trade-mark by the proprietor thereof to a related company, subject to the condition that there be no deception of the public with regard to the origin of the products bearing the licensed trade-mark, became part of this Convention. The Convention was ratified by the United States on October 28, 1938, and is now part of our law.

The second paragraph of Article 11 of the Inter-American Convention of 1929, quoted *supra*, was considered by this Court in *Bacardi Corporation v. Domenech*, 311 U. S. 150. In this case the trade-mark was owned by a Cuban corporation which had used it on rum manufactured by it. The Cuban corporation licensed the plaintiff, Bacardi Corporation, to manufacture rum in accordance with its formula and under its trade-mark in Puerto Rico. The legislature of Puerto Rico undertook to prevent the use of the mark in Puerto Rico by enacting a statute that forbade the use of any trade-mark on any product made in Puerto Rico which had been used elsewhere than in continental United States and Puerto Rico. The question presented to this Court was whether or not enactment of the Puerto Rican legislature was valid under the existing law. Commenting upon the effect of the Inter-American Convention and its second provision, this court said (p. 164):

> "Then there is the additional recognition of the right to transfer the ownership of a registered mark, and also to transfer separately for each country the use and exploitation of trade-marks when the transfer is executed in accordance with the law of the place where it is made and is duly recorded. It will be observed that the right of protection of foreign marks on compliance with the prescribed formality is accorded in each of the ratifying states irrespective of citizenship or domicile. When the foreign mark is entitled by virtue of the treaty to registration in a ratifying state and is

duly registered there, the substantive right in its protection in that state attaches."

As a result of these considerations, the enactment of the Puerto Rican legislature was held invalid.

We submit that the proposals of the representatives of the American Government at the international conventions as outlined and the language of the international convention heretofore quoted and considered by this Court in the *Bacardi* case demonstrate clearly a policy on the part of the United States to permit licensing of trademarks on an international basis, country by country.

Controlled licenses of trademarks have been recognized by our courts. The late Edward S. Rogers, an acknowledged authority on the law of trademarks for the United States, summarized the development of trademark law in this and other countries in a report to the International Law Association in 1930 as follows, *Derenberg, Trademark Protection and Unfair Trading* (p. 586):

"The American courts are beginning to realize that the value of a trademark does not depend upon the personal identity of the producer of the goods bearing it, that the mark is valuable only to the extent that the producer, by making a good article, has given the mark value. If the guarantee of quality which the mark implies is reserved by proper standards, there is no reason to insist that the commercial origin of the goods should remain unchanged."

This principle has been recognized in a variety of situations.

Licensing to controlled subsidiaries was approved in *Keebler Weyl Baking Co. v. J. S. Irvins' Sons, Inc.*, 7 Fed. Supp. 211 (D. C. E. D. Pa. 1934).

Licensing of his trademark by a distributor to a company manufacturing his product for him, subject to his supervision as to quality, was upheld in *Knight, Inc. v. Milner & Co.*, 283 Fed. 816 (D. C. N. D. Ohio 1922), and in *Freeman v. Huyck*, 7 Fed. Supp. 971 (D. C. N. D. N. Y. 1934).

Licensing use of the trademark in the sale of a product incorporating another product, such as Coca-Cola syrup, produced by the owner of the mark, subject to regulations imposed by the owner as to incorporation, has been upheld in *Coca-Cola Co. v. Bennett*, 238 Fed. 513 (CCA 8, 1916), *Coca-Cola Co. v. J. G. Butler & Sons*, 229 Fed. 224 (D. C. E. D. Ark., 1916), and *The Coca-Cola Bottling Co. v. The Coca-Cola Co.*, 269 Fed. 796 (D. C. Del. 1920).

This court has consistently recognized that trademark rights may be held concurrently on a territorial basis by different persons or corporations. Thus, in *Hanover Star Milling Company v. Metcalf*, 240 U. S. 403, it established the concept of "bona fide concurrent user" within the limits of the United States. It said (p. 416):

> "* * * But the mark of itself cannot travel to markets where there is no article to wear the badge and no trade to offer the article."

The court held that all three users of the mark "Tea Rose" for flour were the owners thereof in the respective areas in which they had been the first users. This Court applied the same principle in *United Drug Company v. Rectanus*, 248 U. S. 90; *Bourjois & Co. v. Katzell*, 260 U. S. 689; and in *American Trading Company v. Heacock Co.*, 285 U. S. 247.

Thus, it is clear that under American law, and by every reasonable consideration, the ownership of a trademark may be on a territorial basis, and that a license may be executed on that basis which may be absolute in form; and that, at the same time, there may be concurrent user of the same mark in other areas of the world or in other states of the United States if an ownership of the mark can be shown in such differing areas or countries.

3. The Territorial Provisions Set Up in the License of the Trademark "Timken" From American Timken to British Timken and French Timken in the Respective Countries Assigned to Each Company Are Not Violative of the Sherman Act.

An analysis of the various portions of the business agreement of 1928 (Deft's. Exh. 23, R. 1754; offered, R. 274) shows clearly that it was in form and content nothing more than an ordinary trademark license agreement. The subsequent business agreements have not differed essentially from the 1928 agreement.

Clause 1 confirms the pre-existing rights of use of the trademark by the licensee British company for the territory of the 1909 agreement and thus defines the territory to which the trade-mark license extends. The character of this licensee's rights is emphasized by Clause 9 which prohibits sub-licensing without the written approval of the licensor, and by Clause 15 which prohibits assignment of the license and provides that upon liquidation of the licensee the agreement is terminated.

Clause 2 provides that the two parties shall make reciprocal use of patents pertaining to improvements in the products for which the use of the mark is licensed, and Clause 5 is corollary to this, since it requires the licensee to work the patents in the licensed territory because failure to do so may cause forfeiture of the patents. And, of course, the affirmative use of the trade-mark by the licensee in such territory is incidentally required, since failure to use may expose the trade-mark to forfeiture under provisions of foreign laws that non-use of a trade-mark for a certain term may be held to be abandonment. This is an extremely significant provision indicating that failure of the licensee to use the mark in any such territory is proof that the license of the trade-mark is not being availed of and the license to that extent is revoked.

Clause 3 confirms the reversionary rights of American Timken in its trade-mark and its equitable rights therein which are the foundation of the agreement.

Clause 4 lays the foundation for the validity of the license by providing for the supplying of technical instruction and information for the manufacture of the products by the licensor to the licensee and the compliance by the licensee with such instructions. Part of the same system of control of the licensee by the licensor is the covenant under Clause 6 that the licensee may not manufacture or sell bearings except under the terms of the agreement, which means that the licensor could not allow the mark "Timken" to be used on products made not in conformity with its standards and instructions since this would tend to destroy the goodwill and reputation of the trade-mark.

Clause 6 contains also the requirement that all bearings made by the licensee shall bear the trade-mark "Timken." This is also a necessary incident to the license. American Timken could not be expected to supply know-how and technical information—results of large investment and development expense—to promote the manufacture and sale of a product sold in competition with "Timken." The whole purpose of the arrangement of American Timken from the beginning was to create a market and a goodwill for "Timken" on a world wide basis. Of course, the licensee was put into the disadvantageous position by which, at the termination of the license, it would have to adopt a new mark for its products, but this is incident to any license agreement. Any "Coca-Cola" bottler whose bottling agreement is terminated will find himself in the necessity, if he wishes to continue his bottling business, of having to adopt a new mark and try to maintain or create a new market for it. In any case, the position of the licensee is mitigated by Clause 14 which gives

it a six-month period to enable it to shift to a new trade-mark while still selling "Timken" bearings.

Clause 7 is a natural incident of a trade-mark license agreement. American Timken could not expect British Timken to invest in, and develop, a business in a large territory of the world for "Timken" products and at the same time engage in a commercial fight with the same company which licensed it. Nor could American Timken be expected, as a penalty for granting this trade-mark license, to have the licensee engage in a commercial struggle with the licensor. And yet, keeping in mind the necessities of international trade, American Timken, as the licensor, restricted the effects of the license granted to the licensee and in effect made such license non-exclusive for certain important purposes which did not involve direct invasion by the licensor of the licensee's territory, which would have nullified the license. The license was non-exclusive in the following respects: completed manufactured articles made in the United States containing "Timken" bearings could be freely imported into the licensed territory of the licensee; replacement bearings for such completed articles could be freely imported by American Timken into the same territory; and manufacturers of vehicles in the United States could import American Timken's bearings into the territory licensed.

Corresponding rights were granted to the licensee.

Clauses 10 to 12 determine the royalty payment under the license—a normal provision in such an agreement.

In conclusion, there is no provision in the whole agreement which is not a natural and reasonable clause of an ordinary trade-mark license agreement.

It has already been shown in this brief that this Court has recognized the right to own and the right to transfer trademarks on a territorial basis and indeed the right to license them on a territorial basis. It seems clear to us,

therefore, that, if a license agreement does no more than that, it is not unlawful and does not extend the rights of a licensee beyond the ordinary scope of trademark ownership.

The first reason that suggests itself for this conclusion is the fact that ownership or right of user of a trademark does not preclude any third party from engaging in competition with the owner or licensee of the trademark in the sale of the product covered by the mark. Thus, even though American Timken owns and uses the trademark "Timken" to distinguish antifriction bearings of its manufacture, no third party is thereby precluded from making the same kind of antifriction bearings under a different mark in the United States or any place else in the world where American Timken owns the mark, in competition with it, or its licensees. The "monopoly" owned by American Timken through the medium of the trademark is limited in scope. It is limited to the point that it can only lawfully object to a competitor's undertaking to use the trademark "Timken," or a trademark similar thereto, in connection with the manufacture of a similar product which is in competition with American Timken's.

It is easy to pin the badge of "monopoly" on a trademark as a means of trying to make it appear that it is therefore an undesirable medium for use in the economic world. In fact, it is an instrument for the promotion of competition.

We have already referred to many instances in which this Court and other American courts have sustained the right to own and use a trademark on a territorial basis. Admittedly, a patent is not the same as a trademark in many respects. It has been recognized generally, however, that it is proper for the owner of a patent to grant a license thereof on a territorial basis. In *Agawam Woolen Company v. Jordan*, 74 U. S. 583, in discussing the general

principles of law involved in the rights of a patentee, this Court said (p. 593) that:

> "He may assign the letters patent by an instrument in writing either as to the whole interest or any undivided part thereof; or he may grant and convey to another the exclusive right under the patent to make and use and grant to others to make and use the thing patented within and throughout *any specified district.*".

See also, *United States v. General Electric Company*, 272 U. S. 476; *Ethyl Gasoline Corporation v. United States*, 309 U. S. 436, 456; *L. E. Waterman Company v. Kline*, 234 Fed. 891 (CCA 4, 1916); *American Equipment Company v. Tuthill*, 69 Fed. (2d) 406 (CCA 7, 1934); *Becton, Dickinson & Company v. Eisele & Company*, 86 Fed. (2d) 267 (CCA 6, 1936); *American Lecithin Company v. Warfield*, 105 Fed. (2d) 207 (CCA 7, 1939); and *Extractol Process Limited v. Hiram Walker & Sons, Inc.*, 153 Fed. (2d) 264 (CCA 7, 1946).

Thus, it is well established that the owner of a patent may license it in the United States and restrict the licensee as to area and such a license may be exclusive if the parties wish it to be. If this is the rule as to the licensing of patents, there is no sound reason why the same rule should not apply to the licensing of a trademark as well. As previously seen, territorial restraints in a patent license agreement are, basically, restraints reasonable because ancillary to the valid transaction of licensing the patent. In the only case decided involving licensing of a trademark in exclusive territories, *The Coca-Cola Bottling Co. v. The Coca-Cola Co.*, 269 Fed. 796, *supra*, the court held the restraints legal on this basis, saying (p. 814):

> "The defendant points out certain covenants of paragraphs 6, 7, 11, and 12 of the contract as amended in 1915 to show that the contract is in restraint of trade. It cites *Floding v. Floding*, 137 Ga. 531, 73 S. E. 729, and other cases, to show that the courts of Georgia refuse to recognize an agreement not to oper-

ate the same business in a territory very large in area as being in reasonable restraint of trade. But such cases have no analogy to the case at bar, where the effect of the contract was not to transfer the whole business of the vendor, but only an incidental and potential business arising out of the main business of the vendor. It is unnecessary to analyze the several covenants pointed out as being in unreasonable restraint of trade. Those covenants at most operate as a partial and not as a general restraint, and are 'merely ancillary to the main purpose of a lawful contract, and necessary *to protect the covenantee in the enjoyment of the legitimate fruits of the contract, or to protect him from the dangers of an unjust use of those fruits by the other party,' or were covenants necessary to protect the Georgia corporation in its retained business.* Such provisions are valid. *United States v. Addyston Pipe & Steel Co.*, 85 Fed. 271, 29 CCA 141, 46 LRA 122; *John D. Park & Sons Co. v. Hartman*, 153 Fed. 24, 82 CCA 158, 12 LRA (N. S.) 135. I find in the contract nothing having an effect or intended to have an effect to defeat or lessen competition or to encourage or tend to create a monopoly, nor do I find anything therein that may be said to be in unreasonable restraint of trade."

In conclusion, on this point, the territorial limitations were necessary, would have been observed in any event, and were not so restrictive as to indicate wrongful intent.

The numerous restrictions on the transaction of international trade as to which there is an abundance of proof in the record show beyond any doubt that there are many times when licensing the use of the trademark abroad in one or more countries is the only method available to an American company for the transaction of foreign business. The mark involved in this case is a manufacturing mark. Aside from any trademark consideration, if both the licensor and the licensee are making and selling, it is entirely conceivable that a licensee would not be willing to risk the investment in a business for the manufacture of a

product covered by a trademark unless he could be certain of not incurring the risk of having his business destroyed. As a matter of ordinary business prudence, he would feel obliged not to enter into any license agreement if, as a practical result, he knew that the laws of the United States would require the licensor to immediately set up a competing manufacturing and sales organization with his (the licensee's) at the risk of being held in violation of the Sherman Act.

In fact, the agreements for the territorial restrictions in the territory of British Timken and French Timken accomplished no more than what was essential for the protection of the trademark for both the licensor and the licensee. Even if there had been no such clause in the agreement of 1938 and the predecessor agreements, American Timken, of its own free will and not as a matter of contractual stipulation, would have refrained from using its mark if such use would have destroyed it in Great Britain and France. The use it made by the exempted sales for use in completed automobiles, replacement parts, etc., did not impair the validity of the trademark. Such goods were only dealt in by dealers who were service agents for the imported machines, which distinguished American Timken's goods by the fact that they were imported for replacement parts for use in foreign equipment only, and were marked with an indication of origin so that no confusion really arose between its goods and those of British Timken by such imports on a small scale.

Finally, the agreement in this instance did not seek to engraft upon the ownership right of American Timken anything beyond that reasonably included in the scope of the trademark as such. There was no requirement that either of the foreign companies purchase from American Timken any particular number of bearings or any surplus bearings. There was no agreement establishing the price at which British Timken or French Timken would sell bear-

ings in the markets in which they were to operate. Indeed, American Timken made possible the importation into this country of products produced in the territories of the licensees equipped with Timken bearings which otherwise would not have been permitted entry into the United States. As of the time that the agreements were executed in 1928, American Timken was the admitted owner of the trademark in the United States. It had registered with the customs authorities its ownership of the mark. Thus, any product which was produced by a manufacturer outside of the United States, in which a bearing carrying the mark "Timken" was included, could have been stopped at the port of entry. The agreement contemplates, however, that any product manufactured in the territory of the foreign Timken companies which is equipped with a bearing marked "Timken" shall be permitted to come into the United States as well as replacement bearings therefor. Clearly, the license agreement, instead of restricting trade, expanded the opportunity for trade in a fashion that is entirely reasonable and proper.

We submit, therefore, that the business agreements from 1928 and thereafter have in nowise violated the Sherman Act, and that the inclusion of territorial provisions in a trademark license of the type involved in this case, is entirely lawful. Therefore, for this reason alone the arrangements between the three Timken companies are lawful.

III.

THE PURPORTED FINDINGS OF FACT UPON WHICH THE DISTRICT COURT BASED ITS JUDGMENT ARE CLEARLY ERRONEOUS.

It is American Timken's contention that the district court proceeded throughout in its consideration of this case upon an assumption as to material matters of fact which is wholly inconsistent with, and unsupported by the evidence, which is indisputably to the contrary.

The findings of fact to which American Timken excepts and assigns as clearly erroneous, are set forth in detail in its assignment of errors (Numbers 42-110, inclusive; R. 1269-1283), and, relying thereon, we proceed to call the Court's attention to some of the most outstanding mistakes and misconceptions of the district court as to what we believe to be controlling questions of fact.

We are aware that Federal Rule of Civil Procedure 52(a) provides that the findings of fact of the trial court shall not be set aside upon review "unless clearly erroneous," and that this Court on this appeal will not try the case *de novo*. We submit, however, that the rule announced by this Court in the recent case of *United States v. United States Gypsum Company*, 333 U. S. 364, is applicable here. It was there held that, under Rule 52(a), "a finding of fact by the trial court is 'clearly erroneous' when, although there is evidence to support it, the reviewing court upon the entire evidence is left with the definite and firm conviction that a mistake has been committed" (p. 395.)

1. The District Court's Conclusion That At Various Times American Timken Was Combining With Potential or Actual Competitors is Clearly Erroneous.

At various points in its memorandum, the district court indicated that American Timken, pursuant to the business agreements from 1909 on, was dealing with actual or potential competitors. This idea obviously colored the district court's decision and influenced it in its conclusion that

American Timken had continued, in 1927, a combination for the specific purpose of stifling competition which had been formed some time before its acquisition of British Timken in 1927 (see section 3, *infra*).

American Timken and E. & O. A. The court made the observation at one point that the present relationship between the parties is "the outgrowth of the principal agreements in 1909, *when world markets were divided and competition was eliminated*" (Mem. par. 120, R. 995), thus clearly implying that, when the 1909 patent license agreements were entered into, they amounted to division of the world by potential competitors. Actually, as the Statement shows, E. & O. A., Vickers' subsidiary with which those agreements were made, had never manufactured any type of anti-friction bearing prior to the making of the 1909 agreements and commenced operations with a staff of not more than a half a dozen people.

American Timken and the Vickers subsidiaries from 1909 to 1927. The district court, again, stated that after the basic patents pertaining to the tapered roller bearing had expired in 1924, the 1909 license agreements, as amended in 1925, "were without pretense, contracts for the avowed purpose of suppressing competition" because they no longer revolved around the patents (Mem. par. 121, R. 995). Again the district court clearly continued the thought that the parties had divided world markets and eliminated competition, thus, at least, implying the existence at that time of a combination between strong potential competitors to control the alleged tapered roller bearing industry.

Actually, the Statement shows that Wolseley Motors, which took over the licenses from E. & O. A. in 1920, was not a possible competitor of American Timken because it had always been an automobile manufacturer, and British Timken, which was organized in 1920 to handle the bearing business as a wholly owned subsidiary of Wolseley Motors,

was no more a strong potential competitor than was its parent at that time. The Statement further discloses that from 1920 to 1927 British Timken was continually calling for assistance from American Timken in order to meet competition, and as late as 1926 was in a very poor condition to compete even in its own British market. Indeed in Ely's letter to Duncan as late as 1924 (Deft's. Exh. 83, R. 1966; offered, R. 586; R. 1967) he suggested the possibility of canceling the license agreement because British Timken's production was below the minimum specified in the license agreement. No good reason is suggested as to why American Timken would consider such a company a *strong* potential competitor.

American Timken and British Timken in 1927, at the time of American Timken's acquisition of the latter. This, of course, is the most important situation in which the district court found that American Timken was dealing with a potential or actual competitor. The district court found that in 1927 British Timken was a prosperous concern which had grown faster than American Timken and that its potent leadership in the industry compared favorably with that of American Timken so that it had become "a potential formidable competitor in the field of roller bearings" (Mem. pars. 34, R. 965; 36, R. 966). All the evidence is plainly to the contrary. In the Statement the relative impotency of British Timken is described.

The mass of uncontroverted evidence as to the actual situation of British Timken, and its predecessor subsidiaries of Vickers from 1909 to 1927, discussed in the Statement, all of which was ignored by the district court, shows without question that British Timken was not a "potential formidable competitor" of American Timken or any other company in the field of roller bearings. It was calling for help at all times, due to competition from SKF, it could not manufacture tapered roller bearings at a cost which enabled it to be competitive with the bearing manufacturers

in its own country, and, even after American Timken acquired it and had introduced American methods of production, its costs were still twice those of American Timken on comparable bearings. On the basis of comparative sales in 1926 it was 1/25th the size of American Timken and employed 500 people at that time, whereas American Timken was employing many thousands.

The district court's finding that British Timken had grown relatively faster than had American Timken is erroneous. This statement is undoubtedly based upon calculations which were contained in the appellee's brief in the district court in which it contended that British Timken sales had almost doubled in the six-year period preceding 1928, while American Timken's had increased only about 35%. This result was arrived at by comparing British Timken sales for the years 1922 through 1926 (Deft's. Exh. 230, R. 2545; offered, R. 943) with American Timken's sales for the years 1922 through 1927 (Deft's. Exh. 229, R. 2544; offered, R. 943). British Timken's sales of £240,202 in 1926 were almost double its sales of £139,370 in 1922, which, however, had decreased from £145,364 in 1921 and £212,524 in 1920, so that the period from 1922 through 1926 was not a representative period. Figures on American Timken's sales prior to 1922 do not appear in the record.

Dewar, who knew more about the matter than anybody else is uncontradicted when he said, in substance, that, without American Timken's help British Timken would never have survived.

This entirely erroneous conception of the condition of British Timken in 1927 obviously influenced the district court in its consideration of the propriety of the business agreements made in 1928 originally, and continued during the years 1928 and 1938 between the two companies, because the court said that they were "made between two manufacturers who on the basis of the evidence, were

properly characterized as the largest manufacturer in the world and the largest manufacturer in Great Britain respectively" (Mem. par. 36, R. 966).

American Timken and French Timken. Perhaps the outstanding example of the district court's erroneous conception of the potential or actual competitive conditions between American Timken and the other Timken companies is that with regard to French Timken. Here the district court found that American Timken "participated in the formation of and invested in the stock of *a potential competitor* in France" (Mem. par. 160, R. 1005). How a corporation which American Timken participated in organizing, and more than 70% of whose capital was furnished by it, could be regarded as an important "potential" competitor is difficult to understand.

Again, the district court called attention to the fact that ever since 1909 American Timken had maintained territorial market restrictions "in France with the predecessor of French Timken" (Mem. par. 152, R. 1003). The uncontroverted evidence discloses that the district court's finding that SMG was a "predecessor" of French Timken was clearly erroneous, for two reasons: first, because American Timken never had *any* contract with SMG and, second, because SMG was an entirely independent bearing manufacturer which, after selling the trademark to French Timken upon its organization by American Timken and Dewar, subsequently sold all of its assets to SKF *and became an SKF subsidiary in 1930* (R. 441).

Moreover, the uncontroverted evidence in the record discloses that not only was it impossible for these foreign companies to compete with American Timken by importing bearings into the United States during the whole period in question, but also that it would have been impossible for American Timken to compete with them on any practical basis for original installation business and consequent replacement sales in the territories in which they operated.

Other anti-friction bearing manufacturers in Europe cannot and do not sell on any substantial basis in the United States and American manufacturers cannot and do not sell in Europe to any extent. The practical reasons have been fully explained. The fact that such foreign companies as SKF and Norma Hoffman have established subsidiaries in this and other countries for the purpose of conducting bearing business in such countries, as shown in the Statement, bears out American Timken's claim in this respect.

American Timken, in addition to producing tapered roller bearings, manufactures an alloy steel tubing which is very advantageous in making anti-friction bearings. It is uncontradicted that since 1927 American Timken has sold this tubing to all its competitors who manufacture roller and ball bearings in the United States. There is no sensible explanation as to why American Timken should supply its competitors in this country with a basic need, plus information as to how to use this tubing to the best advantage, and at the same time make foreign agreements alleged to have as their purpose the stifling of non-existent foreign competition.

Thus, the district court's conclusions with respect to alleged combinations between American Timken and various potential or actual competitors from 1909 on were clearly erroneous, and no doubt had great weight in influencing it to the decision which it finally reached.

2. The District Court's Findings as to the "Dominant" Position of the Timken Companies in the Alleged Tapered Roller Bearing Industry and Market are Clearly Erroneous.

The district court was obviously mistaken in reaching the conclusion that there is a separate and distinct tapered roller bearing ma. et and industry in which American Timken, British Timken and French Timken occupied "dominant" positions (Mem. pars. 9, R. 960; 15, R. 961; and 146,

R. 1002). The Statement, *supra*, shows without question that they compete with others primarily in the anti-friction bearing industry, in which they produce approximately 25%, 20% and 10%, of anti-friction bearings in their separate countries. The district court's statement as to the extent of competition between tapered roller bearings and other types of bearings (Mem. par. 19, R. 962; par. 130, R. 997) ignores the uncontroverted evidence that they compete with other anti-friction bearings 90% of the time for original installation business, and gives the distinct impression that competition with other types of bearings exists only to a quite limited extent. Moreover, the district court's statement (Mem. par. 20, R. 962), that tapered roller bearings "constitute a distinct type of anti-friction bearings which fulfills a requirement not supplied or satisfied by others," is contrary to the uncontroverted evidence that bearings are designed to take radial and end thrust loads, and that ball bearings and other types of roller bearings are designed to perform these functions just as do tapered roller bearings, the only difference being in the way that these objects are accomplished.

Obviously, the frequent references to the "dominant" position of the three Timken companies in the "tapered roller bearing industry" and to their "dominant" position in the anti-friction bearing industry[39] shows how much the district court was impressed by their supposedly controlling influence in determining that they had combined illegally for the purpose of forming a "smoothly operating combination to control commerce in the tapered bearing industry throughout the entire world" (Mem. par. 146, R. 1002). Therefore, the district court's mistake as to the nature and extent of the market in which the three companies compete with others was obviously prejudicial to them.

---

[39] See Note 4, *supra*, for a full reference to the district court's statements in this regard.

3. The Treatment by the District Court of the Three Timken Companies as Independent Operating Units For the Purpose of Determining That They Had Combined in Violation of the Sherman Act, and Its Failure to Consider Evidence Which Demonstrated That They Were Engaged in a Joint Venture, and Its Conclusion That Their Relation Was Merely a Continuation of an Illegal Combination in Restraint of Trade Created By American Timken and Vickers' Subsidiaries Under the 1909 License Agreements, as Amended, are Clearly Erroneous.

This is the fundamental mistake made by the district court in its consideration of the evidence in this case.

The court in the course of its opinion did state some (and omitted many more) of the facts surrounding the joint venture of American Timken and Dewar having for its object the manufacture and distribution of tapered roller bearings in foreign lands, the acquisition of British Timken by them, their joint creation of French Timken, their method of managing and controlling the two foreign companies, the license of the trademark, the exchange of know-how, the assistance rendered by American Timken to the two foreign companies, and other evidentiary facts. An examination of its opinion, however, cannot fail to disclose that, throughout, it regarded the two foreign Timken companies as, not only separate and distinct corporate entities (which they at all times were), but as independent operating units and factors in the tapered roller bearing business, *which upon the uncontrovertible evidence, they clearly were not.*

This appears particularly from the following statements in the district court's memorandum:

> "123. The relationship effected and maintained was not that which prevails between a manufacturer and its exclusive foreign agents for the distribution of its product. *Each company* was a manufacturer and distributor, *independent of the others*, but joined for the sole and only purpose of mutual benefits. It is not

even contended that defendant, British Timken and French Timken ever competed." (R. 996)

"144. Defendant seeks to draw a parallel between the instant facts and those in the Columbia Steel case, supra. By contradistinction from the facts in that case defendant, British Timken and French Timken, *are separate corporations* who in their respective territories, both before and after their agreements, were potential competitors in the tapered bearing market. They were the largest dealers in tapered bearings in their respective territories. They occupied dominant positions in the entire anti-friction bearing industry. Defendant did not acquire British and French Timken." (R. 1001)

That the Court treated the three Timken companies as independent units is further evidenced by its adoption in its memorandum of the appellee's statement of the legal questions presented (R. 959):

"4. The factual and legal questions to be determined in respect of the charges of the complaint are posed by the Government as follows:

"5. Within the purview of the Sherman Act is it illegal for the 'defendant and two foreign corporations, which between them manufacture and sell a substantial portion of the world's production of anti-friction bearings, to regulate interstate and foreign commerce by private arrangements embodying the following restrictive practices'?"

The conclusion is irresistible that each of the "two foreign corporations" was here regarded by the district court as a wholly independent unit of operation—thus imparting to the agreements and understandings between the three respective Timken companies the same character as they might have if made between the three acknowledged competitors in any branch of industry as, for example, in the automobile industry, General Motors, Chrysler and Ford. And the following paragraphs throughout the district court's memorandum, dealing with the agreements,

understandings and acts of the respective Timken companies relating to various phases of the case, conclusively demonstrate that the court did consider and treat each of them as an independent operating unit: 15, 72, 78, 79, 88, 95, 99, 117, 124, 128, 129, 132, 134, 146, 147, 150, 154, 157, 160, 183, 204 and 210.

Proceeding upon the basis that the three companies were independent, the district court discussed at great length (Mem. pars. 70, R. 972, through 105, R. 990) evidence tending to show collaboration by them, all of which was just as consistent with the legal joint adventure to which they were parties and the licensing of the trademark as with an illegal combination in restraint of trade between independent operating units. The district court then discussed some evidence relating to agreements made between British Timken and French Timken and SKF subsidiaries in their countries which, as the uncontroverted evidence discloses, were terminated in 1939, have never been in operation since that date, and did not affect American commerce (Mem. pars. 106, R. 991, through 115, R. 994). Based upon this recital of evidence and facts, the district court found that the three companies had engaged in an illegal combination in restraint of trade by allocating territories, fixing prices, mutual assistance to protect each other's markets, and to eliminate the competition of outsiders and participation in foreign cartels (Mem. par. 117, R. 994), and that the evidence disclosed "an extensive and far-reaching combination to smother all competition between defendant, British and French Timken, and to stifle or suppress competition of other manufacturers by joint effort against them or by agreement with them" (Mem. par. 119, R. 995).

The court's answer to American Timken's contention that the restraints imposed upon trade by the business agreements from 1928 on were reasonable because ancillary to the operation of the joint adventure between American Timken and Dewar, was, fundamentally that, even though

"if a joint venture or partnership is formed for the purpose of a lawful business enterprise and restraints result from the right to protect established business interests no violation of law occurs," nevertheless, "if the association is formed *for the purpose* of *continuing* a combination to allocate exclusive territories in the world, to fix prices and to eliminate competition both within and without the combination, it cannot hide from the effects of the law *under the cloak* of a joint venture or partnership" (Mem. par. 163, R. 1006). The district court's theory n this respect was based on *United States v. Addyston Pipe & Steel Company*, 85 Fed. 271; *supra*, in which the court said (p. 291), that, when the case turns on the above proposition of law, "the *actual intent* to monopolize must appear. It is not deemed enough that the mere tendency of the provisions of the contract should be to restrain competition. In such cases the restraint of competition ceases to be ancillary and becomes the *main purpose* of the contract and the transfer of property and good will *or the partnership agreement* is merely ancillary and subordinate to that purpose * * *."

The district court was thus obviously of the opinion that from 1927 on, American Timken and Dewar, in spite of their negotiations upon the basis that they were to be "partners," not discussed at all by the district court (Mem. par. 41, R. 967), and the plan and agreement resulting therefrom, were merely "*continuing a combination*" (Mem. pars. 149, R. 1003, and 163, R. 1007) to restrain trade which had previously come into existence prior to their entering into their Heads of Agreement of May 16, 1927.

Other parts of the district court's memorandum also demonstrate that this is a correct analysis of its essential holding on this point. The court held, in substance, that the alleged combination was the "outgrowth of the principal agreements in 1909 when world markets were divided and competition was eliminated" (Mem. par. 120, R. 995), that those agreements were extended by the 1925 amendments

thereto, after all the basic tapered roller bearing patents had expired (Mem. par. 31, R. 965), and thereafter were no longer based on patents "*but were without pretense contracts for the avowed*[40] *purpose of suppressing competition*" (Mem. par. 121, R. 995), and, therefore, that the restraints were not ancillary to the joint adventure but, instead, the arrangements between American Timken and Dewar were made "to carry on effectively" the pre-existing alleged combination (Mem. pars. 152, R. 1003; 153, R. 1004; 154, R. 1004).

Thus it is seen, that the fundamental basis of the district court's decision was, that the 1909 patent license agreements set the pattern of restraints, that the restraints were continued in effect after the patents expired in 1924 *for the specific purpose of restraining trade*, and this *intentional* violation of the Sherman Act was merely continued by the subsequent relations between American Timken and Dewar, which were merely a "cloak" therefor.

If, therefore, the district court's opinion on this vital fact, which caused it to disregard all of the evidence tending to establish the joint venture, was erroneous; then, certainly, a clear mistake has occurred because the keystone of the arch upon which the court's decision is erected falls to the ground.

In concluding that there was not even a colorable legal basis for the restraints imposed by the 1909 license agreements after the basic patents terminated in 1924, the district court completely ignored uncontroverted evidence that American Timken's American trademark counsel advised it on February 23, 1924, prior to the negotiation of the modifications of the 1909 license agreements, that they had

---

[40] The district court based this "avowal" solely on a statement of Duncan in a letter to American Timken that the main advantage to British Timken under the 1928 business agreement would be "the advice and information to be received from you, the right to use the name 'Timken' and the absence of your competition." (Mem. par. 121, R. 995).

not terminated and that they were properly based upon the license of the trademark "Timken" to British Timken, as well as patents (Pltf's. Exh. 173, R. 1683; offered, R. 949, 950).[41] The statement contained in the letter from Duncan to American Timken in 1927 upon which the district court so heavily relied, *supra* note 40, was entirely consistent with this prior opinion by American Timken's American trademark counsel in 1924 and, in fact, expressed the same point of view. Obviously, when they were referring to "the absence of your competition," counsel were speaking of the absence of competition which would result from the continuance of the license agreements based, as they were, upon the license of the trademark "Timken," both in 1925, and later in the 1928 business agreement pursuant to the provision therefor in the 1927 Heads of Agreement.

The district court also disregarded evidence that American Timken received in 1926 an opinion from British trademark counsel (Deft's. Exh. 99, R. 2005; offered, R. 594) in which they stated that the 1925 amendments to the 1909 license agreements clearly licensed the use of the trademark "Timken" and therefore supported the provisions for payment of royalty (R. 2007).[42]

---

[41] The trademark counsel stated in part (R. 1683):

"* * * Judging from your letter, Mr. Lothrop seems to have in mind that the patent lawyers will undertake to pass on the extent of legal protection afforded to the British licensee by the several British patents with a view to determining the justice of the British Company's claim to a reduction of its royalty. *The defect in this proposition is that it wholly overlooks the trademark license, that is to say, the great value to the British Company of the right to use the word 'Timken' on its products and the further great right of excluding you from competition with it.*"

[42] Counsel stated (R. 2007):

"With regard to the question of royalties, it is clear that so long as the English Company continues to make bearings according to the methods covered by the later patents which

(Continued on following page)

Regardless of the validity of a license of the trademark to support the restraints imposed by the 1909 license agreements as amended in 1925, therefore, American Timken clearly acted upon the advice of counsel, and the fact that the agreements were extended does not give rise to a valid inference that the territorial restraints were intentionally extended until 1929, without any legal basis, and merely for the purpose of combining to restrict competition, as concluded by the district court. This, of course, constitutes one of the main questions involved in the case at bar, argued Section II, *supra*, and the district court itself stated that whether "Within the provisions of the Sherman Act commerce may be restrained to the extent that it is reasonably ancillary to protect a trademark has not been decided or discussed by the courts" (Mem. par. 192, R. 1011).

If the law is not settled at this late date, American Timken can hardly be charged with *intentionally* conspiring with British Timken in 1924 because it extended patent and trademark license agreements after the basic patents had terminated.

How could the district court's entire decision be otherwise than completely erroneous, when it is entirely based on this fundamental proposition that in 1924 the 1909

(Continued from preceding page)

are still in force, royalties are payable upon all bearings so made.

"Bearings which are not protected by any subsisting Patent would not in our opinion have been 'made under this agreement' within the meaning of Clause 7(4) of the Principal Agreement, had that agreement remained unmodified. The subsequent agreements do not in terms alter the basis of royalty payment except as regards amount; *but the agreement of January 1925 does make the use of the name 'Timken' as between the parties a matter of contract deemed to be the subject of a license and we are upon the whole of the opinion that reading the agreements together the effect is that the English Company is liable to pay royalties on all bearings sold as 'Timken' Bearings.*"

license agreements were extended without legal justification, thus evidencing an *intention* to suppress competition—a proposition entirely unsupported by evidence, and contrary to the only evidence in the record, which showed that the parties *intended* a *legal* trademark license recommended by their legal counsel?

4. The District Court's Findings that the Three Timken Companies Had Combined to Control the Alleged Tapered Roller Bearing Industry, from 1928 and Thereafter, by Stifling Competition of Outsiders, or Combining With Them, Are Clearly Erroneous.

Analysis of the facts relied upon by the district court as proving the appellee's charges demonstrates clearly that they do not support the court's findings as to conspiracy.

The district court found that the parties adhered to their contractual obligations to maintain exclusive territorial divisions as among themselves (Mem. par. 70, R. 972), and that each of them refused orders for shipment outside of its territory, referring them to the company in whose territory they were to be used (Mem. par. 71, R. 973). The court pointed to the fact that in 1929 American Timken, instead of filling an order from Ford for its Cork, Ireland plant, arranged for sale of the bearings by British Timken and shipped bearings to it to fill the order (Mem. par. 73, R. 973). This, of course, was in accordance with the basic policy of the joint enterprise.

A substantial part of the court's memorandum (Mem. pars. 74-85, R. 974-983) was devoted to a discussion of the situation created in 1939 and 1940 by England's entering World War II with the resultant inability of British Timken to handle demands for bearings in its territory expeditiously, due, apparently, to the great demand for them in England. American Timken reminded its employees of its arrangements with its "British and French associates" (Mem. pars. 74-76, R. 974-976) instructing them that it had

made arrangements to handle some small orders direct, but that it was still the policy of the company to persuade prospective customers that its "British and French associates are both able and eager to supply their foreign requirements and that they manufacture a product comparable in every way to our own" (Mem. par. 76, R. 976). Employees were told they could quote a 50% discount from its list price on standard bearings and pay a 5% commission on the net sale thereof to British Timken (Mem. par. 75, R. 975). While the court characterized this as a protective discount policy which insured the parties against competition from each other in replacement bearings because American Timken sold at a 70% discount for export in its own territory but quoted a 50% discount from the American list price on standard bearings in response to unsolicited inquiries from British Timken's territory (Mem. par. 88; R. 985), the uncontroverted evidence shows that this arrangement as to the 50% discount on quoting prices in British Timken's territory was an arrangement which resulted from American Timken's demonstrating to Dewar in 1927 that British Timken's discount on this business was not large enough to meet competition, which caused British Timken to adopt American Timken's discount at that time, 50% from list price (R. 367).

The district court's finding that this system resulted in a serious interference with Australian war production due to British Timken's inability to supply bearings was based upon letters, and not testimony, of British Timken's technical engineer (Mem. par. 80; R. 979) in Australia and its distributor there (Mem. pars. 81, 82, 83; R. 980). As soon as this matter was called to American Timken's attention arrangements were made within a period of months for it to handle business directly in the Australian territory for the duration of the war (Mem. par. 78; R. 979), which is another example of the cooperation between American Timken and Dewar in the operation of their joint enter-

prise. American Timken also advised representatives of the Australian Government that it would not consider building a bearing manufacturing plant in Australia in part because that country was under the jurisdiction of British Timken, but equally because it would be almost impossible to get delivery on any machine tools suitable for the manufacture of anti-friction bearings and no bearing manufacturer had access to machinery which could be shipped to Australia (Mem. pars. 86, 87; R. 983, 984), although it offered to take the matter up with Dewar (Pltf's. Exh. 118, R. 1527; offered, R. 196; R. 1528). Actually the decision of what was to be done in the war effort in Australia was a governmental decision. It is well known that Europe was made the main theater of operation.

The district court stated that the provisions in the 1935 and 1938 business agreements between American Timken and British Timken as to sales in Russia were carried out to the letter (Mem. par. 94; R. 986), although this statement is not supported by any evidence and is contrary to the only evidence in the record, which is, in substance, that this provision was inserted to prevent the state-controlled Russian buying agencies from causing the Timken companies to bid against each other, but that those agencies never sought quotations from American Timken and British Timken on the same business at any time (R. 898, 899).

The district court found that American Timken, British Timken and French Timken construed the contractual obligations for the interchange of information as to manufacture of bearings and of all inventions and discoveries, whether patented or not, as being for their exclusive mutual benefit, because in 1932 American Timken, which had given its big customer, Ford, a license to manufacture bearings under its United States patents, advised Ford that it could not give Ford a similar license in England under its British patents because British Timken was its exclusive licensee (Mem. par. 95; R. 987). Apparently, it is this one instance of the operation of the exclusive pat-

ent license given by American Timken to British Timken, as it had a right to do, upon which are based the elaborate provisions of the district court's final judgment, which prevent American Timken from giving patent licenses, know-how, machines, and material to British Timken or French Timken unless they are also made available to any third parties in the world who desire them.

The district court's important finding that American Timken, British Timken and French Timken "cooperated to shut out the competition of other dealers in tapered roller bearings" (Mem. par. 97; R. 987) was based upon evidence which disclosed, merely, the nature and purpose of the joint enterprise between American Timken and Dewar. This evidence showed that the three companies have considered SKF as "a common enemy," and that their general policy has been that if a tapered roller bearing is sold it must be by a manufacturer of Timken bearings (Mem. par. 99; R. 989), that if customers in British Timken's territory insisted on buying bearings from American Timken they would be permitted to do so "in order to combat competition" (Mem. par. 100; R. 988); that American Timken desired to help Dewar in every way possible during World War II by keeping Timken bearings to the front since it knew "how difficult it is to eradicate a competitor in foreign fields after he once gets a start" (Mem. par. 101; R. 988); and testimony of one of American Timken's executives that it was willing to sell bearings at a loss, if necessary, to compete with SKF in Australia and the East Indies during World War II (Mem. par. 102; R. 988, 989).[43] *In fact, there was no evidence that American Timken ever engaged in unfair competition, such as selling bearings below cost, in competition with SKF and other*

[43] W. Robert Timken testified that American Timken would have sold bearings at below cost because it considers SKF's competition unethical in that American Timken is of the opinion that SKF sells at prices below its costs to "freeze out competitors" (R. 925, 926).

competitors. Expressions such as "eradicating" competitors, "keeping them out," and "combatting" competition were used in the sense of preventing competitors from obtaining business by ordinary competitive methods (R. 563, 564; 934, 935).

The district court found that American Timken and British and French Timken sold bearings to each other on a most favorable basis to "supplement the plan of strict compliance with the allocated areas and to protect themselves from competition by outsiders" (Mem. 103; R. 989, 990), and in support of this finding quoted portions of correspondence which showed that in 1929 American Timken suggested that British Timken supply bearings for its industrial requirements in Canada due to the tariff situation, and Dewar replied that he would love to help American Timken compete with SKF in Canada because he wanted "to take every possible step we can to keep SKF out of the taper roller bearing business everywhere." Dewar testified that he meant that this should be done by "underquoting them in price" (R. 161). The district court stated that in 1939 American Timken made a similar suggestion as a means of "putting a club over the head" of SKF which was making price reductions far below those which American Timken had ever extended in the United States, Canada, and foreign countries such as Japan and South America (Mem. par. 103; R. 989). British Timken was willing to consider the matter, but thought it unlikely that it could help (Pltf's. Exh. 100; R. 1478; offered, R. 179).

The district court stated that American Timken and British Timken "made certain that the alloy steel made by defendant, especially adapted for the manufacture of bearings, was not made available for use by their competitors" (Mem. par. 104; R. 990), and cited one exchange of correspondence in 1934 in which Dewar expressed reluctance to have American Timken's tubing sold to British Timken's

competitors in its territory, and Hess assured him that nothing would be done which might harm any of the three Timken companies (Mem. par. 105; R. 990). The court made no mention of uncontroverted testimony that American Timken sells its steel to its competitors who manufacture ball and roller bearings and gives them instructions in connection with its use (R. 72-74).

The district court devoted considerable attention to the fact that British Timken and French Timken had entered into agreements with their competitors abroad to share information and to stabilize prices, and that discussions were had concerning prices between American Timken, British Timken and their foreign competitors (Mem. pars. 106-115; R. 991-994).

With respect to discussions of prices which took place in 1932 and prior years (Mem. pars. 108, 109; R. 991, 992), the uncontroverted evidence discloses that they were contemporaneous with arrangements made between British Timken and SKF in England and discussed with Spray and Hess of American Timken after they had been made. At this time the Timken companies and SKF were discussing a proposal by the latter that "the SKF Swedish company should buy the American Timken company's interests in Europe, and that The Timken Roller Bearing Company in United States should purchase the SKF's interests in that continent" (R. 207). Thus, in Plaintiff's Exhibit 73 (R. 1455; offered R. 159), Dewar in 1932 stated that he hoped "you will be able to come to a decision soon regarding SKF. I am on the verge of a real row with them in this country," that he had agreed that "pending all these discussions—which have now been going on for a year—we would let them have motorcycle bearings provided they would not interfere with our large motorcycle bearing business" (R. 1456), but that SKF had not abided by this arrangement, and he testified that these references were to this then pending transaction (R. 206, 207). In

Plaintiff's Exhibit 61 (R. 1411; offered, R. 138), Dewar, in 1932, discussed cable correspondence as to comparing American Timken's Canadian prices with those of SKF, referred to the fact that during Hess' visit in 1932 "he told us of certain events on your side of the water," and said that as a result of this information he was attempting to negotiate "an arrangement with SKF to cover orders placed by Ford-Dagenham" (R. 1411, 1412).

Dewar testified that SKF had made the proposal for this world-wide deal, and that "nothing came of it. It dragged on for a year or more and in the end it was turned down flatly by Mr. H. H. Timken" and his financial adviser (R. 207).

Thus, the uncontroverted evidence is that price discussions with SKF occurred in connection with a proposed much larger transaction with SKF which, if entered into, would really have divided up the world. American Timken rejected it.

With respect to agreements with foreign competitors by British Timken and French Timken, while there were such with SKF with respect to England and France until the commencement of World War II in 1939,[44] nevertheless, as the district court found (Mem. par. 110; R. 992) American Timken was not a party to the English and French agreements.

It was merely advised of the English agreement by Hess' correspondence with Dewar, and talks with the latter on the former's trips to England (R. 144, 145).

The first French agreement was made by Dewar with several French manufacturers of anti-friction bearings,

[44] Plaintiff's Exhibit 71 (R. 1453; offered, R. 159) shows that British Timken also had an arrangement with RIV, the Italian bearing manufacturer, as to Russian business, which, however, lasted only six or seven months in 1931 (R. 157). An agreement between British Timken and Bock in 1929 (Pltf's. Exh. 72; R. 1455; offered, R. 159) was so temporary that Dewar did not even recollect its terms (R. 159).

SKF, RIV, SRO, and M & B, apparently without prior consultation with American Timken, to commence July 1, 1932 and to continue for eighteen months. French Timken was given 7% of total French anti-friction bearing business as its quota in 1932, to be limited to 10,000,000 francs, with a guarantee of 80% of its 1932 business for 1933 (Pltf's. Exh. 51, R. 1397; offered, R. 133). This resulted in French Timken's being able to obtain some of the Citroen business which it had lost (Pltf's. Exh. 59, R. 1409; offered, R. 138), but did not interfere with its production, since it exceeded its quota in 1932 (Pltf's. Exh. 60, R. 1409; offered, R. 138; Pltf's. Exh. 63, R. 1416; offered, R. 145; 1431). The renewal of the French agreement was submitted for American Timken's consideration prior to execution thereof (Pltf's. Exh. 65; R. 1436; offered, R. 146). Although American Timken preferred to postpone this matter for another six months, Hess advised Dewar that if he considered "this impossible we go on with you in your judgment. Would suggest two year agreement" (Pltf's. Exh. 70; R. 1453; offered, R. 156). Hess had nothing to do with negotiating this agreement, and American Timken raised no objection to it because Dewar was considered the "managing partner" of British, French and German operations (R. 666).

This agreement did not interfere with exports by American Timken to France because French Timken was continuously exceeding its quota, which indicates that the agreement did not interfere with its production. Dewar testified that in his opinion none of these agreements could have had the effect of restricting exports from, or imports into, the United States of tapered roller bearings (R. 207, 208).

That these cartel agreements were not entered into by British Timken and French Timken for the purpose of rounding out a combination to dominate the mythical tapered roller bearing industry is demonstrated by the circumstances under which the agreement between French

Timken and French SKF was made. As previously seen, in 1929, Citroen, the largest French automobile manufacturer, gave French Timken its bearing business which resulted in a need for great expansion of French Timken. Unfortunately, Citroen a year or two later "fell on rather evil days and the SKF company in Sweden financed them" partly on condition that Citroen use SKF bearings exclusively (Dewar, R. 209). Citroen was compelled to cease placing any orders with French Timken, which left it with practically no orders at all, and Dewar "felt that it was better for us to have some arrangement with SKF to keep the French Timken company alive rather than let it die, which it would have done without such an arrangement" (Dewar, R. 209).

In any event, these agreements terminated at the beginning of World War II in 1939, and have never been renewed (R. 208).

Thus, the evidence relied upon by the district court, substantially all of which was documentary, when examined in the light of all the facts, does not support the court's conclusion that American Timken, British and French Timken had combined to "stifle" all competition between them, and "to stifle or suppress competition of other manufacturers by joint effort against them or agreement with them" (Mem. par. 119, R. 995).

IV.

THE DISTRICT COURT ERRED IN NOT MAKING PROPER FINDINGS OF FACT, SEPARATELY FOUND, AND CONCLUSIONS OF LAW, SEPARATELY STATED, AS REQUIRED BY RULE 52 OF THE RULES OF FEDERAL PROCEDURE.

As previously seen, the district court overruled American Timken's motion to require the appellee to file proposed findings of fact and conclusions of law in accordance with its Rule 4B, entered an order adopting its memorandum as its findings and conclusions, and overruled American Timken's motion at the end of the case that it make new, and additional, findings and conclusions by adopting those submitted therewith.

Federal Rule of Civil Procedure 52(a) requires that in all actions tried upon the facts without a jury, as was the case at bar, "the court shall find the facts specially and state separately its conclusions of law thereon and direct the entry of the appropriate judgment." This command was present also in the predecessor Equity Rule 70½ and is likewise contained in Admiralty Rule 46½ (28 U. S. C. fol. Sec. 723c). By an amendment which became effective March 19, 1948, the text of Rule 52(a) was amplified by adding the language: "If an opinion or memorandum of decision is filed, it will be sufficient if the findings of fact and conclusions of law appear therein."

The provision added by the recent amendment does not in terms purport to change this Court's substantive requirements as to the nature and scope of the findings and conclusions required in complying with Rule 52(a), but rather merely permits the use of such an opinion or memorandum of the trial court as a vehicle for compliance if the special findings and separate statement of the conclusions of law otherwise required by the rule are contained therein.

The decisions of this Court as to the substantive requirements as to findings and conclusions are that (1) there must be specific findings of all of the underlying and sub-

sidiary facts which must be found in order to determine all the issues which the case presents; (2) a discussion of portions of the evidence and the court's reasoning in its opinion do not constitute such findings; and (3) statements of fact mingled with reasoning and inferences do not meet the requirements of the rule, *Interstate Circuit, Inc. v. United States*, 304 U. S. 55; *Kelly v. Everglades Drainage District*, 319 U. S. 415; *Schneidermann v. United States*, 320 U. S. 118; *Mayo v. Lakeland Highlands Canning Co.*, 309 U. S. 310. See particularly *United States v. Aluminum Company of America*, 2 F. R. D. 224 (D. C., N. Y., 1941), in which the court denied the prevailing party's request that it adopt its opinion as its findings and conclusions, for this reason (p. 231).

When the district court's memorandum is examined in the light of the foregoing cases, it is apparent that, although it performs the function and purpose of an opinion, it does not constitute nor include the findings of fact and conclusions of law required by Rule 52(a).

First, the memorandum does not contain complete underlying and subsidiary findings on several important matters which are essential to a determination of "all the issues in the case." Among these, are the facts as to competition among all types of anti-friction bearings in substantially every type of installation; the insignificant volume of foreign trade in anti-friction bearings and the reasons therefor during the years in question; the inability of American manufacturers to export bearings on a commercially successful basis and the resultant necessity of establishing foreign affiliated corporations to manufacture and market bearings locally; the inability of foreign manufacturers to import bearings into the United States on a commercially successful basis; the relations between American Timken and Vickers' subsidiaries, other than those purely contractual; the underlying reasons for American Timken's acquisition of British Timken in conjunction with Dewar,

and the various steps taken by them to effectuate the arrangement between them and to preserve their control of and their respective interests in the European enterprises; the various phases of the basic plan of American Timken and Dewar to secure the integrated production and sale of Timken bearings throughout the world, including the extensive furnishing by American Timken of production and selling know-how to British Timken and French Timken; the circumstances attending the so-called "cartel" agreements between British Timken and French Timken and SKF and the absence of any intention thereby to affect, and of any actual effect upon, foreign commerce of the United States; and the extent of American Timken's rights in the trademark "Timken," and the problem of retaining such rights in view of adverse rules of foreign law relating to registration of trademarks, and American Timken's attempt to solve such problems by contractual provisions with British Timken and French Timken.

Second, the memorandum contains much discussion of, and quotation from, portions of the evidence as to various matters, and the court's reasoning with respect thereto. See, for example, the detailed treatment of the Australian situation during World War II (R. 977-985), of the SKF situation (R. 988-990), and of the foreign cartel arrangements (R. 991-994).

Third, such statements of fact and conclusions of law as are contained in the memorandum are not stated separately in many instances, but must be gleaned from an examination of its entire 60 pages (R. 958-1018). Many statements of fact are embedded in the district court's reasoning and argument, by which its ultimate conclusions are reached.

In short, the memorandum does not comply with the substantive requirements established by this Court with respect to findings of fact and conclusions of law under Rule 52(a).

V.

THE FINAL JUDGMENT OF THE DISTRICT COURT IS ERRONEOUS, BEYOND ITS JURISDICTION, EXCEEDS THE PERMISSIBLE LIMITS OF THE DISCRETION CONFERRED UPON IT, AND DEPRIVES AMERICAN TIMKEN OF ITS PROPERTY WITHOUT JUST COMPENSATION AND WITHOUT DUE PROCESS OF LAW CONTRARY TO THE FIFTH AMENDMENT OF THE CONSTITUTION OF THE UNITED STATES.

The jurisdiction of the district court to take action in this case is conferred by Section 4 of the Sherman Act (26 Stat. 209, § 4, 15 U. S. C., § 4) which provides that that court is vested "with jurisdiction to prevent and restrain violations of this Act." Certain of the provisions contained in the district court's final judgment are erroneous, beyond the jurisdiction conferred by Section 4 of the Sherman Act, exceed the permissible limits of the discretion conferred upon the court, or deprive American Timken of its property without just compensation and without due process of law in the following respects.

1. The Injunction Against Assignment, License, Receipt or Transfer of Patents, Know-How, Material, Machinery, and Trademark or Name "in Such a Way as to Deny Any Third Person Access Thereto" is Erroneous.

Section V of the final judgment, subsections G and H [45] (R. 1175, 1176), and Section VII, subsections A, B, C, and

---

[45] "V. Defendant is hereby enjoined and restrained from entering into, performing, adopting, adhering to, maintaining or furthering, directly or indirectly, or claiming any rights under, any combination, conspiracy, contract, agreement, arrangement, understanding, or concerted plan of action with British Timken, French Timken, or any subsidiary, successor, assign, agent, sales representative or distributor thereof; * * *

"G. To receive, grant, disclose, render available or exchange, in such a way as to deny any third person access

(Continued on following page)

7 and 8[46] (R. 1177-1179) enjoin American Timken from granting *exclusive* patent assignments or licenses, know-how, machinery and material used in the production of anti-friction bearings to British Timken, French Timken and the other parties named, and also prevent it from granting the same to those parties in exchange for *exclusive* grants and transfers of patent licenses, know-how, machinery and material to any entity whatsoever, including American Timken, but not limited thereto, by preventing such transfers "in such a way as to deny any third person access thereto."

This was done in the face of the district court's statement in its memorandum (Mem. par. 137, R. 1000) that

---

(Continued from preceding page)

thereto, any assignment, license or grant of immunity under a patent or patent application, relating to anti-friction bearings;

"H. To receive, grant, disclose, render available or exchange, in such a way as to deny any third person access thereto, (1) information, advice, assistance or rights with respect to any invention, discovery, improvement, practice, formula, pattern, device, process, method, or other technical information, relating to the production of anti-friction bearings, or (2) any material or machinery used in the production of anti-friction bearings, or any information, advice, assistance or rights with respect to any such material or machinery."

---

[46] "VII. Defendant is hereby enjoined and restrained from entering into, performing, enforcing, adhering to, maintaining, furthering, or renewing, directly or indirectly, any contract, agreement, combination, understanding or arrangement with British Timken and/or French Timken, or any subsidiary, successor, assign, agent, sales representative or distributor thereof which provides for:

"A. An assignment, license or grant of immunity under any patent or patent application;

"B. The receipt, grant, disclosure, rendering available or exchange of information, advice, assistance or rights with respect to any invention, discovery, improvement, practice, formula, pattern, device, process, method or other technical information relating to the production of anti-friction bear-

(Continued on following page)

"There is no charge made in the complaint that the parties engaged in the practice of exclusively exchanging present and future know-how and inventions, patented or unpatented," and the further rather puzzling statement that "*Although it does not convincingly appear* that *either the exclusive exchange of know-how* or the enforcement of the trademark restrictions alone served as direct instruments to eliminate competition, they have been most helpful in buttressing other illegal conduct to achieve the desired result." If it did not appear that the exclusive exchange of know-how was used as a direct instrument to eliminate competition, it is difficult to see how, in any respect, it could have assisted in carrying out the alleged combination.

Since it was not alleged that the exclusive exchange of patents, know-how, materials and machinery constituted

---

(Continued from preceding page)

ings, or of any material or machinery used in the production of anti-friction bearings, or of any information, advice, assistance or rights with respect to any such material or machinery; or

"C. The transfer of any right or immunity under a trade mark or name, relating to the production of anti-friction bearings, * * *

upon the condition or requirement that British Timken and/or French Timken, or any subsidiary, successor, assign, agent, sales representative or distributor thereof shall: * * *

"7. receive, grant, disclose, render available or exchange, in such a way as to deny any third person access thereto, any assignment, license or grant of immunity under a patent or patent application, relating to anti-friction bearings;

"8. receive, grant, disclose, render available or exchange, in such a way as to deny any third person access thereto, (a) information, advice, assistance, or rights with respect to any invention, discovery, improvement, practice, formula, pattern, device, process, method, or other technical information relating to the production of anti-friction bearings, or (b) any material or machinery used in the production of anti-friction bearings, or any information, advice, assistance or rights with respect to such material or machinery;"

part of the means by which the alleged combination in restraint of trade was carried out, the district court should not have dealt with these matters in its decree. In *United States v. National Lead Company*, 332 U. S. 319, this Court, in denying the Government's prayer that the two defendants be required to divest themselves of certain manufacturing plants said (p. 351), that "There is neither allegation in the complaint nor finding of fact" that the physical properties of the defendants had been acquired or used in violation of the Act. See also *De Beers Consolidated Mines, Ltd. v. United States*, 325 U. S. 212, in which this Court held that a preliminary injunction could not properly be granted, partly because "it deals with a matter lying wholly outside the issues in the suit" (p. 220), and *Hartford Empire Company v. United States*, 323 U. S. 386, in which this Court, in holding erroneous a provision in the decree which required the defendants to license their patents royalty free stated that the Government had not attacked the validity of any patent (p. 414), thus expressing the thought that, as validity of the patents was not in issue, it was improper to treat them as though they were invalid by destroying their value to the owners.

In any event such a provision amounts in effect to confiscation of the defendant's property without due process of law. In *Hartford Empire Company v. United States*, 323 U. S. 386, paragraph 51 of the district court's decree, completely analogous to that under discussion, enjoined each defendant from acquiring, otherwise than through direct issue from the patent office, any patent application, or exclusive rights thereunder, covering any invention embodied or employed in a machine or used in glassware manufacture, except non-exclusive rights or patents on inventions of its employees (pp. 430, 431). This court stated (p. 431) that this provision "seems to prohibit the acquisition of any patent, or of a *restricted* license under any pat-

ent by any defendant. In this respect the paragraph is inappropriate to restrain future violations of the anti-trust laws. The paragraph should be deleted." Confiscation of patents by free licensing, or by provisions against taking or granting exclusive licenses, was denied for the reasons set forth by this court in striking paragraph 24 of the decree (p. 413) with respect to which this court recognized the existence of a constitutional question when it stated (p. 413):

> "That a patent is property, protected against appropriation both by individuals and by government, has long been settled. In recognition of this quality of a patent the courts, in enjoining violations of the Sherman Act arising from the use of patent licenses, agreements, and leases, have abstained from action *which amounted to a forfeiture of the patents.*"

In *United States v. National Lead Company*, 332 U. S. 319, this court in denying the Government's request for a provision for compulsory licenses of the defendant's patents, free of royalties (p. 355), again recognized the existence of a constitutional question in this connection when it said (p. 349):

> "*We do not, in this case, face the issue of the constitutionality of such an order.* That issue would arise only in a case where the order would be more necessary and appropriate to the enforcement of the Antitrust Act than here. * * *"

With respect to know-how, the same objections apply. In *Hartford Empire Company v. United States*, 323 U. S. 386, *supra*, paragraph 24(c) of the judgment required the defendants to make available to any licensee under the compulsory licenses of patents provided for therein all drawings or patterns "relating to the machines or methods used in the manufacture of glassware" embodied in the licensed inventions (p. 413). The Court ordered this paragraph to be deleted without comment (p. 418). In *United States v.*

National Lead Company, 332 U. S. 319, *supra*, this Court denied the Government's request for a provision requiring the defendants to furnish to any applicant, at a reasonable charge, technical information desired by the applicant relating to the processes for manufacturing titanium pigments (pp. 353, 359).

It is obvious that this provision, which impairs American Timken's right to grant or receive exclusive patents, know-how, materials, and machinery, confiscates property rights of American Timken to the same extent and in the same way as that by which such a provision confiscates patent rights. Therefore, such relief was erroneous for the same reasons as those which motivated this Court in condemning confiscation of patents in the *Hartford Empire* and *National Lead* cases.

2. The Injunction Against American Timken's Agreeing With British Timken, French Timken or Any Subsidiary, Successor, Assign, Agent, Sales Representative, or Distributor Thereof to Fix, Maintain or Adhere to Prices or Other Terms and Conditions of Sale or Resale of Anti-friction Bearings in the United States is Erroneous.

Section V of the district court's final judgment [47] (R. 1175, 1176) enjoins American Timken, in substance, from

---

[47] "V. Defendant is hereby enjoined and restrained from entering into, performing, adopting, adhering to, maintaining or furthering, directly or indirectly, or claiming any rights under, any combination, conspiracy, contract, agreement, arrangement, understanding, or concerted plan of action with British Timken, French Timken, or any subsidiary, successor, assign, agent, sales representative or distributor thereof: * * *

"F. To fix, maintain or adhere to prices or price ranges, or other terms and conditions of sale or resale of anti-friction bearings produced by defendant for sale or other distribution in any territory or market, or produced by any other person for sale or other distribution in the United States."

agreeing with British Timken, French Timken, or any subsidiary, successor, assign, agent, sales representative or distributor thereof to fix, maintain or adhere to prices or price ranges or other terms and conditions of sale or resale of anti-friction bearings produced by American Timken or by any other person for sale or other distribution in the United States. Section VII [48] (R. 1177, 1178) prohibits American Timken from agreeing with the same persons for the transfer of know-how, machinery or material upon the condition or requirement that such person maintain or adhere to fixed prices or price ranges or other terms or conditions of sale or resale of anti-friction bearings (subparagraph 6, R. 1178). The injunction is perpetual in this respect, as in others.

These provisions deny to American Timken rights, which it would otherwise have under the Miller-Tydings Amendment to Section 1 of the Sherman Act, 26 Stat. 209,

---

[48] "VII. Defendant is hereby enjoined and restrained from entering into, performing, enforcing, adhering to, maintaining, furthering, or renewing, directly or indirectly, any contract, agreement, combination, understanding or arrangement with British Timken and/or French Timken, or any subsidiary, successor, assign, agent, sales representative or distributor thereof which provides for: * * *

"B. The receipt, grant, disclosure, rendering available or exchange of information, advice, assistance or rights with respect to any invention, discovery, improvement, practice, formula, pattern, device, process, method or other technical information relating to the production of anti-friction bearings, or of any material or machinery used in the production of anti-friction bearings, or of any information, advice, assistance or rights with respect to any such material or machinery; * * *

Upon the condition or requirement that British Timken and/or French Timken, or any subsidiary, successor, assign, agent, sales representative or distributor thereof shall: * * *

"6. maintain or adhere to fixed prices or price ranges, or other terms and conditions of sale or resale of anti-friction bearings;"

as amended, 50 Stat. 693,[49] to agree with the entities and persons named in these sections of the final judgment upon minimum prices for the resale of the trademarked bearing which it manufactures, and also of trademarked material, such as its steel tubing, and possible trademarked machinery or technical information which it might wish to market in the future. While, at the present time, British Timken and French Timken are manufacturers, although not in competition with American Timken, it would be possible for American Timken to have the same agent, sales representative or distributor as either one of those two companies [50] and to arrange for "fair trading" its product

---

[49] "Section 1. Every contract, combination in the form of trust or otherwise, or conspiracy, in restraint of trade or commerce among the several States, or with foreign nations, is hereby declared to be illegal: *Provided*, That nothing herein contained shall render illegal, contracts or agreements prescribing minimum prices for the resale of a commodity which bears, or the label or container of which bears, the trade mark, brand, or name of the producer or distributor of such commodity and which is in free and open competition with commodities of the same general class produced or distributed by others, when contracts or agreements of that description are lawful as applied to intrastate transactions, under any statute, law, or public policy now or hereafter in effect in any State, Territory, or the District of Columbia, in which such resale is to be made, or to which the commodity is to be transported for such resale, and the making of such contracts or agreements shall not be an unfair method of competition under section 5, as amended and supplemented, of the Act entitled 'An Act to create a Federal Trade Commission, to define its powers and duties, and for other purposes,' approved September 26, 1914: *Provided further*, That the preceding proviso shall not make lawful any contract or agreement, providing for the establishment or maintenance of minimum resale prices on any commodity herein involved, between manufacturers, or between producers, or between wholesalers, or between brokers, or between factors, or between retailers, or between persons, firms, or corporations in competition with each other. * * *".

[50] While Section VI of the final judgment prevents American Timken from using British or French Timken or their subsidiaries as agents, sales representatives or distributors, and vice versa, subsections E and F (R. 1177) it does not extend this prohibition to common sales representatives or distributors.

by the latter if it were not for these provisions in the judgment. In *United States v. Bausch & Lomb Optical Co.*, 321 U. S. 707, *supra*, this Court refused to grant a permanent injunction against Soft-Lite by which the Government sought to prevent it from "the execution of resale price maintenance contracts under the Miller-Tydings Act" (p. 729), instead leaving in effect a provision in the judgment which enjoined this practice for six months only. Certainly, in the case at bar, where alleged resale price fixing, if any, played a very minor part, as distinguished from its major importance in the *Bausch & Lomb* case, no more rigorous restrictions should be imposed upon American Timken.

3. The Injunction Against Refusal to Sell Bearings Where the Reason For Such Refusal Is That They Are For Resale or Other Distribution in British or French Territory, and Against Discrimination As to Availability As to Prices, Terms and Conditions of Sale or Failing to Provide Services and Assistance Relating to the Distribution or Use Thereof Comparable to That Made Available to Distributors and Users in American Timken's Territory, Where the Reason For Such Refusal, Discrimination or Failure is That They Are For Use, Resale or Distribution in a Country or Area Other Than American Timken's Territory, is Erroneous.

Section VI, subsection B,[51] (R. 1176-1177) enjoins American Timken from refusing to sell anti-friction bearings to any person at prices and on terms and conditions

---

[51] "VI. Defendant is hereby enjoined and restrained from: • • •

B. Refusing to sell anti-friction bearings to any person at prices and on terms and conditions of sale corresponding to those regularly offered to purchasers of the same classification for resale or other distribution in defendant's territory, as herein defined, where the reason for such refusal is that such bearings are for resale or other distribution in British territory or French territory, as herein defined;"

corresponding to those regularly offered to purchasers for resale for distribution in American Timken's territory where the reason for such refusal is that they are for resale or other distribution in British territory or French territory as defined in the judgment.

"British territory," "French territory," and "defendant's territory," respectively, are defined in section 1, G, H and I (R. 1173, 1174), substantially as the territories which are allocated to British Timken, French Timken and American Timken, respectively, by the 1938 business agreements.

Section IX [52] (R. 1179, 1180) contains substantially the same provision with respect, not only to sale and distribution of bearings, but also service and assistance in the distribution or use thereof, where the reason for such refusal is that the bearings are for use, resale or other distribution in some country or area other than American Timken's territory.

Presumably, the purpose of Section VI is to prevent American Timken from refusing to deal with customers in the territories allocated to French Timken and British Timken by the business agreements, and thus to buttress the general provisions in Section V (R. 1175) which enjoin American Timken from combining with British Timken and French Timken to allocate exclusive territory. But, in addition to being unnecessary, this provision goes too far. We believe that, properly interpreted, it does not enjoin

---

[52] "IX. Defendant is hereby enjoined from refusing to sell antifriction bearings to any person or discriminating as to availability and prices, terms, and conditions of sale of such bearings or failing to provide services and assistance relating to the distribution or use of such bearings comparable to the services and assistance made available to distributors and users of such bearings in defendant's territory, where the reason for such refusal, discrimination, or failure is that such bearings are for use, resale, or other distribution, either in their original form or incorporated in another product, in some country or area other than defendant's territory as herein defined."

American Timken from refusing to deal with any prospective purchaser of bearings because of business reasons, such as lack of financial stability, or any other reasons, such as personal animosity, except the one reason specified, namely, that the purchaser is located in British or French territory. However, even if so interpreted (and it might not be so liberally interpreted by the appellee or the district court in a future enforcement proceeding) the provision still is too broad, and, in fact, is practically unworkable. One hypothetical example should be sufficient to demonstrate this. Suppose that American Timken should decide, from motives of patriotism, that it did not care to sell bearings to purchasers or distributors located in the territory of French Indo-China because of the possibility that they might be incorporated into military equipment to be used by Communists infiltrating that territory; refusal to sell in such case would be, in part at least, for the reason that such bearings were for resale or other distribution in French territory, and also in a country or area other than American Timken's territory, under Sections VI and IX, respectively. American Timken, then, might be forced to sell in that territory, nevertheless.

While it might be urged, plausibly, that the purpose of Section VI, which is limited to sale of bearings, is merely to supplement the provision against combination to allocate exclusive territories with British Timken and French Timken, it is clear that Section IX goes far beyond any such purpose. It requires American Timken, not only to sell bearings, without discrimination as to availability, prices, terms and conditions of sale, but also to provide services and assistance relating to the distribution or use of the bearings comparable to those made available to distributors and users of such bearings in this country, to purchasers for use, resale or other distribution in their original form, or incorporated in another product, in countries outside of its territory. This possibly might be interpreted by the court as requiring American Timken, at tremendous

expense, to set up a system of sales engineers, comparable to that which it maintains in the principal cities of this country, in other countries all over the world in order to render the technical assistance and advice and other service which it gives to customers in this country with respect to original installation business.

One possible purpose of such a provision is to force American Timken into going into foreign trade in the export of its bearings, whether or not it desires so to do.

The Statement demonstrates without question the impracticability of exporting bearings manufactured in this country in an attempt to obtain original installation business, and the consequent 5% resale business which results therefrom, in foreign countries, and yet this may well be the effect of this portion of the district court's judgment.

The jurisdiction of the district court under Section 4 of the Sherman Act "to prevent or restrain" violations certainly does not extend to forcing American Timken to enter into business relations. That section was never intended to permit a court to require compulsory competition for sale by a defendant. This is made certain by the interpretation placed upon the substantive provisions of the Sherman Act by this Court.

Thus, in *United States v. Bausch & Lomb Optical Company*, 321 U. S. 707, *supra*, this Court refused to incorporate a provision in the judgment that Soft-Lite be required to file with the district court a written statement that it would sell its product, without discrimination, to any person offering to pay cash therefor, because as the Court said (p. 728) "*Congress has been liberal in enacting remedies to enforce the anti-monopoly statutes. But in no instance has it indicated an intention to interfere with ordinary commercial practice.*"

In *Hartford-Empire Co. v. United States*, 323 U. S. 386, the Hartford-Empire Company, as appears from the record in that case (R. 7735) asserted that Section 23 of the dis-

trict court's judgment therein violated the Fifth Amendment of the Constitution. This Court pointed out (p. 412) that paragraphs 21, 22 and 23 of the judgment required, *inter alia*, that all of the corporate and individual defendants, if they should engage in the business of distributing glass making machinery, should "file a writing with the court agreeing to offer, and to continue to offer, to sell any machinery used in the manufacture of glassware to any applicant at reasonable and equal prices and upon reasonable and equal terms and conditions" (p. 412). As previously seen, this Court stated that since the provisions of paragraphs 21 to 24, inclusive "in effect confiscate considerable portions of the appellants' property, we think they go beyond what is required to dissolve the combination," and struck down this portion of the judgment. While this Court, on motion to clarify its opinion in *Hartford-Empire Co. v. United States*, 324 U. S. 570, said that Hartford should be required to lease patented machines and license their manufacture, use or sale on reasonable terms (p. 573) nothing was said as to sale thereof by Hartford or the other defendants.[53]

These provisions, which compel American Timken to deal with persons with whom it might not otherwise desire to deal, are contrary, not only to the provisions of Section 4 of the Sherman Act as interpreted by this Court,[54] but

---

[53] While section 12A of the final judgment in that case required sale or lease of machines to all applicants, many of the provisions in the final judgment in that case were agreed upon by the parties; see "Compulsory Patent Licensing By Antitrust Decree," 56 Yale Law Journal 77 (1946), 90. We are advised by counsel in that case that this was the case as to section 12A.

[54] In *United States v. Colgate & Co.*, 250 U. S. 300, this Court said (p. 307):

> "The purpose of the Sherman Act is to prohibit monopolies, contracts and combinations which probably would unduly interfere with the free exercise of their rights by those engaged, or who wish to engage, in trade and commerce—in a word to preserve the right of freedom to trade. In the absence of any

(Continued on following page)

also to the Congressional policy exhibited by Section 1 of the Robinson-Patman Act, 49 Stat. 1526, 15 U. S. C. A. § 13, which provides, in part, that nothing therein contained "shall prevent persons engaged in selling goods, wares, or merchandise in commerce from selecting their own customers in bona fide transactions and not in restraint of trade."

4. The Injunction Against American Timken's Entering Into Any Agreement With British Timken or French Timken For the Transfer of Any Right or Immunity Under Any Trademark or Name Relating to the Production of Anti-friction Bearings, Upon the Conditions Forbidden, Is Erroneous.

The district court dealt with licensing the trademark in Section VII, subsection C, subparagraphs 1, 2, 4, 5 and 8 (R. 1178-1179). This paragraph of the decree enjoined American Timken from entering into, maintaining or re-

---

(Continued from preceding page)

purpose to create or maintain a monopoly, *the act does not restrict the long recognized right of trader or manufacturer engaged in an entirely private business, freely to exercise his own independent discretion as to the parties with whom he will deal.*"

See, also similar expressions in *Federal Trade Com. v. Raymond Bros.-Clark Co.*, 263 U. S. 565; *Moore v. N. Y. Cotton Exchange*, 270 U. S. 593 (1926), 606; *Brosious v. Pepsi-Cola Co.*, 155 F. (2) 99 (CCA 3, 1945); *Johnson, et al. v. J. H. Yost Lumber Co., et al.*, 117 F. 2d 53 (CCA 8, 1941) 61; *Lipson v. Socony-Vacuum Corp.*, 76 F. 2d 213 (CCA 1, 1935); *Hart v. B. F. D. N. Y., 1944); *United States v. Aluminum Co. of America*, 44 F. Supp. 97 (D. C. S. D. N. Y. 1941), (Syl. 54).

newing with "British Timken and/or French Timken, or any subsidiary, successor, assign, agent, sales agent or distributor thereof" any contract for:

> "C. The transfer of any right or immunity under a trade mark or name, relating to the production of anti-friction bearings,
>
> "upon the condition or requirement that British Timken and/or French Timken, or any subsidiary, successor, assign, agent, sales representative or distributor thereof shall:
>
> "1. allocate or divide territories or markets for the production, sale or other distribution of anti-friction bearings;
>
> "2. limit, restrain or prevent importation into or exportation from the United States of anti-friction bearings;
>
> • • • • •
>
> "4. refrain from competing or leave any person free from competition in the production, sale or other distribution of anti-friction bearings in any territory or market;
>
> "5. exclude any producer or distributor from any market for anti-friction bearings, or interfere with or restrict any producer or distributor in competing in any such market;
>
> • • • • •
>
> "8. receive, grant, disclose, render available or exchange, in such a way as to deny any third person access thereto, (a) information, advice, assistance, or rights with respect to any invention, discovery, improvement, practice, formula, pattern, device, process, method, or other technical information relating to the production of anti-friction bearings, or (b) any material or machinery used in the production of anti-friction bearings, or any information, advice, assistance or rights with respect to any such material or machinery."

It is obvious that these provisions in the judgment are directly contrary to recognized authority in this country on

the subject of licensing a mark. They restrict American Timken with respect to the trademark in several ways which deny it rights which it would otherwise have under the recognized law. However, the district court did not find nor hold that the Timken companies had used the trademark in such a way as to justify denial to American Timken of these rights. The only statement which the district court made remotely touching on the use of the trademark was that "although it does not convincingly appear that * * * the enforcement of the trademark restrictions served as direct instruments to eliminate competition, they have been most helpful in buttressing other illegal conduct to achieve the desired result" (Mem. par. 137, R. 1000). The district court did not specify in what way their enforcement has been helpful in buttressing the alleged combination, and it is impossible to see how they could have assisted in carrying it out if, as the court stated, it did not appear that the trademark was used as a direct instrument to eliminate competition. Therefore, there is no justification for denying to American Timken its customary rights with respect to use of its trademark.

We have shown heretofore that the allocation of territory in connection with a manufacturer's mark is a recognized part of the ownership of a mark and yet subparagraph 1 clearly does violence to that principle.

Subparagraph 2 is equally erroneous, for its effect is to require the licensor of a trade-mark as a condition of a foreign license to permit the foreign licensee to use the same mark in the United States that the licensor owns in the United States. American Timken is the owner of the mark "Timken" in the United States, and the effect of the Court's judgment is that, if it grants a license of the mark in any foreign country in which it owns the mark to the parties specified, it must provide that the licensee have a license to use the mark in the United States as well. There is certainly no authority for this view of the licensing of trademarks.

If the cases to which we have referred are the law, obviously this provision of the decree injects into the licensing field a matter that is unsupported by the statutes and decisions of the courts in this country. From a practical standpoint, no American company would wish to license a mark abroad if the penalty for so doing is the requirement that it give a license to its licensee to use the mark in the United States.

This section likewise makes it unlawful for an American company to give an exclusive license to one or more foreign licensees in foreign countries without reserving to the American company the right to use the mark in competition with the licensee. In short, this portion of the judgment, as does the quoted subparagraph 4, prevents an American licensor from giving an exclusive license and for practical purposes this would in most instances destroy the value of licensing a trade-mark abroad, since any proposed licensee of a manufacturer's mark would hesitate before undertaking the investment in manufacturing equipment necessary for the installation of a plant to make the product covered by the trade-mark.

Subparagraph 5 embraces the same idea as do the other subparagraphs in that it makes it unlawful for an American licensor to exclude the licensee from any market for anti-friction bearings. This provision is another method of destroying the right to grant an exclusive trade-mark license. The effect of it is that American Timken by granting a license in one country to a licensee, must of necessity grant a license in every country in which it has ownership of the mark, despite the fact that it may have other licensees in other countries. To put the matter concretely, having granted a license to British Timken to use the mark in England and a similar license to French Timken to use the mark in France, the requirement of subparagraph 5 is that a license must be granted to British Timken in the area covered by the French Timken license and conversely

French Timken must be granted a licens to use the mark in the area covered by the British Timken license. More than that, in the other sections of the world where American Timken has ownership of the mark, this requirement of the decree would make it obligatory upon the company to grant licenses to both licensees for the entire world. This proviso in the judgment makes absolutely meaningless the provisions of the international conventions heretofore quoted, the provisions of the Lanham Act, and the numerous decisions of this and other courts as to trademark licenses.

By subsection 8 the district court provided that, if American Timken supplied any technical information as to the product covered by the trade-mark or machinery for the manufacture of that product to its licensee, the same information must be made available to any third person. Certainly there is no authority for the inclusion of such a proviso in a decree dealing with a trade-mark license. The only basis for including such a proviso would be that activity in this regard under the license was unlawful and that, as a penalty for engaging in unlawful conduct, the licensor would be obligated to make information theretofore unlawfully given exclusively to the licensee available to third parties.

The supplying of such know-how and information, not only is not improper, but indeed is necessary (in order to make the licensee's product comparable in quality to the licensor's), if the licensor is to retain ownership in the trade-mark. In *Morse-Starrett Products Company vs. Steccone,* 86 F. Supp. 796 (D. C. N. D. Cal. S. D., 1949), the court considered this question, and stated (p. 805):

> "If the owner of a trademark wants to license the use thereof to another and still retain as his own the enjoyment of the rights stemming therefrom, he must do so in such a way that he maintains sufficient control over the nature and quality of the finished product, over the activities of the licensee, as will enable the licensor to sustain his original position of guarantor

to the public that the goods now bearing the trademark are of the same nature and quality as were the goods bearing the trademark before the licensing, or, that the mark now has the same meaning as far as the public is concerned as it did before the licensing.

"No such control was ever exercised or attempted to be exercised by defendant."

In *E. I. Du Pont de Nemours Co. v. Celanese Corporation*, 167 Fed. (2d) 484 (Ct. Cust. Pat. App., 1948), the court held similarly.

If, as provided in subparagraph 8, the penalty for so doing is the further requirement that such information must be made available to third parties the making of controlled trade-mark licenses will stop immediately. No licensor would be willing to supply data and information to his licensee so that the latter's product will equal the quality of the licensor's product with the knowledge that he must put every third party competitor on the same basis.

This provision of the judgment, therefore, effectively confiscates American Timken's trademark rights, by preventing licensing thereof, whether exclusive or not, just as it confiscates patent rights and know-how, contrary to the decisions of this Court in *Hartford-Empire Company v. United States*, 323 U. S. 386, and *United States v. National Lead Co.*, 332 U. S. 319, *supra*.

5. The Provisions of the Final Judgment which Require American Timken to Divest Itself of All Stockholdings and Financial Interests in British Timken and French Timken, and Enjoin It from Acquiring Any Further Interest and Participation in Their Affairs, Are Erroneous.

In Section VIII of its final judgment (R. 1179),[55] the district court ordered American Timken to divest itself of its interests in British Timken and French Timken, and enjoined it from further acquisition thereof. It is the contention of American Timken that, even if it had violated Sections 1 and 3 of the Sherman Act by the acts and agreements alleged in the amended complaint in this case (R. 13-25), and under the findings of the district court, this severe remedy is not justified in this case.

---

[55] "A. Within two years from the date of this judgment, defendant shall divest itself of all stock holdings and other financial interests, direct or indirect, in British Timken and French Timken. Within one year from the date of this judgment, defendant shall present to the Court for its approval a plan for such divestiture.

"B. Defendant is hereby enjoined and restrained, from the date of this judgment, from:

"1. Acquiring, directly or indirectly, any ownership interest in (by purchase or acquisition of assets or securities, or through the exercise of any option, or otherwise), or any control over, British Timken or French Timken, or any subsidiary, successor or assign thereof;

"2. Exercising any influence or control over the production, sales or other business policies of British Timken or French Timken, or any subsidiary, successor, assign, agent, sales representative, or distributor thereof;

"3. Causing, authorizing or knowingly permitting any officer, director, or employee of defendant or its subsidiaries to serve as an officer, director, or employee of British Timken or French Timken or of any subsidiary, successor, assign, agent, sales representative, or distributor thereof."

Principles Governing Divestiture.

In all of the earlier cases, in which a divestiture type of remedy was adopted,[56] there was either a combination of companies by *stock ownership which was itself held to be in violation of the Act, either* because of acquisition of a former competing company, or by the formation of a holding company (the well-known business "trust" of the early 1900's), or, in some cases, also the purchase of assets of competitors which had been forced out of business. Since the acquisition and ownership of the stock of competing companies was the essence of the violation of the Act in these cases, it is apparent that only by requiring the stock to be divested could the violation be ended. Moreover, in all of the cases the violation found was not merely a restraint of trade contrary to Section 1 of the Act, but involved an attempt to monopolize or a monopolization of some area of commerce falling under Section 2.

In the case at bar, the amended complaint did not charge that any combination between American Timken, British Timken and French Timken, constituted a monopoly or an attempt to monopolize; and the district court made no such finding, or any finding on which such a conclusion could be based. Also, as we shall see the district court did not regard American Timken's ownership of the British and French Timken stock as itself illegal.

The divestiture remedy has been given extensive consideration, in some of the more recent cases decided by this Court which have clarified the principles governing the granting of this form of relief.

Of these, the first is *United States vs. Crescent Amusement Company*, 323 U. S. 173 (1944), in which this Court recognized three types of circumstances which warranted

---

[56] For a review of these cases, see Hale, "*Trust Dissolution: Atomizing Business Units of Monopolistic Size*," 40 *Columbia Law Review* 615 (1940).

a decree of divestiture: (1) "where the creation of the combination is itself the violation"; (2) where the acquisition of the interests to be divested was "part of the fruits of the conspiracy"; and (3) where "common control was one of the instruments * * * in making the conspiracy effective."

In *Hartford-Empire Company vs. United States*, 323 U. S. 386 (1945), this Court laid down the following general principles with regard to relief in equity suits by the United States under the Sherman Act (pp. 409, 410):

> "The applicable principles are not doubtful. The Sherman Act provides criminal penalties for its violation, and authorizes the recovery of a penal sum in addition to damages in a civil suit by one injured by violation. It also authorizes an injunction to prevent continuing violations by those acting contrary to its proscriptions. The present suit is in the last named category *and we may not impose penalties in the guise of preventing future violations.* This is not to say that a decree need deal only with the exact type of acts found to have been committed or that the court should not, in framing its decree, resolve all doubts in favor of the Government, or may not prohibit acts which in another setting would be unobjectionable. But, even so, the court may not create, as to the defendants, new duties, prescription of which is the function of Congress, or place the defendants, for the future, 'in a different class than other people,' as the Government has suggested. The decree must not be 'so vague as to put the whole conduct of the defendants' business at the peril of a summons for contempt'; or cause the defendants hereafter not 'to be under the protection of the law of the land.'"

The third significant recent decision is *United States vs. Aluminum Company of America*, 148 F. 2d 416 (1945), *supra*, in which the Second Circuit Court of Appeals, sitting in lieu of this Court, refused to direct a dissolution of the Aluminum company, saying (p. 446):

"*Dissolution is not a penalty but a remedy;* if the industry will not need it for its protection, it will be a disservice to break up an aggregation which has for so long demonstrated its efficiency."

The next case was *United States vs. National Lead Company,* 332 U. S. 319 (1947), in which divestiture questions were two-fold: (1) the request of the Government that National Lead and du Pont each be required to divest themselves of two of their principal titanium pigment plants; and (2) the provision in the decree requiring National Lead and Titan, Inc., to divest themselves of stock and other interests in certain foreign corporations, *or in the alternative to purchase the entire stock and other financial interests in those companies.* This Court refused to require divestiture of the producing plant, saying (pp. 351, 352);

"We believe there is neither precedent nor good reason for such a requirement. The violation of the Sherman Act is found in these cases in the patent pooling and in the related agreements restraining interstate and foreign commerce. *There is neither allegation in the complaint nor finding of fact by the District Court that the physical properties of either National Lead or du Pont have been acquired or used in a manner violative of the Sherman Act, except as such acquisition or use may have been incidental or related to the agreements above mentioned.* The cancellation of such agreements and the injunction against the performance of them by the appellant companies eliminate them.

* * * * *

"*There is no finding of fact, and apparently no evidence, showing that the respective principal titanium plants of National Lead or du Pont were acquired in violation of law, that they ever were separately owned or operated,* or that they are adapted to such operation."

This Court affirmed, without much discussion, the provisions for divestiture of the interests in foreign companies,

quoting from the District Court's opinion as follows (p. 363):

> "In other words, the stock acquisitions were *part and parcel of the territorial allocation agreements,* and probably were *a necessary element* in the establishment of the territorial arrangement."

Two more decisions affecting the motion picture industry cast further light on the proper use of the divestiture remedy. *Schine Chain Theatres, Inc. vs. United States,* 334 U. S. 110 (1948), was much like *United States v. Crescent Amusement Co.,* 323 U. S. 173, *supra,* involving the use of the monopolistic buying power of a theater chain to destroy competition. The dissolution plan adopted by the District Court in the *Schine* case, rather than realigning the corporate organization of the chain, required Schine to sell certain theaters in towns where it operated more than one theater. This Court set aside the divestiture provisions of the decree, remanding the case for further findings with respect thereto, and established certain guides for their formulation (334 U. S. 110, pp. 128-130). Here, again, as in the *Crescent Amusement Co.* case, the justifications for divestiture were divided into three classes: (1) that the combination "is itself the violation"; (2) that the defendants are being denied the "benefits of their conspiracy"; and (3) that it breaks up the "monopoly power which violates the Act."

Finally, in *United States vs. Paramount Pictures, Inc.,* 334 U. S. 131 (1948), once again, we find the justification for divestiture expressed along three different lines: (1) acquisitions which were the "fruits" of monopolistic practices or restraints of trade; (2) acquisitions which though lawfully acquired, have been "utilized as part of the conspiracy"; and (3) acquisitions which "would afford opportunity to perpetuate the effects of the restraints of trade." The court in this case also made the following significant statement (p. 153):

"If in such cases the acquisition was not improperly used in furtherance of the conspiracy, its retention by defendants would be justified absent a finding that no monopoly resulted. And in those instances permission might be given the defendants to acquire the interests of the independents on a showing by them and a finding by the court that neither monopoly nor unreasonable restraint of trade in the exhibition of films would result."

This review of the important decisions relating to dissolution and divestiture fails to reveal any principles which support the provisions of Section VIII of the final judgment herein, as applied to the violations of Section 1 of the Act charged in the amended complaint (R. 13-25), and found by the district court. Nowhere in the memorandum herein (R. 958-1018), does the district court explain the reason for ordering divestiture in this case.

Divestiture to break up monopoly power not applicable. We have already noted that monopolization, or attempt to monopolize, the anti-friction bearing industry in any area whatever is not charged in this case. The district court did make certain statements as to the percentages of tapered roller bearings and of anti-friction bearings which were produced by American Timken, British Timken and French Timken in their respective countries (R. 960-961) and declared that this "spells out the dominant position" of these companies "both in the tapered and anti-friction bearing industry" (Mem. par. 15, R. 961). Except for some other general comments in paragraphs 35 and 36 of its memorandum (R. 965-966), the district court made no further findings with respect to American Timken's position in the industry, or regarding its competitors. Clearly, then, divestiture cannot be supported by anything in the record in this case on the "monopoly power" theory of the *Schine Chain Theatres* case, 334 U. S. 110.

Divestiture to remove "fruits" of wrongdoing not applicable. The second theory advanced to support divesti-

ture is that of depriving the party of the "fruits" of his violation. This concept requires that the interests to be divested were acquired as the direct consequence or "fruit" of the illegal practices found to have occurred. Thus, in the *Crescent Amusement* case, 323 U. S. 173, the defendants had coerced their competitors to sell out to them. The same appeared in the *Schine Chain* case, 334 U. S. 110. It was in that case, indeed, that this Court spoke of divestiture as being analogous to the equitable remedy of restitution, since it "merely deprives a defendant of the gains from his wrongful conduct." In the case at bar, there was no finding that American Timken's interests in British Timken and French Timken resulted from any such unlawful acts. Rather, the district court minimized the significance of its ownership of interests in these companies, and placed major stress throughout on the theory of restraints imposed by *agreement* and acts as between *independent* corporations. Thus, in paragraph 153 of its memorandum (R. 1003-1004), the district court declared:

> "The only substantial change in the relationship of the parties resulting from the Dewar-defendant contract was that defendant acquired a stock ownership in British Timken and French Timken."

While we do not concur in the intimation that this "change in the relationship" was of no legal significance, yet there is no suggestion here or elsewhere in the memorandum that the acquisition in itself was unlawful, or that it was the *consequence* of any prior unlawful acts, in the sense connoted by the expression "fruits of the conspiracy." In fact, such a finding would have been beyond the issues in the case, because the acquisitions occurred prior to the combination alleged to have commenced in 1928.

Divestiture to prevent unlawful use of stock not applicable. The third theory supporting the divestiture remedy is that the interests, even though lawfully acquired, are being used in aid of the conspiracy. There is no sug-

gestion in the district court's memorandum that this was done by American Timken with its interests in British Timken and French Timken. It is true that the final judgment enjoins defendant from:

> "Exercising any influence or control over the production, sales or other business policies of British Timken or French Timken. * * *"

but, as stated above, the district court treated the three companies as completely separate corporate units, and stated in its memorandum (R. 1004):

> "Both British Timken and French Timken were managed and operated by Dewar. Except for such powers possessed by virtue of its stock ownership and the contracts, defendant *had no control* over the business conduct of either. * * *
>
> "British Timken and French Timken retained their corporate independence and jealously guarded their interests in dealings with defendant."

Again, while we believe that the district court erred in its interpretation of the facts in this case with respect to the "independence" of British Timken and French Timken, nevertheless, the above statements are wholly inconsistent with any theory that American Timken utilized its interests in those companies in the furtherance of a conspiracy, especially of a conspiracy *with them*.

Divestiture to break up combination not applicable. Another situation which we find in the cases discussed above to support a divestiture decree, is that in which the combination is itself the violation. Applied to this case, this would mean that the *acquisition* of the stock of British Timken by American Timken and its *participation* with Dewar in the *establishment* of French Timken, *were themselves unlawful*, quite apart from any agreements relating thereto, for as we have seen above the district court did not regard the acquisition of the stock as an essential part of the transactions between the companies, but treated it

as merely incidental. For the reasons given and the excerpts from its memorandum previously quoted, it is clear that the district court did not consider whether or not the stock acquisitions in themselves, were in violation of the Act.

The divestiture question under this theory is essentially the converse of the questions involved in the corporate integration cases, of which some of the important earlier examples are *Standard Oil Company vs. United States*, 221 U. S. 1 (1911); *United States vs. American Tobacco Company*, 221 U. S. 106 (1911); and *United States vs. United States Steel Corporation*, 251 U. S. 417 (1920). The latter case illustrates that in these early cases this Court was concerned with three questions: (1) the size of the unit involved; (2) the methods by which it achieved that size; and (3) the power which it was able to exercise over prices and production. As we have pointed out, the district court made only the briefest reference to the size of American Timken, British Timken and French Timken, and that solely as regards their respective percentages of production in their countries. No attention at all was given to the manner in which the companies grew to that size; and indeed there were no allegations in the amended complaint and no evidence whatsoever that any such improper practices were followed as were condemned in the *Standard Oil* and *American Tobacco* cases. Finally, there were no findings with respect to power which the three Timken companies exercised in regard to production or prices of anti-friction bearings. Even by the tests of the earlier cases, then, the findings of the district court were far from adequate to sustain the divestiture provisions of the decree.

Necessity of determining field of competition and district court's failure to do so. Recent cases in which similar questions have been discussed are *United States vs. Paramount Pictures, Inc.*, 334 U. S. 131 (1948), and most sig-

nificant as to the questions involved in this case, *United States vs. Columbia Steel Company*, 334 U. S. 495 (1948).

In *United States v. Columbia Steel Company*, 334 U. S. 495, the ultimate issue was whether it was a violation of the Sherman Act for United States Steel Corporation or its subsidiary, Columbia Steel Company, to acquire the assets of Consolidated Steel Corporation, said to be "the largest independent steel fabricator on the West Coast" (p. 498). This Court first proceeded to an extensive examination of statistics as to the production and sale of rolled steel and other steel products, throughout the United States and in an eleven-state area which was Consolidated's principal market, accepting (p. 520), for the purpose of decision, the Government's contention that:

> "'* * * this area is the one to be considered in measuring the effect on competition of the withdrawal of Consolidated as a market for other rolled steel producers and of the bringing together under common control of Consolidated and the fabricating subsidiaries of United States Steel."

It further laid down the tests of legality of a vertical or horizontal expansion by the acquisition of existing facilities as follows (pp. 527, 528):

> "It is first necessary to delimit the market in which the concerns compete and then determine the extent to which the concerns are in competition in that market. If such acquisition results in or is aimed at unreasonable restraint, then the purchase is forbidden by the Sherman Act. In determining what constitutes unreasonable restraint, we do not think the dollar volume is in itself of compelling significance; we look rather to the percentage of business controlled, the strength of the remaining competition, whether the action springs from business requirements or purpose to monopolize, the probable development of the industry, consumer demands, and other characteristics of the market. We do not undertake to prescribe any set of percentage figures by which to measure the unreason-

ableness of a corporation's enlargement of its activities by the purchase of the assets of a competitor. The relative effect of percentage command of a market varies with the setting in which that factor is placed."

In contrast, in the case at bar, although there was extensive evidence as to the field in which defendant's tapered roller bearings were competing—namely, with all other types of anti-friction bearings and with friction bearings, the district court made no precise findings as to the scope of competition, or with respect to the percentage which the Timken companies controlled, in the industry, and even stated (Mem. par. 35, R. 966):

"It is of no moment what the precise figures were."

Nor was there any exploration of the extent to which the Timken companies had been able to control prices within the anti-friction bearing industry; and the evidence and findings regarding alleged illegal practices (other than the agreements with British and French Timken) were confined to a few instances of cooperation between the three companies to meet competition of their international competitors, especially SKF, and of participation by British Timken and French Timken in agreements in England and France which allocated customers and fixed quotas. There was no evidence that these practices resulted in the destruction of competitors, as was true of the unlawful practices found in all the earlier cases which we have discussed.

Indeed, the district court avoided making any findings of this nature, because it persistently clung to the theory that the three Timken companies were independent entities, actual or potential competitors, who had entered into contracts and conspiracies to restrain trade. Thus, it stated (Mem. par. 144, R. 1002):

"Defendant did not acquire British and French Timken."

and (Mem. par. 160, R. 1005):

"It simply acquired substantial interests in a dominant manufacturer of bearings in England, participated in the formation of and invested on the stock of a potential competitor in France."

It is quite apparent that the district court gave no consideration to the legality or illegality of these acquisitions, as such. Yet obviously, findings on this score are essential, to determine the correctness of the divestiture provisions of the judgment.

It is clear from the foregoing cases that the district court failed to give due consideration to the propriety of the divestiture provisions in the judgment in the light of established precedents and doctrines. Certainly, that court has never fully explained the basis upon which divestiture was ordered.

Ineffectiveness of Divestiture to Create Competition—the Invalid Basis Suggested by Appellee.

The main argument stressed by the appellee in demanding this relief was that, in view of the long-continued relationship between American Timken, British Timken and French Timken, the ownership of stock in those companies would serve as an inducement for it not to compete with them, even after the termination of contractual obligations. However, we have been cited to no authorities which show that the removal of one inducement not to compete is a sufficient basis for ordering divestiture of valuable business interests.

We begin in this case with the understanding that the judgment is not essentially penal or punitive in its object, but that its purpose is the effective enforcement of the Sherman Act, the prevention of future violations, and, to the extent indicated by the cases which we have discussed, the undoing of past violations. *Hartford-Empire Company vs. United States*, 323 U. S. 386; *United States vs. National Lead Company*, 332 U. S. 319. We have already

seen that the divestiture of the British Timken and French Timken stock cannot be sustained on the theory that the *acquisition* of the stock was illegal. Any justification for divestiture in this case, therefore, must be found in the preventive effect of such a judgment.

The evidence is so abundant that it has never been practical, and is not now, for American Timken to attempt to export its bearings into foreign markets, and, as this Court is well enough aware, the international economic situation is presently so disrupted, that there is no reasonable probability whatever that, even without its financial interests in British and French Timken, American Timken could with any success market its products in the areas which were allocated to them because of the competitive advantages which they had there. On the contrary, the opposite would be true. The only effect of divesting American Timken of these interests, therefore, would be to deprive it of holdings in foreign companies which, by its investment of capital and through its invaluable assistance in production and sales methods, have grown, in one instance, from a relatively small and ineffective bearing manufacturer, and in the other from scratch, to substantial factors in the industrial make-up of their respective nations.

It is very doubtful whether it would be possible for American Timken to acquire or construct new facilities in those countries.[57] Yet, the undisputed evidence in the case is that this is the only manner in which it is feasible for a manufacturer of bearings to sell in those countries on any

---

[57] See, e.g., the testimony of DeKraft, that at the present time it is necessary for a foreign manufacturer to obtain a governmental permit to start a new manufacturing plant in England (R. 818) and, for that purpose, to show the necessity for producing something in England which is not produced there (R. 819), and that in all probability the Board of Trade would not allow the establishment of such a manufacturing company to compete with established business there (R. 826).

substantial scale. Therefore, the divestiture of American Timken's interests in British and French Timken will not tend to create competition between them. For any such purpose, it is utterly futile.

Furthermore, it is well-known that one of the basic policies of the United States, under the popular name of "Point Four," is the encouragement of private investment by American sources in foreign enterprises. The judgment in the case at bar, which the same Government seeks to sustain, works directly contrary to that policy—the *present investment* of an American company is to be withdrawn, to be replaced by we know not what, under circumstances which will *discourage* not only it, but others in similar situations, from making like investments. It is true that this Court cannot make the policy or enact the laws, but in exercising its discretion in formulating decrees in anti-trust cases it can certainly consider whether any reasonable purpose will be served by certain provisions of the decree. Moreover, it can and should consider whether the judgment is consistent with the purpose of the very Act under which it purports to be issued.

Probable Prevention of Foreign Trade in "Timken" Trade-Marked Bearings Resulting from Divestiture.

Rather than stimulating competition in foreign trade by American Timken and its American customers, the divestiture provisions, together with other portions of the judgment, will make it virtually impossible for American Timken to compete in the territories now served by British and French Timken.

Section IV of the final judgment declares the 1938 agreement between the three Timken companies to be unlawful, orders it terminated, and enjoins American Timken from further performance or enforcement of any of the provisions:

> "including those involving rights or obligations upon termination, of said agreements * * *" (R. 1174, 1175).

This would obviously apply to the provisions of paragraph 3(B) of the 1938 agreement (Deft's. Exh. 27, R. 1771; offered, R. 291; R. 1775) which requires British Timken and French Timken, upon termination of the agreement, and upon request of American Timken, to eliminate the name "Timken" from their corporate names, to refrain from using it as a trade-mark or trade name, and to assign to the latter any trade-mark or other rights in respect of said name which they control. Thus, if American Timken is also to be divested of its interests in these companies, and prevented from acquiring such interests, it probably will lose all rights to the use of the trade-mark in those countries where it has been registered and/or used by British Timken or French Timken, or depends upon such registrations or user.

American Timken is also enjoined by Section VII, subsection C, of the final judgment from entering into any agreement with British Timken or French Timken, providing for:

> "The transfer of any right or immunity under a trade mark or name, relating to the production of anti-friction bearings * * *,"

upon condition that the parties thereto will, among other things, refrain from the sale of anti-friction bearings in any territory, refrain from competing in any market, or exclude any producer or distributor from any market (R. 1178). Because the use of a trade-mark in any territory by more than one manufacturer, except under strict limitations, will impair the validity of the mark, these provisions will prevent *any* licensing of the trade-mark to American Timken by British Timken and French Timken in the areas where they are freed of obligation to return it to the former.

As a consequence, American Timken will be unable to sell bearings in these territories under the trade-mark or name of "Timken." Theoretically, for sales in these territories, it might adopt a new mark or name, and develop

good will in that mark. Practically, this is an impossibility for American manufacturers of automobiles and other products cannot determine which of them are destined for a specific foreign market and could not, and would not, select specially marked bearings for use in foreign markets for the accommodation of American Timken. We have already seen how important the mark "Timken" has been in enabling British and French Timken to develop tapered roller bearings sales in new areas.

If it is unable to use that mark on its own products to be sold in those areas, American Timken would have little chance of developing any substantial business therein. It would have to set up its manufacturing organization in such a way that bearings to be sold in those areas would be separately produced, so that the mark "Timken" would not appear on them.

In this additional way, then, the divestiture provisions would work directly to the contrary of the avowed purpose of increasing the foreign trade of the United States in anti-friction bearings.

Hardship and Loss to American Timken from Divestiture.

Another factor which may well be considered, at least in connection with the other reasons given above, is that, while serving no remedial purpose under the Sherman Act, the divestiture provisions of the judgment will result in a serious loss to American Timken. While this Court has said that divestiture of the benefits of a violation or the undoing of the unlawful project cannot be avoided on the plea of hardship or inconvenience, yet it has also stated on several occasions that the decree should "work out a compliance with the law without unnecessary injury to private property." *United States vs. American Tobacco Company*, 221 U. S. 106, 188; that "* * * one of the fundamental purposes of the statutes is to protect, not to destroy, rights of property." *Standard Oil Company vs. United States*, 221 U. S. 1, 77; and that, so far as is consistent with the purpose of the Act, the decree "should conserve the property interests involved." *United States vs. Union Pacific*

Railroad Company, 226 U. S. 470, 477. Thus, in *Hartford-Empire Company vs. United States*, 323 U. S. 386, it was said (p. 414):

> "Since the provisions of paragraphs 21 to 24 inclusive in effect confiscate considerable portions of the appellants' property, we think they go beyond what is required to dissolve the combination and prevent future violations of like character."

At the hearing on the decree in this case, deVegh testified that the sale of British Timken stock could be made to a non-Englishman legally having dollars, but that the market for such transactions is "extremely small," "very irregular" and "not dependable" (R. 1110, 1111). Even so, such a transaction would not take place on the official quoted exchange rates, but on the basis of what is known as the "switch" pound (R. 1111), which at that time was exchanged at the rate of $1.85 or $1.90 to the pound sterling, as compared with the official rate of $2.80 per pound sterling (R. 1111, 1112). Thus, even if such a sale could be made, American Timken would sustain a loss of approximately one-third of its investment, simply on the exchange transaction.

However, deVegh declared that a sale of the magnitude of that involved here—approximately $1,350,000.00 (R. 1093, 1094)—could not be made within any short interval, and that, even over a longer period of time, "it would have a very depressing effect on the switch pound market" (R. 1113). Indeed, because of this, the British government might even refuse to permit the transfer (R. 1113). Presumably, the stock might be sold "to a speculator somewhere" at a dollar a pound (R. 1113). At this rate, American Timken's loss would be almost two-thirds of its present British Timken investment.

If the sale were made to a British resident, he could not possibly have dollars legally available; American Timken would have to accept sterling which it could hold for a maximum of two months before converting it into another

British industrial stock or into British government bonds (R. 1114, 1115). In converting these into dollars, it would have the same problem of depressing the "switch" pound market as in the sale of its stock (R. 1115, 1116).

As to France, the same difficulties exist, although at the time of the hearing deVegh could not say what the "switch" franc rate of exchange was, because there were "practically no transactions in New York" (R. 1116, 1117).

The loss suffered by American Timken, if required to divest itself of its shares of British Timken and French Timken stock, therefore, will be substantial indeed, and without any compensating beneficial effect so far as creating international trade in anti-friction bearings. This factor cannot well be overlooked in determining whether divestiture should be ordered in this case.

We have expressed the belief, in our Statement as to Jurisdiction in this Court that this case presents the fundamental and novel question of whether an American manufacturer may join with a foreign subject to acquire a business in the foreign country, and in connection therewith agree not to compete in a territory allocated to the jointly owned foreign company. There was nothing in the decided cases prior to 1928 to indicate to American Timken that this course of action would put it in violation of the Sherman Act. If there had been, it might well have chosen to adopt Ely's preferred plan, and acquire for itself full ownership of British Timken, and establish German and French Timken alone even though this would have dispensed with the great advantages apparent from the partnership with Dewar. We do not believe that any court would have said that such acquisitions, or any absence of competition between the three companies under those circumstances, was illegal.

If this Court is now to condemn the mode of proceeding which American Timken did follow, for what appear to have been sound business reasons, it is certainly fitting

that it should not penalize American Timken so severely for doing what, in 1927, it had no reason to believe illegal.

In short, we submit that there is no precedent for the divestiture provisions of the judgment; that they are not supported by the findings of the district court; that they will not accomplish any remedial purpose under the Sherman Act, but instead will prevent American Timken from competing in foreign markets; that they will impose hardship upon American Timken without any compensating benefit to anyone; and that they are solely punitive and penal in their effect.

CONCLUSION.

For the reasons hereinbefore set forth, upon the law and the facts, the judgment should be reversed, and final judgment entered for American Timken, or, in any event, the judgment should be modified in the respects indicated.

Respectfully submitted,

LUTHER DAY,
JOHN G. KETTERER,
Counsel for Appellant.

INDEX.

Statement 1

Argument 3

I. The Appellee's Contentions As to the Alleged Combination and Conspiracy 3

A. The 1909 license agreements between American Timken and the Vickers' subsidiary, E. & O. A. 3

1. The 1909 agreement covering the United Kingdom 4

2. The 1909 agreement covering Europe 5

B. The appellee's contention that the district court's findings establish that the agreements and other concerted activities of the three Timken companies have unlawfully restrained foreign commerce 7

1. Alleged price fixing 7

2. Alleged elimination of outside competition 13

3. Alleged exclusive exchange of know-how .. 14

4. Alleged restrictive use of the trademark "Timken" 15

5. Alleged participation in agreements between British Timken and French Timken and their competitors 15

II. The Appellee's Argument that the Alleged Restraints Cannot Be Justified as Ancillary to Some Lawful "Main Purpose" 17

A. The appellee's argument that the restraints here imposed were unreasonable per se and therefore cannot be justified as "ancillary" .. 17

B. The appellee's contentions that the restraints were in no sense ancillary to a joint venture 20

C. The appellee's contentions that the alleged restrictions cannot be justified as ancillary to the licensing of the name "Timken" 22

1. The licensed use of a trademark is competitive and is not monopolistic 26

2. There is no unlawful restraint involved in requiring British Timken and French Timken to manufacture under the mark "Timken" 30

3. The reversionary clause in respect of the trademark in the 1938 agreement which provided for the return by British and French Timken of the mark to American Timken is not unlawful 33

III. The Appellee's Contention That the Findings of Fact Upon Which the District Court Based its Judgment are Correct and are Clearly Supported By the Evidence 34

A. The appellee's contention that American Timken combined and conspired with potential competitors 34

B. The appellee's contentions as to findings as to competition between tapered roller bearings and anti-friction bearings 36

C. The appellee's contentions with respect to the treatment of the three Timken companies as separately operated units, the district court's refusal to consider the evidence as to a joint venture, and its findings that the relationship between the parties was merely a continuation of an illegal combination dating from 1909 .. 37

1. The argument that American Timken was merely a stockholder in British Timken and French Timken 37

2. The claim that, in fact, the acquisition of American Timken and Dewar constituted merely the continuance of an existing combination between American Timken and British Timken, Vickers' subsidiary 38

D. The appellee's contention as to the findings that the Timken companies had combined and conspired to suppress competition of outsiders by acting collectively against outsiders or joining with them 40

E. The appellee's contentions as to evidence of price-fixing 41

F. The appellee's contentions that the district court properly adopted its memorandum opinion as its findings of fact and conclusions of law 41

IV. The Appellee's Contentions As to the Relief Ordered By the District Court 42

A. The appellee's contentions as to divestiture 42

B. The appellee's contentions as to the injunctive provisions of the judgment 51

1. The appellee's contentions as to the injunction against the exclusive grant of exclusive patent licenses, know-how, material, and machinery 51

2. The appellee's contentions as to agreements to fix prices 52

3. The appellee's contention as to the injunction against refusing to sell or selling at discriminatory prices 52

Conclusion 53

THE TIMKEN ROLLER BEARING COMPANY,
Appellant,

v.

THE UNITED STATES OF AMERICA,
Appellee.

APPEAL FROM THE DISTRICT COURT OF THE UNITED STATES, FOR THE NORTHERN DISTRICT OF OHIO, EASTERN DIVISION.

REPLY BRIEF FOR THE APPELLANT, THE TIMKEN ROLLER BEARING COMPANY.

STATEMENT.

It is apparent from the appellee's brief that the appellee has undertaken simply to support all of the purported findings made by the district court, and, upon the basis thereof to support its conclusions.

Necessarily, therefore, the discussion of the facts in the appellee's brief, while it may appear to be a full discussion of the facts involved in the case, actually omits certain of the most important facts. Moreover, many of the statements in the appellee's brief are made in such a way as to de-emphasize the importance of other facts, resulting in an over-all impression which does not reflect the true state of the facts as disclosed by the record.

For example, it is said (Appellee's Brief, p. 16) that, although tapered roller bearings compete "*to some extent*"[1]

[1] Emphasis throughout is supplied.

with other types of anti-friction bearings and to a lesser extent with friction bearings" they are "free from competition for certain uses." This statement passes over entirely the uncontroverted evidence that tapered roller bearings compete with other types of anti-friction bearings *for 90%* of the installations of anti-friction bearings, *not merely "to some extent,"* and gives an entirely erroneous picture of the competitive situation in the anti-friction bearing industry.

Again, in stating the facts as to French Timken the appellee says that it is the "largest manufacturer and seller of tapered roller bearings in France" (Appellee's Brief, p. 18), but disregards the evidence which shows what a relatively insignificant operation French Timken is, namely, that it has only 510 employees.

Once more, in discussing Dewar's negotiations with Ely in 1927 the appellee states (Appellee's Brief, p. 30) that the former indicated his preference that the latter should join him in the purchase of British Timken "on account of its 'interest in the profitable operation of the company'" carefully omitting the statement in the same communication that Dewar desired to have American Timken "very much as partners" so that it would have this interest in the profitable operation of British Timken. Indeed, the appellee has not discussed the contemporaneous references to American Timken and Dewar as "partners" in 1927, 1929, and 1936 at all, but has been content to rely upon the finding of the district court and the two statements relied upon in the district court's opinion, discussed in our main brief (p. 82, note 26), which are supposed to show that any possible partnership ended in 1934.

These few examples serve to show that the appellee's statement of the facts cannot be regarded as a full statement thereof. In fact, it portrays the same misleading picture as does the memorandum opinion of the district court, namely, a combination between independent companies,

dominant manufacturers in a mythical tapered roller bearing industry which they control.

The Court will observe that many statements contained in the appellee's brief are merely supported by references to paragraphs in the district court's memorandum opinion.

Many of the factual and legal contentions of the appellee have been anticipated and answered in our main brief. Without attempting to answer piecemeal every minor contention made by the appellee, we propose to discuss certain of the broad issues involved in the case.

ARGUMENT.

I.

THE APPELLEE'S CONTENTIONS AS TO THE ALLEGED COMBINATION AND CONSPIRACY.

A. The 1909 license agreements between American Timken and the Vickers' subsidiary, E. & O. A.

The provisions of the 1909 license agreements between American Timken and the Vickers subsidiary, E. & O. A., loom large in the case at bar, principally because the district court placed such emphasis upon them in arriving at its apparent conclusion that there was an *intentional* illegal combination in restraint of trade which was the "outgrowth of the principal agreements in 1909 when world markets were divided and competition was eliminated" (Mem. par. 120, R. 995). As pointed out in our main brief (pp. 148 to 153), the court disregarded American Timken's contentions as to the legality of its acts on the theory that whatever was done by American Timken and Dewar from 1927 and thereafter constituted merely a continuation of this combination in restraint of trade, which had its roots in the 1909 license agreements. The appellee's brief embraces, and continually expands upon, this theme.

In fact, it is at least doubtful whether the provisions of the 1909 license agreements, found by the district court to have been illegal, constituted violations of the anti-trust

laws. Certainly their legality was sufficiently ambiguous to negative any reasonable inference that American Timken, and the Vickers subsidiary *intended* to violate the Sherman Act at the time these agreements were made, or subsequent thereto.

1. The 1909 agreement covering the United Kingdom.

As the district court found (Mem. pars. 24, 25; R. 962, 963), the license from American Timken to E. & O. A. under the three basic bearing patents in the United Kingdom contained territorial restrictions but they were not entirely exclusive, for both the licensor and the licensee were given the right to sell bearings to manufacturers of vehicles in the territories in which they respectively were making bearings, which, when included in vehicles so manufactured, could be sold any place in the world. We know of no authority which has yet established that a patent licensor may not impose such a restriction upon itself. And it has always been understood that the licensor may limit the patent licensee to manufacture, use or sale within a restricted territory.

E. & O. A. was prevented from manufacturing or selling any anti-friction bearings except those made under the licensed patents under the name "Timken" and was required to manufacture pursuant to instructions given to it by American Timken as the licensor (Mem. par. 25; R. 963). The requirement that E. & O. A. use the name "Timken" in the manufacture and sale of the bearings certainly implied a license to use it, because American Timken necessarily permitted E. & O. A. to use the name when it required it to do so. Restriction to the manufacture and sale of the bearings under the exclusive name "Timken" was a valid one ancillary to the license to use the name which has always been recognized as legal. The authorities supporting this proposition are discussed in Section II, C, *infra*.

There was a provision fixing the minimum price for bearings manufactured by E. & O. A. which was obviously designed to protect the licensor, American Timken, from competition from its licensee, a valid price-fixing provision ancillary to the grant of the license which has been recognized as legal in *United States v. General Electric Company*, 272 U. S. 476; *United States v. Line Material Company*, 333 U. S. 287; and *United States v. United States Gypsum Company*, 333 U. S. 364.

2. The 1909 agreement covering Europe.

The point upon which the district court really relied was based upon provisions in the 1909 license agreement covering Europe which, it held, granted E. & O. A. an exclusive license in European countries in which American Timken had not as yet obtained patents (Mem. pars. 26, 27; R. 963, 964). However, this conclusion is certainly debatable in view of the language of the agreement and particularly one qualifying provision therein which the district court did not include in its memorandum, and which has not been commented upon in the appellee's brief. In this agreement (Deft's. Exh. 190; R. 2322; offered, R. 936), American Timken agreed to pursue its application for the German patent (par. 2) and granted the licensee an exclusive license "in the territories *covered* by the said patents respectively" under two French patents, a Russian patent, and under the German patent, applied for, *as soon as letters patent should have been obtained there*, and further granted E. & O. A. an exclusive license, until the patents should have been granted or after they had ceased to exist, "but only so far as the licensor can then lawfully do so" to make, use, exercise and vend the articles embodying the subject matter of the patents (par. 3). It also agreed that if it should obtain any patents in any of the other European countries it would give the licensee an exclusive license "in the country *covered by* each such patent" and

that, until they should be obtained, "so far as the licensor can lawfully do so in the absence of such patents or grants"[2] E. & O. A. should be licensed exclusively to manufacture and sell the subject matter of the three British patents throughout Europe and in the British colonies, protectorates and dependencies except Canada (par. 5). American Timken agreed that during the period of the license agreement it would not make, use nor sell "in any of the territory *covered by* the provisions of this agreement, hereinafter called 'said territory'" (par. 6), and E. & O. A. agreed not to sell roller bearings "outside the said territory" (par. 39).

Obviously, when the parties referred to territory "covered" by the agreement, as they did in various sections thereof, they may well have been referring to territory "covered" by the agreement when, if and as patents should be obtained "in the country covered by each such patent," so that the provisions as to exclusive territories would not become operative as to particular territories until they should become covered by patents. Moreover, American Timken granted an exclusive license only to the extent that it could lawfully do so. Therefore, it canot be said unequivocally that the agreement was so clearly an attempt to create an exclusive license of the right to manufacture tapered roller bearings in countries in which American Timken had no patents that it constituted an obvious attempt to create an illegal restraint of trade.

On the contrary, the general impression to be deduced from the agreement is that powerful Vickers insisted on obtaining everything it could in the way of an exclusive license from American Timken, which was in its infancy, and that the latter agreed to the former's demands with the reservation, however, that it would license Vickers' subsidiary only to the extent that it could lawfully do so.

---

[2] This is the provision ignored by the district court.

B. The appellee's contention that the district court's findings establish that the agreements and other concerted activities of the three Timken companies have unlawfully restrained foreign commerce.

Generally speaking, this section of the appellee's brief undertakes to demonstrate that combinations among independent competitors to allocate exclusive territories, fix prices, eliminate competition of outsiders, and to exchange technological information exclusively for the purpose of eliminating competition of third parties, constitute violation of the anti-trust law. No one can quarrel with the truth of these general propositions. Whether or not they are applicable to the case at bar, in view of the facts, is the issue in the case.

Certain of the statements contained in this section of the appellee's brief, however, should be made the subject of comment.

1. Alleged Price Fixing.

One aspect of American Timken's practices in relation to British Timken and French Timken which the appellee attacks most vigorously is what it terms "price fixing." The appellee apparently regards the alleged price fixing agreements as independent violations of the Act, quite apart from the territorial allocations. The matters to which reference is made are (1) the prices on replacement bearings, (2) the alleged protective discount, and (3) the Russian sales provision.

In approaching the discussion of alleged "price fixing" in this case, one thing should be made clear. There never was any provision in the agreements which undertook to fix generally the prices of either American Timken, British Timken or French Timken.

It should be observed, however, that the pricing provisions, such as they were, in the 1938 agreement between

American Timken, British Timken and French Timken were merely incidental to the territorial allocations, and were adopted as reasonable conditions governing that portion of the territorial allocations which permitted each of the parties to sell bearings for use in the territory of the other for replacement purposes in equipment which originally was supplied with bearings by such party. If, as we have shown, the territorial allocations were lawful, they were not rendered illegal by relaxing their strictness, and the pricing practices which were agreed upon to govern this situation do not fall under the Sherman Act's condemnation of price-fixing, as interpreted by this Court.

In the 1928 agreements there was no provision whatever with respect to prices. The position that the agreement had as one of its purposes the fixing of prices is clearly unsound. Recognizing the shallowness of its contention that price-fixing was one of the objects of the first agreement in which American Timken and Dewar participated, the appellee says on pages 35 and 36 of its brief:

> "Although the 1928 contract (Def. Ex. 23, R. 1754) did not specifically provide for price fixing on replacement bearings, such price fixing was accomplished by a supplementary understanding."

This had reference to what has been called by the district court and the appellee the "protective discount." Actually the "protective discount" had no such sinister scope as was implied in the foregoing language. Prior to 1927 a "protective discount" was established by American Timken for unsolicited bearing orders that originated outside the United States in areas not served by any distributor, and a similar system had been adopted by British Timken for overseas sales. First, it should be noted that this business of American Timken amounted to only $15,000.00 or $25,000.00 per year, so that any practices affecting it hardly warrant serious consideration. The whole

story on these discounts ~~were~~ is simply that in 1927 Hess told Dewar that British Timken was losing business by having a low discount rate on these sales; that he thought British Timken would get more business if it increased its discount rate to 50%; and that British Timken thereupon increased its discount (that is, reduced its prices) to the rate then allowed by American Timken, namely 50% off list (although the list prices were not the same nor were they affected by the discussion) (Deft's. Exh. 31, R. 1800-1834 at 1830, offered R. 318). American Timken's discount rates were subsequently changed by it, without any consultation with British Timken, for unsolicited orders received from all territories except British Timken territory (R. 893-894, 906). The effect of the discount system, then, was no more than a further refinement of the territorial provisions, just as in the case of the provision regarding replacement bearing sales, and was therefore reasonably ancillary to the joint venture.

The pertinent provision of the 1938 business agreement between American Timken, British Timken and French Timken (Deft's. Exh. 27, R. 1771-1780, offered R. 291) was contained in paragraph 6(B) as follows:

> "The covenantor Company in its territory may accept and execute orders for bearings for ultimate destination in the territory of the covenantee Company for use for bearing replacement purposes in such completed articles of manufacture but such right shall not authorize sales to or known to be destined for manufacturers in the territory of the covenantee Company or sales at prices in conflict with the wishes of the covenantee Company and the covenantor Company from time to time will notify the covenantee Company of the details of the sales authorized under this paragraph and will pay to the covenantee Company an amount equal to five per centum of the net sale price received under any sales so authorized not being sales made through or at the request of the covenantee Company."

This is substantially identical with the provision in the 1935 Agreement between American Timken and British Timken, where it first appeared, quoted in the district court's memorandum opinion at paragraph 59 (R. 970). In the agreement, it follows the provision authorizing bearings to be shipped into either party's territory as component parts of completed articles of manufacture. This obviously is not a price-fixing agreement as such. But more than that, there was no evidence that the parties had followed this provision of the agreement. Moore's uncontradicted testimony (R. 896-897) is that when bearings are sold to an American manufacturer, it is assumed that a certain percentage will be used for replacement purposes, domestically and for export; that American Timken has no control over the places to which the bearings are shipped; that it makes no efforts to control the prices of such resales; and that this is generally understood by British Timken and French Timken.

As to alleged control of prices on resale by customers, the evidence discloses only one instance in which, over twenty years ago, in 1928, American Timken undertook to persuade a customer to ask its Hungarian distributor to sell at prices which would not undercut those of British Timken's Hungarian distributor (Pltf's. Exh. 39, R. 1387). It refused to do so as a general practice (Pltf's. Exh. 43, R. 1390, 1391).

Fair consideration of the Russian situation fails to support the appellee's views. In the 1928 agreement Russia was treated as British Timken's territory for the obvious reason that the British Government had trade relations with Russia before the American Government did. By 1935 the American Government had established relations with Russia and American Timken and Dewar felt that both companies might be able to do some business there.

The Supplemental Business Agreement of 20 November, 1938 (Deft's. Exh. 28, R. 1780-1789, offered R. 291)

contained in paragraph 12(C), relating to Russia, similar to the clause in the 1935 agreement, a provision authorizing both British Timken and American Timken to sell in Russia, but specifying that they should keep each other advised of negotiations with Russian buyers, and should pay the other a two per cent commission and share all selling expenses on such sales, that prices should "so far as practicable be mutually agreed from time to time," but that either company might make quotations without the other's consent, provided it notified the other party and did not undercut a quotation already made by the other.

This arrangement was designed for the special situation in the Russian economy. As Moore testified (R. 899), since the Russian Government controlled all buying for industry in that country, it was feared that it might seek to take advantage of that position by attempting to obtain quotations from both American Timken and British Timken, and then play one against the other to their mutual disadvantage. In fact, however, Moore could not recall any instance, since 1928, when the Russian buying agencies asked for bids from both American Timken and British Timken on the same order. (R. 898-899.) The fact that they notified each other of the prices at which sales had been made to Russia (R. 897), then, can hardly be declared to be "price fixing."

Furthermore, there was no evidence that this part of the agreement had any effect on prices of bearings sold to Russia. It could not have done so, because the defendant always had strong competition from other American producers. (R. 898.) Again, whatever interpretation be given the provisions of the agreement, they had no practical importance because the situations for which they were designed never arose.

Of course, as has been stated, these provisions did not purport to, and could not, have any effect of fixing the prices at which sales were to be made by American Timken, British Timken or French Timken generally.

The authorities relied upon by the appellee on the subject of price-fixing have nothing to do with a situation of the type involved here. The *Socony-Vacuum* case, 310 U. S. 150, and the *Trenton Potteries* case, 273 U. S. 392, dealt with combinations one of the basic purposes of which was the control of prices. None of this doctrine applies to this case. It is indeed a strange "price-fixing" agreement (if the 1928 agreement is to be called such) which never mentions prices, much less price-fixing.

Another basic weakness of the charge and the finding with respect to price-fixing is that they ignore the fact that American Timken, British Timken and French Timken did not possess the power effectively to *control* prices, particularly not in the markets where the provisions with respect to prices were applicable. It is urged by the appellee that any agreement with respect to prices, regardless of the ability of the parties to affect the market price of the commodity in question, is per se a violation of the Sherman Act. We submit that this is too broad a statement of the law relating to price-fixing agreements, and that it must be qualified by the proposition that the illegality of price-fixing practices depends on the power of the parties engaged therein to make their purposes effective to that end. *United States vs. Socony-Vacuum Oil Company*, 310 U. S. 150; *United States vs. Masonite Corporation*, 316 U. S. 265; *Board of Trade of the City of Chicago vs. United States*, 264 U. S. 231; *Standard Oil Company (Indiana) vs. United States*, 283 U. S. 163; *Appalachian Coals, Inc. vs. United States*, 288 U. S. 344; and *Ethyl Gasoline Corporation vs. United States*, 309 U. S. 430.

There is no evidence in this case that American Timken, British Timken and French Timken, had such a controlling position in the anti-friction bearing industry of the world that they could thus control prices. Indeed, there was no evidence that the provisions of the agreements with respect to prices or any practices of the parties

affected prices in any way, or that this was even their purpose.

For the above reasons, we submit that the price-fixing claims made cannot be sustained, and that there has been no price-fixing between American Timken, British Timken and French Timken in violation of the Sherman Act.

2. Alleged elimination of outside competition.

The statement that "in some instances they have acted collectively to drive outsiders out of the market" (Appellee's Brief, p. 70) is entirely unsupported by any evidence that any competitor of any of the Timken companies had been driven from the market. The same is true of the statement (Appellee's Brief, p. 71) that the practice of "sales to each other on a 'most favorable basis' has made it thoroughly impossible for independent producers to compete." It is completely unsupported by any evidence that independent producers have become unable to compete as a result of any such practice. On the contrary, the evidence discloses that such companies as SKF were consistently making competition very difficult for the Timken companies by underselling them in the various markets. See, for example, the situation in Canada referred to in the appellee's brief (p. 45, note 58), where American Timken solicited assistance from British Timken in order to meet, not eliminate, SKF competition.

In reality, all the acts complained of as having been done by American Timken, British Timken and French Timken were of a character which would normally be associated with the efforts of any three related companies to obtain business to the necessarily resultant exclusion of their competitors.

It is stated categorically that American Timken has exercised the policy of refusing its special bearing steel to competitors who might harm British Timken, the district court finding that the parties made certain that their

special steel "was not made available for use to their competitors" (Appellee's Brief, p. 71). In fact, the district court's finding to this effect (Mem. par. 104; R. 990) was obviously based solely upon the exchange of letters set forth in its memorandum (par. 105; R. 990), in which Hess merely told Dewar that American Timken would not sell its steel tubing to anyone in the world who might as a result harm any of the three Timken companies. There is no evidence in the record that any such policy was actually followed. On the contrary, it is apparent from the provisions of the 1935 business agreement between American Timken and British Timken (Pltf's. Exh. 20, R. 1346; § 9, R. 1351) that provision was made by which American Timken could grant licenses to manufacture, make and sell its steel and tubes in British Timken's territory, and the evidence is uncontroverted that American Timken sells such tubing to its competitors in this country (R. 72-74).

3. Alleged exclusive exchange of know-how.

While there is some claim that there was exclusive exchange of know-how for the purpose of eliminating the competition of third parties (Appellee's Brief, p. 73), the appellee does not attempt to point to any evidence supporting the statement of the district court (Mem. par. 124, R. 996) cited in its brief on that point. Here, again, there is no evidence that any competition has actually been eliminated by virtue of this alleged practice. The district court's statement in this respect is entirely inconsistent with its further statement that "the know-how furnished by defendant to the other companies was not a secret process for the manufacture of tapered roller bearings," and that other manufacturers "were admitted to the plants of British and French Timken, where they could observe *all the know-how* put into operation" (Mem. par. 168, R. 1007).

How the district court could have found, or the appellee could seriously assert, that exclusive exchange of know-how

has buttressed the alleged combination, in view of this last statement of the court, is impossible to understand.

4. Alleged restrictive use of the trademark "Timken."

We call attention at this point that the provisions of the agreements relating to the use of the trademark are of the type and kind that would be found in the usual trademark license agreement. A full discussion of the various provisions complained of by the appellee appears in Section III, C, *infra*.

5. Alleged participation in agreements between British Timken and French Timken and their competitors.

The appellee states that these agreements, although made abroad, were restrictive upon exports by United States bearing producers and had a direct effect upon the foreign trade of the United States, citing paragraphs 117 and 136 contained in the district court's memorandum (Appellee's Brief, p. 81). No citations to the record in support of these findings are made and, as is pointed out in our main brief (p. 160), the uncontroverted evidence in the record is that none of these agreements could have had the effect of restricting exports from, or imports into, the United States of tapered roller bearings (R. 207, 208).

Obviously, the agreement between British Timken and the SKF subsidiary in England could not have affected United States exports or imports because it related merely to prices and customers and did not fix quotas which might have tended to reduce exports from American Timken to British Timken (R. 141).

While the appellee states that the export trade of American Timken was directly affected because the quantity of the bearings which it could ship into France was limited by the quota provisions in French Timken's agreement with SKF, the uncontroverted evidence is that these quotas were consistently exceeded by French Timken, as detailed in our main brief (p. 160).

These agreements related exclusively to domestic bearing business in England and France. There was no evidence that they were intended to affect the foreign commerce of the United States, and none which affirmatively showed that they had such an effect. Therefore, they were not illegal under the Act, because, to establish illegality, it must be shown that they were intended to have, and actually had, an effect on American foreign commerce. In *United States v. Aluminum Co. of America*, 148 Fed. (2d) 416, the court, discussing such agreements, said (p. 443):

> "Did either the agreement of 1931 or that of 1936 violate § 1 of the Act? The answer does not depend upon whether we shall recognize as a source of liability a liability imposed by another state. On the contrary we are concerned only with whether Congress chose to attach liability to the conduct outside the United States of persons not in allegiance to it. That being so, the only question open is whether Congress intended to impose the liability, and whether our own Constitution permitted it to do so: as a court of the United States, we cannot look beyond our own law. * * * Two situations are possible. *There may be agreements made beyond our borders not intended to affect imports, which do affect them, or which affect exports.* Almost any limitation of the supply of goods in Europe, for example, or in South America, may have repercussions in the United States if there is trade between the two. Yet when one considers the international complications likely to arise from an effort in this country to treat such agreements as unlawful, *it is safe to assume that Congress certainly did not intend the Act to cover them.* * * *"

In that case, the agreements were intended to affect imports into the United States and the question was whether, in fact, they did so. In the case at bar, on the other hand, the agreements were not intended to affect either imports into, or exports from, the United States.

In view of the fact that French Timken, at least, was forced into its agreement with SKF in order to survive (see our main brief, p. 161), the arguments of the appellee and the findings of the District Court that these agreements made by Dewar with the competitors in his area were part of the means used by the alleged combination for the purpose of controlling the industry and eliminating the competition of others are not convincing. Since the agreements came to an end in 1939 and have not been renewed (R. 208), they are of no significance in the case.

II.

THE APPELLEE'S ARGUMENT THAT THE ALLEGED RESTRAINTS CANNOT BE JUSTIFIED AS ANCILLARY TO SOME LAWFUL "MAIN PURPOSE."

A. The appellee's argument that the restraints here imposed were unreasonable per se and therefore cannot be justified as "ancillary."

The appellee argues in substance that in order for a restraint ancillary to a valid main purpose to be legal, it must be reasonable in scope, and that a restraint which is unreasonable per se, such as price fixing or allocation of territories, can never be reasonable, so that the provisions for division of territories and alleged price fixing in the business agreements between the Timken companies could not be reasonably ancillary to the formation and conduct of a joint venture between American Timken and Dewar (Appellee's Brief, pp. 83-86).

This argument is not supported by the authorities. It depends for its support upon combination of the *general* principle as to the doctrine of ancillary restraints stated in *United States v. Addyston Pipe Company*, 85 Fed. 271, with *general* authorities such as *Apex Hosiery Company v. Leader*, 310 U. S. 460, and *United States v. Socony-Vacuum Oil Company*, 310 U. S. 150, which did not involve ancillary restraints.

It is well settled, that a restraint ancillary to a valid main transaction may involve price fixing or allocation of territory, or, in fact, an agreement which absolutely prevents competition, provided that it is reasonably necessary to bringing about the consummation of a legal main transaction.

Restraints resulting from price fixing ancillary to the grant of a patent license by a manufacturer to a potential manufacturing competitor have been held legal in *Bement v. National Harrow Company*, 186 U. S. 70, and *United States v. General Electric Company*, 272 U. S. 476. In the recent cases of *United States v. Line Material Company*, 333 U. S. 287, this Court refused specifically to overrule the doctrine of the *General Electric* case as applied to its facts. Contrary to the assertion of the appellee (Appellee's Brief, p. 84, note 79), statutory patent rights do not constitute the sole justification for price fixing. That price fixing can be justified only on the basis that it is reasonably ancillary to the grant of a patent license, in order to encourage it, by protecting a manufacturing patentee from competition of his own making resulting from granting the license, is clear from the distinction made by this Court in *United States v. Masonite Corporation*, 316 U. S. 265, 277, between valid price fixing in such a situation, and invalid price fixing by a patentee who grants a license merely to vend the patented article. In the latter situation, of course, there is no reason, like that of protection of the manufacturing patentee, which justifies fixing the licensee's price, and, therefore, an attempt to fix the price at which the licensed vendor is to sell is outside the scope of the patent monopoly.

Ancillary restraints resulting from allocation of territory have been held not to be illegal per se, *Fowle v. Park*, 131 U. S. 88; *Thoms v. Sutherland*, 52 F. (2d) 592 (C. C. A. 3, 1931). Thus an agreement by a licensor not to license others in the same territory as his licensee con-

stitutes a valid ancillary division of territory for the protection of the licensee, as this Court stated in *Bement v. National Harrow Company*, 186 U. S. 70, 94. Similarly, a valid ancillary restraint is imposed by an agreement by a manufacturer not to sell within a designated territory in competition with an exclusive distributor or selling agent, who is induced to invest his money in the agency by reason of that agreement. *Cole Motor Car Company v. Hurst*, 228 Fed. 280 (C. C. A. 5, 1915), certiorari denied 247 U. S. 511.

The argument of the appellee runs directly contrary to the decision of this Court in *United States v. Bausch & Lomb Optical Company*, 321 U. S. 707, discussed in our main brief (pp. 72, *et seq.*), because in that case this Court held, by a split decision, that an agreement which prevented any competition whatsoever between Bausch & Lomb and Soft-Lite in the distribution of pink tinted lenses was not illegal under the antitrust laws. The same is true of those traditional restraints imposed by the agreement of the vendor of a business to refrain from engaging therein in the same territory for a period of years, which has always been recognized as legal. An agreement for *no* competition certainly imposes a restraint just as effective as, if not more than, an agreement not to compete on the basis of price or in the same territory.

Again, in such cases as *International Salt Company v. United States*, 332 U. S. 392, and *Fashion Originators' Guild v. Federal Trade Commission*, 312 U. S. 457, this Court has indicated that combinations or agreements, the main purpose or effect of which is to foreclose the market to outsiders, impose restrictions on trade which are unreasonable *per se*. Yet in *United States v. Bausch & Lomb Optical Company*, 321 U. S. 707, *supra*, this Court upheld the exclusive agreement between Bausch & Lomb and Soft-Lite by which the former agreed to manufacture exclusively for the latter, and the latter agreed to purchase exclusively

from the former, pink tinted glass, although this obviously foreclosed Bausch & Lomb as a potential manufacturer for other distributors of pink tinted lenses and Soft-Lite as a potential customer for pink tinted glass made by other manufacturers. In *United States v. Columbia Steel Company*, 334 U. S. 495, this Court referred to this exclusive agreement between Bausch & Lomb and Soft-Lite as a typical example of a valid exclusive dealing contract (p. 523, note 23).

Thus, it is seen that the mere fact that an agreement calls for a restraint which would be illegal *per se* if the imposition thereof were the only purpose of the agreement does not cause the agreement to provide for a restraint which cannot be reasonable, if the restraint is reasonably necessary under the circumstances, and ancillary to the consummation of a valid main agreement.

B. The appellee's contentions that the restraints were in no sense ancillary to a joint venture.

The appellee relies first upon the finding of the district court that there was no joint venture, and calls attention to the fact that the district court found that the 1928 business agreements merely extended the long existing arrangements between alleged potential competitors "who continued such arrangements in order to escape each other's competition" (Appellee's Brief, pp. 86-88). We have dealt in our main brief with the district court's fundamental error in overlooking important evidence in arriving at this conclusion (pp. 146-153). There it is pointed out that the district court based this conclusion upon the mistaken theory that from 1925 until the acquisition of British Timken by American Timken and Dewar in 1927, there was not even a colorable legal basis for the continuation of the 1909 license agreements after the basic British patents on bearings had expired in 1924, contrary to the uncontroverted evidence in the record that American Timken pro-

ceeded at that time in accordance with advice of its American trademark counsel that continuation of the license agreements was amply justified by the license of the trademark by American Timken to British Timken, supported in 1926 by the opinion of eminent British trademark counsel.

Significantly, the appellee has nothing to say about the contemporaneous declarations of the "partners" in 1927, 1929 and 1936.

Opposing counsel argue that the relationship between American Timken and Dewar created by the Heads of Agreement of May 16, 1927, did not meet "the familiar legal criteria of a 'joint venture'" (Appellee's Brief, pp. 89, 90). A complete answer to these contentions is that this Court determined in *United States v. Bausch & Lomb Optical Company*, 321 U. S. 707, *supra*, that an arrangement involving even less of the characteristics of a technical legal joint adventure, creating reciprocal legal rights, than that involved in the case at bar, nevertheless constituted a sufficient justification for the imposition of those restraints which can be validly imposed in connection with the organization of a partnership, *by analogy to the principles applicable to partnerships.* Similarly, in *United States v. Scophony Corporation of America*, 333 U. S. 795, this Court did not find it necessary to determine that all of the legal incidents necessary to the creation of a true legal joint adventure were present in order to apply *by analogy* the principles applicable to a legal joint adventure to "what practically, *if not also technically*, was a joint adventure * * *."

The efforts of opposing counsel to distinguish the *Bausch & Lomb* case are singularly unimpressive. While they emphasize in other parts of their brief the fact that British Timken and French Timken were *potential* competitors of American Timken, they seek to distinguish that case on the basis that Bausch & Lomb (which, of course, could have marketed the pink tinted glass which it pro-

duced at any time in competition with Soft-Lite) was not an actual competitor of Soft-Lite (Appellee's Brief, p. 93).

They also develop, without authority, the theory that "one way" restrictions may be valid ancillary restraints, whereas "mutual" restrictions cannot be (Appellee's Brief, pp. 93, 94). What difference could it possibly make, in determining whether restraints are ancillary to a valid main transaction, whether they are imposed on one of the parties thereto or both?

C. The appellee's contentions that the alleged restrictions cannot be justified as ancillary to the licensing of the name "Timken."

There are many omissions from that part of the appellee's brief devoted to a discussion of the trademark licensing, which are more persuasive than the material therein contained. It is, we submit, of the highest significance that there was no discussion of the provisions of the Lanham Act, dealing with that subject; of the international conventions to which this country is a party, in which the subject of trademark licensing is clearly referred to; nor of the decisions cited in our main brief on the points that registration of the trademark may be properly carried in the name of a licensee and that a trademark may be introduced into a territory wherein it has not theretofore been used by the licensor through the medium of a trademark license. These matters are fully argued and discussed in our main brief (pp. 99-138)

There was discussion on the subject of ownership of the mark and the claim is asserted again that American Timken was not the owner of the mark in various areas of the world. This point was discussed at some length in our main brief (pp. 101-120) and it is not necessary to elaborate on it further in this reply brief beyond commenting upon some of the completely unsound statements made in the appellee's brief.

On page 59, the statement is made that:

"Appellant admits that it has no common law rights arising from the use of the mark 'Timken' in areas of the world allotted to British Timken and French Timken."

There is no reference to the source of such alleged admission for the obvious reason that none was ever made. The common law as such had no application on the continent of Europe or in most sections of the world outside of England and the English colonies, protectorates and the United States. It would not have made sense to have admitted the lack of any common law rights in countries where none could have existed because there was no common law.

On page 77, note 76, the appellee refers to the fact that after the passage of the Trademark Act of 1946, American Timken registered the mark "Timken" and is now in a position to utilize the provisions of the statute banning through the facilities of the customs authorities importation of bearings with the mark "Timken" on them. This is a clear statutory right of American Timken and we are at a loss to know why any special significance is attached to its use. Reference was also made on page 77 of the brief to the recording of the registration of the mark with the Bureau of Customs in 1921 preceding any connection with Dewar by six years. Why it is important in respect of the association with Dewar and the licensing of British Timken to use the mark "Timken" is left to imagination.

On pages 104 and 105, statements are made to the effect that ownership rights in a trademark arise only from use of the mark in connection with the sale of products. This is clearly an incorrect statement, for in many countries of the world, use has nothing to do with ownership. The first person to register the mark becomes the owner of it. Derenberg, *Trademark Protection and Unfair Competition*, pp. 16 and 17; Ladas, *The International Protection of Industrial Property*, pp. 489, *et seq.*

It is difficult to understand the statement on page 111 that:

> "Appellant has no legal rights to the mark in England but only a contractual right against British Timken to come to fruition in 1965 when (and if) the current agreements terminate and not renewed."

It would seem that an inquiry is appropriate as to whether contractual rights are not legal rights and whether legal rights cannot be based upon a contract.

On page 113, the appellee states that American Timken had "complete control over the development and use of the name 'Timken' at the time when its international use began in 1909."

This is obviously incorrect for, as pointed out in our main brief, American Timken could not register the mark in foreign countries until it was able to obtain registration in the United States. It was not in a position to do so until the amendment to the Trademark Act in 1920.

In asserting the claim that American Timken was not the owner of the trademark in various areas of the world, the appellee has not been able to point to any finding by the district court declaring that American Timken did not own the mark in any specific country. Nor is any attempt made to explain the challenge of ownership which is in direct conflict with the allegations of the amended complaint.

On pages 109 and 110 of the appellee's brief, there is a table inserted which purports to show the status of registrations in various countries of the world and from this table the argument is made that there were some forty countries in which no registration had been obtained at the time of trial. An examination of this list of countries shows a curious hodge podge of countries that are entirely insignificant from a manufacturing standpoint. Some of them are in the territory of American Timken and therefore not covered by any license by American Timken to British Tim-

ken or French Timken; others are colonies and protectorates of European countries where presentation of a registration from the mother country is necessary to obtain a registration therein; others have no trademark registration laws; none of them are of any manufacturing importance. It is obvious that any bearings imported into these areas would be, either in equipment produced in manufacturing areas of the world, or for replacement parts in such equipment. As a practical matter, registration in such areas is unimportant for the reason that registrations in the manufacturing areas of the world afford complete protection in these non-manufacturing sections.

An examination of this table on pages 109 and 110 of the appellee's brief shows beyond any question that as of the time the license was given by American Timken to British Timken and French Timken in 1928, there were registrations of ownership of the trademark in all the important manufacturing areas of the world and any attempt to attack the license at this time on the basis of lack of ownership is without foundation.

Finally, on page 67 of the brief, the government states that:

> "The division or allocation of *exclusive* territories is the crux of this case."

It should be pointed out again that at no time since 1928 has the use of the trademark by British Timken and French Timken in the areas in which they have been manufacturing been exclusive. On the contrary, the record shows clearly, and indeed the contracts have always so provided, that American Timken could and did make use of the trademark in such areas on its bearings manufactured and sold to producers of equipment in the United States and elsewhere (Pltf's. Exh. 179, R. 1693; offered, R. 952; R. 1701; Deft's. Exh. 99, R. 2005; offered, R. 594; R. 2005). If the alleged exclusive featute of the license is the determinative factor and the charge of exclusiveness is unsound,

then the entire argument of the appellee in respect of the alleged unlawful character of the agreements involved in this case must fail.

On page 113 of its brief, the appellee described as "hokus pokus" the registration of American Timken as registered user of the trademark in England. In point of fact, it was a step taken in full compliance with British law only to cover the use of the mark in England by American Timken as contemplated by the 1938 contract. As has been shown, the bearings of American Timken were going into the English market as a part of American made equipment, and as replacement parts for use in such equipment. No proof has been afforded, as indeed none could be, that such action had any effect on the ownership of the trademark by American Timken, as such ownership was recognized and acknowledged in all the earlier agreements with Dewar and British Timken and French Timken.

The brief of the appellee warrants specific answer with respect to three other matters. First is the claim that the licensed use of a trademark is "monopolistic" and that it is not such a transaction as should be encouraged. Second, is its claim that the requirement of the 1928 business agreement and succeeding agreements that British Timken and French Timken use only the mark "Timken" on tapered roller bearings is unlawful. Third, is the claim that the reversionary clause in the 1938 agreement requiring that the mark revert to American Timken after use thereof by British and French Timken is unlawful.

1. The licensed use of a trademark is competitive and is not monopolistic.

The basis of the appellee's opposition to the trademark license in this case is perhaps unwittingly shown on page 98 of its brief wherein this language appears:

> "The ancillary restraint doctrine is based upon the rationale that the primary transaction is not only lawful but should be encouraged in the public interest.

Trademark licensing is not such a primary transaction."

From this language it is perfectly apparent that the appellee in this case has an inherent dislike of controlled trademark licensing as an instrument of commerce and that this is the true basis of the views that are expressed in the brief filed in this case on its behalf. When consideration is given to this statement, it is understandable that no reference is made in the appellee's brief to the provisions of the Lanham Act relating to controlled licensing of trademarks, to the provisions of the international conventions, or indeed to the many cases decided in this country involving the normal practices incident to trademark licensing, including the decisions of this Court on the same subject.

The fact is that a trademark license is a competitive instrument and not a monopolistic one. It is said at another point of the appellee's brief (p. 98) that a trademark owner is not entitled to any ancillary provision to protect "such a territorial product monopoly." Viewed in its proper light, a trademark is not a territorial product monopoly. On the contrary, it is a territorial monopoly in good will for the obvious reason that no third party is precluded by ownership of a trademark or by its controlled licensing from making a competing article.

The function of the trademark is to provide ready identification of goods and to associate them with the good will that has been developed in their production by the owner of the trademark. It is easy to understand why any man who has goods to sell should not hesitate to adopt a trademark and begin its use, because by so doing he is adopting a means of perpetuating the good will of his business. The use of a trademark and the process of developing good will in it, whether by user of the owner or by a controlled license, are not the result of, and do not result in, monopoly. On the contrary, they are the result of the existence of competitive forces which make it desirable for

the owner of a trademark to develop good will as a means of distinguishing his product or the product of his licensee from that of his competitors. In this case, if all the antifriction bearings in the world were manufactured by American Timken, there would be no need for it to consider the adoption of a trademark, for there would be no antifriction bearings in the market from which it would be necessary or desirable to have its goods distinguished.

The very fact that a trademark has been developed indicates very plainly that there is competition in the sale of the product covered by the mark and, further, that the owner of the mark is desirous of having his goods distinguished from those of his competitors in the same field. The trademark is a convenient way of accomplishing just that, but this does not mean that there is any monopoly in the production of goods of the type covered by the trademark, for any third party is free to manufacture and sell such goods as long as in so doing he does not appropriate any good will developed by the owner of the trademark.

The Congress of the United States at the time of the enactment of the Lanham Act recognized that trademarks were instruments of competition and did not develop monopoly. In Senate Report No. 1333, 79th Congress, 2nd Session, submitted May 14, 1946,[3] under the heading "Trademarks Defeat Monopoly by Stimulating Competition" the following appears:

> "This bill, as any other proper legislation on trademarks, has as its object the protection of trademarks, securing to the owner of the good will of his business and protecting the public against spurious and falsely marked goods. The matter has been approached with the view of protecting trademarks and making infringement and piracy unprofitable. This can be done without any misgivings and without the fear of fostering hateful monopolies, *for no monopoly is involved in trademark protection.*"

[3] Robert, *The New Trademark Manual*, p. 267.

Later on under the same heading, this appears:

"Trademarks are, indeed, the essence of competition, because they make possible the choice between competing articles by enabling the buyer to distinguish one from the other. Trademarks encourage the maintenance of quality by securing to the producer the benefit of the good reputation which excellence creates. To protect trademarks, therefore, is to protect the public from deceit, to foster fair competition, and to secure to the business community the advantages of reputation and good will by preventing their diversion from those who have created them to those who have not. This is the end to which this bill is directed."

Repeatedly in the appellee's brief, reference is made to the older conceptions of a trademark and its uses. In the report it is clearly shown that one of the purposes of the Congress was to modernize trade-mark law in the United States for it is there stated:

"Moreover, ideas concerning trade-mark protection have changed in the last 40 years and the statutes have not kept pace with the commercial development. In addition the United States has become a party to a number of international conventions dealing with trade-marks * * *. These conventions have been ratified, but it is a question whether they are self-executing, and whether they do not need to be implemented by appropriate legislation.

Industrialists in this country have been seriously handicapped in securing protection in foreign countries due to our failure to carry out, by statute, our international obligations. There has been no serious attempt fully to secure to nationals of countries signatory to the conventions their trademark rights in this country * * *"

Then the purposes of the bill are enumerated, among which are

"2. To carry out by statute our international commitments to the end that American traders in foreign countries may secure the protection to their marks to which they are entitled * * *

3. To modernize the trade-mark statutes so that they will conform to legitimate present-day business practice."

There is no provision contained in the trademark license involved in this case which is not supported by statute and the decided cases, or which undertakes to engraft upon the license any rights to which the owner of a trade-mark is not entitled. Thus, it is clear that the entire argument of the appellee on the subject of trade-mark licensing, being predicated upon an unsound premise, must fall.

2. There is no unlawful restraint involved in requiring British Timken and French Timken to manufacture under the mark "Timken."

The basis of this claim by the appellee is that the inclusion of such a provision in the trade-mark license agreement between American Timken as licensor, and British Timken and French Timken as licensee, has the effect of foreclosing American Timken's competitors from sales of anti-friction bearings to British Timken and French Timken. The argument is that since the latter companies can deal only in bearings marked "Timken," they could not buy bearings fro[illegible] the Bower Company, New Departure, (other American manufacturers) or any other anti-friction bearing manufacturer in the United States. A fair test of whether or not such a provision is unreasonable or unlawful is: would American Timken, if it were manufacturing abroad and using its mark there as a manufacturer, be interested in purchasing bearings from another American manufacturer carrying a different mark? The answer, of course, is unqualifiedly "No," for the obvious reason that American Timken would not be interested in "pushing" the products of a competing manufacturer. There is as a consequence no sound reason why American Timken's *alter egos*, its licensees British Timken and French Timken, would proceed on a different basis.

The court will bear in mind that as licensees, these companies are *bearing manufacturers*; that the trade-mark that they are using is a manufacturer's trade-mark. Certainly there is no real "restraint" involved in a provision that requires the licensee to use that mark exclusively, for the obvious reason that as a manufacturer it would not consider using any other mark. Surely British Timken or French Timken as a manufacturer would not be interested in buying from New Departure, any more than General Motors would be interested in explaining to its representatives in the United States and over the world that it was in a position to supply them with Ford automobiles. Would the manufacturer of Camel cigarettes in the United States ever consider advising its distributors that it had arranged to supply them with Chesterfields? Yet, this is the kind of "competition" the restraint of which the government urges is unlawful if included in a trade-mark license agreement.

There is a further and equally sound reason why such a provision in the license agreement is normal, and that is that, if a licensee is permitted to manufacture and sell the same articles as those covered by the trade-mark license under different trade-marks, the effect would be that the value of the mark would be seriously impaired. Customers of such a licensee would immediately feel that the product sold under the licensor's mark was not worth what the licensor claimed, since the licensee was manufacturing a similar product under another mark. This, of course, is in no wise comparable to the situation involved in connection with a patent license. The owner of a patent has a true monopoly and is in a position to prevent anybody from manufacturing the article covered by the patent. There is nothing in either the ownership or the controlled licensing of a trade-mark that prevents a third party from manufacturing a competing product.

Such a provision in a trade-mark license is one that is calculated to require the licensee to "push" the sale of the

product under the trade-mark and thus maintain the value of the mark for the owner. To the extent that a licensee would manufacture a competing product he would dilute the value of the mark. Such exclusive provisions have been recognized as sound in the only cases on this point. Thus, in *The Coca Cola Bottling Company v. Coca Cola Company,* 269 Fed. 796 (D. C. Del. 1920), the license agreement provided that the licensee would "not manufacture, deal in, sell, offer for sale, use or handle or attempt to do so, either directly or indirectly, any product that is a substitute for Coca Cola" (p. 802) and the court held that this provision, as well as others, was "ancillary and incidental" to the licensing of the trademark (p. 808). The same doctrine was upheld in *Brosious v. Pepsi-Cola Company,* 155 Fed. (2d) 999 (CCA 3, 1946), in which, in an action for treble damages under the anti-trust laws, the court definitely implied (p. 101) that a provision that the licensee would not handle any other product with the name "Cola" or any beverage which could be confused with "Pepsi-Cola" was a reasonable condition "calculated to protect the good reputation of its product which is sold under a trade-marked name." See also, *Associated Perfumers, Inc. v. Andelman,* 316 Mass. 176, 55 N. E. (2d) 209 (1940), and *Harris Calorific Company v. Marra,* 345 Pa. 464, 29 Atl. (2d) 64 (1942).

Finally, to avoid deception it is necessary that the licensor in a controlled trademark license supply technical information to his licensee to insure the quality of his licensee's product. Would it be fair for the licensee to use such information to manufacture a different product, or conversely is it unreasonable for the licensor to insist that the information which he gives to the licensee be used for the purpose for which it was intended, namely, to develop goodwill in the trademark covered by the license?

We submit that these considerations show clearly the unsoundness of the appellee's views.

3. The reversionary clause in respect of the trademark in the 1938 agreement which provided for the return by British and French Timken of the mark to American Timken is not unlawful.

One of the features of the 1938 agreement to which the appellee takes exception is the reversionary clause which provides that at the end of the license term, the mark will revert to American Timken. While this claim was advanced in the district court, an examination of the memorandum opinion fails to disclose any reference to it by that court. In point of fact, there is no sound basis for the contention that a licensor should not provide in a license agreement for the return of the subject of the license. If it were not lawful to include such a provision in an agreement licensing a trademark, no trademark owner could ever afford to execute a license of the mark. The penalty for so doing under the appellee's theory would be complete loss of the trademark to the licensee. The appellee cites no authority to support this contention. Among the cases cited in our brief in chief is the case of *E. F. Pritchard Co. vs. Consumers Brewing Company*, 136 Fed. (2nd) 512. On page 519 of its opinion that court said, among other things, that:

> "An owner of a trade name who lends the use of such trade name may resume its exclusive use according to the terms of the lending."

The same conclusion is implicit in the *Scandinavia Belting Company*, *F. R. Arnold & Company*, and *The Dental Products Company* cases, cited on pages 110-111 of our main brief.

We submit that the provision that contemplates a reversion of a trademark to American Timken is a normal, sensible and necessary requirement in a trademark license and that it is in no sense unlawful to include such a provision in a license agreement.

III.

THE APPELLEE'S CONTENTION THAT THE FINDINGS OF FACT UPON WHICH THE DISTRICT COURT BASED ITS JUDGMENT ARE CORRECT AND ARE CLEARLY SUPPORTED BY THE EVIDENCE.

While the appellee relies upon *United States v. Yellow Cab Company*, 338 U. S. 338, as authority that this Court should not review the action of the district court in determining, on the evidence, the intent of the alleged parties to the combination, we call attention to the fact that in *United States v. U. S. Gypsum Company*, 333 U. S. 364, *supra*, the very first finding of the district court held clearly erroneous by this Court was one that the evidence "fails to establish that the defendants associated themselves in a *plan* to blanket the industry under patent licenses and stabilize prices" (p. 393). This Court emphasized the fact that insofar as the district court's findings are "inferences drawn from documents or undisputed facts, * * * Rule 52(a) of the Rules of Civil Procedure is applicable" (p. 394). As pointed out in our main brief (p. 9), the appellee's evidence was almost entirely documentary and therefore the district court necessarily based its decision against American Timken upon inferences from documentary evidence and undisputed facts rather than upon the testimony of witnesses.

A. The appellee's contention that American Timken combined and conspired with potential competitors.

The appellee first argues that American Timken recognized that E. & O. A. was a potential competitor because the 1909 license agreement limited E. & O. A. to its territory (Appellee's Brief, pp. 117, 118). Such reciprocal provision is, of course, an ordinary incident of a patent license and has no particular significance in determining whether or not a licensor deems the licensee to be an *actual* potential competitor. It is difficult to see how E. & O. A. could have been recognized as an actual or potential competitor in 1909

since that company had never produced any anti-friction bearings before that date and as far as the record shows had never indicated any interest in so doing. The fact is that the evidence discussed in our main brief (pp. 33-36) shows that E. & O. A. did not do at all well in the manufacture of tapered roller bearings and at no time was a potential or actual competitor of American Timken.

The appellee next argues that British Timken, from its inception in 1920, experienced a rapid and substantial growth relatively greater than that of American Timken (Appellee's Brief, p. 118, note 101). This is the same discussion which confused the district court when it found that British Timken's growth had been relatively faster than American Timken's, discussed in our main brief (p. 142), which shows that it is based upon an inaccurate comparison of sales of the two companies, British Timken's sales being carefully selected by the appellee from favorable years, which produced the inaccurate conclusion. The statement that British Timken had produced as many as 660,000 bearings a year is particularly unimpressive, in view of the facts that as late as 1920, 11 years after E. & O. A. had undertaken the manufacture of the bearings in 1909, American Timken apparently found it necessary to insist upon an amendment of the 1909 license agreement, covering the United Kingdom, which gave it a right to rescind in the event that Wolseley Motors did not produce a minimum of at least 400,000 bearings in 1920, and 500,000 in every subsequent year (Deft's. Exh. 192, R. 2343; Section 6, R. 2345), and the 660,000 figure was not achieved until the year commencing October 1, 1925 and ending September 30, 1926 (R. 1830). Moreover, while the appellee dilates on the fact that British Timken paid $62,556 royalty in 1923 (Appellee's Brief, p. 118), it fails to call attention to the fact that the royalties dropped to $31,075 in the next year and were only $45,604 in 1926 (Deft's. Exh. 230, R. 2545), after the 1924 reduction from 10% to 5%.

It is said that British Timken's only competitor in England in 1928 was British Bock, Limited (Appellee's Brief, p. 119) in the face of the contemporaneous documentary evidence clearly establishing that as early as 1923 British Timken was sustaining damaging competition from Skefko, the British SKF subsidiary, in the manufacture of tapered roller bearings, which caused it to ask repeatedly for reductions in royalties (see our main brief, pp. 38-40, 42).

Finally, we have the amazing statement that the facts "fully support the conclusions of the district court that *at the time of the formation* of French Timken by appellant and Dewar, the French company was the largest dealer in tapered roller bearings in France * * * and a potential competitor of appellant" (Appellee's Brief, p. 120).

This is another example of the strenuous attempt to build a case, at least on paper, showing a combination between the giants of a mythical roller bearing industry—as early as the organization of one of them—which pervades this entire case.

Moreover, this argument overlooks completely the fact that SMG, the independent former sublicensee of British Timken when it was Vickers' subsidiary, which was sold to SKF in 1930 (see our main brief, p. 143) was equipped to manufacture tapered roller bearings and undoubtedly continued to do so.

B. The appellee's contentions as to findings as to competition between tapered roller bearings and anti-friction bearings.

The appellee contends that it was not necessary for the district court to ascertain with particularity the extent of the elementary competition or freedom from competition between tapered roller bearings and other anti-friction bearings (Appellee's Brief, p. 122), again ignoring in its discussion the undisputed fact that they compete 90% of the

time. On the contrary, it was very necessary, of course, to determine the extent of competition in view of the great importance placed by the district court upon the alleged "dominant" positions of the three Timken companies in the alleged bearing, anti-friction bearing, roller bearing and tapered roller bearing industries to which it referred (see our main brief, p. 12, note 4).

It is said that, in any event, whether or not the Timken companies dominated the alleged tapered roller bearing market has no significance because this is not a monopoly case (Appellee's Brief, p. 123). Yet clearly the district court's findings in this respect are significant in that, if it had not been mistaken as to the position of the companies in the industry in which they compete, it would not have adopted such harsh provisions in its judgment, particularly those which prevent the exclusive exchange of patents, know-how, machinery and materials.

C. The appellee's contentions with respect to the treatment of the three Timken companies as separately operated units, the district court's refusal to consider the evidence as to a joint venture, and its findings that the relationship between the parties was merely a continuation of an illegal combination dating from 1909.

1. The argument that American Timken was merely a stockholder in British Timken and French Timken.

The appellee first undertakes to support the district court's finding that there was no joint venture, merely ownership of stock by American Timken in British Timken and French Timken,—the familiar argument urged unsuccessfully by the defendant in *United States v. Scophony Corporation*, 333 U. S. 795, a decision which opposing counsel have not dignified by mentioning. The appellee seeks to support the district court's finding that in any event any joint venture was ended in 1934. This matter was dis-

cussed in our main brief (p. 82, note 26), in which the utter lack of any basis for this conclusion is shown.

2. The claim that, in fact, the acquisition of American Timken and Dewar constituted merely the continuance of an existing combination between American Timken and British Timken, Vickers' subsidiary.

Opposing counsel argue that the district court considered, and that we conceded in argument that it had considered, all of the evidence as to the complex financial relationships between American Timken and Dewar (Appellee's Brief, p. 126). The district court's memorandum clearly disclosed that, whether or not it was aware of the evidence as to these matters, it disregarded them on the mistaken theory that, even if the facts would otherwise have constituted a valid joint venture, this made no difference because there was an *intentional* combination in restraint of trade, and, therefore, what otherwise might have been a joint venture, could not constitute a "cloak" for it. (See our main brief, pp. 146-153.)

The appellee then argues that in 1924 American Timken "began to cast about" for devices other than the basic bearing patents to support the territorial allocations between it and British Timken, and hit upon the alleged device of the license of the trademark "Timken" (Appellee's Brief, p. 128), that Dewar's underlying motive for making the 1928 business agreement was his desire to escape American Timken's competition and continue the alleged combination in restraint of trade (Appellee's Brief, p. 127), and that American Timken was well aware that he was acting in order to escape this competition, and that one of the purposes of the agreements was to satisfy Dewar in his desire not to have its competition in the areas allocated to British Timken (Appellee's Brief, pp. 127, 128).

We pointed out in our main brief in detail (pp. 148, 153) that, although the district court specifically considered

the statement of American Timken's British solicitor, Duncan, in 1927 in a letter to American Timken as an avowal by the latter of a purpose to suppress competition, nevertheless it completely disregarded the legal advice actually given by American Timken's trademark counsel to it in 1924 to the effect that the license of its trademark to British Timken constituted a legal basis for the continuation of the license agreement and payment of royalty thereon, as well as the opinion by eminent British trademark counsel in 1926, which reenforced this opinion. Since the district court cited one specific piece of evidence in support of its conclusion, it is to be assumed that it cited all of the evidence which it considered on this point. Otherwise, the court would have weighed the evidence and stated its reasons for rejecting the evidence reflected by the opinions given to American Timken by its Amrican and English trademark counsel.

Furthermore, acquisition of British Timken by American Timken jointly with Dewar represents a complete departure from the previous practices. The system of merely licensing the Vickers subsidiaries had failed as a method of promoting tapered roller bearings in competition with other anti-friction bearings in Europe, and American Timken now was starting on an entirely new program for that purpose.

No inference of an intention to suppress competition illegally is to be drawn from the fact that Dewar apparently desired to avoid competition from American Timken in investing his life savings in this enterprise. Dewar undoubtedly assumed, when he suggested an extension of the license agreements, that the provisions thereof were legal, and they were so, because, as its American trademark counsel had advised American Timken in 1924 (Pltf's. Exh. 173, R. 1683; offered, R. 949, 950) and as Kerley and Bray, the British trade-mark counsel, had advised it in 1926 (Deft's. Exh. 99, R. 2005; offered,

R. 594), the licensee had the right to use the name "Timken" which constituted one legal basis for the license agreements thereafter. If, incidental to the licensing of the trade-mark, it was legal to protect the licensee from competition by the licensor, and if it was also legal to extend this protection in connection with the joint adventure, as we contend, then the fact that Dewar sought to obtain the protection to which he was legally entitled, does not lead to any inference that either he or American Timken intended to eliminate competition otherwise than as legally ancillary to the main transaction.

Thus, the parties did not consciously contemplate the extension of alleged illegal agreements in 1927, but merely the implementation of those which they considered to be legal, upon advice of counsel, and they only intended thereby to restrain competition to the extent to which they were legally entitled for their protection.

D. The appellee's contention as to the findings that the Timken companies had combined and conspired to suppress competition of outsiders by acting collectively against outsiders or joining with them.

The appellee apparently misconceives the purport of the statement in our brief (p. 153) as to referral of orders (Appellee's Brief, p. 129). We did not intend to give the impression that there was only one incident in which orders were referred to the other Timken companies by American Timken, and do not think that this conclusion is to be drawn from our statement, which specifically cited the district court's statement on this point (see our main brief, p. 153, which cited the district court's memorandum, par. 71, R. 973). The incident with respect to the order from Ford in 1929 for its Cork, Ireland, plant was not one of the typical referrals, but instead an incident in which American Timken is supposed to have sold bearings to British Timken at a low price for the purpose of carrying out their cooperative enterprise.

With respect to the agreements of British Timken and French Timken with competitors in their areas, the appellee merely asserts that the district court found that American Timken, while not actually a party to these arrangements, had cooperated and consulted with the other Timken companies in bringing them about and had approved these agreements before they were executed (Appellee's Brief, p. 131). The evidence referred to does not support these conclusions, but merely demonstrates that Hess of American Timken knew about the agreements between British Timken and SKF governing the United Kingdom, although he never participated in making them, and that after an agreement had been made between French Timken and SKF covering France in 1930, the renewal thereof in 1932 was submitted to officials of American Timken, and they did not interfere with Dewar's decision to renew it. (See our main brief, pp. 159-161.)

E. The appellee's contentions as to evidence of price-fixing.

These contentions are discussed and answered under Section I, B, 1, *supra*.

F. The appellee's contentions that the district court properly adopted its memorandum opinion as its findings of fact and conclusions of law.

Perhaps the only answer necessary to this portion of the appellee's brief (pp. 133-135) is that the appellee recognizes in note 1, page 5 thereof, that much of the opinion of the district court consists of matter which cannot be properly regarded as either findings of fact or conclusions of law. The appellee has found it desirable to designate certain portions as findings, others as conclusions, and others merely as portions of the opinion. This indicates the nature of the memorandum and shows that it does not perform the proper function of findings of fact and conclusions of law which would justify the district court in adopting it as such.

IV.

THE APPELLEE'S CONTENTIONS AS TO THE RELIEF ORDERED BY THE DISTRICT COURT.

A. The appellee's contentions as to divestiture.

Much of the appellee's argument regarding divestiture is based upon the assumption that British Timken and French Timken "were and are" American Timken's "potential competitors." We have shown in our main brief, pages 138-144, how completely erroneous this assumption is. With respect to French Timken, which was established largely with American Timken's funds, it approaches the absurd. Since this erroneous assumption is its basis, the whole argument is seriously undermined.

But even if British Timken and French Timken are regarded as "potential competitors" of American Timken (although surely their "potentiality" in 1927 was, and even now is, very small), still we are faced with the tests of the *Columbia Steel* case as to the legality of the acquisition of a competitor. At pages 193 to 195 of our principal brief, we have shown that by the tests, the acquisitions were not illegal.

The appellee relies mainly on three cases to sustain the divestiture provisions of the final judgment, *United States v. Paramount Pictures, Inc.*, 334 U. S. 131; *United States vs. Crescent Amusement Co.*, 323 U. S. 173, and *United States vs. National Lead Co.*, 332 U. S. 319. We have already analyzed each of these cases in our principal brief, and submit that, as applied to the case at bar, they do not support the type of decree for which the appellee contends.

In the *Crescent Amusement* case, 323 U. S. 173, as this Court said (page 181):

> "The crux of the government's case was the use of the buying power of the combination for the purpose of eliminating competition with the exhibitors on acquiring a monopoly in the areas in question."

Competitors unable to obtain films, therefore, would "go out of business or come to terms and sell out to the combination with an agreement not to compete for a term of years." It is clear from this Court's opinion (pages 189-190), that it was this abuse of the monopoly power, and the fact that the holdings to be divested were so acquired, which justified the divestiture order.

The *Paramount Pictures* case, 334 U. S. 131, approved, first, the divestiture of interests in theaters acquired as "the products of the unlawful practices" (p. 152). This is apparently the same situation as in the *Crescent Amusement* case, that is, that competitors were forced out of business and their theaters acquired by the defendants. Certainly, no similar claim is made with respect to American Timken's purchase of its interest in British Timken and the establishment of French Timken. The second classification was that of interests which, "though lawfully acquired, may have been utilized as part of the conspiracy to eliminate and suppress competition"—that is, they were thrown into the pooling agreements and clearance systems by which the five major exhibitor-defendants avoided competition among themselves and with others. As we have pointed out in our principal brief (pages 190-191), the argument that American Timken utilized its interests in British Timken and French Timken to promote the conspiracy, is wholly at odds with the district court's findings as to their independence of American Timken. The portion of the argument in the district court to which appellee refers in its brief, at page 140, note 7, shows that the dilemma in which the district court found itself bothered it and the appellee, and that the latter therefore was forced to fall back on a completely different and entirely new and novel ground to sustain the divestiture provisions—namely, that continued ownership of these interests would afford an inducement for American Timken not to compete with British and French Timken.

There is no support for this theory in the *Paramount Pictures* case, which speaks, third, of the divestiture of interests which "would afford opportunity to perpetuate the effects of the restraints on trade." This is tied in with the second classification, ~~mainly~~ namely of interests utilized as part of the conspiracy, so that it depends upon *control* of the foreign companies, which the district court here found to be lacking.

In the *National Lead* case, 332 U. S. 319, the stockholdings ordered divested were not interests in foreign corporations which were found to be co-conspirators, but were interests in companies which were jointly owned by National Lead *and such co-conspirators,* and which had been assigned exclusive territories under the plan for dividing the world markets in titanium pigments. In this way, the stock acquisitions were "part and parcel of the territorial allocation agreements." We would have a comparable situation in this case if Dewar, as a producer of anti-friction bearings on his own account, and American Timken had been adjudged the co-conspirators. Dewar had no personal interest in the production of anti-friction bearings prior to 1927 when he joined American Timken in this enterprise. But, even in the *National Lead* case, the National Lead Company *was* permitted to acquire the interests of the other co-conspirators, apparently because such acquisition would not have the effect of giving National Lead unlawful monopoly power in the industry on an international scale. This is exactly what American Timken contends with regard to the divestiture provisions in the case at bar.

The error in the district court's judgment in respect to divestiture and to the prohibition of further acquisitions of British and French Timken stock is made even more apparent, and its injustice all the more pronounced, by reason of the situation which arose upon the death of Dewar on December 21, 1950, while this case was pending on appeal

in this Court. Upon Dewar's death, pursuant to an agreement between him and American Timken, dated March 22, 1948 (Pltf's. Decree Exh. 3, R. 2680; offered, R. 1142), which succeeded several previous agreements containing substantially the same provisions, American Timken became entitled to purchase his stock in British Timken, consisting of 94,960 ordinary shares. These, added to its own 121,040 shares (Deft's. Exh. 186, R. 2298; offered, R. 911), would constitute 54 per cent of the 400,000 total ordinary shares in British Timken issued and outstanding. Under an agreement between them and others, dated December 10, 1935 (Deft's. Exh. 228, R. 2483; offered, R. 942, R. 2534), American Timken was given the right upon Dewar's death to acquire such shares in French Timken as would give it voting control of that company, and if the remaining shares were to be offered for sale to purchase such shares as well.

American Timken has already taken steps to acquire the British Timken shares, and the French Timken shares giving it 100% ownership of that company.[4]

If and when this transaction has been completed, the culmination of the joint adventure with Dewar will have been achieved, and the same result accomplished as if American Timken, in 1927, instead of joining with Dewar for that purpose, had alone acquired all of the shares of British Timken (later selling some of the shares to the public generally) and had controlled it directly since

---

[4] As we pointed out in our main brief (p. 2, note 1), the district court has recently overruled our motion in that court which was designed to introduce into the record in this case the facts with respect to Dewar's death and American Timken's exercise of the options, made effective thereby, to acquire Dewar's stock in British Timken and French Timken. We have filed a motion in this Court asking that the motion in the district court and the district court's order overruling it be incorporated in the record upon appeal in this Court. The following argument is based on the assumption that American Timken will succeed in acquiring Dewar's stock in British Timken and French Timken, and that this Court will consider upon this appeal these facts as to Dewar's death and the exercise of the options.

that time, and had acted alone in establishing French Timken. We do not believe that such acquisitions by American Timken in 1927, or even in 1951, would be considered as violations of the Sherman Act under the principles laid down in *United States vs. Columbia Steel Company,* 334 U. S. 495, and *United States vs. Aluminum Company of America,* 148 F. (2) 416, discussed at greater length in our principal brief at pages 96 and 192-194. The appellee has never urged the contrary, and does not now.

The district court, of course, denied that this case raised any problems such as those presented in the *Columbia Steel* and *Aluminum Company* cases (Mem. par. 144, R. 1001), because it refused to consider that for this purpose the three Timken companies were to be treated as related in the roles of parent and subsidiary, saying:

> "Defendant did not acquire British and French Timken." (Mem. par. 144, R. 1002);

and that American Timken:

> "did not build plants in Europe or purchase subsidiaries abroad" (Mem. par. 160, R. 1005).

To the contrary, American Timken obviously *did* acquire substantial interests in those companies—not 100% ownership at the outset, it is true, but 50% or more in each; and now that Dewar is dead, it will, unless forbidden by the judgment in this case, acquire 100% ownership of French Timken and 54% ownership in British Timken. Thus, the proposition which the appellee must really urge is that although 100% ownership from the beginning would not have violated the law, ownership of less than that percentage, along with the other facts, does spell out a violation, even though it may be expected to culminate in 100% ownership in due course. We submit that such a view exalts the *form* which the transaction has taken over the *substance* of what it was intended to and did accomplish, namely, the extension of American Timken's business into European markets. But surely the application of the Sherman Act cannot be

made so to depend upon form rather than substance! Certainly the Congress never intended that Sherman Act cases should be disposed by dialectics in an economic vacuum!

Despite pronouncements which the appellee cites, that corporate affiliation does not avoid the application of the Sherman Act, this Court has also recognized that the tests of what constitutes an "unreasonable restraint of trade" cannot be the same with respect to related corporations as in the case of completely independent companies, for in the *Columbia Steel* case, *supra*, it said (p. 523):

> "When other elements of Sherman Act violations are present, the fact of corporate relationship is material and can be considered in the determination of whether restraint or attempt to restrain exists."

The two propositions are not mutually inconsistent, and the logic of the above quoted principle is so sound that it cannot be questioned. We submit that the relationship of the three Timken companies is now that of parent and subsidiary in every respect, whatever may have been lacking before, and that this principle now has very direct application in this case.

The consequences of Dewar's death in respect of the stock ownership in British and French Timken thus emphasize the soundness of the analogy between this case and *United States vs. Columbia Steel Company*, 334 U. S. 495, *supra*. It has, of course, complicated the problems with regard to the record in this Court that events have developed as they have. American Timken has sought to follow the procedures specified by this Court for such situations, in the case of *Roemer vs. Simon*, 91 U. S. 149, and approved in *Realty Acceptance Corporation vs. Montgomery*, 284 U. S. 547, and in the rules of this Court. We believe that the consequences of Dewar's death are of importance in this case, as affecting both the judgment on the merits (as explained above) and the appropriate relief and that the district court erred in holding to the contrary and refusing to take further evidence on the questions raised thereby.

As respects the relief, it is hardly necessary to add to what has been said in our principal brief at pages 184-202 on the divestiture question generally. One aspect, however, which is worthy of further comment is the reference to *United States vs. National Lead Company*, 63 F. Supp. 513 (D. C., S. D. N. Y., 1945), aff'd 332 U. S. 319, especially to the alternative form of decree in that case which permitted National Lead Company either to divest itself of all stock interests in certain foreign corporations owned jointly by it and its adjudged co-conspirators, or to acquire the stock of the latter in such companies.

We submit that under the circumstances of this case, it would be in the furtherance of justice to permit American Timken to choose between the same alternatives. It is significant that in this case the remaining shares in British Timken which American Timken has no option to purchase are widely held, no other holder being an alleged co-conspirator as in the *National Lead* case. We further submit that the acquisition of a controlling interest in British Timken and of complete ownership of French Timken will not give American Timken such control of international commerce in anti-friction bearings as would itself be contrary to the Sherman Act.

In the final analysis, the question on this phase of the cases is whether an American corporation may operate foreign subsidiaries which it does not wholly own, and of which it has acquired control following an intermediate step in which it jointly participated with a foreign citizen in the ownership and management of the foreign companies. There are many other American companies which have foreign investments representing much less than 100 per cent ownership of their foreign affiliates. Such arrangements do not unreasonably restrain trade, but rather promote it by encouraging the development of the economies of the foreign countries, which has now become one of the basic objectives of the foreign policy of the United States.

In the long run, it is such development which will promote trade between the United States and foreign countries and will inure to the greatest benefit of this country. The acquisition or the establishment of a foreign plant in conjunction with a foreign national as a means of extending the business of an American company into a foreign market in many cases, as it was in this, is a highly desirable choice of means to accomplish such a purpose. It gives a local flavor to the enterprise and it makes unnecessary the carrying of the full investment by the American company. Surely this is a lawful method of extending business.

The necessity of participating in foreign markets by means of affiliated companies established in the respective countries has been recognized by many business organizations, including such an international competitor of this defendant as the Swedish bearing company, SKF, whose size and power were shown in the trial of this case. As the Supreme Court said in the *Columbia Steel* case (page 533):

> "extension of that industry requires that the existing companies go into production there or abandon that market to other organizations."

This leaves the alternatives of acquiring existing facilities in the new territory, or creating entirely new ones. The choice of the former method should not be forbidden unless it will unreasonably restrain competition in the entire industry, under the tests laid down in the *Columbia Steel* case, *supra*. There is no hint or suggestion that from a practical standpoint the continued ownership of American Timken in such companies will do other than supply a strong competitive force in the anti-friction bearing industry.

A decision on questions of this importance to the American economy should not be made on the basis of abstract logic, but in full recognition of the economic realities involved. We submit that trade by American Timken and other companies in foreign commerce will not be promoted

by depriving them of foreign investments which they have developed over many years, and expecting them either to attempt to compete in the foreign market solely by exporting products of domestic establishments, or to embark *alone* to establish foreign factories, and systems of distribution. Rather, they should be permitted, wherever reasonably possible and wherever they do not actually restrain trade which would otherwise flourish, to develop their foreign trade along such lines as the practicalities of their particular problems require. Only by so doing can the Sherman Act be made a real instrument for the removal of restraints of trade rather than a device for imposing restraints and discouraging foreign trade.

For these reasons, we urge that, even if American Timken be held to have violated the Sherman Act by its past conduct, nevertheless the final judgment herein should be modified to order American Timken either to divest itself of all stock or other financial interests in British Timken and French Timken, or to acquire the controlling interest in British Timken and the entire ownership of French Timken.

The suggestion of the appellee (p. 148) that American Timken may not have raised any issue as to Section VIII, subsection B, which enjoins it from further acquisitions of British Timken and French Timken stock is answered by the fact that American Timken's Statement of Points To Be Relied Upon (R. 1327) states that it intends "to rely upon its assignment of errors herein and upon the following points based thereon" (R. 1327), clearly indicating that it intends to rely *inter alia* upon assignments of error numbers 31 and 32 (R. 1267, 1268) which relate to Section VIII, subsection B of the judgment.

B. The appellee's contentions as to the injunctive provisions of the judgment.

1. The appellee's contentions as to the injunction against the exclusive grant of exclusive patent licenses, know-how, material, and machinery.

The appellee makes no substantial argument with respect to this issue (Appellee's Brief, pp. 149-151). First, it merely refers to, without attempting to support by record references, the statement of the district court (Mem. par. 137, R. 1000) that exclusive exchange of know-how has been most helpful in "buttressing" alleged illegal conduct to achieve the desired result. In fact, as previously seen, the district court found that know-how received by British Timken and French Timken from American Timken was made available to their competitors, and there is no finding by the district court as to any specific instance in which exclusive exchange of patents, know-how, material or machines was resorted to by the Timken companies for the purpose, or with the effect, of eliminating competition by third parties.

It is urged, that, even though there was no allegation in the amended complaint that the exclusive exchange of know-how and of patented and unpatented inventions constituted one of the means by which the alleged combination was carried out, nevertheless the district court could deal with this matter in its final judgment. Federal Rule of Civil Procedure 15 (b) is cited as sanctioning this action on the ground that counsel for American Timken consented to the trial of this issue, the appellee citing paragraph 164 of the district court's memorandum (R. 1006) in which it discussed American Timken's contention that any restraints imposed were ancillary to its agreement to furnish know-how to the foregoing Timken companies. Obviously, "know-how" did not include patents, material and machinery. Moreover, the assertion of this defense did not constitute an implied consent to trial of the wholly different

issue as to whether exclusive exchange of know-how constituted one of the means by which the alleged combination was carried out.

2. The appellee's contentions as to agreements to fix prices.

With respect to the appellee's argument in answer to our contention that we are deprived of the right to fix minimum prices under the Miller-Tydings Act (Appellee's Brief, pp. 152, 153), it is to be observed that it makes no attempt to justify this position, but merely suggests that the judgment can be modified at some time in the future. Obviously, this does not constitute an answer to our argument, which is fully supported by this Court's reasoning in *United States v. The Bausch & Lomb Optical Company*, 321 U. S. 707, 729.

3. The appellee's contention as to the injunction against refusing to sell or selling at discriminatory prices.

It is to be observed that the appellee concedes that the program embraced in Section IX of the district court's judgment is probably intended to involve maintenance of substantial sales and service organizations in foreign countries (Appellee's Brief, pp. 154, 155). It thus takes the position that it will be necessary for American Timken to take steps to enter into export business with persons with whom it would otherwise not engage in business due to the many practical reasons against attempting to engage in export of bearings into foreign countries which have been pointed out in our main brief.

The only authority cited for this provision is *International Salt Company v. United States*, 332 U. S. 392, which is said to authorize a decree "which will pry open to competition a market that has been closed by defendant's restraints" (p. 401). However, that case does not constitute authority for requiring American Timken to engage in business. It is, we believe, the only case in which a provi-

sion for compulsory leasing of patented machinery was included over the protest of the defendant. However, the provision was not included in that case for the purpose of compelling the defendant to compete, but rather as a means of preventing the resumption by the defendant of its past practice of "tying" sales of its unpatented salt to leases of its patented salt-vending machines, which restrained competition by other vendors of unpatented salt with the defendant.

CONCLUSION.

In conclusion, we urge that, contrary to the decision of the district court, and to the picture painted in the appellee's brief, this is *not* a case where three independent companies, already of great size and well established in the anti-friction bearing industries of their respective countries, entered into contracts dividing the world into mutually exclusive territories in which they agreed not to compete with each other and, as a consequence, completely stifled all competition in the industry. To the contrary, in 1928 when the supposedly illegal combination is alleged to have commenced, French Timken, one of the three companies, was *barely coming into existence,* having been established in 1928 largely by the investment and efforts of American Timken, along with those of Dewar. The other foreign company, British Timken, although previously a subsidiary of Vickers, Ltd. and a patent and trademark licensee of American Timken's, had been sold to American Timken and Dewar as its sole owners, and its previous owners dropped out of the picture completely; it employed only about 500 people, and its maximum total sales in any year had been only about £240,000, or $1,150,000.00, in 1926.

Certainly, at that time, if American Timken had acquired British Timken wholly on its own account, as it considered doing, and had established French Timken without

Dewar's participation, no question would ever have been raised as to the legality of such acquisitions; and the fact that it followed the practice of dealing in certain territories exclusively for certain purposes through one company or the other would not have been considered in any way unreasonable or contrary to law.

As of the present time, British Timken has achieved more substantial size, employing about 2,400 people and making sales which in 1947 totalled $14,700,000.00. French Timken, still wholly owned by American Timken and Dewar until the latter's death, is now about as large as British Timken was in 1928, with 500-odd employees and $2,274,723.00 in sales in 1947. Although the inadequate findings of the district court make it difficult to determine, we do not believe that the acquisition *today* of these companies by American Timken (even assuming that it had no previous financial interests in them), and its operation of them along the lines disclosed by the record, could be held to impose an undue restraint on the foreign commerce of the United States. Rather, such acquisitions would be recognized as legitimate expansion by American Timken into the European market, undertaken in that manner because of the practical, commercial necessity of doing European business in anti-friction bearings through companies organized and located there.

Instead of the above situation, the record discloses that, after consideration of such a course of action, American Timken did not *wholly* acquire British Timken in 1928 and did not establish French Timken *wholly* on its own account, but joined for these purposes with an English businessman, Dewar, because of Dewar's exceptional qualifications to promote the sale of tapered roller bearings in England and in Europe generally, and because of the belief that greater success would be achieved by having British management of the British company. At all times, American Timken and Dewar maintained their joint con-

trol of British Timken and French Timken. We have referred to the arrangement between American Timken and Dewar as a joint adventure, because it had all the features of such a relationship in law.

Yet, even this arrangement was obviously planned, if the venture proved worthwhile, to culminate in majority ownership and control of British Timken and French Timken by American Timken alone, because at all times American Timken had the option, upon Dewar's death or withdrawal, to acquire Dewar's shares.

Pending this appeal, upon Dewar's death, that eventuality became a fact, and American Timken began taking the requisite steps to exercise its options to acquire Dewar's shares in British Timken and French Timken.

We find it difficult to believe that, *under these circumstances,* the practices which were agreed upon as between American Timken, British Timken and French Timken, for the sale of bearings in certain territories, can be held to constitute a violation of the Sherman Act. We believe that the district court's decision to that effect was based upon a completely erroneous conception of the facts as shown by the record in this case and of the inferences to be drawn therefrom. We urge that it is in no degree contrary to the language or spirit of the Sherman Act for an American company to undertake to extend its business into foreign countries in the manner followed in this case, and in connection therewith to agree with the foreign companies which it is using as the vehicles for such expansion, not to compete in certain territories with respect to certain important phases of their business. So to hold would seriously interfere with the choice by American companies of the most advantageous means from a commercial standpoint for accomplishing such expansion, without any real beneficial effect in furthering the policy expressed in the Sherman Act.

Furthermore, in the absence of findings by the district court as to the effect of these arrangements upon competi-

tion in the anti-friction bearing industry on a world-wide scale and on many other essential facts, we do not believe that a sufficient basis exists in the record upon which it can properly be determined that a violation of the Sherman Act has occurred, or that American Timken should be prevented from acquiring control of British Timken and absolute ownership of French Timken.

We submit that under the true and complete facts as shown by the records, the judgment of the district court is erroneous and should be reversed; and we again so urge.

Respectfully submitted,

No. 352

In the Supreme Court of the United States

OCTOBER TERM, 1950

THE TIMKEN ROLLER BEARING COMPANY, APPELLANT

v.

THE UNITED STATES OF AMERICA

APPEAL FROM THE UNITED STATES DISTRICT COURT FOR THE NORTHERN DISTRICT OF OHIO

STATEMENT OPPOSING JURISDICTION AND MOTION TO DISMISS OR AFFIRM

IN THE UNITED STATES DISTRICT COURT FOR THE NORTHERN DISTRICT OF OHIO EASTERN DIVISION

Civil Action 24214

UNITED STATES OF AMERICA, APPELLEE

v.

THE TIMKEN ROLLER BEARING COMPANY, APPELLANT

STATEMENT IN OPPOSITION TO APPELLANT'S STATEMENT OF JURISDICTION AND MOTION TO DISMISS OR AFFIRM

Appellee, pursuant to paragraph 3 of Rule 12 of the revised Rules of the Supreme Court of the United States, moves that the appeal be dismissed or that the Final Judgment of the District Court be affirmed.

This is a direct appeal from the Final Judgment of the United States District Court for the Northern District of Ohio, entered on February 15, 1950, which granted injunctive relief under Section 4 of the Sherman Act with respect to an unlawful conspiracy in restraint of trade, engaged in by the appellant, in the manufacture, sale and distribution of anti-friction bearings.[1]

[1] As defined in Section 1 A of the Final Judgment, " 'Anti-friction bearings' means rotating devices for reducing friction between moving mechanical parts, wherein rollers of various shapes or balls are inserted between containers which are inserted between moving parts. . . ."

In a memorandum opinion, filed March 3, 1949 (83 F. Supp. 284), after trial of the action, the District Court found that appellant had violated Sections 1 and 3 of the Sherman Act by forming a cartel with a British and a French producer of anti-friction bearings, both of whom were named as co-conspirators, whereby appellant and its co-conspirators eliminated competition among themselves and with others by dividing among themselves world markets for the production and sale of anti-friction bearings.

A hearing on the relief in this case was held before the District Court September 28 to October 3, 1949. The Court handed down its Final Judgment on February 15, 1950. The Judgment aimed at severing the ties among the co-conspirators, and enjoined any further concerted action between them. Further provisions had as their objective the restoration of competition in the field of the manufacture, sale, and distribution of anti-friction bearings.

MOTION TO DISMISS

Appellee moves, pursuant to paragraph 3 of Rule 12 of the Revised Rules of the Supreme Court of the United States, that this appeal be dismissed because the excessive number of assignments of error makes it impossible to determine the grounds upon which the appellant relies for a reversal of the District Court's Judgment, and this deficiency is not cured by certain broadly stated propositions in appellant's jurisdictional statement. Cf., *Local 167* v. *United States*, 291 U. S. 293, 296.

The 206 assignments of error, covering 67 typewritten pages, advanced by the appellant constitute

a promiscuous attack upon virtually everything done by the District Court.

The most appropriate remarks applicable to this undigested mass are those made by Mr. Justice Miller in *Phillips & Colby Construction Co.* v. *Seymour*, 91 U. S. 646, 648, in referring to only 52 assignments of error:

> "This practice of unlimited assignments is a perversion of the rule, defeating all its purposes, bewildering the counsel of the other side, and leaving the Court to gather from a brief, often as prolix as the assignments of error, which of the latter are really relied on."

This language was approvingly cited in *Chesapeake & Delaware Canal Co.* v. *U. S.*, 250 U. S. 123, in which there were only forty-one assignments. Finally, in *Local 167* v. *United States*, 291 U. S. 293, the Court warned the bar that in the future such an assignment of errors would be ground for dismissal, saying (p. 296):

> The assignment of errors includes more than 250 specifications and occupies more than 35 pages of the record. While it is possible to find among them bases for the five points indicated, they contain so much that is irrelevant that they tend to confuse rather than to define the issues to be presented. They do not appropriately serve the convenience of the appellee or of the court. *Phillips & Colby Const. Co.* v. *Seymour*, 91 U. S. 646, 648. *Central Vermont Ry.* v. *White*, 238 U. S. 507, 508. *Chesapeake & Del. Canal Co.* v. *United States*, 250 U. S. 123, 124. *Seaboard Air Line Ry.* v. *Watson*, 287 U. S. 86, 91. In view of the omission of appellee to object and the lack of precedent definitely in point we refrain from dismissing

the appeal for failure substantially to comply with the statute and our rule in respect of the assignment of errors. 28 U.S.C., § 862. Rule 9. But what is here said is to be understood as an announcement that in the future a failure of that sort may be taken as sufficient ground for dismissal.

MOTION TO AFFIRM

Appellee, pursuant to paragraph 3 of Rule 12 of the Revised Rules of the Supreme Court of the United States, moves that the Final Judgment of the District Court be affirmed for the reason that the appeal from said Judgment presents no substantial question for consideration.

In its jurisdictional statement, appellant claims that this case involves two basic and fundamental legal questions of vital importance to American businessmen.

First, appellant claims that the restraints imposed by the territorial allocations were reasonably ancillary to a "joint venture in the general nature of a partnership" between the appellant and a British subject. Nowhere is this legal entity, "joint venture in the general nature of a partnership," defined, but appellant declares that the Supreme Court approved this contention in *United States* v. *Bausch & Lomb Optical Co.*, 321 U. S. 707. The Supreme Court did affirm *United States* v. *Bausch & Lomb Optical Co.*, 45 F. Supp. 387 (S.D. N.Y.), in which the words "joint venture" were casually used, but no fair analysis of the business arrangement discussed in this latter case would make it applicable to the present case. The District Court in the *Bausch & Lomb* case found reasonable a *vertical* selling arrangement between manufacturer and

distributor. Here, we find a *horizontal* arrangement among existing competing manufacturers which resulted in an allocation of sales territories throughout the world. Ever since *United States* v. *Addyston Pipe & Steel Co.*, 85 Fed. 271 (6th Cir.), aff'd. 175 U. S. 211, this has been illegal *per se*. Where there is a *per se* violation, the doctrine of ancillary restraints can have no application. That doctrine can only be brought into play where the issue of the reasonableness of the restraint is still open. Historically, the ancillary doctrine was based upon the seller of a business agreeing for a period of time not to compete with the buyer. This protects the buyer's investment in a reasonable manner which is in the public interest. But this situation has nothing to do with the present case. The District Court correctly disposed of this attempt to becloud with semantics by stating that "regardless of the descriptive term used," (par. 150) this was an illegal contract in restraint of trade. Therefore, there is no substantial, significant, or important question involved in this issue.

The second important question alleged to be involved in this case is the right of an American company to license the use of its trademark "Timken" abroad on a territorial basis. Whatever right an American company might have to license its trademark abroad, it would have this right only upon a *national* basis and then only if (1) the law of the nation in question permits the licensing of trademarks, and (2) the American company complies with the requirements of such law.

But regardless of the law governing the licensing of trademarks abroad, that question is not involved

in this case. Appellant does not own the mark "Timken" in such important areas of potential competition as Great Britain, France and Germany. British Timken and French Timken were and are the registered owners of that mark in their respective countries (Pl. Ex. 149) and British Timken owns the mark in Germany. As the District Court said: "Defendant did not and could not have a right to license a trademark in markets where it did not own the mark." (Par. 190) In fact, appellant is at present taking steps to obtain a license of the mark in Great Britain from British Timken. (D. Ex. D (decree))[2] Hence, with respect to those countries where the problem posed might be of importance to the American businessman, that is, in the major industrial nations of the world, appellant has not licensed and could not license the mark; therefore the question of the right of an American corporation to *grant* a trademark license in these countries is not involved in this case.

Further, the Final Judgment does nothing to interfere with this right to license the mark. Sec. VII of the Judgment, the only provision dealing with trademarks, enjoins appellant from entering into any contract with its co-conspirators which provides for the transfer of any right under a trademark upon condition that the co-conspirators allocate or divide territories or markets or engage in other enumerated restrictive practices.

---

[2] Further, appellant has advised the Court that it would become a licensee of the mark "Timken" in other countries when a law permitting it to do so is passed. (D. Ex. D (decree)).

Even in those areas where appellant has the registration of the trademark, that is, areas other than the major industrial countries, such as Great Britain, France and Germany, and in which appellant might presumably license the mark, appellant may not license legally under any agreement which allocates markets throughout the world. It is well settled that the allocation of territories cannot be justified as ancillary to the grant of a license under a patent. *United States* v. *National Lead,* 63 F. Supp. 513, aff'd. 332 U. S. 319; *Ethyl Gasoline Corp.* v. *U.S.,* 309 U. S. 436, 456. Nor can a copyright be used to restrain commerce and suppress competition. *Interstate Circuit, Inc.* v. *U. S.,* 306 U. S. 208; *U. S.* v. *Paramount Pictures,* 334 U. S. 131, 143. Even less can a trademark owner impose such restrictions, for, as was said in *United Drug Co.* v. *Rectanus Co.,* 248 U. S. 90, 98, "The owner of a trademark may not, like the proprietor of a patented invention, make a negative and merely prohibitive use of it as a monopoly." If a patent license will not support an allocation of markets, it must follow that the lesser right, that is, the trademark will not do so either. The reason is, of course, that an allocation of sales territories is a *per se* violation of the Sherman Act. The rule is of universal application that, upon finding a *per se* violation, all discussion as to reasonableness is precluded. This is so whether the ancillary restraint imposed flows out of a patent license, a joint venture, or a trademark license.

Turning now to the appellant's assignments of error, the omnibus and indiscriminate nature of appellant's assignments makes it impossible to

focus attention on any particular points of fact or law. The appellant here objects to 83 of the Court's Findings of Fact. However, the basic agreements establishing this cartel in 1938 (Pl. Ex. 26 and 27) showed on their faces a division of markets and sales territories. The remaining evidence showed conclusively that these agreements were carefully adhered to over a period of many years.[3] The District Court's Findings were amply supported by the evidence in the case. To reconsider all these assignments on factual issues would amount to a needless retrial of the case. The Supreme Court in *United States* v. *Yellow Cab Co.*, 338 U. S. 338, refused to try a case *de novo* on the record, reject nearly all the findings of the trial court, and substitute contrary findings of its own.

The conclusions of law made by the District Court with respect to these facts are plainly correct and amply supported by authority. Appellant objects specifically to 62 of these conclusions. Not one of these objections, so far as can be discerned, raises a substantial or novel point of law. The facts of this case demonstrate that what is here involved is a typical international cartel involving the allocation of territories among competitors to eliminate competition among themselves. As pointed out above, for over fifty years such restraints have been illegal *per se*. *United States* v. *National Lead Co.*, *supra*; *United States* v. *Addyston Pipe & Steel*

---

[3] In appellee's answer to appellant's unsuccessful motion for a new trial, dated March 16, 1950, appellee pointed to the page or exhibit in the trial record which supported 71 of these 83 findings objected to. The 12 new objections here made by the appellant are equally negated by an actual reference to the trial record.

Co., supra. In short, the legal questions that might be raised by this appeal involve only already settled law and contain nothing of substantiality or novelty.

Appellant has assigned as error each and every provision of the Final Judgment in this case—30 assignments in all. Many of the provisions are objected to more than once. The inevitable result of such an unselective attack is that many of these assignments are frivolous. For instance, the appellant claims that the Court, sitting as an equity court, was in error in retaining jurisdiction in this case (Assignment 37).[4] Appellant also claims that the Court erred in taxing costs against the appellant (Assignment 38).[5]

The only issue that arises with respect to a final judgment is whether or not the District Court has abused its discretion, for, as was said in the *National Lead* case: "the provisions of this decree, to a large extent, are matters lying within the discretion of the District Court as a court of equity whose duty it was to make the remedy as effective

---

[4] The frivolous character of this assignment is readily demonstrated by reference to a previous decision of the Supreme Court:

> "Power to modify the decree was reserved by its very terms, and so from the beginning went hand in hand with its restraints. If the reservation had been omitted, power there still would be by force of principles inherent in the jurisdiction of the chancery. A continuing decree of injunction directed to events to come is subject always to adaptation as events may shape the needs." *U. S. v. Swift & Co.*, 286 U.S. 106, 114.

[5] This is claimed as error in spite of the plain language of Rule 54 (d) of the Federal Rules of Civil Procedure: "Costs shall be allowed as of course to the prevailing party unless the court otherwise directs."

as possible." 332 U. S. at 334.[6] The established facts of this case and the law applicable to such facts make it clear that no such abuse can be validly claimed in the present cause.

In its jurisdictional statement, the only question raised by the appellant with respect to the Final Judgment concerned the District Court's order that appellant divest its stockholdings in the co-conspirators. Appellant claims that it neither illegally acquired nor illegally used these holdings. Both of these contentions are contrary to the facts of this case. The agreement (D. Ex. 15) which provided for the purchase of British Timken stock by appellant likewise provided, "in connection therewith," for the continuation of the existing agreement dividing world territories. The stock interest in French Timken was similarly acquired. Thus the acquisitions were illegal because immediately connected with the *per se* violation of the Sherman Act.

---

[6] In the proper exercise of its discretion in providing effective and adequate relief in antitrust cases, the District Court should strive to achieve certain end results. First, it should enjoin the unlawful practices. *Ethyl Gasoline Corp.* v. *United States*, 309 U.S. 436, 461 (1940). This was done in the present Judgment by, for example, enjoining the allocation of territories (Final Judgment, V A). Secondly, it should order the undoing of the conditions created within the industry by the unlawful practices. In the present Judgment, the divestiture of appellant's stock holdings in the co-conspirators was ordered in accordance with this objective (Final Judgment, VIII A). And thirdly, it should seek to restore competition in the industry affected. *International Salt Co.* v. *United States*, 332 U.S. 392 (1947). Among the provisions in the present Judgment directed to this end are those ordering advertising in the territories formerly allocated to co-conspirators (Final Judgment, X A), and prohibiting refusals to sell in those territories (Final Judgment, IX).

Appellant also made illegal use of these holdings in the co-conspirators. Although its holdings in British Timken and French Timken did not give appellant control of those companies,[7] they did serve as a means of influencing the suppression of competition among the three companies and encouraging the continued adherence to the agreements. This influence was exercised, in the case of British Timken, by the appellant having one director on that Company's board of four members. An example of its exercise occurred in 1935, when appellant used this influence to bring about a thirty-year extension of the agreements (Tr. of Trial 1962-66; Def. Ex. 131-135). The investments likewise served as an inducement to appellant not to compete with the companies whose stock it held in such substantial amounts (Tr. of Trial 2584, 2784-5). Divestiture on these grounds was approved in *United States* v. *Crescent Amusement Co.*, 323 U. S. 173; *United States* v. *National Lead Co., supra; United States* v. *Paramount Pictures, Inc.*, 334 U. S. 131.

In short, there is no substantial question of fact or law raised by this appeal, nor can it be sustained that the Court abused its discretion in the Final Judgment rendered by it.

---

[7] Appellant's holdings did not give it control of British Timken and French Timken, respectively, because a British subject, N. B. U. Dewar, also had substantial holdings in those companies, and by contract with appellant was to retain control of them as long as profits remained at a specified level. Under these arrangements, Dewar maintained operating control of British Timken and French Timken at all times during the joint ownership. (Tr. of Trial 935, 2526-2532; D. Exs. 26, 187, 228, 249).

PRAYER FOR DISMISSAL OR AFFIRMANCE

For the reasons stated it is respectfully submitted that the appeal should be dismissed, or that the Final Judgment of the District Court should be affirmed.

(S.) PHILIP B. PERLMAN,
Solicitor General.

No. 352

THE TIMKEN ROLLER BEARING COMPANY,
APPELLANT

v.

UNITED STATES OF AMERICA

ON APPEAL FROM THE UNITED STATES DISTRICT COURT FOR THE NORTHERN DISTRICT OF OHIO, EASTERN DIVISION

MEMORANDUM IN OPPOSITION TO MOTION FOR POSTPONEMENT OF ORAL ARGUMENT TO OCTOBER TERM, 1951

Appellee, the United States of America, opposes the motion filed by appellant requesting postponement of the oral argument in the above-entitled case until the October, 1951 term. Appellant's request is based on the pendency of a motion filed by it in the District Court on January 24, 1951, six months after the petition for appeal was filed and

allowed by the District Court on July 28, 1950, and more than two months after this Court noted probable jurisdiction on November 6, 1950.

The United States is constrained to oppose postponement of the oral argument not only because it would be contrary to the rule of expeditious hearing of antitrust cases but also for the following specific reasons: (1) appellant's motion in the District Court of January 24, 1951, is on its face completely lacking in substance or merit, and indeed approaches the frivolous; (2) appellant's motion for postponement of argument in this Court is premature, since ample time still remains for the District Court to act upon the motion before the probable date when argument would be heard in this Court.

I

Appellant's motion in the District Court is patently without any substantial basis because that court has already decided all the matters presented in the motion, and no novel or meritorious issues are raised therein. Hence it is extremely probable that the District Court will promptly deny appellant's motion; but even if it should not, the pendency of such motion does not affect the issues on this appeal, and provides no warrant for postponement of the oral argument before this Court.

The motion was based upon the premise that there had been a material change of circumstances following the filing of the appeal. The occasion

which allegedly constituted a material change of circumstances was the death of Michael Dewar on December 21, 1950, and the desire of appellant to exercise certain options to purchase shares of stock owned by Dewar in the co-conspirator corporations, British Timken Limited (herein called "British Timken") and Societe Anonyme Francaise Timken (herein called "French Timken").

The options which appellant stated it wished to exercise were in evidence at the trial (D. Ex. 228, R. 2539-41; D. Ex. 240, R. 2660-1). The District Court, in Section VIII B of its final judgment entered on February 15, 1950, specifically prohibited appellant from exercising these options, as follows (R. 1179):

> B. Defendant is hereby enjoined and restrained, from the date of this judgment, from:
>
> 1. Acquiring, directly or indirectly, any ownership interest in (by purchase or acquisition of assets or securities, or *through the exercise of any option, or otherwise*), or any control over, British Timken or French Timken, or any subsidiary, successor or assign thereof;
> 2. Exercising any influence or control over the production, sales or other business policies of British Timken or French Timken, or any subsidiary, successor or assign, agent, sales representative, or distributor thereof;
> 3. Causing, authorizing or knowingly permitting any officer, director, or employee of

> defendant or its subsidiaries to serve as an officer, director, or employee of British Timken or French Timken or of any subsidiary, successor, assign, agent, sales representative, or distributor thereof. [Emphasis supplied]

The District Court also, in Section IV B of its judgment, cancelled the agreement of March 22, 1948 (D. Ex. 240, R. 2659-2662), which granted to appellant the option on British Timken shares which it now wishes to exercise, as follows: (R. 1175):

> B. Each of the following agreements, entered into during the trial of this action, is hereby terminated; and defendant is hereby enjoined and restrained from the further performance or enforcement of any of the provisions of said agreements and of any agreements amendatory thereof or supplemental thereto:
>
> 1. Agreement dated March 22, 1948 between defendant and Michael B. U. Dewar, Esq., entitled "Agreement with respect to British Timken Limited";

Dewar's death was, in fact, only one of the contingencies named in the agreements which gave appellant options to purchase Dewar's British Timken and French Timken shares. For example, other contingencies named in the agreement as giving rise to such an option on British Timken shares were (1) Dewar's incapacity for a period of six

consecutive months, and (2) Dewar's decision during his lifetime to sell such shares.[1] The agreement also gave Dewar an option on appellant's shares should it have decided to sell (D. Ex. 240, par. 1(d), R. 2660-1). In addition, it gave both appellant and Dewar the right to approve or disapprove, with or without reason, any purchaser found by the other party (D. Ex. 240, par. 2, R. 2661). Similar contingencies were named in the option agreement as to French Timken shares (D. Ex. 228, R. 2539-41).

These various contingencies were all before the District Court when it entered its final judgment. That court might have provided for the exercise of the options upon the occurrence of one or more of the contingencies, but instead it flatly prohibited appellant from acquiring any interests in British Timken or French Timken "through the exercise of any option, or otherwise".

Appellant states in paragraph 4 of its motion

---

[1] The British option agreement provided in part as follows (D. Ex. 240, par. 1, R. 2660):

> (a) Upon the death of Mr. Dewar or if he shall become incapacitated by ill health or otherwise for a consecutive period of six months from discharging his duties as a Director of British Timken Limited . . . [appellant] shall have an option to purchase all or any of the 94960 ordinary Shares in British Timken now belonging to Mr. Dewar or his assigns . . .
>
> (b) In the event of Mr. Dewar or his assigns or his or their legal representatives . . . desiring to sell all or any of the Dewar Shares [appellant] shall have an option to purchase all or any of such Shares which option shall be independent of the option in favor of . . . [appellant] provided for in paragraph (a) hereof.

for postponement of oral argument that it has already exercised the option on British Timken shares and part of the option on French Timken shares (even though such exercise was specifically banned by Section VIII B of the judgment), apparently on the basis of a stay of execution of its final judgment granted by the District Court on July 28, 1950 (R. 1255). Whatever may be the propriety of appellant's action pending appeal, certainly appellant has done it at the peril of having to divest itself of the stock so acquired along with that previously held, in the event that this Court affirms Section VIII A of the judgment, which provides (R. 1179):

> A. Within two years from the date of this judgment, defendant shall divest itself of all stock holdings and other financial interests, direct or indirect, in British Timken and French Timken. Within one year from the date of this judgment, defendant shall present to the Court for its approval a plan for such divestiture.

Appellant held 30.25 per cent of the ordinary shares of British Timken (Fg. 66, R. 971) and 50 per cent of the outstanding stock of French Timken (Fg. 54, 66, R. 969, 971). Dewar held approximately 25 per cent of the outstanding ordinary shares of British Timken (Fg. 66, R. 971), and 50 per cent of the outstanding stock of French Timken (Fg. 54, 66, R. 969, 971). Appel-

lant states that it has acquired from Dewar's estate all of his ordinary shares of British Timken, and stock of French Timken representing one vote at stockholder's meetings, both purchases being made pursuant to the options exercisable at Dewar's death; and that it proposes to purchase the remainder of French Timken stock pursuant to a right of first refusal. This option of first refusal on the remainder of French Timken shares was not exercisable upon the contingency of Dewar's death, which appellant claims was the change of circumstances justifying reopening of the judgment, but rather upon the decision of Dewar's holding company to sell, which decision might have been made either during Dewar's lifetime or after his death (D. Ex. 228, R. 2541). Thus, appellant is contending in effect that the occurrence of any of the contingencies named in the option agreements before the District Court justifies reopening the judgment. If this contention has any merit, then the District Court performed a useless act indeed when it specifically enjoined any exercise of the options.

Because the District Court has already acted upon the question of whether exercise of the options should be allowed upon the occurrence of any of the various contingencies, the occurrence of one of the contingencies manifestly is not a material change of circumstances which would justify re-

opening that court's judgment.[2] And, since the record is complete as to the lower court's action regarding exercise of the options, this Court is in a position to review completely that court's action.[3] Therefore, no purpose, other than delay in final disposition of the appeal, will be served by postponement of oral argument to the October term, 1951.

II

Appellant's motion for postponement of oral argument in this Court is, in any event, premature. There is no reason to suppose that the District Court will not act upon appellant's motion there well before the date of oral argument in this Court. We have been advised by the Clerk of this Court that such argument could be set for the week of April 23, 1951. Since probable jurisdiction in this case was noted on November 6, 1950, and the record on appeal has already been printed, there are no impediments (other than appellant's motion for postponement) in the way of early argument of this case. The District Court, at the hearing on appellant's motion on February 14, 1951, indicated that it would take "at least thirty days or more to

---

[2] A copy of appellee's memorandum in opposition to appellant's recent motion in the District Court is attached as Appendix.

[3] The printing of the record on appeal was finished on February 28, 1951. Appropriate references have been made above to the printed record. Dewar's death, the single fact not in the record, is now known to this Court, and may be considered for whatever bearing it may have on the appeal.

get to the matter". But in view of the motion's patent lack of merit, the District Court may well decide the motion within a very short time after it begins consideration thereof about the middle or end of this month, and will probably render its decision prior to April 23.[4]

The motion in the District Court, if denied before April 23, as is likely, would present no bar to oral argument. The additional record to which appellant refers in paragraph 9 of its motion for postponement of argument, if received by this Court, would be small and should entail no delay. Part of the additional matter is already contained in the papers filed with this motion. The District Court's order denying the motion could readily be transmitted to this Court. But even if the District Court should grant appellant's motion prior to April 23, and ask leave of this Court to conduct additional hearings, then this Court could at that time decide whether a delay in oral argument of this appeal would be justified.

Moreover, the pendency of the motion below, even while unacted upon by the District Court, should not in any way preclude this Court from proceeding to hear the appeal. In its very nature, that motion presents no conflict with this Court's early consideration of the appeal. Appellant captioned it as a motion that the District Court

[4] The District Court stated that it could not give immediate consideration to the motion because of the press of other matters.

ask leave of this Court to consider appellant's motion that the District Court receive additional evidence and reconsider its final judgment, etc. The pendency of such a motion, even if meritorious, as this one is not, presents no reason for this Court to delay disposition of the appeal. Unless and until such motion should be granted by the District Court, the *status quo* remains unchanged. Only the grant of appellant's motion by the District Court could involve such a change in the *status quo* as to require this Court to consider whether it should delay passing upon the appeal before it.

Appellant states in paragraph 9 of its motion for postponement that if the argument is not deferred until October, 1951 it must "commence forthwith the preparation of a brief in this Court". This statement seems to admit that appellant has taken no steps towards preparation of a brief in this Court, even though the appeal was allowed on July 28, 1950, and this Court noted jurisdiction over three months ago, on November 6, 1950. Further, it is not impracticable, as appellant contends in its motion, for appellant to undertake the preparation of a brief in this Court before the District Court has ruled on the pending motion, since appellant must prepare such a brief in any event, unless it intends to abandon its appeal.

For the reasons stated, it is respectfully submitted that appellant's motion requesting postponement of oral argument of this appeal to the October Term, 1951 should be denied.

Respectfully submitted,

PHILIP B. PERLMAN,
Solicitor General.

MARCH 6, 1951

APPENDIX

IN THE UNITED STATES DISTRICT COURT FOR THE NORTHERN DISTRICT OF OHIO, EASTERN DIVISION

Filed February 14, 1951

Civil Action No. 24,214

UNITED STATES OF AMERICA, *Plaintiff-Appellee,*

v.

THE TIMKEN ROLLER BEARING COMPANY, *Defendant-Appellant*

PLAINTIFF-APPELLEE'S MEMORANDUM IN OPPOSITION TO DEFENDANT-APPELLANT'S MOTION THAT THIS COURT ASK LEAVE OF THE SUPREME COURT OF THE UNITED STATES TO CONSIDER DEFENDANT'S MOTION THAT THIS COURT RECEIVE ADDITIONAL EVIDENCE AND RECONSIDER ITS FINAL JUDGMENT HEREIN AND, IF LEAVE BE GRANTED, THAT THIS COURT PROCEED SO TO DO, BECAUSE OF CHANGED CIRCUMSTANCES DUE TO THE DEATH OF MICHAEL B. U. DEWAR SINCE THE PERFECTION OF AN APPEAL HEREIN TO THE SUPREME COURT OF THE UNITED STATES

The plaintiff-appellee opposes the motion, filed with this Court on January 24, 1951, in which defendant-appellant moved that this Court (1) ask leave of the Supreme Court of the United States to consider defendant-appellant's motion

that this Court (a) receive additional evidence, (b) make additional findings of fact and conclusions of law, and (c) vacate its judgment entirely, or vacate and modify portions of Sections IV and VIII thereof; and (2) if leave be granted, that this Court proceed to take such steps.

The occasion for the motion is alleged to be the death of Michael Dewar on December 21, 1950, and the desire of defendant-appellant (hereinafter called "defendant") to acquire additional shares in British Timken and French Timken, pursuant to certain options exercisable at Dewar's death.

Defendant's proposed acquisition of additional stock in British Timken and French Timken is directly prohibited by the final judgment entered in this case on February 15, 1950. In Section VIII B of the judgment, this Court perpetually enjoined defendant from (1) acquiring any interest in British Timken or French Timken, or (2) controlling their business policies, or (3) permitting any officer, director, or employee of defendant to serve as an officer, director, or employee of British Timken or French Timken.

Section VIII A of the judgment required defendant, within two years after the judgment, to divest itself of all stock holdings and other financial interests, direct or indirect, in British Timken and French Timken, and to present a plan for such divestiture to the Court for approval within one year. Section IV B cancelled the agreement of March 22, 1948, which granted to defendant the

option on British Timken shares which it now wishes to exercise.

The primary purpose of defendant's present motion is to require the vacation of the entire final judgment entered by this Court. At the minimum defendant seeks vacation of Sections IV B and VIII B of the judgment, and modification of Section VIII A to permit defendant either to sell present interests or to buy additional shares in those companies.

Plaintiff-appellee is opposed to the granting of any portion of the motion. The facts alleged therein do not justify vacation of the entire judgment or the vacation or modification of any part thereof. Consequently, it would be useless for this Court to grant the preliminary portions of the motion involving asking leave of the Supreme Court for permission to receive additional evidence and reconsider the final judgment, and to take such steps if leave is granted. Therefore, defendant's motion should be denied in its entirety. (A trial court may properly deny a motion for the receipt of additional evidence and reconsideration of its judgment, where the evidence if received, would not have changed the result previously reached. *Union Bleachery* v. *United States*, 176 F. (2) 517 (C.C.A. 4, 1949).)

The inadequacy of the facts alleged in the motion to justify vacation or modification of the judgment in whole or in part will be considered below.

I

Dewar's death does not, as stated in paragraph 1 of defendant's motion, change the basis upon

which this case was tried or upon which relief was granted.

The agreement giving defendant an option to purchase Dewar's shares in British Timken, in the event of Dewar's death, was executed the day the trial in this case started, and was introduced in evidence at the trial (D. Ex. 240), as well as the hearing on relief (P. Ex. 3 (Decree)). It was cancelled by this Court in Section IV B of its final judgment, and is at the present time "in full force and effect", as defendant states in paragraph 3 of its motion, only because a stay of all of the provisions of the final judgment pending appeal was granted by this Court on July 28, 1950. The agreement of December 11, 1935, granting defendant an option at Dewar's death to purchase one of his shares in French Timken, and, as to the remainder of Dewar's stock in French Timken, the right of first refusal, was likewise in evidence at the trial (D. Ex. 228).

The holdings of defendant and of Dewar in British Timken and French Timken were, at the time of the trial (Fg. 54, 66) and of the relief hearings (Hg. Tr. 28-9, 32, 43, 209-210), the same as they are stated to be at present in paragraphs 3 and 4 of the defendant's motion.

The recently executed British option agreement was discussed extensively at the hearing on relief (Hg. Tr. 132-176, 199, 204-6, 290-1). It was also discussed in plaintiff-appellee's brief in support of its proposed final judgment filed October 24, 1949, in part as follows:

> The two Agreements (P. Ex. 2 and 3 (Decree)) executed by defendant on March 22, 1948, the day the trial in this action began,

should be terminated not only because they are a continuation of the illegal conspiracy, but also because they contain provisions which will interfere with the divestiture of defendant's shares.[4] Plaintiff believes it well-established that this Court has the authority to cancel all contracts to which the defendant is a party where the effect of the contracts would be to interfere with or nullify an order of the Court.

Section 1(c) of the Agreement between defendant and Dewar (Pl. Ex. 3 (Decree)) gives Dewar an option to purchase defendant's shares in the event that defendant should wish to sell them. This option was preceded by a somewhat similar one, relating to Timken Holdings Limited shares, contained in Art. 28 of the Articles of Association of Timken Holdings Limited, dated August 31, 1935.[5]

Section 2 of that Agreement gives Dewar the right to approve any other purchaser whom defendant may find, before a transfer of defendant's shares may be accomplished. This right of Dewar to approve other purchasers is not limited, and hence amounts on its face to a complete right in Dewar to bar any transfer of shares held by defendant in British Timken. This absolute right to approve or disapprove a purchaser of defendant's British Timken stock was preceded by an "honorable understanding" contained in Sec. 1 of the Agreement of September 7, 1935

[4] The contracts would serve no useful purpose in any event should divestiture be ordered, since they were designed to maintain the control arrangements in British Timken (Hear. 136), and are thus dependent upon defendant having an interest in that company.

[5] The Articles of Association were furnished plaintiff by defendant's counsel subsequent to the recent hearing. Pursuant to the arrangement made at the hearing, plaintiff now offers these Articles as Pl. Ex. 7 (Decree).

(P. Ex. 4 (Decree)), that Dewar (a) would not "unreasonably" stand in the way of defendant selling its stock, and would object to a purchaser only "on reasonable grounds", and (b) would take all steps within his power to bring about a registration on the company's books of defendant's shares to the purchaser.

The 1948 Agreements thus differed from the earlier Agreements in that the defendant was for the first time under a legally binding obligation to give Dewar a veto power over the transfer of its stock holdings, a power which could be exercised without assigning reasonable or any other grounds.

Dewar's death was in fact only one of the contingencies named in the agreements which gave defendant options to purchase Dewar's British Timken and French Timken shares. Another contingency named in the agreements as giving rise to such an option was Dewar's decision during his lifetime to sell such shares. The agreements also gave Dewar options on defendant's shares should it have decided to sell. Furthermore, they gave both defendant and Dewar the right to approve or disapprove, with or without reason, any purchaser found by the other party. This Court was cognizant of these contingencies when it entered its final judgment with Section IV B and VIII A and B as integral parts thereof. These sections of the judgment would have little effect if every contingency foreseen in the option agreements should serve as a basis to render the judgment open to reconsideration.

The fact that the contingency of Dewar's death was before the Court when it cancelled the British option agreement, ordered divestiture and en-

joined future acquisitions, clearly indicates not only that the basis of the Court's decision and judgment has not changed, but also that no grounds have been stated upon which defendant's motion could be granted.

II

Defendant's intent and proposal, expressed in paragraph 6 of its motion, to exercise the above-described options, is, as has been pointed out, specifically prohibited by Sections IV B and VIII B of the final judgment. Though the execution of this order of the Court is stayed pending appeal, any such exercise of the option by defendant must be at the peril of having to divest itself of any newly acquired stock along with that previously held, should the Supreme Court affirm Section VIII of this Court's judgment as it was entered.

III

Exercise of the options will not, as defendant contends in paragraph 11 of its motion, raise legal questions not considered or decided by this Court.

The fact of additional stock ownership resulting from exercise of the options will not change or in any way affect this Court's previous determination that defendant and its co-conspirators, British Timken and French Timken, violated the Sherman Act for a period of many years. Nor will such additional stock ownership change or in any way affect the relief ordered by this Court, including the Court's order that defendant divest itself of all its financial interests in British Timken and French Timken, and refrain from acquiring such interests in the future.

The purpose of this relief was to remove obstacles to competition between defendant, British Timken and French Timken imposed by the illegal conspiracy in restraint of trade. The relief was fully justified by the past violations and the threat of future restraints upon competition. Indeed, defendant's proposal now to purchase additional shares in French Timken and British Timken so as to make them controlled subsidiaries shows clearly defendant's continuing intention to suppress competition between itself and these companies. As subsidiaries they will not compete with defendant, nor defendant with them. As defendant's counsel said at the trial "it wasn't anything that could be expected in common sense, that Michael Dewar would compete, if he had a company of his own, with British Timken, or for us to compete with British Timken" (T. 2784.) Thus the wisdom and necessity of the Court's order has already been demonstrated.

Even conceding for argument that defendant might originally have "conducted its operations in the British Empire and Europe through British Timken and French Timken as a majority owned subsidiary" (Def. Motion, par. 11), it does not follow that defendant, after choosing many years ago to make illegal restrictive agreements with potential competitors, may now reap, as a reward for its past violation, the right to acquire control of its co-conspirators, and thus to achieve completely the non-competitive purpose of its conspiracy. The effects of its past violation may not be so easily wiped out. The courts do not permit violators of the antitrust laws to benefit as a result of their violations, by extending and perfecting

their plans to eliminate competition. As the Supreme Court said regarding divestiture of jointly held theatres in the movie industry, in a case cited to this Court by plaintiff-appellee in connection with the proposed judgment (*United States* v. *Paramount Pictures, Inc.*, 334 U.S. 131, 152-3 (1948)):

> To the extent that these acquisitions were the fruits of monopolistic practices or restraints of trade, they should be divested. *And no permission to buy out the other owner should be given a defendant.* . . . . Moreover, even if lawfully acquired, they may have been utilized as part of the conspiracy to eliminate or suppress competition in furtherance of the ends of the conspiracy. In that event divestiture would likewise be justified. . . . In that situation *permission to acquire the interest of the independent would have the unlawful effect of permitting the defendants to complete their plan to eliminate him.*
>
> Furthermore, if the joint ownership is an alliance with one who is or would be an operator but for the joint ownership, divorce should be decreed even though the affiliation was innocently acquired. For that joint ownership would afford opportunity to perpetuate the effects of the restraints of trade which the exhibitor-defendants have inflicted on the industry. [Emphasis supplied.]

The original acquisition of British Timken and French Timken stock by defendant in 1927-8 was illegal because it was part and parcel of the conspiracy to eliminate competition between defendant and those companies. Further acquisitions in 1951 of stock in the same companies can certainly have no effect other than to continue and extend

the purposes of that conspiracy. It would follow that the acquisitions now proposed by defendant would be in themselves illegal, as further steps in the illegal conspiracy already found to exist by this Court.

IV

Vacating Sections IV B and VIII B and amending Section VIII A, the minimum action required by defendant's motion, would have the effect of nullifying most of the remaining provisions of the judgment. For example, Section V of the judgment enjoins defendant from combining with British Timken, French Timken or their subsidiaries for the purpose of allocating markets, restraining production or engaging in other listed restrictive practices. Section VII of the judgment likewise is confined to prohibition of concerted action by defendant with British Timken, French Timken or their subsidiaries, and enjoins these companies from transferring patent licenses, know-how, or trade mark rights upon designated restrictive conditions. Section VI of the judgment, though relating only to unilateral action by defendant, is concerned mainly with such action in connection with British Timken or French Timken, as for example, referral of orders to those companies, and acting as their distributor. These three judgment sections, which, with Sections IV, VIII and IX, comprise the bulk of the judgment, have meaning only so long as British Timken and French Timken are independent of defendant, and would be rendered utterly ineffective if Sections IV and VIII are modified as defendant wishes. Possibly this is the reason defendant has frankly asked, as

its primary request, that this Court vacate its entire judgment.

V

Even assuming that these other portions of the judgment could be effective with British Timken and French Timken under defendant's control, modification of the divestiture section as defendant proposes would defeat the basic objective of the judgment.

This objective was to remove previously existing barriers to competition between defendant, British Timken and French Timken. One of the principal means adopted by this Court in its judgment to achieve this objective was the elimination of defendant's financial interests in these potential competitors. As long as defendant is interested in these companies either partially or wholly, competition between them will not exist. The financial interests will continue to serve, as they have in the past, as an inducement not to compete, and further acquisitions will serve only to increase the inducement. The acquisition by defendant of its stock interests in these companies was an original element of the illegal conspiracy, and the interests were used thereafter as an instrument to further the conspiracy. Defendant at no time used the influence arising from the interests other than to extend the various restrictive agreements which formed part of the conspiracy.[1] Anything short of

[1] These points were all made by plaintiff-appellee at the hearing on relief and in its brief on relief of October 24, 1949. That brief urged, in part, as follows:

> Defendant's investments in potentially competing companies were an integral part of the 1927-28 agreements, which continued the existing illegal conspiracy to suppress

a complete divestiture of these interests, and the prevention of future acquisition of similar interests, would interfere with the fundamental end sought to be accomplished by the judgment.

VI

United States v. *National Lead Company*, 63 F. Supp. 513, affd. 332 U.S. 319 (1947), is not, as defendant suggests on page 12 of its "Statement of Reasons Supporting Motion", a precedent for amendment of this Court's judgment.

Actually, defendant's suggestion comes somewhat late. It was not made at the hearing on relief, where the *National Lead* case was discussed in some detail. The various contingencies of the option agreements were known at that time, and provision could readily have been made in the judgment for their exercise upon the occurrence of any of the contingencies. Instead, the Court pro-

---

competition. As such, they were an influencing factor in inducing the renewal of world territorial allocation that would otherwise have expired. [p. 4]

* * * *

As an integral part of the conspiracy whose purpose was thus to eliminate competition, on the part of coconspirators and outsiders alike, defendant's investments in British Timken and French Timken were factors which induced the continuation of the agreements to divide world territories that would otherwise have expired in 1928. [p. 5]

* * * *

The investments served initially, and have continued to serve, as an inducement to defendant not to compete with British Timken and French Timken [p. 5]

* * * *

The investments, though not giving defendant control of British Timken and French Timken, have given it a means of influencing those companies not to compete

hibited their exercise by enjoining further acquisition by defendant of British Timken or French Timken stock. Defendant is not now entitled to a further hearing on a question already decided.

Even assuming, however, that defendant's reference to the *Lead* case were timely, it would not alter the determination already made by this Court to order divestiture and prohibit future acquisitions. A number of factors, not present in this case, led the Court there to include in its divestiture provision the alternative of selling or buying. In the first place, the alternative language was adopted in that case with the understanding that the Government could object to any sale or acquisition later proposed by the defendants. Only one acquisition was in fact approved under the provision, that of a jointly owned Canadian corporation. Several considerations made this acquisition of relatively minor importance to the restoration of

---

with defendant. In this way as well, they have been utilized as part of the illegal conspiracy. [p. 6]

* * * *

The influence possessed by defendant over British Timken and French Timken has been thrown in favor of continuing the illegal restrictions when the restrictive agreements were renewed in 1934, 1935 and 1938. [p. 7]

* * * *

. . . Those interests have served, and will continue to serve, within the meaning of the *Crescent Amusement* case (323 U. S. 173), as an inducement to defendant to continue its past illegal restraints. [p. 8]

* * * *

. . . The restrictive agreements were about to expire at the time the stock investments were made (F. 37), and the stock investments were among the factors which brought about the continuation of the illegal agreements. [p. 9]

competition. For example, the Canadian company acquired was not a manufacturer, and hence was not a potential exporter to the United States. Further, the Canadian company owned patents which could exclude National Lead exports to Canada, so that a sale of National Lead's stock to a third party would not have necessarily resulted in promoting exports to Canada. In addition, a difficulty existed to transfer of the Canadian company's stock to a stranger, since it was a private company, not a public company such as British Timken. The Canadian company's charter, as well as certain private agreements, contained restrictions which prohibited any stock transfer without consent of the board of directors. The Court felt that, while it could cancel a private contract between a defendant and a foreigner, as it had already done in the case of the cartel agreements, it could not amend the charter of a foreign corporation.

Notwithstanding these considerations, however, the court indicated that it might still have disapproved the acquisition, had the Government not objected to it too late. The Government had presented its objections to the acquisition at the time when the defendant, as required by judgment, offered its plan of divestiture to the court for approval. The acquisition had, however, been accomplished a year earlier, during the pendency of the appeal, and the Government and the court were notified of it at a hearing. At this hearing the court agreed with the Government that it had no power to approve the acquisition pending appeal, as requested by defendant. At the later hearing on the plan, however, the court decided that certain

statements made by Government counsel at the earlier hearing indicated approval of the acquisition, and estopped the Government from later objecting to the consummated transaction. The court stated that had the Government's position been made known sooner, the court might have framed its judgment differently.

The *National Lead* case was cited to the court by plaintiff-appellee, as we have previously stated, and discussed both orally and in the briefs which were exchanged on the subject of relief in this case. This Court properly adopted a divestiture section which did not contain an alternative permitting defendant to acquire further interests in the co-conspirator corporations which were its potential competitors. (*United States* v. *Paramount Pictures, Inc.*, 334 U.S. 131, 152-3 (1948).) Such a choice given to defendant would have defeated the very purpose of the judgment, by allowing complete and permanent elimination, through integration, of the competition which had previously been suppressed by combination.

VII

Defendant is, in fact, requesting this Court to reconsider matters which it has already decided. Defendant's motion is based upon facts and contingencies which were known and in evidence prior to the entry of the judgment, and upon which this Court has already exercised its discretion.

For example, the fact that Dewar died does not, as suggested on page 12 of defendant's "Statement of Reason Supporting Motion", change or affect this Court's findings in relation to the "joint venture" alleged to have existed between defendant

and Dewar. This Court has found not only that it is doubtful that the joint venture ever existed, but also that even if it did exist it could not excuse the defendant's violations of law (Fg. 150, 154-5, 161-3).[2] If the defendant wishes to urge in the Supreme Court that Dewar's death has some affect upon this Court's holdings in regard to the joint venture, the fact of Dewar's death can, as hereinafter pointed out, be appropriately brought to the attention of the Supreme Court.

Defendant's motion should not be granted, as Circuit Justice Field said of a petition for rehearing on modification of an equity decree, "simply to allow a rehash of old arguments" (*Giant Powder Co.* v. *California V. P. Co.*, 5 Fed. 197, 201).

VIII

Granting defendant's motion will not, as claimed in paragraph 13 of the motion, "prevent unnecessary delay and prolixity in the final disposition of this cause both in this court and on appeal in the Supreme Court of the United States".

On the contrary, for this Court to vacate its judgment, either in whole or in part, and conduct further proceedings on relief, as suggested by defendant, would cause a completely unnecessary and unwarranted delay in the final disposition of this case. The facts alleged in defendant's motion in no way justify repetition of the careful proceed-

---

[2] Defendant's statement on page 12 of its "Statement of Reasons Supporting Motion", that the option which it now wishes to exercise was "one provision of the agreement pursuant to which the joint venture was carried on" is an admission that the option agreements were, as plaintiff-appellee contended in its brief of October 24, 1949, "a continuation of the illegal conspiracy."

ings already conducted by this Court before framing its final judgment. Such further proceedings would serve only the purpose of delay.

Even assuming that there is some justification for inserting additional evidence in the record, a much more expeditious method exists than that proposed by defendant. Dewar's death, the only fact alleged in defendant's motion which could be considered "additional evidence",[3] could readily be brought to the Supreme Court's attention by affidavit or stipulation of counsel. In fact, a stipulation as to Dewar's death has been suggested by plaintiff-appellee's counsel.

It has been recognized that an appellate court may receive evidence outside the record of matters occurring after the judgment which may affect the reviewing court's action upon the judgment. *United States* v. *Aluminum Company of America*, 148 F. (2d) 416, 445-6 (C.C.A. 2, 1945). In that case, the court, sitting as a statutory court of last resort, accepted figures outside the record showing aluminum production as of March 1944, over 3½ years after the trial and 2 years after judgment, because such evidence had a bearing upon relief. The court refused to accept evidence of facts, such as Arkansas bauxite reserves in 1940, already existing before judgment but not in the record.

---

[3] The other facts alleged by defendant are not new. The option agreements, as we have seen, were in evidence (D. Ex. 240, also introduced as P. Ex. 3 (Decree); D. Ex. 228). That the occurrence of one of the contingencies named in the option agreements would cause "the perfection of resulting rights", as stated in paragraph 14 of defendant's motion, was obvious on the face of the agreements. Defendant's desire to exercise the options is hardly an independent fact, and might be inferred from its past conduct; certainly the Supreme Court would accept counsel's statement as to such desire.

The rule was explained, in part, as follows (148 F. (2d) at 445-6):

> . . . There is no reason why an appellate court upon deciding an appeal from such a judgment should not direct the district court what judgment to enter; and so it often does. Nor is there any reason why in deciding what judgment to direct, it should not advise itself from outside the record of such facts as appear to admit of no genuine dispute; i.e. should take "notice" of whatever the district court itself might take "notice." . . . The case is otherwise as to any facts already existing in August, 1940, such as the amount of bauxite in Arkansas, as to which the "Truman Report" also contains figures. . . . We could not constitutionally substitute it for the findings of a court after a trial; facts which a court may judicially "notice" do not for that reason become indisputable. Wigmore, § 2567a. At most we could do no more than treat the report as newly discovered evidence, and send the issue back for another trial, which in the present case we should under no circumstances be willing to do. *For these reasons we refuse to take "notice" of facts relevant to the correctness of the findings; but we do take "notice" of those relevant to remedies.* [Emphasis supplied.]

Since the death of Dewar occurred after the judgment, it clearly may be noticed by the appellate court under the rule of the *Aluminum* case.[4] Cases

[4] A comment written shortly before the *Aluminum* decision had suggested the rule which was applied in that case to intervening facts. The author of the comment pointed out that the question whether facts arising after judgment and affecting the court's action may be shown in the reviewing court outside the record, "does not seem to have arisen under the old practice"; but expressed the view that "especially where they

cited by defendant, such as *Realty Acceptance Corp.* v. *Montgomery*, 284 U.S. 547 (1932), where the appellate court did not look outside the record, related to facts which occurred before judgment.[5]

In an action such as the present one, where the public interest requires a direct appeal to the Supreme Court (28 U.S.C. § 29), certainly a long delay should not be allowed for additional hearings in the District Court merely to place in the record a fact which could be covered by a stipulation or affidavit filed in the Supreme Court.[6] Having the fact of Dewar's death before it, the Supreme Court could give that fact whatever weight it merited.

---

may be shown by incontrovertible evidence, there is no good reason for not permitting them to be proved in the reviewing court". Note, *Appeal and Error—New Evidence in the Appellate Court*, 56 Harv. L. Rev. 1313, 1324 (1943). The same writer distinguished, and criticized, the old practice barring an appellate court from considering evidence which arose before judgment but was not placed in the record, as being archaic and time-consuming, especially where the new evidence is incontrovertible. Note, *Appeal and Error—New Evidence in the Appellate Court, supra;* see also Case Comment *Appellate Practice—Shift of Position—Introduction of New Evidence*, 34 IA L. Rev. 521 (1949).

[5] Other cases cited by defendant also arose from facts occurring before judgment. *Baltimore S.S. Co.* v. *Phillips*, 9 F. (2d) 902; *United States* v. *Newbury Manufacturing Co.*, 123 F. (2d) 453; *Levinson* v. *United States*, 32 F. (2d) 449. In *Roemer* v. *Simon*, 91 U.S. 149 and *Hall* v. *United States*, 78 F. (2d) 168, both relating to newly discovered evidence, it is not possible to ascertain from the report whether the evidence related to facts arising before or after judgment. *In re Robertshaw*, 75 F. (2d) 203 and *Jensen* v. *New York Life Insurance Co.*, 59 F. (2d) 512 involve the determination by judicial bodies of legal issues, rather than the occurrence of facts, after judgment.

[6] The Supreme Court's liberality in accepting extrinsic evidence, even where it occurred before judgment, is demonstrated by its action in a recent case where it received an affidavit as to the fact, which was outside the record and had occurred before judgment, that a contract clause alleged to be illegal had been removed. *Automatic Radio Mfg. Co., Inc.* v. *Hazeltine*

The Court could, if it considered such action necessary, modify the provisions of the judgment. Or, it could affirm those provisions of the judgment not deemed affected by Dewar's death, and remand only the provisions affected to this Court for reconsideration. Or, if it agrees with plaintiff-appellee that no revision of the judgment is necessary or justified, it could affirm the judgment as it was entered by this Court on February 15, 1950.

Such procedure would certainly be a more expeditious method of inserting in the record the fact of Dewar's death for whatever bearing it may have on the issues of this case, than the lengthy and cumbersome one proposed by defendant in its motion. For this reason also, granting defendant's motion, rather than expediting, would materially delay the final disposition of the case.

IX

Defendant relies upon Rule 60(b) (5) and (6) of the Federal Rules of Civil Procedure as conferring power upon this Court to reconsider its final judgment. Rule 60(b), as amended in 1948, reads in part as follows:[7]

> On motion and upon such terms as are just, the Court may relieve a party of his legal representatives from a final judgment, order or

---

Research, Inc., 339 U. S. 827, 835 (1950). See also *American Telephone & Telegraph Co.* v. *United States*, 229 U. S. 232, 241 (1936). The Supreme Court commonly accepts evidence of facts which will render a case moot. *Robertson & Kirkham, Jurisdiction of the Supreme Court of the United States* (1936) §§252-254.

[7] The background and history of Rule 60 are fully discussed in Moore and Rogers, *Federal Relief from Civil Judgments* (1946) 55 Yale Law Journal 623.

> proceeding for the following reasons: (1) mistake, inadvertence, surprise, or excusable neglect; (2) newly discovered evidence which by due diligence could not have been discovered in time to move for a new trial under Rule 59(b); (3) fraud (whether heretofore denominated intrinsic or extrinsic), misrepresentation, or other misconduct of an adverse party; (4) the judgment is void; (5) the judgment has been satisfied, released or discharged, or a prior judgment upon which it is based has been reversed, or otherwise vacated, *or it is no longer equitable that the judgment should have prospective application; or* (6) *any other reason justifying relief from the operation of the judgment.* [Emphasis supplied]

Rule 60(b), as set out above, is all-inclusive in that it defines the practice with respect to any and all rights or remedies to obtain relief from final judgments.[8] It is to be emphasized that the rule applies only to the *procedure* for vacating judgments and effects no change in the *substantive* law.[9]

The substantive law applicable to relief from judgments based upon changed circumstances, such as defendant alleges have occurred here, is derived from the inherent jurisdiction of courts of equity to adapt or modify continuing judgments as

---

[8] *Report Prepared by the Advisory Committee on Rules for Civil Procedure*, 80th Cong. First Session, H. Doc. No. 473, p. 124.

[9] "It should be noted that Rule 60(b) does not assume to define the substantive law as to the grounds for vacating judgment, but merely prescribes the practice in proceedings to obtain relief." (*Report of Advisory Committee on Rules*, p. 128). See also, *Melekoff* v. *Collins* (D.C. Calif., 1939) 30 F. Supp. 159.

events may shape the need.[10] *U. S.* v. *Swift & Co.*, 286 U.S. 106 (1932) is the landmark case.

In the *Swift* case, a suit brought by the United States under the Sherman Act, a consent decree was entered in 1920 dissolving a monopolistic combination of meat packers and individually enjoining such packers from holding stock in cold storage plants and stock yard terminal railroads, from dealing in commodities not related to meat packing, and from selling meats and milk at retail. In April 1930, more than 10 years after entry of judgment, certain defendants filed petitions to modify the judgment and to adapt its restraints to the alleged changed conditions. Petitioners presented evidence of what they contended to be a substantial change in conditions in the industry. The Supreme Court of the District of Columbia modified the judgment to the extent of permitting defendants to deal in groceries at wholesale. All other modifications prayed for in the petition were denied. An appeal was thereupon taken to the Supreme Court.

The Supreme Court reversed the judgment of the court below which had modified the consent decree. The court, in an opinion by Mr. Justice Cardozo, first discussed the inherent power of a court of equity, upon a showing of changed conditions, to modify a judgment, whether entered by consent or after litigation (286 U.S. at 114-115). The court then discussed the question of whether or not evidence presented by petitioners of substantial change in conditions in the industry was sufficient to justify the exercise of the court's power

[10] Moore and Rodgers, *Federal Relief from Civil Judgments*, *supra*, at pp. 692, 643.

to modify the judgment. In reviewing the consent decree, the court found that the restraints upon the defendants relating to their sale of meats and groceries had been imposed because of the gigantic size of the individual defendants, and their capacity for eliminating the competition of smaller competitors. Against this background, the court held that there had been no change of conditions in the industry which would eliminate the need for restraint upon the individual defendants.

The court there specified the limitations imposed upon the exercise of its jurisdiction to modify continuing judgments and concluded that (p. 119):

> We are not framing a decree. We are asking ourselves whether *anything has happened that will justify us now in changing a decree.* The injunction, whether right or wrong, *is not subject to impeachment in its application to the conditions that existed at its making.* We are not at liberty to reverse under the guise of readjusting . . . *Nothing less than a clear showing of grievous wrong evoked by new and unforeseen conditions* should lead us to change what was decreed after years of litigation with the consent of all concerned. (Emphasis supplied)

The doctrine of the *Swift* case requires that courts make careful inquiry whether or not anything has occurred since the entry of a judgment which will justify its modification. Judgments will not be reviewed in the light of conditions which existed at the time of entry, but rather on the basis of whether there are changed conditions which clearly result in grievous wrong arising from new and unforeseen

circumstances. Unless such changed conditions be clearly shown, modification will not be ordered. As we have previously pointed out, the facts alleged in defendant's motion relate only to matters previously considered by this Court and fail to disclose such changed conditions which make it inequitable that the judgment have prospective application.

The rule of the *Swift* case represents the substantive law applicable to proceedings under subsection (5) of Rule 60 (b), which prescribes the procedure for seeking modification of a judgment where it is no longer equitable that the judgment should have prospective application. Moore & Rogers, *Federal Relief from Civil Judgments, supra,* at 692, 643. Subsection (6) prescribes the procedure for seeking modification for any other reason justifying relief. That subsection is a catch-all and described by its proponent as a "general residual clause . . . to cover unforeseen contingencies." [11]

A survey of cases filed under Rule 60(b) (5) and (6) indicates that motions for modification or vacation of judgment have been granted only where the facts of the individual case show extreme hardship and injustice.[12] For example, in *Block* v. *Thou-*

---

[11] Moore and Rogers, *Federal Relief from Civil Judgments, supra,* at p. 692.

[12] A conflict of opinion exists over a trial court's jurisdiction under Rule 60(b) to modify or vacate judgments after an appeal has been perfected. Some courts have held that an appeal terminates the power of a trial court to act. *Miller* v. *U. S.* (C.C.A. 7, 1940), 114 F. (2d) 267, cert. den. 313 U.S. 591; *Schram* v. *Safety Inv. Co.* (E.D. Michigan 1942) 45 F. Supp. 636; *Fiske* v. *Wallace* (C.C.A. 8, 1940), 115 F. (2d) 1003; *Piascik* v. *British Ministry of War Transport* (S.D. N.Y., 1949) 83 F. Supp. 518; Moore's *Federal Practice,* Vol. 3, Section 73.03 Supp. p. 413; *International Railway Co.* v. *Davidson* (W.D. N.Y. 1945) 65 F. Supp. 58, Barron and Holt-

sandfriend, (C.C.A. 2, 1948), 170 F. (2d) 428, where a motion was filed under subsections (5) and (6), the defendant landlord was granted relief from a judgment based on an order of local rent control authorities reducing his rents and requiring a refund, where, after entry of judgment, the refund order was set aside by the OPA administrator. *Grand Union Equipment Co.* v. *Lippner,* (C.C.A. 2, 1948) 167 F. (2d) 958, also concerned a

---

zoff, *Federal Practice and Procedure,* Sec. 1332. Others have held that trial courts may consider such motions with leave of the appellate court. *Perlman* v. *332 West Seventy-Second Street Company* (C.C.A. 2, 1942) 127 F. (2d) 716. See also *S. C. Johnson and Son, Inc.* v. *Johnson* (C.C.A. 2, 1949) 175 F. (2d) 176.

With respect to Rule 60(a), the ambiguity as to which court, trial or appellate, has power to correct *clerical mistakes* pending an appeal, clearly has been recognized (*Federal Relief from Civil Judgment,* p. 686). In 1948, an amendment was adopted permitting trial courts to correct clerical errors pending appeal, with leave of the appellate court. (*Report of Advisory Committee on Rules,* p. 123). Unfortunately, the Advisory Committee has failed to recommend a similar amendment to Rule 60(b), under which this motion was filed, and the conflict of opinion still exists as to this latter subsection.

As previously stated, (*supra,* p. 25); Judge Rifkind held in the *National Lead* case that he had no power pending appeal to approve a plan submitted by a defendant under the divestiture section of the judgment, stating, "As I understand it I am at this point without power to act under Section 8 of the decree. Consequently I am not in a position either to approve or disapprove the proposed acquisition."

In the cases cited by defendant where additional evidence was received by trial courts after appeal, the appellate courts, under the special circumstances, had refused to consider such evidence. (See *supra,* n. 5). Consequently, unless the trial courts had been permitted to receive such evidence it would have been excluded from the consideration of the appellate courts. No such problem is raised in this case since under the circumstances here, as we have seen above (*supra,* pp. [illegible]), the appellate court can readily consider the facts alleged in defendant's motion, for whatever bearing they may have on the issues of the case.

motion filed under subsections (5) and (6). There an order was granted in a bankruptcy proceeding modifying an injunction against prosecution of claims against the debtor, where the purpose of the modification was to enable the creditor to reduce his claim to judgment so as to enable him to maintain an action on an insurance policy issued to the debtor.

Klapprot v. *United States,* 335 U.S. 601, was an action filed under subsection (6) of Rule 60(b). There the defendant Klapprot sought, after four years, to have a default judgment of denaturalization set aside on the ground that the judgment was entered against him while he was in prison awaiting trial on a selective service charge. He alleged that while confined to prison he was ill and was without funds to obtain counsel. He further alleged that after the conviction for the selective service charge had been reversed, he had been charged with sedition and that after that charge had been dismissed he had been held for some time for deportation. Mr. Justice Black, speaking for the court, set aside the default judgment on the basis of the treatment which the defendant had received and his inability to present his defense in the denaturalization proceedings, holding that subsection (6) enabled courts "to vacate judgments whenever such action is appropriate to accomplish justice." See also *United States* v. *Backofen* (C.C.A. 3, 1949) 176 F. (2d) 263. *United States* v. *Miller* (M.D. Pa., 1949) 9 F.R.D. 506, likewise granted relief from a default judgment in an action under Rule 60(b) (6) where a judgment for treble damages had been entered against a

party by default and *without notice* to such party, the amount of damage having been based upon nothing more than a *guess*.

The facts alleged in defendant's motion do not justify relief from the operation of the judgment under the cases describing the substantive law applicable to such relief. If defendant's motion is denied, it will not suffer extreme hardship or "grievous wrong," resulting from new or unforeseen circumstances. It is not necessary or appropriate for this Court to vacate or modify its judgment in order "to accomplish justice."

No events are alleged by defendant to have occurred which would make it "no longer equitable," as defendant states in paragraph 13 of its motion, that the provisions of this Court's judgment "should have prospective application," or which would otherwise justify modification or vacation of the judgment. In short, we have already seen that the option agreements relating to British Timken and French Timken stock were in evidence, and that the various contingencies named in these agreements, including that of Dewar's death, were before this Court when it found the existence of law violations and framed its judgment. The occurrence of one of these contingencies could not affect violations already consummated, nor the relief necessary to dissipate the effects of those violations. Thus, there has been no change in the factual basis of the Court's decision and judgment, nor are any new legal issues raised. The Court could have provided for the exercise of these options upon the occurrence of one or more of the contingencies, but instead elected to prohibit any further acquisitions of British Timken and

French Timken stock. Therefore, the Court has already decided the questions raised in defendant's motion based upon the occurrence of the contingency of Dewar's death.

WHEREFORE, plaintiff-appellee, the United States of America, prays the Court to deny in its entirety the defendant-appellant's motion that this Court, first obtaining leave of the Supreme Court of the United States, receive additional evidence, make additional findings of fact and conclusions of law, and vacate its entire judgment, or vacate and modify portions of Sections IV and VIII thereof.

Respectfully submitted,

H. G. MORISON,
Assistant Attorney General.

LIBRARY
SUPREME COURT, U.S

CIVIL ACTION No. 24,214.

UNITED STATES OF AMERICA,
Plaintiff,

vs.

THE TIMKEN ROLLER BEARING COMPANY,
Defendant.

REPLY TO PLAINTIFF-APPELLEE'S MEMORANDUM IN OPPOSITION TO MOTION THAT THIS COURT ASK LEAVE OF THE SUPREME COURT OF THE UNITED STATES TO CONSIDER APPELLANT'S MOTION THAT THIS COURT RECEIVE ADDITIONAL EVIDENCE AND RECONSIDER ITS FINAL JUDGMENT HEREIN AND, IF LEAVE BE GRANTED, THAT THIS COURT PROCEED TO DO SO, BECAUSE OF CHANGED CIRCUMSTANCES DUE TO THE DEATH OF MICHAEL B. U. DEWAR SINCE THE PERFECTION OF AN APPEAL HEREIN TO THE SUPREME COURT OF THE UNITED STATES.

NOW PENDING ON APPEAL IN THE SUPREME COURT OF THE UNITED STATES.

I.

THE PROCEDURAL QUESTION.

In our "Statement of Reasons Supporting Motion," filed with the defendant's motion, we set forth numerous authorities supporting the procedure defendant has adopted in cases where developments while an appeal was pending made some action by the trial court appropriate.

These authorities are fully discussed in our main brief, and it is not necessary to add to that discussion.

The soundness of our contentions is made evident when it is remembered that the trial court, under the proposed procedure, reconsiders the judgment entered in this case after proof as to the new facts and circumstances has been adduced. It is, of course, eminently proper that this proceeding be had in the trial court, for that court, having considered the case originally, is better qualified than the appellate court, which has not yet done so, to determine the effect of the new circumstances on its judgment. Conceivably, action in the trial court could alter the entire basis of the appeal, making the decision of the appellate court, based on the original facts and the original judgment, wholly academic. Therefore, once jurisdiction has been transferred to the appellate court, before the trial court may act, it must be authorized to do so by the appellate court.

While the position of the plaintiff is not too clear on the procedural question, it seems to be the plaintiff's suggestion in its argument on pages 12 to 15 of its memorandum that the appellate court should first hear and consider the new evidence. One objection to this method of handling this matter is that it would require the appellate court, as to the matters involved in the motion, to act as a court of first instance, and to pass upon questions as to which the trial court has had no opportunity to act. This is something far different from simply modifying the decree of a trial court which itself has had every opportunity to consider all the facts which later come before the appellate court, and is not properly the function of the appellate court. Another objection is that there is no authority for such action by an appellate court.

Indeed, plaintiff does not seriously challenge the propriety of the procedure which defendant seeks to have followed here. Plaintiff does argue (page 12 of its memorandum) that this procedure will not prevent delay and

prolixity in the final disposition of this cause. It is suggested that the Supreme Court could itself make any modifications in the decree which it saw fit by reason of the new developments in the case, or could simply affirm the decree of this Court if it concluded that no modifications were called for by the changed circumstances, or that it could "remand only the provisions affected to this Court for reconsideration." Of course, if we assume as plaintiff apparently does, that the changed circumstances do not affect the result of this case, then it is true that this proceeding in this Court would simply delay the final disposition of this case. On the other hand, if, as we believe, the death of Dewar *and the acquisition by the defendant of his interests in British Timken and French Timken*[1] change the entire factual situation and the legal problems involved in this case, then certainly it is more expeditious to have this Court reconsider the case now, and to postpone the review by the Supreme Court until it has the current situation, and this Court's judgment thereon, before it in the record. We cannot believe that in such a case as this the Supreme Court would wish to have the burden of reviewing a decree based upon one set of circumstances, and modifying it to a new factual situation, without having the judgment of this Court on the effect of the changed circumstances. If the judgment is to be modified because of the changed circumstances, it will be done by this Court, either before review by the Supreme Court, or upon remand by that Court. If the latter, then the modified decree of this Court may itself be subject to review, at the instance of either the plaintiff or the defendant. Then, finally, the case will be disposed of. Certainly it will be more expeditious, more considerate of the time of the Supreme Court, and more in keeping with the proper functions of this Court and the Supreme Court, for this Court to reconsider its judg-

---

[1] Emphasis throughout is supplied unless otherwise indicated.

ment in the light of the changed circumstances *before* the Supreme Court is asked to consider this case on appeal.

Plaintiff argues that this procedure should not be allowed to delay the hearing on appeal "merely to place in the record a fact which could be covered by a stipulation or affidavit filed in the Supreme Court." However, as has been emphasized repeatedly, the purpose of this proceeding in this Court is *not* "merely to place in the record" new and additional facts. It is rather to permit this Court to consider the effect of these facts upon its judgment entered prior to the change of circumstances. We have shown that this method of procedure is the most expedient for this purpose.

Moreover, the authorities which plaintiff cites to show that new facts, not in the record, will be considered by the Supreme Court, if presented by affidavit or stipulation, are far from convincing on this point.

It is not at all clear from the opinion in *Automatic Radio Mfg. Co. Inc. vs. Hazeltine Research Inc.*, 339 U. S. 827 (1950), (cited in plaintiff's memorandum at page 15, note 6) that the affidavit which the Supreme Court mentions was not part of the record in the case from the lower courts. That case was heard on motions for summary judgment filed by both parties, with affidavits in support of the motions. Thus, the affidavits themselves constituted the record in the case; and from the opinion of Mr. Justice Minton it is impossible to tell whether the particular affidavit to which he refers at page 835 (stating that Hazeltine had authorized its licensees to discontinue a notice restricting the use of the patented apparatus—one of the facts upon which Automatic based its claim of illegal use of the patent) had been filed in the District Court or only in the Supreme Court. There is nothing in the opinion to lead us to the latter conclusion.

The only other case cited by plaintiff on this point is *United States vs. Aluminum Company of America*, 148 F. (2nd) 416 (C. C. A. 2, 1945). The consideration of facts

outside the record in that case, in the words of the Court itself, depended on the doctrine of judicial notice. That was an unusual case because of the extremely long time which had elapsed between the closing of evidence and the consideration of the appeal—nearly five years—and because during that time, as the Court says, the aluminum industry had been revolutionized by reason of the war. These factors made it especially appropriate that the appellate court bring itself up to date on the facts, and apparently no attempt had been made to accomplish this by a proceeding in the District Court. Therefore, the Court took notice of facts appearing in a Congressional Committee report.

Neither party raised any question as to the propriety of the appellate court's taking judicial notice of the facts which it considered. To the contrary, they asked it to take such notice of certain facts. Certainly there is nothing in the case at bar comparable to the Congressional Committee report from which the Supreme Court, even were it so inclined, could take judicial notice of the fact of Dewar's death or of defendant's acquisition of his interests in British Timken and French Timken.

The only other authorities cited are law review notes which see "no good reason for not permitting them (new facts) to be proved in the reviewing court." The obvious answer to this is that it is not the proper function of a reviewing court to take evidence or to determine, in the first instance, the legal conclusions which follow therefrom. Moreover, in the cases cited in our main brief, the Supreme Court has said that it will not consider additional evidence not in the record certified to it from the trial court.

Finally, it is stated that the Supreme Court accepts facts which render a case moot; but that is a problem far different from the one here involved, and its solution depends on completely different considerations.

In short, we submit that there is no recognized appropriate method, other than that which defendant has fol-

lowed, for bringing the changed circumstances in this case to the attention of the Supreme Court, and, as we have already pointed out, accomplishing the further and broader purpose of this proceeding, namely, to have a reconsideration of the case by this Court. This ultimate object cannot possibly be accomplished unless this Court obtains authority from the Supreme Court to take additional evidence *and* to reconsider its judgment herein. We believe there can be no doubt that the procedure which we have asked the Court to adopt is approved by competent authorities and is best adapted to permitting this Court to take the action in this case which, upon full consideration of the changed circumstances, it may deem appropriate with respect to its judgment herein.

II.

THE EFFECT OF THE CHANGED CIRCUMSTANCES ON THE MERITS AND FINAL JUDGMENT IN THIS CASE.

By far the larger portion of plaintiff's memorandum is directed to the substantive, rather than the procedural, aspects of defendant's motion. It is somewhat difficult to discuss the substantive question without a definite set of facts as the basis for the discussion; and these, of course, will be preesnted to the Court only after it decides the present motion. Presumably, we can treat this in the same manner as a motion to dismiss, and assume that for the purposes of this motion the facts stated therein are admitted to be true. These facts may be sufficient to show that there is probable cause for reconsidering the decree in this case; but we believe there will be other facts which will have to be considered before the Court can determine the appropriate decree to enter under these changed circumstances, and some reference may be made to these in our discussion.

Dewar's death, in itself, of course, is not the only important fact. The facts of ultimate importance are that his death necessarily ends the joint venture between him and the defendant with respect to British Timken and French Timken; that his interests in those companies will now be acquired by the defendant, in all probability, and his control and management transferred to the defendant; and that British Timken and French Timken will now become, for the first time, true subsidiaries of the defendant. Questions as to restraints of trade imposed by contract between defendant, Dewar, British Timken and French Timken, now become secondary; and the primary question is whether defendant's acquisition of ownership control of these companies is illegal. Furthermore, the acquisition of these controlling interests represents the culmination of the joint venture and the fulfillment of its ultimate purpose, namely, the extension of defendant's business of manufacturing and selling tapered roller bearings into foreign countries, and thus permits a reevaluation of the course of conduct which was followed in all the relations between defendant, British Timken and French Timken.

It is contended by plaintiff that Dewar's death does not change the basis upon which this case was tried or upon which relief was granted; that the exercise by defendant of its options to acquire Dewar's stock will not raise legal questions not considered or decided by this Court; and that defendant is simply asking the Court to reconsider matters which it has already decided. It is pointed out that the agreements containing the option provisions were in evidence when this Court entered its judgment herein, and that the Court therefore was fully aware of the possibility that defendant might some day acquire Dewar's interests in British Timken and French Timken. Plaintiff does not take into account the tremendous difference between a mere contingent right to acquire controlling interests in those companies, a mere possibility of making

them true subsidiaries, and the actual fact of such control. Defendant might have desired to acquire these interests prior to this time, but until now it has never had an absolute right to do so. Having entered into the joint venture with Dewar, it was bound to carry that venture through to completion, and had no way of compelling Dewar to sell his interests. Now it does have such right, and is actively proceeding to acquire those shares.

Plaintiff argues (page 2 of its memorandum) that the very acquisition of Dewar's shares is prohibited by the decree entered by this Court, and that the agreements giving defendant the right to acquire those shares are in full force and effect only because a stay of all the provisions of the final judgment has been granted pending appeal (plaintiff's memorandum, page 3). It is clear, therefore, that plaintiff does not deny that defendant may now lawfully acquire Dewar's shares in British and French Timken, though admittedly such acquisition may be at the peril of having to dispose of all the shares should the judgment remain unmodified. The defendant's action is understandable. Upon Dewar's death it was simply placed in the position of having to act within a limited time to exercise its options, or very probably lose the right to acquire control of subsidiaries, one of which it had helped to establish, and both of which it had assisted in developing, with financial and technical aid. It naturally chose to take the necessary action to protect its rights.

The change in the factual situation, then, is quite a significant one. How does it affect the legal questions involved?

This case was commenced by the plaintiff, and tried and decided by this Court, on the theory that three independent companies, being actual or potential competitors in a tapered roller bearing market, had entered into contracts, combinations and conspiracies to restrain competition. (Court's memorandum opinion, pages 53 and 58.) The Court stated that

"Defendant did not acquire British and French Timken" (memorandum opinion, page 53), and

"did not build plants in Europe or *purchase subsidiaries* abroad"

(memorandum opinion, page 58); and the Court therefore rejected defendant's analogy between this case and *United States vs. Columbia Steel Company*, 334 U. S. 495 (1948). The plaintiff made no charges of a monopoly, or an attempt to monopolize on the part of defendant, and the Court made no findings relating to such a charge.

Now, however, the three companies are brought into a parent-subsidiary relationship; and it is clear that a judgment based on the theory of a conspiracy between independent companies should no longer apply to the new legal relationship. Now, the legal questions involved are those presented by the corporate integration cases, such as *Standard Oil Company vs. United States*, 221 U. S. 1 (1911); *United States vs. Paramount Pictures*, 334 U. S. 131 (1948); *United States vs. Aluminum Company of America*, 148 F. (2d) 416, *supra;* and *United States v. Columbia Steel Co.*, 334 U. S. 495, *supra.* These questions apparently were not considered by this Court,[2] as they were not necessary to its decision under the theory on which the case was tried. Further inquiry into these questions is now essential to a proper decision in this case.

The *Columbia Steel* case sets forth most concisely the method of analysis in a case where corporate acquisitions are alleged to result in unreasonable restraints of trade, or to lead to monopoly. In that case the Supreme Court stated (page 527):

"'The same tests which measure the legality of vertical integration by acquisition are also applicable to the ac-

---

[2] Although the corporate integration cases were referred to by the defendant by analogy, they apparently were thought inapplicable by the Court for the reasons indicated in its distinguishing of *United States v. Columbia Steel Co., supra.*

quisition of competitors in identical or similar lines of merchandise. It is first necessary to delimit the market in which the concerns compete and then determine the extent to which the concerns are in competition in that market. If such acquisition results in or is aimed at unreasonable restraint, then the purchase is forbidden by the Sherman Act. In determining what constitutes unreasonable restraint, we do not think the dollar volume is in itself of compelling significance; we look rather to the percentage of business controlled, the strength of the remaining competition, whether the action springs from business requirements or purpose to monopolize, the probable development of the industry, consumer demands, and other characteristics of the market. We do not undertake to prescribe any set of percentage figures by which to measure the reasonableness of a corporation's enlargement of its activities by the purchase of the assets of a competitor. The relative effect of percentage command of a market varies with the setting in which that factor is placed."

Somewhat similar is the following declaration from the *Paramount Pictures* case (page 174):

"In the opinion of the majority the legality of vertical integration under the Sherman Act turns on (1) the purpose or intent with which it was conceived or (2) the power it creates and the attendant purpose or intent. First, it runs afoul of the Sherman Act if it was a calculated scheme to gain control over an appreciable segment of the market and to restrain or suppress competition, rather than an expansion to meet legitimate business needs. United States v. Reading Co., 253 U. S. 26, 57; United States v. Lehigh Valley R. Co., 254 U. S. 255, 269, 270. Second, a vertically integrated enterprise, like other aggregations of business units (United States v. Aluminum Co. of America, 2 Cir., 148 F. 2d 416), will constitute monopoly which, though unexercised, violates the Sherman Act provided a power to exclude competition is coupled with a purpose or intent to do so. As we pointed out in United States v. Griffith, 334 U. S. 107, n. 10, size is it-

> self an earmark of monopoly power. For size carries with it an opportunity for abuse. And the fact that the power created by size was utilized in the past to crush or prevent competition is potent evidence that the requisite purpose or intent attends the presence of monopoly power. See United States v. Swift & Co., 286 U. S. 106, 116; United States v. Aluminum Co. of America, supra, 148 F. 2d at page 430. Likewise bearing on the question whether monopoly power is created by the vertical integration is the nature of the market to be served (United States v. Aluminum Co. of America, supra, 148 F. 2d at page 430), and the leverage on the market which the particular vertical integration creates or makes possible."

And in the *Aluminum Company* case, *supra*, in connection with its discussion of the percentages of aluminum production which were controlled by Aluminum Company of America, the Court stated:

> "Hence, it is necessary to settle what we shall treat as competing in the ingot market."

Thus, it is seen that the first problem for the Court in these cases is "to delimit the market"; next, to determine "the percentage of business controlled" in this market by the integrated corporations; third, to examine the "strength of remaining competition"; fourth, to inquire into the motives behind the acquisition—whether they be "business requirements or purpose to monopolize"; and, fifth, to determine such additional questions as "the probable developments of the industry, consumer demands, and other characteristics of the market."

This Court in this case made certain findings with respect to the size and volume of sales of defendant, British Timken and French Timken, and the respective percentages which each produced of tapered roller bearings and antifriction bearings in their respective countries (pages 3, 4 and 5, memorandum opinion), and made general findings to the effect that these figures showed "the dominant position

of defendant, British Timken and French Timken both in the tapered and anti-friction bearing industry." (Memorandum opinion, pages 5, 12 and 13.) The Court never made it entirely clear, however, which percentage it considered as showing defendant's competitive advantage—whether that concerning tapered rollor bearings only or that including all anti-friction bearings, and even stated (memorandum opinion, page 12):

"It is of no moment what the precise figures were."

That may have been true so long as the Court was dealing with three companies on the basis that they were "independent." However, considering the new integration of the three companies and the statements of the Supreme Court in the *Columbia Steel* case, such findings as this are now required for a proper decision of this case.

The Court made no findings regarding the competitors of defendant, British Timken and French Timken, as to their size, strength and sales. There were certain general findings with regard to the alleged participation of British Timken and French Timken in cartel agreements with some of their competitors (memorandum opinion, page 46) and others as to the manner in which they acted with the defendant with respect to other competitors (memorandum opinion, page 46). Nowhere in its opinion, however, did this Court make any findings as to the size and strength of the competing companies. Yet these findings now become of the greatest significance in determining whether defendant's control of British Timken and French Timken constitutes an unreasonable restraint of trade.

The Court also gave little attention to the question of defendant's motives in acquiring the interest in British Timken and in cooperating in the establishment of French Timken, because the Court found (memorandum opinion, page 53) that the defense of absence of intent to restrain trade and of the existence of good business reasons was not valid in such cases. The *Columbia Steel* and *Paramount*

Pictures decisions, quoted above, teach us otherwise where a corporate integration is involved.

The Court did make some general comments with regards to defendant's intent to restrain trade, and cited one letter (not involving defendant's relations with British and French Timken) (memorandum opinion, page 54) to show such an intent with respect to domestic trade; but we submit that to determine the legality of defendant's acquisition of control of these companies more detailed findings, based upon a more thorough examination of the purposes behind defendant's acquisitions, should be made by the Court.

Finally, the Court made few, if any, findings with regard to the probable developments of the industry, consumer demand, and other characteristics of the market.

Furthermore, we submit that the tests of what constitutes an "unreasonable restraint of trade" cannot be the same with respect to parent and subsidiary as in the case of independent corporations. It is true that in its first decision in *United States vs. Yellow Cab Company*, 332 U. S. 218 (1947), the Supreme Court said:

> "The corporate interrelationships of the conspirators, in other words, are not determinative of the applicability of the Sherman Act."

Yet, in the subsequent *Columbia Steel* case, the Court recognized the obvious fact that:

> "A subsidiary will, in all probability, deal only with its parent for goods the parent can furnish."

and declared:

> "That fact, however, does not make the acquisition invalid. When other elements of Sherman Act violations are present, the fact of corporate relationship is material and can be considered in the determination of whether restraint or attempt to restrain exists."

For this further reason, then, we submit that this Court should reconsider its judgment herein in considera-

tion of defendant's acquisition of the controlling interest in British Timken and of complete ownership of French Timken.

In these respects, we believe that the changed circumstances in this case may affect not only the question of the remedy which is appropriate, but even the basic question of whether a violation of the Sherman Act now exists which requires the intervention of this Court; and thus present questions not previously before this Court.

III.

THE FORM OF THE JUDGMENT.

In the first instance, we wish to make it clear that our reference to Rule 60(b) of the Federal Rules of Civil Procedure is not intended to imply that it affects the substantive rights of the defendant to relief from the judgment. We do contend, and, as we read plaintiff's memorandum, it does not deny, that under this rule this Court has power to grant relief from a final judgment, on motion timely made, when:

> "it is no longer equitable that the judgment should have prospective application."

or when there is:

> "any other reason justifying relief from the operation of the judgment."

The rule simply provides a convenient procedure for securing relief from a final judgment.

The cases which plaintiff has cited to show the application of Rule 60(b) do not exhaust the situations in which relief from a judgment may be granted under the rule, and they certainly do not contain any discussions by the various courts which would preclude such relief in the present case.

The most important authority cited by the plaintiff on this aspect of the motion is *United States vs. Swift & Company*, 286 U. S. 106 (1932). The first point to be noted

with regard to that case is the fact that it begins by affirming "the power of a court of equity to modify an injunction in adaptation to changed circumstances" (page 114). The second point is that the decree involved in that case was a consent decree; and, while the Supreme Court makes some statements which indicate that there is nothing about a consent decree which affects the power of the Court with respect to modification, and though the decree was previously attacked upon appeal in the Supreme Court, yet it is clear that this factor of consent had much to do with the Court's unwillingness to have the decree modified. For example, at page 112 of its opinion the Court remarked:

> "The expectation would have been reasonable that a decree entered *upon consent* would be accepted by the defendants and by those allied with them as a definite adjudication setting controversy at rest."

Again, at page 115, it is commented:

> "The defendants, controlled by experienced business men, *renounced* the privilege of trading in groceries, whether in concert or independently, *and did this with their eyes open.*"

And at pages 116-117:

> "We do not turn aside to inquire whether some of these restraints upon separate as distinguished from joint action could have been opposed with success if the defendants had offered opposition. Instead, *they chose to consent,* and the injunction, right or wrong, became the judgment of the court."

And finally at page 119:

> "The difficulty of ferreting out these evils and repressing them when discovered supplies an additional reason why we should leave the defendants where we find them, *especially since the place where we find them is the one where they agreed to be.* * * * Nothing less than a clear showing of grievous wrong evoked by new and unforeseen conditions should lead us to change what was decreed after years of litigation *with the*

consent of all concerned. * * * Wisely or unwisely, *they submitted to these restraints upon the exercise of powers that would normally be theirs. They chose to renounce what they might otherwise have claimed,* and the decree of the court confirmed the renunciation and placed it beyond recall."

The other statements by the Court in the *Swift* case, then, must be read in the light of the above quoted remarks, and were not intended to interfere with the sound discretion of the district courts in framing their decrees in anti-trust cases (*United States vs. Crescent Amusement Company,* 323 U. S. 173 (1944)), or in adapting them to changed circumstances, when a consent decree is not involved.

Another important difference between this case and the *Swift* case is that the modification of the decree is sought here prior to any consideration of the case whatever by the Supreme Court. In a sense, so long as the Supreme Court has not acted in this case, it is still a matter of this Court's discretion in framing the decree initially, rather than modifying it after it has already gone into operation and, indeed, after it has been confirmed by the Supreme Court upon attack by the defendant in that Court.

Admittedly, it is an unusual thing for circumstances to change sufficiently to cause a court to modify its judgment once rendered, even before the case can be heard in an appellate court; but we believe that the changed situation as to ownership and control of British Timken and French Timken, thrust upon the defendant, as it were, by events beyond its control, is of sufficient importance that this Court will wish to reconsider its exercise of discretion in the framing of the decree in this case.

With respect to possible modification of the divestiture provisions of the judgment, plaintiff urges that any modification which would exclude these provisions would be contrary to certain statements of the Supreme Court in *United*

States vs. Paramount Pictures, 334 U. S. 131 (1948). The Court there first stated:

> "To the extent that these acquisitions were the *fruits of monopolistic practices or restraints of trade,* they should be divested."

Quite clearly, defendant's acquisitions of interests in British Timken and French Timken cannot properly be characterized as "the fruits" of any illegal practices. Even if it is claimed that the illegal practices which the Court found are to be traced back to a time prior to the original acquisitions, yet in no sense were defendant's acquisitions the consequence of any prior illegal acts. The idea of "the fruits" of illegal practices denotes that by the exercise of monopolistic power or by other improper competitive practices the defendant has been able to force competitors out of business and to buy up the competing concerns' property. There is no such factor in this case with respect to defendant's purchase of interests in British Timken and French Timken.

The Supreme Court in the *Paramount Pictures* case next spoke of properties which, though

> "lawfully acquired * * * have been utilized as part of the conspiracy to eliminate or suppress competition in furtherance of the ends of the conspiracy."

But it has never been claimed that defendant, prior to the present time, had control of either British Timken or French Timken. On the contrary, this Court has found (memorandum opinion, page 57) that

> "British Timken and French Timken retained their corporate independence and jealously guarded their interests in dealing with defendant."

How can it be said, then, that defendant "utilized" its interests in those companies "as part of the conspiracy to eliminate or suppress competition"?

The argument previously advanced by the plaintiff to justify divestiture of these interests has been that they

served as "inducements" to the defendant not to compete with British Timken and French Timken. (Plaintiff's Brief in Support of Its Proposed Final Judgment, pages 5 and 6). But that argument was based on the assumption that contractual restraints of competition between three "independent" companies, and possible continuance thereof, must be removed. Now that defendant will have absolute ownership of French Timken, and majority voting control of British Timken, the fact that its ownership may induce it not to compete with its subsidiaries does not make such ownership illegal, as the Supreme Court held in the *Columbia Steel* case.

The arguments presented in the *Paramount Pictures* case for divestiture, therefore, have no application to the present case, particularly due to the changed ownership situation. None of these arguments are convincing reasons why defendant should not be permitted to acquire and hold the controlling interest in British Timken and the entire voting stock of French Timken. It should be remembered that this is not a case where it is alleged that the defendant alone, or in combination with British Timken and French Timken, has a monopoly within the anti-friction bearing industry in any area whatever. There have been no serious charges that defendant has been able to exercise power to destroy competitors, and in fact there could be no basis for such a charge. In the *Paramount Pictures* case, and indeed every other case where divestiture has been ordered, the defendant was not permitted to *retain* properties which permitted it to exercise this monopolistic power, and divestiture was therefore necessary to prevent this. No such considerations require divestiture in this case.

Plaintiff denies the validity of the *National Lead* case, *United States v. National Lead Company*, 63 F. Supp. 513, aff'd. 332 U. S. 319 (1947) as authority for an alternative form of decree requiring defendant either to divest itself of its holdings in British Timken and French Timken, or

to acquire controlling or complete interests, respectively, in those companies. Certain statements are made which purport to show that the decree entered in such form in that case was really so qualified by extraneous understandings of such a nature that, in fact, the defendant had no such choice as the language of the decree would indicate. It is further said that only one acquisition was ever made under this decree, and that this one was "of relatively minor importance to the restoration of competition." Among other things, it is stated that, because of patents owned by the company acquired, *National Lead* could have been excluded from the Canadian market. *The same may be true in this case with regard to imports by the defendant* into *Great Britain, France and other territories,* if defendant is enjoined from enforcing any rights under its agreements with British Timken and French Timken, by reason of the trademark problems involved, as well as the international economic situation which has been analyzed at length heretofore. It is stated that "a difficulty existed to transfer of the Canadian company's stock to a stranger, since it was a private company." *There are many more difficulties,* practical as well as legal, in connection with the disposition of defendant's interests in British Timken and French Timken.

We submit that there is present here every reason which may have existed in the *National Lead* case for allowing the defendant, as an alternative to divestiture, to acquire and hold the controlling interest in British Timken (the remaining shares being widely held, no other holder being an alleged co-conspirator) and the entire ownership of French Timken. Plaintiff argues that defendant is "somewhat late" in suggesting the alternative form of decree. If any explanation is needed for defendant's failure to suggest this, it is sufficient to say that until now the situation has never been such that a decree in that form would have meant anything as a practical matter. Now, by reason of Dewar's death, defendant could, if permitted by this

Court, make effective the alternative provisions of such a decree.

CONCLUSION.

We believe that the Court, in deciding this motion, is faced with two sets of problems: first, the procedural problems of how the fact of the changed circumstances may be made part of the record in this case, and by what court the effect of those changed circumstances on the decree in this case is now to be considered; and second, the substantive problem of what, if any, relief defendant should be given by reason of the changed circumstances. We believe we have shown that the procedure which this motion asks this Court to follow is the correct and most orderly procedure for these purposes.

Beyond that, of course, the Court cannot really decide this motion until evidence has been introduced and arguments more fully presented on the substantive questions involved. In this sense, arguments now directed to the substantive questions are premature, except as they go to demonstrate that there is, or is not, matter of sufficient importance to warrant the Court's reconsideration. We believe that this Court will recognize that there are new questions of importance in this case, and will wish to give them full consideration after receiving evidence on these questions.

In the final analysis, the question in this case will now become one of whether an American corporation may operate foreign subsidiaries which it does not wholly own, and of which it has acquired control following an intermediate step in which it jointly participated with a foreign citizen in the ownership and management of the foreign companies. There are many other American companies which have foreign investments representing much less than 100 per cent ownership of their foreign affiliates. Such arrangements do not unreasonably restrain trade, but

rather promote it by encouraging the development of the economies of the foreign countries, which has now become one of the basic objectives of the foreign policy of the United States. In the long run, it is such development which will promote trade between the United States and foreign countries and will inure to the greatest benefit of this country.

The necessity of participating in foreign markets by means of affiliated companies established in the respective countries has been recognized by many business organizations, including such an international competitor of this defendant as the Swedish bearing company, SKF, whose size and power were shown in the trial of this case. As the Supreme Court said in the *Columbia Steel* case,

> "extension of that industry requires that the existing companies go into production there or abandon that market to other organizations."

This leaves the alternatives of acquiring existing facilities in the new territory, or creating entirely new ones. The choice of the former method should not be forbidden unless it will unreasonably restrain competition in the entire industry, under the tests laid down in the *Columbia Steel* case, *supra*.

A decision on questions of this importance to the American economy should not be made on the basis of dialectics or abstract logic, but in full recognition of the economic realities involved. We submit that trade by the defendant and other companies in foreign commerce will not be promoted by depriving them of foreign investments which they have developed over many years, and expecting them either to attempt to compete in the foreign market solely by exporting products of domestic establishments, or to embark alone to establish foreign factories, and systems of distribution. Rather, they should be permitted, wherever reasonably possible and wherever they do not actually restrain trade which would otherwise flourish, to develop

their foreign trade along such lines as the practicalities of their particular problems require. Only by so doing can the Sherman Act be made a real instrument for the removal of restraints of trade rather than a device for imposing restraints and discouraging foreign trade.

LUTHER DAY,

THE TIMKEN ROLLER BEARING COMPANY,
APPELLANT

v.

THE UNITED STATES OF AMERICA

ON APPEAL FROM THE UNITED STATES DISTRICT COURT
FOR THE NORTHERN DISTRICT OF OHIO

BRIEF FOR THE UNITED STATES

INDEX

	Page
Opinion below	1
Jurisdiction	1
Questions presented	2
Statute involved	2
Statement:	
The proceedings below	3
The evidence	14
A. The appellant, the co-conspirators, and their products	15
B. The background of the conspiracy	19
C. The present conspiracy:	
1. Formation	27
2. The 1935 agreements	38
3. The current agreements	39
D. The operation of the conspiracy	42
E. Appellant's activities during and since trial of this case	50
Summary of argument	53
Argument:	
Introduction	65
I. The district court's findings establish that the agreements and other concerted activities of appellant, British Timken and French Timken have unlawfully restrained foreign commerce	66
A. Division of world production and sales territories	67
B. Price fixing	69
C. Elimination of outside competition	70
D. Exclusive exchange of know-how	73
E. Restrictive use of the trade-mark "Timken"	75
F. Participation in foreign cartels	81
II. The restraints cannot be justified as ancillary to some lawful "main purpose"	83
A. The restraints here imposed were unreasonable *per se*, and therefore cannot be justified as "ancillary"	83
B. The restraints were in no sense "ancillary" to a joint venture	86

941038—51——1

Argument—Continued Page

C. The restraints cannot be justified as ancillary to the licensing of the name "Timken" 94

1. A trade-mark may not be used as a device for restraining commerce 96

2. Appellant did not own and hence could not "license" the name "Timken" in many countries where it claims to have been a licensor 103

3. The restraints were not in fact ancillary to the licensing of the name "Timken" 114

III. The findings of fact upon which the district court based its judgment are correct and clearly are supported by the evidence 116

A. The finding that appellant combined and conspired with potential or actual competitors 117

B. The findings as to competition between tapered roller bearings and antifriction bearings 122

C. The treatment of the three companies as separately operated units for purposes of determining that they had combined in violation of the Sherman Act, the treatment of evidence designed to indicate a "joint venture," and the finding that the relationship between the parties was merely a continuation of an illegal combination dating from 1909 124

D. The findings that appellant and its coconspirators had combined and conspired to suppress the competition of outsiders by acting collectively against outsiders or joining with them 129

E. The evidence of price fixing 132

F. The district court properly adopted its opinion as its findings of fact and conclusions of law 133

IV. The relief ordered by the district court is appropriate and necessary 136

A. The district court properly directed divestiture of appellant's financial interests in its coconspirators, British Timken and French Timken 136

Argument—Continued Page

B. The injunctive provisions of the judgment are appropriate means for preventing further violation of the Act 149
1. Exclusive grant, receipt or exchange of patent licenses, know-how and material and machinery 149
2. Agreements to fix sale or resale price 152
3. Refusing to sell or selling at discriminatory prices, on products to be resold in British or French territory 153
4. Agreements with coconspirators as to transfer of trade-mark 156

Conclusion 160

OCTOBER TERM, 1950

No. 352

THE TIMKEN ROLLER BEARING COMPANY,
APPELLANT

v.

THE UNITED STATES OF AMERICA

ON APPEAL FROM THE UNITED STATES DISTRICT COURT FOR THE NORTHERN DISTRICT OF OHIO

BRIEF FOR THE UNITED STATES

OPINION BELOW

The opinion of the district court (R. 958) is reported in 83 F. Supp. 284.

JURISDICTION

The final judgment of the district court was entered on February 15, 1950 (R. 1172), and motions for a new trial and amendment of findings and conclusions were denied on June 14, 1950 (R. 1252). The petition for appeal was filed and allowed on July 28, 1950 (R. 1253–1255). The jurisdiction of this Court is conferred by Section 2 of the Expediting Act of February 11, 1903, 32

Stat. 823, 15 U. S. C. 29, as amended by Section 17 of the Act of June 25, 1948, 62 Stat. 869. Probable jurisdiction was noted on November 6, 1950 (R. 1327).

QUESTIONS PRESENTED

1. Whether appellant has combined with British Timken and French Timken to restrain foreign commerce by allocating world markets, fixing prices, and restricting competition in the sale of anti-friction bearings.

2. Whether the restraints are reasonable as ancillary to a "joint venture" or to the "licensing" of the trademark "Timken".

3. Whether the findings and evidence support the judgment.

4. Whether the divestiture and injunctive relief ordered by the district court are appropriate and necessary.

STATUTE INVOLVED

The Act of July 2, 1890, 26 Stat. 209, known as the Sherman Act, provides in pertinent part as follows:

> SECTION 1 [as amended by the Act of August 17, 1937, 50 Stat. 693]. Every contract, combination in the form of trust or otherwise, or conspiracy, in restraint of trade or commerce among the several States, or with foreign nations, is hereby declared to be illegal * * *. [15 U. S. C. 1.]
>
> * * * * *

SEC. 3. Every contract, combination in form of trust or otherwise, or conspiracy, in restraint of trade or commerce in any Territory of the United States or of the District of Columbia, or in restraint of trade or commerce between any such Territory and another, or between any such Territory or Territories and any State or States or the District of Columbia, or with foreign nations, or between the District of Columbia and any State or States or foreign nations, is hereby declared illegal. * * * [15 U. S. C. 3.]

SEC. 4 [as amended by the Act of March 3, 1911, Sec. 291, 36 Stat. 1167]. The several district courts of the United States are hereby invested with jurisdiction to prevent and restrain violations of this act; and it shall be the duty of the several district attorneys of the United States, in their respective districts, under the direction of the Attorney-General, to institute proceedings in equity to prevent and restrain such violations. * * * [15 U. S. C. 4.]

STATEMENT

THE PROCEEDINGS BELOW

This is a civil action brought by the United States under Section 4 of the Sherman Act. The amended complaint, filed December 15, 1947, charged appellant and two foreign corporations, which were named co-conspirators but not defend-

ants (British Timken, Limited, and Societe Anonyme Française Timken, herein referred to as British Timken and French Timken, respectively), with engaging in a combination and conspiracy to restrain interstate and foreign commerce, in violation of Sections 1 and 3 of the Sherman Act, by entering into agreements and planning and acting together to eliminate competition among themselves and others in the manufacture and sale of antifriction bearings in all markets of the world (R. 25).

The amended complaint prayed for adjudication that the conspiracy and contracts to eliminate competition were illegal, cancellation of the illegal contracts, injunctions against continuation of the restrictive practices and against appellant's transferring the trade-mark "Timken" to British Timken or French Timken so as to exclude appellant from using it anywhere in the world, an order that appellant divest itself of its stock holdings and other financial interests, direct and indirect, in the co-conspirator corporations, and such other relief as might be required to dissipate the effects of the conspiracy (R. 23–25).

The district court, after a trial extending from March 22 to April 27, 1948, filed an opinion on March 3, 1949 (R. 958), which it thereafter adopted as its findings of fact and conclusions of law (R. 1020). The court found that appellant, together with British Timken and French Timken, had combined and conspired to restrain

foreign commerce in anti-friction bearings, in violation of Sections 1 and 3 of the Sherman Act, by (a) dividing the world among themselves into exclusive sales and production territories (Fdg.,[1] par. 117, R. 994; Concls., pars. 128, 129, R. 997), (b) fixing prices for products sold under limited exceptions to the division of territories (Fdg., par. 117, R. 994; Concl., par. 132, R. 998), (c) cooperating to eliminate the competition of outsiders (Fdgs., pars. 117, 119, R. 994, 995; Concl., par. 134, R. 999), and (d) participating in foreign cartels which restricted exports by United States producers (Fdgs., pars. 117, 126, R. 994, 996; Concls., pars. 126, 135, R. 996, 999–1000). The Court also found that the exclusive exchange of patents and "know-how" among appellant and its co-conspirators, together with restrictions imposed by them upon the use of the trade-mark "Timken," were integral parts of the general scheme to suppress trade (Fdg., par. 137, R. 1000).

All of the various defenses raised by appellant were considered and rejected by the district court.

The contentions that there was no intent to restrain trade, that the restraints were reasonable and ancillary to appellant's purchase of British Timken and French Timken stock, and resulted

[1] References to statements in the court's opinion which clearly constitute findings of fact or conclusions of law are so designated in this brief. Other references to the opinion of the court are designated by paragraph number and record page only.

from transactions entered into for legitimate reasons, were rejected by an explicit, comprehensive finding that "all that the evidence discloses is an intent to form a smoothly operating combination to control commerce in the tapered-bearing industry throughout the entire world" (Fdg., par. 146, R. 1002; and see Fdgs., pars. 147, 148, R. 1002). The court concluded that the restraints involved were unlawful *per se* (Concls., pars. 142–3, R. 1001) and could not be justified by "good business reasons" (Concl., par. 145, R. 1002).

The contention that the restraints of territorial allocation and price fixing were reasonably ancillary to a "joint venture" was rejected on several grounds. The court found that no joint venture existed (Fdgs., pars., 156–160, R. 1004–5, and it concluded that had one existed it would not have justified continuation of a pre-existing combination designed to allocate exclusive sales territories, to fix prices, and to eliminate competition both within and without the combination (Concls., pars, 161–3, R. 1005–6). And it found further that the restrictive agreements were not, in any event, actually ancillary to the joint venture (assuming one existed), but were made for the specific purpose of eliminating competition (Fdgs., pars. 150, 154–5, R. 1003, 1004).

The defense that the restraints imposed were reasonably ancillary to the contract provisions for transfer of know-how was likewise overruled. Because the court concluded that even the pos-

session of a patent monopoly would not have justified restraints of the character here involved, the lesser interest in protecting know-how was held clearly inadequate as a justification (Concls., pars. 170, 172–8, R. 1007–9).[2]

A similar finding was reached with respect to the claim that the restraints were permissible as ancillary to appellant's licensing of the trade-mark "Timken" to British Timken and French Timken (Op., pars. 179, 180, R. 1009). The court found that the restrictive trade-mark provisions of the various contracts were secondary to the primary purpose of allocating trade territories and preventing competition in the sale of bearings (Fdgs., pars. 183, 187–8, R. 1009, 1010–1), that the restraints could not in any event be justified even by a patent monopoly, and that they could certainly not be justified as sanctioned by the lesser rights of the owner of a trade-mark (Concls., pars. 195–200, R. 1012–4). Moreover, even assuming that the restraints were ancillary to trade-mark licensing, the court ruled that appellant was not the legal or "equitable" owner of

[2] The court said (Concl., par. 177, R. 1008):

"We are, here, confronted with a situation, wherein a patentee upon the expiration of its patent monopoly, seeks to justify the perpetuation of the favored position it enjoyed by virtue of the patent through the ingenious theory of furnishing know-how. If lawful restraints and monopolies could be predicated on the ownership of know-how they could last ad infinitum. This Court cannot subscribe to such unharnessed privilege."

the mark in many countries within the territory allotted by the contracts to British Timken and French Timken, and, therefore, could not license the mark in such areas (Fdgs., pars. 182, 183, R. 1009–10; Concls., pars. 189, 190, R. 1017).

Appellant's argument (Op., pars. 201–203, R. 1014–5) that equitable relief would be useless, since no substantial United States foreign trade in anti-friction bearings on a competitive price basis has existed for many years, but such trade has been and is impossible as a result of chaotic economic conditions, tariff and currency regulations, government restrictions on imports and exports and sales resistance to foreign made products, was likewise held insufficient, legally and factually. The court held that such obstacles have always existed to our foreign trade, which is subject to fluctuation with political and social changes, and that the provisions of the Sherman Act pertaining to free competition with foreign nations nevertheless continue to be applicable to restraints on such competition (Fdg., par. 205, R. 1015; Concl., par. 209, R. 1017). The court further found that there was and is actual and potential competition in the international roller bearing market, and that such competition would have been greater but for the restrictions imposed upon it by the appellant and its co-conspirators (Fdgs., pars. 202, 204, 206–8, R. 1014, 1015–17).

On February 15, 1950, after the filing of briefs and an extensive hearing on the relief to be

granted, the district court entered its final judgment, which contained, among other provisions, an adjudication that the conspiracy and the described contracts were illegal, injunctions against practices which formed part of the conspiracy or might lead to its revival, an order that appellant divest itself within two years of its interests in the co-conspirator corporations, and an injunction against appellant's acquiring, "through the exercise of any option, or otherwise," any interest in those companies (R. 1179). A motion for a new trial was denied (R. 1252), and the present appeal was taken.[3]

The relief provisions of the final judgment which are apparently challenged on this appeal are as follows (R. 1175–9):

> V. Defendant is hereby enjoined and restrained from entering into, performing, adopting, adhering to, maintaining or furthering, directly or indirectly, or claiming any rights under, any combination, conspiracy, contract, agreement, arrangement, understanding, or concerted plan of action with British Timken, French Timken, or any subsidiary, successor, assign, agent, sales representative or distributor thereof:
>
> * * * * *

[3] After this Court had noted probable jurisdiction of this appeal, appellant on January 24, 1951, moved the district court to request leave of this Court to receive additional evidence, make additional findings of fact and conclusions of law, and vacate all or part of its final judgment of February 15, 1950. A hearing was held in the district court on Feb-

F. To fix, maintain or adhere to prices or price ranges, or other terms and conditions of sale or resale of anti-friction bearings produced by defendant for sale or other distribution in any territory or market, or produced by any other person for sale or other distribution in the United States.

G. To receive, grant, disclose, render available or exchange, in such a way as to deny any third person access thereto, any assignment, license or grant of immunity under a patent or patent application, relating to anti-friction bearings;

H. To receive, grant, disclose, render available or exchange, in such a way as to deny any third person access thereto, (1) information, advice, assistance or rights with respect to any invention, discovery, improvement, practice, formula, pattern, device, process, method, or other technical information, relating to the production of anti-friction bearings, or (2) any material or machinery used in the production of anti-friction bearings, or any information, advice, assistance or rights with respect to any such material or machinery.

VI. Defendant is hereby enjoined and restrained from:

* * * * * *

B. Refusing to sell anti-friction bearings to any person at prices and on terms and

---

ruary 14, 1951; and on April 10, 1951, the court denied this motion.

conditions of sale corresponding to those regularly offered to purchasers of the same classification for resale or other distribution in defendant's territory, as herein defined, where the reason for such refusal is that such bearings are for resale or other distribution in British territory or French territory, as herein defined;

* * * * *

VII. Defendant is hereby enjoined and restrained from entering into, performing, enforcing, adhering to, maintaining, furthering, or renewing, directly or indirectly, any contract, agreement, combination, understanding or arrangement with British Timken and/or French Timken, or any subsidiary, successor, assign, agent, sales representative or distributor thereof which provides for:

A. An assignment, license or grant of immunity under any patent or patent application;

B. The receipt, grant, disclosure, rendering available or exchange of information, advice, assistance or rights with respect to any invention, discovery, improvement, practice, formula, pattern, device, process, method or other technical information relating to the production of anti-friction bearings, or of any material or machinery used in the production of anti-friction bearings, or of any information, advice, assistance or rights with respect to any such material or machinery; or

C. The transfer of any right or immunity under a trade mark or name, relating to the production of anti-friction bearings, upon the condition or requirement that British Timken and/or French Timken, or any subsidiary, successor, assign, agent, sales representative or distributor thereof shall:

1. allocate or divide territories or markets for the production, sale or other distribution of anti-friction bearings;

2. limit, restrain or prevent importation into or exportation from the United States of anti-friction bearings;

* * * * *

4. refrain from competing or leave any person free from competition in the production, sale or other distribution of anti-friction bearings in any territory or market;

5. exclude any producer or distributor from any market for anti-friction bearings, or interfere with or restrict any producer or distributor in competing in any such maket;

6. maintain or adhere to fixed prices or price ranges, or other terms and conditions of sale or resale of anti-friction bearings;

7. receive, grant, disclose, render available or exchange, in such a way as to deny any third person access thereto, any assignment, license or grant of immunity under a patent or patent application, relating to anti-friction bearings;

8. receive, grant, disclose, render available or exchange, in such a way as to deny any third person access thereto, (a) information, advice, assistance, or rights with respect to any invention, discovery, improvement, practice, formula, pattern, device, process, method, or other technical information relating to the production of anti-friction bearings, or (b) any material or machinery used in the production of anti-friction bearings, or any information, advice, assistance or rights with respect to such material or machinery;

* * * * *

VIII. A. Within two years from the date of this judgment, defendant shall divest itself of all stock holdings and other financial interests, direct or indirect, in British Timken and French Timken. Within one year from the date of this judgment, defendant shall present to the Court for its approval a plan for such divestiture.

B. Defendant is hereby enjoined and restrained, from the date of this judgment, from:[4]

1. Acquiring, directly or indirectly, any ownership interest in (by purchase or acquisition of assets or securities, or through the exercise of any option, or otherwise), or any control over, British Timken or French Timken, or any subsidiary, successor or assign thereof;

[4] As pointed out *infra*, p. 148, the Government questions whether the appellant is in a position to challenge subsection B of Section VIII.

2. Exercising any influence or control over the production, sales or other business policies of British Timken or French Timken, or any subsidiary, successor, assign, agent, sales representative, or distributor thereof;

3. Causing, authorizing or knowingly permitting any officer, director, or employee of defendant or its subsidiaries to serve as an officer, director, or employee of British Timken or French Timken or of any subsidiary, successor, assign, agent, sales representative, or distributor thereof.

IX. Defendant is hereby enjoined from refusing to sell anti-friction bearings to any person or discriminating as to availability and prices, terms, and conditions of sale of such bearings or failing to provide services and assistance relating to the distribution or use of such bearings comparable to the services and assistance made available to distributors and users of such bearings in defendant's territory, where the reason for such refusal, discrimination, or failure is that such bearings are for use, resale, or other distribution, either in their original form or incorporated in another product, in some country or area other than defendant's territory as herein defined.

The Evidence

The undisputed documentary evidence furnishes, in our view, complete support for the findings and conclusions of the district court with respect to

the restraints imposed by appellant. Moreover, review on this appeal does not encompass detailed scrutiny of the factual inferences of intent (to the extent relevant) which were drawn by the trial judge from the entire record. *United States* v. *Yellow Cab Co.*, 338 U. S. 338. Accordingly, the detailed recital of the background, development, and operation of the conspiracy which follows is included only because of its relevance to the questions of the appropriateness of the relief ordered by the district court.

A. THE APPELLANT, THE CO-CONSPIRATORS, AND THEIR PRODUCTS

Appellant is an Ohio corporation with its main offices in Canton, Ohio (Fdg., par. 6, R. 960; Ans., par. 3, R. 25, 26; R. 458), and its principal plants in Canton and Columbus, Ohio (Fdg., par. 6, R. 960; Ans., pars. 2, 13, R. 26, 28). It is "many times over" the largest manufacturer of tapered roller bearings in the world (Fdgs., pars. 10, 35, R. 960, 965–6; Gov. Ex. 1, not printed;[5] Ans., par. 11, R. 27) and has been since 1904 (Fdg., par. 35, R. 965–6; R. 46).

A tapered roller bearing is a type of anti-friction bearing (Fdg., par. 18, R. 962), which is a device for reducing friction by mechanical means between moving parts in machines (Fdg., par. 17,

[5] The parties have stipulated that exhibits which are of record but were not printed may be referred to in the briefs and argument (R. 1333).

R. 961–2). Tapered roller bearings consist of a circular group of conical or truncated conical steel rollers revolving between two circular steel raceways, which in turn are inserted between the moving parts of the machine.[6] Tapered roller bearings are extensively used in many industrial products containing rotating parts, such as trucks, automobiles, farm machinery, and railroad rolling stock (Fdg., par. 16, R. 961; R. 40–1). Though they compete to some extent with other types of anti-friction bearings and to a lesser extent with friction bearings, tapered roller bearings are free from competition for certain uses.[7]

---

[6] Fdgs., pars. 17, 18, R. 961–2; Gov. Exs. 1, 2, p. 6, not printed; Def. Exs. 49–C, 50–A to G, not printed; R. 37, 39–40, 112. The other principal types of anti-friction bearings are straight roller bearings, which have cylindrical steel rollers, and ball bearings, which have steel spheres (Fdgs., pars. 17, 18, R. 961–2; Gov. Exs. 1, 2, p. 6, not printed; Def. Exs. 49–C, 50–A to G, not printed; R. 37, 39–40, 112). A friction bearing consists of a metal sleeve which slides directly over a shaft; oil or other filmy substances, rather than rotating parts, are used to reduce friction between the moving sleeve and shaft (Fdg. 17, R. 961–2; Ans., par. 8, R. 27; R. 475–6, 481).

[7] Fdgs., pars. 19, 20, R. 962; R. 37–8, 40–1. For example, because of their design, they are capable of supporting heavy loads which ball bearings could not support except in a size which would be commercially and industrially impractical (R. 59–60). This is true with respect to railroad cars (R. 489). Tapered roller bearings are also capable of carrying a heavier sidewise thrust load than other types of bearings (R. 40).

Even in instances where ball or straight roller bearings may be adequate alternatives for tapered roller bearings, once the tapered roller bearing is incorporated into the

Appellant's share of the United States annual production of tapered roller bearings has ranged in recent years from 71 to over 80 percent.[8] Its gross sales were approximately $77,097,756 in 1947 (Fdg., par. 10, R. 960; R. 541–3). Its sales of tapered roller bearings for "original installation" constitute approximately 95 per cent of its total bearings sales, while "replacement" or "service" sales make up the remaining 5 per cent (Fdg., par. 21, R. 962; R. 500–1).

British Timken, named as a co-conspirator but not as a defendant, is a British joint stock company with its principal offices and plant at Birmingham, England (Fdg., par. 7, R. 960; Ans., par. 4, R. 26). It is the largest manufacturer and seller of tapered roller bearings in England (Fdgs., pars. 13, 36, R. 961, 966). Though its position once dropped to as low as 70 per cent, in 1927 and at the time of trial it had more than 90 percent of such production (Fdg., par. 13, R. 961;

---

design of equipment, ball or straight bearings thereupon become noncompetitive, since these other types of bearings cannot be substituted without redesign of the equipment (Fdg., par. 20, R. 262; R. 210–1, 296–7). In addition, in "replacement" sales of tapered bearings there is no competition from other types of bearings, where the original installation was a tapered bearing (Fdg., par. 20, R. 962; R. 45, 65–6).

[8] Fdg., par. 11, R. 960–1; Gov. Exs. 4, 5, 135 (not printed), 138, R. 1333, 1334, 1557. Appellant makes no other type of anti-friction bearings (Fdg., par. 6, R. 960; R. 460). Appellant also makes alloy steel, seamless tubing, and removable rock bits (Fdg., par. 6, R. 960).

R. 106–7). Its gross sales for 1947 were approximately $14,700,000.[9]

At the time when judgment below was entered, appellant owned 30.25% of the ordinary shares and 1% of the preferred shares of British Timken.[10]

French Timken, also named as a co-conspirator but not as a defendant, is a French corporation with its principal offices at Asnieres, France (Fdg., par. 8, R. 960). It is the largest manufacturer and seller of tapered roller bearings in France.[11] Its 1947 sales amounted to 270,692,963.88 francs or $2,274,723 (Fdg., par. 14, R. 961; Def. Ex. 35, R. 1846).

At the time of the judgment, appellant owned 50% of the outstanding shares of French Timken,[12] and promissory notes from French Timken on which approximately $241,000 is now

[9] Fdg., par. 13, R. 961. Since 1933 or 1934 British Timken has also manufactured, through its subsidiary, Fischer Bearing Company, ball and straight roller bearings (Fdg., par. 7, R. 960; R. 107). The gross sales for 1947, given above, include those of Fischer.

[10] Fdg., par. 66, R. 971; R. 911–2. Appellant's acquisition of its interest held at the time of judgment in British Timken is described on pp. 28–32, *infra*, and in French Timken on pp. 30, 36, *infra*.

[11] Fdg., par. 14, R. 96; R. 117. French Timken has never made ball or straight roller bearings (R. 113), since it is prohibited from doing so by its agreements with appellant and British Timken (Def. Ex. 27, par. 6, R. 1771, 1776; Def. Ex. 28, par. 5, R. 1780, 1783).

[12] Fdgs., pars. 54, 66, R. 969, 971; Def. Ex. 186, R. 2298; Ans., par. 5, R. 26; R. 912–3.

owed (R. 1062–3). In addition, appellant holds a $120,000 note from M. B. U. Dewar, secured by a pledge of his 50% stock interest in French Timken (Def. Ex. 228, R. 2487; 1063).[13]

B. THE BACKGROUND OF THE CONSPIRACY

The court found that the present conspiracy was the natural outgrowth of agreements dating back to 1909 which divided world markets and eliminated competition (Fdg., par. 120, R. 995). In 1909 appellant entered into two contracts (Def. Exs. 189, 190, R. 2305, 2322) with Electric & Ordnance Accessories Company, Limited (Fdg., par. 24, R. 962).

The 1909 agreements provided, in substance, for:

> (1) A division of world production and sales territories, whereby appellant agreed not to manufacture or sell roller bearings (or to sell such bearings to others for resale) in Europe or the British Empire (except Canada), and E&OA agreed not to manufacture or sell outside of these territories.[14]

---

[13] See note 10.

[14] Fdgs., pars. 24–27, R. 962–4; Def. Ex. 189, Art. 2, 15, R. 2306, 2319; Def. Ex. 190, pars. 6, 39, R. 2322, 2325, 2335. Both contracts provided that appellant should not, directly or indirectly, manufacture or sell any roller bearings, whether patented or otherwise, in the territory "licensed" to E&OA, nor sell any roller bearings to others for shipment into E&OA territory except as part of complete automobiles made in the United States (Def. Ex. 189, Art. 2, R. 2306;

(2) The compulsory and exclusive use by E&OA of the mark "Timken" on roller bearings made or sold by it.[15]

(3) The fixing of minimum prices at which E&OA could sell within its territory.[16]

(4) The furnishing of manufacturing information by appellant to E&OA, the compulsory use of such information by E&OA, and the right of appellant to adopt any improvements made by E&OA.[17]

Though the two contracts were cast in the form of patent licenses from appellant to E&OA,[18] the restrictions applied to all roller bearings, whether patented or not, and to territories where appellant had no patent rights.[19] The court held that the 1909 agreements were themselves illegal because,

---

Def. Ex. 190, par. 6, R. 2325–6). E&OA likewise agreed in each contract not to manufacture or sell "any roller bearings" outside its territory, nor to sell them to others for shipment outside its territory, except as parts of vehicles made in its territory. (Def. Ex. 189, Art. 15, R. 2319; Def. Ex. 190, par. 39, R. 2335.)

[15] Fdgs., pars. 25, 27, 187, R. 963, 964, 1010; Def. Ex. 189, Art. 11, R. 2316; Def. Ex. 190, par. 32, R. 2333.

[16] Fdgs., pars. 25, 27, R. 963, 964; Def. Ex. 189, Art. 14, R. 2318; Def. Ex. 190, par. 37, R. 2335.

[17] Fdgs., pars. 25, 27, R. 963, 964; Def. Ex. 189, Art. 4, 10, 13, R. 2307, 2316, 2317; Def. Ex. 190, pars. 31, 34, R. 2333, 2334.

[18] The principal license covered three existing British patents of appellant, as well as all future patents it acquired which related to roller bearings (Fdg., par. 24, R. 962; Def. Ex. 189, Art. 2, R. 2306).

[19] Fdgs., pars. 24–27, R. 962, 964; Def. Ex. 189, Art. 1, 2, R. 2305, 2306; Def. Ex. 190, pars. 3, 5, R. 2324, 2325.

though patent licenses, they applied to products and territories beyond the scope of existing patent rights, and included future developments and inventions, in the industry (Concls., pars. 120, 170, 173–4, R. 995, 1007, 1008). Moreover, the 1909 agreements set the pattern for the restraints which continued long after the expiration of the patents.[20]

Pursuant to these two contracts, E&OA began the production of bearings in Great Britain in 1909 (R. 427), and thereafter all bearings sold by E&OA and its successor, British Timken, were sold under the name "Timken" (Fdgs., pars. 96, 124, R. 987, 996; R. 430, 440). Appellant, which had not before 1909 sold any bearings in the territories allotted to E&OA by the two contracts, under the name "Timken" or otherwise, was after that date prohibited from doing so by the contracts, to which it gave rigid adherence (Fdgs., pars. 70, 72, 86, 87, R. 972, 973, 983, 984). British Timken by the use of the name in the sale of its tapered roller bearings thus acquired the common law ownership of the name as a trademark in Great Britain (R. 608), and later became the registered owner (*supra*, p. 26, n. 36).

On April 6, 1920, the agreements of 1909 between appellant and E&OA (Def. Exs. 189, 190, R. 2305, 2322) were modified by two contracts (Def. Exs. 191, 192, R. 2338, 2343) between

[20] Fdg., par. 153, R. 1003–4. The basic patents had all expired by 1924 (Fdgs., pars. 31, 188, R. 965, 1010–1; Def. Exs. 82, 242; R. 1965, 2662; R. 220).

appellant and another Vickers subsidiary, Wolseley Motors, Limited (hereinafter called "Wolseley"), providing for the transfer to Wolseley of the E&OA licenses of 1909 (Fdg., par. 28, R. 964; R. 230). Later, on June 4, 1920, British Timken was organized as a wholly-owned subsidiary of Wolseley, and Wolseley's rights under the two 1920 contracts were assigned to British Timken (Fdgs., pars. 31, 32, R. 965; Def. Ex. 199, R. 2359).

The 1920 contracts, though retaining substantially all of the terms of the 1909 contracts, made certain modifications in addition to the assignment to Wolseley (Fdg., par. 28, R. 964). One of the principal changes was an exception to permit appellant to sell bearings to manufacturers in its own territory for export into Wolseley's territory, but only for use in such manufacturer's own products.[21] Wolseley was granted reciprocal rights.[22] The contracts provided, however, that bearings made in the territory of one of the parties and sold for use in the territory of the other should "not be sold at prices which shall be unreasonable or unfair to the party in whose territory the roller bearings are sold."[23]

---

[21] Fdg., par. 28, R. 964; Def. Ex. 191, par. 3, R. 2338, 2339; Def. Ex. 192, par. 3, R. 2343, 2344.

[22] Fdg., par. 28, R. 964; Def. Ex. 191, par. 4, R. 2338, 2340; Def. Ex. 192, par. 4, R. 2344.

[23] Fdg., par. 29, R. 964; Def. Ex. 191, par. 9, R. 2341; Def. Ex. 192, par. 9, R. 2345.

Wolseley was required to use the name "Timken" on its bearings as was E&OA under the 1909 contracts,[24] but in the event the contracts were rescinded by appellant under certain listed conditions Wolseley was obligated to abandon the use of the name "Timken."[25]

By 1921 appellant had become aware that its covenants not to make or sell bearings in territories allotted to others resulted in others registering and owning the mark "Timken" in those territories,[26] so that appellant could not use the mark in many areas of the world.[27] In 1916 a German citizen named Prausnitzer had obtained in Germany the first registration in any country of the word "Timken" as a trade-mark for anti-friction bearings.[28] In 1921 the trade-mark "Timken" was registered in France and the French colonies by Societe de Mechanique de Gennevilliers (hereinafter called SMG),[29] the sole

---

[25] Fdg., par. 30, R. 964; Def. Ex. 191, par. 10, R. 2341; Def. Ex. 192, par. 10, R. 2346.

[26] Fdg., par. 183, R. 1009; Def. Ex. 63, R. 1947–8; Def. Exs. 77, 79, 80, 89, R. 1961, 1963, 1964, 1993.

[27] Fdg., par. 182, R. 1009. Even in those instances where appellant obtained registrations outside its allotted territory, these registrations were subject to being set aside, since British Timken could have established prior use (R. 609–10, 613–4; see Fdg., par. 182, R. 1009).

[28] Fdg., par. 182, R. 1009; Def. Ex. 87, R. 1972; R. 117–8.

[29] Fdgs., pars. 53, 182, R. 969, 1009; R. 120–1, 450; Def. Exs. 37, 38, 39, R. 1849, 1851, 1859.

French producer of tapered roller bearings.[30] In 1921 appellant was advised by counsel that it had no rights to the mark "Timken" in the United Kingdom, as a result of prior use there by British Timken and its predecessors.[31] Appellant then decided to obtain such rights if possible through cooperation with British Timken (Def. Ex. 80, R. 1964). Throughout the years after 1920, appellant exerted considerable effort to remedy its

[30] Fdgs., pars. 53, 182, R. 969, 1009; R. 111-2. SMG was operating under a sublicense from E&OA (Fdgs., pars. 53, 182, R. 969, 1009; see Def. Ex. 194, pars. 3, 4, R. 2347, 2348-9). The registration in France by SMG was an unpleasant "surprise" to appellant (Def. Exs. 81, 82, R. 1965; R. 586).

[31] Def. Ex. 77, R. 1961; see also Def. Exs. 63, 79, 89, R. 1947, 1963, 1993. Appellant's British trade-mark solicitors explained the situation as follows (Def. Ex. 77, R. 1961):

"Now the idea of the registration of a trade-mark is not to protect the proprietor of the mark but to protect the general public by assuring them that they are obtaining the goods of a particular manufacturer. In the present case the goods actually sold in this country are not manufactured by the Timken Roller Bearing Company, but have been manufactured first of all by the Electric & Ordnance Accessories Company, Limited, then by Wolseley Motors Limited and now by British Timken, Ltd., and if we are to apply under part B of the Act, it seems to us that the application should be made in the name of the British Timken, Ltd., as they would have to prove actual use of the mark for more than two years either by themselves or their predecessors in business. Now if registered in the name of the British Timken, Ltd., your clients would have no rights in this trade mark unless some specific arrangements were made whereby, on termination of the agreement under which these rollers are at the present being manufactured here, the good will of the business in respect thereof must revert to the Timken Roller Bearing Company."

dubious trade-mark position in the various territories allotted by agreement to others.[32]

On December 31, 1924, and January 1, 1925, respectively, appellant entered into two contracts

[32] Fdgs., pars. 183–4, 186, R. 1009–1010; Def. Exs. 79, 80, 83, 89, 91–4, 97, 98, 99, 102–106, R. 1963, 1964, 1966, 1993, 1996–2000, 2002, 2003, 2005, 2010–2015; R. 585–6, 594, 595–6, 609–10, 613–5. On July 30, 1925, appellant was advised (a) that its application for registration in Germany had been successfully opposed by Prausnitzer; (b) that appellant could not register the name in France because SMG had already registered it and that appellant also had no right to registration in Great Britain and Ireland, "because the laws of those countries seemed to require actual use of the trade-mark before registration" (Def. Ex. 89).

Appellant's trade-mark problems in British Timken territory were summarized by its counsel in January 1927 as follows (Gov. Ex. 100, R. 1478):

"Your application in New Zealand has been unsuccessful by reason of your inability to obtain affidavits as to ownership of the mark, the New Zealand trade recognizing the mark as being the property of British Timken. In Great Britain, it seems impossible for you to obtain registration in your name. In both cases, it might be possible to obtain registration in the name of British Timken, with a promise to assign the registrations to you; but we have not done this because of the provision against assignment of a trade-mark registration separate and apart from the business. In France and Germany, representatives of British Timken have obtained registration; * * * The difficulties in these four countries could be surmounted if you were to take over the business of British Timken * * *. If the matter is handled merely by you beginning when British Timken leaves off you will probably not be able to carry back your title to the trade-mark, and there will be the possibility of trouble with other people. For instance, in Germany we understand that 'Timken' is more or less equivalent to 'tapered' and your rights to your trade-mark may be lost unless you can relate back you [sic] ownership to the date of the Prausnitzer registration."

with British Timken, both to be effective as of January 1, 1924.[33] By these agreements the 1909 agreements[34] were extended to January 1, 1929.[35] These agreements also provided for the first time that the mark "Timken" should "belong exclusively" to appellant.[36] British Timken was to have the right to use the name, but upon termination it was required to take all steps necessary to change its name and cease to have any right in the name or to make use of it in any way; British Timken was further obligated, both before and after expiration of the agreement, to do all acts necessary to secure for appellant the exclusive right in the name in British Timken territory.[37]

During the period from 1909 to 1927, appellant, as well as British Timken and its predecessors,

---

[33] Fdg., par. 31, R. 965; Def. Exs. 88, 194, R. 1991, 2347.

[34] Def. Exs. 189, 190, R. 2305, 2322, as amended in 1920, Def. Exs. 190, 191, R. 2322, 2338.

[35] Fdg., par. 31, R. 965; Def. Ex. 194, par. 4, R. 2347–8; Def. Ex. 88, par. 3, R. 1992.

[36] Fdg., par. 31, R. 965; Def. Ex. 88, par. 3, R. 1992; Def. Ex. 194, par. 4, R. 2347–8.

[37] Appellant's steps to register the mark in Great Britain had begun in 1920 (Def. Exs. 63–72, 74, 79–80, R. 1947–58, 1959, 1963–4). Appellant soon abandoned, as impossible, the idea of obtaining the registration in its own name (Def. Exs. 77, 79, 80, 83, R. 1961, 1963, 1964, 1966). Instead, it decided to try to obtain the registration through British Timken (Def. Ex. 80, R. 1964). Since it was advised that a direct assignment of the registration to appellant would also require transfer of the good-will of the business of British Timken, appellant decided to insist upon the contract provisions described above relating to

experienced rapid and substantial growth in productive capacity and sales.[38] Each occupied within its own country a dominant position in the tapered roller bearing market, and in 1928 they were strong potential competitors.[39] SMG, the predecessor of French Timken, was then the dominant producer of tapered roller bearings in France and was also a potential competitor (Fdgs., pars. 53, 144, R. 969, 1002–3; R. 111–2, 117).

C. THE PRESENT CONSPIRACY

1. *Formation*

In about 1926, Michael B. U. Dewar, then managing director of Metropolitan Carriage and Wagon Manufacturing Company, the largest Vickers subsidiary (R. 230), became vice-chairman of Wolseley, at a time when Vickers was in financial difficulties (Fdg., par. 37, R. 966; R.

---

rights in the mark upon termination of the contract (Def. Ex. 80, R. 1964).

A joint application for registration filed by appellant and British Timken in 1925 (Def. Exs. 91, 92, R. 1996, 1997) was withdrawn upon advice of counsel, who believed that it could not succeed (Def. Exs. 98, 99, 104, R. 2003, 2005, 2011; R. 585–6, 594). The British registration was finally obtained by British Timken in 1940, with "the closest cooperation" from appellant (Gov. Ex. 182, R. 1703; see also Gov. Exs. 179, 181–188, 190, R. 1693, 1703–10, 1711).

[38] Fdgs., pars. 34, 35, R. 965–6; R. 56–7, 84–5, 105–7, 144, 241, 435, 455; Def. Exs. 7, 31, 230, R. 1725, 1800, 2545.

[39] Fdgs., pars. 36, 122, 144, R. 966, 996, 1002–3; Gov. Exs. 4, 5, 34, 137, 138, R. 1333, 1385, 1553, 1577; R. 106–7, 453.

230). During 1926 Dewar made a visit to the United States as a member of a British Government commission studying comparative production costs (R. 232–3), and while in the United States visited appellant's plant (Fdg., par. 37, R. 966; R. 234).

Dewar in 1927 knew that the existing contracts with respect to allocation of territories between appellant and British Timken were, by their terms, to expire on January 1, 1929 (Fdg., par. 37, R. 966; R. 239). On March 10, 1927, upon becoming chairman of British Timken, Dewar wrote to appellant and raised "the question of continuation of our existing agreement" (Fdg., par. 38, R. 966–7; Def. Ex. 4, R. 1722). Dewar suggested making an offer to Vickers for the purchase of British Timken (Fdg., par. 38, R. 966–7; Def. Ex. 4, R. 1722; R. 242). On March 28, 1927, Dewar cabled appellant asking if it would be prepared to extend its agreements with British Timken for 10 years if he were to take over, saying that he did "not think it wise without a 10 years arrangement" with appellant (Fdg., par. 39, R. 967; Def. Ex. 5, R. 1724; R. 247–8). On March 29, 1927, appellant cabled Dewar that it would "give consideration to a ten year term of license" and that "we would be more interested, however, in joining with you in purchasing company from Vickers and making the necessary investment" (Fdg., par. 40, R. 967; Def. Ex. 6, R. 1724; R. 248–9). Dewar replied on

March 30, 1927, that he was "prepared to put up approximately half," and stated that British control was essential (Def. Ex. 7, R. 1725; R. 248–9).

On April 1, 1927, appellant advised its American trade-mark counsel of its proposed purchase of an interest in British Timken, stated that it hoped to arrange for modification of the existing agreements, and requested suggestions as to what should be done regarding name registration (Def. Ex. 102, R. 2010; R. 595–6). Appellant's counsel advised (Fdg., par. 185, R. 1010; Def. Ex. 104, R. 2011):

> We are glad to note that you are endeavoring to obtain controlling interest in British Timken. This is in line with our own suggestion and will put you in *control* of the trade mark "Timken" all over the world, whereas, under existing conditions, there is a danger that, if your present license agreement with British Timken should be terminated, you might not be able to prevent others from establishing a right to use the word "Timken" in certain countries from which you are excluded by the agreement from doing business. [Emphasis supplied.]

Appellant had serious doubts of its rights in the trade-mark "Timken" at that time in the territories assigned to British Timken and French Timken; it realized that it could not use the mark in many of those territories as a result of its own covenants not to compete, and was primarily con-

cerned, therefore, not in safeguarding trade-mark rights which it then possessed, but rather in acquiring rights obtained by others."[40]

In April and May of 1927, negotiations took place in London between an executive of appellant and Dewar, regarding the acquisition of British Timken from Vickers, and renewal of the existing agreements.[41] During these negotiations, Dewar indicated his preference that appellant should join him in the purchase of British Timken on account of its "interest then in the profitable operation of the company" (Def. Ex. 16, R. 1735; R. 264–5). He also insisted upon "a clear understanding of what territories his company would serve."[42] Appellant's representative and Dewar also decided that a jointly owned French company should be organized (R. 288–9)

[40] Fdgs., pars. 182–184, R. 1009–10; Def. Exs. 105, 106, R. 2013, 2015.

[41] Fdg., par. 41, R. 967; Def. Exs. 11, 13, 14, R. 1727, 1728, 1729; R. 251–3, 253–4, 256–7.

[42] Fdg., par. 207, R. 1015–6; R. 933–4. Appellant's Vice-President testified at the trial that "it was only normal" in view of the financial investments, that there should be some understanding as to allocation of territories (R. 933). Appellant's counsel urged at the trial that "Dewar, putting his money into this enterprise, was entitled to that protection" against competition (Orig. R. 2878), and candidly admitted: "It wasn't anything that could be expected in common sense, that Michael Dewar would compete, if he had a company of his own, with British Timken, or for us to compete with British Timken" (Orig. R. 2877).

as well as a jointly owned German company (R. 292–5).

On May 16, 1927, a "Heads of Agreement" was concluded between appellant and Dewar (Fdg., par. 41, R. 967; Def. Ex. 15, R. 1730; R. 257–8). This was a memorandum in general terms of the points agreed upon in the negotiations and was to be "embodied in more formal documents as soon as practicable" (Fdg., par. 41, R. 967; Def. Ex. 15, par. 11, R. 1730, 1734). It provided for the purchase of all outstanding British Timken stock by appellant and Dewar, appellant to contribute £52,500 and Dewar £47,500 (Fdg., par. 42, R. 967; Def. Ex. 15, par. 1, R. 1730), and likewise provided "in connection therewith," as one of the "terms and conditions" of the purchase, for the extension for ten years of the existing restrictive agreements.[43] The district court found that Dewar's underlying motive in making the agreement was his desire to escape appellant's competition and to continue the existing contracts (Fdg., par. 155, R. 1004).

Dewar was to hold a majority of the controlling class of shares and be managing director of British Timken, undertaking "the control and management of the company's affairs", as long as it earned a stipulated minimum net profit

[43] Fdg., par. 43, R. 967–8; Def. Ex. 15, Preamble, par. 10, R. 1730, 1733.

and paid a specified dividend.[44] As one of the terms of the new ten year agreement, all practicable steps were to be taken for protecting the mark "Timken" and "securing the exclusive reversion of the name in all countries to the American Company at the termination of the Agreement" (Fdg., par. 43, R. 967–8; Def. Ex. 15, par. 10 (a), R. 1733). Upon Dewar's death or incapacity for six months, appellant was to "have an option to purchase the shares belonging to him at the date of such death or the expiration of sick period" (Def. Ex. 15, par. 10 (a), R. 1733).

It is apparent from the above facts, as the court held, that the only substantial change in the relationship between appellant and its coconspirators as a result of the Heads of Agreement was that appellant acquired a stock interest in British Timken and French Timken. The pattern of trade restriction continued. (Fdg., par. 153, R. 1003–4.)

Following the signing of the Heads of Agreement, various steps were taken necessary to carry out its terms. Appellant and Dewar acquired British Timken from Vickers, as agreed (Fdg., par. 44, R. 968; R. 267). Activity began looking

[44] Fdgs., pars. 42, 44, 156, R. 967, 968, 1004; Def. Ex. 15, pars. 2, 69, R. 1730, 1954. Dewar retained control of British Timken throughout the period 1928 to the time of trial (Fdg., par. 156, R. 1004; R. 283; R. 911–15; Def. Ex. 26, R. 1766; Def. Ex. 187, R. 2301; Def. Ex. 228, R. 2483; Def. Ex. 249, R. 2672).

to formal agreements embodying the ten year extension of the existing agreements. In November 1927 appellant's London counsel, in connection with a proposal to formalize the Heads of Agreement as a patent license, stated (Fdg., par. 121, R. 995–6; Gov. Ex. 174, R. 1686):

> As we understand the position, the main advantage derived by the English Company under the Agreement will be the advice and information to be received from you, the right to use the name "Timken" and the *absence of your competition.* Do you not think that it would be better to accentuate these advantages in the Agreement, rather than leave them merely as incidents in a patent license? [Emphasis supplied.]

On January 1, 1928, pursuant to Article 10 of the Heads of Agreement, appellant and British Timken entered into a contract called by them a "Business Agreement" (Fdg., par. 47, R. 968; Def. Ex. 23, R. 1754).[45] This contract extended the restrictive arrangements which had existed between appellant and British Timken for nearly twenty years (Fdg., par. 153, R. 1003–4). The first paragraph provided for the division of territories as follows (Fdg., par. 48, R. 968):

---

[45] Appellant's counsel described this as "the contract that carries out pretty much the terms of the heads of agreement that was drawn up in May 1947, between American Timken and Michael Dewar" (R. 36).

> For the purposes of this Agreement the United Kingdom of Great Britain and Northern Ireland and all other countries of Europe and all colonies or dependencies of said United Kingdom and European countries except in or adjacent to North or South America shall be deemed to be the territory of the British Company and the rest of the world shall be deemed to be the territory of the American Company.

Each party agreed not to make or sell, or license to others to make or sell, bearings directly or to others for shipment into the other party's territory, except (a) as an assembled part of completed article of manufacture, manufactured in its own territory, and (b) for bearing replacement purposes in such completed article of manufacture, and then only on payment to the other party of 10% of the net sale price as a penalty (Fdg., par. 51, R. 969; Def. Ex. 23, par. 7, 8, R. 1754, 1757–9).

Appellant granted British Timken an exclusive license to make and sell bearings in its territory under all present or future patents of appellant (Fdg., par. 49, R. 968; Def. Ex. 23, par. 2 (b), R. 1755) while British Timken agreed to assign absolutely to appellant all present and future patent rights in appellant's territory (Fdg., par. 49, R. 968; Def. Ex. 23, par. 2 (c), R. 1755–6). Appellant agreed to advise British Timken as to methods of manufacture which British Timken was obliged to follow insofar as economically

practicable (Fdg., par. 50, R. 968; Def. Ex. 23, par. 4, R. 1756–7). The parties were to inform each other as to all improvements and practices whether or not patented (Fdg., par. 50, R. 968; Def. Ex. 23, par. 2 (a), R. 1755).

British Timken was required to make, sell, and deal in bearings only under the mark "Timken" (Fdg., par. 52, R. 969; Def. Ex. 23, par. 6, R. 1757). The parties agreed to endeavor to maintain the distinctive character of "Timken" (Fdg., par. 52, R. 969; Def. Ex. 23, par. 3, R. 1756). British Timken agreed to join appellant in applications for concurrent registration of the mark "Timken" upon request (Def. Ex. 23, par. 3, R. 1757). Upon termination of the contract British Timken agreed that it would eliminate the name "Timken" from its corporate title and would refrain from using the name "Timken" as a trade-mark and would assign rights therein as directed by defendant (Fdg., par. 52, R. 969; Def. Ex. 23, par. 3 (a), R. 1756). The contract was to extend to January 1, 1938, appellant having the privilege to extend it to January 1, 1948 (Def. Ex. 23, par. 16, R. 1762–3).[46]

Although the 1928 contract (Def. Ex. 23, R. 1754) did not specifically provide for price fixing

[46] By another agreement of January 1, 1928 (Def. Ex. 195, R. 2350) all previous contracts between appellant and British Timken were cancelled, and it was also provided that British Timken's agreement with SMG, the French antifriction bearing manufacturer, should remain in effect until June 30, 1928 (see Fdg., par. 53, R. 969).

on replacement bearings, such price fixing was accomplished by a supplementary understanding. On January 13, 1928, one of appellant's officials wrote (Gov. Ex. 39, R. 1387, 1388) "As you know, we have established service prices for bearings identical with your own and operate at the same discounts * * *," and on March 22, 1928, another official of appellant wrote (Gov. Ex. 42, R. 1390) "As you know we have established service prices identical with your own * * *."

Following the execution of these contracts, and pursuant to Article 10 (b) of the Heads of Agreement (Def. Ex. 15, par. 10 (b), R. 1760; R. 288–9), French Timken was organized (Fdg., par. 54, R. 969). Though stock ownership in the French company was divided equally between appellant and British Timken, Dewar, by contract, supervised and controlled its operations.[47] On June 16, 1928, British Timken and French Timken entered into an agreement (Def. Ex. 29, R. 1789), modeled upon British Timken's agreement with appellant (Def. Ex. 23, R. 1754), allocating to French Timken France and its colonies, dependencies and mandates (except those in North and South America) as its exclusive territory for the manufacture and sale of antifriction bearings (Fdg., par. 55, R. 969). This contract contained provisions relating to

[47] Fdg., par. 54, R. 969; Fdg., par. 156, R. 1004; Def. Ex. 186, R. 2298; R. 912–3, 915–6).

patents, trade marks, and know-how and the division of territories almost identical with those in the contract between appellant and British Timken. French Timken then acquired the mark "Timken" from SMG for 12,000 francs (Fdg., par. 54, R. 969; R. 122–23; Def. Exs. 38 and 39, R. 1851, 1859). French Timken began operations by first importing semifinished products from appellant and British Timken and finishing them in France; within five years it was manufacturing all of the component parts of roller bearings (Fdg., par. 56, R. 969–70; 111–2).

Appellant and British Timken also organized a new company in Germany (Fdg., par. 57, R. 970; R. 117–8). Since they were unable to "wrest" the German trade-mark registration of "Timken" from Prausnitzer (Def. Ex. 89, R. 1993), in order to acquire his existing company and the trade-mark registration for the new company, they gave him a 20 or 25 per cent interest in the new company in addition to a salary as manager (Fdg., par. 57, R. 969–970; R. 117–8; Def. Ex. 44, R. 1907). British Timken then entered into an agreement with the new company similar to the one with French Timken, setting aside Germany as the new company's exclusive territory, and providing for the transfer of the trade-mark to British Timken upon termination (Fdg., par. 57, R. 970; Def. Ex. 47, R. 1935). The German company's business was discontinued in 1934 and the

territory was returned to British Timken (Fdg., par. 57, R. 970; R. 117–8).

2. *The 1935 agreements*

A new contract was entered into between appellant and British Timken, on December 29, 1934, effective January 1, 1935 (Gov. Ex. 20, R. 1347), superseding the 1928 contract (Def. Ex. 23, R. 1766) and to extend to January 1, 1951 (Fdg., par. 58; R. 970). With two modifications,[48] the new contract contained substantially the same provisions as the 1928 contract regarding the division of territories, exclusive exchange of patents and know-how and the trade-mark provisions (Fdg., par. 58; R. 970).

The agreement of 1928 between British Timken and French Timken (Def. Ex. 29, R. 1789), was also superseded by a new contract dated July 15, 1935 (Fdg., par. 63, R. 971; Gov. Ex. 25, R. 1373). It was substantially the same as the 1928 agreement, and likewise provided that replacement sales might be made by appellant, French Timken and British Timken in each other's territories at prices satisfactory to the company in whose terri-

[48] Each company was permitted to sell replacement or service bearings in the other's territory but only at prices approved by the company in whose territory the bearings were to be sold and only upon the payment to the other party of 5% of the net sale price (Fdgs., pars. 59, 60, R. 970; Gov. Ex. 20, pars. 7 and 8, R. 1346, 1340–51), and Russia was to be considered open territory in which both parties could sell at prices and terms mutually agreed upon (Fdgs., pars. 61, 62, R. 970–1; Gov. Ex. 20, par. 10 (c), R. 1352).

tory the bearings were being sold (Fdg., par 63, R. 971; Gov. Ex. 25, pars. 7, 8, R. 1377–9). French Timken was also prohibited from making or selling any product other than bearings marked "Timken" (Fdg., pars. 63, 187, R. 971; Gov. Ex. 25, par. 6, R. 1377).

At this time British Timken had obtained trade-mark registrations in three countries within its allocated territory. Appellant meanwhile had obtained registrations in only 13 of 53 countries allocated to it, 24 of the 66 areas allocated to British Timken and none of the 11 areas allocated to French Timken (Gov. Ex. 28, R. 1383; Def. Ex. 87, R. 1972).

During 1935 appellant and Dewar sold a part of their British Timken stock to the British public, though retaining holdings which, when combined, would assure control (Fdg., par 66, R. 971; R. 911, 913–4).

3. *The current agreements*

The current contracts between appellant, British Timken and French Timken, superseding the 1935 agreements (Gov. Exs. 20, 25, R. 1346, 1373), were entered into in November 1938, and by their terms continue until 1965 (Fdg., par. 64, R. 971; Def. Ex. 27, R. 1771; Def. Ex. 28, R. 1780). The principal contract, dated November 28, 1938, designated a "Business Agreement", and sometimes called the "Tripartite Contract", was among appellant, British Timken and French Timken

(Fdgs., pars. 64, 68, R. 971-2; Def. Ex. 27, R. 1771). The "Tripartite Agreement" recited its purposes as follows (Fdg., par. 187, R. 1010; Def. Ex. 27, R. 1772):

> The Companies parties hereto for their mutual advantage and convenience in working have agreed to make arrangements for an interchange between them of information and facilities and in connection therewith *to define their respective territories* and for other purposes in manner hereinafter appearing. [Emphasis supplied.][49]

The other contract dated November 29, 1938, designated "Supplemental Business Agreement", was among appellant, British Timken and Dewar (Fdg., par. 64, R. 971; Def. Ex. 28, R. 1780).

The current agreements contain substantially the same provisions (Fdgs., pars. 68, 69, R. 972) as the 1935 agreements, in regard to division of world production and marketing areas (Def. Ex. 27, par. 6,[50] R. 1776; Def. Ex. 28, par. 12, R.

---

[49] The parties agreed, in part, as follows (Def. Ex. 27, par. 6, R. 1776):

"6. Each of the Companies parties hereto as a covenantor Company hereby covenants with each of the other Companies parties hereto as a covenantee Company that during the life of this Agreement the covenantor Company will not directly or indirectly make or sell or authorise others to make or sell bearings in the territory of the covenantee Company or in the territory of the covenantor Company knowing them to be for shipment into the territory of the covenantee Company. * * *"

[50] The territorial allocation was as follows (Def. Ex. 27, par. 1, R. 1772-3):

1787–8), the fixing of prices on all replacement bearings sold in each other's territories (Def. Ex. 27, par. 6 (b); R. 1777; Def. Ex. 28, par. 12, R. 1787–8); the fixing of prices on bearings sold in Russia, which was joint territory (Def. Ex. 28, par. 12 (b); R. 1788), the exclusive exchange of patents and know-how (Def. Ex. 27, par. 2, R. 1773; Def. Ex. 28, par. 6, R. 1783–4); the prohibition against British Timken and French Timken manufacturing or selling bearings except under the mark "Timken" (Fdg., par. 187, R. 1010; Def. Ex. 28, par. 6, R. 1783–4); and the provision for reversion of the mark "Timken" upon the termination (Def. Ex. 27, par. 3; R. 1774–5; Def. Ex. 28, par. 3, R. 1782).

"The Companies parties hereto agree as follows:

"1. For the purpose of this Agreement—

"(A) The territory of the French Company means the territories of the Republic of France on the Continent of Europe and its Dominions, Colonies, Dependencies, and Mandatory Territories in any part of the world except in or adjacent to North or South America.

"(B) The territory of the British Company means the United Kingdom of Great Britain and Northern Ireland, Eire and all countries other than France on the Continent of Europe and all Dominions, Colonies, Depedencies, and Mandatory Territories of the United Kingdom aforesaid and other European countries except France in any part of the world except in or adjacent to North or South America but does not include any part of the territory of the French Company.

"(C) The territory of the American Company means the rest of the world outside the territories of the French Company and the British Company."

D. THE OPERATION OF THE CONSPIRACY

The division of world production and sales territories, provided for in the series of written agreements among appellant, British Timken and French Timken, was adhered to during the entire period of the conspiracy (Fdgs., pars. 70, 72, 86, 87, R. 972, 973, 983–4).[51] In practice, the parties interpreted the contract prohibitions against "directly or indirectly" selling outside of allocated territory as meaning that they should not only refrain from making such sales themselves, but also should "not permit our customers to ship bearings in this territory" (Fdg., par. 74, R. 974–5; Gov. Ex. 107, R. 1498, 1499).

In preserving the territorial allocations, each party to the conspiracy made it a practice to refuse orders from outside its territory, and to refer the prospective customers to the party in whose territory the bearings were to be used.[52] From July 1, 1945, to February 20, 1947, alone, appellant referred 402 inquiries or orders to

[51] In 1941 the Australian Government attempted to interest appellant in the construction of a bearing-manufacturing plant in that country, but appellant stated that "under no circumstances" would it do so, explaining: "We have a contract while British Timken Limited which precludes our establishment of a manufacturing plant in Australia. Such a plant would have to be built by British Timken Limited" (Fdgs., pars. 86–87, R. 983–4; Gov. Ex. 120, R. 1529).

[52] Fdgs., pars. 71, 208, R. 973, 1017; Gov. Exs. 139, 141, 141A, 143, 143A, 146, 146A, 147, 147A, R. 1579, 1582, 1583, 1625, 1634, 1635, 1636.

British Timken and French Timken (Fdg., par. 71, R. 973; Gov. Exs. 142, 143–147A, R. 1583, 1625–1636; R. 218–9).

Sales of bearings for replacement purposes outside of allocated territory, though permitted by contract, were discouraged by a penalty or "commission" of 10% (later 5%) imposed upon such sales pursuant to the contracts.[53] Even when replacement bearings were sold subject to the penalty outside of allocated territory,[54] the prices were regularly fixed by agreement among the parties.[55] The price-fixing provisions for the joint territory of Russia (*supra*, p. 41) were also carefully observed (Fdg., par. 94, R. 986).

The "protective discount" was another device used to discourage the "replacement" sales permitted by the written contracts (Fdg., par. 88,

[53] Fdgs., pars. 51, 59, 60, 75, R. 969, 970, 975; Def. Ex. 23, pars. 7 (b), 8 (b), R. 1754, 1758, 1759; Gov. Ex. 20, pars. 7, 8, R. 1346, 1349–51; Def. Ex. 27, par. 6 (b), R. 1771, 1777).

[54] The territorial restrictions were in some instances made even more rigid by supplemental understanding than the contracts provided. For example, although "replacement" sales outside of allocated territory were permitted upon payment of the penalty, British Timken in 1932 agreed not to quote on any inquiry for replacement bearings coming from appellant's territory, but to advise customers to obtain the required products from appellant, unless the customer demanded a British product or unless SKF or a named subsidiary was in competition (Fdg., par. 70, R. 972; Gov. Ex. 82, R. 1470).

[55] Fdgs., pars. 75, 88, 90, 91, 97, 124; R. 975, 985–6, 987, 996; Gov. Exs. 102, 103, 112, 113, 114, 128, 129; R. 1481, 1484, 1511, 1514, 1517, 1541, 1542; R. 187–8.

R. 985). By mutual understanding, each party to the conspiracy, in selling replacement parts for export into the other's territory, charged substantially higher prices than it charged for replacement bearings sold for export to countries within its own territory (*ibid.;* see also Fdgs., pars. 75, 77, 93, R. 977–8, 986; Gov. Ex. 108, R. 1500). Pursuant to this understanding, appellant ordinarily sold at a 70% discount for export in its own territory, but quoted at a "protective discount" of only 50% in response to inquiries from British Timken territory.[56]

The only exception to the adherence to the territorial divisions and the price-fixing provisions of the agreements was in connection with joint efforts by appellant, British Timken and French Timken to eliminate outside competition. Where deviation was necessary to combat the competition of other bearing producers and dealers, it occurred.[57] Appellant was willing to try to pre-

[56] Fdg., par. 88, R. 985; Gov. Exs. 108, 124, 128, 131, 132, 133, R. 1500, 1532, 1541, 1545, 1546, 1549; R. 895–6.

[57] Fdgs., pars. 92, 97, 98, 124, R. 986, 987–8, 996. One such exception was the practice whereby the three companies, in order to assure the sale of "Timken" bearings manufactured by one of them, each filled orders for replacement bearings in the other's territory (upon payment of the required penalty), in instances when one of the others was not in a position to fill all such orders from within its territory (Fdg., par. 99, R. 988; R. 104–5, 177). This practice was followed notwithstanding British Timken's agreement as a general practice not to quote on any inquiry for replacement bearings coming from appellant's territory (Fdg., par. 70, R. 972; Gov. Ex. 82, R. 1417). Its purpose was, of course, to preserve

vent the growth of outside competition "by any means we could, including selling bearings at a loss if necessary" (Fdg., par. 102, R. 988–9; R. 935–6). At times appellant, British Timken and French Timken joined to fight outside competition by selling to each other at prices which, although not below cost, were considerably below the usual charge made to other customers.[58] In combatting outside competition, the "protective discount" policy was sometimes relaxed in situations where buyers were becoming "familiar with the fact that we are protecting British Timken" (Fdgs., pars. 92, 93, R. 986; Gov. Ex. 131, R. 1545).

---

the value of the common mark as a competitive weapon to be used jointly against outsiders. "The whole object of that arrangement * * * was in order to combat competition; that was the whole basis of it" (Fdg., par. 100, R. 988; R. 173).

[58] Fdgs., pars. 73, 103, R. 973–4, 989–90; Gov. Exs. 44, 75, 76, R. 1392, 1458, 1459. For example, in 1929 appellant declined an order from the Ford Motor Company for bearings for its Cork, Ireland, plant, located within British Timken territory, and instead made the bearings, sold them to British Timken for resale to Ford at prices "very materially below the prices that we sell Ford"; appellant explained that "our joint efforts must be made to keep competition out of this Ford situation" (Fdg., par. 73, R. 973–4; Gov. Ex. 44, R. 1392). Later in the same year, appellant suggested that, because of the lower Canadian tariff on English products, it could combat SKF competition in Canada more readily if British Timken would sell its bearings to appellant at low prices for resale by appellant in Canada (Fdg., par. 103, R. 989–90; Gov. Ex. 75, R. 1458). Dewar replied: "I should love to help you compete with SKF in Canada" (Fdg., par. 103, R. 989–90; Gov. Ex. 76, R. 1459).

During World War II, in order to prevent business from going to competing outside manufacturers, the parties, though at first attempting to retain the territorial restrictions inviolate,[59] made special arrangements for appellant to supply customers in British Timken markets for the period of the war (Fdgs., pars. 72, 77–9, R. 973, 977–9). Appellant, however, made sales to such customers at prices fixed by British Timken, through British Timken distributors only, and credited British Timken with part of the profit.[60] In Australia (which was British Timken territory, *supra,* p. 40, n. 49), a critical situation developed in 1940 because of the requirement that the British Timken distributor there should route all orders through British Timken rather than send the orders direct to appellant, even though under the arrangement they were to be filled by appellant (Fdg., par. 78, R. 978). This arrangement caused such delays in the filling of orders that the British Purchasing Commission became concerned over the effect upon the Australian war effort, and appellant became concerned over the bearing business going to outside manufacturers

[59] Fdgs., pars. 74–6, 208, R. 974–6, 1017; Gov. Exs. 107, 109, 123, R. 1498, 1502, 1531.

[60] Fdgs., pars. 77–8, R. 977–8. All sales made outside of allocated territory, under permitted exceptions to the territorial allocations, were handled only through the party to whom the territory was allotted (R. 115, 155, 170–1, 205). For example, appellant never made any sales in French Timken territory except through French Timken (R. 155).

(Fdgs., pars. 79–84, R. 979–81). British Timken finally agreed to permit Australian orders for "Timken" bearings to go directly to appellant (Fdg., par. 85, R. 983; Gov. Ex. 115, R. 1524).

Another means of opposing the competition of other producers of bearings was the exclusive exchange of know-how and inventions, patented and unpatented, among appellant and the co-conspirators.[61] In addition, appellant made it a policy not to sell alloy steel tubing, of which it was and is an important producer (R. 45–6, 72, 73–4, 458), to outside competitors in British Timken territory, for use in making bearings. When Dewar raised a question as to such sales, he was assured by appellant that "under no circumstances would we sell our tubing to anyone in the world who might as a result harm British Timken, French Timken or American Timken".[62]

In cooperating to eliminate competition among themselves and from others, appellant, British Timken and French Timken augmented the previously described agreements and understandings by cartel agreements between British Timken and French Timken and certain of their competitors abroad.[63] These agreements provided for the

[61] Fdgs., pars. 95, 97, 124, 137, R. 986–7, 996, 1000; Gov. Exs. 79, 81, 97, R. 1465, 1467, 1475.

[62] Fdgs., pars. 104, 105, R. 990; Gov. Exs. 85, 86, R. 174, 1473.

[63] Fdg., par. 106, R. 991. Although appellant was not actually a party to any of those cartel agreements, it cooperated and consulted with British Timken and French

sharing of customers and sales on a quota basis, and the stabilization of prices, in England, France and Italy.[64] The English cartel, for example, began in 1932 with a 70%–30% division of the Ford English business between British Timken and SKF (Fdg., par. 112, R. 993; Gov. Exs. 61, 63, R. 1411, 1416), and was then expanded to a general arrangement apportioning all business between British Timken and SKF (R. 141). The cartel agreements were successful in stabilizing and also raising bearing prices in England and France.[65]

The restrictive use of the trade-mark "Timken," in accordance with the contractual provisions requiring British Timken and French Timken to manufacture and sell bearings only under that name (*supra,* p. 41), has continued not only through the entire period of the present conspiracy, but also throughout the period leading up to its formation.[66] These restrictions aided the division of territories (Fdgs., pars. 124, 137,

---

Timken in bringing them about, and approved the agreements before they were executed, all as a part of the plan of eliminating outside competition (Fdgs., pars. 110, 111, 125, R. 992, 996; Gov. Exs. 49–65, 65A, 68, 70, R. 1396–1444, 1438, 1445, 1453; R. 543–4).

[64] Fdgs., pars. 106, 111–115, R. 991, 992–4; Gov. Exs. 49, 51, 54, 59, 61, 73, R. 1396, 1397, 1400, 1411, 1455; R. 140, 141, 149–50, 151–2, 154, 207–8.

[65] Fdgs., pars. 111, 112, R. 992–3; Gov. Exs. 60, 63, R. 1409–16.

[66] Fdgs., pars. 96, 124, 137, 187, R. 987, 996, 1000, 1010; Gov. Exs. 3, 49A, 49B (not printed), R. 108, 113–4, 403.

R. 996, 1000), since, as a result of its own covenants not to make or sell bearings in territory allocated to others (Fdg., par. 183, R. 1009–10), in many parts of the world appellant could not use the mark in competition with British Timken or French Timken (Fdg., par. 182, R. 1009).[67] The restrictions also included use of the mark by appellant and its coconspirators as a help in excluding the competition of outsiders.[68] Appellant's primary interest was in preserving the value of the common mark as a means of eliminating competition of outsiders throughout the world (Fdgs., pars. 84, 101, R. 981–3, 988; Gov. Ex. 113, R. 1514).

---

[67] Appellant also took steps to prevent British Timken and French Timken from importing "Timken" bearings into its allotted territory, by recording its United States registration with the Bureau of Customs, so that the Bureau would detain any importation of bearings carrying the recorded mark (*infra*, pp. 76–77).

[68] Fdgs., pars. 84, 124, 137, R. 981–3, 996, 1000; Gov. Exs. 43, 113, R. 1390, 1514. For example, in connection with an attempt in 1928 to prevent Timken-Detroit Axle Company from selling appellant's bearings for replacement purposes in Europe at prices lower than those agreed upon with British Timken, one of appellant's officials wrote Dewar: "Naturally, once the trade-mark of Timken is registered in England, this situation can be entirely cleared up" (Gov. Ex. 43, R. 1390). Again, in 1940, appellant advised British Timken that the way to combat competition from other manufacturers for replacement or service sales in Australia was "for British Timken to instruct all of their foreign service connections to very definitely and positively specify Timken tapered roller bearings" (Fdg., par. 84, R. 981–3; Gov. Ex. 113, R. 1515).

E. APPELLANT'S ACTIVITIES DURING AND SINCE TRIAL OF THIS CASE

On the day the trial began, March 22, 1948, appellant entered into two new agreements. One agreement, with British Timken, provided for maintenance of the control arrangements in British Timken (Gov. (Decree) Ex. 2, R. 2677–80; R. 1144). The other agreement, with Dewar, gave appellant an option to purchase Dewar's shares in British Timken upon the occurrence of any of several named contingencies, including his death, incapacity, or decision to sell (Gov. (Decree) Ex. 3, pars. 1 (a) and (b), R. 2680–1). It also gave Dewar an option to purchase shares in the event that appellant should wish to sell them (Gov. (Decree) Ex. 3, par. 1 (c), R. 2681).

In addition, the agreement made Dewar's approval a condition to any sale by appellant of its shares (Gov. (Decree) Ex. 3, par. 2, R. 2682). This absolute right to approve or disapprove a purchaser of appellant's British Timken stock was preceded by an "honorable understanding" contained in Sec. 1 of the agreement of September 7, 1935 (Gov. (Decree) Ex. 4, R. 2683–86), that Dewar (a) would not "unreasonably" stand in the way of appellant selling its stock, and would object to a purchaser only "on reasonable grounds," and (b) would take all steps within his power to bring about a registration on the

company's books of appellant's shares to the purchaser. The 1948 agreements thus differed from the earlier agreements in that the appellant for the first time gave Dewar a legally binding veto power over the transfer of its stock holdings, a power which could be exercised without assigning reasonable or any other grounds.

Appellee urged that these agreements not only were a continuation of the illegal conspiracy, but also would interfere with an order of divestiture, and the district court cancelled the agreements in Section IV B of the final judgment (*supra*, p. 13; R. 1175).

Appellant states in its brief that Michael Dewar died on December 21, 1950, while this appeal was pending. Dewar held approximately 24 per cent of the outstanding ordinary shares of British Timken (Fdg., par. 66, R. 971), and 50 per cent of the outstanding stock of French Timken (Fdgs., pars. 54, 66, R. 969, 971). Appellant also states that it has acquired from Dewar's estate, presumably in February 1951, all of his ordinary shares of British Timken, pursuant to the option described above. It further states that it has acquired stock of French Timken representing one vote at stockholders' meetings, pursuant to another option exercisable at Dewar's death, and that it proposes to purchase the remainder of French Timken stock pursuant to a right of first refusal (Def. Ex. 228, R. 2539–41). This option of first refusal on the remainder of French Tim-

ken shares was not exercisable upon the contingency of Dewar's death, but rather upon the decision of Dewar's holding company to sell, which decision might have been made either during Dewar's lifetime or after his death (Def. Ex. 228, R. 2541).

On October 12, 1949, immediately following the hearing on relief held in the district court, appellant's representatives participated in a conference in London at which arrangements were made for further use of the trade-mark "Timken" by appellant and the co-conspirators on the basis of the existing allocation of territories. One of the purposes of the arrangements was stated to be "that each of the three companies would have the use of the mark contemplated by the 1938 contract" (Def. (Decree) Ex. D, R. 2758). As part of the arrangements, appellant was to become a "registered user" of the name "Timken" in Great Britain and other countries within British Timken territory, British Timken being the "registered owner." (Def. (Decree) Ex. D, R. 2757–62).

Under the British Trade Marks Act, 1938, which "does not legalize the general licensing of trademarks," a registered user may sell products under the registered trade-mark only if control is maintained by the registered owner over the "permitted use" (Gov. (Decree) Ex. 8, R. 2743, 2745, 2750–1). Thus as a "registered user" appellant could manufacture bearings for sale in Great

Britain under the mark "Timken" only "in accordance either with prescribed specifications or standards of quality laid down or directions given" by British Timken, which must be given the right "to inspect the goods and the methods of manufacturing on the premises of the user or to have samples submitted" (Gov. (Decree) Ex. 8, R. 2750). Appellant's rights as "registered user" were to be further confined within the territorial allocation of the 1938 contracts (Def. (Decree) Ex. D, par. (M), R. 2762).

SUMMARY OF ARGUMENT

I

A. The world-wide allocation of manufacturing and sales territories for anti-friction bearings by appellant, British Timken and French Timken was *per se* unreasonable and unlawful under Sections 1 and 3 of the Sherman Act. *United States* v. *National Lead Company,* 63 F. Supp. 513, affirmed, 332 U. S. 319.

B. The sale of bearings by appellant, British Timken and French Timken in each other's territories, under certain limited exceptions to the territorial allocations, only at prices agreeable to the party into whose territory the sales were made, was *per se* unreasonable and unlawful under the Sherman Act. *United States* v. *Socony-Vacuum Oil Company,* 310 U. S. 150, 218.

C. The combined activities of appellant, British Timken and French Timken to reduce the compe-

tition of outsiders, whereby they protected each other's markets, relaxed the territorial division and permitted sales in each other's territory to the extent necessary to prevent sales by a competitor, and sold bearings to each other at preferential prices in order to combat outside competition, were illegal under the Sherman Act. *Associated Press* v. *United States*, 326 U. S. 1, 15.

D. The exclusive exchange of know-how and inventions, patented and unpatented, among appellant, British Timken and French Timken permitted members of the combination to utilize the extensive research and technical knowledge of the group while preventing its access to outsiders. This exclusive exchange buttressed the other illegal conduct, and was an integral part of the conspiracy to suppress trade. As such, it was unlawful under the Sherman Act. *Associated Press* v. *United States*, 326 U. S. 1, 15; *Fashion Originators Guild* v. *Federal Trade Commission*, 114 F. 2d 80 (C. A. 2), affirmed, 312 U. S. 457, 465.

E. The restriction in the division of territories contracts between appellant, British Timken and French Timken, prohibiting the co-conspirators from manufacturing, selling, or dealing in bearings except under the mark "Timken", provided a ready means of policing the division of territories. Appellant was able not merely to prevent British Timken and French Timken from manufacturing or selling their products in appellant's

territory by trade-mark infringement suits, but also to utilize the customs laws for detaining importations of bearings carrying the infringement mark. The restriction also prevented British Timken and French Timken from building up good will in a different mark and thus creating competition for appellant from products labeled under such different mark. Coupled with the contract provision requiring British Timken and French Timken to cease using the mark "Timken" upon termination of the contract, the restriction also assured continuation of the territorial allocation, since those companies could terminate only by accepting virtual destruction of their present business and good will. Even a patent licensor may not limit its licensee to exploitation of patented products. The prohibition against dealing in other marks foreclosed appellant's American competitors from selling bearings to British Timkin and French Timken, which have supplemented their production by purchasing from appellant. Finally, common exploitation of the mark "Timken" through worldwide advertising and promotion gave each member of the combination an advantage as against outside competitors in securing replacement business for original installations made by all three of them.

F. British Timken and French Timken's participation in foreign cartel arrangements to fix prices, allocate customers and divide sales in

England, France and Italy, restricted exports by United States bearing producers and were part of the over-all conspiracy to eliminate competition between the parties and with outsiders, and therefore violated the Sherman Act. *United States* v. *National Lead Company,* 63 F. Supp. 513, 524, affirmed, 332 U. S. 319; *United States* v. *Nord Deutscher Lloyd,* 223 U. S. 512.

II

A. Even if restraint of trade were not appellant's primary purpose, the restraints which it imposed could not be justified, as they were unreasonable *per se.* Such restraints as division of territories and price fixing, because of their inherent character, have been recognized by this Court as necessarily having an undue and unreasonable effect upon competition. Such restraints can under no circumstances be justified by business convenience or necessity, nor by resort to formal business devices. Hence, the fact that division of territories and price fixing might have been expedient for appellant in its business arrangements with Dewar or British Timken and French Timken, or that the arrangements were called a "joint venture" or a "trade-mark license" could not excuse these basic violations of the Sherman Act.

B. The so-called "joint venture," to which appellant claims the restraints were ancillary, did not in fact ever exist. Appellant and Dewar were

not jointly liable for the obligations of British Timken, as they would have been had that business entity been a "joint venture" instead of a corporation. Nor did either have authority to act for the common enterprise, which as a corporation could act only through its duly authorized officers. Other essentials of a "joint venture," such as common control and sharing of profits and losses, were also lacking. And at no time were the restraints of trade ancillary or incidental to the "joint venture." They were the purpose and essence of it.

Appellant's purchase of stock in British Timken and French Timken was in fact only a transaction whereby it acquired substantial interests in potentially competing corporations. The relationship of stockholder and corporation thereby created, even had the stock interests been controlling, could not support an agreement between the affiliated companies not to compete. *Kiefer-Stewart Company* v. *Seagram & Sons,* 340 U. S. 211, 227; *United States* v. *Yellow Cab Co.,* 332 U. S. 218.

C.1. Because of the inherent nature of a trade-mark, its owner may not license another to use it and, as an incident thereto, impose restraints upon competition between them. A trade-mark is merely a method of identifying the source of origin of goods. It enables a seller to distinguish his products from those of others. A trade-mark does not give exclusive rights to manufacture, use

or sell a product within the territory of the nation recognizing the right. The owner of a trade-mark may not make a negative and merely prohibitive use of it as a monopoly. *United Drug Co.* v. *Rectanus Co.*, 248 U. S. 90, 97–8. It does not even give exclusive rights to use of a word or symbol, but only a right to prohibit its use by others so as to confuse purchasers as to source of origin. *Champion Spark Plug Company* v. *Sanders*, 331 U. S. 125, 130.

Trade-mark rights are entirely unlike patent rights, since they are not the product of invention, do not give the public the benefit of disclosure of an invention, and do not carry out any constitutional intent to promote the progress of science and useful arts. Further, trade-mark rights, unlike patent rights, are unlimited in time, and restraints of trade if allowed in connection therewith could be made perpetual. Because of its inherent nature, a trade-mark may be "licensed" only under exceptional circumstances where deception of the public will not result, and in no event may restraints of trade be imposed as an incident to the granting of permission to others to use the mark.

Even if a trade-mark had the status of a patent, it would not support the restraints imposed by appellant. Appellant did not have trade-mark rights in many countries where the territorial restraints applied, and even a patentee may not impose restraints beyond the scope of its patent

rights. Further, appellant required British Timken and French Timken to manufacture bearings only under the name "Timken." Even a patentee may not require his licensee to manufacture only under the patent.

The public interest requires that trade-mark rights be kept within their proper bounds, and not be used as a device for allocating world markets, fixing prices, and otherwise nullifying the policy of the Sherman Act against restrictions on competition.

2. Appellant did not own and hence could not "license" the trade-mark "Timken" in many areas of the world. It had no trade-mark rights in most of the areas allotted to British Timken and French Timken as a result of its covenant not to compete in those areas. It had first permitted others to obtain rights in the mark in connection with the territorial allocation, rather than attempting to use its mark competitively. It did not guard, as a competing seller would, the symbols used to prevent simulation of its goods by actual or potential competitors. Later, it directed its activities, not to protecting its own rights in the mark "Timken," but rather to acquiring rights in that mark which it had permitted others to obtain, without actually entering into competition in contravention of its agreements not to compete.

Appellant admits that it has no common law

rights arising from the use of the mark "Timken" in areas of the world allotted to British Timken and French Timken. Nor is it the registered owner in most of such areas. Appellant claims rather to be the "equitable owner" in those countries, principally on the basis of the provision, in the division of territories contracts, for the reversion of the mark in those areas from British Timken and French Timken to appellant at the expiration of the agreements.

This provision for reversion of the trade-mark, however, was itself a restriction which violated the Sherman Act because it aided the division of territories and suppression of outside competition. Even assuming this provision to be legal under English law, and to give appellant "equitable ownership" in the mark in England, it does not excuse appellant's violation of the Sherman Act. Appellant cannot justify such illegal restraints of trade as division of territories by resort to another provision of the same contract which itself was an illegal restriction under the Sherman Act.

3. Finally, even if appellant had trade-mark rights capable of licensing, and even if the restraints here imposed could have been reasonably ancillary to such licensing, the district court unequivocally found that in fact the restraints were not ancillary but were appellant's primary purpose.

III

The findings are fully adequate and are supported by the evidence. This Court will not undertake to reweigh the evidence, especially as to imponderables such as intent, where a trial court has conscientiously and thoroughly reviewed the entire evidence and made adequate findings. *United States* v. *Yellow Cab Co.*, 338 U. S. 338.

IV

A. Appellant's 30.25 percent stock interest in British Timken and 50 percent interest in French Timken held at the time of judgment were principally acquired in 1927, as an integral part of the illegal agreements which continued the allocation of world trade territories between appellant and British Timken, and made French Timken a party to this and the various other illegal restraints on competition. The existing restrictive agreements were to expire on January 1, 1929, and these stock interests, acquired as an integral part of the conspiracy, were a factor inducing their extension. The "Heads of Agreement" of May 16, 1927, provided for the purchase of stock in British Timken and French Timken by appellant and Dewar, and in connection therewith for the extension of the existing restraints. Since that time, appellant's interests in these companies consistently have been utilized to further the illegal conspiracy. Though not giving appellant

control, they have enabled it to influence the maintenance of restrictions on competition between itself and the companies in which it invested. It used this influence in favor of continuing the illegal restrictions when the basic agreements were renewed in 1934, 1935, and 1938. In addition, the interests served initially and have continued to serve as an inducement for appellant, British Timken and French Timken not to compete with each other. They will continue to serve as a constant deterrent to competition as long as they are allowed to exist.

Because these interests were illegally acquired as an integral part of the conspiracy, were illegally used in furtherance thereof, and have served and will continue to serve as an inducement for appellant and those companies not to compete, the divestiture ordered by the district court was essential to remove effectively existing and prospective barriers to competition.

B. The injunctive provisions of the district court's judgment to which appellant objects were properly designed to terminate the unlawful restraints of trade and to prevent their recurrence. Though consisting primarily of prohibitions against continuation of activities which formed a part of the illegal conspiracy, to the extent that they went beyond the narrow limits of the proven violation, they were necessary in order to provide effective relief. *United States* v. *U. S. Gypsum Co.*, 340 U. S. 76, 90.

The injunctions against exclusive exchange of know-how, patents, material and machinery are justified, since evidence of such exchange was offered at the trial, and the lower court specifically found that the exchange was most helpful in buttressing the other illegal conduct, and was an integral part of the general scheme to suppress trade. The failure of the complaint to make such a charge was not a fatal defect. Federal Rules of Civil Procedure, Rules 15 (b), 54 (c).

The injunctions against appellant's agreeing with British Timken, French Timken, or their subsidiaries, agents, sales representatives, or distributors to fix prices for the sale or resale of bearings in the United States are properly calculated to sever the unlawful ties between appellant and its co-conspirators. The injunctions are directed to horizontal agreements between these companies to fix prices. They do not affect any right appellant may have to maintain resale prices under the Miller-Tydings amendment, unless the exceptional circumstance should arise that appellant, British Timken, and French Timken had the same United States distributor.

The injunctions against appellant's refusing to sell bearings for the reason that they are for resale or distribution in the territories allotted by the conspiracy to British Timken and French Timken are justified by appellant's long-standing policy and practice of not selling bearings in

those countries pursuant to the illegal agreements. A mere injunction prohibiting the appellant from conspiring to divide territories is not sufficient to restore competition in the industry. The injunction against refusing service and assistance to customers located in British Timken and French Timken territory is necessary because the evidence showed that such service and assistance is essential to the sale of bearings. The authority of the district court to deprive appellant of its right to choose its customers was settled by this Court's decision in *International Salt Company* v. *United States,* 332 U. S. 392.

Injunctions against appellant's entering into agreements with British Timken and French Timken for the transfer of trade-mark rights upon restrictive conditions, such as allocation of territories and exclusive exchange of know-how and materials, are justified by the district court's finding that the restrictive use of the trade-mark "Timken" was an integral part of the conspiracy. Appellant's continuing intention to use the mark in conformity with the illegal territorial allocation is demonstrated by its action immediately following the hearing on relief in the district court, when it agreed with British Timken to transfer and allocate rights in the mark pursuant to the territorial division in the 1938 contracts.

ARGUMENT

INTRODUCTION

The underlying legal issues in this case have a simplicity which may be somewhat obscured by the number and intricacy of the agreements which have been entered into in furtherance of the conspiracy, and the prolixity of the points urged by appellant. The two basic questions here are whether the Sherman Act has been violated and if so, whether the relief ordered by the district court is appropriate.

With respect to the question of violation of the Act, it has been abundantly established that appellant for many years has engaged in concerted activities with British Timken and French Timken to allocate world markets, fix prices and restrict the competition of others in the sale of anti-friction bearings. The principal issues raised by appellant are whether the restraints imposed by the parties to the conspiracy can be said to be "ancillary" to some lawful activity, and if so, whether they are reasonable. Appellant contends that the restraints were ancillary to a "joint venture" between appellant and Dewar, or ancillary to the licensing of the trade-mark "Timken". We shall show that the restraints there imposed were unreasonable *per se,* and therefore could not be justified even if ancillary; and that in any event they were not in fact ancillary in purpose, either to a joint venture or to

trade-mark licensing. On the contrary, the creation of stock relationships among the parties and the agreements with respect to the use of the name "Timken" were steps in furtherance of the conspiracy to restrain trade.

The district court has ordered divestiture of the interests of appellant in British Timken and French Timken, and injunctive relief designed to make certain that the potential competitors will be freed of any ties with each other which might prohibit competition among them. We shall show that the decree fashioned by the district court is entirely appropriate to dispel, as far as possible, the effects of this long-standing conspiracy, and to prevent its recurrence in any other form.

I

THE DISTRICT COURT'S FINDINGS ESTABLISH THAT THE AGREEMENTS AND OTHER CONCERTED ACTIVITIES OF APPELLANT, BRITISH TIMKEN AND FRENCH TIMKEN HAVE UNLAWFULLY RESTRAINED FOREIGN COMMERCE

The offense found by the district court involves a world-wide combination and conspiracy between appellant and its co-conspirators to eliminate competition among themselves and with others in the manufacture and sale of antifriction bearings. The suppression of competition by the members of this international cartel is, and has been, accomplished by numerous means and methods.

Some of these means, lawful in themselves, are unlawful as part of the illegal scheme and purpose to eliminate competition. Other means are unreasonable restraints of trade in themselves or are illegal *per se,* such as allocation of territories, price fixing, combination to eliminate the competition of outsiders, and cartel arrangements with foreign producers abroad. Similarly, the basic written contracts between appellant and its coconspirators are in themselves illegal *per se.*

A. *Division of world production and sales territories*

The division or allocation of exclusive territories is the crux of this case. Territorial allocations have existed ever since the beginning of relations between the parties in 1909. They presently exist in the form of current contracts between appellant, British Timken and French Timken which by their terms continue in effect until 1965 (*supra,* p. 39).

Each of the parties is prohibited from manufacturing or selling bearings, or authorizing others to make or sell bearings, in the territories allocated to the other parties. Thus appellant may not export, or permit other American firms to export, its bearings from the United States for sale in Europe and the French and British Empires. Neither may appellant manufacture bearings in Europe or in the French or British Empires and

import such bearings into the United States. (*Supra*, pp. 39–40.)

Conversely, British Timken and French Timken may not import bearings into the United States. This inflexible territorial allocation has been strictly adhered to throughout the period of the conspiracy, and the district court so found (Fdg., par. 70, R. 972).

It is now settled, and the district court correctly held (Concl., par. 128, R. 997), that the division of territories among competitors in different countries of the world and the elimination of competition between them violates the Sherman Act. *United States* v. *National Lead Co.*, 63 F. Supp. 513, affirmed, 332 U. S. 319; *United States* v. *American Tobacco Co.*, 221 U. S. 106, 182. As the district court pointed out, contracts providing that in a particular area products may be sold by only one of the members of a combination "necessarily were intended to and had the effect of eliminating competition" (Concl., par. 129, R. 997).

The inherent danger of such agreements has been recognized by this Court in consistently holding that combinations or conspiracies for allocating or dividing markets are illegal *per se*. *United States* v. *American Tobacco Co., supra; United States* v. *National Lead Co., supra; United States* v. *Addyston Pipe & Steel Co.*, 175 U. S. 211, 241; *United States* v. *Aluminum Co. of America*, 148

F. 2d 416, 439–45, 447–8 (C. A. 2); *Apex Hosiery Co.* v. *Leader,* 310 U. S. 469, 497.

B. *Price fixing*

To the limited extent that exceptions have been made to the territorial division, appellant and the co-conspirators have sold in each other's territory only at prices agreeable to the party into whose territory the sales were made. Current contracts provide for agreed prices on replacement sales in each other's territory and a mutual understanding has existed as to the actual prices (the "protective discount") to be charged. Appellant also has fixed the resale price of others buying its bearings in the United States for resale in the territory allocated to the co-conspirators. Prices also have been agreed upon between appellant and British Timken on sales in Russia, which is joint territory. (*Supra,* p. 41.)

The district court was correct in holding (Concl., par. 132, R. 998) that the practice of selling only at prices agreeable to the party into whose territory bearings are sold, the provisions of the contracts for agreed prices on replacement bearings, and the other price fixing arrangements between the parties, constitute violations of the Sherman Act. In an unbroken line of decisions, of which *Kiefer-Stewart Co.* v. *Seagram & Sons,* 340 U. S. 211, is the latest, this Court has held to be illegal *per se* all agreements and combinations

to fix or control prices or restrain price competition.[69]

C. *Elimination of outside competition*

The elimination of competition between appellant, British Timken and French Timken through the division of world markets, price fixing and other means, was but one aspect of the conspiracy. As in most cartels there was also the intent and purpose to eliminate the competition of other anti-friction bearing producers (Fdg., par. 98, R. 987–8). That purpose has been achieved by complete and full cooperation between appellant and its co-conspirators. In some instances they have acted collectively to drive outsiders from the market; in other cases they have joined with outsiders to eliminate competition through arrangements to fix prices and allocate sales and customers. (*Supra*, pp. 47–48.)

The parties in acting collectively against outsiders have made exceptions to the territorial division in order to combat the competition of such outsiders and to protect each other's markets. They have tolerated sales in each other's

[69] *United States* v. *Trans-Missouri Freight Association*, 166 U. S. 290; *United States* v. *Joint Traffic Association*, 171 U. S. 505; *United States* v. *Trenton Potteries Co.*, 273 U. S. 392; *Atlantic Cleaners & Dyers, Inc.* v. *United States*, 286 U. S. 427; *United States* v. *Socony-Vacuum Oil Company*, 310 U. S. 150; *United States* v. *Masonite Corp.*, 316 U. S. 265, 276; *United States* v. *Line Material Co.*, 333 U. S. 287; *United States* v. *Paramount Pictures, Inc.*, 334 U. S. 131; *United States* v. *National Ass'n of Real Estate Boards*, 339 U. S. 485.

territory to the extent necessary to prevent that market from going to a competitor. Competitors likewise have been excluded from markets by reason of appellant's intermittent relaxation of its "protective discount" policy. (*Supra*, p. 45.)

Activities against outsiders also have taken the form of sales by the parties to each other at levels below the usual charge made to other customers.[70] In that connection the district court found that the intent and purpose of the parties was to "supplement the plan of strict compliance with the allocated areas and to protect themselves from competition by outsiders" (Fdg., par. 103, R. 989). This practice of sales to each other on a "most favorable basis" has made it virtually impossible for independent producers to compete. (*Supra*, p. 45.)

Furthermore, appellant has exercised the policy of refusing to sell its special bearing steel to competitors who might harm British Timken, the district court finding that the parties made

[70] This is a favored practice of international cartels. See Stocking & Watkins, *Cartels or Competition?* (1948), p. 142:

"Furthermore, price discrimination often arises out of business dealings among cartel members themselves. The offer of special low prices to affiliated concerns is an effective way of promoting trade solidarity. Discrimination is also used to prevent competition from allied or closely related industries.

"All of these cartel practices are, of course, far from consistent with the principles of a 'fair field and no favors' and of 'equal opportunity for all,' which are the bedrock of a private enterprise economic system."

certain that steel was not made available for use by their competitors. The exercise of such policy has had the direct result of placing outside competitors at a competitive disadvantage, thus reducing their ability to survive. (*Supra*, p. 47.)

All of the collective activities herein described—protection of each other's markets; sales of bearings at preferential prices; preferential treatment respecting bearing steel; and use of combined technological resources—were carried out, the district court found, with the intent and purpose of excluding "individual" or outside competitors from the anti-friction bearing market. The court properly concluded as a matter of law that such association of appellant, British Timken and French Timken for the purpose of protecting each other's markets and the exclusion of outsiders was illegal under the Sherman Act (Concl., par. 134, R. 999). This Court, in a uniform series of decisions, has struck down any such collusive action by groups of competitors.

In *Associated Press* v. *United States*, 326 U. S. 1, 15, the vice of such an arrangement was described as follows:

> The Sherman Act was specifically intended to prohibit independent businesses from becoming "associates" in a common plan which is bound to reduce their competitor's opportunity to buy or sell the things in which the groups compete. Victory of a member of such a combination over its business rivals achieved by such

collective means cannot consistently with with the Sherman Act or with practical, everyday knowledge be attributed to *individual* "enterprise and sagacity"; such hampering of business rivals can only be attributed to that which really makes it possible—the collective power of an unlawful combination."[11]

D. *Exclusive exchange of know-how*

Another significant means of eliminating the competition of outsiders has been the exclusive exchange of know-how and inventions, patented and unpatented, among appellant and its co-conspirators. Current agreements provide for a complete and continuous interchange (until 1965) of all technological information relating to the manufacture of anti-friction bearings. (*Supra*, p. 41.)

The district court found that the exclusive exchange of know-how was carried on for the purpose of eliminating the competition of third parties (Fdg., par. 124, R. 996). It therefore held that, while it did not appear that such arrangement alone served as a direct instrument to eliminate competition, it was used by the parties as a "most helpful" aid in buttressing other illegal conduct, and was illegal as an integral part

[11] See also *Montague & Co.* v. *Lowry*, 193 U. S. 38, 45; *Standard Sanitary Mfg. Co.* v. *United States*, 226 U. S. 20, 47–48; *United States* v. *Trenton Potteries Co.*, 273 U. S. 392; *Hartford-Empire Co.* v. *United States*, 323 U. S. 386, 406–7.

of the general conspiracy to suppress competition. (Concl., par. 137, R. 1000.)

The exclusive exchange of know-how has effectively eliminated the competition of third parties since it has permitted the members of this combination to utilize the extensive research and technical knowledge of the group while preventing access to outsiders.[72] The result has been that newcomers and outsiders, while denied access to virtually all the existing technology in the industry, are forced to compete for business against the combined technology and power of the three industrial organizations which control and dominate the world markets for tapered roller bearings. It is, of course, no aid to such potential competitors that tapered roller bearings are competitive with other kinds of bearings (Appellant's Br. 44 ff.).

The illegality inherent in such activities springs from the collective power of a combination as opposed to the individual. The elimination of competition as the result of combination is precisely what the Sherman Act condemns. *Associated Press* v. *United States*, 326 U. S. 1, 15;

---

[72] It has been held that pooling of patents by competitors for the purpose and effect of eliminating competition is illegal since it enables *each* member of the combination to use the combined patent power of *all* members against their respective competitors, *Standard Oil Co.* v. *United States*, 283 U. S. 163, 174; *Blount Mfg. Co.* v. *Yale & Towne Mfg. Co.*, 166 Fed. 555, 562 (D. Mass.); *United States* v. *Vehicular Parking*, 54 F. Supp. 828, 830 (D. Del.).

Fashion Originators Guild v. *Federal Trade Commission*, 114 F. 2d 80, 85 (C. A. 2), affirmed, 312 U. S. 457, 465.

E. *Restrictive use of the trade-mark "Timken"*

Just as with know-how, the district court concluded that the restrictive use of the mark "Timken" has been "most helpful" to the conspirators in serving to buttress other illegal acts and was unlawful as an integral part of the general conspiracy to suppress competition (Concl., par. 137, R. 1000).[73]

The mark "Timken" is the only mark that appellant, British Timken and French Timken use on their tapered roller bearings.[74] Indeed, the current contracts prohibit the co-conspirators from manufacturing, selling or dealing in bearings except under that mark. This contract provision is the very heart of appellant's restrictive use of the mark. Most importantly, it provides an easy, almost self-enforcing means of policing the division of territories. To the extent that appellant has exclusive rights in the mark "Timken" in its territory, it can, by the use of infringement suits, or the threat of such suits, successfully prevent British Timken or French Timken from

[73] The scheme of "licensing" the mark by appellant and its co-conspirators is itself unlawful and *a fortiori* no defense to the restrictive practices. See *infra*, p. 94 ff.

[74] The origin, use and ownership of the mark "Timken" are described *supra*, pp. 23–25.

manufacturing or selling their products in that area.[75] Conversely, British Timken and French Timken, by the use of similar devices abroad where they have the exclusive rights to the mark, successfully may prevent appellant from manufacturing or selling its products in those areas. The device can also be employed to prevent importers and exporters, distributors, automotive dealers and other firms, from buying bearings from either appellant, British Timken or French Timken and reselling them in the other's territory.

The operation of the trade-mark device to enforce and police a division of territories is aptly described in Handler, *Trade-Marks and the Anti-Trust Laws,* 38 T. M. Rep. 387, 388–9:

> In implementing a division of world markets, some cartels have parcelled among their members rights in a trade-mark on a geographical basis. All the parties sell the same product under the same mark, one operating in the United States, another perhaps in South America, and others in various parts of Europe. The appor-

[75] This use of a mark as a cartel enforcement device has arisen in other antitrust litigation. *United States* v. *Sperry Corporation*, Civil Action No. 19–175, S. D. N. Y., complaint filed September 1, 1942, consent decree entered September 1, 1942; *United States* v. *The Bayer Co., Inc.*, Civil Action No. 15–364, S. D. N. Y., complaint filed September 5, 1941, consent decree entered September 5, 1941.

For a discussion of the cases and the use of marks to restrain international trade, see Diggins, *Trade-Marks and Restraints of Trade*, 26 Jour. Pat. Off. Society 461 (July, 1944).

> tionment of territorial rights in a mark can be an effective device to prevent shipment of the trade-marked product from one market to another. Indeed, under such an arrangement the courts can be used to enforce and police the cartel restriction.

The present case might well be cited as a classic example of such use of a trade-mark to restrain competition.

By virtue of the provision requiring the manufacture of bearings only under the mark "Timken", appellant also has been able to utilize the customs laws of the United States as an instrument for policing the division of territories. In 1921 appellant obtained a registration of the mark (Gov. Phys. Ex. 150; R. 571) and recorded it with the Bureau of Customs in order to detain any importation of bearings carrying the recorded mark (Gov. Phys. Exs. 150; Gov. Ex. 151 (a), 151 (b), R. 1639, 1642).[76] This use of legal means

---

[76] Significantly, although appellant had other marks which it might have been desirous of protecting against use on importations, it recorded with Customs only the mark which its co-conspirators were forced to use on their bearings (Def. Ex. 87, R. 1972; Gov. Ex. 151-A, R. 1642; R. 949). British Timken was likewise in a position to prevent importations of appellant's bearings into Great Britain under the mark "Timken" (R. 618-619).

Upon the passage of the Trade Mark Act of 1946, appellant was no longer able to use the mark to stop importations (Section 28, 60 Stat. 436, 15 U. S. C. 1096). Appellant, however, thereafter took steps which will once again place it in a position to secure the aid of customs officers. On July 11, 1950, appellant obtained registration of the mark "Timken"

to accomplish an unlawful objective contravenes the Sherman Act. *American Tobacco Co.* v. *United States,* 328 U. S. 781, 809.

The provision against the British and French companies' dealing in bearings under any other mark also prevents these companies from building up good will in any different mark and thus creating competition for appellant from products labeled under such different mark. These provisions are comparable to restrictions in patent licenses illegally limiting the licensees to exploitation solely of the patented products and devices (*National Lockwasher Co.* v. *George K. Garrett Co.,* 137 F. 2d 255, 256 (C. A. 3); *McCullough* v. *Kammerer Corp.,* 166 F. 2d 759, 761 (C. A. 9), certiorari denied, 335 U. S. 813), and are particularly vicious when coupled with provisions of the current contracts which require British Timken and French Timken to cease using the name and mark "Timken" upon the termination of the contract and to reassign to appellant all rights in such mark and name. The effect of coupling such provisions is to put the British and French companies in an almost impossible competitive situation upon the termination of the agreements. As the district court held (Concl., par. 96, R. 987), the retention of good will and

---

upon the Principal Register (Reg. No. 527512) which, when recorded with the Treasury Department, will again prevent the importation of bearings carrying that mark (Section 40, 60 Stat. 440, 15 U. S. C. 1124).

competitive dominance built up by the co-conspirators through the use of the name "Timken" depended upon the continued right to use that name; the severance of contractual relations would mean the termination of their ability to profit by years of experience in manufacture and successful business dealings with their customers. Viewed realistically therefore, these provisions provide a guarantee against termination of the unlawful agreements by the co-conspirators. So far as they are concerned, the choice is between continuing the conspiracy and submitting to virtual destruction of their names and good will (Fdg. par. 96, R. 987).

The prohibition against dealing in other marks also has reacted to restrict other American producers in exports to foreign countries. In many sizes and types British Timkin and French Timken, in order to meet requirements of their customers, have had to supplement their production by purchasing from appellant in the United States (R. 112–115). Throughout the period of the conspiracy this has amounted to approximately $3,000,000 (Gov. Exs. 153, 154, R. 1648, 1649).

Inasmuch as British Timken and French Timken can deal only in bearings marked "Timken" they have been unable to purchase bearings marked with any other names. The necessary result has been that appellant's American competitors have been completely foreclosed from this

substantial market in England and France. Since the parties by direct agreement could not have erected a barrier excluding competitors from these markets (*International Salt Co.* v. *United States*, 332 U. S. 392, 396–7; *United States* v. *Yellow Cab Co.*, 332 U. S. 218, 227; *United States* v. *General Motors Corp.*, 121 F. 2d 376, 404 (C. A. 7), certiorari denied, 314 U. S. 618), they cannot legally accomplish that purpose indirectly through the use of trade-marks.

American producers who are not members of this combination constantly have been put at a competitive disadvantage by virtue of the common effort of appellant and its co-conspirators to exploit the mark "Timken" for their exclusive benefit (R. 105, 407–8). Such producers must compete individually against the combined world-wide advertising and promotion of "Timken" products by the three largest manufacturers of such bearings. The tendency of a customer to replace a defective or worn-out bearing with the make of bearing he finds originally installed in his machinery is a well accepted fact in this industry (R. 394–5, 511–2). Thus, each member of the combination has an advantage as against outside competitors in securing replacement business for original installations made by all three of them. This collective activity for the purpose of excluding the outside or individual competitor is clearly prohibited by the Sherman Act. *Associated Press* v. *United States*, 326 U. S. 1, 15.

F. *Participation in foreign cartels*

The foreign cartel arrangements between British Timken and French Timken and their competitors in England, France, and Italy to fix prices, allocate customers, and divide sales were found by the district court to have been consummated with the knowledge, approval, and cooperation of appellant (Fdg., par. 125, R. 996). The arrangements were part of the over-all conspiracy to eliminate competition between the parties and with outsiders and appellant's participation "completed the circle in which the combination operated to forestall competition" throughout the world (Fdg., par. 135, R. 999–1000).

These foreign cartel arrangements, although made abroad, restricted exports by United States bearing producers (Fdg., par. 117, R. 994) and had a direct effect upon the foreign trade of the United States (Fdg., par. 136, R. 1000). For example, the cartel agreement between French Timken and French SKF (Gov. Ex. 65, R. 1436; Gov. Ex. 65A, R. 1438), which was sent to appellant for approval (Gov. Ex. 65A, R. 1438), was carefully considered by all of appellant's top officials (R. 543–544), and was finally approved by appellant (Gov. Ex. 70, R. 1453), fixed quotas for French Timken and SKF for sales in France and the French Empire. The quota of French Timken included "Timken" bearings manufactured elsewhere and imported into France, including those made by appellant and sold to French Timken.

under special exception to the territorial allocation (R. 154–155).

This cartel arrangement also provided for agreement on retail prices and prices for all large orders and customers. Thus the export trade of appellant was directly affected since the quantities of bearings that it could ship into France were limited to the quota provisions and, in addition, the prices had to be agreeable not only to French Timken but also to French SKF. (*Supra*, pp. 47–48.)

The Sherman Act prohibits conspiracies and combinations and the impositions of restraints on foreign trade as well as domestic commerce. As the district court properly held (Concl., par. 135, R. 999–1000), restraints on exports and imports are banned. *United States* v. *Nord Deutscher Lloyd*, 223 U. S. 512; *United States* v. *Sisal Sales Corporation*, 274 U. S. 268, 274; *United States* v. *American Tobacco Co.*, 221 U. S. 106, 133–141, 171–172, 185–187; *Thomsen* v. *Cayser*, 243 U. S. 66, 88; *United States* v. *Aluminum Co. of America*, 148 F. 2d 416, 443, 444 (C. A. 2); *United States* v. *National Lead Co.*, 63 F. Supp. 513, 524, affirmed, 332 U. S. 319; *United States* v. *General Dyestuff Corp.*, 57 F. Supp. 642, 647 (S. D. N. Y.).

Combinations and conspiracies directly affecting the foreign commerce of the United States are, as the district court held (Concl., par. 136, R. 1000), unlawful even though formed outside the jurisdiction of the United States. *United*

States v. *Nord Deutscher Lloyd*, 223 U. S. 512; *United States* v. *Hamburg-Amerikanische P. F. A. G.*, 200 Fed. 806, 807 (C. C. S. D. N. Y.); *Thomsen* v. *Cayser*, 243 U. S. 66, 88.

The foreign cartel arrangements were held by the district court to be illegal (Concls., pars. 126, 135, R. 996, 999–1000) not only as direct restraints upon United States foreign commerce (Fdg., par. 117, R. 994), but also as part of the over-all conspiracy to eliminate competition (Concl., par. 126, R. 996). The arrangements were links in the conspiratorial chain designed to suppress competition on a world-wide basis (Concl., par. 135, R. 999–1000) and would have violated the Sherman Act even if they had related solely to the commerce of foreign nations. See *United States* v. *National Lead Co.*, 63 F. Supp. 513, 524, affirmed, 332 U. S. 319.

II

THE RESTRAINTS CANNOT BE JUSTIFIED AS ANCILLARY TO SOME LAWFUL "MAIN PURPOSE"

A. *The restraints here imposed were unreasonable per se, and therefore cannot be justified as "ancillary"*

In order to excuse, under the "ancillary restraints" doctrine, the restraints which it imposed upon competition, appellant must show not only that the imposition of the restraints was not its primary purpose, but also that the re-

straints were reasonable in scope."[77] The very case upon which appellant relies so heavily as stating the doctrine makes this clear. *United States* v. *Addyston Pipe & Steel Co.*, 85 Fed. 271 (C. A. 6), modified and affirmed, 175 U. S. 211.

The "ancillary restraints" doctrine is necessarily based upon the rule of reason. Restraints which would otherwise be unlawful are said to be permissible, if reasonable, and if ancillary or incidental to some legitimate main transaction. But the doctrine obviously cannot apply to restraints which are unreasonable *per se*, since such restraints are by definition excepted from the rules of reason.[78] The district court correctly held that the restraints here involved unmistakably fall in the unreasonable *per se* category (Concl., par. 143, R. 1001).

It is, of course, settled law that price fixing is illegal *per se*.[79] It is likewise settled that the

[77] The burden of proof in establishing the defenses and showing that the restraints imposed were reasonable rested upon appellant. *United States* v. *Paramount Pictures*, 334 U. S. 131, 148; *United States* v. *Crescent Amusement Company*, 323 U. S. 173, 188.

[78] Whatever may be the authority of *United States* v. *General Electric Co.*, 272 U. S. 476, cited by appellant, after this Court's decision in *United States* v. *Line Material Company*, 333 U. S. 287, the former case obviously was decided on the basis of statutory patent rights, and was not an application of the ancillary restraints doctrine. Consequently, it is in no way inconsistent with the conclusion that restraints which are unreasonable *per se* cannot be justified as ancillary to a main purpose.

[79] See *United States* v. *Line Material Co.*, 333 U. S. 287, 307, and other cases collected, *supra*, p. 69, n. 69.

allocation of territories cannot be justified as reasonable. *Apex Hosiery Co.* v. *Leader*, 310 U. S. 469; *United States* v. *Aluminum Company of America*, 148 F. 2d 416 (C. A. 2); *United States* v. *Addyston Pipe & Steel Co.*, 85 Fed. 271 (C. A. 6), modified and affirmed, 175 U. S. 211. In the *Addyston* case, Judge Taft, in rejecting the argument that division of trade territories and price-fixing agreements were reasonable, said that "the association of the defendants, however great the competition they had to encounter, and however great the necessity for curbing themselves by joint agreement from committing financial suicide by ill-advised competition, was void at common law, because in restraint of trade, and tending to a monopoly" (85 Fed. at 291). Years later, Judge Learned Hand speaking of the same restraints in the *Aluminum* case, said (148 F. 2d at 427): "It is settled, at least as to § 1, that there are some contracts restricting competition which are unlawful, no matter how beneficent they may be; no industrial exigency will justify them; they are absolutely forbidden."

What the law condemns as unreasonable *per se* cannot be justified on the basis of any claim of business necessity, suppression of competitive evils, or some incidental benefit to the public. As this Court said of price fixing in *United States* v. *Socony-Vacuum Oil Co.*, 310 U. S. 150, 226, "Whatever economic justification particular price-fixing agreements may be thought to have,

the law does not permit an inquiry into their reasonableness. They are all banned because of their actual or potential threat to the central nervous system of the economy." Hence, the fact that the division of territories or price fixing might have been convenient or expedient for appellant in its business arrangements with Dewar or British Timken and French Timken (such as the alleged "joint venture" or "licensing" of trade-mark rights) could in no way excuse appellant from these fundamental violations of the Sherman Act even if in fact the restraints could in any real sense be viewed as ancillary. In Sections B and C, *infra,* it is pointed out that not only was there no joint venture or lawful licensing of trade-marks, but the restraints on competition themselves have been and are the primary purpose of the agreements among appellant and its co-conspirators.

B. *The restraints were in no sense "ancillary" to a joint venture*

The exact nature of appellant's contention that the restrictive agreements were ancillary to a "joint venture" undertaken by appellant and Dewar is not entirely clear from its statements at the trial or the brief filed with this Court. It appears, however, to be of this nature: appellant and Dewar, pursuant to negotiations undertaken in 1927 (Heads of Agreement, Def. Ex. 15, R. 1730) entered into a "joint venture" to purchase

British Timken, to create a French corporation (French Timken), and to acquire a German corporation (German Timken), for the purpose of manufacturing Timken-type tapered roller bearings. Inasmuch as Dewar was fearful of competition from appellant and the possible adverse effect upon British Timken of such competition, appellant agreed not to compete with British Timken in the sale of the common product. Appellant, on the other hand, having invested its money jointly with Dewar in British Timken, was fearful in turn of the adverse effect upon it of competition from British Timken, and accordingly extracted from British Timken, as well as from French Timken and German Timken, an undertaking by them not to compete in the territory that appellant had staked out for itself.

The defense that the restraints upon competition were ancillary to a main transaction known as a "joint venture" was rejected by the district court (Concl., par. 150, R. 1003). That court found the evidence would not support a finding that the "joint venture" between appellant and Dewar was the main transaction; on the contrary, it explicitly found that the "arrangements were made to carry on effectively the combination, to eliminate competition between the parties and to frustrate any competition of outsiders" (Fdg., par. 154, R. 1004). It found from the evidence that the "only conclusion which may properly be drawn is, that the restraints upon competition

were not ancillary to the 'joint venture'" (*ibid.*).[80]

In finding that the combination to eliminate competition was the primary or main transaction, the district court observed that the restrictive agreements which were part of the combination were in existence many years prior to the alleged "joint venture." The 1928 agreements providing for the joint purchase of British Timken and the establishment of French Timken followed by almost twenty years the original restrictive agreements between appellant and predecessors of British Timken and French Timken (Fdg., par. 152, R. 1003). Thus the "joint venture" arrangements in 1928 did not mark the beginning of *new* business contacts (Fdg., par. 153, R. 1003–4). On the contrary, they merely extended long existing arrangements between potential competitors who

---

[80] A defense based upon the doctrine of ancillary restraints, similar to the "joint venture" defense in this case, was offered in the *United States* v. *National Lead Company*, 63 F. Supp. 513, affirmed, 332 U. S. 319. There the court in rejecting the defense pointed out that in the original 1920 agreements, and in each of the subsequent agreements which resulted in the creation of the companies ordered to be divested, "the same purpose, to restrain trade in order to avoid competition, was paramount" (63 F. Supp. at 524).

The defense that territorial restraints may be valid if reasonable and ancillary to an exchange of know-how was rejected on the same grounds in *United States* v. *General Electric Co.*, 82 F. Supp. 753, 845–7, 889 (D. N. J.). Appellant relied unsuccessfully on such a defense in the court below (Concl., par. 178, R. 1009), but has abandoned it in this Court.

continued such arrangements in order to continue to escape each other's competition (Fdg., par. 155; R. 1004).

Not only were the restrictive agreements not ancillary to any "joint venture" between appellant and Dewar,[81] but the Dewar-appellant joint purchase of British Timken was not a "joint venture" since, as a matter of fact, no such relationship ever existed. The non-existence of the "joint venture" relationship is clearly demonstrated by the record; and, as the district court pointedly observed, "The repeated assertion that it [appellant] was in a joint venture or was a member of a partnership does not make it so." (Fdg., par. 160, R. 1005.)

The Dewar-appellant relationship falls far short of meeting the familiar legal criteria of a "joint venture." The Court of Appeals for the Sixth Circuit has laid down tests for determining what constitutes a "joint venture" in *Detachable Bit Co.* v. *Timken Roller Bearing Co.*, 133 F. 2d 632, 635.[82] That court in holding that there had

---

[81] At the trial appellant also argued that the restraints were ancillary to its purchase of British Timken and French Timken stock (Op., par. 139, R. 1000–1). Apparently realizing the inconsistency of this argument with the claim that the restraints were ancillary to a "joint venture," appellant has not relied upon it in this Court.

[82] Timken had been sued for breach of an alleged fiduciary duty not to compete with Detachable, the latter claiming that the arrangement had constituted a joint venture. Timken denied that there had been a joint venture relationship, con-

not been a "joint venture" between Timken and Detachable said (p. 635):

> A variety of elements have, from time to time, been considered as pointing to a joint venture, although perhaps not any one of them is conclusive. Among them are to be found agreements for sharing profits or losses as principals * * *; the authority of each party to act for both in respect to the means or agencies employed to execute a common purpose * * *; the incurring of joint obligations for the acquisition of joint rights * * *. Perhaps the most important criterion of a joint venture is the joint control or management of the property used in accomplishing its aims.

The element of control is lacking in the instant case. The evidence is uncontroverted that both British Timken and French Timken were managed and operated by Dewar and that, except for powers posessed by virtue of its stock ownership and the agreements, appellant had no control over the business conduct of either foreign company (Fdg., par. 156, R. 1004). The foreign

---

tending that under the settled law a joint venture must have the following essential elements:

"(a) It must be contractual in origin, and the participants must in effect assume the relation of partners; (b) there must be an arrangement to share profits and losses; (c) there must be a joint control over the property used in accomplishing its purpose; (d) it cannot be a corporation nor can the business of a corporation be conducted as a joint venture" (Brief of Defendant, p. 7, N. D. Ohio, Eastern Div., Equity No. 5761).

companies had carefully "retained their corporate independence and jealously guarded their interests in dealings" with appellant (Fdg., par. 157, R. 1004–5). But even if the stock investment of appellant in the British and French companies had indicated a pre-existing "joint venture" in the parties' own judgment, it is clear that by 1934 when British Timken became a "public" company, neither party believed such relationship existed (Fdgs., pars. 157, 158, 159, R. 1004–5). Similarly, there was no agreement between Dewar and appellant to share profits or losses as joint principals or venturers. Nor did the so-called "joint venture" here comply in other respects with the requirements of a genuine joint enterprise.

Appellant, apparently recognizing the utter failure of the record to support a claim that there was a true joint venture, asserts that the Dewar-appellant arrangement constitutes a "joint venture in the layman's sense." The exact nature of what appellant means by a "joint venture in the layman's sense" is not very clear. In the present context it would appear to partake principally of the elements of a conspiracy in restraint of trade.[83]

[83] Appellant's counsel was unable at the trial to determine upon a single or consistent definition of "joint venture in the layman's sense." At times the deal between Dewar and appellant was the joint venture (R. 934), or the partnership. At other times the joint venture or partnership was among the three corporations, British Timken, French Timken and

In effect appellant asks this Court to treat its foreign venture or "partnership" as though appellant had erected a plant abroad or established a subsidiary there to manufacture bearings. If that had been the case there would not have been restrictive agreements prohibiting appellant from making sales anywhere in the world; appellant could have made sales at whatever price it pleased; it could have erected additional plants anywhere it thought they were needed. Appellant has not been able to do any of these things because of its obligations under its agreements with British Timken and French Timken.

The plain fact is, as the district court concluded, that appellant did not build plants in Europe or purchase subsidiaries abroad. Instead it "acquired substantial interests in a dominant manufacturer of bearings in England, participated in the formation of and invested in the stock of a potential competitor in France" (Fdg., par. 160; R. 1005).

There is no magic in the relationship between a stockholder and a corporation which will support an agreement between them not to compete. Even where stock ownership is sufficient to constitute voting control, agreements not to compete are not thereby legalized. It has repeatedly been held that common ownership, financial integra-

---

appellant (R. 934). And at one point British Timken was an "instrumentality" of appellant like a wholly owned subsidiary or just a plant established abroad (Fdg. 160, R. 1005).

tion, parent-subsidiary relationship, is not a defense to agreements not to compete between affiliated corporations, if they are in fact separate companies; and the decisive fact here is that these co-conspirators were separate companies, separately operated. *United States* v. *Yellow Cab Co.*, 332 U. S. 218, 227; *Kiefer-Stewart Co.* v. *Seagram & Sons*, 340 U. S. 211; *United States* v. *General Motors Corp.*, 121 F. 2d 376, 404 (C. A. 7), certiorari denied, 314 U. S. 618.

Appellant relies upon *United States* v. *Bausch & Lomb*, 45 F. Supp. 387, 398 (S. D. N. Y.), affirmed, by an equally divided vote, 321 U. S. 707, as authority for insulating from the Sherman Act trade-restraining agreements among parties to a "joint venture". But the *Bausch & Lomb* case involved a vertical arrangement between a manufacturer and a distributor, i. e., "a joint enterprise in which one will produce and the other market the commodity" (45 F. Supp. at 398), and has no application to an arrangement between competing manufacturers. Moreover, the *Bausch & Lomb* case did not involve mutual covenants between the parties not to compete. The restraints were imposed solely upon the manufacturer, Bausch & Lomb. The distributor, Soft-Lite, could manufacture itself, sell its products wherever it pleased and authorize any other manufacturers it desired to manufacture for it in competition with Bausch & Lomb.

Appellant also relies by analogy upon the dictum in *United States v. Addyston Pipe & Steel Co.*, 85 Fed. 271, 281 (C. A. 6), modified and affirmed, 175 U. S. 211, in support of the lawfulness of an agreement by a partner not to compete with the partnership. This dictum can provide no possible support for the type of restrictions here which resulted in an agreement not to compete between corporations producing like goods. Judge Taft was referring to simple, *one-way* restrictions, involving only agreements by partners not to compete with the partnership. He says nothing about an agreement by the partnership not to compete with the partner.

The restrictions imposed in the instant case are anything but simple, one-way restrictions. They are reciprocal, mutual covenants whereby appellant agrees to restrictions upon itself for the benefit of its co-conspirators and the co-conspirators agree to restrictions upon themselves for the benefit of appellant and each other.

C. *The restrictions cannot be justified as ancillary to the licensing of the name "Timken"*

Appellant's contention that the restraints which it imposed upon competition were ancillary to the licensing of the name "Timken", and the protection of its interests in that name, appears to rest upon the proposition that appellant has the right under the laws of various jurisdictions, including the United States, to license the name,

and that this gives it the right to impose restraints upon competition as an incident thereto.

Baldly stated, this defense seems to be that restraints which, considered by themselves, would be patently unreasonable, are somehow legalized if they are incidental to the licensing of a trade-mark. Apart from the fact that the restraints here were not ancillary in character (*infra*, pp. 114–6), there are several insuperable difficulties with this defense. First, it rests upon the premise that a trade-mark confers a species of monopoly which its owner is entitled to exploit as effectively as possible even if the method chosen involves agreements to allocate territories, fix prices, and restrict the competition of others. But, as will be demonstrated, a trade-mark does not give exclusive rights to anything but the mark itself, and that only in a limited way. It carries with it far fewer rights than does a patent, yet even a patent monopoly cannot be extended beyond its terms. The restraints here could not be justified as ancillary to exploitation of a patent monopoly, and *a fortiori* cannot be justified in connection with trade-mark licensing. Second, appellant does not own the trade-mark Timken in many of the foreign countries in which it is purportedly "licensing" it. The "equitable ownership" in the mark which, it is asserted, results from the agreements between appellant and its co-conspirators is simply a label used to describe the unlawful trade restraining obligations which the parties

have assumed to each other. By the same reasoning, the parties could be said to have acquired "equitable ownership" of the respective territorial markets which have been unlawfully allocated to them by the agreements.

Far from furnishing a justification for other restrictive practices, the so-called trade-mark licensing, the district court found, is itself a restrictive device in furtherance of the conspiracy (*supra*, pp. 74–80). Even assuming the applicability of the "ancillary restraints" doctrine upon which appellant relies, such doctrine obviously can only come into play if the "main transaction" is lawful.

1. *A trade-mark may not be used as a device for restraining commerce*

A trade-mark is not a legal monopoly. It does not give any exclusive right to manufacture, use or sell a product within the territory of the nation recognizing the right, but is merely a means of identifying the source of origin of goods.[*] In *United Drug Company* v. *Rectanus Company*, 248 U. S. 90, 97–98, this Court stated:

> The owner of a trade-mark may not, like the proprietor of a patented invention,

[*] Although the Trade Mark Act of 1946, 60 Stat. 427, 15 U. S. C. 1051, *et seq.*, was enacted long subsequent to most of the acts in furtherance of the conspiracy, its provisions are pertinent as reflecting the present policy of the law toward trade-marks. The Act contains the following classic definition of a trade-mark: "any word, name, symbol, or device or

> make a negative and merely prohibitive use of it as monopoly. * * *
>
> In truth, a trade-mark confers no monopoly whatever in a proper sense, but is merely a convenient means for facilitating the protection of one's good-will in trade by placing a distinguishing mark or symbol—a commercial signature—upon the merchandise or the package in which it is sold.

And see *Hanover Star Milling Co.* v. *Metcalf,* 240 U. S. 403, 412; *Columbia Mill Co.* v. *Alcorn,* 150 U. S. 460, 463; *Canal Co.* v. *Clark,* 13 Wall. 311, 322. The right of the seller to protect his mark is a right to prevent use of it by others in such a way as to confuse a purchaser as to the source of origin of the goods. The mark is not protected as such, but only as a symbol of the good will of the business it signifies. *American Steel Foundries* v. *Robertson,* 269 U. S. 372, 380; *United Drug Co.* v. *Rectanus Co.,* 248 U. S. 90, 98; *Hanover Star*

---

any combination thereof adopted and used by a manufacturer or merchant to identify his goods and distinguish them from those manufactured or sold by others." Sec. 45, 60 Stat. 443, 15 U. S. C. 1127.

The Act consistently recognizes designation of the source of origin as the inherent function of a trade-mark, providing, for example, that any assigned registration may be cancelled at any time if the registered mark is being used "so as to misrepresent the source" of goods or services (Sec. 10, 15 U. S. C. 1060; see also Sec. 33 (b) (3), 15 U. S. C. 1115 (b) (3)). It further provides for cancellation of a registration at any time "if the registered mark becomes the common descriptive name of an article or substance" (Sec. 14 (c), 15 U. S. C. 1064 (c)).

Milling Co. v. *Metcalf, supra,* at 414; Nims, *Unfair Competition and Trade-Marks* (Fourth Ed., 1947) Sec. 15. Even the right of the owner to exclusive use of the mark is not qualified. A trade-mark is not a monopoly of the use of the word or combination of words, but only a right to prohibit the use of the word or words by others insofar as it is necessary to protect the owner's good will and the public against deceit.[85]

Since a trade-mark is not a monopoly or even a right in gross, the conditions under which it can be licensed are limited, and in no event can such licensing furnish a justification for ancillary restraints of trade. The trade-mark owner is entitled to "license" its use by others only insofar as the public is not deceived, and only upon terms which will protect his right to identify properly his goods as to source of origin. Since he has no exclusive right to make or sell a product within a prescribed territory, as a patentee does, he is not entitled to any ancillary provision to protect such

[85] In *Prestonettes, Inc.* v. *Coty*, 264 U. S. 359, 368, this Court held that "when the mark is used in a way that does not deceive the public we see no such sanctity in the word as to prevent its being used to tell the truth." This principle was recently again applied in *Champion Spark Plug Co.* v. *Sanders*, 331 U. S. 125, where the sale of second-hand spark plugs bearing the mark of the original manufacturer was held lawful since "the plugs, though used, are nevertheless Champion plugs and not those of another make" (331 U. S. at 128), and stated that "full disclosure gives the manufacturer all the protection to which he is entitled" (331 U. S. at 130).

a territorial product monopoly.[86] Territorial division and price fixing bear no conceivable relation to his right merely to identify his product. For these reasons, negative covenants which restrict competition in the sale of a product cannot be supported by a trade-mark "license."

The ancillary restraint doctrine is based upon the rationale that the primary transaction is not only lawful but should be encouraged in the public interest. Trade-mark licensing is not such a primary transaction. The use of the trade-mark by one who is not its owner is almost certain, except under very limited circumstances, to lead to a confusion in the mind of the consumer as to the source of origin of the product which he is buying. Hence, the assignment of trade-marks is not permitted unless the business and good will is also transferred, because of the likelihood of fraud on the public, and the "licensing" of trade-marks, even in those limited situations where it is permitted, is carefully circumscribed. Nims, *Unfair Competition and Trade-Marks* (Fourth Ed., 1947), Sec. 17, 22; Derenberg, *Trade Mark Protection and Unfair Trading* (1936) Sec. 51.

There is no warrant under the traditional law of trade-marks for sanction of trade-restraining agreements as "ancillary" to even legitimate use

---

[86] In fact, as seen above, he is not even entitled to exclusive use of the trade name, except insofar as it may be necessary to avoid confusion as to the source of origin of goods.

of a trade-mark.[37] A trade-mark is not the product of invention, nor does it carry out any constitutional intent to promote the progress of science and useful arts. The public receives no benefit such as the advancement of science, or disclosure of an invention, from the owner of the trade-mark. As was pointed out in the *Trade-Mark Cases*, 100 U. S. 82, 94:

> The trade-mark may be, and generally is, the adoption of something already in existence as the distinctive symbol of the party using it. At common law the exclusive right to it grows out of its *use*, and not its

[37] The Trade Mark Act of 1946, 60 Stat. 427, 15 U. S. C. 1051 *et seq.*, reaffirms the subordination of trade-mark rights to the antitrust laws. Section 33 (b) (7) of the Act (15 U. S. C. 1115) penalizes use of a trade-mark "to violate the antitrust laws of the United States." The reasons for this provision were cogently stated by Senator O'Mahoney (92 Cong. Rec. 7872–7873):

"There have been occasions, however, when trade-marks have been misused. There have been occasions when trade-marks have been used in connection with cartel agreements. There have been occasions when trade-marks have been used to restrain the trade and to the disadvantage of little business.

* * * * * * *

"* * * It is a matter of great importance to the consumers of the United States that they shall know that trade-marks are being used as it was intended under the common law that they should be used. * * * *But it is of such great importance to the public of the United States that restraints of trade shall not be permitted, that the Senate inserted this amendment to make it a defense to an infringement suit* as well as to make it a ground of contestability if it should be shown that the registrant was using the mark itself to violate the antitrust law." [Emphasis supplied.]

> mere adoption. By the act of Congress this exclusive right attaches upon registration. But in neither case does it depend upon novelty, invention, discovery, or any work of the brain. It requires no fancy or imagination, no genius, no laborious thought. It is simply founded on priority of appropriation.

There is also no similarity in the rights granted. A patent confers a monopoly for a limited time. A trade-mark is a commercial signature which may last perpetually. The two should not be confused. Indeed, this Court has adverted to "the fundamental error of supporting that a trade-mark right is a right in gross or at large, like a statutory copyright or a patent for an invention, to either of which, in truth, it has little or no analogy." *United Drug Co.* v. *Rectanus Co.*, 248 U. S. 90, 97.[88]

Even if it be assumed, *arguendo*, that, as the owner of the trade-mark "Timken", appellant has the same rights as it would under a patent, the restraints here imposed cannot be justified. The agreements in this case include at least four

[88] A similar difference is to be noted between trade-marks and copyrights. See Chief Justice Holmes in *Chadwick* v. *Covell*, 151 Mass. 190, 193–4, 23 N. E. 1068, 1069:

"* * * When the common law developed the doctrine of trade-marks and trade names, it was not creating a property in advertisements more absolute than it would have allowed the author of Paradise Lost, but the meaning was to prevent one man from palming off his goods as another's, from getting another's business or injuring his reputation by unfair means, and, perhaps, from defrauding the public."

types of provisions which would not be embraced within a patent monopoly: (1) There are territorial restraints with respect to areas in which appellant does not own the trade-mark "Timken," and could not, therefore, "license" it. Plainly a patentee could not, under the shield of his patent, restrain trade in countries where that patent was not in force.[89] (2) There has been widespread price fixing. Cf. *United States* v. *Line Material Co.*, 333 U. S. 287, 314–315; *Standard Oil Co.* v. *United States*, 283 U. S. 163, 175. (3) Appellant agreed not to permit its customers to sell in territories allocated to British and French Timken. A patentee may not control a patented article once it has been sold.[90] (4) British Timken and French Timken have agreed to manufacture tapered roller bearings only under the name "Timken." A patentee may not require his licensee to manufacture only under the patent. *McCullough* v. *Kamerrer Corp.*, 166 F. 2d 759, 761 (C. A. 9), certiorari denied, 335 U. S. 813.

The court below correctly held that "Even the patent monopoly is not broad enough to encompass the power to engage in conduct and practices to eliminate competition such as were employed"

[89] *United States* v. *National Lead Co.*, 63 F. Supp. 513, 524, affirmed, 332 U. S. 319. This is analogous to an attempt to use patents to control trade in unpatented goods, a practice consistently condemned by this Court. E.g., *International Salt Co.* v. *United States*, 332 U. S. 392; *Morton Salt Co.* v. *Suppiger Co.*, 314 U. S. 488.

[90] *United States* v. *Univis Lens Co.*, 316 U. S. 241, and cases cited, p. 250.

here (Concl., par. 197, R. 1013). *A fortiori* the public interest requires that trade-mark rights be kept within their proper bounds and not used as a device for restraining competition (Concl., par. 200, R. 1014).

2. *Appellant did not own and hence could not "license" the name "Timken" in many countries where it claims to have been a licensor*

The district court held that, even assuming the restraints to be in fact ancillary to trade-mark licensing and the law to permit such ancillary restraints, appellant did not own the mark "Timken" in many areas of the world and could not, therefore, license it in such areas (Fdg., par 182, Concls., pars. 189, 190, R. 1009, 1011).

Appellant's own non-competitive conduct was responsible for its not owning the mark "Timken" in the areas of the world in which it agreed not to sell its products. In implementing the division of world markets, it parceled out rights in the name "Timken" on a geographical basis. In addition to confusing the public as to the real origin of the respective products of appellant and its co-conspirators, with the inherent effect of dividing and diluting the significance of the name "Timken" as a mark of identification (R. 104–5, 394–5, 407–8, 512), appellant's conduct resulted in the registration and ownership of the mark "Timken" by others in areas allotted to British Timken and French Timken (Fdg., par. 183, R. 1009–10).

Had appellant's object at any time from 1909 to the present been the competitive use of its mark, it would have pursued an entirely different course of action. It could readily have sold its products wherever possible under the "Timken" mark; registered it in its own name wherever possible; contested British Timken's and French Timken's right to use it in every area where they asserted that right; in those areas where it was unable to prevent those companies from using the mark, it could have possibly obtained non-exclusive rights, and if not it could have developed new marks for its own product in such areas.[91]

These would have been the traditional competitive ways for appellant to deal with its trademark rights. A competing seller ordinarily jealously guards the symbols used to prevent simulation of his goods by actual or potential competitors. Appellant, however, directed its inquiry and planning to the question not how it might protect the name "Timken" but how it might acquire rights in that name without actually entering into competition in contravention of its agreements not to compete (Fdgs., pars. 153, R. 1003). Thus, the typical competitive procedures held no attraction for appellant. They would have defeated rather than achieved what

[91] The mark "TRBCO," for example, was registered by appellant in more countries in the world than was the mark "Timken" (D. Ex. 87, R. 1972–7).

the court below found as a fact to be the real objective, namely, to prevent competition.[92]

Ownership rights in a trade-mark arise *only* from *use* of the mark in connection with the sale of products. The owner's rights then are confined to the territory within which he sells his goods. On the basis of such use, the law of this country recognizes that the user obtains certain common law rights of ownership, limited as described above. *United Drug Co.* v. *Rectanus Co.*, 248 U. S. 90, 97, 98; *Trade-Mark Cases*, 100 U. S. 82, 94. A statutory registration may be obtained on the basis of use (Trade-Mark Act of 1946, Secs. 1, 45, 15 U. S. C. 1051, 1127). A registration may be attacked and cancelled on the basis of prior use by others.[93] In fact, appellant's registrations in those few countries within British Timken territory where it obtained them were subject to being set aside because of British Timken's prior use (R. 609–10, 613–14; See Fdg., par. 182, R. 1009; Appellant's Br. 104). Trade-mark ownership

---

[92] Fdg., par. 188, R. 1010–11: "The evidence conclusively proves that defendant entered into the agreements not for the purpose of exercising its right to protect the trade mark 'Timken' from its unlawful use by British and French Timken nor to protect the public from British or French Timken passing off their products as those of defendant, but *for the purpose of preventing competition in the sale of bearings.*" [Emphasis supplied.]

[93] A registration on the Principal Register may be cancelled for prior use at any time during the five-year period before it becomes incontestable (Sec. 14, 15 U. S. C. Sec. 1064). A registration on the Supplemental Register may be cancelled for prior use at any time (Sec. 24, 15 U. S. C. Sec. 1092).

arising from use, and possible subsequent registration, is the only form of such ownership recognized by law.

Because of its agreements not to sell its products in territories allotted to British Timken and French Timken, appellant has never obtained rights on the basis of user within those countries. Though it has obtained registrations in a few of the countries outside its allotted territories, through the cooperation of its co-conspirators, it has not registered the mark in most of the territories allocated to the co-conspirators. Appellant suggests that it has obtained registrations in most of the countries in British and French Timken territory, but the chart on pages 108–109 shows the actual status of registrations of "Timken" throughout the world. Thus the name "Timken" has never had a world-wide connotation as identifying appellant's products, but has had at least three different connotations depending upon the areas of the world in which it was used. In the areas allotted to British Timken and French Timken, the name signified their products. Hence appellant's rights in the name outside the immediate territory in which it was selling were completely non-existent.

Appellant admits that it has never had any common law rights in the name "Timken" as a trade-mark in the areas of the world allotted to British Timken and French Timken. It must, of course, admit that it is not the registered owner

in most of those areas, as the record speaks for itself (Def. Ex. 87, R. 1972). Appellant bases its contention that it has licensed the mark "Timken" upon the claim, rather, that it is the "equitable owner" of that mark in those areas, and that British Timken and French Timken are its "equitable licensees."

Appellant has offered varied explanations for this claim. For example, it refers to the fact that "Timken" was the surname of the founder of the company, and that it is a part of the corporate name.[24] Again, describing the use of the name

[24] That the name "Timken" is in its corporate name, happens to be the surname of the founder of the corporation, and that appellant has registered the name in certain countries, do not entitle appellant to use it everywhere in the world, but on the contrary, weaken its claims to world-wide trade-mark rights. The fact that "Timken" is a surname used by appellant and others as a trade name to identify tapered roller bearings means that it is not a "technical trade-mark" (R. 620–1, 624). *Herring-Hall-Marvin Safe Company* v. *Hall's Safe Company*, 208 U. S. 554, 559.

A mark consisting merely of a surname, although registered under the Trade Mark Act of 1920 (Sec. 1, 15 U. S. C. 121), was unregisterable under the Trade Mark Act of 1905 (Sec. 5, 15 U. S. C. 85) and cannot be registered on the Principal Register provided for by the Trade Mark Act of 1946, except upon evidence that it has become distinctive of the applicant's goods, five years continuous use constituting prima facie evidence (Sec. 2 (e), (f), 15 U. S. C. 1052 (e), (f)). In Great Britain and the British colonies, also, a strong showing of distinctiveness is required to obtain registration of a surname (R. 617, 620, 622–4, 635). As early as June 1921 appellant's counsel advised that, in addition to British Timken's prior use in Great Britain, "there are numerous difficulties

COUNTRIES IN WHICH THE TRADE MARK "TIMKEN" WAS NOT REGISTERED.

(Based on D. Ex. 87, R. 1972–7)

AS OF:

(1) July 16, 1909 (The date of the E&OA agreements).
(2) April 6, 1920 (The date of the Wolseley agreements).
(3) December 31, 1924 (The date of the first British Timken agreement).
(4) January 1, 1928 (The date of the second British Timken agreement).
(5) December 29, 1934 (The date of the third British Timken agreement).
(6) November 28, 1938 (The date of the "Tripartite" agreement).
(7) July 31, 1946 (The date original complaint was filed).

(1) ON JULY 16, 1909, "TIMKEN" WAS NOT REGISTERED IN THE FOLLOWING 118 COUNTRIES (i. e., THE ENTIRE WORLD): (Unless otherwise indicated, registration is in Appellant's name)

(2) Registered between 7/16/09 and 4/6/20:	Argentina	China	Japan	Peru
	Chile	Germany [4]	Mexico	Venezuela
Still not registered in the 110 countries below this line.				
(3) Registered between 4/6/20 and 12/31/24:	Australia	Denmark	Jugo-Slavia	Roumania
	Austria	Egypt	Luxembourg	Spain
	Belgium	France [2]	Netherlands	Sweden
	Brazil	Finland	Norway	Switzerland
	Bulgaria	Hungary	Portugal	Turkey
	Canada	India [3]	Rhodesia (Southern)	United States
Still not registered in the 84 countries below this line.	Czecho-Slovakia	Italy		
(4) Registered between 12/31/24 and 1/1/28:	Greece	Poland		
Still not registered in the 82 countries below this line.				
(5) Registered between 1/1/28 and 12/29/34:	Eire [1]	New Zealand [1]	Russia	South Africa [1]
	Newfoundland	Philippine Islands	Siam	
Still not registered in the 75 countries below this line.				

See footnote at end of table.

(6) Registered between 12/29/34 and 11/28/38:	Colombia	Hong Kong	Manchukuo	Trinidad & Tobago
	Cuba	Jamaica	Puerto Rico	Uruguay
Still not registered in the 66 countries below this line.	Hawaii			
(7) Registered between 11/28/38 and 7/31/46:	Afghanistan	Ecuador	Iceland [2]	Panama
	Belgian Congo	Ethiopia	Iran [3]	Paraguay
	Bolivia	Great Britain [1-6]	Iraq	Salvador
	Costa Rica	Guam	Liberia	Straits Settlement [1]
	Curacao	Guatemala	Morocco	Tangier Zone
	Dominican Republic	Haiti	Nicaragua	Tunis
Not registered in the 40 countries below this line at time of trial:	Dutch Guiana (Surinam)	Honduras		
	Bahama Islands	Dominica	Mauritius	Sierra Leone
	Basutoland [1-6]	Dutch East Indies [4]	Nigeria	South African Union
	Bechuanaland [1-6]	Eritrea	Northern Rhodesia [1-6]	South-West Africa [1-6]
	Bermuda	Fiji Islands	Nyasaland Protectorate	Sudan
	British Guiana [1-6]	Gambia	Palestine	Switzerland Protectorate
	British North Borneo	Gold Coast [1-6]	Portuguese Colonies	Tanganyika Territory
	Burma	Kenya Colony	St. Lucia	Travancore
	Ceylon	Lebanon	St. Vincent	Uganda Protectorate
	Congo Free State	Leeward Islands [5]	Sarawak	Virgin Islands
	Cyprus	Malta & Gozo	Seychelles Islands	Zanzibar

[1] Registration by British Timken.

[2] Registration by SMG, later transferred to French Timken. D. Ex. 87, R. 1972-7 shows registration in 1929.

[3] Registration by British Timken and Appellant apparently by each separately. British Timken registered in Iran and Iceland in June and July 1947, after the complaint was filed.

[4] Registration by Prausnitzer, later transferred to DTG. (Not included in D. Ex. 87, R. 1972-7. See Stipulation R. 598-599.)

[5] D. Ex. 87, R. 1972-7 lists the Great Britain trade mark registration as issuing 8/9/38. The evidence shows, however, that it issued in February 1940 (Gov. Ex. 190 and attachments R. 598).

[6] Registered between July 31, 1946 and February 26, 1947 (November, 1947, in the case of British Timken's registrations.

"Timken" by the predecessor of British Timken under the 1909 agreements, appellant has characterized this as "essentially, an attempt to project its good will ahead of its business" (Appellant's Br. 102, 112), and to project "its reputation into the territory of the British licensee ahead of American Timken's use there of the name 'Timken' as a trade-mark" (*ibid.*).[95] In dealing with the 1928 agreements, appellant contended that the contract provisions (*supra*, p. 35) for reversion of the mark to appellant at the

in connection with the registration of the word 'Timken' by reason of its being a surname" (Def. Ex. 79, R. 1963).

In addition, since the name "Timken" covered a product originally patented, and has always been used to refer to one type of bearing, the name may have even become generic, *Singer Mfg. Co.* v. *June Mfg. Co.*, 163 U. S. 169. Appellant's British counsel in fact stated in September 1925 that "the name has been frequently used in a context which suggests that it describes a type of bearing rather than a trade origin" (Def. Ex. 99, R. 2005; see also *supra*, n. [illegible] 32).

[95] This Court's statements in *United Drug Co.* v. *Rectanus Co.*, 248 U. S. 90, 98, are sufficient answer to appellant's claim that it could acquire any trade-mark rights by "projecting" its reputation ahead of its use of the mark:

"It results that the adoption of a trade-mark does not, at least in the absence of some valid legislation enacted for the purpose, project the right of protection in advance of the extension of the trade, or operate as a claim of territorial rights over areas into which it thereafter may be deemed desirable to extend the trade. And the expression, sometimes met with, that a trade-mark right is not limited in its enjoyment by territorial bounds, is true only in the sense that wherever the trade goes, attended by the use of the mark, the right of the trader to be protected against the sale by others of their wares in the place of his wares will be sustained."

expiration of the agreements meant that British Timken and French Timken must at such time abandon use of the name "Timken" and allow appellant to establish rights in it, or that they must assign the mark together with the good will of their businesses to appellant; and that these "rights" of appellant to establish if possible its own trade-mark rights in the future made appellant an "equitable owner" of the mark in 1928 (R. 612).

Appellant relies upon the opinion testimony of an expert witness as to the British trade-mark law (R. 612), which, it is contended, establishes that the agreements between appellant and British Timken make the former the equitable owner of the mark in Great Britain.[96] But a careful reading of this testimony reveals that the expert testified in substance that appellant has no legal rights to the mark in England, but only a contractual right against British Timken to come to fruition in 1965 when (and if) the current agreements terminate and not renewed (R. 627–8).[97] This con-

[96] It should be noted that from 1909 to 1928 British Timken was the sole user of the mark in Great Britain, and there is no basis for any contention that appellant had an equitable or any other kind of interest in it during that period.

[97] Appellant has cited no statutory or judicial authority for these novel propositions. Nor does the record contain any contemporaneous reference to such asserted rights to "equitable ownership" of a trade-mark. Appellant's claim appears to be wholly an afterthought which originated following the charge of antitrust law violation.

tractual obligation of British Timken requires it to abandon the mark itself and to assist appellant to secure it if possible. It is difficult to see how, assuming that this relationship may be characterized as giving "equitable ownership" of the mark to appellant, this characterization converts what would otherwise be unlawful restraints of trade into permissible "ancillary" restraints. That "equitable ownership" might be recognized under British law is no more a defense than is the fact that price fixing may be lawful in Great Britain. And surely whatever rights a present owner of a trade-mark might have to protect his mark would not adhere to one who merely has a contingent expectancy of becoming an owner in 1965. There is no suggestion in the testimony of the expert witness for appellant that one having an "equitable interest" may license that interest to any other person, much less to the legal owner.

It is clear from the record that one of the primary methods by which appellant has fettered its principal potential competitors has been to require them to manufacture tapered roller bearings only under the name of "Timken" and at the same time to agree to relinquish use of the mark upon termination of the relationship with appellant. This restrictive arrangement is itself one of the means used to carry out the conspiracy and can hardly serve as a justification for other restrictive activities. Appellant's position in sub-

stance is that an agreement with a potential competitor preventing competition between it and the competitor, and providing that on termination of the agreement the competitor shall surrender the trade-mark it legally owns and has used for many years, is valid as ancillary to the licensing by appellant of the trade-mark which it does not own.

The anomalous result of appellant's contention, if accepted, is that British Timken, which in 1928 had common-law ownership of the mark in Great Britain (R. 609), and later became the registered owner there (Def. Ex. 87, R. 1988), was a "licensee" of its own mark. The argument becomes even more artificial as a result of appellant's action in October 1949, immediately after the relief hearings in the court below, when it took steps to become a "registered user" or "licensee" of the mark "Timken" in Great Britain, British Timken being the "registered owner". (*supra*, pp. 52–3). Appellant's contention leads to the ultimate conclusion that the registered owner of the mark is its "equitable licensee," while the "legal licensee" becomes the "equitable licensor." And the legal licensor is under a duty to supervise the quality of the product of appellant, the purported equitable licensor. Such legal legerdemain and attempted manipulation of trade-mark rights falls into a category aptly termed "hokus-pokus" in *California Fruit Growers Exchange v. Sunkist*

Packing Company, 166 F. 2d 971, 975 (C. A. 7).[98]

Appellant had complete control over the development and use of the name "Timken" at the time when its international use began in 1909. It could have prevented the rise of conflicting interests in, or the concurrent use of, the name at that time. Instead, it encouraged them, deeming the illegal restraint upon competition more to its interests. It would be strange doctrine indeed which would permit appellant now to continue to restrain trade in order to establish trade-mark rights which it has lost or failed to acquire because of its previous restraints of trade.

3. *The restraints were not in fact ancillary to the licensing of the name "Timken"*

Even if it be assumed, contrary to the arguments presented above, that appellant had the power to license the trade-mark in foreign countries, and that restraints of trade of the char-

[98] Appellant significantly does not mention its action, taken in 1949, whereby it arranged to become a "registered user" of the mark "Timken" in Great Britain, and thus subject under British law to British Timken's control of its production (*supra*, pp. 52–3). This action is utterly inconsistent with appellant's claim that, rather than being subject to British Timken control, it controlled British Timken's production, by supplying know-how, in compliance with British trade-mark law (Appellant's Br. 125). Appellant likewise omits any reference to the fact that trade-mark licensing was not known in Great Britain in 1928 when appellant supposedly began to comply with the requirements of the law relating thereto. Limited trade-mark "licensing" was first introduced by the Trade-Mark Act, 1938 (Govt. Ex. 8 (Decree), R. 2741, 2748; see R. 625–6).

acter here imposed are reasonable if ancillary to trade-mark licensing, the fact is that the restraints were not ancillary but were appellant's primary objective. The restraints were not the tail to the kite of trade-mark licensing; it was the other way round. On consideration of all the evidence the district court found as a fact that "the trade-mark provisions of the challenged contracts were subsidiary and secondary to the central purpose of allocating trade territories" (Fdg., par. 187, R. 1010). This Court will not try the question of intent *de novo*. *United States* v. *Yellow Cab Co.*, 338 U. S. 338.

In holding that the restraints imposed by the parties were not in fact ancillary to the "licensing" of the trade-mark the district court reviewed the history of the mark "Timken." The court noted that even as late as 1928[99] appellant had serious doubts of its ownership of the mark in the territories assigned to British Timken and French Timken (Fdg., par. 182, R. 1009). In some countries British Timken's predecessor was the owner of the mark and in France it had been registered by the predecessor of French Timken. A German national, Prausnitzer, owned the mark in that country. The court observed that it was apparent that appellant "could not use the mark in a great portion of the world (*ibid.*)."

[99] As of January 1, 1928, appellant was the registered owner in only 34 countries and British Timken had no registered trade-mark rights anywhere in the world (Def. Ex. 87, R. 1972).

On the basis of appellant's inability to use the mark in most of the world, the court below concluded that appellant "was primarily concerned therefore, not in safeguarding the trade-mark rights which it then possessed, but rather in acquiring the rights obtained by other manufacturers, as a consequence of the early patent license agreements, in areas where * * * appellant had agreed not to manufacture and sell" (Fdg., par. 183, R. 1009–10). The court pointed out that from 1909 to 1924, appellant had been free of competition because of its patent monopoly, and that the evidence shows that the agreements were originally entered into for the "purpose of preventing competition in the sale of bearings" (Fdg., par. 188, R. 1011), and it rejected the attempt to extend the patent monopoly on the basis of the grant by it of trade-mark rights to British and French Timken (*ibid.*).

Thus, in final analysis, the ancillary defense fails, *inter alia*, for the fundamental reason that the restraints were not ancillary to the "licensing."

III

THE FINDINGS OF FACT UPON WHICH THE DISTRICT COURT BASED ITS JUDGMENT ARE CORRECT AND CLEARLY ARE SUPPORTED BY THE EVIDENCE

The findings of facts made by the trial court "represent the considered judgment of an able trial judge, after patient hearing" (cf. *United States* v. *Yellow Cab Co.*, 338 U. S. 338, 341) and

are not to be set aside unless clearly erroneous (Fed. R. Civ. P., Rule 52 (a)). In this case, the Court is unquestionably being asked "to reweigh the evidence and review findings that are almost entirely concerned with imponderables, such as the intent of the parties to certain 1929 business transactions" (338 U. S. at 340).[100]

We submit that the findings of the district court are complete, accurate, and fully supported by the evidence. In view of the standards of review laid down in the *Yellow Cab* case, *supra*, and the prolixity of appellant's attacks upon the findings, it will suffice to confine discussion to the more important findings, and the evidence supporting them.

A. *The finding that appellant combined and conspired with potential or actual competitors*

Despite the fact that British Timken's predecessor, E&OA, did not begin the manufacture of bearings until 1909 (Appellant's Br. 140), the record is clear that appellant recognized E&OA as a potential competitor from the start. In the 1909 agreements, appellant exacted a covenant from E&OA not to manufacture or sell bearings outside the patent licensed territory. While these agreements gave E&OA the right to sell its bearings in its territory at any price it deemed desirable, they provided that the deficiency be-

[100] Here the transactions leading up to the conspiracy and bearing upon general intent go back to 1909.

tween the lowest price charged for the time being by the licensor to the trade in the United States, and the lowest price charged at the time by E&OA, should not exceed the United States tariff chargeable on bearings from any part of E&OA's territory (Def. Ex. 189, Art. 14, R. 2305, 2318; Def. Ex. 190, par. 37, R. 2322, 2335). These safeguards against competition indicate that appellant recognized E&OA as a potential competitor in the United States, and foresaw the possibility that third parties might buy E&OA's bearings and ship them into the United States.

The Vickers subsidiaries from 1909 to 1927, E&OA, Wolseley Motors and British Timken, are pictured by appellant (Appellant's Br. 140–1) as a series of unsuccessful companies with virtually no assets and little substantial progress. The facts show, however, that this was not the case. These subsidiaries were part of the powerful Vickers organization (R. 81–2, 231–2) so that appellant in dealing with them well knew that it was dealing with a company whose business was "world-wide-everywhere" (R. 231).

British Timken, from its inception in 1920, has experienced a rapid and substantial growth.[101] At

[101] In 1920 British Timken had only 350 or 400 employees engaged in the manufacture of tapered roller bearings and was making 60 or 70 sizes, largely automotive (R. 84). In 1927, however, British Timken was making 100 sizes of tapered roller bearings, mostly automotive sizes, and had a growing business in other fields, such as machine tools and mill equipment (R. 85). It was employing 500 people

the beginning of the conspiracy in 1928, British Timken had virtually all of the tapered roller bearing business in Great Britain (R. 107). Its only competitor was British Bock, Ltd. (R. 106), a small concern which was bought out shortly thereafter by British Timken (R. 144). In fact, British Timken controlled 99 or 100 per cent of the British tapered bearing market and was a dominant producer of tapered roller bearings in England as well as a strong potential competitor for appellant (R. 107). When one adds to this the fact that appellant was "many times over the largest manufacturer of tapered roller bearings in the world" (Gov. Ex. 1 (not printed); Ans., par. 11, R. 27), it readily appears that the district court

---

(R. 85), and had produced as many as 660,000 bearings a year (Def. Ex. 31, p. 26, R. 1800, 1831).

The sales record of British Timken and its predecessors is equally impressive. In 1912 E&OA's net sales were £27,000 or $135,000; by 1919 they had reached £140,000 or $700,000 (Def. Ex. 230, R. 2545); in 1919 British Timken paid appellant royalties of $37,000, and in 1923 they were $62,000 (Def. Ex. 230, R. 2545). In fact, British Timken was growing at a more rapid rate than appellant. That much is apparent from a comparison of British Timken's net sales (Def. Ex. 230, R. 2545) with appellant's (Def. Ex. 229, R. 2544). British Timken's sales almost doubled in the six-year period preceding the commencement of the conspiracy while appellant's had increased only about 35 percent. Most impressive of all is the record of British Timken's profits in the five-year period immediately preceding the conspiracy agreements of 1928 (Def. Ex. 7, R. 1725). For example, in 1926, British Timken's net profit of $315,000 was more than 26 percent return on its gross sales, "a very good profit" (R. 241).

was fully justified in finding that "the accused agreements between 1928 and 1938 were made between two manufacturers, who on the basis of the evidence, were properly characterized as the largest manufacturer in the world and the largest manufacturer in Great Britain respectively" (Fdg., par. 36, R. 966).

Appellant also takes issue with the findings of the district court that French Timken was a "potential competitor" of appellant's in France (Appellant's Br. 143). The facts are these: A French anti-friction bearing manufacturer, SMG, had been making and selling tapered roller bearings, and in 1927–1928 was the *sole* producer in France (R. 111). SMG had been operating under an agreement with British Timken (Def. Ex. 194, pars. 3, 4, R. 2347–8) which was terminated in 1928 upon the organization of French Timken. The French company presently controls approximately 80 percent of the tapered bearing market in France (Fdg., par. 14, R. 961; R. 117). These facts fully support the conclusions of the district court that at the time of the formation of French Timken by appellant and Dewar, the French company was the largest dealer in tapered roller bearings in France (Fdg., par. 144, R. 1001–2) and a potential competitor of appellant (Fdg., par. 160, R. 1005).

Appellant further asserts that whether or not British Timken and French Timken were competitors of the American company is unimportant,

since it was impossible for these foreign companies to compete with appellant by importing bearings into the United States, and equally impossible for appellant to compete with them in their territories. (Appellant's Br. 143–4.) In the first place, this contention is at war with appellant's other argument that the covenants dividing the world between the three parties were reasonably and necessarily ancillary to the transfer of some property, in order to afford protection against competition for the recipient (Appellant's Br. 99 *et seq.*). Moreover, if competition between the parties was impossible, why did appellant enter into these agreements and why has it so vigorously defended its right to continue them? As the district court expressed it (Fdg., par. 204, R. 1015):

> If all the impediments to foreign trade existed ever since 1914, which became more and more pronounced to the present day, why were the contracting parties, defendant, British Timken and French Timken so concerned about air-tight agreements to keep each one within its own commercial domain? The repeated and persistent provisions of the successive contracts, for territorial restrictions, contradict any claim of lack of ability to compete.

The record abundantly supports the district court's finding that there was, and is, "actual and potential competition in the international roller bearing market" (Fdg., par. 206, R. 1015).

Indeed, on the basis of the evidence the district court concluded that had it not been for the restrictive agreements, "the volume of business with foreign countries would have been considerable in size" (Fdg., par. 208, R. 1017). But even if international trade in tapered bearings had not in fact existed and the conspirators could not have competed, their agreement to abstain from foreign commerce constitutes a violation of the antitrust laws. See *United States* v. *National Lead Co.*, 63 F. Supp. 513, 525–6, 530, affirmed, 332 U. S. 319.

B. *The findings as to competition between tapered roller bearings and antifriction bearings*

Appellant attacks findings by the district court on the grounds that they do not correctly set forth the extent of competition between tapered roller bearings and other types of antifriction bearings (Appellant's Br. 144). What appellant fails to appreciate is that the court below specifically found that there was some degree of competition between tapers and other antifriction bearings, and that, for certain purposes, tapers enjoyed freedom from competition (Fdg., par. 19, R. 962; Fdg., par. 130, R. 997–8). The court was not under the necessity of ascertaining with particularity the extent of this limited competition or freedom from competition. Tapered roller bearings obviously differ in some respects from other types of antifriction bearings and

the public is entitled to the benefits of competition within that segment of the industry. As was stated in *Eastman Kodak Co.* v. *Federal Trade Commission,* 158 F. 2d 592, 594 (C. A. 2), certiorari denied, 330 U. S. 828 (a monopoly case):

> Hence it will not do to say that all film is in the same class. If a purchaser wants a color film he must be able to buy it from more than one manufacturer if there is to be "free and open competition with commodities of the same general class"; that he can buy a black and white film will not serve to destroy the monopoly of the sole producer of color film.

And see *Fashion Originators' Guild* v. *Federal Trade Commission,* 114 F. 2d 80 (C. A. 2), affirmed, 312 U. S. 457.

Appellant also challenges findings that appellant and the co-conspirators dominated the tapered bearing markets of the world. Appellant is undeniably the largest manufacturer of tapered roller bearings in the world (Fdg., par. 10, R. 960; Gov. Ex. 1 (not printed); Ans., par. 11, R. 27). British Timken had 99 to 100 percent of the tapered bearing market in England in 1928 and now has about 95 percent (Fdg., par. 13, R. 961; R. 107). French Timken manufactures about 80 percent of the tapered bearings in France (Fdg., par. 14, R. 961; R. 117).

But the question of whether or not appellant and its co-conspirators dominate the tapered

roller bearing market has no significance in relation to the division of territories. This is not a monopoly case, and restraints of trade can be effected by others than the dominant member of an industry. The only possible significance of the dominant position of the parties is to aggravate the seriousness and results of offenses such as the exclusive exchange of know-how and the combination to suppress the competition of outsiders.

C. *The treatment of the three companies as separately operated units for purposes of determining that they had combined in violation of the Sherman Act, the treatment of evidence designed to indicate a "joint venture," and the finding that the relationship between the parties was merely a continuation of an illegal combination dating from 1909*

Objection is raised by appellant to the action of the district court in treating the three companies as separately operating units for the purposes of determining that they had combined in violation of the Sherman Act. Appellant concedes that the two foreign companies were separate and distinct corporate entities (Appellant's Br. 146) but vehemently denies that they were separately operating in the business of making tapered roller bearings.

It cannot be determined on what basis appellant claims that the co-conspirators were not separately operated. The record is uncontro-

verted, however, that British Timken and French Timken were managed and operated by Dewar and that, except for powers possessed by virtue of its stock ownership and agreements, appellant had no control over the immediate management of either foreign company (Fdg., par. 42, R. 967; Fdg., par. 44, R. 968; Fdg., par. 54, R. 969; Fdg., par. 156, R. 1004; Def. Ex. 15, par. 2, R. 1730; Def. Ex. 69, R. 1954; Def. Ex. 186, R. 2298; 912–3, 915).

If there were ever any doubts as to the separate and distinct operation of the foreign companies, these doubts were dispelled in 1934 when British Timken became a "public" company. Dewar in speaking of the 1934 "new deal" referred to the "very separate and distinct identities of the various Companies concerned", and said that "no one Company has the right to expect any material benefit from another Company without properly paying for it" (Gov. Ex. 176, R. 1690). As Dewar expressed it, "'Me' is British Timken" (Fdg., par. 158, R. 1005; R. 277). This is not to say that appellant's minority interest in British Timken is unimportant. Obviously that interest is substantial and places appellant in a position to exert powerful influence against any latent tendency of British Timken to enter into competition with appellant. But such a minority interest in a potential competitor does not legalize the combination between competitors.

Even if there had been complete control by appellant over British Timken and French Timken so as to create a financial integration or parent-subsidiary relation, these relationships would not serve to insulate the parties from the operation of the antitrust laws. *United States* v. *Yellow Cab Co.*, 332 U. S. 218, 227; *Kiefer-Stewart Co.* v. *Seagram & Sons*, 340 U. S. 211.

Appellant raises objections at several points (Appellant's Br. 57, 146–148) to the alleged failure of the district court to make detailed findings as to the complex financial interrelationships between the parties, indicating the existence of a so-called "joint venture". These financial arrangements were merely subordinate and supplementary agreements, one of the purposes of which was to place control of British Timken and French Timken in Dewar. The fact that the court, in its extended discussion of the "joint venture" defense, made specific findings (Fdg., par. 157, R. 1004–5; Fdg., par. 158, R. 1005; Fdg., par. 159, R. 1005) as to Dewar's control over the foreign companies, is a definite indication that the court considered, and did not disregard, evidence of such financial arrangements. In fact, counsel for appellant has admitted that the court, in reaching its decision, considered evidence offered by appellant in support of its defenses. Counsel said, at the hearing on findings and conclusions (p. 11):

> We have assumed from the opinion of the Court and a very careful reading and re-reading of it, that the Court did receive and *did consider, in coming to the conclusions the Court reached, the evidence offered by defendant in support of what have been termed our various defenses.* [Emphasis added.]

The action of the district court in rejecting the "joint venture" theory and finding that the 1928 agreements "merely extended the restrictive arrangements which had existed for almost twenty years between potential competitors" (Fdg., par. 153, R. 1003–4; Fdg., par. 155, R. 1004), is fully supported by the evidence.

The record is clear that Dewar's underlying motive for making the 1928 agreements was his desire to escape appellant's competition and to continue the existing arrangements. In March 1927, Dewar knew that the agreements had only about eighteen months to run (R. 239) and that if they were not renewed he might have to face appellant's competition (Def. Ex. 88, par. 4, R. 1991, 1192–3; Def. Ex. 194, par. 5, R. 2347, 2349). Consequently one of the first things he considered upon being made chairman of British Timken was (as he wrote to appellant) "the question of the continuation of our existing agreement" (Def. Ex. 4, R. 1722, 1723). This continuation of these agreements, which is actually what the 1928 agreements are, was the primary concern

of Dewar before the so-called "joint venture" was even mentioned, and it was of concern regardless of whether appellant made any investment in British Timken. Even the "Heads of Agreement" speaks of "extending for ten years the terms of the existing agreements" subject to certain modifications (Def. Ex. 15, par. 10, R. 1730, 1733–4).

The evidence also points to the inevitable conclusion that appellant was well aware that Dewar was acting in order to escape appellant's competition. Appellant had been advised by its London attorney that one "main advantage derived by the English company under the agreement" was "the absence of your competition" (Gov. Ex. 174, R. 1686). Similarly, in connection with the previous agreements, appellant had been advised by its own trade-mark attorney that one of the great values to British Timken was the absence of appellant's competition (Gov. Ex. 173, R. 1683). Appellant's vice president himself admitted that one of the purposes of the agreements was to satisfy Dewar in his desire not to have appellant's competition in the areas allocated to the British company (R. 932–4).

The record very plainly shows that at the expiration of the basic patents in 1924, the parties began to cast about for other devices to support the division of territory between appellant and British Timken. An attempt was thereupon

made to employ the trade-mark device.[102] In short, it is there demonstrated that in 1921, as well as 1927, appellant was well aware and had been advised that it had no rights in the name "Timken" in the United Kingdom which it could have licensed to British Timken, so that the intent was not to protect any trade-mark rights but to continue the allocation of territories.

D. *The findings that appellant and its co-conspirators had combined and conspired to suppress the competition of outsiders by acting collectively against outsiders or joining with them*

Appellant raises more than a dozen objections (Appellant's Br. 153–161) to the district court's findings relating to the combination to suppress or eliminate the competition of outside producers of antifriction bearings. It would unnecessarily prolong this brief to answer those objections in detail; a few examples will be cited, however, to show their lack of substance.

As appellant recites (Appellant's Br. 153), the district court found that the parties had adhered to their contractual obligations to maintain exclusive territories (Fdg., par. 70, R. 972) and that each of them had refused orders for shipment outside its territory, referring them to the company in whose territory they were to be used

[102] The subsequent manipulation of trade-mark rights is fully discussed in notes 31 and 32, and text relating thereto, at *supra*, pp. 24–25.

(Fdg., par. 71, R. 973). Appellant points to one instance of referral of orders, and asserts that "This, of course, was in accordance with the basic policy of the joint enterprise" (Appellant's Br. 153). Appellant completely ignores Finding, par. 71 (R. 973) which indicates the large number of orders and inquiries referred by the parties to each other. The evidence showed (Gov. Exs. 139–147A, R. 1579–1636; R. 218–9) and the district court found (Fdg., par. 71, R. 973), that during the period from July 1, 1945, to February 20, 1947, alone, appellant transmitted 402 inquiries or orders to British Timken and French Timken, advising those customers that either the British or French company had the exclusive right to supply the bearings in that territory.

Objection also is raised by appellant as to the district court's findings that provisions of the agreements fixing prices on sales to Russia were carried out to the letter (Fdg., par. 94, R. 986). The claim is made by appellant that this statement is contrary to the only evidence in the record which is, in substance, that this provision was inserted in the agreements to prevent the Russian buying agencies from playing off one company against the other, but that in fact, those agencies never sought quotations from appellant and British Timken on the same business at the same time (Appellant's Br. 155). Here again, appellant has ignored testimony which clearly

supports the district court's finding. Appellant has not referred to the admission of Mr. Moore, appellant's Director of Sales, that the parties had in actual practice kept each other advised of their negotiations for Russian business (R. 897–8). Appellant likewise has overlooked the testimony of its president that in general appellant could not undercut British Timken on sales to Russia, and that appellant and British Timken gave their prices to each other (R. 554).

Still other objections are raised to findings relating to the foreign cartel arrangements entered into by British Timken and French Timken with competitors abroad which the district court found had restricted exports by American producers (Fdg., par. 117, R. 994). Appellant states that the district court found that it [appellant] was not a party to the English and French agreements (Appellant's Br. 159). The court did so find, but in addition it concluded that while appellant was not actually a party to the arrangements, it had cooperated and consulted with the co-conspirators in bringing them about, and had approved the agreements before they were executed, all as a part of the general plan to suppress the competition of outside producers (Fdgs., pars. 110, 111, 125, R. 992, 996). These findings have ample support in evidence (Gov. Exs. 49–65, 65A, 68, 70, R. 1396–1438, 1438, 1445, 1453; R. 543–4).

941038—51——10

E. *The evidence of price fixing*

Appellant contends the record is clear that the provisions of the contracts for fixing prices for replacement bearings sold in each other's territory had "never been followed by the parties since the first agreement was made in 1928" (Appellant's Br. 87). The record does not support this contention. As early as 1928 the parties were fixing prices on replacement bearings (*supra*, pp. 35–36). In practice, after 1935, the parties agreed to a general formula for fixing prices on replacement sales in each other's territory, rather than seeking a price from the other at the time of making each sale. This device was known as the "protective discount" (*supra*, pp. 43–44).

This fixing of abnormally high export prices caused appellant to lose much business, since this "weakness in our pricing policy" caused buyers to become "familiar with the fact that" (Gov. Ex. 131, R. 1545): "we are protecting British Timkin and by so doing, do not have a price that is anywhere near competitive with Bower. As a result, it now develops that we don't even get inquiries for a lot of requirements. They are automatically referred to our competitors." Despite this, appellant continued to adhere to price arrangements even though in some instances it did not agree with British Timken's pricing policies (Gov. Ex. 128, R. 1541).

During World War II when appellant made sales in British Timken's territory at the latter's request, British Timken instructed appellant as to the price to be charged (Gov. Ex. 102, R. 1418; Gov. Ex. 103, R. 1484; Gov. Ex. 112, R. 1511; Gov. Ex. 113, R. 1514; Gov. Ex. 129, R. 1542). The arrangement for Australia was that British Timken would fix prices at which appellant sold bearings in that area (Gov. Ex. 114, p. 4, R. 1521; R. 187, 188), and later when appellant took over all of British Timken's territory, the "protective discount" would be quoted on *all* unsolicited inquiries, unless the order was a large one of special importance (Gov. Ex. 128, R. 1541). Even then, appellant had to communicate with British Timken's agents (Gov. Ex. 128, R. 1541) who would determine prices to be charged in accordance with British Timken's instructions for the handling of such business (Gov. Ex. 125, R. 1534; Gov. Ex. 127, R. 1538).

F. *The district court properly adopted its memorandum opinion as its findings of fact and conclusions of law*

Appellant argues that the district court erred in failing to make proper findings of fact, separately found, and conclusions of law, separately stated, as required by Rule 52 of the Rules of Civil Procedure.

Rule 52 (a) provides in part that, "In all actions upon the facts without a jury * * *,

the court shall find the facts specially and state separately its conclusions of law thereon * * *." By amendment effective March 19, 1948, the following language was added: "If an opinion of memorandum of decision is filed, it will be sufficient if the findings of fact and conclusions of law appear therein."

It is clear from the *Report of the Advisory Committee on Rules for Civil Procedure,* H. Doc. No. 473, 80th Cong., 1st Sess. pp. 111–112, that this amendment was adopted expressly to permit a district court to certify its memorandum opinion as its findings of fact and conclusions of law. Appellant does not appear to be attacking the legality of the procedure whereby the district court, in the instant case, so certified its memorandum opinion.[103]

The first objection raised by appellant is that the memorandum opinion does not contain "underlying and subsidiary findings on several important matters which are essential to a determination of 'all the issues in the case.'" (Appellant's Br. 163.) The complete answer to this contention is that the trial court was not required to make findings on all the facts in the case. It was required to find only such ultimate facts as were necessary to reach a decision in the case. *Skelly Oil Company* v. *Holloway,* 171

---

[103] But see cases cited by appellant (Appellant's Br. 163) in support of its attack on the findings. Each of these five cases was decided prior to the amendment to Rule 52 (a).

F. 2d 670, 673 (C. A. 8); *Oedekerk* v. *Muncie Gear Works, Inc.*, 179 F. 2d 821 (C. A. 7); *Norwick Union Indemnity Company* v. *Haas*, 179 F. 2d 827, 832 (C. A. 7); *Klimkiewicz* v. *Westminster Deposit & Trust Company*, 122 F. 2d 957, 958 (C. A. D. C.). As stated in the *Report of Advisory Committee on Rules for Civil Procedure, supra* (p. 112), "the judge need only make brief, definite, pertinent findings and conclusions upon the contested matters; there is no necessity for overelaboration of detail or particularization of facts."

The second objection voiced by appellant is that the memorandum contains much "discussion of, and quotation from, portions of the evidence as to various matters, and the court's reasoning with respect thereto." (Appellant's Br. 164.) The Court's references to evidence and reasoning as to such evidence can hardly be harmful to appellant on this appeal. If anything, such references and reasoning will aid this Court in its review of the case by showing the basis for the district court's findings and indicating the reasoning process employed by the court in reaching its conclusions.

The third objection of appellant is that the statements of fact and conclusions of law "are not stated separately in many instances but must be gleaned from an examination of its entire 60 pages" (Appellant's Br., 164). Reference need only be made to the memorandum opinion itself

in answer to this contention. The lengthy opinion fairly bristles with clear and specific findings of fact and conclusions of law, separately stated. It contains abundantly adequate findings of ultimate facts necessary for a proper adjudication of all pertinent issues, and legal conclusions pertinent to the issues presented.

IV

THE RELIEF ORDERED BY THE DISTRICT COURT IS APPROPRIATE AND NECESSARY

A. *The district court properly directed divestiture of appellant's financial interests in its co-conspirators, British Timken and French Timken*

Subsection A of Section VIII of the judgment requires appellant to divest itself of "all stock holdings and other financial interests" in British Timken and French Timken within two years of the date of judgment, and to submit for the court's approval a plan for such divestiture within one year from such date (R. 1179).

At the time of judgment appellant's financial interests in these co-conspirators consisted primarily of 30¼% of the common stock of British Timken and 50% of the stock of French Timken.[104] These interests in companies which were and

[104] Appellant also owned 1% of the preferred stock of British Timken and certain promissory notes of French Timken (*supra*). Subsequent to the entry of judgment appellant acquired certain additional shares of British Timken and French Timpen stock (*supra*).

are appellant's "potential competitors" (*supra*, pp. 27, 117–121) were acquired as an integral part of the 1927–1928 agreements made by appellant to continue to allocate world markets among it and its co-conspirators and otherwise illegally to restrain competition (*supra*, pp. 28–32).[105] The district court found that the 1927 agreements "were made to carry on effectively the combination to eliminate competition between the parties and to frustrate any competition of outsiders" (Fdg., par. 154, R. 1004).

The "Heads of Agreement" of May 16, 1927 (Def. Ex. 15, R. 1730), provided for purchase of stock in British Timken and French Timken by appellant and Dewar and for extension of the existing restraints "in connection therewith" (Fdg., pars. 42–44, R. 967–8; *supra*, p. 31). The pattern for these restraints was set by the 1909 agreements dividing world markets and eliminating competition (Fdgs., pars. 120, 153, R. 995, 1003–4). These agreements for division of territories and other restraints, as embodied in

[105] Pursuant to these agreements, appellant acquired all of the French Timken stock which it held at the time of judgment (*supra*, pp. 30, 36), as well as most of its stock holdings in British Timken (*supra*, pp. 31, 32). In 1935, when appellant and Dewar sold part of their stock in British Timken on the open market and entered into a series of new agreements designed "to continue the implementation of the earlier contract" (R. 283, 914), appellant repurchased on the open market part of the stock thus sold, the net effect of its sales and repurchases being to reduce its share of British Timken common stock to 30¼% (*supra*, p. 39).

and extended by later agreements between appellant and British Timken, were to expire on January 1, 1929 (Fdg., par 37, R. 966; *supra,* pp. 26, 28). The district court found that appellant's association with Dewar in acquiring an interest in British Timken and French Timken was "formed for the purpose of continuing a combination to allocate exclusive sales territories in the world, to fix prices and to eliminate competition both within and without the combination" (Fdg., par. 163, R. 1006). Thus the stock acquisitions, both in purpose and effect, served to effectuate and solidify the underlying conspiracy to restrain trade in antifriction bearings in all markets of the world.

Appellant, in view of its "joint venture" argument, can scarcely deny that its acquisition of British Timken and French Timken stock was directly linked with its trade-restraining agreements with these companies. The basic premise of the "joint venture" argument is that these agreements were not merely linked with, but were actually subordinate and ancillary to, ~~Timken and French Timken (*supra,* pp. 31–2),~~ appellant's acquisition of a large stock interest in its co-conspirators.

While the 1927 agreements provided that Dewar should control the management of British Timken and French Timken (*supra,* pp. 31–2), appellant was entitled to representation on their board of directors (Def. Ex. 15, par. 7, R. 1732–3; R. 1035). Appellant's ownership interest in these foreign companies thus put it in a position

to exert a powerful voice in opposition to any move on their part to put an end to the cartel system which had been set up. No occasion for exercising this power arose, but appellant threw its influence in favor of continuing the illegal restrictions when the agreements were renewed in [redacted], 1935 and 1938 (*supra,* pp. 38–41). Appellant has itself argued that, had it not done so, it would have been using its own money "to create competition for itself" (R. 1165–6).

Both appellant and Dewar recognized, in 1927 and later, that appellant's financial interests in British Timken and French Timken provide assurance against competition between it and its co-conspirators. Dewar, being anxious to avoid appellant's prospective competition with British Timken upon expiration on January 1, 1929, of the existing trade-restraining agreements (Fdg., par. 135, R. 1005), insisted upon a territorial understanding (Fdg., par. 207, R. 1015–7; R. 933), and sought to insure this result by having appellant purchase part of the British Timken stock so that it would have an "interest then in the profitable operation of the company" (*supra,* p. 30). Appellant's Vice President testified that, in view of its financial investments, allocation of territories was "only normal" (R. 933). These investments, furnishing both motive and means for preventing competition between appellant and the companies in which it

has invested, will remain a constant and powerful deterrent to competition as long as they are permitted to continue.

We submit that there could hardly be a clearer case of illegal acquisition than one where, as here, stock in potential competitors was acquired as an integral part of a conspiracy between the acquired and acquiring companies to restrain trade in a manner forbidden by the Sherman Act. Not only were the stock acquisitions an essential element of the conspiracy itself, but they put behind the scheme to control world trade, in addition to the ties forged by consipracy and agreement, the force of a large ownership interest in putative competitors by the dominant concern in the industry.

We have shown that appellant's interests in British Timken and French Timken (1) were acquired pursuant to and in furtherance of an illegal conspiracy, (2) were used to promote the conspiracy's illegal ends, and (3), if not severed, will continue to serve as an inducement to maintenance of the non-competitive regime of the past. Each of these circumstances, singly considered, constitutes ground for divestiture.[106] *United States* v. *Paramount Pictures, Inc.*, 334 U. S. 131, 152–153. Taken together, they furnish the most compelling justification for the divestiture ordered by the district court.

---

[106] In the district court the Government urged each of these circumstances as grounds for divestiture (R. 1165–1168).

In the *Paramount* case, certain exhibitor-defendants held stock interests in corporations operating motion picture theatres, other stock interests in the same corporations being held in some cases by other exhibitor-defendants and in other cases by independents, i. e., former, present, or putative motion picture operators not controlled by defendant exhibitors. In that case the district court had found that the result of joint ownership was that the jointly-owned theatres were operated "collectively rather than competitively," and it had ordered termination of all joint ownerships. This Court, after approving the divestiture which had been ordered of theatres jointly owned by defendant-exhibitors, held that the divestiture of theatres jointly owned with an independent should be in some respects broader and in some respects narrower than that decreed by the district court.[107] This Court laid down the principles to govern divestiture of these theatre interests as follows (334 U. S. at pp. 152–153):

---

[107] The district court's judgment permitted the defendant-exhibitor to acquire, subject to certain limitations, the existing interests of the independent, whereas this Court held that no such permission should be granted. On the other hand, the district court had ordered divestiture in the case of theatres owned jointly with persons assumed, without inquiry, to come within the classification of an independent, whereas this Court held that divestiture was not appropriate in the case of theatres involving "no more than innocent investments by those who are not actual or potential [theatre] operators."

> To the extent that these acquisitions were the fruits of monopolistic practices or restraints of trade, they should be divested. * * * Moreover, even if lawfully acquired, they may have been utilized as part of the conspiracy to eliminate or suppress competition in furtherance of the ends of the conspiracy. In that event divestiture would likewise be justified. * * *
>
> Furthermore, if the joint ownership is an alliance with one who is or would be an operator but for the joint ownership, divorce should be decreed even though the affiliation was innocently acquired. For that joint ownership would afford opportunity to perpetuate the effects of the restraints of trade which the exhibitor-defendants have inflicted on the industry.

In *United States* v. *Crescent Amusement Company,* 323 U. S. 173, companies which were potential competitors in the operation of theatres had become affiliated in the course of a conspiracy to restrain and monopolize trade and commerce in motion picture films, in violation of the Sherman Act. The district court had entered a judgment which required each corporate defendant to divest itself of any interest in any other corporate defendant or affiliated corporation. This Court held that the principle that those who violate the Sherman Act may not reap the benefits of their violations justified divestiture of

all interest in affiliates whose acquisition was "part of the fruits of the conspiracy." But this Court significantly further held (pp. 189–190):

> But the relief need not, and under these facts should not, be so restricted. The fact that the companies were affiliated induced joint action and agreement. Common control was one of the instruments in bringing about unity of purpose and unity of action and in making the conspiracy effective. If that affiliation continues, there will be tempting opportunity for these exhibitors to continue to act in combination against the independents. The proclivity in the past to use that affiliation for an unlawful end warrants effective assurance that no such opportunity will be available in the future. Hence we do not think the District Court abused its discretion in failing to limit the relief to an injunction against future violations. There is no reason why the protection of the public interest should depend solely on that somewhat cumbersome procedure when another effective one is available.

United States v. *National Lead Company*, 332 U. S. 319, like the present case, involved an illegal division of world territories. This Court upheld the district court's order that defendant divest itself of its foreign stock interests because "the stock acquisitions were part and parcel of the

territorial allocation agreements" (332 U. S. at 363).

Since appellant acquired its British Timken and French Timken stock as part and parcel of an illegal conspiracy, since it had utilized such investment to further this conspiracy, and since the investment would continue to provide opportunity and inducement to joint action to suppress competition, the district court's order of divestiture clearly did not constitute an abuse of the discretion vested in it respecting the framing of appropriate relief against the violations of the Act which it had found and against future violation of the Act.

The district court had a wide range of discretion in fashioning relief, and where its findings of violation are sustained, only abuse of discretion by the district court will lead this Court to recast its judgment. *United States* v. *Crescent Amusement Co.*, 323 U. S. 173, 185; *United States* v. *National Lead Co.*, 332 U. S. 319, 334. In view of the appellant's long and undeviating adherence to a cartel system, the district court plainly was justified in concluding that relief limited to mere prohibition of consensual agreements in restraint of trade would be ineffective to undo the effects of the past illegal conduct. The district court was warranted in concluding that if the judgment is to establish conditions conducive to competition in international trade among the erstwhile conspirators, appellant's

ownership interest in its co-conspirators must be severed so that the foreign companies will be completely independent of appellant *de facto* as well as *de jure*.

Appellant contends (Appellant's Br. 22–28, 196–198) that the nature of the business in which it is engaged, together with the obstacles to international trade created by tariffs, quota restrictions, governmental limitations on foreign exchange, etc., are such as to foreclose any substantial invasion of foreign markets by appellant or of domestic markets by its co-conspirators. Appellant concludes that this Court should make the assumption that there will be no competition between appellant and its co-conspirators even if the ties binding them to appellant are severed, and that the Court should hold that, in these circumstances, divestiture operates as a penalty rather than as a measure of relief against past and future violations of the Act.

The district court, dealing with appellant's contention that the exports of antifriction bearings from the United States, and imports into the United States, are so insignificant that action by the court to curb restraints on such trade would be a vain and futile gesture, pertinently observed (Op., par. 204, R. 1015):

> If all the impediments to foreign trade existed ever since 1914, which became more and more pronounced to the present day, why were the contracting parties, defend-

ant, British Timken and French Timken so concerned about airtight agreements to keep each one within its own commercial domain? The repeated and persistent provisions of the successive contracts, for territorial restrictions, contradict any claim of lack of ability to compete.

The district court found that there had, in fact, been "actual and potential competition" in international trade in roller bearings, and that such trade would have been of considerable size but for the restrictive agreements (*supra*, p. 121). Not only is the asserted unlikelihood of any substantial international trade in tapered roller bearings open to serious doubt, but it rests on an inherently speculative forecast as to the factors governing the future course of international trade. The district court properly held that the applicability of the Sherman Act to foreign trade cannot be made dependent upon every fluctuation in international political and economic conditions (Concl., par. 209, R. 1017). And even if any doubt existed as to efficacy of the relief deemed necessary to prevent further violations of the Act, relief is not to be withheld because of possible uncertainty as to how successful it will be in achieving the desired end. Just as in determining the scope of the relief to be granted, "doubts should be resolved in favor of the Government and against the conspirators" (*Local 167 v. United States*, 291 U. S. 293, 299), doubts

as to the efficacy of relief should be resolved in favor of the Government and against those who over a long period have been flagrant violators of the law.

Appellants suggest (Appellant's Br. 198–199) that the provisions of the judgment may have the effect of preventing appellant from using the trade-mark "Timken" in countries where British Timken or French Timken have been prior users of the mark. But even if we assume this to be true, it does not follow that appellant will not be able to compete, by selling its products in such countries under another trade-mark. To do so might well lead to greater competition than if all sold under the same trade-mark.

Appellant also urges (Appellant's Br. 199–202) that divestiture should be denied because it may have the effect of preventing appellant from realizing on the full value of its investment in its co-conspirators. But it is well settled that those who violate the Act "may not reap the benefits of their violations and avoid an undoing of their unlawful project on the plea of hardship or inconvenience" (*United States* v. *Crescent Amusement Co.*, 323 U. S. 173, 189), and that "the policy of the antitrust laws is not qualified or conditioned by" the disadvantages or inconvenience which the judgment provisions may cause to those whose conduct is regulated (*United States* v. *Paramount Pictures, Inc.*, 334 U. S. 131, 159).

Furthermore, the hardship of divestiture to appellant is doubtful and speculative. The testimony shows that there is a regular market for British Timken shares, which are listed on the London Stock Exchange and also traded upon the so-called "switch pound" market in New York (R. 1111). Appellant has a two-year period in which to dispose of this stock and may do so through open market sales, privately negotiated sales, syndicate operations, or any combination of these methods.

It is not clear that appellant has raised, or that it is entited to raise, any issue regarding subsection B of Section VIII of the judgment, which enjoins appellant from further acquisitions of British Timken and French Timken stock (R. 1179).[108] Regardless of whether the issue is properly raised, the provision is clearly necessary to prevent appellant from nullifying, by additional stock purchases, the divestiture which is ordered by subsection A. In the *Paramount* case, *supra*, this Court, in approving termination of theatre interests as to which the defendant-exhibitors were joint owners with potentially competitive independent operators, held that it was improper for the district

[108] There is a reference to this requirement of the judgment in appellant's Summary of Argument (Appellant's Br. 80) and a passing reference to it in the Argument (Appellant's Br. 98), although not in connection with divestiture, and it is not covered by appellant's Statement of Points to be Relied Upon (R. 1327–32).

court to permit termination of such interest through acquisition of the independent's interest (334 U. S. at pp. 152–153).

B. *The injunctive provisions of the judgment are appropriate means for preventing further violation of the Act*

The injunctive provisions of the judgment to which appellant objects principally prohibit concerted action and practices which were found to constitute elements of the illegal conspiracy to which appellant was a party. And to the extent that the prohibitions go beyond activities found to be unlawful, they come within the principle that "relief, to be effective, must go beyond the narrow limits of the proven violation." *United States* v. *U. S. Gypsum Company*, 340 U. S. 76, 90.[109]

1. *Exclusive grant, receipt or exchange of patent licenses, know-how and material and machinery.*—Appellant objects (Appellant's Br. 165–170) to the provisions of the judgment which enjoin it from entering into any conspiracy, agreement, or understanding with British Timken or French Timken for the exclusive grant, receipt or interchange of patent licenses, know-

[109] See also *International Salt Co.* v. *United States*, 332 U. S. 392, 400; *Local 167* v. *United States*, 291 U. S. 293, 299; *Ethyl Gasoline Corp.* v. *United States*, 309 U. S. 436, 461; *United States* v. *Bausch & Lomb Co.*, 321 U. S. 707, 727; *Hartford-Empire Co.* v. *United States*, 323 U. S. 386, 409.

how, or machinery and material relating to anti-friction bearings."[110]

The district court found that, although it does not "convincingly appear" that the exclusive exchange of know-how or enforcement of the trade-mark restrictions alone had served as "direct instruments" to eliminate competition, "they have been most helpful in buttressing other illegal conduct to achieve the desired result" and "were integral parts of the general scheme to suppress trade" (Fdg., par. 137, R. 1000). Means thus employed in effectuating the conspiracy were properly barred by the judgment. Indeed, when a trial court has made a finding of a conspiracy in restraint of trade, the prohibitions of its judgment need not be confined to "the proven means by which the evil was accomplished, but may range broadly through practices connected with acts actually found to be illegal." *United States* v. *U. S. Gypsum Co.*, 340 U. S. 76, 88–89.

It is immaterial that the complaint did not charge that there had been an exclusive exchange of know-how and of patented and unpatented inventions. Evidence to establish such a claim was presented at the trial (Fdg., par. 137, R. 1000) and issues with reference thereto were argued by the parties (Fdg., par. 164, R. 1006). "When issues not raised by the pleadings are tried by the express or implied consent of the

[110] Subsections G, H, Section V, and subsections A, B, C, 7, 8, Section VII, quoted *supra*, pp. 11–13.

parties, they should be treated in all respects as if they had been raised in the pleadings," and failure to amend the pleadings to conform to the evidence "does not affect the result of the trial of these issues." Federal Rules of Civil Procedure, Rule 15 (b).

Hartford-Empire Co. v. *United States,* 323 U. S. 386; *De Beers Consolidated Mines, Ltd.* v. *United States,* 325 U. S. 212; and *United States* v. *National Lead Co.,* 332 U. S. 319, cited by appellant, clearly are not apposite. The *Hartford-Empire* case merely held that, in the absence of a showing of patent invalidity, it was improper to require dedication to the public of patents employed in carrying out illegal restraints of trade. The *De Beers* case merely condemns grant of a preliminary injunction with respect to a matter wholly outside the issues of the case. And the holding in the *National Lead* case was that there was no basis for requiring divestiture of certain plants where there had been no charge, proof, or finding that the plants in question had been acquired or used in violation of the Act.

Appellant also contends that the prohibition against exclusive grant, receipt, or exchange of know-how and certain other property is confiscatory. We submit that this contention is almost frivolous. The prohibition is no more confiscatory than the prohibition against sale or lease of goods on tying clauses or conditions,

outlawed by Section 3 of the Clayton Act. It is a limitation, not a destruction, of property rights. In the *Hartford-Empire* and *National Lead* cases there is some suggestion that a requirement of compulsory licensing royalty-free offends against the due process clause of the Fifth Amendment, but this was on the theory that such a requirement is a destruction of all property rights in the defendants' misused patents.

2. *Agreements to fix sale or resale price.*— Subsection F of Section V of the judgment (*supra,* p. 10) enjoins appellant from agreeing with British Timken or French Timken, or any subsidiary, agent or distributor thereof, to fix or maintain sale or resale price. Appellant contends (Br. 170–173) that this prohibition might deny to it "rights" which it would otherwise have under the Miller-Tydings Act.

Agreements of this kind with British Timken or French Timken are horizontal agreements, not within exemptions from the Sherman Act given by the Miller-Tydings Act. Appellant's objection is therefore limited to the possibility that one of the foreign companies might have a distributor in this country who was also a distributor for appellant. But if appellant sold generally in this country to distributors pursuant to agreements having sanction under the Miller-Tydings Act, it is not clear that the judgment would bar such agreement with a distributor who

also happened to handle products of British Timken. Certainly the applicability of the prohibition might depend upon all the circumstances involved, including the relationship of the distributor to appellant and to the foreign company. If the situation suggested should ever arise, appellant would be free to apply to the district court for an interpretation of the scope of the prohibition of the judgment or for modification of the prohibition if good cause therefor could be shown. See *International Salt Co.* v. *United States*, 332 U. S. 392, 401.

3. *Refusing to sell or selling at discriminatory prices, on products to be resold in British or French territory.*—Subsection B of Section VI of the judgment (*supra*, pp. 10–11) enjoins appellant from refusing to sell bearings to any person at prices and on terms corresponding to those regularly offered to customers in its own territory, where the reason for such refusal is that such bearings are to be resold in territories exclusively allocated to British Timken and French Timken by the 1938 agreements.

Section IX of the judgment (*supra*, p. 14) similarly prohibits sales at discriminatory prices, and failure to provide comparable service and assistance to distributors, on sales in those territories.

For more than forty years appellant has refrained from sales in the countries allocated to its co-conspirators. Appellant and its co-conspirators have "religiously adhered to their

contractual obligations to make the territorial divisions inviolate" (Fdg., par. 70, R. 972). The "inflexible territorial limitations" which they imposed were "designed for the purpose of preventing competition" (Fdg., par. 124, R. 996) and have "had the effect of eliminating competition" (Fdg., par. 129, R. 997). In these circumstances, a mere injunction prohibiting appellant from conspiring to divide territories would plainly be insufficient to restore competition to the industry.

Appellant urges that the prohibitions are too broad, and suggests (Appellant's Br. 173) that they would apply to a refusal to sell, for motives of patriotism, in a territory in which appellant's bearings might come into the hands of Communists infiltrating the region. But questions of this character concern national policy and foreign relations and are to be determined by the appropriate officials of the Federal Government, not by private individuals or corporations.

Appellant objects (Br. 175–178), on the ground of unnecessary expense and burden, to the prohibition against failure to furnish to foreign distributors service and assistance comparable to that given domestic distributors. But service may be as important as price in selling appellant's product. The record is clear that mechanical engineering plays a pivotal role in the sale of bearings for original installation. In the words of appellant's vice president, it is at

the point where the layouts are prepared, when the proposed machinery is on the drawing board of the customer, that competition for original installation business takes place (R. 43-4, 65).

Appellant maintains local sales offices in cities throughout the United States, to each of which is attached a corps of sales engineers. These engineers confer with design engineers at the customer's offices and attempt to place appellant's bearings in the machinery to be manufactured by the customer. The customer in turn calls on appellant for design applications (R. 948). A similar sales engineer organization is maintained by appellant in South America (Gov. Ex. 141, R. 1582) and British Timken and French Timken provide the same type of technical assistance to customers in their respective territories (R. 391). Appellant has admitted that, for it to conduct any satisfactory sales efforts in the markets served previously by British Timken and French Timken, it would be necessary to have independent sales organizations, engineer organizations and replacement organizations (R. 544). Appellant's president has pointed out that "bearings are rarely sold by correspondence or by mail order methods" (R. 545). These facts indicate both the need for and the reasonableness of the provisions of the court's judgment. Of course comparable service is, in some measure, related to the volume of actual or potential business.

Even if it be assumed that the judgment would tend to force appellant "to enter into business relations," it is clear that the requirement would not be beyond the jurisdiction of the district court. *International Salt Co.* v. *United States,* 332 U. S. 392, affirmed an injunction requiring defendants to lease salt-dispensing machinery to all applicants without discrimination, and the Court said in this connection that the purpose of a judgment entered against those who have violated the Sherman Act is not "merely to end specific illegal practices," but in addition to effectively "pry open to competition a market that has been closed by defendants' illegal restraints" (332 U. S. at p. 401).

Appellant's related contention that the judgment deprives it of the right to choose its customers is met not only by the decision in *International Salt,* but also by decisions upholding judgments which require granting patent licenses, at a reasonable rate of royalty, to every applicant therefor. *Hartford-Empire Co.* v. *United States,* 323 U. S. 386, 417–8; *United States* v. *National Lead Co.,* 332 U. S. 319, 330, 332, 364; *United States* v. *U. S. Gypsum Co.,* 340 U. S. 76, 94.

4. *Agreements with co-conspirators as to transfer of trade-mark.*—Subsection C, 1, 2, 4, 5, of Section VII of the judgment (*supra,* p. 12) enjoins appellant from entering into agreements or contracts with its co-conspirators for the transfer of any right or immunity under a trade-

mark or name, upon certain specified conditions which involve limitation of competition, restraint of trade or price fixing.

The district court found that the enforcement of trade-mark restrictions by appellant and its co-conspirators had served to buttress the desired result of eliminating competition among themselves and had been "integral parts of the general scheme to suppress trade" (Fdg., par. 137, R. 1000); that the trade-mark provisions of their agreements "were subsidiary and secondary to the central purpose of allocating trade territories" (Fdg., par. 187, R. 1010); and that appellant's agreements with its co-conspirators governing use of the trade-mark "Timken" was "for the purpose of preventing competition in the sale of bearings," and not to protect itself or the public from deceit (Fdg., par. 188, R. 1010–11).

Based upon such findings, the district court enjoined the use of trade-marks for allocation of territory and like purposes. The basic prohibitions of the judgment against such practices would be ineffective without this trade-mark relief since otherwise trade-mark rights might be employed to divide trade on a territorial basis. To the extent that this relief bars conduct which is lawful standing by itself, such prohibition is proper and appropriate where, as here, it is required in order that the relief be effective. *Local 167* v. *United States*, 291 U. S. 293, 299;

Hartford-Empire Co. v. *United States,* 323 U. S. 386, 409.

Appellant's purpose to continue the allocation of territory is shown by what transpired at the London conference immediately following the hearing on relief in the district court, when it was arranged that appellant become the "registered user" and British Timken the "registered owner" of the mark "Timken" in certain countries within British Timken territory (Def. Ex. D, R. 2757–61). Significantly, it was decided that appellant's rights as a "registered user" in certain territories would be limited by the allocation of territories in the 1938 agreements (Def. Ex. D (Decree), par. (M), R. 2762), so that even though appellant is a "registered user" in Great Britain, for example, it would not be empowered under this agreement to make or sell bearings there for original installation because prohibited from so doing by the 1938 agreements.

Appellant further objects to subsection 8 of Section VII of the judgment (*supra,* p. 13), which enjoins appellant from agreeing with its co-conspirators to transfer trade-mark rights upon condition that the latter exclusively grant, receive or exchange technical information, material or machinery relating to antifriction bearings. Appellant contends (Br. 182–183) that this requirement will stop the making of "controlled trade-mark licenses" since appellant as licensor of the trade-mark "Timken" would not be willing

to supply know-how to a licensee knowing that it would have to supply the same information to third party competitors.

The judgment bars such licensing agreements only when made with British Timken or French Timken or a subsidiary, agent, sales representative or distributor thereof. The substance of the contention therefore is that the judgment should leave appellant free to license its trade-mark rights to British Timken and French Timken; upon the condition that they grant, receive or exchange know-how exclusively with appellant. The contention is a repetition of the objections to prohibiting such exclusive exchange, which we have previously answered (*supra,* pp. 149–151).

We submit that judgment provisions relating to trade-marks are essential if the unlawful combination to allocate territories is to be terminated and its recurrence prevented.

CONCLUSION

For the foregoing reasons, the judgment of the district court should be affirmed.

Respectfully submitted.

No. 352.

OCTOBER TERM, 1950.

THE TIMKEN ROLLER BEARING COMPANY,
Appellant,

vs.

UNITED STATES OF AMERICA,
Appellee.

MOTION FOR POSTPONEMENT OF ORAL ARGUMENT TO OCTOBER TERM, 1951.

The Timken Roller Bearing Company, appellant in the above entitled case, respectfully moves this Honorable Court that the oral argument herein be postponed until the October, 1951, term of this Court, and in support of its motion states:

1. The above-entitled case is now pending on the docket of this Court, petition for appeal having been filed and allowed by the District Court on July 28, 1950 and probable jurisdiction having been noted by this Court on November 6, 1950.

2. Subsequently to the perfection of the appeal to this Court and the noting of probable jurisdiction therein, Michael B. U. Dewar, who in 1927 acquired jointly with the appellant all the stock of British Timken, Limited, an English corporation (hereinafter called "British Timken"), and who in 1928 jointly with the appellant caused Societe Anonyme Francaise Timken, a French corporation (hereinafter called "French Timken"), to be organized died on December 21, 1950.

3. One of the appellant's principal contentions in the above-entitled case in the District Court was that it had not combined unlawfully in restraint of trade and in violation of Section 1 of the Sherman Act (26 Stat. 209, as amended), with British Timken and French Timken, as alleged by the appellee, because it had engaged with Dewar in a joint enterprise (terminated by his death) to conduct the manufacture and sale of antifriction bearings in foreign countries under a license of the trade-mark "Timken"; that British Timken and French Timken, respectively, were acquired and organized as instrumentalities for the purpose of carrying out the enterprise, and that any restraints of trade resulting from agreements between the appellant and these two companies were reasonably ancillary to the organization and conduct of the joint enterprise, all as more particularly described in a motion filed in the District Court after Dewar's death, a copy of which is attached hereto and marked Exhibit A and which is more particularly referred to hereinafter.

4. Pursuant to agreements entered into by the appellant with Dewar in connection with the joint enterprise between them, the appellant was given options effective at Dewar's death to purchase Dewar's ordinary shares of stock of British Timken amounting to approximately 23.74 per cent of all of its issued and outstanding ordinary shares, which, together with the appellant's ordinary shares of stock in British Timken amounting to 30.26 per cent thereof, represent voting control of British Timken, and to purchase stock of French Timken owned by a holding company owned by Dewar representing one vote at stockholders' meetings thereof which, with appellant's stock in French Timken amounting to 50 per cent thereof, represents voting control of French Timken, and also was given the first refusal on the remaining 50 per cent of the stock of French Timken, owned by Dewar's holding company, in the event that Dewar's holding company should desire to sell, all as more

particularly described in Exhibit A hereto. The appellant has exercised its options as to Dewar's stock in British Timken and in French Timken representing voting control thereof, and has been advised by Dewar's executors that Dewar's holding company desires to sell the balance of the stock of French Timken held by it, and the appellant has advised them that it desires to acquire such balance of French Timken stock. As a result of such acquisition the appellant will become the sole owner of French Timken.

5. On January 24, 1951, the appellant filed a motion, a copy of which is Exhibit A hereto, in the District Court for the Northern District of Ohio, Eastern Division (in which judgment had been rendered against the appellant in the above-entitled case) asking that that court make application to this Court for leave to take and consider evidence of Dewar's death, of appellant's desire to exercise, and exercise of, the options with respect to Dewar's stock in British Timken and the stock of Dewar's holding company in French Timken, and such other evidence deemed relevant by the District Court as the appellant might desire to introduce at the hearing, and to reconsider its judgment herein, and that, upon granting of such application by this Court, the District Court take and consider the additional evidence, thereafter make further application to this Court to remit to it the record to the extent deemed necessary by the District Court for its consideration of the matter, and vacate or modify its judgment in view of the changed circumstances resulting from Dewar's death, all as more particularly set forth in Exhibit A hereto.

6. On February 14, 1951, the District Court heard oral argument on the motion and took it under advisement, and stated to counsel that the Court desired to give the matter careful consideration, to examine the briefs filed by both parties, and an opportunity to study the case, that the Court would be unable to begin the consideration of this matter for 30 days or more from and after February 14,

1951, and that it would be a number of weeks after February 14, 1951, before the Court would reach a decision on the appellant's motion, all as more particularly set forth in a portion of the transcript of the proceedings had with respect to said oral argument, a copy of which is attached hereto and marked Exhibit B.

7. The appellant is advised by the office of the Clerk of this Court that the last assignment of cases for oral argument in the October term, 1950, of this Court will commence on April 16, 1951.

8. It will be impracticable for the appellant to prepare and print a brief on the merits of the above-entitled case after the earliest date on which decision of such motion by the District Court reasonably may be expected and within 3 weeks prior to oral argument of this case on appeal during the period commencing April 16, 1951.

9. If argument is not now postponed it will be necessary to commence forthwith the preparation of a brief in this Court and it is not practicable to undertake, nor is it reasonable to require, the preparation of a brief until the District Court has ruled on the motion, pending disposition thereof, and until any necessary action pursuant to such ruling has been taken, because until such time neither party will know: (1) what facts ultimately will be included in the record before this Court (we are advised by the office of the Clerk of this Court that the printing of the record should be finished by February 28, 1951, but the record, as so printed, will not include any of the facts as to Dewar's death and action taken pursuant thereto, as previously stated herein); (2) what modification, if any, will be made in the findings of facts or conclusions of law of the District Court; and (3) what modification, if any, will be made in the final judgment of the District Court.

10. If the District Court grants the appellant's motion, further time will elapse before the District Court will

be able to request authority from this Court to receive the additional evidence and for the District Court to hear such additional evidence and to reconsider its prior judgment herein; and in such event the appellant would be put to unnecessary expense in the preparation and printing of its brief on the proposed merits of this case in this Court, in that the brief might become unnecessary or inapplicable if the District Court should vacate or modify its judgment.

11. Giving the District Court an opportunity to hear additional testimony in this case based upon the changed circumstances resulting from the death of Dewar, and the opportunity to reconsider its final judgment, will save the time of this Court, by causing to be presented to this Court at one time, with the existing record, any new and additional facts sought to be elicited by the appellant, and will avoid delay in a final determination of this case by this Court.

EXHIBIT A.

IN THE UNITED STATES DISTRICT COURT
FOR THE NORTHERN DISTRICT OF OHIO,
EASTERN DIVISION.

CIVIL ACTION No. 24,214.

UNITED STATES OF AMERICA,
Plaintiff,

VS.

THE TIMKEN ROLLER BEARING COMPANY,
Defendant.

MOTION BY THE TIMKEN ROLLER BEARING COMPANY, DEFENDANT IN THIS COURT, APPELLANT IN THE SUPREME COURT OF THE UNITED STATES, THAT THIS COURT ASK LEAVE OF THE SUPREME COURT OF THE UNITED STATES TO CONSIDER DEFENDANT'S MOTION THAT THIS COURT RECEIVE ADDITIONAL EVIDENCE AND RECONSIDER ITS FINAL JUDGMENT HEREIN AND, IF LEAVE BE GRANTED, THAT THIS COURT PROCEED SO TO DO, BECAUSE OF CHANGED CIRCUMSTANCES DUE TO THE DEATH OF MICHAEL B. U. DEWAR SINCE THE PERFECTION OF AN APPEAL HEREIN TO THE SUPREME COURT OF THE UNITED STATES.

NOW PENDING ON APPEAL IN THE SUPREME COURT OF THE UNITED STATES.

The Timken Roller Bearing Company, defendant in this Court, appellant in the Supreme Court of the United States (hereinafter styled "the defendant"), in support of its motion that this Court ask leave of the Supreme Court of the United States to consider defendant's motion that this Court receive additional evidence and reconsider its final judgment herein and, if leave be granted, that this

Court proceed so to do, because of changed circumstances due to the death of Michael B. U. Dewar since the perfection of an appeal herein to the Supreme Court of the United States, respectfully shows to the Court as follows:

1. Michael B. U. Dewar died in England on December 21, 1950 at the age of 64. He and his acts and agreements with the defendant and others figure prominently and are mentioned frequently in the record, and in the memorandum opinion of this Court in this cause, which was tried throughout and decided upon the basis that Dewar was alive.

2. The final judgment in this cause was appealed to the Supreme Court of the United States on the 28th day of July, 1950, and is now pending on appeal in that Court, being cause No. 352 therein. The appeal was perfected before Dewar died.

3. At the time Dewar died, to wit, on December 21, 1950, he owned approximately 23.74 per cent, consisting of 94,960 ordinary shares, of the issued and outstanding stock of British Timken, Ltd. (hereinafter called "British Timken"), a British corporation engaged in the manufacture of anti-friction bearings, all of the stock of which was acquired jointly by Dewar and the defendant in 1927. At the time of Dewar's death, and at the present time, the defendant owned, and owns, approximately 30.26 per cent, consisting of 121,040 ordinary shares, of the stock thereof. The above described ordinary shares owned by the defendant and by Dewar's estate constitute approximately 54 per cent of the ordinary shares of stock of British Timken, the vote of which is entitled to control its affairs in the absence of default by it with respect to its preferred stock requirements. At the time Dewar died, and at the present time, there was, and is, in full force and effect an agreement between him and the defendant made March 22, 1948 (the latest of a series of agreements which carried out the fundamental agreement to the same effect made in 1927),

by virtue of which the defendant now has the option to purchase all or any of the 94,960 ordinary shares in British Timken belonging to Dewar, exercisable at any time during a period of six months from and after Dewar's death by notice in writing served upon the holders of such 94,960 ordinary shares within the period of six months during which the option is exercisable, at a price agreed upon by the parties, or, failing agreement, at the average price of similar shares of British Timken on the London Stock Exchange over a period of thirty days immediately preceding the date on which the option became exercisable, namely, Dewar's death on December 21, 1950.

4. At the time Dewar died on December 21, 1950, and at the present time, the defendant owned, and now owns, 50 per cent, consisting of 40,000, and La Reunion Industrielle Societe Anonyme (hereinafter called the Lux Company, a company incorporated in Luxembourg, all of the shares of which have been owned directly or indirectly by Dewar) owned, and now owns, the other 50 per cent, consisting of 40,000, of the issued and outstanding ordinary 100 franc par shares of the stock of Societe Anonyme Francaise Timken (hereinafter called "French Timken"), a French corporation engaged in the manufacture and sale of antifriction bearings in France, which was organized at the joint instance of the defendant and Dewar in 1928 and has been jointly owned by them, or corporations owned by them, at all times thereafter. The votes of the above described ordinary shares of French Timken are entitled to control its affairs. The defendant and the Lux Company each own, also, 50 per cent of the issued and outstanding preferred stock and promissory notes of French Timken. By the terms of Section 5 (h) of an agreement entered into on or about the 11th day of December, 1935, by and between the defendant, the Lux Company, Frederick John Pascoe (as trustee) and Dewar, it is provided that, upon the death of Dewar, the Lux Company, if so requested by

the defendant, will cause one share or other holding of shares in French Timken carrying one vote, to be transferred to the defendant or its nominees at the par value of such share or holding, thus transferring voting control of French Timken to the defendant, and it is further provided, in Section 6, that no share of French Timken owned or controlled by the defendant or the Lux Company at the date of said agreement will be sold, transferred or otherwise disposed of unless it has been first offered for sale to the other party by notice in writing, the offer to remain open for acceptance by the party to whom it is made for ninety days after it is received by such party.

5. The defendant acquired 52½ per cent and Dewar 47½ per cent of the capital stock of British Timken in 1927, and the defendant and Dewar caused French Timken to be organized and each acquired, directly or indirectly, half of its ordinary shares, as above set forth, pursuant to a general arrangement in the nature of a joint venture between them by which, in substance, Dewar was to have control of the ordinary affairs of British Timken and French Timken during his lifetime and active participation in the management thereof while those companies made specified profits, and the defendant had the right to acquire complete control of each company in certain events, including Dewar's death, as aforesaid. This arrangement has continued from its inception in 1927 until the date hereof.

6. The defendant intends and proposes, as soon as may be practicable, to exercise its rights under the six months option granted to it by the terms of the aforesaid agreement relating to British Timken stock, and under the option to acquire voting control of French Timken granted to it by the terms of the aforesaid agreement relating to French Timken stock, and proposes to consider the purchase of the remainder of the stock of French Timken, if the same should be offered to it by the Lux Company for ninety days pursuant to the latter agreement. The defendant considers

that it is free so to do without violating any of the provisions of this Court's final judgment in this cause, by virtue of its order entered July 28, 1950 allowing an appeal to the Supreme Court of the United States and staying the execution of said judgment pending the final disposition of said appeal, which order provides as to such stay that:

> "* * * the execution against the above named defendant of all of the provisions of the Final Judgment entered herein, and compliance by the defendant with said Final Judgment be, and the same are, hereby suspended and stayed pending the hearing and final determination of this cause upon appeal."

7. Inasmuch as the time within which the defendant may give the required notices of its intention to exercise its respective options above described is limited as above set forth, it is imperative that it proceed with dispatch so to do for the reason that, if said options are not exercised by it within the times limited, and the final judgment of this Court is reversed or modified by the Supreme Court of the United States, and it is ultimately determined that the defendant may lawfully exercise said options and acquire the stocks covered thereby, it may sustain great and irreparable loss, in that the stock of either or both of British and French Timken, respectively, including the element of control incident thereto, may be sold to purchasers other than the defendant.

8. If the defendant exercises its option, hereinbefore described in paragraph 3, to acquire Dewar's ordinary shares in British Timken, it will be the owner of 216,000 ordinary shares of the stock of British Timken out of a total of 400,000 shares, and will be a majority and controlling shareholder of said corporation with the ensuing and attendant rights to exercise all of the powers vested in it as such.

9. If the defendant exercises its option, hereinbefore described in paragraph 4, to acquire the controlling share

or shares in French Timken from the Lux Company it will be the majority and controlling shareholder of French Timken with the ensuing and attendant rights to exercise all of the powers vested in it as such, and if the Lux Company decides to sell its shares of French Timken, the defendant will have the right to become the owner of all of the stock of French Timken.

10. If the respective options above described are exercised by the defendant and as a consequence thereof, stock interests in British Timken and French Timken, respectively, are acquired as above set forth, it will follow that the defendant will be a majority stockholder of both British and French Timken, respectively, and possibly the sole owner of French Timken, instead of a minority stockholder in British Timken and an equal stockholder with Dewar in French Timken, as it was before Dewar died.

11. The exercise by the defendant of the options to acquire Dewar's former stock interest in British Timken and French Timken, respectively, and the resulting changed and additional stock interest of the defendant therein will necessarily raise and present for determination legal questions which have not heretofore been considered nor decided by this Court, in the light of the changed circumstances, including particularly the question of whether the defendant should be permitted to conduct its operations in the British Empire and Europe through British Timken and French Timken, as majority owned subsidiaries, or, instead, be required to divest itself of all interest in those companies, as presently decreed by this Court.

12. It is in the furtherance of justice, in view of the fact that Dewar has died since the perfecting of the appeal to the Supreme Court of the United States in this cause, and the further fact that the defendant intends and proposes to exercise the options granted to it to acquire additional stock interests in British Timken and French Timken, respectively, as above set forth, that the record in this case

be reopened by this Court for the purpose of permitting the defendant to introduce evidence of these facts and the new situation thereby created.

13. The taking of additional evidence in the respects above stated, will result in having the record in this cause disclose the facts as they now actually exist, and will thereby prevent unnecessary delay and prolixity in the final disposition of this cause both in this Court and on appeal in the Supreme Court of the United States.

14. It is no longer equitable, because of the occurrence of the death of Dewar and the perfection of the resulting rights in the defendant, all of which has occurred since the rendition of this Court's final judgment herein, that such final judgment should have prospective operation in certain respects, including particularly Section IV thereof which terminates, and restrains the defendant from further enforcing any of the provisions of the agreement dated March 22, 1948, between the defendant and Dewar which grants to the defendant the option to purchase Dewar's ordinary shares of stock in British Timken referred to in paragraph 3 hereof, and Section VIII thereof which requires the defendant to divest itself of all stock holdings and other financial interest, direct or indirect, in British Timken and French Timken, and enjoins it from acquiring any ownership interest in British Timken or French Timken by purchase or acquisition of assets or securities or through the exercise of any option, and from exercising any authority or control over the sale or other business policies of British Timken or French Timken.

15. This Court has jurisdiction to ask leave of the Supreme Court of the United States to consider the defendant's motion that this Court receive additional evidence in the respects above set forth, determine the legal questions presented by reason of the change of circumstances as to stock ownership and control of the defendant in British Timken and French Timken, respectively, and reconsider

its final judgment herein, and, if leave be granted, to proceed so to do, by virtue of the decisions and holdings of the Supreme Court of the United States in *Roemer v. Simon*, 91 U. S. 149 and *Realty Acceptance Corporation v. Montgomery*, 284 U. S. 547, 551.

WHEREFORE, The Timken Roller Bearing Company, defendant in this Court, appellant in the Supreme Court of the United States, respectfully moves this Court as follows:

1. That this Court make application to the Supreme Court of the United States for leave to consider the motion made by the defendant in the next succeeding paragraph hereof, and in connection therewith

(a) to receive evidence and insert it in the record in this cause;

(b) to consider such additional evidence and make its findings of fact and conclusions of law with respect thereto;

(c) to obtain, upon further application to the Supreme Court of the United States by this Court, a remittitur of all or so much of the record in this cause now filed in the Supreme Court of the United States as this Court may deem necessary to further consideration of this cause in the light of such additional evidence;

(d) to reconsider its final judgment herein and to relieve the defendant therefrom by vacation or modification thereof, if this Court shall deem such action just; and

(e) in the event that this Court shall not vacate its final judgment herein, to certify such proceedings had pursuant to this motion to the Supreme Court of the United States for inclusion as part of the record on appeal in that Court in this cause.

2. That this Court, upon receiving leave from the Supreme Court of the United States, proceed further in this cause:

(a) to receive and insert in the record in this cause evidence that Michael B. U. Dewar died at the age of 64 on December 21, 1950, after the appeal from this Court to the Supreme Court of the United States had been perfected;

(b) to receive and insert in the record in this cause evidence that the defendant proposes to exercise, as soon as may be practicable, its rights under the option agreements hereinbefore described and thereby to acquire 94,960 ordinary shares of the stock of British Timken, and shares carrying one vote in French Timken, or part or all of the shares of French Timken now owned by the Lux Company if the same shall be offered to the appellant;

(c) to receive and insert in the record in this cause any other evidence offered by the parties which the Court shall deem competent, relevant and material;

(d) to consider such new and additional evidence described in subparagraphs (a) through (c) of this paragraph 2, and determine the legal questions presented by the change of circumstances resulting from the death of Dewar and the exercise by the defendant of the options hereinbefore described, and make its findings of fact and conclusions of law with respect thereto;

(e) to reconsider its final judgment herein and to relieve the defendant therefrom by the vacation thereof, or, in the event that the Court shall not vacate the same, by modification thereof to eliminate the provisions of Sections IV and VIII thereof which adversely affect the rights of the defendant as specified in paragraph 14 hereof, or otherwise as may to the Court seem appropriate; and

(f) in the event that this Court shall not vacate its final judgment herein, to certify such proceedings

had pursuant to this motion to the Supreme Court of the United States for inclusion as part of the record on appeal in that Court in this cause.

Notice of Motion.

To Philip B. Perlman, Solicitor General of the United States,
Washington, D. C.

Robert B. Hummel, Chief,
Great Lakes Division,
Antitrust Division,
Department of Justice of the United States,
905 Public Square Building,
Cleveland, Ohio.

Please take notice that The Timken Roller Bearing Company, defendant in Civil Action No. 24,214 in the District Court of the United States for the Northern District of Ohio, Eastern Division, entitled *United States of America vs. The Timken Roller Bearing Company,* and appellant in said cause on appeal in case No. 352 on the docket of the Supreme Court of the United States, entitled *The Timken Roller Bearing Company vs. The United States of America,* has filed the foregoing motion in the above entitled case that the District Court of the United States for the Northern District of Ohio, Eastern Division, ask leave of the Supreme Court of the United States to consider defendant's

motion that the said Distfict Court receive additional evidence and reconsider its final judgment therein, and, if leave be granted, that the District Court proceed so to do, because of changed circumstances due to the death of Michael B. U. Dewar since the perfection of the appeal in said cause to the Supreme Court of the United States, and that the same will be on for hearing before the Honorable Emerich B. Freed, Judge of the District Court of the United States for the Northern District of Ohio, Eastern Division, Federal Building, Cleveland, Ohio, on the 5th day of February, 1951, at 10:00 o'clock, or as soon thereafter as such motion can be heard.

LUTHER DAY,
JOHN G. KETTERER,
Attorneys for Defendant-Appellant, The Timken Roller Bearing Company.

Service of Motion.

Copies of the foregoing motion, notice of motion, and statement of reasons in support thereof were served upon counsel for the plaintiff-appellee in the above entitled cause by depositing in the mail copies thereof addressed to Philip B. Perlman, Solicitor General of the United States, Washington, D. C., and Robert B. Hummel, Chief, Great Lakes Division, Antitrust Division, Department of Justice of the United States, 905 Public Square Building, Cleveland, Ohio, on this 24th day of January, 1951.

LUTHER DAY,
JOHN G. KETTERER,
Attorneys for Defendant-Appellant, The Timken Roller Bearing Company.

STATEMENT OF REASONS SUPPORTING MOTION.

The Court will remember that Dewar, the English businessman who purchased British Timken in 1927 and caused the organization of French Timken in 1928, at the joint instance of himself and defendant, figured very prominently in the evidence when this case was tried on the merits. Much of the evidence introduced by the defendant was for the purpose of proving that Dewar and it, ever since their entering into the Heads of Agreement of May 16, 1927, contemplating the purchase of British Timken and other matters of a broad general nature, had maintained and carried out an arrangement in the nature of a joint venture between them for the purpose of developing the manufacture and sale of tapered roller bearings in defined foreign territory, and that British Timken and French Timken were the instrumentalities through which the joint venture was conducted. One of the defendant's principal contentions was that Dewar and it could lawfully cause arrangements to be made between the foreign Timken companies and the defendant by which the latter, by reason of the joint venture, agreed not to compete with them and they, in turn, not to compete with the defendant.

On December 21, 1950 Dewar died, and it is quite obvious that his death radically changed all of the foregoing situation, and is a fact which, therefore, should appear in the record on appeal to the Supreme Court. This case can no longer be briefed or argued properly, upon the now existing state of facts, on the same basis as that which obtained in this Court before Dewar died.

Moreover, as the motion shows, one provision of the agreement pursuant to which the joint venture has been carried on, was that, upon Dewar's death, the defendant should have the right to acquire control of both British Timken and French Timken by the exercise of the options specifically described in our motion. That which was merely a remote possibility in this regard at the time of the

trial and disposition of this case in this Court has now become a fact. We believe that this Court may wish to reconsider particularly, as requested by the defendant, that portion of its judgment in which it decreed that the defendant should divest itself of all interest in British Timken and French Timken, respectively, and should acquire no further interest therein. After all, it is necessary and usual for American manufacturers to conduct their foreign operations in the principal European countries, including those composing the British Empire, through local subsidiaries, either wholly or partly owned, and this Court may desire to consider whether or not it should afford to the defendant that privilege now that it is potentially the majority owner of both British Timken and French Timken. This was done in *United States v. National Lead Company*, 63 F. S. 513 (S. D. N. Y., 1945) aff'd. *United States v. National Lead Co.*, 332 U. S. 319, in which the court gave National Lead Company the option of either disposing of its stock in certain foreign corporations jointly owned by it and its adjudged co-conspirators, or acquiring the stock of the latter therein.

In any event, it would be in the interest of justice to enable the defendant to insert in the record the facts as to Dewar's death, the exercise of the options by it, and any other competent, relevant and material evidence bearing on this question which this Court might see fit to receive, for the purpose of enabling the Supreme Court on appeal to determine the nature of the relief which should be granted to the plaintiff, assuming that the judgment of this Court on the merits of the case is affirmed.

This motion, of course, is unusual in nature, in that we are asking that the District Court take action in a case which is pending on appeal in the Supreme Court. However, an extended examination of the authorities has revealed that this procedure is authorized and approved by the Supreme Court under circumstances of the nature here present.

In *Roemer v. Simon*, 91 U. S. 149, the appellant presented in the Supreme Court a petition supported by affidavits, stating, in substance, that material evidence previously unknown to him had been discovered since perfection of his appeal from a decree dismissing his bill for an injunction and an accounting resulting from alleged patent infringement. He moved that leave be granted him to give to the appellees the requisite notice of a further motion for a rule requiring them to show cause why the Supreme Court should not remit the record to the Court below for a rehearing of the case. The Supreme Court denied the motion stating (p. 150):

> "It is clear that, after an appeal in equity to this Court, we cannot, upon motion, set aside a decree of the court below, and grant a rehearing. *We can only affirm, reverse or modify the decree appealed from, and that upon the hearing of the cause. No new evidence can be received here.*[1] Rev. Stat. § 698. The court below cannot grant a rehearing after the term at which the final decree was rendered. Equity Rule 88. It would be useless to remand this cause, therefore, as the term at which the decree was rendered has passed. *If the term still continued, the proper practice would be to make application to the court below for a rehearing, and have that court send to us a request for a return of the record, in order that it might proceed further with the cause.* Should such a request be made, we might, in a proper case and under proper restrictions, make the necessary order; but we cannot make such an order on the application of the parties. *The court below alone can make the request to us. The application of the parties must be addressed to that court, and not to us.*"

In *Realty Acceptance Corporation v. Montgomery*, 284 U. S. 547, the Supreme Court reaffirmed its position that the action must be initiated in the first instance in the District Court. In that case, the Circuit Court of Appeals af-

---

[1] Emphasis throughout is supplied unless otherwise indicated.

firmed a judgment of the District Court against the defendant for breach of a contract of employment after the expiration of the term in which the District Court had entered judgment against the defendant. After the affirmance, the appellant filed a motion for a rehearing and, before disposition thereof, presented to the appellate court a petition alleging that at the trial the plaintiff had failed to disclose certain earnings of which he had been in receipt which should have been taken into account in mitigation of damages, and that these facts had been discovered only after the perfection of the appeal. The petition prayed that the mandate of the Court of Appeals be stayed to afford the District Court opportunity, if it thought proper, to request the return of the record so that the judgment could be opened and that, if justice should so require, a new trial be granted on the issue of the amount of damages. This petition was granted and the District Court, on application of the appellant, requested the Court of Appeals to return the record, whereupon the latter court vacated its judgment affirming that of the District Court and dismissing the appeal, thus returning the record to the District Court, which then entertained a motion for a new trial, found the evidence newly discovered, set aside the judgment, and granted a new trial. On appeal, the Court of Appeals held that it should not have taken the action which it did, and reinstated the order affirming the original order of the District Court. The Supreme Court, on appeal, held that 28 U. S. C. A. § 876, which defined the appellate jurisdiction of the Court of Appeals as well as that of the Supreme Court, did not grant jurisdiction to the appellate courts to take action to reverse or modify their judgments where no error appeared in the record justifying modification or reversal, merely for the pupose of enabling the lower court to receive newly discovered evidence. The Court referred to *Roemer v. Simon*, 91 U. S. 149, *supra*, as supporting this proposition, and also the proposition that

"if the term had not expired the appellate court might in a proper case, upon request of the court below, return the record, for the opening of the decree and for rehearing" (p. 551). The Supreme Court also held that by rescinding its affirmance of the judgment and dismissing the appeal, the Circuit Court of Appeals ended the case in that court, and deprived itself of all power to add to or alter the record as certified, and "Since there was no case pending power was wanting to make any power granting leave to the court below for any purpose. The attempt by remanding the record with leave to the court below to take action *which would otherwise have been beyond its power* left the matter precisely as if no such order had been made." (p. 552.)

That under the present rule this Court does have power to act as requested by the defendant is shown by our discussion of Rule 60(b) and 6(c), Rules of Civil Procedure, later herein, so that an order of the Supreme Court permitting this Court to act would not be contrary to the decisions in the above cases.

This method of procedure has been recognized as appropriate in *Chisholm-Ryder Company v. Buck*, 65 F. (2d) 735 (C. C. A. 4, 1933), in which the complainant in a patent infringement case on appeal presented to the Appellate Court a motion to receive and consider as a part of the record a certain patent, and the court held it had no jurisdiction to take further proof or to set aside a judgment of the District Court for that purpose, if no error appeared in the record, following *Realty Acceptance Corporation v. Montgomery*, 284 U. S. 547, *supra;* and *In Re Robertshaw*, 75 F. (2d) 203 (Court of Customs and Patent Appeals, 1935), in which the court denied a motion to remand which was joined in by the Commissioner of Patents, in order to enable the patent office to declare an interference between two applications for patents which should have been declared but was not, and to enable the Commissioner of Patents to take proper action, on the ground that application should have been made to the patent office alone to send

to the Court of Appeals a request for return of the record in accordance with the practice laid down in *Roemer v. Simon*, 91 U. S. 149, *supra*; and in *Hall v. United States*, 78 F. (2d) 168 (C. C. A. 10, 1935).

The Court will observe that the motion in the case at bar does not ask that this Court seek to obtain a return of the record from the Supreme Court unless, and until, this Court shall determine whether it is necessary to consider the record, in whole or in part, to determine what action to take in connection with this supplemental proceeding. The authority for this refinement of the rule laid down in *Roemer v. Simon*, 91 U. S. 149, *supra*, is found in *Baltimore S. S. Company v. Phillips*, 9 F. (2d) 902 (C. C. A. 2, 1925), in which the District Court, on motion of the plaintiff therein, and after the appellant had appealed from an adverse judgment, requested the Circuit Court of Appeals to remit the record in connection with a motion in the District Court by the appellant for reargument of the case. The record was remitted and the District Court vacated its judgment and set the cause down for trial. Appealing to the Court of Appeals from a judgment for the plaintiff, the defendant contended that the District Court had no jurisdiction to vacate the judgment of dismissal of the complaint. The Court, after referring to *Roemer v. Simon*, *supra*, as stating the proper practice, said (p. 903):

> "Of course, the appellant may always move to dismiss his appeal (Greene v. United, etc., Co., 124 F. 961, 60 C. C. A. 93 (C. C. A. 1)), and no request is necessary for that purpose. But in so doing he risks all on his cast in the District Court, for it may be too late after decision for a new appeal. Similarly, if on the appellant's motion the District Court asks for a remittitur before deciding the motion, as was apparently the case in Mossberg v. Nutter, 124 F. 966, 60 C. C. A. 98 (C. C. A. 1), and as the District Court did in the case at bar. *The safest way is for the District Court, if disposed to entertain the motion at all, to ask leave of this court to do so. If this is given, it may proceed, the appeal*

> *still pending. Should it decide to reopen, it may then request remittitur; and the appellant will have risked nothing.* This was the course approved by the Circuit Court of Appeals for the Sixth Circuit in Meccano v. Wagner (C. C. A.) 235 F. 890, and we also approve it. Sundh Elec. Co. v. Cutler-Hammer Mfg. Co., 244 F. 163, 170, 171, 156 C. C. A. 591."

See also *Thomas & Betts v. Electrical Fitting Corporation,* 25 Fed. Supp. 173 (D. C. S. D. N. Y. 1938), and *United States v. Newbury Manufacturing Company,* 123 F. (2d) 453 (C. C. A. 1, 1941).

Authority for the retention of the appeal by the Appellate Court while this Court is considering additional evidence is found in *Jensen v. New York Life Insurance Company,* 50 F. (2d) (C. C. A. 8, 1931), 59 F. (2d) 957. In that case the insurance company sued in the Federal District Court to cancel a policy, and Jensen plead in abatement that an action involving the same issue,—as to whether the insurance ever took effect,—was pending in a State Court, and had been decided in favor of Jensen, and was pending on appeal in the State Supreme Court. The plea in abatement was overruled, and the Federal Court decided the case in favor of the insurance company. On appeal, it was made known to the Federal Circuit Court of Appeals that the decision in favor of Jensen in the State Court had been affirmed by the State Supreme Court. The Circuit Court of Appeals decided that it was important that this fact should be in the record in order to enable it to determine properly the question of the effect of the judgment in the State Supreme Court, which, of course, was contrary to that of the Federal District Court. The Court stated that it might (1) affirm the decree without prejudice to an original suit by the plaintiff to set aside the decree in Federal Court because of the final judgment in the State Court; (2) reverse the decree and remand the cause to the District Court for further pleadings and proceedings; or (3) "follow one of the different methods of

procedure shown in" various decisions "following an expression in *Roemer v. Simon*" (p. 515). The court then stated (p. 515):

> "Still another course is open: To retain the present appeal in this court, but remand the cause to the trial court and grant leave to Jensen to apply to that court to reopen the case for the filing of a supplemental pleading and the introduction of evidence on the issue as to the effect of the judgment in the state court.
>
> "The cause can again be brought to this court on appeal from the later decree entered on the supplemental issue, and this court can then determine the whole cause, whether based upon the original or the later decree. Such a course has obvious advantages. It disposes of the whole cause in one suit; and it does away with the necessity of retrying, in the District Court, issues already adjudicated by a decree. It obviates the necessity of passing upon the question of the merits of the suit at this time, a question which may possibly not be necessary for this court to pass upon at all."

The Court then referred to certain other decisions in which somewhat similar procedure had been adopted, and then stated (p. 515):

> "We think the procedure last above outlined as approved by this court should be followed in the case at bar; especially so, as the matters which it is sought to bring to the attention of the court have occurred subsequent to the taking of the present appeal.
>
> "An order will, accordingly, be entered that leave is hereby granted to appellants, defendants below, to make a motion to the United States District Court below to open the case and allow reframing of the pleadings so as to present the issue of the existence of the alleged final judgment in the state court, and the effect thereof upon the suit in the federal court; and leave is hereby granted to said United States District Court to hear, consider, and decide such motion; and if, upon consideration of the evidence and the arguments of the respective parties on that motion, said United

States District Court decides to grant said motion, then thereafter to admit such competent and relevant evidence as any of the parties to this suit may present relative to the existence of the alleged final judgment in the state court, and the effect thereof upon the present cause in the federal court; and thereafter to consider and determine the case upon the record thereof thus supplemented. Meanwhile, the present appeal will remain in this court."

The case was retried, and before it was decided on the second appeal the Supreme Court of the United States decided the cause of *Realty Acceptance Corporation v. Montgomery*, 284 U. S. 547, *supra*. In the *Jensen* case on the second appeal, *Jensen v. New York Life Insurance Company*, 59 F. (2d) 957, the court pointed out that when it remanded the case, as previously outlined, the term of court in which the District Court had entered its decree had ended, and held that, in view of the Supreme Court's decision in *Realty Acceptance Corporation v. Montgomery, supra*, it had exceeded its jurisdiction because "the district court was without power to grant a rehearing after the term in which the decree was entered" and "this court was without authority to grant a remand for that purpose" (p. 960).

However, it would seem that the *Jensen* case is still authority for retention by the Appellate Court of the appeal pending original application in the District Court for relief pursuant to the procedure outlined in *Roemer v. Simon, supra*. Somewhat similar procedure was adopted in *Levinson v. United States*, 32 F. (2d) 449 (C. C. A. 6, 1929), in which the Circuit Court of Appeals, on motion to remand the appeal in order to permit the appellant, who was convicted of a crime, to file a motion for a new trial in the District Court on the ground of evidence of misconduct in connection with the trial, discovered shortly after the appeal was taken, instead retained the appeal, extending the time for making return to the appeal and permitting

the motion for a new trial to be heard by the District Court. The Court said (p. 450):

> "For the reasons stated, we think the motion should be heard on its merits, but we see no occasion for suspending the appellate proceedings except to direct that the time for making return to the appeal be extended until the 1st of June. We assume that the motion will be heard without delay. If granted, and that event is certified to us, the appeal will be dismissed; if denied and appellant conceives that the denial is legally erroneous because beyond the court's discretion, he may include such matter in the return, with amended allegations of error thereon.
>
> "Of course we intimate no opinion as to whether the motion should be granted; we only permit it to be entertained by the trial court as if the appeal had not been made. Upon such motion, the trial court will consider only these two new grounds. As to all the others, appellant, by appealing, deliberately waived his right to make the motion."

It is to be observed that the difficulty which prevented the courts in *Roemer v. Simon*, *Realty Acceptance Corporation v. Montgomery*, and *Jensen v. New York Life Insurance Co.*, *supra*, from taking any action at all, namely, that the term of the District Court at which the judgment had been entered had expired, does not exist in the case at bar. Rule 60(b) of the Federal Rules of Civil Procedure provides in material part:

> "On motion and upon such terms as are just, the court may relieve a party or his legal representative from a final judgment, order, or proceeding for the following reasons: (1) mistake, inadvertence, surprise, or excusable neglect; (2) newly discovered evidence which by due diligence could not have been discovered in time to move for a new trial under Rule 59(b); (3) fraud (whether heretofore denominated intrinsic or extrinsic), misrepresentation, or other misconduct of an adverse party; (4) the judgment is void; (5) the judgment has been satisfied, released, or dis-

charged, or a prior judgment upon which it is based has been reversed or otherwise vacated, *or it is no longer equitable that the judgment should have prospective application; or (6) any other reason justifying relief from the operation of the judgment.* The motion shall be made within a reasonable time, and for reasons (1), (2), and (3) not more than one year after the judgment, order, or proceeding was entered or taken. * * *"

The emphasized language indicates the portion of the rule which confers power upon this Court to reconsider its final judgment. It is stated in the comments of the rules committed with respect to these portions of Section 60(b):

"* * * Clause (5) further permits relief on the basis that '*it is no longer equitable that the judgment should have prospective application.*' The chief application of this provision will be to a permanent injunction, which, while proper when entered, has become of no use or benefit to the one whose rights were protected, *or where it would be inequitable to continue it, because of the occurrence of facts and conditions since its rendition,* and the decree should accordingly be modified or vacated. Moore and Rogers, Federal Relief from Civil Judgments (1946) 55 Yale J. L. 623, 643."

"Clause (6), which is also new, is likewise not subject to any definite time limit, and is a statement of residual power in the court. Since the intendment of Rule 60(b) is that the rule be inclusive, some statement of residual power was necessary."

Moreover, the ending of the term in which the final judgment in the case at bar was entered does not affect the defendant's right to seek reconsideration of the Court's final judgment pursuant to Rule 60(b), for Rule 6(c) provides as follows:

"The period of time provided for the doing of any act or the taking of any proceeding is not affected or limited by the continued existence or expiration of a term of court. The continued existence or expiration

of a term of court in no way affects the power of a court to do any act or take any proceeding in any civil action which has been pending before it."

In conclusion, for the reasons stated, we submit that the foregoing motions should be granted.

Respectfully submitted,

LUTHER DAY,
JOHN G. KETTERER,

Attorneys for Defendant-Appellant,
The Timken Roller Bearing Company.

EXHIBIT B.

IN THE DISTRICT COURT OF THE UNITED STATES

FOR THE NORTHERN DISTRICT OF OHIO,
EASTERN DIVISION.

No. .....

UNITED STATES OF AMERICA,
Plaintiff,

vs.

THE TIMKEN ROLLER BEARING COMPANY,
Defendant.

FREED, *J.*—Wednesday, Feb. 14, 1951.

The Court: I want to say to you gentlemen this. I think all of you undoubtedly know what the situation as to the work has been in this court. We have finally reached a point where a judge will be here and we at least see daylight. Now, I can not hope to take this matter up before I dispose of numerous other matters that have been submitted to me before. The only reason I mention that is because it was indicated by Mr. Epes that this matter is about to be set for hearing in the Supreme Court.

As much as I would like to do it, I think other litigants are entitled to have their matters decided in the order in which they were presented. I am in a position where I have so many submissions that it will take me at least three or four weeks before I can get out from under those. I do want you to know that I can not see my way clear to give this one the green light and make those other litigants wait their turn, particularly in view of the fact that this was filed subsequent to those other matters. If it should interfere with the hearing in the Supreme Court I think some arrangement should be made between you to permit this court to consider this motion.

I do want you to know that. I don't know what your desires are. I don't know how important it is to either side to have the matter immediately heard, but it will take me at least thirty days or more to get to this matter. I want you to know, I can't avoid it. It is something that I can't help.

Mr. Ketterer: Well, I don't think that is going to raise any particular problem, your Honor. I mean if that matter is brought to the attention of the Supreme Court I am quite sure they won't raise any problem on that point.

The Court: Is the Government going to object to making some arrangement with the clerk of the Supreme Court on the matter of the hearing of this case?

Mr. Epes: Of course, your Honor, the Government has been anxious to have this case heard in the Supreme Court this term.

The Court: I understood that. That's the only reason I mentioned it to you.

Mr. Epes: Yes.

The Court: But, at the same time, I don't ever want to pass on any matter, gentlemen, unless I give it careful consideration. I don't want to pass on this matter from the bench. You have searched the law, you have devoted a lot of time to it, you have seen fit to file briefs consisting of 20 some pages for each side; the Timken Roller Bearing Company's counsel wish to file a reply brief. I think this Court would be derelict in its duty if it passed on the matter without examining it. I want to examine your briefs and be given an opportunity to study it. I can't pass on it so as to expedite the matter that you want heard. If you think it is that important, I don't know what I can do about it.

Mr. Epes: Well, what is your Honor's suggestion as to the—

The Court: I haven't any. I'm leaving it entirely in your hands, in counsel's hands. All I can say to you is what I have already indicated. I didn't create this situa-

tion of having a court of two judges attempting to carry on the work of this entire district, it wasn't my doing. I think the litigants who have filed briefs and have presented matters to me two or three months ago are entitled to have their cases decided, and I don't think I have any right to say to them, "You wait until I decide the Timken case." I can't do that, and I don't think it is a fair way of disposing of these cases.

Mr. Epes: Your Honor, I appreciate your position entirely and, as I understand what you are saying, you will possibly not get to this for thirty days.

The Court: That's right.

Mr. Epes: And you feel you must read the twenty-page briefs that each side has filed.

The Court: I am not just going to read the briefs, but I want to see the cases.

Mr. Epes: In other words, it will be a number of weeks before we can expect a decision from your Honor?

The Court: Yes. I want you to know that very definitely, because I think it would be unfair to both sides if I didn't tell you.

Mr. Epes: Well, I think possibly, since that is the fact, and I think your Honor is absolutely correct in taking that position, possibly the best thing is for counsel to discuss what we will do in the Supreme Court.

The Court: That's up to you gentlemen.

Mr. Epes: We have got your Honor's position and I think possibly, if we have to do it, we can reach some conclusion.

Certificate.

I, A. V. Jarvela, Official Court Reporter for the United States District Court, Eastern Division, Northern District of Ohio, do hereby certify that the above and foregoing is a true and accurate transcript.

OCTOBER TERM, 1950.

No. 352

THE TIMKEN ROLLER BEARING COMPANY,
Appellant,

vs.

THE UNITED STATES OF AMERICA,
Appellee.

APPEAL FROM THE DISTRICT COURT OF THE UNITED STATES FOR THE NORTHERN DISTRICT OF OHIO, EASTERN DIVISION.

MOTION OF APPELLANT FOR INCORPORATION OF ADDITIONAL PROCEEDINGS IN THE DISTRICT COURT IN THE RECORD ON APPEAL.

Now comes the appellant and says that on January 24, 1951, it filed a motion in the District Court of the United States for the Northern District of Ohio, Eastern Division, which entered the final judgment in this case from which this appeal is taken, asking that court to ask leave of this Court to consider this appellant's motion, made contemporaneously therewith, that the District Court receive additional evidence and reconsider its final judgment in this case because of changed circumstances due to the death of Michael B. U. Dewar since the perfection of this appeal, and that on April 10, 1951 said motion was overruled by order of the District Court.

True and full copies of said motion and the order of the District Court overruling the same, duly certified to be such by the Clerk of the District Court, are attached hereto.

The appellant respectfully moves that said motion of the District Court in this case and the District Court's order with respect thereto, be made a part of the record in this case on appeal in this Court.

LUTHER DAY,
JOHN G. KETTERER,
Counsel for Appellant.

Civil Action No. 24,214.

IN THE UNITED STATES DISTRICT COURT

FOR THE NORTHERN DISTRICT OF OHIO,
EASTERN DIVISION.

UNITED STATES OF AMERICA,
Plaintiff,

vs.

THE TIMKEN ROLLER BEARING COMPANY,
Defendant.

MOTION BY THE TIMKEN ROLLER BEARING COMPANY, DEFENDANT IN THIS COURT, APPELLANT IN THE SUPREME COURT OF THE UNITED STATES, THAT THIS COURT ASK LEAVE OF THE SUPREME COURT OF THE UNITED STATES TO CONSIDER DEFENDANT'S MOTION THAT THIS COURT RECEIVE ADDITIONAL EVIDENCE AND RECONSIDER ITS FINAL JUDGMENT HEREIN AND, IF LEAVE BE GRANTED, THAT THIS COURT PROCEED SO TO DO, BECAUSE OF CHANGED CIRCUMSTANCES DUE TO THE DEATH OF MICHAEL B. U. DEWAR SINCE THE PERFECTION OF AN APPEAL HEREIN TO THE SUPREME COURT OF THE UNITED STATES.

NOW PENDING ON APPEAL IN THE SUPREME COURT OF THE UNITED STATES.

The Timken Roller Bearing Company, defendant in this Court, appellant in the Supreme Court of the United States (hereinafter styled "the defendant"), in support of its motion that this Court ask leave of the Supreme Court of the United States to consider defendant's motion that this Court receive additional evidence and reconsider its final judgment herein and, if leave be granted, that this Court proceed so to do, because of changed circumstances due to the death of Michael B. U. Dewar since the perfection of an appeal herein to the Supreme Court of the United States, respectfully shows to the Court as follows:

1. Michael B. U. Dewar died in England on December 21, 1950 at the age of 64. He and his acts and agreements with the defendant and others figure prominently and are mentioned frequently in the record, and in the memorandum opinion of this Court in this cause, which was tried throughout and decided upon the basis that Dewar was alive.

2. The final judgment in this cause was appealed to the Supreme Court of the United States on the 28th day of July, 1950, and is now pending on appeal in that Court, being cause No. 352 therein. The appeal was perfected before Dewar died.

3. At the time Dewar died, to wit, on December 21, 1950, he owned approximately 23.74 per cent, consisting of 94,960 ordinary shares, of the issued and outstanding stock of British Timken, Ltd. (hereinafter called "British Timken"), a British corporation engaged in the manufacture of anti-friction bearings, all of the stock of which was acquired jointly by Dewar and the defendant in 1927. At the time of Dewar's death, and at the present time, the defendant owned, and owns, approximately 30.26 per cent, consisting of 121,040 ordinary shares, of the stock thereof. The above described ordinary shares owned by the defendant and by Dewar's estate constitute approximately 54 per cent of the ordinary shares of stock of British Timken, the vote of which is entitled to control its affairs in the absence of default by it with respect to its preferred stock requirements. At the time Dewar died, and at the present time, there was, and is, in full force and effect an agreement between him and the defendant made March 22, 1948 (the latest of a series of agreements which carried out the fundamental agreement to the same effect made in 1927), by virtue of which the defendant now has the option to purchase all or any of the 94,960 ordinary shares in British Timken belonging to Dewar, exercisable at any time during a period of six months from and after Dewar's death by notice in writing served upon the holders of such 94,960 ordinary shares within the period of six months during which the option is

exercisable, at a price agreed upon by the parties, or, failing agreement, at the average price of similar shares of British Timken on the London Stock Exchange over a period of thirty days immediately preceding the date on which the option became exercisable, namely, Dewar's death on December 21, 1950.

4. At the time Dewar died on December 21, 1950, and at the present time, the defendant owned, and now owns 50 per cent, consisting of 40,000, and La Reunion Industrielle Societe Anonyme (hereinafter called the Lux Company, a company incorporated in Luxembourg, all of the shares of which have been owned directly or indirectly by Dewar) owned, and now owns, the other 50 per cent, consisting of 40,000, of the issued and outstanding ordinary 100 franc par shares of the stock of Societe Anonyme Francaise Timken (hereinafter called "French Timken"), a French corporation engaged in the manufacture and sale of anti-friction bearings in France, which was organized at the joint instance of the defendant and Dewar in 1928 and has been jointly owned by them, or corporations owned by them, at all times thereafter. The votes of the above described ordinary shares of French Timken are entitled to control its affairs. The defendant and the Lux Company each own, also, 50 per cent of the issued and outstanding preferred stock and promissory notes of French Timken. By the terms of Section 5 (h) of an agreement entered into on or about the 11th day of December, 1935, by and between the defendant, the Lux Company, Frederick John Pashe (as trustee) and Dewar, it is provided that, upon the death of Dewar, the Lux Company, if so requested by the defendant, will cause one share or other holding of shares in French Timken carrying one vote, to be transferred to the defendant or its nominees at the par value of such share or holding, thus transferring voting control of French Timken to the defendant, and it is further provided, in section 6, that no share of French Timken owned or controlled by the defendant or the Lux Company at the date of

said agreement will be sold, transferred or otherwise disposed of unless it has been first offered for sale to the other party by notice in writing, the offer to remain open for acceptance by the party to whom it is made for ninety days after it is received by such party.

5. The defendant acquired 52½ per cent and Dewar 47½ per cent of the capital stock of British Timken in 1927, and the defendant and Dewar caused French Timken to be organized and each acquired, directly or indirectly, half of its ordinary shares, as above set forth, pursuant to a general arrangement in the nature of a joint venture between them by which, in substance, Dewar was to have control of the ordinary affairs of British Timken and French Timken during his lifetime and active participation in the management thereof while those companies made specified profits, and the defendant had the right to acquire complete control of each company in certain events, including Dewar's death, as aforesaid. This arrangement has continued from its inception in 1927 until the date hereof.

6. The defendant intends and proposes, as soon as may be practicable, to exercise its rights under the six months option granted to it by the terms of the aforesaid agreement relating to British Timken stock, and under the option to acquire voting control of French Timken granted to it by the terms of the aforesaid agreement relating to French Timken stock, and proposes to consider the purchase of the remainder of the stock of French Timken, if the same should be offered to it by the Lux Company for ninety days pursuant to the latter agreement. The defendant considers that it is free so to do without violating any of the provisions of this Court's final judgment in this cause, by virtue of its order entered July 28, 1950 allowing an appeal to the Supreme Court of the United States and staying the execution of said judgment pending the final disposition of said appeal, which order provides as to such stay that:

"* * * the execution against the above named defendant of all of the provisions of the Final Judgment entered

herein, and compliance by the defendant with said Final Judgment be and the same are, hereby suspended and stayed pending the hearing and final determination of this cause upon appeal."

7. Inasmuch as the time within which the defendant may give the required notices of its intention to exercise its respective options above described is limited as above set forth, it is imperative that it proceed with dispatch so to do for the reason that, if said options are not exercised by it within the times limited, and the final judgment of this Court is reversed or modified by the Supreme Court of the United States, and it is ultimately determined that the defendant may lawfully exercise said options and acquire the stocks covered thereby, it may sustain great and irreparable loss, in that the stock of either or both of British and French Timken, respectively, including the element of control incident thereto, may be sold to purchasers other than the defendant.

8. If the defendant exercises its option, hereinbefore described in paragraph 3, to acquire Dewar's ordinary shares in British Timken, it will be the owner of 216,000 ordinary shares of the stock of British Timken out of a total of 400,000 shares, and will be a majority and controlling shareholder of said corporation with the ensuing and attendant rights to exercise all of the powers vested in it as such.

9. If the defendant exercises its option, hereinbefore described in paragraph 4, to acquire the controlling share or shares in French Timken from the Lux Company it will be the majority and controlling shareholder of French Timken with the ensuing and attendant rights to exercise all of the powers vested in it as such, and if the Lux Company decides to sell its shares of French Timken, the defendant will have the right to become the owner of all of the stock of French Timken.

10. If the respective options above described are exercised by the defendant and as a consequence thereof, stock

interests in British Timken and French Timken, respectively, are acquired as above set forth, it will follow that the defendant will be a majority stockholder of both British and French Timken, respectively, and possibly the sole owner of French Timken, instead of a minority stockholder in British Timken and an equal stockholder with Dewar in French Timken, as it was before Dewar died.

11. The exercise by the defendant of the options to acquire Dewar's former stock interest in British Timken and French Timken, respectively, and the resulting changed and additional stock interest of the defendant therein will necessarily raise and present for determination legal questions which have not heretofore been considered nor decided by this Court, in the light of the changed circumstances, including particularly the question of whether the defendant should be permitted to conduct its operations in the British Empire and Europe through British Timken and French Timken, as majority owned subsidiaries, or, instead, be required to divest itself of all interest in those companies, as presently decreed by this Court.

12. It is in the furtherance of justice, in view of the fact that Dewar has died since the perfecting of the appeal to the Supreme Court of the United States in this cause, and the further fact that the defendant intends and proposes to exercise the options granted to it to acquire additional stock interests in British Timken and French Timken, respectively, as above set forth, that the record in this case be reopened by this Court for the purpose of permitting the defendant to introduce evidence of these facts and the new situation thereby created.

13. The taking of additional evidence in the respects above stated, will result in having the record in this cause disclose the facts as they now actually exist, and will thereby prevent unnecessary delay and prolixity in the final disposition of this cause both in this Court and on appeal in the Supreme Court of the United States.

14. It is no longer equitable, because of the occurrence of the death of Dewar and the perfection of the resulting rights in the defendant, all of which has occurred since the rendition of this Court's final judgment herein, that such final judgment should have prospective operation in certain respects, including particularly Section IV thereof which terminates, and restrains the defendant from further enforcing any of the provisions of the agreement dated March 22, 1948, between the defendant and Dewar which grants to the defendant the option to purchase Dewar's ordinary shares of stock in British Timken referred to in paragraph 3 hereof, and Section VIII thereof which requires the defendant to divest itself of all stock holdings and other financial interest, direct or indirect, in British Timken and French Timken, and enjoins it from acquiring any ownership interest in British Timken or French Timken by purchase or acquisition of assets or securities or through the exercise of any option, and from exercising any authority or control over the sale or other business policies of British Timken or French Timken.

15. This Court has jurisdiction to ask leave of the Supreme Court of the United States to consider the defendant's motion that this Court receive additional evidence in the respects above set forth, determine the legal questions presented by reason of the change of circumstances as to stock ownership and control of the defendant in British Timken and French Timken, respectively, and reconsider its final judgment herein, and, if leave be granted, to proceed so to do, by virtue of the decisions and holdings of the Supreme Court of the United States in *Roemer v. Simon*, 91 U. S. 149 and *Realty Acceptance Corporation v. Montgomery*, 284 U. S. 547, 551.

WHEREFORE, The Timken Roller Bearing Company, defendant in this Court, appellant in the Supreme Court of the United States, respectfully moves this Court as follows:

1. That this Court make application to the Supreme Court of the United States for leave to consider the motion

made by the defendant in the next succeeding paragraph hereof, and in connection therewith

(a) to receive evidence and insert it in the record in this cause;

(b) to consider such additional evidence and make its findings of fact and conclusions of law with respect thereto;

(c) to obtain, upon further application to the Supreme Court of the United States by this Court, a remittitur of all or so much of the record in this cause now filed in the Supreme Court of the United States as this Court may deem necessary to further consideration of this cause in the light of such additional evidence;

(d) to reconsider its final judgment herein and to relieve the defendant therefrom by vacation or modification thereof, if this Court shall deem such action just; and

(e) in the event that this Court shall not vacate its final judgment herein, to certify such proceedings had pursuant to this motion to the Supreme Court of the United States for inclusion as part of the record on appeal in that Court in this cause.

2. That this Court, upon receiving leave from the Supreme Court of the United States, proceed further in this cause:

(a) to receive and insert in the record in this cause evidence that Michael B. U. Dewar died at the age of 64 on December 21, 1950, after the appeal from this Court to the Supreme Court of the United States had been perfected;

(b) to receive and insert in the record in this cause evidence that the defendant proposes to exercise, as soon as may be practicable, its rights under the option agreements hereinbefore described and thereby to acquire 94,960 ordinary shares of the stock of British Timken, and shares carrying one vote in French Tim-

ken, or part or all of the shares of French Timken now owned by the Lux Company if the same shall be offered to the appellant;

(c) to receive and insert in the record in this cause any other evidence offered by the parties which the Court shall deem competent, relevant and material;

(d) to consider such new and additional evidence described in subparagraphs (a) through (c) of this paragraph 2, and determine the legal questions presented by the change of circumstances resulting from the death of Dewar and the exercise by the defendant of the options hereinbefore described, and make its findings of fact and conclusions of law with respect thereto;

(e) to reconsider its final judgment herein and to relieve the defendant therefrom by the vacation thereof, or, in the event that the Court shall not vacate the same, by modification thereof to eliminate the provisions of Sections IV and VIII thereof which adversely affect the rights of the defendant as specified in paragraph 14 hereof, or otherwise as may to the Court seem appropriate; and

(f) in the event that this Court shall not vacate its final judgment herein, to certify such proceedings had pursuant to this motion to the Supreme Court of the United States for inclusion as part of the record on appeal in that Court in this cause.

Civil Action No. 24,214.

IN THE UNITED STATES DISTRICT COURT

FOR THE NORTHERN DISTRICT OF OHIO,
EASTERN DIVISION.

UNITED STATES OF AMERICA,
Plaintiff,

vs.

THE TIMKEN ROLLER BEARING COMPANY,
Defendant.

ORDER ON MOTION BY THE TIMKEN ROLLER BEARING COMPANY, DEFENDANT IN THIS COURT, APPELLANT IN THE SUPREME COURT OF THE UNITED STATES, THAT THIS COURT ASK LEAVE OF THE SUPREME COURT OF THE UNITED STATES TO CONSIDER DEFENDANT'S MOTION THAT THIS COURT RECEIVE ADDITIONAL EVIDENCE AND RECONSIDER ITS FINAL JUDGMENT HEREIN AND, IF LEAVE BE GRANTED, THAT THIS COURT PROCEED SO TO DO, BECAUSE OF CHANGED CIRCUMSTANCES DUE TO THE DEATH OF MICHAEL B. U. DEWAR SINCE THE PERFECTION OF AN APPEAL HEREIN TO THE SUPREME COURT OF THE UNITED STATES.

(Filed April 10, 1951.)

The instant motion was submitted to the Court on oral arguments and extensive briefs of the respective parties.

It is urged that the change of circumstances which developed since the cause was heard should prompt this Court to request the Supreme Court for permission to hear new evidence, make additional findings of fact and state its conclusions of law and determine the effect of the changed factual situation on the decision heretofore rendered.

Defendant points out that Michael B. U. Dewar died in December, 1950. During his lifetime (and at the time of trial), he owned 23.74 per cent of the stock of British

Timken, Limited. Defendant had at the time of trial and now has the option to purchase this stock as well as stock in French Timken, all of which would give defendant a controlling interest in British Timken and possibly the outright ownership of French Timken. Defendant recently indicated to the proper parties its desire to exercise the option.

After due consideration, the Court is of the opinion, in the light of the facts and on the evidence developed at the time of trial, that the reasons advanced in support of the motion warrant neither the re-examination of the final judgment in respect of the finding of violation of the Sherman Anti-trust Act nor the reconsideration of the relief which this Court regards as essential and necessary to remove the existing impediments to competition.

IT IS THEREFORE ORDERED that the motion be and is hereby overruled.

FREED,

United States District Judge.

UNITED STATES OF AMERICA,
NORTHERN DISTRICT OF OHIO, SS.:

I, C. B. WATKINS, Clerk of the United States District Court in and for the Northern District of Ohio, do hereby certify that the annexed and foregoing is a true and full copy of the original Order on Motion by The Timken Roller Bearing Company, Defendant in this Court, Appellant in the Supreme Court of the United States, that this Court ask leave of the Supreme Court of the United States to consider Defendant's motion that this Court receive additional evidence and reconsider its Final Judgment herein and, if leave be granted, that this Court proceed so to do, because of changed circumstances due to the death of Michael B. U. Dewar since the perfection of an appeal herein to the Supreme Court of the United States now remaining among the records of the said Court in my office.

IN TESTIMONY WHEREOF, I have hereunto subscribed my name and affixed the seal of the aforesaid Court at Cleveland, Ohio this 17th day of April, A. D. 1951.
